A distributary of the Smith Glacier in Marie Byrd Land, flowing northward through the middle of the Kohler Range into Dotson Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN in association with Kohler Range.

Kohler Head 75°48'S., 162°51'E.

A small headland on the NE. side of Whitmer Pen., on the coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1957-62. Named by US-ACAN for John L. Kohler, USN, construction electrician at McMurdo Station, 1965-66 and 1966-67.

Kohler Range 75°05'S., 114°15'W.

A mountain range about 40 mi. long standing between the base of Martin Peninsula and Smith Glacier in Marie Byrd Land. The range consists of two ice-covered plateaus punctuated by several rock peaks and bluffs. The plateaus are oriented E.-W. and are separated by Kohler Glacier, a distributary which flows N. from Smith Glacier. Discovered from a distance on Feb. 24, 1940 by R. Adm. Byrd and other members of the USAS in an airplane flight from the ship *Bear*. Named by Byrd for Walter J. Kohler, manufacturer and former governor of Wisconsin, who was one of the supporters of the ByrdAE, 1933-35, and who helped furnish the seaplane from which the discovery was made.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Kohl-Larsen Plateau: see Kohl Plateau 54°14'S., 36°57'W.

Kohl Plateau 54°14'S., 36°57'W.

Ice-covered plateau, over 760 m., standing between the heads of Keilhau and Neumayer Glaciers in the central part of South Georgia. Discovered and first indicated on a map by Ludwig Kohl-Larsen during his 1929-30 expedition. Surveyed and named for its discoverer by the SGS, 1951-52.

Kohmyr Ridge 82°47'S., 160°10'E.

A prominent ridge immediately E. of Hochstein Ridge in the NW. part of the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Walter D. Kohmyr, USARP meteorologist at McMurdo Station, 1963-64.

Kohnen, Mount 75°00'S., 134°47'W.

A peak on the SW. corner of Bowyer Butte, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Heinz Kohnen, geophysicist at Byrd Station, 1970-71.

Ko-iwa Rock 68°42'S., 40°33'E.

A small rock exposure 3.5 mi. W. of Oku-iwa Glacier on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Ko-iwa (small rock).

Koke Strand 69°13'S., 39°39'E.

A beach, or strand, situated just southward of Mt. Chōtō in the Fukuro Cove of Langhovde Hills, coastal Queen Maud Land. The feature is the site of a community of mosses measuring 15 by 30 meters. The name "Koke-daira" (moss strand) was given by JARE Headquarters in 1963 and follows Japanese research in this vicinity.

Kolich Point 77°21'S., 163°33'E.

Rock point midway between Spike Cape and Gneiss Point on the E. coast of Victoria Land. Named by US-ACAN for Thomas M. Kolich, geophysicist who participated in the USARP geophysical survey of the Ross Ice Shelf in the 1973-74 and 1974-75 seasons.

Koll Rock 67°24'S., 60°41'E.

Large rock 0.5 mi. SE. of Oom I. in the W. side of Oom Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Kollskjer (knoll rock).

Koloc Point 74°11'S., 111°24'W.

An ice-covered point marking the N. extremity of Bear Peninsula, in Marie Byrd Land. First mapped by

USGS from air photos obtained by USN Op. Hjp. in January 1947. Named by US-ACAN for Lt. Cdr. Bohumil Koloc, Jr., USN, helicopter pilot during USN Op. DFrz. 1966 and 1967.

Kolodkin, Mount 71°45'S., 12°37'E.

Mountain, 2,525 m., standing 1.5 mi. SE. of Pinegin Peak in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Kolodkin, designer of Bellingshausen's ships the *Vostok* and *Mimyy*.

Kolosov, Cape 66°29'S., 50°16'E.

A point along the W. side of the ice-covered peninsula that forms the E. side of the entrance to Amundsen Bay. Photographed in 1956 from ANARE aircraft. Rephotographed in 1958 by the Soviet exp. and named after the polar aviation navigator V. Kolosov, who died in the Arctic.

Kolp, Mount 81°39'S., 161°42'E.

A mainly ice-free coastal mountain, 1,010 m., standing 7 mi. WNW. of Cape Laird, along the W. side of the Ross Ice Shelf. Named by US-ACAN for Lt. Col. H. R. Kolp, USMC, executive officer of USN Squadron VX-6 in Antarctica during Op. DFrz. I. (1955-56).

K. Olsen, Mount: see Olsen Crags 86°12'S., 160°48'W.

Kolven Island 67°33'S., 61°29'E.

A small island lying 0.5 mi. E. of Stedet I. and close NE. of Falla Bluff, in Utstikkar Bay, Mac. Robertson Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Kolven (the club).

Komandnaya Nunatak 72°12'S., 14°31'E.

The eastern and highest of the Rokhlin Nunataks, located in the S. part of the Payer Mtns. in Queen Maud Land. Disc. and plotted from air photos by the GerAE, 1938-39. Replotted from air photos by the SovAE, 1960-61. Named Gora Komandnaya (command mountain) by the USSR in 1966.

Komatsu Nunatak 71°55'S., 161°11'E.

A very prominent nunatak rising to 1,840 m. near its center. Located 4 mi. W. of the summit of Mt. Van der Hoeven in the W. part of Helliwell Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Stanley K. Komatsu, USARP biologist at McMurdo Station, 1966-67 and 1967-68.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Komsa Mountain 72°05'S., 25°21'E.

Mountain, 2,960 m., between Koms Gl. and Salen Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Komsa (the Lapp cradle).

Komsbreen: see Koms Glacier 72°03'S., 25°18'E.

Koms Glacier 72°03'S., 25°18'E.

Glacier, 5 mi. long, flowing N. between Mefjell Mtn. and Komsa Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Komsbreen (the Lapp cradle glacier).

Komsomol'skaya Hill 66°33'S., 93°01'E.

Hill rising to 35 m., standing immediately S. of Mabus Pt. on the coast of Antarctica. Discovered and roughly sketched by the AAE under Mawson, 1911-1914. Photographed from the air by USN Op. Hjp., 1946-47. Rephotographed by the Soviet exp. of 1956, who named it Komsomol'skaya (Young Communist).

Komsomol'skiy Peak 75°45'S., 63°25'E.

A partly snow-covered peak rising above the ice plateau about 130 miles SSE. of Mt. Menzies, Mac. Robertson Land. Discovered by the crew of a Soviet aircraft on Dec. 7, 1958, during a flight from the "Pole of Inaccessibility" to Mirnyy Station. Photographed by ANARE in December 1960. Named by the Soviet expedition.

Kong Edward VII Land: see Edward VII Peninsula 77°40'S., 155°00'W.

Kong George V-Land: see George V Coast 68°30'S., 148°00'E.

Kong Leopold og Dronning Astrid Land: see Leopold and Astrid Coast 67°20'S., 84°30'E.

Kong Oskar II Küste: see Oscar II Coast 65°45'S., 62°30'W.

König Edward VII Land: see Edward VII Peninsula 77°40'S., 155°00'W.

König-Eisstrom: see König Glacier 54°10'S., 36°48'W.

König George V-Land: see George V Coast 68°30'S., 148°00'E.

König Georg Insel: see King George Island 62°00'S., 58°15'W.

König Glacier 54°10'S., 36°48'W.

Glacier, 3 mi. long and 1.5 mi. wide, flowing in a northerly direction from the N. side of Neumayer Gl. to the head of Fortuna Bay, South Georgia. First surveyed in 1928-29 by a Ger. exp. under Kohl-Larsen, who named it for Felix König, Austrian mountaineer with the GerAE, 1911-12, under Filchner.

König Haakon Hafen: see King Haakon Bay 54°10'S., 37°20'W.

Königin Alexandra Gebirge: see Queen Alexandra Range 84°00'S., 168°00'E.

Königin Mary Land: see Queen Mary Coast 66°45'S., 96°00'E.

Königin Maud Bucht: see Queen Maud Bay 54°14'S., 37°23'W.

Königin Maud Gebirge: see Queen Maud Mountains 86°00'S., 160°00'W.

König Oskar II Land: see Oscar II Coast 65°45'S., 62°30'W.

Konter Cliffs 75°06'S., 137°48'W.

A line of cliffs (360 m.) which surmount the east side of the terminus of Frostman Glacier, on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy tricamera aerial photographs, 1959-65. Named by US-ACAN for Richard W. Konter, a member of the ships party on the *City of New York* during the ByrdAE, 1928-30.

Kon-Tiki Nunatak 82°33'S., 159°52'E.

Raft-like nunatak, 1,300 m., surmounting the Cooper Icefalls in the center of Nimrod Glacier. Seen by the northern party of the NZGSAE (1961-62) and named after the raft *Kon-Tiki* which drifted across the Pacific Ocean from E. to W. in 1947.

Koob, Mount 84°53'S., 169°02'W.

The highest peak (1,600 m.) in Mayer Crags, Queen Maud Mtns., standing 4 mi. NW. of Mt. Ferguson. Named by US-ACAN for Derry D. Koob, USARP biologist at McMurdo Station in the 1964-65 and 1965-66 seasons.

Koons, Mount 72°43'S., 160°22'E.

A small mountain situated 1 mi. E. of Miller Butte in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Robert W. Koons, USARP logistics coordinator with the McMurdo Station winter party, 1968.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Kooperatsiya, Zaliv: see Rennick Bay 70°06'S., 161°20'E.

Kooperatsiya Ice Piedmont 70°15'S., 160°25'E.

An ice piedmont at the southwest side of Yermak Point on the west shore of Rennick Bay. This area was photographed in 1958 by the SovAE which gave the name "Zaliv Kooperatsiya" to the western portion of Rennick Bay (q.v.). The US-ACAN has retained the prior name Rennick Bay. For the sake of historical continuity, the name Kooperatsiya Ice Piedmont has been approved for the feature described. Named after the *Kooperatsiya*, the expedition ship used by the SovAE in 1958.

Koopman Peak 85°29'S., 125°35'W.

A peak over 2,200 m., standing 2 mi. N. of Moran Butress on the N. side of Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Kenneth E. Koopman, Navy yeoman on Operation Deep Freeze 1965, 1966 and 1967.

Kooyman Peak 82°43'S., 162°49'E.

Peak, 1,630 m., on the ridge just S. of Dorrer Gl. in the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by the US-ACAN for Gerald L. Kooyman, USARP biologist at McMurdo Station, 1961-62, 1963-64 and 1964-65.

Kopaitic Island 63°19'S., 57°55'W.

An island lying 0.3 mi. W. of Cape Legoupil in the Duroch Islands. Named by the Chilean Antarctic Expedition of 1947 for Lt. Boris Kopaitic O'Neill, leader of the Chilean party at Greenwich I. in 1947.

Kopere, Mount 82°17'S., 158°51'E.

Peak 1.5 mi. NW. of Lyttelton Pk. in the central part of Cobham Range. Named by the Holyoake, Cobham and Queen Elizabeth Ranges party of the NZGSAE (1964-65). Kopere is the Maori word for arrow; the peak's triangular cross section from most directions suggests an arrowhead.

Köppenberg: see Köppen Point 54°30'S., 36°02'W.

Köppen Point 54°30'S., 36°02'W.

Point marking the NE. side of the entrance to Moltke Hbr. in Royal Bay, South Georgia. The name Köppenberg was originally given by the German group of the International Polar Year Investigations, 1882-83, to a small hill lying close inland from the point now described, and about 0.5 mi. E. of the German base. It was named for Prof. W. Köppen (1846-1940), noted

meteorologist and climatologist, who had recommended the establishment of a high level observatory near the base. The SGS, 1951-52, reported that the hill is too small and unimportant to require a name, but that one is needed for the nearby point. For the sake of historical continuity, the name of Köppen is transferred to this previously unnamed point; the name Köppenberg is rejected.

Koppervik: see Koppervik 54°00'S., 37°25'W.

Koppervik 54°00'S., 37°25'W.

Cove 0.25 mi. wide, lying 1.7 mi. SW. of Cape Buller in the NW. side of the Bay of Isles, South Georgia. The name was applied prior to 1930, probably by Norwegian whalers operating at South Georgia.

Korff Ice Rise 79°00'S., 69°30'W.

An ice rise, 80 mi. long and 20 mi. wide, lying 50 mi. ENE. of Skytrain Ice Rise in the SW. part of Ronne Ice Shelf. Discovered by the US-IGY Ellsworth Traverse Party, 1957-58. Named by the party for Prof. Serge A. Korff, vice chairman of the cosmic ray technical panel, U.S. National Committee for the IGY, 1957-59.

Kosciusko, Mount: see Kosciusko, Mount 75°43'S., 132°13'W.

Kosciusko, Mount 75°43'S., 132°13'W.

Prominent mountain (2,910 m.) that comprises the central portion of Ames Range in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Capt. Henry M. Kosciusko, USN, Commander of the Antarctic Support Activities group, 1965-67.

Kosco Glacier 84°27'S., 178°00'W.

A glacier about 20 mi. long, flowing from the Anderson Heights vicinity of the Bush Mtns. northward to enter Ross Ice Shelf between Wilson Portal and Mt. Speed. Discovered by the USAS, 1939-41. Named by US-ACAN for Capt. George F. Kosco, USN, chief aerologist and chief scientist of USN Operation Highjump, 1946-47.

Koski Glacier 85°17'S., 167°15'E.

An east-flowing glacier, 7 mi. long, draining the east-central portion of the Dominion Range icecap. The glacier lies close N. of Vandament Gl., whose flow it parallels, and terminates at Mill Gl. just SE. of Browns Butte. Named by US-ACAN for Raymond J. Koski, USARP engineer on several traverses originating at the South Pole Station 1962-63, 1963-64, and 1964-65.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Kosko, Mount 79°09'S., 159°33'E.

A peak, 1,795 m., standing 6 mi. N. of Mt. Keltie in the Conway Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959-63. Named by US-ACAN for Arno Kosko, ionosphere scientist at Byrd Station, 1963.

Kosky Peak 70°57'S., 63°28'W.

A peak 1.5 mi. S. of Mt. Nordhill in the Welch Mtns. of Palmer Land. The peak was mapped by USGS in 1974. Named by US-ACAN for Capt. Harry G. Kosky, USCG, Commanding Officer of USCGC *Westwind* in the Antarctic Peninsula Ship Group during Operation Deep Freeze, 1971.

Kostka, Mount 70°42'S., 164°49'E.

Mountain (1,210 m.) on the W. side of Zykov Gl., 3 mi. SE. of Saddle Peak, in the Anare Mountains. Named by a joint committee of the Antarctic Academy of Science of the USSR, 1960-61, for Czechoslovakian aerologist O. Kostka. A member of the SovAE, 1959-61, Kostka perished in a fire at Mirnyy Station on Aug. 3, 1960.

Kostki, Gora: see Kostka, Mount 70°42'S., 164°49'E.

Kotick Point 64°00'S., 58°22'W.

The southern entrance point to Holluschickie Bay, on the W. coast of James Ross Island. The name, recommended by UK-APC, arose from association with Holluschickie Bay; Kotick was the name of the white seal in Rudyard Kipling's *Jungle Book*.

Kottas, Gory: see Heimefront Range 74°35'S., 11°00'W.

Kotterer Peaks 70°11'S., 64°26'E.

A group of small peaks standing between Wignall Nunataks and Mt. Starlight in the Athos Range, Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1955-65. Named by ANCA for C. Kotterer, weather observer at Davis Station, 1964.

Kouperov Peak 75°06'S., 133°48'W.

A peak (890 m.) at the S. end of the Demas Range in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Leonid Kouperov, Soviet Exchange Scientist (ionospheric physicist) to the U.S. Byrd Station, 1961.

Kowalczyk, Mount 77°56'S., 163°47'E.

Mountain, 1,690 m., standing 1 mi. S. of Goat Mtn. at the head of Hobbs Gl. in Victoria Land. Charted by the BrAE under Scott, 1910-13. Named by the US-ACAN in 1964 for Chester Kowalczyk, Chief of the

Photogrammetry Branch, U.S. Naval Oceanographic Office, who for many years had responsibility for the photogrammetric compilation of Antarctic charts.

Koyubi, Cape 69°14'S., 39°38'E.

A rocky point marking the western extremity of a U-shaped peninsula which extends seaward in finger-like fashion from the west side of Langhovde Hills, Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62. The name "Koyubi-misaki" (little finger point) was given by JARE Headquarters in 1972 in association with Cape Nakayubi, which lies 0.5 mi. to the southeast.

Kozlov Nunataks 66°37'S., 51°07'E.

A group of nunataks lying 8 mi. N. of Mt. Parviainen in the Tula Mtns., Enderby Land. The nunataks were visited by geologists of the SovAE, 1961-62, who named them for M. I. Kozlov, Soviet polar pilot.

Kozō Rock 68°23'S., 41°54'E.

An exposed rock standing on the coast between Narabi Rocks and Gobamme Rock in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Kozō-iwa (youngster rock).

K. Prestrud, Mount: see Prestrud, Mount 86°34'S., 165°07'W.

Kraken Cove 57°03'S., 26°41'W.

The largest cove at Candlemas I., South Sandwich Is., indenting the N. coast of the island just W. of Demon Point. The name applied by UK-APC in 1971 is that of a legendary Norwegian sea monster.

Krakken Hill 71°57'S., 26°14'E.

Rocky hill standing in Byrdgreen, 5 mi. E. of Bautaen Peak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Krakken (the stool).

Krakken Mountain 71°32'S., 12°09'E.

A mountain 1 mi. N. of Sandseten Mtn. and just NW. of Gneysovaya Peak in Westliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Krakken (the stool).

Kramer Island 77°14'S., 147°10'W.

An ice-covered island, 2 mi. long, in Marshall Archipelago. It lies between Nolan Island and Court Ridge in Sulzberger Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Michael S. Kramer, meteorologist at Byrd Station, 1968.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Kramer Rocks 65°26'S., 64°02'W.

Two rocks lying in the N. part of Beascochea Bay, 3 mi. SE. of Cape Pérez on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1959 for J. G. H. Kramer, Austrian army physician who independently recognized scurvy as a nutritional deficiency disease and showed how it could be prevented or cured, in about 1737.

Krank Glacier 83°08'S., 162°05'E.

A glacier 5 mi. long, flowing E. to enter Helm Gl. just S. of Mt. Macbain in the Queen Elizabeth Range. Named by US-ACAN for Joseph P. Krank, Weather Central meteorologist at Little America Station, winter of 1957.

Kranz Peak 86°31'S., 155°24'W.

A peak 2,680 m., standing 6 mi. NW. of Mt. Przywitowski, between the heads of Holdsworth and Bartlett Glaciers, in the Queen Maud Mountains. Named by US-ACAN for Cdr. Arthur C. Kranz, staff meteorological officer, U.S. Naval Support Force, Antarctica, during USN Op. DFrz. 1966 and 1967.

Kråsen Crevasse Field 71°48'S., 0°58'W.

A crevasse field about 15 mi. long in the lower part of Jutulstraumen Gl., in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kråsen (the crop).

Krashenninnikova, Gora: see Krashenninnikov Peak 71°41'S., 12°40'E.

Krashenninnikov Peak 71°41'S., 12°40'E.

Peak, 2,525 m., on the S. side of Svarthausane Crags in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Russian geographer S. P. Krashenninnikov.

Krasin Nunataks 68°18'S., 50°05'E.

A small group of nunataks lying 10 mi. SE. of Alderdice Peak in the Nye Mountains, Enderby Land. The features were plotted by the SovAE, 1961-62, which named them after the Soviet icebreaker *Krasin*.

Krasinskiy, Cape 69°50'S., 8°30'E.

A projecting angle of the ice shelf fringing the coast of Queen Maud Land, separating Dublitskiy Bay and Kamenev Bight. The feature was photographed from the air by NorAE in 1958-59 and was mapped from these photos. It was also mapped in 1961 by the SovAE who named it for G. D. Krasinskiy, polar investigator and organizer of air expeditions.

Krasinskogo, Mys: see Krasinskiy, Cape 69°50'S., 8°30'E.

Krasnaya Nunatak 68°18'S., 49°42'E.

A nunatak lying 4 mi. S. of Alderdice Peak in the Nye Mountains, Enderby Land. Mapped and named "Gora Krasnaya" (red mountain) by the SovAE, 1961-62.

Krasnova, Skaly: see Krasnov Rocks 71°48'S., 10°20'E.

Krasnov Rocks 71°48'S., 10°20'E.

A linear group of rocks lying 2 mi. SSE. of the summit of Mt. Dallmann, in the Orvin Mtns. of Queen Maud Land. Plotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Russian geographer A. N. Krasnov.

Krasovskogo, Khrebet: see Mittlere Petermann Range 71°30'S., 12°28'E.

Kraterbucht: see Crater Bay 56°40'S., 28°10'W.

Krat Rocks 68°34'S., 77°54'E.

An area of submerged rocks off the Vestfold Hills, lying at the W. side of Davis Anchorage, about 0.8 mi. due S. of Bluff Island. The rocks extend over an area of about 100 yards by 60 yards and have a least depth of 4 feet. Depths of 3 fathoms or less extend eastward about 150 yards. The reef was delineated by d'A. T. Gale, ANARE surveyor aboard the *Thala Dan* in 1961. Named by ANCA for I. Krat, chief engineer on the *Thala Dan* in 1961.

Kraul Mountains 73°30'S., 14°10'W.

A chain of mountains and nunataks that trend north-eastward from Veststraumen Glacier for approximately 70 mi., in western Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Capt. Otto Kraul, ice pilot of the expedition.

Krause Point 66°34'S., 91°04'E.

Low, ice-covered point fronting on Davis Sea midway between Cape Torson and Cape Filchner. Mapped from air photos taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for Glenn R. Krause, photogrammetrist with the Navy Hydrographic Office, who served as surveyor with the USN Op. Wml. parties which established astronomical control stations along Wilhelm II, Knox and Budd Coasts in 1947-48.

Kraut Rocks 76°04'S., 136°11'W.

A group of rock outcrops on the snow-covered, lower SW. slopes of the Mt. Berlin massif, in Marie Byrd

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for William F. Kraut, RM1, USN, radioman with the 1956 Army Navy Trail Party that traversed eastward from Little America V to establish the Byrd Station.

Krebs, Mount 84°50'S., 170°20'W.

A prominent rock peak (1,630 m.) surmounting the central part of the main ridge of Lillie Range, 4 mi. N. of Mt. Daniel, in the foothills of the Prince Olav Mountains. Discovered by the U.S. Ross Ice Shelf Traverse Party (1957-58) under A. P. Crary, and named by him for Cdr. Manson Krebs, USN, helicopter and airplane pilot of USN Squadron VX-6 during Deep Freeze operations.

Krebs Glacier 64°38'S., 61°31'W.

Glacier flowing W. into the head of Charlotte Bay on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Arthur C. Krebs (1850-1935), who, with C. Renard, constructed and flew the first dirigible airship capable of steady flight under control, in 1884.

Krebs Ridge 70°33'S., 62°25'W.

An E.-W. ridge which forms the N. wall of Gurling Glacier and terminates at the SW. head of Smith Inlet, on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for William N. Krebs, USARP biologist at Palmer Station in 1972.

Kreiling Mesa 83°13'S., 157°54'E.

A distinctive, partially ice-covered mesa at the S. side of the mouth of Argosy Gl. in the Miller Range. Named by US-ACAN for Lee W. Kreiling, USARP traverse engineer at NAF McMurdo, winter 1961, Ellsworth Land Traverse, 1961-62, and Roosevelt Island, 1962-63.

Kreitzer Bay: see Vincennes Bay 66°30'S., 109°30'E.

Kreitzer Glacier 70°22'S., 72°36'E.

A glacier flowing NW. between Jennings Promontory and Reinbolt Hills into the E. part of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from aerial photographs taken by USN Operation Highjump, 1946-47. Named by Roscoe for Lt. William R. Kreitzer, USN, commander of one of the three Operation Highjump aircraft used in photographing this and other coastal areas between 14° and 164° East.

Kreitzerisen 72°13'S., 22°10'E.

Glacier, 8 mi. long, flowing N. between Tertene Nunataks and Bamse Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named

for Lt. William R. Kreitzer, USN, plane commander on one of the three USN Op. Hjp. aerial crews which photographed this and other coastal areas between 14° and 164° East.

Krigsvold Nunataks 75°38'S., 137°55'W.

A small cluster of isolated nunataks located directly at the head of Strauss Glacier, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Sgt. Alvin I. Krigsvold, USA, member of the Army-Navy Trail Party that blazed a trail from Little America V to establish Byrd Station in 1956.

Kring, Mount 74°59'S., 157°54'E.

A sharply defined nunatak on the northern margin of the upper reaches of David Glacier, 13 mi. SW. of Mt. Wood, in Victoria Land. Previously uncharted, it was used (with Mt. Wood) as a reference for establishing a USARP field party on Nov. 6, 1962. Named by D.B. McC. Rainey of the Cartographic Branch of the New Zealand Dept. of Lands and Survey for Staff Sgt. Arthur L. Kring, USMC, navigator on many U.S. Navy VX-6 Squadron flights during the 1962-63 season when New Zealand field parties received logistic support by that squadron.

Kringholmane: see Hobbs Islands 67°19'S., 59°58'E.

Kring Islands 67°10'S., 58°30'E.

Two islands and numerous rocks lying at the E. side of Bell Bay along the coast of Enderby Land. Mapped as one island by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Kringla (the ring). ANARE air photos of 1959 show the feature to be more than one island.

Kringla: see Kring Islands 67°10'S., 58°30'E.

Kristensen, Gora: see Christensen, Mount 67°58'S., 47°52'E.

Kristensen, Mount 86°20'S., 159°40'W.

A mountain, 3,460 m., standing on the W. side of Nilsen Plateau 2 mi. SE. of Lindstrøm Peak, in the Queen Maud Mountains. Named by US-ACAN in 1967 for H. Kristensen, an engineer on the ship *Fram* of Amundsen's Nor. exp. of 1910-12. This naming preserves Amundsen's commemoration of "Mt. H. Kristensen," a name applied in 1911 for an unidentifiable mountain in the general area.

Kristensen Rocks 71°55'S., 171°11'E.

Twin rocks lying 1 mi. S. of Possession Island in the Possession Islands group in the Ross Sea. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Capt. Leonard

GEOGRAPHIC NAMES OF THE ANTARCTIC

Kristensen who, with H.J. Bull in the ship *Antarctic*, explored the area and landed on the Possession Islands in 1895.

Kristiania Island: see Christiania Islands 63°57'S., 61°27'W.

Krivoy, Proliv: see Robertson Channel 66°19'S., 110°29'E.

Krogh Island 66°17'S., 67°00'W.

Island about 5 mi. long lying close W. of the S. part of Lavoisier I., Biscoe Islands. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for August Krogh (1874-1949), Danish physiologist who specialized in the functional activity of the capillaries, pioneer of studies of human metabolism and blood circulation in cold climates.

Krogmann Island: see Hovgaard Island 65°08'S., 64°08'W.

Krogmann Point 65°08'S., 64°08'W.

Point forming the W. extremity of Hovgaard I., in the Wilhelm Archipelago. Hovgaard I. was first seen by a Ger. exp. under Dallmann in January 1874 and named "Krogmann Insel." However, the name Hovgaard, applied by the BelgAE under Gerlache in February 1898, has overtaken the original in usage. In order to preserve Dallmann's earlier name in this vicinity, Krogmann Point has been approved for the feature here described.

Krok Fjord 68°40'S., 78°00'E.

A narrow sinuous fjord, 11 mi. long, between Mule Peninsula and Sørsdal Glacier Tongue, at the south end of the Vestfold Hills. Mapped from air photos taken by the Lars Christensen Expedition (1936-37) and named Krokfjorden (the crooked fjord).

Krokfjorden: see Krok Fjord 68°40'S., 78°00'E.

Krok Inlet: see Krok Fjord 68°40'S., 78°00'E.

Krokisius, Mount 54°30'S., 36°03'W.

A mountain 0.6 mi. NE. of Moltke Harbor, South Georgia. Named by the German group of the International Polar Year Investigations, 1882-83, for Corvette Captain Krokisius, commander of the *Marie*, one of the two ships of the expedition.

Krokisius-Berg: see Krokisius, Mount 54°30'S., 36°03'W.

Krok Island 67°02'S., 57°46'E.

Irregular-shaped island nearly 1 mi. in extent, the largest of the group lying 1 mi. S. of Abrupt I. and 6

mi. W. of Hoseason Glacier. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and named Kroköy (crooked island).

Krok Lake 68°37'S., 78°24'E.

An irregular-shaped lake about 4 mi. long in the SE. part of the Vestfold Hills. The lake was partially mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37) and named Krokvatnet (the crooked lake). The lake was mapped in its entirety by ANARE, utilizing air photos taken in 1957-58.

Krokvatnet: see Krok Lake 68°37'S., 78°24'E.

Kroner Lake 62°59'S., 60°35'W.

Circular lake 0.2 mi. in diameter lying immediately W. of Whalers Bay, on Deception I. in the South Shetland Islands. The name Tokroningen, meaning the two kroner piece, was given this lake by whalers during the period 1905-31. The original name was altered to Kroner Lake in 1950 by the UK-APC following a survey of Deception I. by Lt. Cdr. D. N. Penfold, RN, in 1948-49.

Kronprinsesse Märtha Kyst: see Princess Martha Coast 72°00'S., 7°30'W.

Kronprinsesse Märtha Land: see Princess Martha Coast 72°00'S., 7°30'W.

Kronprins Gustav Channel: see Prince Gustav Channel 63°50'S., 58°15'W.

Kronprins Olav Land: see Prince Olav Coast 68°30'S., 42°30'E.

Kronprinz Gustaf Kanal: see Prince Gustav Channel 63°50'S., 58°15'W.

Kronprinz Olaf Berge: see Prince Olav Mountains 84°57'S., 173°00'W.

Kropotkin, Mount 71°54'S., 6°35'E.

A peak on the W. side of Jökulkyrkja Mountain in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norsk Polarinstitut from surveys and air photos by NorAE, 1956-60. Also mapped by the SovAE in 1961 and named for Russian scientist P. A. Kropotkin.

Kropotkina, Gora: see Kropotkin, Mount 71°54'S., 6°35'E.

Kroshka Island 70°40'S., 2°05'E.

The smaller of two ice-covered islands lying close together in the Fimbul Ice Shelf, along the coast of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Queen Maud Land. The feature was first mapped by the SovAE in 1961 and named Kupol Kroshka (crumb dome).

Krout Glacier 84°53'S., 172°12'W.

A tributary glacier, 4 mi. long, draining the N. slopes of Prince Olav Mtns. between Mt. Sellery and Mt. Smithson and entering Gough Gl. just E. of Mt. Dodge. Named by US-ACAN for Equipment Operator 1st Class Walter L. Krout, USN, of Operation Deep Freeze, 1964.

Kruber, Skala: see Kruber Rock 71°45'S., 11°05'E.

Kruber Rock 71°45'S., 11°05'E.

A lone rock lying 3.5 mi. WNW. of the summit of Mt. Flånuten on the W. side of the Humboldt Mtns., in Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet geographer A. A. Kruber.

Krüger, Mount 72°36'S., 0°57'E.

A mountain (2,655 m.) standing 8 mi. SW. of Kvithø Peak in the Sverdrup Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Walter Krüger, meteorological assistant on the expedition. Surveyed by NBSAE, 1949-52.

Krügerfjellet: see Krüger, Mount 72°36'S., 0°57'E.

Kruglyy, Kupol: see Blåskimen Island 70°25'S., 3°00'W.

Krylen Hill 71°33'S., 2°10'W.

A hill 5 mi. SW. of Valken Hill, in the N. part of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Krylen (the hump).

Krylova, Gora: see Ristelen Spur 71°59'S., 5°37'E.

Krylov Peninsula 69°05'S., 156°20'E.

An ice-covered peninsula on the Antarctic coast just west of Lauritzen Bay. Photographed by USN Operation Highjump (1946-47), the Soviet Antarctic Expedition (1957-58) and ANARE (1959). Named by the USSR after Soviet mathematician and academic naval architect Aleksey N. Krylov (1863-1945).

Krylvika Bight 71°20'S., 2°00'W.

A bight, a southern lobe of the Fimbul Ice Shelf, indenting the coast of Queen Maud Land for about 30 mi. between Båkeneset Headland and Trollkjerneset Headland. Mapped by Norwegian cartographers from

surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Krylvika (the hump bay), probably in association with nearby Krylen Hill.

K. Sundbeck, Mount: see Sundbeck, Mount 86°10'S., 158°28'W.

Kuarisen, Shel'fovyi Lednik: see Quar Ice Shelf 71°20'S., 11°00'W.

Kubbestolen Peak 71°47'S., 8°54'E.

A bare rock peak, 2,070 m., at the NW. end of Vinten-Johansen Ridge in the Kurze Mountains, Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named Kubbestolen (the log chair).

Kuberry Rocks 75°17'S., 138°31'W.

A small area of exposed rock at the N. end of Coulter Heights. The rocks are 6 mi. NW. of Matikonis Peak, near the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Richard W. Kuberry, geomagnetist/seismologist at Byrd Station, 1969-70.

Kubitza Glacier 70°24'S., 63°11'W.

A northern tributary glacier to the Clifford Glacier, joining it just east of Mt. Samsel in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for J. T. Kubitza, BUC, USN, Chief Builder in the construction detachment at Palmer Station in 1969-70.

Kubusdaelda 71°59'S., 7°26'E.

A steep, ice-filled ravine between Kubus and Klevekampen Mountains in the Filchner Mountains, Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Kubusdaelda (the cube dell) in association with Kubus Mountain.

Kubusdalen 71°58'S., 7°14'E.

An ice-filled valley between Trollslottet and Kubus Mountains in the Filchner Mountains, Queen Maud Land. Plotted from surveys and air photos by NorAE (1956-60) and named Kubusdalen (the cube valley) in association with Kubus Mountain.

Kubus Mountain 71°59'S., 7°21'E.

A distinctive blocky mountain (2,985 m.) rising 3 mi. SE. of Trollslottet Mountain, in the NW. part of the Filchner Mountains of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and given the descriptive name Kubus (the cube).

Kuhn Nunatak 84°06'S., 66°34'W.

One of the Rambo Nunataks, lying 3 mi. SW. of Oliver Nunatak on the W. side of Foundation Ice Stream,

GEOGRAPHIC NAMES OF THE ANTARCTIC

in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Michael H. Kuhn, meteorologist at Plateau Station, winter 1967.

Kuiper Scarp 71°26'S., 68°27'W.

An east-west escarpment along the south side of Uranus Glacier on the east side of Alexander Island. The scarp was photographed by Lincoln Ellsworth, Nov. 23, 1935, in the course of a trans-Antarctic flight and was plotted from the photos by W.L.G. Joerg. Named by UK-APC from association with Uranus Glacier after Gerald P. Kuiper, the American astronomer who in 1948 discovered Miranda, one of the satellites of Uranus.

Kujira Point 69°36'S., 38°16'E.

A small point forming the N. extremity of Padda I. in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Remapped by JARE, 1957-62, and named Kujira-misaki (whale point).

Kukri Hills 77°44'S., 162°42'E.

Prominent E.-W. trending range, about 25 mi. long and over 2,000 m. high, forming the divide between Ferrar Glacier on the S. and Taylor Glacier and Taylor Valley on the N., in Victoria Land. Discovered by the BrNAE (1901-4) and probably so named because its shape resembles that of Kukri, a Gurkha knife.

Kulen Mountain 72°39'S., 3°18'W.

A projecting-type mountain on the NW. side of Jøkulskarvet Ridge, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Kulen.

Kullen Knoll 72°04'S., 2°44'W.

A knoll 2 mi. N. of Gösta Peaks, in the S. part of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kullen.

Kuno Point 66°24'S., 67°10'W.

The southwestern extremity of Watkins I., Biscoe Islands. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Yas Kuno, Japanese physiologist who has specialized in the study of human sweating and its effect as a temperature regulator.

Kupriyanov Islands 54°45'S., 36°19'W.

Group of islands off the S. coast of South Georgia, close S. of Diaz Cove. The name "Mys Kupriyanov" or "Mys Kupriyanova," for Ivan Kupriyanov, an officer

of the *Mirnyy*, was given by Adm. Thaddeus Bellingshausen in 1819 to a cape on the coast between Novosilski Bay and Cape Disappointment. The name was evidently overlooked by Lt. Cdr. J. M. Chaplin, who in 1930 gave the name Johannesen Point to a feature on this same stretch of coast. Johannesen Point was identified by the SGS, 1955-56, as an insignificant point not requiring a name. At the same time, the group of islands off Diaz Cove was mapped in detail for the first time. An altered form of the original Russian name has been accepted for this group.

Kurchatov, Mount 71°39'S., 11°14'E.

A peak, 2,220 m., rising from the base of Sponskafte Spur in the Humboldt Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1963 for Soviet scientist I. V. Kurchatov.

Kurchatova, Gora: see Kurchatov, Mount 71°39'S., 11°14'E.

Kurki Hills: see Kukri Hills 77°44'S., 162°42'E.

Kurlak, Mount 84°05'S., 168°00'E.

An ice-covered mountain 3 mi. SE. of Mt. Bell in Queen Alexandra Range. Named by US-ACAN for Lt. Cdr. William B. Kurlak, USN, aircraft commander during USN Op. DFrz., 1964.

Kurtse, Gory: see Kurze Mountains 71°53'S., 8°55'E.

Kurumi Island 69°01'S., 39°28'E.

Island lying between Ongulkalven I. and Ongul I. in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Surveyed by JARE, 1957-62, and named Kurumi-shima (walnut island) because of its configuration.

Kurzeffella: see Gagarin Mountains 71°57'S., 9°23'E.

Kurze Mountains 71°53'S., 8°55'E.

A range of mainly bare rock peaks, ridges and mountains about 20 mi. long and 6 mi. wide in the Orvin Mtns. of Queen Maud Land. The feature stands between Drygalski Mtns. on the west and Gagarin Mtns. and Conrad Mtns. on the east. Kurze Mountains were discovered and plotted from air photos by the GerAE under Ritscher, 1938-39, who named them for the Dir. of the Naval Division of the former Marineleitung (German Admiralty). They were remapped by Norsk Polarinstitut from surveys and air photos taken by the NorAE, 1956-60, and given the name "Holtedahlfjella." The correlation of the prior name (Kurze) with

GEOGRAPHIC NAMES OF THE ANTARCTIC

this feature is quite definite and is recommended for the sake of international uniformity and historical continuity.

Kusunoki Point 65°33'S., 65°59'W.

A point on the W. coast and near the N. end of Renaud Island, in the Biscoe Islands. Mapped from air photos by Hunting Aerosurveys, 1956-57. Named by UK-APC for Kou Kusunoki, Japanese sea ice specialist at Hokkaido University.

Kutschin Peak 86°25'S., 159°42'W.

Prominent peak 2,360 m., on the W. slope of the Nilsen Plateau, standing 6 mi. S. of Mt. Kristensen, at the E. side of Amundsen Gl., in the Queen Maud Mountains. Named by US-ACAN for A. Kutschin, a member of the sea party of Amundsen's Nor. exp. of 1910-12.

Kuven Hill 73°52'S., 5°15'W.

A prominent hill between Gommen Valley and Kuv-sletta Flat, near the SW. end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Kuven (the hump).

Kuvsletta Flat 73°50'S., 5°14'W.

A small, flattish, ice-covered area between Utrinden and Framranten Points, near the SW. end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Kuvsletta (the hump plain).

Kuvungen Hill 73°50'S., 5°09'W.

A hill just SE. of Framranten Point, near the SW. end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Kuvungen.

Kuzira Point: see Kujira Point 69°36'S., 38°16'E.

Kvaevefjellet Mountain 71°52'S., 14°27'E.

An elongated mountain, about 6 mi. long and surmounted by Mt. Fučik, which has been eroded by the ice into a series of spurs that enclose small cirques, standing at the N. end of the Payer Mtns. in Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by the Norwegian Antarctic Expedition, 1956-60, and named Kvaevefjellet.

Kvaevenutane Peaks 71°57'S., 14°18'E.

A small cluster of peaks which include Mt. Kibal'chich and Mt. Brounov, located 2 mi. SW. of Kvaevefjellet

Mtn. in the Payer Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Kvaevenutane in association with Kvaevefjellet Mountain.

Kvalfinnen Ridge 72°08'S., 26°24'E.

Ridge, 2,670 m., standing on the W. side of Byrdreen and 0.5 mi. N. of Isachsen Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Kvalfinnen (the whale fin) because of its shape.

Kvamsgavlen Cliff 71°46'S., 11°50'E.

A gable-like cliff facing E. at the SE. corner of Storkvammen Cirque, on the E. side of the Humboldt Mtns. in Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped and named Kvamsgavlen by Norway from air photos and surveys by the NorAE, 1956-60.

Kvars Bay: see Kvarsnes Bay 67°03'S., 56°49'E.

Kvarsnes Bay 67°03'S., 56°49'E.

Small bay at the SW. side of Kvarsnes Foreland, in the S. part of Edward VIII Bay. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and named Kvarsnesvika.

Kvarsnes Foreland 67°02'S., 57°00'E.

Prominent, rocky foreland projecting into the S. side of Edward VIII Bay close W. of the Øygarden Group. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37, who named it Kvarsnes.

Kvars Promontory: see Kvarsnes Foreland 67°02'S., 57°00'E.

Kvassknatten Nunatak 72°27'S., 0°20'E.

One of the Knattebrauta Nunataks, in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kvassknatten (the sharp crag).

Kvasstind Peak 72°31'S., 3°23'W.

A peak in the NE. part of Borg Mountain, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Kvasstind (sharp peak).

Kvea Valley 71°55'S., 4°30'E.

A rectangular ice-filled valley between Grinda and Skigarden Ridges, northward of Mt. Grytøyr in the

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mühlig-Hofmann Mtns. of Queen Maud Land.
Mapped from surveys and air photos by the NorAE (1956-60) and named Kvea (the sheepcote).

Kvervelnatten Peak 73°31'S., 3°53'W.

A peak 2 mi. SW. of Svartbandufsa Bluff in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Kvervelnatten.

Kvinge Peninsula 71°10'S., 61°10'W.

Snow-covered peninsula at the N. side of Palmer Inlet terminating in Cape Bryant, on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Thor Kvinge, Norwegian oceanographer from the Univ. of Bergen, a member of the International Weddell Sea Oceanographic Expeditions, 1968, 1969 and 1970.

Kvithamaren Cliff 71°59'S., 5°02'E.

A cliff just E. of Slokstallen Mtn. in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Kvithamaren (the white hammer or crag).

Kvitholten Hill 71°49'S., 5°51'E.

A snow-clad hill at the E. side of Austreskorve Glacier, standing just S. of Sagbladet Ridge in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Kvitholten (the white grove).

Kvithø Peak 72°29'S., 1°13'E.

An isolated peak rising above the ice 7 mi. SE. of Kvitkjølen Ridge, in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kvithø (white hill).

Kvithovden Peak 72°22'S., 0°45'E.

A peak at the N. end of Kvitkjølen Ridge in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kvithovden (the white peak).

Kvitkjølen Ridge 72°24'S., 0°49'E.

A rock ridge between ice filled Kvitsvodene Valley and Ising Glacier in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from

surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kvitkjølen (the white keel).

Kvitkleven Cirque 72°00'S., 7°43'E.

An ice-filled cirque at the S. side of Klevekampen Mtn. in the Filchner Mtns. of Queen Maud Land. First plotted from air photos by the GerAE (1938-39). Mapped from surveys and air photos by the NorAE (1956-60) and named Kvitkleven (the white closet).

Kvitøya: see White Island 66°44'S., 48°35'E.

Kvitskarvet: see Krüger, Mount 72°36'S., 0°57'E.

Kvitskarvhalsen Saddle 72°30'S., 0°51'E.

An ice saddle between Mt. Krüger and Robin Heights in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kvitskarvhalsen (the white mountain neck).

Kvitsvodene Valley 72°26'S., 0°45'E.

An ice-filled valley about 5 mi. long between Kvitkjølen Ridge and Robin Heights in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Kvitsvodene.

Kyffin, Mount 83°48'S., 171°38'E.

A distinctive reddish-brown mountain, 1,670 m., with a sloping spur extending 4 mi. to the N., at the extreme N. end of the Commonwealth Range, projecting into the E. side of Beardmore Gl. and rising precipitously above it. Discovered by the BrAE (1907-9) and named for Evan Kyffin-Thomas, one of the proprietors of the *Register*, an Adelaide, South Australian newspaper. He was a traveling companion of Shackleton's on the voyage from England.

Kyffin, Mount: see Kyffin, Mount 83°48'S., 171°38'E.

Kyle, Mount 71°57'S., 168°35'E.

A mountain (2,900 m.) midway along the ridge bordering the N. side of Deming Gl., in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Ricky L. Kyle, UT2, USN, Utilitiesman at McMurdo Station, 1967.

Kyle Cone 77°31'S., 169°16'E.

An exposed volcanic cone near Cape Crozier, located 1.2 mi. WNW. of the summit of The Knoll in eastern

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ross Island. Named by NZ-APC for P.R. Kyle, geologist with VUWAE which examined the cone in the 1969-70 season.

Kyle Nunataks 66°47'S., 51°20'E.

Three nunataks 2.5 mi. E. of Mt. Hampson, in the N. part of the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for J. T. Kyle, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Kyrkjebakken Slope 71°54'S., 6°32'E.

An ice slope on the W. side of Jøkulkyrkja Mtn., in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Kyrkjebakken (the church hill).

Kyrkjedalen Valley 71°50'S., 6°53'E.

An ice-filled valley between Jøkulkyrkja Mtn. and Habermehl Peak in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air pho-

tos by the NorAE (1956-60) and named Kyrkjedalen (the church valley).

Kyrkjedalshalsen Saddle 71°47'S., 6°53'E.

An ice saddle between Gessner and Habermehl Peaks in the Mühlig-Hofmann Mtns., Queen Maud Land. Plotted from surveys and air photos by the NorAE and named Kyrkjedalshalsen (the church valley neck).

Kyrkjekskipet Peak 71°52'S., 6°48'E.

A peak, 3,085 m., just N. of Kapellet Canyon and dominating the NE. part of Jøkulkyrkja Mtn. in the Mühlig-Hofmann Mountains. Mapped from surveys and air photos by the NorAE (1956-60) and named Kyrkjekskipet (the church nave).

Kyrkjektorget 71°54'S., 6°57'E.

A flattish ice-filled amphitheater on the E. side of Jøkulkyrkja Mtn. in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Kyrkjektorget (the church market place).

L

Laavebrua: see Ramp Rocks 53°59'S., 38°18'W.

Labbe, Isote: see Labbé Rock 63°17'S., 57°56'W.

Labbe, Isotes: see Stray Islands 65°10'S., 64°14'W.

Labbé Rock 63°17'S., 57°56'W.

A rock lying about 0.7 mi. NW. of Largo I. in the Duroch Islands. The name was conferred by the first Chilean Ant. Exp. (1947) for First Lt. Custodio Labbé Lippi, navigation officer of the transport ship *Angamos*.

Labuan, Cape 53°11'S., 73°28'E.

A rocky point midway between Cape Arkona and Lavett Bluff, forming the SW. extremity of Heard Island. Charted in 1948 by the ANARE and named by them for HMAS *Labuan*, relief ship for the expedition.

Labyrinth 77°33'S., 160°50'E.

An extensive flat upland area which has been deeply eroded at the W. end of Wright Valley, in Victoria Land. So named by the VUWAE (1958-59) because the eroded dolerite of which it is formed gives an appearance of a labyrinth.

Lacaze-Duthiers, Cape: see Duthiers Point 64°48'S., 62°49'W.

Lacey, Mount 70°11'S., 64°43'E.

A high, pyramidal, brown rock mountain with two sharp peaks, standing 1 mi. W. of Mt. Béchervaise in the Athos Range, Prince Charles Mountains. Sighted by an ANARE party led by J. M. Béchervaise in November 1955 and plotted by R. H. Lacey, surveyor at Mawson Station in 1955, for whom it is named.

Lachal Bluffs 67°30'S., 61°09'E.

A group of rocky headlands located just S. of Ufs Island on the coast of Mac. Robertson Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for R. Lachal, assistant cook at Mawson Station, who acted as geological field assistant, 1965.

Lachman, Cape 63°47'S., 57°47'W.

Cape marking the N. tip of James Ross I., which lies S. of Trinity Peninsula. Disc. by the SwedAE, 1901-4, under Nordenskjöld, who named it for J. Lachman, a patron of the expedition.

Lachman Crag 63°52'S., 57°50'W.

Escarpment which extends in a N.-S. direction for about 5 mi., its high point rising to 620 m., standing 3 mi. SSW. of Cape Lachman on James Ross I., close S. of Trinity Peninsula. First charted by the FIDS in 1945, who named it after nearby Cape Lachman.

Lachmann, Kap: see Lachman, Cape 63°47'S., 57°47'W.

Lackey Ridge 84°49'S., 116°15'W.

An E.-W. ridge, 4 mi. long, that forms the W. end of Buckeye Table in the Ohio Range, Horlick Mountains. Named by US-ACAN for Larry L. Lackey, geologist with the Ohio State University expedition to the Horlick Mountains in 1960-61.

Laclavère Plateau 63°27'S., 57°47'W.

A plateau 10 mi. long and from 1 to 3 mi. wide between Misty Pass and Theodolite Hill, Trinity Peninsula. The plateau rises directly south of the Chilean scientific station, General Bernardo O'Higgins. Named by the UK-APC (1963) for Georges R. Laclavère, French cartographer, President of the Scientific Committee on Antarctic Research (SCAR) since 1958.

La Conchée 66°47'S., 141°29'E.

Rocky island 0.25 mi. long lying between Pascal I. and Monge I., 0.7 mi. NE. of Cape Mousse. Charted in 1950 by the FrAE and named by them for one of the forts guarding the Golfe de Saint-Malo.

Lacroix, Mount 65°03'S., 63°58'W.

Prominent mountain with red vertical cliffs and a rounded summit, 640 m., surmounting the NE. end of Booth I., in the Wilhelm Archipelago. First charted by the FrAE, 1903-5, under Charcot and named by him for Alfred Lacroix, prominent French mineralogist and geologist.

Lacroix, Mount: see Lacroix Nunatak 66°51'S., 141°20'E.

Lacroix Glacier 77°40'S., 162°33'E.

Glacier between Suess and Matterhorn Glaciers, which flows SE. into Taylor Valley in Victoria Land. Charted and named by the BrAE under Scott, 1910-13, for Alfred Lacroix, French mineralogist and geologist.

Lacroix Nunatak 66°51'S., 141°20'E.

Ridge of terminal moraine, about 1 mi. long and 75 mi. high, standing immediately S. of a small zone of low rocky ridges which protrude above the ice-covered point 2 mi. SW. of Cape Margerie. Disc. in 1931 by BANZARE personnel on the *Discovery*, who sighted this feature from a distance, believing it to be a 300-m. rock peak. Named by Mawson for Prof. Alfred Lacroix, French mineralogist. Phot. from the air by USN Op. Hjp., 1946-47. Surveyed by the FrAE, 1949-51, who established an astronomical station near its center.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lacuna Island 65°31'S., 65°18'W.

A small island lying 8 mi. E. of Tula Point, the N. end of Renaud Island, in the Biscoe Islands. Mapped from air photos obtained by Hunting Aerosurveys Ltd., 1956-57. So named by UK-APC because the island lies in a lacuna (a gap) in the vertical air photos taken in 1956-57.

Lady Newnes Bay 73°40'S., 167°30'E.

A bay about 60 mi. long in the western Ross Sea, extending along the coast of Victoria Land from Cape Sibbald to Coulman Island. Discovered by the BrAE, 1898-1900, led by C. E. Borchgrevink. He named it for Lady Newnes, whose husband, Sir George Newnes, financed the expedition.

Lady Newnes Glacier: see Aviator Glacier 73°50'S., 165°03'E.

Lady Newnes Ice Shelf: see Lady Newnes Bay 73°40'S., 167°30'E.

Lady Newnes Shelf Ice: see Lady Newnes Bay 73°40'S., 167°30'E.

Laënnec Glacier 64°12'S., 62°13'W.

Glacier 3 mi. long flowing NE. into Hill Bay on the E. side of Brabant I., in the Palmer Archipelago. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for René T. H. Laënnec (1781-1826), French inventor of the stethoscope and pioneer investigator of chest diseases.

Lafarge Rocks 63°13'S., 57°33'W.

One large and several smaller rocks lying 2 mi. NW. of Casy I. and 7 mi. W. of Prime Head, the N. tip of Antarctic Peninsula. Disc. by a Fr. exp., 1837-40, under D'Urville, and named by him for Ens. Antoine Pavin de la Farge of the exp. ship *Zélée*. They were recharted by the FIDS in 1946.

Lafond Bay 63°27'S., 58°10'W.

A square bay, 3 miles by 3 miles, close S. of Cape Ducorps, Trinity Peninsula. Mapped from surveys by FIDS (1960-61). Named by UK-APC for Pierre Lafond, French naval officer on the *Astrolabe* during her Antarctic voyage (1837-40).

LaForrest Rock 85°06'S., 164°32'W.

A rock outcrop 1.5 mi. W. of the mouth of Strom Gl., along the low, ice-covered N. slopes of the Duncan Mountains. This area was first explored and mapped by the ByrdAE, 1928-30. Named by US-ACAN for B. A. LaForrest, a storekeeper on USN Operation Deep Freeze, 1966.

Lagally, Mount 67°09'S., 67°06'W.

Mountain standing 3 mi. S. of Vanni Peak in the Dorsey Mtns., on Arrowsmith Pen. in Graham Land. Mapped by FIDS from surveys and air photos, 1956-59. Named by UK-APC for Max Lagally (1881-1945), German mathematician and glaciologist who made studies of the mass and heat balance of glaciers.

Lagarrigue Cove 64°39'S., 62°34'W.

Small cove just SW. of Orne Harbor, along the W. coast of Graham Land. The name was proposed by the Argentine navy and was approved by the Argentine geographical coordinating commission in 1956 to replace the provisional name "Puerto Lote." Named in memory of a navy cook with the Argentine Antarctic Exp. of 1947-48 who perished in a crevasse accident in the vicinity.

Lagernaya, Bukhta: see O'Brien Bay 66°18'S., 110°32'E.

Lagernoye, Lake 67°40'S., 45°51'E.

A small lake situated just S. of the camp at Molodezhnaya Station and close W. of Lake Glubokoye, in the Thala Hills, Enderby Land. Mapped and named "Ozero Lagernoye" (camp lake) by the SovAE, 1961-62.

Laggard Island 64°49'S., 64°02'W.

Rocky island lying 2 mi. SE. of Bonaparte Pt., off the SW. coast of Anvers I. in the Palmer Archipelago. Named by the UK-APC following a 1955 survey by the FIDS. The name arose from the island's position on the eastern fringe of the islands in the vicinity of Arthur Harbor.

Låghamaren Cliff 72°30'S., 0°30'E.

A rock cliff forming the NW. end of Hamrane Heights in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Låghamaren (the low crag).

Lågkollane Hills 72°08'S., 22°28'E.

Group of hills standing 7 mi. N. of Bamse Mtn. between Kreitzerisen and Hansenbreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Lågkollane (the low hills).

Lagoon Island 67°35'S., 68°16'W.

Island 0.7 mi. NW. of Anchorage I. in the Léonie Islands, lying in the entrance to Ryder Bay on the SE.

GEOGRAPHIC NAMES OF THE ANTARCTIC

side of Adelaide Island. Disc. by the FrAE, 1908-10, under Charcot. Named by the BGLE under Rymill during its visit to the Léonie Islands in February 1936.

Lagoon Point 54°11'S., 36°35'W.

Point lying just E. of the entrance to Little Jason Lagoon in Jason Harbor, on the N. coast of South Georgia. The name appears on a 1930 British Admiralty chart.

La Gorce, Mount: see La Gorce Peak 77°37'S., 153°22'W.

La Gorce Mountain: see La Gorce Peak 77°37'S., 153°22'W.

La Gorce Mountains 86°45'S., 146°00'W.

A group of mountains, 20 mi. long, standing between the tributary Robison and Klein Glaciers at the E. side of the upper reaches of the Scott Glacier, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for John Oliver La Gorce, Vice Pres. of the National Geographic Society.

La Gorce Peak 77°37'S., 153°22'W.

Prominent summit 8 mi. SW. of Mt. Josephine, standing at the S. end and marking the highest peak in the Alexandra Mtns. in Marie Byrd Land. Discovered in February 1929 by the ByrdAE, and named by Byrd for John Oliver La Gorce.

Lagotellerie Island 67°53'S., 67°24'W.

Island 1 mi. long, lying 2 mi. W. of Horseshoe I. off the W. coast of Graham Land. Disc. and named by the FrAE under Charcot, 1908-10.

Lagrange, Cabo: see Strath Point 64°32'S., 62°36'W.

Lagrange, Cape: see Lagrange Peak 64°28'S., 62°26'W.

Lagrange, Mount: see Skidmore, Mount 80°18'S., 28°56'W.

Lagrange Island 66°46'S., 141°28'E.

Small rocky island 0.4 mi. NE. of Newton I. and 1.5 mi. N. of Cape Mousse. Charted in 1951 by the FrAE and named by them for Joseph Lagrange (1736-1813), Fr. geometrician.

La Grange Nunataks 80°18'S., 27°50'W.

A scattered group of nunataks extending W. for 22 mi. from the mouth of Gordon Glacier, on the N. side of the Shackleton Range. First mapped in 1957 by the CTAE; photographed in 1967 by U.S. Navy aircraft. Named by UK-APC for Johannes J. La Grange, South African meteorologist with the CTAE, 1955-58.

Lagrange Peak 64°28'S., 62°26'W.

Conspicuous peak, 450 m., standing 5.5 mi. NE. of Strath Pt. on the SE. coast of Brabant I., in the Palmer Archipelago. A point on the coast just S. of this peak was first charted and the name Lagrange applied by the BelgAE under Gerlache, 1897-99. On one of the photos published by the BelgAE the name is applied to the S. tip of the island. To avoid confusion the generic term has been altered and the name applied to the peak described here.

Lagrelius, Cape: see Lagrelius Point 63°55'S., 58°17'W.

Lagrelius Point 63°55'S., 58°17'W.

Low, ice-free point on the NW. side of James Ross I., 1.5 mi. S. of Carlson Island. Disc. and first surveyed in 1903 by the SwedAE under Nordenskjöld, who named it Cape Lagrelius after Axel Lagrelius of Stockholm, who contributed toward the cost of the expedition. It was resurveyed by the FIDS in 1952. Point is considered a more suitable descriptive term for this feature than cape.

Lågtangen: see Low Tongue 67°33'S., 62°00'E.

Laguna Hill 62°56'S., 60°42'W.

Ice-free hill, 160 m., rising above the lagoon on the SW. side of Telefon Bay, Deception I., in the South Shetland Islands. The descriptive name "Monte de la Laguna" was used on an Argentine chart in 1956.

Lahaye, Mount 72°36'S., 31°10'E.

Mountain, 2,475 m., on the N. side of Gjaever Gl. in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Prof. Edmond Lahaye, Pres. of the Belgian National Committee for the International Geophysical Year, 1957-58.

Lahille, Pointe: see Lahille Island 65°33'S., 64°23'W.

Lahille Island 65°33'S., 64°23'W.

Island 3 mi. long, lying 2 mi. W. of Nuñez Pt. off the W. coast of Graham Land. Disc. by the FrAE, 1903-5, and charted as a point on the coast which Charcot named for Fernando Lahille, noted Argentine naturalist. Charcot's FrAE, 1908-10, determined the feature's insularity.

Laine, Roca: see Lone Rock 62°21'S., 58°50'W.

Laine Hills 70°46'S., 64°28'W.

A cluster of four mainly snow-covered hills that rise above the Dyer Plateau about 16 mi. NW. of the Welch Mountains, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Daren Laine, USARP biologist at Palmer Station in 1975.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lainez, Cape: see Lainez Point 67°41'S., 67°48'W.

Lainez Point 67°41'S., 67°48'W.

Point which forms the N. side of the entrance to Dalgliesh Bay on the W. side of Pourquoi Pas I., off the W. coast of Graham Land. Disc. by the FrAE under Charcot, 1908-10, and named by him for Manuel Lainez, senator of the Argentine Republic and founder of the newspaper *El Diario*.

Laird, Cape 81°41'S., 162°27'E.

A rocky cape 8 mi. NW. of Cape May, along the W. side of Ross Ice Shelf. Named by the NZGSAE (1960-61) for Malcolm G. Laird, NZGSAE geologist who took a special interest in the peneplain surface above the cape's granite cliffs.

Laird Glacier 84°55'S., 169°55'E.

A tributary glacier, 3 mi. long, flowing NE. from the Supporters Range to enter Keltie Gl. 4 mi. SE. of Ranfurly Point. Named by US-ACAN for Robert J. Laird, USARP biologist at McMurdo Station, 1963.

Laird Plateau 82°00'S., 157°00'E.

Small plateau over 2,400 m., standing 1 mi. NW. of Mt. Hayter on the N. side of the head of Lucy Glacier. Seen by the NZGSAE (1964-65) and named for the leader of this geological party to the area, M. G. Laird.

Lair Point 62°37'S., 61°02'W.

Point lying 5 mi. SE. of Essex Pt. on the N. side of Byers Pen., Livingston I., in the South Shetland Islands. The name, given by the UK-APC in 1961, is descriptive; a large cave on this point was used by sealers during the early 1820's, relics of their occupation being found by the FIDS in 1957-58.

Laizure Glacier 69°15'S., 158°07'E.

A broad glacier that enters the sea immediately W. of Drake Head. The glacier was roughly plotted by Australia from USN Operation Highjump photography, 1946-47, and from photographs and other data obtained by ANARE, 1959-62. It was mapped in detail by USGS from surveys and USN photography, 1960-64. Named by US-ACAN for Lt. (j.g.) David H. Laizure, USN, navigator on LC-130 aircraft during Operation Deep Freeze 1968.

Lajarte Islands 64°14'S., 63°24'W.

Group of islands fringing the N. coast of Anvers I., close W. of Cape Grönland, in the Palmer Archipelago. Disc. by a Ger. exp. under Dallmann, 1873-74. Charted by the FrAE, 1903-5, and named by Charcot for Capt. Dufaure de Lajarte, French Navy.

Lake Island 68°33'S., 77°59'E.

A small island between Plog I. and Flutter I., lying in Prydz Bay just W. of Breidnes Peninsula, Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Remapped by ANARE (1957-58) and so named because a lake occupies the northern part of the island.

Laktionov Island 65°46'S., 65°46'W.

Island 2 mi. long, lying 4 mi. NE. of Jurva Pt., Renaud I., in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for A. F. Laktionov, Soviet sea ice specialist, head of the Department of Oceanography, Ice Forecasting and River Mouths of the Arctic and Antarctic Institute, Leningrad.

Lallemand Bay: see Lallemand Fjord 67°05'S., 66°45'W.

Lallemand Fiord: see Lallemand Fjord 67°05'S., 66°45'W.

Lallemand Fjord 67°05'S., 66°45'W.

Bay, 30 mi. long in a N.-S. direction and 9 mi. wide, entered between Holdfast Pt. and Roux I., lying between Arrowsmith Pen. and the W. coast of Graham Land. Disc. by the FrAE, 1908-10, under Charcot, who named it for Charles Lallemand, French scientist and member of the Bureau des Longitudes.

Lama, Mount 78°04'S., 163°42'E.

A small, bare rock peak over 800 m., culminating the ridge N. of Miers Glacier and forming the S. rampart of the valley named Shangri-la. Named in association with Shangri-la by the New Zealand VUWAE, 1960-61.

Lamadrid, Islotes: see Psi Islands 64°18'S., 63°01'W.

Lamarck Island 66°40'S., 140°02'E.

Rocky island 0.1 mi. long, lying 0.1 mi. NE. of Rostand I. in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for Jean-Baptiste Lamarck (1744-1829), Fr. naturalist.

Lamb, Cape 63°54'S., 57°37'W.

A cape which forms the SW. tip of Vega Island in the James Ross Island group. Discovered by the SwedAE, 1901-4, under Otto Nordenskjöld. Resighted in 1945 by the FIDS, who named it for I. M. Lamb, botanist on the FIDS staff at Port Lockroy, 1944; at Hope Bay, 1945.

Lambda Island 64°18'S., 63°00'W.

Island 1.5 mi. long, which lies immediately NW. of Delta I. in the Melchior Is., Palmer Archipelago. This

GEOGRAPHIC NAMES OF THE ANTARCTIC

island, the largest feature in the NW. part of the island group, was first roughly charted and named "Ile Sourrieu" by the FrAE under Charcot, 1903-5, but that name has not survived in usage. The name Lambda, derived from the 11th letter of the Greek alphabet, was probably given by DI personnel who roughly surveyed the island in 1927. The island was resurveyed by Argentine expeditions in 1942, 1943 and 1948.

Lambert Glacier 71°00'S., 70°00'E.

A major glacier, about 25 mi. wide and over 120 mi. long, draining a large area to the east and south of the Prince Charles Mountains and flowing northward to the Amery Ice Shelf. This glacier was delineated and named in 1952 by American geographer John H. Roscoe who made a detailed study of this area from aerial photographs taken by USN Operation Highjump, 1946-47. He gave the name Baker Three Glacier, using the code name of the Navy photographic aircraft and crew that made three flights in this coastal area in March 1947 resulting in geographic discoveries. The glacier was described in Gazetteer No. 14, *Geographic Names of Antarctica* (U.S. Board on Geographic Names, 1956), but the feature did not immediately appear on published maps. As a result the name Lambert Glacier, applied by ANCA in 1957 following mapping of the area by ANARE in 1956, has become established for this feature. Named for Bruce P. Lambert, Director of National Mapping in the Australian Department of National Development.

Lambert Nunatak 75°25'S., 137°54'W.

A rock nunatak that protrudes through the snow mantle of southeastern Coulter Heights, near the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Paul A. Lambert, QM1, USN, Senior Quartermaster on the USS *Glacier*, 1961-62.

Lamberts Peak 72°44'S., 74°51'E.

A small peak 3 mi. NNE. of the Mason Peaks in the Grove Mountains. Mapped from air photos, 1956-60, by ANARE. Named by ANCA for G. Lamberts, topographic draftsman with the Division of National Mapping, Australian Dept. of National Development, who has made a substantial contribution to the compilation on Antarctic maps.

Lambeth, Cape: see Lambeth Bluff 53°11'S., 73°36'E.

Lambeth Bluff 53°11'S., 73°36'E.

A rock coastal bluff at the E. side of Fiftyone Gl., on the S. side of Heard Island. Surveyed in 1948 by the ANARE and named "Cape Lambeth" for A. James Lambeth, geologist with the expedition. Further ANARE exploration led to revision of the name in 1964 to Lambeth Bluff.

Lambole Peak 75°04'S., 64°19'W.

A prominent peak in the NW. part of Prehn Peninsula, near the base of Antarctic Peninsula. The peak was first photographed by the RARE, 1947-48, and was mapped by the USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Paul E. Lambole, radioman at South Pole Station in 1964.

Lamb Peak 79°34'S., 84°57'W.

Conspicuous bare rock peak located 2 mi. SSE. of Maagoe Peak in the Gifford Peaks of the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Lt. Cdr. Arthur D. Lamb, who contributed to the success of austral summer resupply activities for three seasons in his capacity as operations and communications officer through USN Op. DFrz. 1966.

Lamb Point 73°41'S., 60°48'W.

Low, ice-covered point forming the S. side of the entrance to Howkins Inlet, on the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for H. H. Lamb, meteorologist on the British whale factory ship *Balaena* in Antarctic waters in 1946-47, who prepared daily forecasts for the whaling fleet on the basis of FIDS and other meteorological reports.

Lamina Peak 70°32'S., 68°45'W.

Prominent pyramid-shaped peak, 1,280 m., surmounting a stratified ridge which curves down from Mt. Edred northeastward toward George VI Sound. The peak stands 4.5 mi. inland from the E. coast of Alexander I. at the S. limit of the Douglas Range. First phot. from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W. L. G. Joerg. Roughly surveyed in 1936 by the BGLE and resurveyed in 1949 by the FIDS. So named by the FIDS because of the marked horizontal stratification of the rocks of this peak.

Lammers Glacier 68°37'S., 66°10'W.

Large glacier flowing E. along the N. side of Godfrey Upland into the Traffic Circle and Mercator Ice Piedmont, on the E. coast of Graham Land. This glacier appears indistinctly in an aerial photograph taken by Sir Hubert Wilkins on Dec. 20, 1928, but shows more clearly in aerial photographs taken by Lincoln Ellsworth in 1935 and the USAS in 1940. It was resighted in 1947 by the RARE under Ronne, who named it for Lester Lammers, contributor of nine grown husky dogs and four puppies to the expedition.

GEOGRAPHIC NAMES OF THE ANTARCTIC

La Molaire 66°40'S., 140°01'E.

Rocky hill, 24 m., on the W. side of Rostand I. in the Géologie Archipelago. Charted and named in 1951 by the FrAE. The name suggests the feature's resemblance to a molar, "La Molaire" being French for the molar.

Lampert, Mount 74°33'S., 62°39'W.

Mountain about 6 mi. W. of Kelsey Cliff in the SE. part of Guettard Range, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Irwin R. Lampert, storekeeper at South Pole Station in 1964.

Lamping Peak 84°14'S., 164°49'E.

A rock peak standing between Prebble and Wyckoff Glaciers, on the western slopes of the Queen Alexandra Range. Named by US-ACAN for John T. Lamping, USARP geomagnetist at South Pole Station, 1961.

Lampitt Nunatak 66°57'S., 65°47'W.

Nunatak near the head of Murphy Gl., in Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1958 for Leslie H. Lampitt (1887-1957), chemist who contributed many ideas for concentrated rations used by British polar expeditions during the period 1937-57.

Lamplugh Bay: see *Lamplugh Inlet* 71°23'S., 61°10'W.

Lamplugh Inlet 71°23'S., 61°10'W.

Inlet 7 mi. long, lying between Capes Healy and Howard, along the E. coast of Palmer Land. Disc. by members of the USAS who explored this coast from East Base by land and from the air in 1940. Named for Elmer L. Lamplugh, chief radio operator at East Base.

Lamplugh Island 75°38'S., 162°45'E.

An ice-capped island, 10 mi. long, lying 4 mi. N. of Whitmer Peninsula, along the coast of Victoria Land. This feature was first sighted by the BrNAE led by Scott, 1901-4, but it was first charted as an island by the BrAE under Shackleton, 1907-9. Named by Shackleton for G.W. Lamplugh, who gave assistance to the expedition.

Lamykin Dome 67°27'S., 46°40'E.

A domed feature (525 m.) which forms the ice-covered summit of Tange Promontory, on the coast of Enderby Land. The feature was plotted on charts by the SovAE (1957) and named for Soviet hydrographer, S. M. Lamykin.

Lana Point: see *Café Point* 64°39'S., 61°59'W.

Lancaster, Cape 64°51'S., 63°44'W.

Cape forming the S. extremity of Anvers I., in the Palmer Archipelago. Disc. by a Ger. exp. under Dallmann, 1873-74. Later sighted by the BelgAE, 1897-99, under Gerlache, who named it for Albert Lancaster, Scientific Dir. of the Meteorological Service of the Royal Observatory of Belgium and a supporter of the expedition.

Lancaster Hill 65°21'S., 64°00'W.

Hill at the S. side of the mouth of Trooz Gl., on the W. coast of Graham Land. First charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1959 for Sir James Lancaster, English navigator of the East India Company who was responsible for the first regular use of fruit juice to prevent scurvy on ships, in 1601.

Lance Rocks 82°52'S., 48°19'W.

Two rocks lying together at the NE. end of Crouse Spur in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Capt. Samuel J. Lance, USAF, navigator and member of the Electronic Test Unit in the Pensacola Mountains, 1957-58.

Lanchester Bay 63°55'S., 60°06'W.

Bay 7 mi. wide lying E. of Havilland Pt., along the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Frederick W. Lanchester (1868-1946), aeronautical engineer who laid the foundations of modern airfoil theory.

Lancing Glacier 54°20'S., 36°56'W.

Glacier 3 mi. long, flowing S. from Mt. Corneliussen and Smillie Peak to Newark Bay on the S. side of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for the *Lancing* (ex-*Flackwell*), built in 1898, and converted to a whale factory ship in 1923; the first factory ship to be fitted with a slipway. The *Lancing* operated off South Georgia and the South Orkney Islands in 1925-26.

Landauer Point 67°04'S., 67°48'W.

A point on the E. coast of Adelaide I., marking the W. side of the N. entrance to Tickle Channel in Graham Land. Mapped by the FIDS from air photos taken by RARE, 1947-48, and FIDASE, 1956-57. Named by UK-APC for Joseph K. Landauer, American physicist who has studied the mechanical properties of ice and glacier flow.

Land Bay 75°25'S., 141°45'W.

An ice-filled bay, about 40 mi. wide, indenting the coast of Marie Byrd Land just eastward of Groves Is-

GEOGRAPHIC NAMES OF THE ANTARCTIC

land. Discovered by the USAS (1939-41). The bay takes its name from Land Glacier which descends into the bay.

Landen, Mount: see Landen Ridge 66°50'S., 63°54'W.

Landen Ridge 66°50'S., 63°54'W.

A narrow rock ridge at the E. end of Cole Peninsula in Graham Land. During Dec. 1947 it was charted by FIDS and photographed from the air by the RARE under Ronne. Named by Ronne for David Landen of USGS, who assisted in planning the RARE photographic program and in correlating photographs after the expedition returned.

Landfall Peak 72°01'S., 102°08'W.

Prominent peak-shaped landmark near the extreme W. end of Thurston Island, about 8 mi. ENE. of Cape Flying Fish. Disc. by members of the USAS in flights from the ship *Bear* in February 1940, and photographed at that time by E. B. Perce. The peak was plotted from air photos taken by USN Op. Hjp. in December 1946, and was observed by personnel of the USN Bellingshausen Sea Exp. in February 1960. So named by US-ACAN because rock exposures on the peak serve as a mark for ships approaching Thurston Island from the west.

Land Glacier 75°40'S., 141°45'W.

A broad, heavily-crevassed glacier, about 35 mi. long, descending into Land Bay in Marie Byrd Land. Discovered by the USAS (1939-41) and named for R. Adm. Emory S. Land, Chairman of the U.S. Maritime Commission.

Landing, The 78°22'S., 161°25'E.

A large flat snowfield in the upper Skelton Glacier, between the Upper and Lower Staircases. Mapped and named in February 1957 by the N.Z. party of the CTAE, 1956-58.

Landing Cove 60°44'S., 45°41'W.

A cove north of Conroy Point on the northwest side of Moe Island in the South Orkney Islands. So named by UK-APC because the cove provides the only possible landing place for small boats on the island.

Landmark Peak 79°10'S., 85°40'W.

A very prominent peak, 1,840 m., standing 5 mi. S. of Minnesota Gl. on the E. side of Gowan Gl., in the Heritage Range. So named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, because the peak is a well used reference point for pilots flying in the area.

Landmark Point 67°31'S., 63°56'E.

A rocky point lying 0.5 mi. SE. of Safety I., on the coast of Mac. Robertson Land. Mapped from ANARE surveys and air photos, 1956-66. So named by ANCA because it is almost due south from Auster Rookery and affords an excellent landmark if approaching the rookery along the coast from Mawson Station.

Landolt, Mount 78°46'S., 84°30'W.

Mountain (2,280 m.) standing at the head of Hudman Gl. in the S. part of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Arlo U. Landolt, aurora scientist at the IGY South Pole Station in 1957.

Landon Promontory 69°13'S., 69°20'E.

A broad, domed ice-covered promontory on the W. side of the Amery Ice Shelf, about 5 mi. S. of Foley Promontory. Plotted from ANARE air photos taken in 1956. The area was first visited by an ANARE party led by D. R. Carstens in November 1962. Named by ANCA for I. Landon-Smith, glaciologist at Mawson Station in 1962, a member of the field party.

Landry Bluff 85°16'S., 175°37'W.

A rock bluff in the Cumulus Hills, standing just N. of the mouth of Logie Gl., where the latter joins Shackleton Glacier. Named by US-ACAN for Edward J. Landry, USARP meteorologist who wintered at Byrd Station in 1963 and at South Pole Station in 1965.

Landry Peak: see Billey Bluff 75°32'S., 140°02'W.

Lands End Nunataks 83°43'S., 172°37'E.

Two rock nunataks 2 mi. NNW. of Airdrop Peak at the N. end of Ebony Ridge. The nunataks lie at the E. side of the terminus of Beardmore Glacier and mark the northern termination of the Commonwealth Range at Ross Ice Shelf. The descriptive name was recommended to US-ACAN by John Gunner of the Ohio State University Institute of Polar Studies, who, with Henry H. Brecher, measured a geological section here on Jan. 16, 1970.

Lange Glacier 62°07'S., 58°30'W.

Glacier flowing into the W. side of Admiralty Bay close S. of Admiralen Peak, King George I., in the South Shetland Islands. Charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1960 for Alexander Lange (1860-1922), Norwegian pioneer of modern steam whaling in the South Shetland Is. in 1905-6, and commander of the *Admiralen*.

Lange Peak 71°34'S., 167°42'E.

Peak (2,435 m.) in the west-central part of Lyttelton Range in the Admiralty Mountains. Mapped by

GEOGRAPHIC NAMES OF THE ANTARCTIC

USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for USARP biologist Otto L. Lange of Hallett Station, 1966-67.

Langestrand: see Cheapman Bay 54°09'S., 37°31'W.

Langestrand Harbour: see Cheapman Bay 54°09'S., 37°31'W.

Langevad Glacier 73°08'S., 168°50'E.

A glacier located 2 mi. S. of Bargh Gl. and just W. of Narrow Neck, draining SW. from the Daniell Pen. into the lower part of Borchgrevink Gl., in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Michael W. Langevad, electronics technician at Hallett Station, 1957.

Langevatnet: see Ellis Fjord 68°36'S., 78°05'E.

Langflogbreen: see Langflog Glacier 72°06'S., 4°14'E.

Langfloet Cliff 72°06'S., 4°24'E.

A rock cliff 6 mi. long at the W. side of Flogeken Glacier, in the Mühlig-Hofmann Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Langfloet (the long rock wall).

Langflog Glacier 72°06'S., 4°14'E.

Glacier flowing N. between Mt. Hochlin and Langfloet Cliff in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Langflogbreen (long rock wall glacier).

Langford Peak 85°33'S., 135°23'W.

An isolated peak 2 mi. W. of the lower part of Reedy Gl. and 5 mi. NW. of Abbey Nunatak. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Lawrence G. Langford, Jr., a builder with the Byrd Station winter party, 1958.

Langhofer Island 72°32'S., 93°02'W.

A small ice-covered island with a rock outcrop near the S. end, lying at the N. edge of Abbot Ice Shelf and 0.5 mi. E. of McNamara Island. The USS *Glacier* lay close off the island, Feb. 11, 1961, and geological and botanical collections were made at the outcrop. Named by US-ACAN for Joel H. Langhofer, USGS topographic engineer aboard the *Glacier* who positioned geographical features in this area.

Langhovde Glacier 69°13'S., 39°48'E.

A glacier at the E. side of Langhovde Hills, flowing N. to Hovde Bay on the E. shore of Lützow-Holm Bay.

Mapped from surveys and air photos by JARE, 1957-62, and named for its proximity to Langhovde Hills.

Langhovde Hills 69°14'S., 39°44'E.

An extensive area of bare rock hills along the E. shore of Lützow-Holm Bay, just S. of Hovde Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Langhovde (long knoll).

Langhovde-kita Point 69°10'S., 39°37'E.

A point which marks the N. end of Langhovde Hills, on the E. shore of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Surveyed by JARE, 1957-62, and named Langhovde-kita-misaki (Langhovde north point) because of its location in Langhovde Hills.

Lang Island 66°59'S., 57°41'E.

Island 1 mi. long and 0.4 mi. wide, lying midway between Abrupt I. and the Øygarden Group. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37, and called by them Langøy (long island).

Langley Peak 64°02'S., 60°36'W.

A peak 3 mi. E. of Curtiss Bay, rising above the W. end of Wright Ice Piedmont in Graham Land. Mapped from air photos taken by Hunting Aerosurveys (1955-57). Named by UK-APC for Samuel P. Langley (1834-1906), American mathematician, one time Secretary of the Smithsonian Inst., designer of the first satisfactory powered model airplane, in 1896.

Langmuir Cove 66°58'S., 67°10'W.

A cove in the N. end of Arrowsmith Peninsula, Graham Land. Named by UK-APC for Irving Langmuir (1881-1957), American physicist who has studied the formation of snow.

Langnabbane: see Wilkinson Peaks 66°37'S., 54°15'E.

Langnes Channel: see Langnes Fjord 68°30'S., 78°15'E.

Langneset: see Langnes Peninsula 68°28'S., 78°15'E.

Langnes Fjord 68°30'S., 78°15'E.

A narrow fjord, 10 mi. long, between Langnes Peninsula and Breidnes Peninsula in the Vestfold Hills. Mapped from air photos by the Lars Christensen Expedition (1936-37) and named after Langnes Peninsula. John Roscoe's 1952 study of air photos taken by USN Operation Highjump (1946-47) revealed that this fjord continues farther east than was previously

GEOGRAPHIC NAMES OF THE ANTARCTIC

mapped, and that it includes what had been plotted as an isolated lake which the Norwegians had called "Breidvatnet."

Langnes Inlet: see Langnes Fjord 68°30'S., 78°15'E.

Langnes Peninsula 68°28'S., 78°15'E.

A narrow rocky peninsula of irregular shape, 9 mi. long, being the northernmost of the three main peninsulas that comprise the Vestfold Hills. The name derives from "Langneset" (the long point), applied by the Lars Christensen Expedition (1936-37) which mapped the peninsula from aerial photographs.

Lang Nunatak 74°10'S., 66°29'W.

An isolated nunatak lying in the interior of southern Palmer Land, about 30 mi. W. of the head of Irvine Glacier. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for James F. Lang, USARP Asst. Representative at Byrd Station, summer 1965-66.

Langnuten: see Breckinridge, Mount 66°37'S., 53°41'E.

Langpollen Cove 69°26'S., 39°35'E.

A long, narrow cove in the NW. part of Skarvsnæs Foreland on the E. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Langpollen (the long bay).

Langskavlen Glacier 72°01'S., 14°29'E.

A short, steep glacier flowing from the N. side of Skavlhø Mtn. in the Payer Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Langskavlen (the long snowdrift).

Lang Sound 67°09'S., 58°40'E.

Sound 1.5 mi. wide at its narrowest point and 9 mi. long, lying between the group of islands that include Broka and Havstein Islands and the Law Promontory. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp. in January-February 1937 and named Langsundet (the long sound).

Längstans Udde: see Longing, Cape 64°33'S., 58°50'W.

Langsundet: see Lang Sound 67°09'S., 58°40'E.

Langway, Mount 75°29'S., 139°47'W.

A coastal mountain (760 m.) located 2.5 mi. SW. of Mt. LeMasurier in the Ickes Mtns. of Marie Byrd Land. The mountain was first photographed from air-

craft of the USAS, 1939-41. Named by US-ACAN for Chester C. Langway, USARP glaciologist at Byrd Station, 1968-69.

Lankester, Cape 79°16'S., 160°29'E.

A high, rounded, snow-covered cape at the S. side of the entrance to Mulock Inlet, along the W. edge of the Ross Ice Shelf. Discovered and named by the BrNAE (1901-4). Probably named for Sir Edwin Ray Lankester, Dir. of the Natural History Department of the British Museum (1898-1907) and founder of the Marine Biological Association in 1884.

Lann Glacier 71°15'S., 167°54'E.

A steep tributary glacier, 3 mi. long, in the N. end of Admiralty Mountains. The glacier is 4 mi. E. of Rowles Gl. and flows NW. to enter Dennistoun Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Roy R. Lann, U.S. Navy cook at Hallett Station, 1964.

Lanning, Mount 77°47'S., 85°45'W.

Mountain (1,820 m.) located at the S. side Newcomer Gl., 5 mi. SE. of Mt. Warren, in the N. portion of the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for 1st. Lt. Delmar L. Lanning, USAF, who participated in establishing the South Pole Station in the 1956-57 season.

Lanternman Range 71°40'S., 163°10'E.

A mountain range about 35 mi. long and 12 mi. wide, forming the SW. part of the Bowers Mountains. It is bounded by the Rennick, Sledgers, Black and Canham Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Cdr. William Lanternman, aerological officer for USN Operation Deep Freeze, 1959-62.

Lanyon, Mount 71°15'S., 67°10'E.

A large mountain about 11 mi. S. of Taylor Platform in the Prince Charles Mountains. The mountain is divided in the S. by a small, plateau-fed glacier and an area of moraine extends eastward from the mountain for 8 miles. Plotted from ANARE air photos of 1956 and 1960. Named by ANCA for J. H. Lanyon, officer in charge at Wilkes Station in 1965.

Lanyon Peak 77°15'S., 161°41'E.

A sharp rock peak 2.5 mi. E. of Victoria Upper Glacier in the Saint Johns Range of Victoria Land. Named by US-ACAN for Margaret C. Lanyon, a New Zealand national who for many years in the 1960's and 1970's served in a secretarial and administrative capacity with the U.S. Antarctic Research Program, in Christchurch.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lanz Peak 77°17'S., 86°17'W.

Peak, 1,570 m., near the extreme N. end of the Sentinel Range in the Ellsworth Mountains. It is 10 mi. NNW. of Mt. Weems and is the middle one of a group of three peaks lying in a NE.-SW. direction. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Walter J. Lanz, radio operator on three Ellsworth Antarctic expeditions, 1933-36.

Lapeyrère Bay 64°23'S., 63°15'W.

Bay 7 mi. long and 2 mi. wide, which lies N. of Gourdon Pen. and indents the NE. coast of Anvers I., in the Palmer Archipelago. The bay was roughly charted by the Ger. exp. under Dallmann, 1873-74. Recharted by the FrAE, 1903-5, and named by Charcot for R. Adm. Boue de Lapeyrère, French Navy.

Laplace Island 66°47'S., 141°28'E.

Small rocky island 0.3 mi. WNW. of La Conchée and 0.75 mi. N. of Cape Mousse. Charted in 1951 by the FrAE and named by them for Pierre de Laplace (1749-1827), Fr. astronomer and mathematician.

La Plata Channel: see Plata Passage 64°40'S., 62°01'W.

La Plaza Point: see Plaza Point 62°06'S., 58°26'W.

LaPrade Valley 85°11'S., 174°36'W.

A valley in the Cumulus Hills with steep rock walls and an ice-covered floor, about 3 mi. long, extending N. to McGregor Gl., just W. of Rougier Hill. Named by the Texas Tech Shackleton Gl. Exp. (1964-65) for Kerby E. LaPrade, graduate student at Texas Technological College, and a member of the expedition.

Laprida, Monte: see Banck, Mount 64°54'S., 63°03'W.

Laputa Nunataks 66°08'S., 62°58'W.

A range of nunataks and snow-covered hills with minor rock outcrops, rising from about 500 m. to over 1,000 m. Located 6 mi. NW. of Adie Inlet on the E. side of Graham Land. First charted by the FIDS and photographed from the air by the RARE in 1947. Named by UK-APC after the flying island in Jonathan Swift's *Gulliver's Travels*, and in association with Gulliver Nunatak to the southeast.

Larga, Isla: see Long Island 63°46'S., 58°12'W.

Larga, Punta: see Aguda Point 65°02'S., 63°41'W.

Large Razorback Island: see Big Razorback Island 77°41'S., 166°30'E.

Largo Island 63°18'S., 57°53'W.

An elongated island, 1 mi. in extent, which is the largest of the Duroch Islands. It lies 1 mi. W. of Halpern Point, Trinity Peninsula. Martin Halpern, leader of the University of Wisconsin party that geologically mapped this area, 1961-62, reported the name "Largo" (meaning long) to be the only one used by Chilean officials at the nearby General Bernardo O'Higgins Station.

Larkman Nunatak 85°46'S., 179°23'E.

A large, isolated rock nunatak, 2,660 m., at the SE. end of the Grosvenor Mtns., 12 mi. E. of Mauger Nunatak. Named by the NZGSAE (1961-62) for A. H. Larkman, Chief Engineer of the *Aurora*, the vessel which transported the Ross Sea Party of Shackleton's Imperial Trans-Antarctic Exp. (1914-17) from Australia to the Ross Sea.

La Roche Strait: see Bird Sound 54°00'S., 38°01'W.

Larouy Island: see Larrouy Island 65°52'S., 65°15'W.

Larrea, Estrecho: see Boyd Strait 62°50'S., 62°00'W.

Larrouy Island 65°52'S., 65°15'W.

Island 5 mi. long and 2 mi. wide which rises to 745 m., lying in Grandidier Chan., 4 mi. N. of Ferin Head. Disc. by the FrAE, 1903-5, under Charcot, who named it for Monsieur Larrouy, at that time a French Minister Plenipotentiary.

Larry Gould Bay: see Gould Bay 78°00'S., 45°00'W.

Lars Andersen Island: see Andersen Island 67°26'S., 63°22'E.

Lars Christensen Coast 69°00'S., 69°00'E.

That portion of the coast of Antarctica lying between Murray Monolith, in 66°54'E., and the head of Amery Ice Shelf in 71°00'E. The seaward portions of this area (along the Amery Ice Front to Murray Monolith) were discovered and sailed along by Norwegian whalers employed by Lars Christensen of Sandefjord, Norway, for whom this coast is named. Mr. Christensen personally participated in some of the exploration conducted in Antarctica by his firm, 1926-37. Exploration and mapping of the southwestern (interior) side of Amery Ice Shelf was accomplished by Australian expeditions during the 1950's.

Lars Christensen Land: see Lars Christensen Coast 69°00'S., 69°00'E.

Lars Christensen Peak 68°46'S., 90°31'W.

A lofty, rounded dome (1,755 m.) in the NE. part of Peter I Island. It marks the greatest elevation of the

GEOGRAPHIC NAMES OF THE ANTARCTIC

island. Peter I Island was discovered by Capt. Thaddeus Bellingshausen in January 1821 and viewed from a distance of 15 miles. The island was circumnavigated in January 1927 by the Norwegian whale catcher *Odd I* under Eyvind Tofte. He named the peak for Lars Christensen, Norwegian whaling magnate who sent out the vessel.

Larsemann Hills 69°24'S., 76°13'E.

A series of low rounded coastal hills along the SE. shore of Prydz Bay. The hills extend W. for 9 mi. from Dalk Glacier. Discovered in February 1935 by Capt. Klarius Mikkelsen from the whaling ship *Thorshavn*, sent out by Norwegian whaling magnate Lars Christensen, and given this name.

Larsen, Kap: see Larsen Point 54°12'S., 36°30'W.

Larsen, Mount 59°27'S., 27°18'W.

Mountain, 710 m., situated in the east-central portion of Thule I. in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II*, who named it for Capt. C. A. Larsen.

Larsen, Mount 74°51'S., 162°12'E.

A mountain, 1,560 m., presenting sheer granite cliffs on the N. side, standing 3 mi. SW. of Hansen Nunatak at the S. side of the mouth of Reeves Gl. in Victoria Land. Discovered by the BrNAE (1901-4) under Scott, who named it for Capt. C. A. Larsen, noted Norwegian Antarctic explorer whose explorations along the E. coast of Antarctic Pen. in the *Jason*, 1892-93, marked the beginning of commercial whaling operations in the Antarctic. Larsen led numerous whaling expeditions until his death in December 1925 while directing operations in the Ross Sea.

Larsen Bank 66°16'S., 110°32'E.

A shoal with a least depth of 52 feet in the N. part of Newcomb Bay, located 0.5 mi. N. of Kilby I. in the Windmill Islands. Discovered and charted in February 1957 by a party from the U.S.S. *Glacier*. Named by ANCA for Ludvig Larsen, second mate on the *Thala Dan*, used by ANARE in a 1962 survey of Newcomb Bay.

Larsen Bay: see Larsen Inlet 64°26'S., 59°26'W.

Larsen Channel 63°10'S., 56°12'W.

Strait 1 to 3 mi. wide separating D'Urville and Joinville Islands, which lie NE. of the tip of Antarctic Peninsula. Disc. in 1902 by the SwedAE under Norden-skjöld, and named for Capt. C. A. Larsen of the exp. ship *Antarctic*.

Larsen Cliffs 71°56'S., 6°53'E.

Steep rock and ice cliffs which form a part of the east face of Jökulkyrkja Mtn., in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named for Per Larsen, steward with NorAE (1956-57).

Larsen Glacier 75°06'S., 162°28'E.

A glacier flowing SE. from Reeves Névé, through the Prince Albert Mountains, and entering the Ross Sea just S. of Mt. Crummer in Victoria Land. Discovered by the South Magnetic Party of the Shackleton expedition, 1907-9, who followed its course on their way to the plateau area beyond. They named it Larsen Glacier because it flowed past the foot of Mount Larsen, which was constantly in view as they ascended the course of the glacier.

Larsen Harbor 54°50'S., 36°01'W.

Narrow inlet in the S. side of Drygalski Fjord, 2.5 mi. WNW. of Nattriss Head, at the SE. end of South Georgia. Charted by the GerAE, 1911-12, under Filchner, who named it for Capt. C. A. Larsen, who was at that time in charge of the Grytviken whaling station.

Larsen Ice Barrier: see Larsen Ice Shelf 67°30'S., 62°30'W.

Larsen Ice Shelf 67°30'S., 62°30'W.

An extensive, linear ice shelf in the northwest part of the Weddell Sea, extending along the east coast of Antarctic Peninsula from Cape Longing to the area just southward of Hearst Island. Named for Capt. C.A. Larsen, who sailed along the Larsen Ice Front in the *Jason* as far as 68°10'S. during December 1893.

Larsen Inlet 64°26'S., 59°26'W.

Ice-filled inlet, 12 mi. long in a N.-S. direction and 7 mi. wide, between Capes Longing and Sobral along the E. coast of Graham Land. C. A. Larsen, Norwegian whaling captain, reported a large bay in this area in 1893. Larsen's name was suggested for the feature by Edwin Swift Balch in 1902. The inlet was re-identified and charted by the FIDS in 1947.

Larsen Island: see Monroe Island 60°36'S., 46°03'W.

Larsen Islands 60°36'S., 46°04'W.

Small group of islands lying 1 mi. NW. of Moreton Pt., the W. extremity of Coronation I., in the South Orkney Islands. Disc. by Capt. George Powell and Capt. Nathaniel Palmer on the occasion of their joint cruise in December 1821. They were named on Capt. Petter Sørle's chart, based upon his survey of the South Orkney Is. in 1912-13, in honor of Capt. C. A. Larsen.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Larsen Nunatak 64°58'S., 60°04'W.

Nunatak 2 mi. N. of Murdoch Nunatak in the Seal Nunataks group, off the E. coast of Antarctic Peninsula. The Seal Nunataks were disc. by a Nor. whaling exp. under C. A. Larsen in December 1893. Commemoration of Larsen was proposed by Ludwig Friederichsen in 1895. The application of this name is based upon a 1947 survey by the FIDS.

Larsen Point 54°12'S., 36°30'W.

Point which forms the W. side of the entrance to Cumberland Bay on the N. coast of South Georgia. Named for Capt. C. A. Larsen, who visited Cumberland Bay in the *Jason* in 1893-94.

Larsen Shelf Ice: see Larsen Ice Shelf 67°30'S., 62°30'W.

Larsenskarvet: see Larsen Cliffs 71°56'S., 6°53'E.

Larsgaddane: see Lars Nunatak 71°52'S., 4°13'E.

Lars Island 54°28'S., 3°22'E.

A rocky island, less than 0.2 mi. long, which lies just off the southwest extremity of Bouvetøya. First roughly charted in 1898 by a German expedition under Karl Chun. The Norwegian expedition under Capt. Harald Horntvedt made a landing on the island from the ship *Norvegia* in December 1927. They named it, probably after Lars Christensen, sponsor of the Norwegian expedition.

Lars Nunatak 71°52'S., 4°13'E.

An isolated nunatak about 5 mi. W. of Skigarden Ridge in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named for Lars Hochlin, dog driver and radio operator with NorAE (1956-58).

Larson Crag 76°44'S., 161°08'E.

A prominent rocky summit, over 1,600 m., at the N. end of Staten Island Heights in the Convoy Range. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for Cdr. Wesley Larson, commanding officer of the USS *Staten Island* in Antarctic waters, 1959-60.

Larson Glacier 77°28'S., 154°00'W.

A tributary glacier that drains NW. from La Gorce Peak in the Alexandra Mtns. and enters the S. side of Butler Glacier, on Edward VII Peninsula. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for helicopter pilot Lt. Cdr. Conrad S. Larson, USN, officer in charge of the helicopter detachment aboard the icebreaker *Eastwind* during Operation Deep Freeze, 1955-56.

Larson Nunataks 82°45'S., 48°00'W.

A small cluster of nunataks lying along the E. side of Forrestal Range, 1.5 mi. SE. of Mt. Malville, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Larry R. Larson, aviation electronics technician at Ellsworth Station, winter 1957.

Larson Valley 79°32'S., 83°51'W.

A relatively smooth, ice-filled valley between the S. end of Inferno Ridge and Mhire Spur in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for equipment operator D. L. Larson, USN, snow removal operator at Williams Field, McMurdo Sound, during Deep Freeze 1965 and 1966.

Larsøya: see Lars Island 54°28'S., 3°22'E.

Larssen Peak 54°19'S., 36°46'W.

Peak, 1,550 m., between Three Brothers and Mari-koppa in the Allardyce Range of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Harald Larssen, Manager at the Compañía Argentina de Pesca station, Grytviken, 1951-54.

Larvik 54°22'S., 36°54'W.

Small bay indenting the S. coast of South Georgia between Newark Bay and Jacobsen Bight. Surveyed by the SGS in the period 1951-57. The name is well established in local usage.

Larvik Bay: see Larvik 54°22'S., 36°54'W.

Larvik Cone 54°22'S., 36°52'W.

Low but prominent scree cone, 425 m., on the promontory between Newark Bay and Jacobsen Bight, on the S. coast of South Georgia. Roughly sketched by the British South Georgia Expedition, 1954-55, and named Larvik Peak from association with nearby Larvik. The SGS, 1956-57, reported that cone is a more suitable descriptive term.

Larvik Peak: see Larvik Cone 54°22'S., 36°52'W.

Laseron Islands 66°59'S., 142°48'E.

A chain of small ice-capped and rocky islands lying 3 mi. E. of Cape Denison in Commonwealth Bay. Discovered by the AAE (1911-14) under Douglas Mawson, who named them for Charles F. Laseron, taxidermist with the expedition.

Lashley Mountains: see Lashly Mountains 77°54'S., 159°33'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lashly Glacier 77°57'S., 159°50'E.

Short, broad glacier lying between the Lashly Mountains on the W. and Tabular Mountain and Mt. Feather on the E., flowing S. into The Portal, in Victoria Land. So named by the New Zealand Party of the CTAE (1956-58) for its proximity to the Lashly Mountains.

Lashly Mountains 77°54'S., 159°33'E.

A small group of mountains, the most prominent being Mt. Crean (2,550 m.), standing S. of the head of Taylor Gl. and W. of Lashly Gl., in Victoria Land. Discovered by the BrNAE (1901-4) and named for William Lashly, a member of the party which explored this area.

Las Islas, Bahía de: see Isles, Bay of 54°02'S., 37°20'W.

Lassell, Mount 71°45'S., 68°50'W.

Snow-covered peak, 1,000 m., overlooking the head of Neptune Gl. in the SE. part of Alexander Island. The peak appears to have been first seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. Remapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for William Lassell (1799-1880), English astronomer who discovered Umbriel and Ariel, satellites of Uranus, and Triton, satellite of Neptune.

Lasserre, Bahía: see Admiralty Bay 62°10'S., 58°25'W.

Lassiter Coast 73°45'S., 62°00'W.

That portion of the E. coast of Antarctic Peninsula extending from Cape Mackintosh to Cape Adams. The N. portion of this coast was discovered and photographed from the air by the USAS in 1940. During 1947 the entire extent of the coast was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. The name was applied by the US-ACAN for Capt. James W. Lassiter of the then USAAF, who as chief pilot was instrumental in the overall success of the RARE aerial exploratory program. Lassiter was pilot not only on the flight SW. from Cape Adams, on which geographic discovery was extended to 76°00'S., 72°30'W. (the Mt. Hassage area), but also on the flight SE. to about 79°00'S., 43°45'W., on which the seaward edge of the Ronne Ice Shelf and the W. and central edge of the Filchner Ice Shelf were sighted and photographed for the first time.

Lassiter Ice Barrier: see Ronne Ice Shelf 78°30'S., 61°00'W.

Lassiter Shelf Ice: see Ronne Ice Shelf 78°30'S., 61°00'W.

Lassus Mountains 69°30'S., 71°37'W.

Mountains, 15 mi. long and 3 mi. wide, rising to 2,000 m. and extending S. from Palestrina Gl. in the N. part of Alexander Island. First seen by the Russ. exp. of 1821 under Bellingshausen. Phot. from the air in 1936 by the BGLE but mapped as part of the Havre Mountains. First mapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Orlandus Lassus (ca. 1532-1594), Belgian composer.

Last Cache Nunatak 85°33'S., 174°08'W.

The southernmost and last nunatak on the ridge forming the eastern wall of Zaneveld Glacier. Though not large, it is an important navigational landmark on the polar plateau in the vicinity of the head of Shackleton Glacier. So named by the Southern Party of NZGSAE (1961-62), who made their last depot of food and fuel near the nunatak.

Last Hill 63°28'S., 57°05'W.

Small hill, 350 m., with a rock ridge at its crest and a cliff at its N. side, standing 4 mi. SSW. of Hope Bay and 2 mi. E. of the NE. shore of Duse Bay on Tabarin Peninsula. Probably seen by the SwedAE, 1901-4, under Nordenskjöld. First charted in 1946 by the FIDS, who so named it because it marks the last climb on the sledge route between Hope Bay and Duse Bay.

Latady Island 70°45'S., 74°35'W.

Low ice-covered island, 35 mi. long and more than 10 mi. wide, lying 45 mi. S. of Charcot I. and W. of Alexander Island. An ice-covered feature in this approximate position was seen from the air and described by Sir Hubert Wilkins in 1929, but not recognized as an island or separately mapped. The island was first phot. from the air by the RARE, 1947-48, and mapped from these photos by Searle of the FIDS in 1960. Named by the UK-APC for William R. Latady, aerial photographer and navigator on the RARE flight.

Latady Mountains 74°45'S., 64°18'W.

A group of mountains rising W. of Gardner Inlet and between the Wetmore and Ketchum Glaciers, in SE. Palmer Land. These mountains were discovered by the RARE, 1947-48, under Ronne, and named for William Latady, aerial photographer with the expedition.

Latham Peak 66°21'S., 51°48'E.

Peak projecting through the icecap 16 mi. SE. of Cape Ann and 8 mi. NW. of Mt. Marr. Discovered in January 1930 by the BANZARE under Mawson, who

GEOGRAPHIC NAMES OF THE ANTARCTIC

named it for Rt. Hon. Sir John Greig Latham, Min. for External Affairs in the Australian Government, 1931-34, and later Chief Justice of Australia.

Latino Peak 72°09'S., 167°33'E.

A peak (2,290 m.) situated 4 mi. SSW. of Mt. Hazlett in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Terry L. Latino, USN, constructionman at McMurdo Station, 1967.

La Torre, Pico: see Tower, The 62°13'S., 58°30'W.

La Tour: see Tower, The 62°13'S., 58°30'W.

Lattemand Bai: see Lallemand Fjord 67°05'S., 66°45'W.

Laubeuf Fjord 67°20'S., 67°50'W.

A sound, 25 mi. long in a N.-S. direction and averaging 10 mi. wide, lying between the east-central portion of Adelaide I. and the S. portion of Arrowsmith Pen., Graham Land. Disc. by the FrAE, 1908-10, under Charcot, and named by him for Maxime Laubeuf, French marine engineer who supervised building the engine for the ship *Pourquoi-Pas?*

Laudon, Mount 74°13'S., 64°03'W.

A prominent mountain standing 7 mi. N. of Mt. Crowell in the NW. part of Guettard Range, in southern Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Thomas S. Laudon, geologist at Byrd Station, summer 1960-61, and member of the Univ. of Wisconsin geological party to the Eights Station area, summer 1965-66.

Lauff Island 73°03'S., 126°08'W.

A small island lying 2 mi. north of Cape Dart, Siple Island, off the coast of Marie Byrd Land. Discovered and photographed from aircraft of USN Operation Highjump, 1946-47. Named by US-ACAN for Cdr. Bernard J. Lauff, USN, Commanding Officer of USS *Glacier* during Operation Deep Freeze, 1956-57.

Launch Channel 66°17'S., 110°30'E.

The narrow body of water between Bailey Pen. and Shirley I. in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN. The relatively shallow soundings in the channel restrict its use to smaller craft, suggesting the name.

Launches Beach: see Skua Beach 53°05'S., 73°41'E.

Launch Rock 67°46'S., 68°56'W.

Submerged rock lying SW. of Glover Rocks, off the S. end of Adelaide Island. Named by the UK-APC to

commemorate the unnamed launch from RRS *John Biscoe* used by the Hydrographic Survey Unit which charted this area in 1963.

Launoit, Mount 72°34'S., 31°27'E.

Mountain, 2,470 m., between Mt. Brouwer and Mt. Imbert in the Belgica Mountains. Disc. by the BelgAE, 1958-59, under G. de Gerlache, who named it for Count de Launoit, Pres. of the BRUFINA Society which gave financial assistance to the expedition.

Laurens, Cape 52°59'S., 73°15'E.

Cape which marks the NW. extremity of Laurens Peninsula and Heard Island. The name was probably applied by Capt. Franklin F. Smith, of the American bark *Laurens*, who visited Heard I. in 1855-56 and who, with Capt. Erasmus Darwin Rogers, initiated sealing operations and longtime American sealer occupation of Heard Island. The name appears on a chart by the Br. exp. under Nares, which visited the island in the *Challenger* in 1874 and utilized the names then in use by the sealers.

Laurens Peninsula 53°00'S., 73°18'E.

Rugged peninsula surmounted by several ice-covered peaks which forms the NW. part of Heard Island. The name was applied by the ANARE following their survey in 1948. It derives from the existing name Cape Laurens, applied for the NW. extremity of this peninsula after the American bark *Laurens* which, under Capt. Franklin F. Smith, visited Heard I. in 1855-56 and assisted in initiating sealing operations there.

Laurie Island 60°44'S., 44°37'W.

An irregularly-shaped island, 12.5 mi. long in an E.-W. direction, being the easternmost of the South Orkney Islands. Disc. in December 1821 in the course of the joint cruise by Capt. George Powell, British sealer, and Capt. Nathaniel Palmer, American sealer. R. H. Laurie, Chartseller to the Admiralty, published a chart of the South Shetland Is., South Orkney Is., and the NE. end of the Antarctic Pen. on Nov. 1, 1822, based on the exploration of Powell, Palmer and other sealers then in this area. The island was surveyed in 1903 by the ScotNAE under W. S. Bruce.

Laurie Point 54°03'S., 37°59'W.

The E. extremity of a small island which lies close to shore and marks the S. side of the entrance to Johan Hbr., on the S. coast and near the W. end of South Georgia. Surveyed by the SGS, 1956-57, and named by the UK-APC for A. H. Laurie, member of the scientific staff of the Discovery Investigations Marine Station, Grytviken, in 1930-31, who also worked on the *William Scoresby* in 1929-30 and on *Discovery II* in 1930.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lauritzen Bay 69°07'S., 156°50'E.

A bay about 12 mi. wide, occupied by bay ice and ice shelf, indenting the coast between Cape Yevgenov and Coombes Ridge. The Matusovich Glacier Tongue joins Coombes Ridge in forming the W. side of the bay. Photographed from the air by USN Operation Highjump in 1947. Sketched and photographed by Phillip Law, leader of ANARE (*Magga Dan*) on Feb. 20, 1959. Named by ANCA for Knud Lauritzen, shipowner of Copenhagen, Denmark, owner of *Magga Dan* and other vessels used by ANARE since 1954.

Laussedat Heights 64°47'S., 62°30'W.

A series of elevations extending eastward for 8 mi. in the SW. part of Arctowski Peninsula, on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Aimé Laussedat (1819-1907), French military engineer, the "father of photogrammetry," who pioneered the application of photography to survey from about 1851 onward.

Lautaro, Canal: see Argentine Channel 64°54'S., 63°01'W.

Lautaro, Isote: see Låvebrua Island 63°02'S., 60°35'W.

Lautaro Island 64°49'S., 63°06'W.

An island 1 mi. long, lying just W. of Lemaire I. in Gerlache Strait. Probably first seen by the BelgAE (1897-99) under Gerlache. Named by the Chilean Antarctic Expedition (1948-49) after the *Lautaro*, one of the Chilean expedition ships working in the area that season.

Lauzanne Cove 65°05'S., 63°23'W.

Cove 2 miles wide, lying immediately S. of Guyou Is. on the S. side of Flandres Bay, along the W. coast of Graham Land. First charted by the FrAE, 1903-5, under Charcot, who named it for Stéphane Lauzanne, chief editor of the French newspaper *Le Matin*, 1900-15.

Lavallee Peak 72°04'S., 164°56'E.

A peak, 2,175 m., just NW. of Gibraltar Peak in West Quartzite Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. David O. Lavallee, USN, biological diver at McMurdo Station, summers 1963-64, 1964-65 and 1966-67.

Lavallee Point 76°37'S., 159°50'E.

The northernmost point of Shipton Ridge in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who reported that they

named the point after Lieutenant Lavallee, U.S. Navy, who assisted in establishing the expedition in the Allan Hills.

Låvebrua Island 63°02'S., 60°35'W.

Island, 95 m. high, lying 0.7 mi. E. of South Pt., Deception I., in the South Shetland Islands. Charted by a Br. exp. under Foster, 1828-31. The name was given by Norwegian whalers operating from Deception I., and was in use as early as 1927. The name is descriptive, meaning literally "threshing floor bridge" or "barn bridge."

Låvebru Island: see Låvebrua Island 63°02'S., 60°35'W.

LaVergne Glacier 85°19'S., 170°45'W.

A tributary glacier about 7 mi. long, flowing E. along the S. slopes of Seabee Heights to enter Liv Gl. close SW. of McKinley Nunatak. Named by US-ACAN for Lt. Cdr. Cornelius B. de LaVergne, Deputy Commander of Antarctic Support Activity at McMurdo Station during USN Op. DFrz. 1961.

Lavett, Cape: see Lavett Bluff 53°11'S., 73°32'E.

Lavett Bluff 53°11'S., 73°32'E.

A rock bluff between Deacock Gl. and Fiftyone Gl. on the S. side of Heard Island. Surveyed in 1948 by ANARE and named "Cape Lavett" for Lt. John L. Lavett, RAN, one of the officers on HMAS *Labuan*, relief ship for the expedition. Further ANARE exploration led to revision of the name in 1964 to Lavett Bluff.

Lavoisier Island 66°12'S., 66°44'W.

Island 18 mi. long and 5 mi. wide, lying between Rabot and Watkins Islands in the Biscoe Islands. First charted by the FrAE, 1903-5, under Charcot, and named "Ile Nansen" after Fridtjof Nansen, Norwegian Arctic explorer. To avoid confusion with Nansen Island (q.v.) in Wilhelmina Bay, the UK-APC recommended in 1960 that the island be renamed for Antoine Laurent Lavoisier, French chemist who pioneered the study of metabolism.

Lavris Peak 76°49'S., 125°56'W.

A snow-capped peak which rises to 2,745 m. in the NE. portion of Mount Hartigan, in the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958-60. Named by US-ACAN for William C. Lavris, Meteorological Technician at Byrd Station, 1959.

Law, Roca: see Low Rock 62°17'S., 58°39'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Law Dome 66°44'S., 112°50'E.

A large ice dome which rises to 1,395 m. directly south of Cape Poinsett. The feature was roughly mapped by USGS from aerial photographs taken by USN Operation Highjump, 1946-47. The dome has been the subject of intensive glaciological and geophysical surveys by ANARE, 1962-65. Named by ANCA for Phillip G. Law, Director of the Antarctic Division, Australian Department of External Affairs, 1949-66.

Law Glacier 84°05'S., 161°00'E.

A glacier about 10 mi. wide between the S. end of Queen Elizabeth Range and the MacAlpine Hills, gradually descending ENE. from the polar plateau to Bowden Névé. Named by the N.Z. party of the CTAE (1956-58) for B. R. Law, Deputy-Chairman of the Ross Sea Committee.

Law Islands 67°15'S., 59°02'E.

Group of small islands lying off the E. end of Law Promontory, at the W. side of the entrance to Stefansson Bay. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37. First visited by an ANARE party led by P. W. Crohn in 1956. So named by ANCA because of their proximity to Law Promontory.

Law Promontory 67°15'S., 58°47'E.

A mainly ice-covered promontory 15 mi. long, extending generally eastward from the coast at the NW. side of Stefansson Bay. First mapped by DI personnel on the *William Scoresby* in February, 1936. Remapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and called Breidhovde (Broad Knoll). First visited by an ANARE party in 1956, and renamed by ANCA for Phillip Law, who flew over and photographed this feature in February 1954.

Lawrence, Cape: see Laurens, Cape 52°59'S., 73°15'E.

Lawrence, Mount 67°51'S., 62°31'E.

Peak, 1,230 m., just N. of Mt. Coates in the David Range of the Framnes Mtns., Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for J. Lawrence, diesel mechanic at Mawson Station in 1959.

Lawrence, Mount: see Lawrence Peaks 72°50'S., 166°20'E.

Lawrence Nunatak 84°50'S., 67°02'W.

A nunatak, 1,540 m., standing 3 mi. W. of Snake Ridge along the ice escarpment that trends SW. from the ridge, in the Patuxent Range, Pensacola Moun-

tains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Lawrence E. Brown, surveyor at Palmer Station, winter 1966.

Lawrence Peaks 72°50'S., 166°20'E.

A mountain complex of high peaks separating the Seafarer Glacier from the head of the Mariner Glacier. Named by the Northern Party of NZGSAE, 1966-67, for the leader of the party, J. E. S. Lawrence.

Lawrie Glacier 66°04'S., 64°36'W.

Glacier flowing into the head of Barilari Bay between Mt. Genecand and Mezzo Buttress, on the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 for Robert Lawrie, English alpine and polar equipment specialist.

Laws Glacier 60°38'S., 45°38'W.

A confluent glacier system which flows into Marshall Bay on the S. coast of Coronation I., in the South Orkney Islands. Surveyed in 1948-49 by the FIDS. Named by the UK-APC for Richard M. Laws of the FIDS, leader and biologist at Signy I. base in 1948 and 1949, and at South Georgia in 1951.

Lawson Aiguilles 67°50'S., 66°15'E.

A line of sharp peaks in the S. part of Mt. Rivett, in the Gustav Bull Mtns. of Mac. Robertson Land. Peaks in this group were included in ANARE surveys of 1962 and 1967. Named by ANCA for E. J. Lawson, diesel mechanic at Mawson Station who assisted with the survey work in 1967.

Lawson Nunatak 67°56'S., 62°51'E.

A small tooth-like nunatak lying 2 mi. SE. of Branson Nunatak in the Masson Range of the Framnes Mountains. The feature was fixed by intersection from trigonometrical stations by ANARE in 1968. Named by ANCA for E. J. Lawson, diesel mechanic at Mawson Station, who assisted with the survey work in 1967.

Lawson Nunataks 70°47'S., 159°45'E.

A line of nunataks about 4 mi. long, located 4 mi. SW. of Keim Peak in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Gerald J. Lawson, USARP biologist at McMurdo Station, 1967-68.

Lawson Peak 66°11'S., 65°36'W.

Peak 3.5 mi. SE. of Cape Evensen on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Sir Arnold Lawson (1867-1947), English ophthalmic surgeon whose work in tinted glass contributed to improve-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ments in the protective qualities of snow goggles. The peak is a prominent landmark when seen from the southwest.

Lawther Knoll 54°29'S., 37°03'W.

A rounded, scree-covered hill (315 m.) in eastern An-nenkov Island, South Georgia. Named by the UK-APC for BAS geologist Eric G. Lawther who worked on the island, 1972-73.

Lay-brother Rock 60°34'S., 46°13'W.

Rock 2 mi. SW. of Despair Rocks and 7 mi. NW. of Route Pt., off the W. end of Coronation I. in the South Orkney Islands. Charted and named by DI personnel on the *Discovery II* in 1933.

Layman Peak 84°51'S., 179°35'E.

A peak, 2,560 m., standing 3 mi. E. of Mt. Bellows and 4 mi. N. of McIntyre Promontory, in the Queen Maud Mountains. Discovered and photographed by the USAS on Flight C of February 29 - March 1, 1940, and surveyed by A. P. Crary in 1957-58. Named by Crary for Frank Layman, mechanic of the U.S. Ross Ice Shelf Traverse Party (1957-58) and Victoria Land Traverse Party (1958-59).

Lazareva, Shel'fovyy Lednik: see Lazarev Ice Shelf 69°37'S., 14°45'E.

Lazarev Bay 69°20'S., 72°00'W.

Rectangular bay, 15 mi. long and 13 mi. wide, between Alexander I. and Rothschild I. and bounded on the S. by ice shelf joining the two islands. The N. coast of Alexander I. was first seen from a great distance by the Russ. exp. of 1821 under Bellingshausen. The bay was first mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Lt. Mikhail P. Lazarev (1788-1851), second-in-command of the Russ. exp. and commander of the sloop *Mirnyy*.

Lazarev Ice Shelf 69°37'S., 14°45'E.

That part of the ice shelf fringing the coast of Queen Maud Land between Leningradskiy Island and Ver-blyud Island. It is about 50 mi. long. First photo-graphed from the air and mapped by the GerAE, 1938-39. Explored and mapped by the SovAE in 1959, and named for Lt. (later Adm.) Mikhail P. Lazarev, commander of the sloop *Mirnyy*.

Lazarev Mountains 69°32'S., 157°20'E.

A chain of mountains along the west side of Matus-evich Glacier southward of Eld Peak, about 25 mi. long. Photographed from the air by USN Operation High-jump (1946-47), the Soviet Antarctic Expedition (1957-58) and ANARE (1959). Named by the Soviet

expedition after Lt. M.P. Lazarev, commander of the sloop *Mirnyy* of the Bellingshausen expedition (1819-21).

Leach Nunatak 77°36'S., 146°25'W.

A nunatak 4 mi. WSW. of Mt. Ronne in the Haines Mtns., Ford Ranges, Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Edwin B. Leach, aviation electronics technician, USN, Williams Field Division Chief responsible for mainte-nance of electronic equipment on all aircraft during Operation Deep Freeze 1967.

Leafvein Gulch 57°06'S., 26°46'W.

A valley 0.5 mi. long with intensely gullied flanks, draining the NE. part of Vindication I., South Sand-wich Islands. Its lower end lies SW. of Braces Point on the E. coast of the island. The name applied by UK-APC in 1971 derives from the pattern of the gullies which recall the radiating veins of a leaf.

League Island: see League Rock 67°46'S., 69°04'W.

League Rock 67°46'S., 69°04'W.

Distinctive rounded rock lying SW. of Box Reef, off the S. end of Adelaide Island. Surveyed by the RN Hy-drographic Survey Unit, 1962-63. So named by the UK-APC because the rock lies one league distant from Adelaide station.

Leah Ridge 70°13'S., 65°00'E.

A rock ridge located 1 mi. NW. of Dawson Nunatak and 5 mi. SE. of Mt. Béchervaise in the Athos Range, Prince Charles Mountains. The feature was inter-sected by an ANARE survey party in November 1966 and climbed by the party in December 1966. So named by ANCA because "Leah" was the code word used at Mawson Station to identify the survey party.

Leahy, Cape 73°43'S., 119°00'W.

An ice-covered cape which marks the N. extremity of Duncan Peninsula, Carney Island, along the coast of Marie Byrd Land. Disc. and photographed from the air on Jan. 24, 1947 by USN Operation Highjump, 1946-47, and named by R. Adm. Byrd for Fleet Adm. William D. Leahy, USN, who as naval advisor to the President at the time of Operation Highjump assisted materially at the high-level planning and authoriza-tion stages.

Leal, Cerro: see Leal Bluff 63°53'S., 57°35'W.

Lealand Bluff 67°27'S., 59°33'E.

High rounded bluff at the SW. corner of William Scoresby Bay in the E. part of Enderby Land. Named

GEOGRAPHIC NAMES OF THE ANTARCTIC

by DI personnel on the *William Socresby* who charted this area in 1936.

Leal Bluff 63°53'S., 57°35'W.

A rounded bluff rising more than 305 m., 2 mi. inland from Cape Lamb at the SW. corner of Vega Island. Named by Argentina for Mayor Jorge Leal, deputy leader at the Argentine station "Esperanza" in 1947.

Leander Glacier 71°56'S., 167°41'E.

A tributary glacier in the Admiralty Mtns., draining the area W. of Mt. Black Prince and flowing S. between Shadow Bluff and McGregor Range to enter Tucker Glacier. Partially surveyed by the NZGSAE, 1957-58, which also observed upper parts of the glacier from Mt. Midnight and Mt. Shadow. Named by NZGSAE for the light cruiser HMNZS *Leander* which served in World War II, 1939-45.

Leap Year Glacier 71°42'S., 164°15'E.

A tributary glacier between Molar Massif and Mt. Stirling in the Bowers Mtns., draining SE. into Black Glacier. So named by the northern party of NZGSAE, 1963-64, which arrived here via Sledgers Gl. and Husky Pass in the new year of 1964.

Leay Glacier 65°10'S., 63°57'W.

Glacier flowing NW. into Girard Bay to the W. of Hotine Gl., on the W. coast of Graham Land. First charted by the FrAE under Charcot, 1908-10. Named by the UK-APC for Petra Leay Searle of the Directorate of Overseas Surveys, who has contributed to the work of mapping the Antarctic Peninsula area.

Le Bland, Cape: see Leblond, Cape 66°04'S., 66°36'W.

Leblond, Cape 66°04'S., 66°36'W.

Cape forming the N. end of Lavoisier I., in the Biscoe Islands. Charted by the FrAE under Charcot, 1908-10, and named by him for the Pres. of the Norman Geographical Soc. at Rouen.

Lechner, Mount 83°14'S., 50°55'W.

A prominent mountain, 2,030 m., surmounting the SW. end of Saratoga Table in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Maj. Ralph C. Lechner, USA, airlift coordinator on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1964-66.

Leckie, Mount 70°26'S., 66°00'E.

A roughly circular outcrop about 3 mi. E. of Martin Massif in the Porthos Range, Prince Charles Mountains. Visited by the ANARE southern party (1956-57). Named for Squadron Leader D. W. Leckie,

RAAF, who commanded the Antarctic Flight at Mawson Station, 1956.

Leckie Range 67°55'S., 56°27'E.

Group of peaks 50 mi. S. of Edward VIII Bay. The individual peaks were first shown on a 1947 Norwegian whalers' chart by H. E. Hansen. Named by ANCA for Squadron Leader Douglas Leckie, RAAF, who commanded the Antarctic Flight at Mawson Station, 1956, and who piloted the Auster aircraft from which Phillip Law sighted and plotted these peaks.

Lecointe, Mount 83°09'S., 161°09'E.

A conspicuous mountain, 3,620 m., located 3 mi. NW. of Mt. Rabot in the Queen Elizabeth Range. Named by the BrAE (1907-9) for Lt. Georges Lecointe, who was second in command of the BelgAE (1897-99) under Gerlache.

Lecointe Island 64°16'S., 62°03'W.

An elongated island, 4 mi. long and 700 m. high, separated from the E. coast of Brabant Island by Pampa Passage, in the Palmer Archipelago. The island was first roughly surveyed by the Belgian Antarctic Expedition, 1897-99, which gave the name Cape Kaiser to its northern extremity. The island was surveyed and photographed by several British expeditions, 1955-58, and was named by them for Georges Lecointe, second-in-command and surveyor of the Belgian expedition which was responsible for the first survey of Gerlache Strait.

Le Couteur Glacier 84°42'S., 170°30'W.

A glacier, 15 mi. long, which drains the NW. slopes of Mt. Hall and Mt. Daniel and flows N. along the W. side of Lillie Range to the Ross Ice Shelf. Named by the Southern Party of NZGSAE (1963-64) for P. C. Le Couteur, geologist with the N.Z. Federated Mountain Clubs Antarctic Expedition, 1962-63.

Le Couteur Peak 72°09'S., 165°59'E.

A peak between Cirque and Omega Peaks, in the N. part of Millen Range. Named by the Southern Party of the NZFMCAE, 1962-63, for P. C. Le Couteur, geologist with this party.

Lecroix, Mount: see Lacroix, Mount 65°03'S., 63°58'W.

Lécuyer Point 64°50'S., 63°30'W.

Point which forms the S. side of the entrance to the harbor of Port Lockroy, Wiencke I., in the Palmer Archipelago. Disc. and named by the FrAE under Charcot, 1903-5.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ledda Bay 74°23'S., 131°20'W.

A shallow embayment or bight, 12 mi. long, in the N. side of Grant Island, off the coast of Marie Byrd Land. Discovered and first charted from the USS *Glacier* (Capt. Edwin A. McDonald, USN) on Feb. 4, 1962. Named for R. J. Ledda, QM3, USN, quartermaster aboard the *Glacier* on the cruise in which the bay was discovered.

Lednikovaya, Bukhta: see Lednikov Bay 66°34'S., 92°22'E.

Lednikov Bay 66°34'S., 92°22'E.

Small bay just W. of McDonald Bay on the coast of Antarctica. The bay was mapped in 1955 from aerial photos taken by USN Op. Hjp., 1946-47. Remapped by the Soviet exp. of 1956 and named Bukhta Lednikovaya (glacier bay), probably because of its location at the terminus of a small glacier.

Lee, Mount 71°27'S., 74°35'W.

Isolated, snow-covered mountain, 500 m., on the peninsula between Verdi and Brahms Inlets in the SW. part of Alexander Island. Disc. and roughly mapped by the RARE, 1947-48, and named by Ronne for R. Adm. Paul F. Lee, USN, Chief of the Office of Naval Research who, appreciating the significance of the scientific program, authorized Naval support for the expedition. Remapped from RARE air photos by Searle of the FIDS in 1960.

Leech, Mount 72°05'S., 99°59'W.

A peak of the Walker Mtns., standing 5 mi. NW. of Mt. Hubbard in Thurston Island. Delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Robert E. Leech, entomologist who participated in a USARP airborne insect program in the Ross, Amundsen and Bellingshausen Sea areas in the 1959-60 season.

Lee Island 67°35'S., 62°52'E.

Island just W. of Teyssier I. in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for R. T. Lee, diesel mechanic at nearby Mawson station in 1957.

Lee Islands: see Outer Lee Island 54°02'S., 37°14'W.

Lee Islands: see Inner Lee Island 54°02'S., 37°16'W.

Leek, Mount 75°49'S., 68°31'W.

A mountain standing W. of Spear Gl. in the NE. part of the Hauberg Mtns., in Ellsworth Land. First observed from the air by the RARE, 1947-48. Mapped by USGS from surveys and USN air photos, 1961-67.

Named by US-ACAN for Gouke M. Leek, glaciologist at Byrd Station, summer 1965-66.

Lee Lake 77°02'S., 162°08'E.

A small lake at the SE. corner of Redcliff Nunatak on the S. flank of Mackay Glacier, in Victoria Land. Redcliff Nunatak projects as a rounded mound of granite 300 m. above the glacier surface. The ice is piled up on the W. side and sweeps around the N. and S. sides to the lee side, where it is much lower, and where this lake has formed from meltwater. Given this descriptive name by the Western Journey Party, led by Taylor, of BrAE, 1910-13.

Lee Nunatak 71°01'S., 159°58'E.

A nunatak (1,920 m.) 4 mi. NW. of Penserose Bluff in the NW. part of Daniels Range, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Chun Chi Lee, USARP biologist at McMurdo Station, 1967-68.

Lee Peak 86°25'S., 151°35'W.

A peak along the W. side of Scott Gl., 3 mi. N. of Mt. Denauro, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Frank P. Lee, photographer on aerial flights in Antarctica during USN Op. DFrz. 1965, 1966 and 1967.

Leeson Point 58°24'S., 26°14'W.

Conspicuous ice-covered coastal feature forming the NE. corner of Montagu I., South Sandwich Islands. Named by UK-APC for Lt. John Leeson, RN, Senior Pilot in HMS *Protector's* ship's flight during survey of these islands in 1964.

LeFeuvre Scarp 69°21'S., 63°18'W.

An irregular cliff-like elevation (750 m.) situated 11 mi. W. of Cape Reichelderfer on the E. side of Palmer Land. It marks the N. side of the divide between Bingham Glacier and a smaller unnamed glacier next northward. The feature was photographed from the air by Lincoln Ellsworth in 1935, the USAS in 1940, and the RARE in 1947. Surveyed by FIDS in 1947. Named by UK-APC in 1962 after Charles F. LeFeuvre, radio operator at Brunt Ice Shelf in 1956, Signy Island in 1959, and Horseshoe and Stonington Islands in 1960.

Lefèvre Point: see Lefèvre-Utile Point 64°50'S., 63°31'W.

Lefèvre-Utile Point 64°50'S., 63°31'W.

A point 1 mi. W. of Curie Point along the N. side of Doumer Island, in the Palmer Archipelago. Discovered and named by the FrAE (1903-5) under Jean B. Charcot.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Legoupil, Cape 63°19'S., 57°55'W.

Cape at the NE. side of the entrance to Huon Bay, on the N. coast of Trinity Peninsula. Disc. by a Fr. exp. under D'Urville, 1837-40. D'Urville named it for Ernest Goupil, a member of the exp., but the incorrect form *Legoupil* has been used so extensively that in this special case it is accepted.

Legru Bay 62°10'S., 58°12'W.

Bay 2 mi. wide, indenting the S. coast of King George I. immediately NE. of Martins Head, in the South Shetland Islands. In 1908-10, the FrAE under Charcot applied the name "Cap Legru" to a feature which has now been identified as Martins Head. As the latter has priority, Charcot's name has been transferred to the feature now described in order to retain it in the area in which it was originally given.

Leguillou, Cape 63°30'S., 59°52'W.

Point which forms the N. tip of Tower I., at the NE. end of Palmer Archipelago. Charted by a Fr. exp. under D'Urville, 1837-40, and named by him for Élie Le Guillou, a surgeon on the exp. ship *Zélée*. The name form approved is in agreement with the charts of the D'Urville exp. and has been consistently used since that time.

Lehaie, Cape: see Lehaie Point 64°30'S., 62°47'W.

Lehaie Point 64°30'S., 62°47'W.

Point forming the SW. extremity of Brabant I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache, who named it for Monsieur Houzeau de Lehaie, a supporter of the expedition. The FrAE under Charcot, 1903-5, charted the point, substantially modifying its earlier cartographic representation.

Le Hâvre, Massif: see Havre Mountains 69°08'S., 71°40'W.

Lehrke Bay: see Lehrke Inlet 70°49'S., 61°45'W.

Lehrke Inlet 70°49'S., 61°45'W.

Ice-filled inlet, 8 mi. wide, which recedes SW. for 17 mi. between Cape Boggs and Cape Sharbonneau, along the E. coast of Palmer Land. Disc. by members of the USAS who explored this coast on land and from the air in 1940. Named for Lester Lehrke, boatswain's mate of the *Bear*, one of the exp. ships, and sailmaker of the East Base.

Leigh Hunt Glacier 85°00'S., 174°10'E.

A glacier, 7 mi. long, flowing NNW. to enter Brandau Glacier just W. of Hare Peak. Named by the NZGSAE (1961-62) for A. Leigh Hunt, founder and first chairman of the New Zealand Antarctic Society.

Leininger Peak 70°34'S., 62°15'W.

Peak, 1,135 m., standing at the N. side of the base of Eielson Pen., on the E. coast of Palmer Land. The peak was photographed from the air by the RARE under Ronne, 1947-48, and charted in 1947 by a joint sledge party consisting of members of the RARE and FIDS. Named by Ronne for Cdr. Joseph A. Leininger, USNR, who devised the plans for the loading of cargo and the alterations on the expedition ship.

Leipzig Island: see Nelson Island 62°18'S., 59°03'W.

Leister Peak 75°10'S., 113°54'W.

A peak 3 mi. N. of Early Bluff in the Kohler Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Geoffrey L. Leister, biologist with the USARP Marie Byrd Land Survey Party, 1966-67.

Leitch Massif 71°55'S., 164°36'E.

A mountain massif that forms the northern part of West Quartzite Range, in the Concord Mountains. Named by the northern party of NZFMCAE, 1962-63, for E. C. Leitch, geologist with this party.

Leith Cove 64°52'S., 62°50'W.

Cove in the NE. part of Paradise Hbr., along the W. coast of Graham Land. Probably named by whalers operating in this vicinity. Leith, Scotland, is the home of Salvesen and Co., whalers.

Leith Harbor: see Inverleith Harbor 64°32'S., 63°00'W.

Leith Harbor 54°08'S., 36°41'W.

The northernmost of three harbors in the W. side of Stromness Bay, South Georgia. Named in about 1912 by Salvesen and Co., whalers of Leith, Scotland, operators of the whaling station at the head of the harbor.

Leith Harbor: see Leith Cove 64°52'S., 62°50'W.

Lekander Nunatak 85°04'S., 64°29'W.

A nunatak, 1,815 m., standing along the SW. edge of Mackin Table, 2 mi. NE. of Bessinger Nunatak, in southern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Bryant A. Lekander, cook at South Pole Station, winter 1960.

Leland, Mount 77°16'S., 161°18'E.

Rock peak 1 mi. W. of Victoria Upper Glacier in Victoria Land. Named by US-ACAN for Capt. Bainbridge B. Leland, USCG, Commanding Officer of USCGC *Burton Island* during Operation Deep Freeze 1968 and 1969.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lemaire Channel 65°04'S., 63°57'W.

Channel about 7 mi. long and averaging about 1 mi. wide, extending in a NE.-SW. direction from Splitwind I. and False Cape Renard to Roullin Pt. and Cape Cloos, and separating Booth I. from the W. coast of Graham Land. Disc. by a Ger. exp. under Dallmann, 1873-74. Traversed in December 1898 by the BelgAE under Gerlache, and named by him for Charles Lemaire, Belgian explorer of the Congo.

Lemaire Island 64°49'S., 62°57'W.

Island 4.5 mi. long and 1.5 mi. wide, lying 1 mi. W. of Duthiers Pt. off the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, under Gerlache, who named it for Charles Lemaire.

Lemaire Strait: see Lemaire Channel 65°04'S., 63°57'W.

Le Marais 66°46'S., 141°34'E.

Small area, mainly ice-covered but bounded by several rock exposures, forming part of the peninsula behind Cape Découverte. Charted and named in 1951 by the FrAE. The name derives from the muddy pools of melting water which form there during periods of summer thaw, "le marais" being French for marsh.

Lemasters Bluff 73°20'S., 162°12'E.

A rock bluff at the E. extremity of the Lichen Hills in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Max E. Lemasters, USN, air operations officer at McMurdo Station, 1967.

LeMasurier, Mount 75°27'S., 139°39'W.

An ice-free coastal mountain which rises to more than 800 m. between Mt. Vance and Mt. Langway, in the central part of the Ickes Mtns. of Marie Byrd Land. The feature was discovered and photographed from aircraft of the USAS, 1939-41. Named by US-ACAN for Wesley E. LeMasurier, geologist with Marie Byrd Land Survey II, 1967-68.

LeMay Range 70°55'S., 69°20'W.

Mountain range 40 mi. long with peaks rising to 2,000 m., extending in a NW.-SE. direction from Snick Pass to Uranus Gl. in central Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and the N. and E. portions mapped from photos obtained on that flight by W. L. G. Joerg. Resighted from the air by the RARE, 1947-48, and named by Ronne for Gen. Curtis LeMay, Deputy Chief of Air Staff for Research and Development of the then USAAF, which furnished equipment for the expedition. Remapped in detail from RARE photos by Searle of the FIDS in 1960.

Lena, Zaliw: see Casey Bay 67°30'S., 48°00'E.

Lena Bay: see Casey Bay 67°30'S., 48°00'E.

Lena Passage 66°34'S., 92°58'E.

Passage 0.5 mi. wide between the SW. part of the Haswell Islands and Vetrov Hill on the coast of Antarctica. Mapped by the Soviet exp. (1956), who named it for the ship *Lena*.

Lenfant Bluff 70°22'S., 160°03'E.

A rock bluff marking the S. side of the mouth of Svendsen Glacier, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Claude J. M. Lenfant, USARP biologist at McMurdo Station, 1967-68.

Lengua, Punta: see Spit Point 62°32'S., 59°48'W.

Lengua, Punta: see Demon Point 57°03'S., 26°40'W.

Lenie Passage 64°44'S., 64°23'W.

A NW.-SE. passage 1 mi. wide between the Gossler Islands and Joubin Islands in the Palmer Archipelago. Named by US-ACAN for Pieter J. Lenie, Master of the R.V. *Hero* in 1972-73 and 1973-74. Lenie is believed to be first to navigate and carry out sounding of this passage, in the *Hero* in Jan.-Feb. 1973.

Leningradskiy Bay 70°00'S., 12°30'E.

An indentation in the ice shelf fringing Queen Maud Land immediately W. of Lazarev Ice Shelf. Leningradskiy Island is at the head of the bay. Mapped by the SovAE in 1959 and named by them for the city of Leningrad.

Leningradskiy Island 70°08'S., 12°50'E.

An ice-covered island situated at the head of Leningradskiy Bay at the W. margin of the Lazarev Ice Shelf, Queen Maud Land. The feature rises nearly 100 m. above the general level of the ice shelf which surrounds all but the N. side. Discovered and mapped by the SovAE in 1961, and named in association with Leningradskiy Bay.

Leniz Point 64°54'S., 63°05'W.

The N. extremity of the small peninsula on which Mt. Banck stands, lying 1 mile S. of Byrde I. on the W. coast of Graham Land. First charted by the BelgAE under Gerlache, who made a landing here on February 10, 1898. The toponym appears on a Chilean Govt. chart of 1951 and is for the chief stoker Clorindo Leniz Gallejo, on board the tender *Yelcho* which rescued the crew of the *Endurance* from Elephant Island in August 1916.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lennox-King Glacier 83°25'S., 168°00'E.

A large valley glacier, about 40 mi. long, draining Bowden Névé and flowing NE. between the Holland and Queen Alexandra Ranges to enter Richards Inlet, Ross Ice Shelf. Named by the NZGSAE (1959-60) for Lt. Cdr. James Lennox-King, RNZN, leader at Scott Base, 1960.

Lensen Glacier 72°18'S., 166°48'E.

A tributary glacier that flows NE. to enter Pearl Harbor Glacier just E. of Mt. Pearson, in the Victory Mtns. of Victoria Land. Named by NZFMCAE, 1962-63, for G. J. Lensen, a member of the NZGSAE, 1957-58, that worked in the Tucker Glacier area.

Lensink Peak 71°04'S., 65°25'E.

The easternmost of a group of three peaks about 5 mi. SE. of Husky Massif in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for W. H. Lensink, weather observer at Wilkes Station in 1960.

Lens Peak 66°08'S., 65°24'W.

Peak at the S. side of Høltedahl Bay just E. of Conway I., on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. So named by the UK-APC in 1960 from association with a group of features in the area commemorating pioneers of research on snow blindness and the design of snow goggles.

Lenton Bluff 79°00'S., 28°13'W.

Rock bluff on the N. side of the mouth of Jeffries Gl. in the Theron Mountains. First mapped in 1956-57 by the CTAE and named for Ralph A. Lenton, deputy leader of the advance party of the CTAE in 1955-56 and carpenter and radio operator with the transpolar party in 1956-58.

Lenton Point 60°44'S., 45°37'W.

The SW. extremity of a small, rocky peninsula in Clowes Bay on the S. side of Signy I., in the South Orkney Islands. Roughly surveyed in 1933 by DI personnel, and resurveyed in 1947 by the FIDS. Named in 1954 by the UK-APC for Ralph A. Lenton of the FIDS, radio operator at Signy I. base in 1948, who helped with the survey and biological work; subsequently at Admiralty Bay in 1949, and then leader at Deception I. in 1951, at Port Lockroy in 1952 and at the Argentine Is. in 1954.

Lentz Buttress 85°40'S., 127°36'W.

A prominent rock bluff 5 mi. ENE. of Faure Peak, rising to 2,800 m. and forming a projection along the N. side of the Wisconsin Plateau of the Horlick Mountains. Mapped by USGS from surveys and USN air

photos, 1960-64. Named by US-ACAN for Lt. Malcolm W. Lentz, USN, officer in charge of the South Pole Station winter party, 1962.

Leo, Mount 69°29'S., 67°00'W.

An isolated mountain (1,270 m.) at the SE. margin of Forster Ice Piedmont on the W. side of Antarctic Peninsula. The mountain has steep rock cliffs on its S. side. First roughly surveyed by BGLE, 1936-37. Photographed from the air by RARE, 1947, and resurveyed by FIDS, 1958. The name applied by UK-APC is suggestive of the shape of the feature, which resembles a recumbent lion.

León, Isla: see Lion Island 64°41'S., 63°08'W.

León, Seno: see Lion Sound 64°40'S., 63°09'W.

Leonardo Glacier 64°42'S., 61°58'W.

Glacier flowing into Wilhelmina Bay between Sadler and Café Points, on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Leonardo da Vinci (1452-1519), artist, musician, architect and first aeronautical scientist.

Leon Head 54°33'S., 36°29'W.

Prominent rocky headland, 880 m., forming the S. side of the mouth of Brøgger Gl. and the SE. side of the entrance to Undine South Hbr., on the S. coast of South Georgia. The headland was roughly charted in 1819 by a Russ. exp. under Bellingshausen. Named by the UK-APC, following a survey by the SGS, 1951-52, for the Spanish vessel *Leon*, which sighted South Georgia in 1756.

Léonie Island 67°36'S., 68°21'W.

Largest and westernmost of the Léonie Islands, 1 mi. in diameter and 455 m. high, lying in the entrance to Ryder Bay along the SE. side of Adelaide Island. Disc. and named by the FrAE, 1908-10, under Charcot.

Léonie Islands 67°36'S., 68°17'W.

Group of small islands lying in the entrance to Ryder Bay along the SE. side of Adelaide Island. The FrAE under Charcot, 1908-10, disc. these islands and gave the name Léonie to the largest island. The BGLE under Rymill, 1934-37, extended the coverage of the name to the entire group.

Leopard Island 65°15'S., 64°18'W.

Island 0.2 mi. long, lying 0.2 mi. W. of the SW. end of Skua I. in the Argentine Is., Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Leopold and Astrid Coast 67°20'S., 84°30'E.

That portion of the coast of Antarctica lying between the western extremity of the West Ice Shelf, in 81°24'E., and Cape Penck, in 87°43'E. Discovered and explored in an airplane flight from the Norwegian ship *Thorshavn*, January 17, 1934, by Lt. Alf Gunnestad and Capt. Nils Larsen. Named by Lars Christensen, Norwegian whaling magnate and leader of the expedition, for King Leopold and Queen Astrid of Belgium.

Leopold Coast: see Luitpold Coast 77°30'S., 32°00'W.

Lepanto, Mount 72°44'S., 168°27'E.

A major peak, 2,910 m., situated 2 mi. SE. of Mt. Freeman in the Victory Mtns., Victoria Land. Named by NZGSAE, 1957-58, after the Battle of Lepanto of 1571. One of a group of associated names in this area given by NZGSAE.

Lepeyrère, Baie de: see Lapeyrère Bay 64°23'S., 63°15'W.

Lepley Nunatak 73°07'S., 90°23'W.

A small conspicuous rocky nunatak 2 mi. SW. of Dentler I., lying near the inner part and E. end of Abbot Ice Shelf. First sighted on Feb. 9, 1961 from helicopters of the USS *Glacier* and *Staten Island*. Named by US-ACAN for Larry K. Lepley, oceanographer of the U.S. Navy Hydrographic Office, who with three others was marooned at this nunatak, Feb. 12-15, 1961, by a severe wind and snowstorm.

Le Poing: see Wegger Peak 62°06'S., 58°31'W.

Le Poing, Cerro: see Admiralen Peak 62°06'S., 58°30'W.

Leppard Glacier 65°58'S., 62°30'W.

A large valley glacier draining E. into Scar Inlet, to the N. of Ishmael Peak, on the E. coast of Graham Land. First seen from the air and photographed in part by Sir Hubert Wilkins on Dec. 20, 1928. The glacier was surveyed by FIDS in 1955. It is now clear that, on the photographic evidence of his outward flight, Wilkins gave the name "Crane Channel" to this glacier, and that on his return flight he photographed what is now accepted as Crane Glacier (q.v.), perhaps thinking that it was the same feature. Since Crane Glacier has been retained for the northern of these glaciers photographed by Wilkins, the UK-APC has named this feature for Norman A.G. Leppard, assistant surveyor with FIDS, who surveyed this area in 1955.

Lepus, Mount 70°40'S., 67°10'W.

A large rocky massif separated into two distinct sections by a deep saddle. Located between Millett and

Bertram Glaciers, about 10 mi. E. of Wade Point on the W. coast of Palmer Land. Named by UK-APC after the constellation of Lepus.

Lerchenfeld Glacier 77°55'S., 34°15'W.

A glacier flowing in a west-northwesterly direction between Bertrab Nunatak and Littlewood Nunataks. It coalesces with the southern flank of Schweitzer Glacier before the combined flow discharges into the head of Vahsel Bay. Discovered by the GerAE, 1911-12, under Wilhelm Filchner, who named this feature for Count Hugo von und zu Lerchenfeld-Köfering, supporter of the expedition.

Lerche, Kap: see Erratic Point 53°04'S., 73°22'E.

LeResche, Mount 71°31'S., 166°17'E.

Prominent mountain (2,040 m.) at the extreme N. end of Homerun Range in the Admiralty Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for Robert E. LeResche, USARP biologist at McMurdo Station, 1966-67 and 1967-68.

Leroux Bay 65°36'S., 64°16'W.

Bay 9 mi. long in a NW.-SE. direction and averaging 5 mi. wide, between Nuñez Pt. and the narrow peninsula surmounted by Magnier Peaks, along the W. coast of Graham Land. Disc. by the FrAE, 1903-5, and named by Charcot for Commander Leroux, Argentine Navy. More accurately delineated by the BGLE in 1935.

LeSchack, Mount 85°25'S., 124°00'W.

A distinctive flat-topped mountain, 2,265 m., standing on the N. side of Perkins Canyon in the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1959-60. Named by US-ACAN for Leonard A. LeSchack, traverse seismologist, Byrd Station winter party, 1958.

Les Dents 68°57'S., 70°58'W.

Conspicuous landmark consisting of 4 sharp needle rocks, uniform in height, lying between Mt. Bayonne and Mt. Paris, in the N. part of Alexander Island. Disc. and named "Les Dents" (the teeth) by the FrAE, 1908-10, under Charcot. Delineated from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960.

Leskov Island 56°40'S., 28°10'W.

Island less than 1 mi. long, lying 30 mi. W. of Visokoi I. in the South Sandwich Islands. Disc. in 1819 by a Russ. exp. under Bellingshausen, who named it for the third lieutenant on the exp. ship *Vostok*.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Leskov Island 66°36'S., 85°10'E.

Ice-covered island in the West Ice Shelf, rising to 185 m., 6 mi. NW. of Mikhaylov Island. Disc. by the Soviet exp. of 1956, who named it for Lt. A. Leskov of the sloop *Vostok* on the Bellingshausen exp., 1819-21.

Leslie Hill 62°34'S., 60°12'W.

Hill lying northward of Mt. Bowles in the E. part of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 for David Leslie, Master of the American brig *Gleaner*, a whaler from New Bedford, Massachusetts, which was diverted to sealing in 1820-21 in the South Shetland Islands, following the discovery of this group.

Leslie Peak 68°00'S., 56°30'E.

A rock outcrop with a conical peak at its S. end, about 5 mi. S. of Mt. Cook of the Leckie Range. Plotted from ANARE air photos. Named by ANCA for Leslie Miller, radio officer at Mawson Station in 1964, a member of one of the survey parties which carried out a tellurometer traverse passing through the Leckie Range in 1965.

Lesser Antarctica: see West Antarctica 79°00'S., 100°00'W.

Lesser Mackellar Island 66°58'S., 142°39'E.

A small island immediately NE. of Greater Mackellar Island in the Mackellar Islands, lying 2 mi. N. of Cape Denison in the center of Commonwealth Bay. Discovered and named by the AAE (1911-14) under Douglas Mawson. The name is indicative of the size of the feature in relation to Greater Mackellar Island.

Lester Cove 64°54'S., 62°36'W.

Cove forming the southernmost part of Andvord Bay, on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Maxime C. Lester (1891-1957), who, with T. W. Bagshawe, wintered at nearby Waterboat Pt. in 1921.

Lester Peak 79°49'S., 83°42'W.

A prominent snow-free peak at the S. side of Hyde Gl. in the Edson Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Lester A. Johnson, meteorologist at Little America V Station in 1958.

Letten, Mount 66°55'S., 51°03'E.

Mountain 1 mi. S. of Mt. Storer, in the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for W. H. Letten, a member of the crew of the *Discovery* during BANZARE, 1929-31.

Levack, Mount 78°18'S., 85°05'W.

Mountain (2,670 m.) located 13 mi. E. of Mt. Ostenso in the central part of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Maj. Herbert T. Levack, USAF, who participated in establishing the South Pole Station in the 1956-57 season.

Levanenskogo, Gora: see Skeidsberget Hill 72°06'S., 11°25'E.

Levassor Nunatak 63°40'S., 58°07'W.

A conspicuous horseshoe-shaped nunatak 1 mi. inland in the middle of Cugnot Ice Piedmont, Trinity Peninsula. Mapped from surveys by FIDS (1960-61). Named by UK-APC for Emile Levassor (1844-1897), French engineer, who in 1891 was jointly responsible with R. Panhard for a motor car design which originated the principles on which most subsequent developments were based.

Le Vaux Peak 76°40'S., 125°43'W.

A small peak on the east side of the crater rim of Mount Cumming in the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1958-60. Named by US-ACAN for Howard A. Le Vaux, auroral physicist at Byrd Station, 1959, and a member of the Marie Byrd Land Traverse Party, 1959-60.

Leverett Glacier 85°38'S., 147°35'W.

A glacier about 50 mi. long and 3 to 4 mi. wide, draining northward from the Watson Escarpment, between the California and Stanford Plateaus, and then trending WNW. between Tapley Mtns. and Harold Byrd Mtns. to terminate at the head of the Ross Ice Shelf close E. of Scott Glacier. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named by him for Frank Leverett, eminent geologist at the Univ. of Michigan and authority on glacial geology of the central United States.

Lever Glacier 65°30'S., 63°40'W.

Glacier, 1.5 mi. wide at its mouth and at least 6 mi. long, flowing WNW., then WSW. into the head of the N. arm of Beascochea Bay, on the W. coast of Graham Land. First sighted and roughly surveyed in 1909 by the FrAE. Resurveyed in 1935 by the BGLE under Rymill, and named in 1954 for William H. Lever, 2nd Viscount Leverhulme of the Western Isles, who contributed toward the cost of the BGLE, 1934-37.

Levick, Mount 74°08'S., 163°10'E.

A prominent mountain, 2,390 m., standing at the NW. side of Tourmaline Plateau in the Deep Freeze Range,

GEOGRAPHIC NAMES OF THE ANTARCTIC

Victoria Land. First charted by the Northern Party of the BrAE, 1910-13, and named for G. Murray Levick, surgeon with the expedition and a member of the Northern Party.

Levi Peak 84°08'S., 165°06'E.

A rock peak 2 mi. NW. of Mt. Stanley, at the western edge of Grindley Plateau. Named by US-ACAN for Gene S. Levi, meteorologist at Hallett Station, winter 1963, and 1964-65 summer season.

Levy Island 66°20'S., 66°35'W.

An isolated snow-covered island in Crystal Sound, about 7.5 mi. E. of Gage Point, Lavoisier Island. Mapped from air photos taken by RARE (1947-48) and surveys by FIDS (1958-59). Named by UK-APC for Henri H. Levy, American physical chemist who, with S.W. Peterson, determined the location of the hydrogen atoms in ice by neutron diffraction, in 1957.

Lewald Glacier 54°45'S., 35°52'W.

Small glacier 3 mi. W. of Cape Vahsel, flowing northward to the coast at the E. end of South Georgia. Named by the GerAE under Filchner, 1911-12, for Theodor Lewald, Ministerialdirektor im Reichsamt des Innern, Germany, who took an active interest in the expedition.

Lewandowski Point 75°36'S., 162°13'E.

A rugged, partially ice-free point on the Victoria Land coast, marking the S. side of the mouth of Clarke Glacier. Mapped by USGS from surveys and U.S. Navy tricamera aerial photographs, 1957-62. Named by US-ACAN for John R. Lewandowski, USN, Chief Construction Electrician at McMurdo Station, 1965-66 and 1966-67.

Lewis, Cape 66°30'S., 124°30'E.

An ice-covered cape at the W. side of Maury Bay. Delineated by G.D. Blodgett (1955) from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN after Thomas Lewis, crew member on the sloop *Peacock* during the USEE (1838-42) under Lt. Charles Wilkes.

Lewis, Mount: see Lewis Chain 80°23'S., 26°50'W.

Lewis Bay 77°22'S., 167°35'E.

Bay indenting the N. coast of Ross I. between Mt. Bird and Cape Tennyson. Charted by the BrNAE under Scott, 1901-4. Named by the US-ACAN in 1964 for Capt. Price Lewis, USN, commanding officer of the USS *Staten Island* during USN Op. DFrz. 1959, and who in USN Op. DFrz. 1963 and 1964 was assistant chief of staff and ship group commander, U.S. Naval Support Force, Antarctica.

Lewis Bluff 75°53'S., 140°36'W.

A rock bluff located at the confluence of Paschal Gl. and White Gl., 7 mi. SE. of Mt. McCoy, in coastal Marie Byrd Land. The bluff was photographed from aircraft of USAS, 1939-41, and was mapped in detail by the USGS, 1959-65. Named by US-ACAN for David L. Lewis, USARP ionospheric physicist at Byrd Station, 1963.

Lewis Chain 80°23'S., 26°50'W.

A chain of four rock nunataks on the W. side of Gordon Glacier in the Shackleton Range. First mapped by the CTAE in 1957; photographed by U.S. Navy (trimetrogon aerial photography) in 1967. Named by UK-APC for Squadron Leader John H. Lewis, RAF, senior pilot of the RAF contingent of the CTAE, 1956-58.

Lewis Cliff 84°17'S., 161°05'E.

An irregular cliff, about 12 mi. long, extending S. from Mt. Achnar along the W. side of Walcott Névé. Named by US-ACAN for Richard E. Lewis, Aviation Electronics Technician, USN, who was injured during USN Op. DFrz. II, 1956-57.

Lewis Glacier 67°45'S., 65°40'W.

The northerly of two glaciers flowing E. into Seligman Inlet, on the E. coast of Graham Land. The glacier was photographed from the air by the USAS in 1940. It was charted in 1947 by the FIDS, who named it for William Vaughan Lewis, British glaciologist and lecturer at the Dept. of Geography, Cambridge University.

Lewis Island 66°06'S., 134°22'E.

A small rocky island rising to 30 m., marking the E. side of the entrance to Davis Bay. Delineated from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for James B. Lewis, Passed Midshipman on the sloop *Peacock* of the USEE (1838-42) under Wilkes.

Lewis Island: see Tonkin Island 67°49'S., 65°03'W.

Lewis Nunatak 85°40'S., 88°05'W.

An isolated, mainly snow-covered nunatak located about 10 mi. SE. of the Davies Escarpment and 14 mi. SW. of Nolan Pillar, at the S. end of the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed the area in 1960-61. Named for Charles R. Lewis, USGS geologist who worked from various U.S. vessels (*Wyandot*, *Glacier* and *Eastwind*) in conducting research in the McMurdo Sound region and in the Balaena Islands during the 1955-56 season.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lewisohn Nunatak 77°38'S., 142°50'W.

An isolated nunatak 10 mi. SE. of the Mackay Mtns., Ford Ranges, in Marie Byrd Land. Discovered and mapped by the USAS (1939-41). Named by US-ACAN for Walter P. Lewisohn, radio operator with the ByrdAE (1933-35).

Lewis Passage 66°20'S., 67°00'W.

A water passage in the Biscoe Islands, separating La-voisier, Krogh and DuBois Islands from Watkins Island and Adolph Islands. Mapped from air photos taken by FIDASE (1958-59). Named by UK-APC for Sir Thomas Lewis (1882-1945), English physiologist, pioneer investigator of the responses of the blood vessels of the skin to environmental temperature.

Lewis Peaks 67°15'S., 67°30'W.

Two prominent peaks, 1,065 m., standing 3 mi. E. of Day I. and surmounting the W. part of Arrowsmith Pen. on the W. coast of Graham Land. First roughly surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1948 by the FIDS who named it for Flight Lt. John Lewis, pilot of the Auster airplane which was used from the *John Biscoe* for reconnaissance of ice conditions in Marguerite Bay in February 1950.

Lewis Point 69°54'S., 62°25'W.

Point marked by rocky exposures on its N. side and surmounted by an ice-covered dome, 510 m., standing at the S. side of the mouth of Anthony Gl., on the E. coast of Palmer Land. Photographed from the air by the USAS in 1940. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for Col. Richard L. Lewis of the Army Quartermaster Corps, which furnished field equipment and clothing to the RARE for testing purposes.

Lewis Ridge 83°13'S., 167°35'E.

A rugged, ice-covered ridge, 14 mi. long, extending eastward from the Holland Range, between Morton and Hewitt Glaciers, and terminating at Richards Inlet. Named by US-ACAN for Cdr. G. H. Lewis, USN, commanding officer of the USS *Burton Island* during USN Op. DFrz., 1964.

Lewis Rocks 76°18'S., 145°21'W.

An area of rock outcrops 3 mi. in extent, at the SW. foot of Mt. June in the Phillips Mountains of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for John H. Lewis, geologist with the USARP Fosdick Mountains party, 1967-68.

Lewis Snowfield 71°25'S., 71°20'W.

A low and undulating snowfield in southern Alexander Island, extending westward from the Walton Mtns. to

Beethoven Pen. and northward from Bach Ice Shelf to Wilkins Ice Shelf. Named by UK-APC for Ernest G. Lewis, Governor of the Falkland Islands, 1971-74.

Lewis Spur 82°34'S., 52°13'W.

A rock spur 1.5 mi. W. of Frost Spur on the N. side of Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Atles F. Lewis, aviation structural mechanic, Ellsworth Station winter party, 1957.

Lewthwaite Strait 60°42'S., 45°07'W.

Passage 2.5 mi. wide, lying between Coronation and Powell Islands in the South Orkney Islands. Disc. in December 1821, on the occasion of the joint cruise of Capt. George Powell, a British sealer in the sloop *Dove*, and Capt. Nathaniel Palmer, an American sealer in the sloop *James Monroe*. Mr. Lewthwaite was a teacher of navigation in Prince's Street, Rotherhithe (London). Captain Powell left the chart and journal of his Antarctic exploration with Lewthwaite before sailing on his last expedition, on which he met his death.

Lexington Table 83°05'S., 49°45'W.

A high, flat, snow-covered plateau, about 15 mi. long and 10 mi. wide, standing just N. of Kent Gap and Saratoga Table in the Forrestal Range, Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 on a transcontinental nonstop flight by personnel of U.S. Navy Operation Deep Freeze I from McMurdo Sound to the vicinity of Weddell Sea and return. Named by the US-ACAN for the U.S.S. *Lexington* of 1926, one of the first large aircraft carriers of the U.S. Navy.

L. Hansen, Mount: see Hansen Spur 86°13'S., 159°33'W.

Lhasa Nunatak 85°07'S., 171°18'E.

Narrow rock ridge, 9 mi. long, trending in a NW.-SE. direction between Snakeskin Gl. and Jensen Gl., to the E. of Supporters Range. So named by the NZGSAE (1961-62) because the central peak resembles a Tibetan monastery perched on top of a hill.

Liard Island 66°51'S., 67°25'W.

Mountainous island, 13 mi. long, 6 mi. wide and rising to 1,000 m., situated in the north-central portion of Hanusse Bay, off the W. coast of Graham Land. Disc. and named by the FrAE under Charcot, 1908-10.

Liavaag, Mount 77°22'S., 86°29'W.

Mountain, 1,820 m., between Mt. Holmboe and Holth Peaks near the N. end of the Sentinel Range in the

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ellsworth Mountains. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for First Mate Liavaag of the *Wyatt Earp* in 1935-36, also a member of Ellsworth's two earlier Antarctic expeditions.

Libertad, Islotes: see Wideopen Islands 63°00'S., 55°49'W.

Liberty Hills 80°06'S., 82°58'W.

A line of rugged hills and peaks with bare rock eastern slopes, about 10 mi. long, standing 7 mi. NW. of Marble Hills and forming part of the W. wall of Horseshoe Valley, in the Heritage Range, Ellsworth Mountains. Liberty Hills were mapped by USGS from ground surveys and USN air photos, 1961-66. The name was applied by US-ACAN in association with the name Heritage Range.

Liberty Rocks 62°19'S., 59°27'W.

Group of rocks lying SE. of Mellona Rocks in Nelson Strait, in the South Shetland Islands. Named by the UK-APC in 1961 after the British sealing vessel *Liberty* (Captain Peacock) from Newcastle, which visited the South Shetland Islands in 1821-22.

Libois Bay 65°04'S., 64°03'W.

Cove on the W. side of Cholet I. which is entered between Rozo Pt., the NW. end of Cholet I., and Paumelle Pt., the NW. end of Booth Island, in the Wilhelm Archipelago. First charted by the FrAE, 1903-5, and named by Charcot for F. Libois, second mechanic and carpenter of the ship *Français*.

Lichen Hills 73°18'S., 162°00'E.

Escarpment-like hills located 2 mi. S. of Caudal Hills on the W. margin of upper Rennick Glacier, in Victoria Land. Lichens were collected there, hence the name given by the northern party of NZGSAE, 1962-63.

Lichen Island 69°20'S., 75°32'E.

A small island lying 5 mi. N. of the Bølingen Is. and 2.5 mi. NW. of Cleft I. in southern Prydz Bay. First visited by an ANARE party led by Phillip Law on Feb. 5, 1955. So named by Law because of the rich growth of lichens found there.

Lichen Island: see Vegetation Island 74°47'S., 163°37'E.

Lichen Peak 76°56'S., 145°24'W.

Peak standing between Saunders Mtn. and the Swanson Mtns. in the Ford Ranges, Marie Byrd Land. Discovered in December 1934 by the ByrdAE sledge party under Paul Siple, and so named because of the lichens and other botanical specimens obtained there.

Liebig Peak 66°46'S., 66°00'W.

A prominent peak on Protector Heights, Graham Land, that is identifiable from both Darbel Bay and Lallemand Fjord. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Justus von Liebig (1803-1873), German pioneer of physiological chemistry, whose work on metabolism and food constituents laid the foundations for modern nutrition studies.

Liebknecht Range 71°48'S., 11°22'E.

A mountain range, 10 mi. long, forming the SW. arm of the Humboldt Mtns. in Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Karl Liebknecht (1871-1919), a German revolutionary.

Lie Cliff 76°42'S., 117°37'W.

A prominent rock cliff at the eastern foot of Mt. Steere, in the Crary Mountains. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959-66. Named by US-ACAN for Hans P. Lie, USARP ionospheric physicist at Siple Station in the 1970-71 and 1973-74 summer seasons.

Lied, Mount 70°30'S., 65°33'E.

A prominent pyramidal peak about 7 mi. ENE. of Mt. Mervyn in the Porthos Range of the Prince Charles Mountains. Sighted by the ANARE southern party led by W. G. Bewsher in 1956 and named for Nils T. Lied, weather observer at Mawson Station in 1956 and Davis Station in 1957.

Lied Bluff 68°31'S., 78°16'E.

A rocky hill 1.5 mi. N. of Club Lake in the north-central part of Breidnes Peninsula, Vestfold Hills. The hill is 125 m. high and its southern face is almost perpendicular. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37). First visited by an ANARE sledge party led by B. H. Stinear in 1958. Named by ANCA for Nils Lied, weather observer at Davis Station in 1957.

Lied Glacier 53°09'S., 73°26'E.

A glacier close N. of Cape Arkona on the SW. side of Heard Island. Surveyed by ANARE in 1948. Named by ANCA for N. T. Lied, radio operator and weather observer with ANARE on Heard I. in the years 1951 and 1963, respectively.

Liège Island 64°02'S., 61°55'W.

Island, 9 mi. long and 3 mi. wide, lying immediately NE. of Brabant I. in the Palmer Archipelago. Charted by the BelgAE, 1897-99, under Gerlache, who named it for the province of Liège, Belgium.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lieja, Isla: see Liège Island 64°02'S., 61°55'W.

Lientur, Isla: see Enterprise Island 64°32'S., 62°00'W.

Lientur Channel 64°50'S., 63°00'W.

Channel between Lemaire and Byrde Islands connecting Paradise Hbr. with Gerlache Strait, off the W. coast of Graham Land. First roughly charted by the BelgAE, 1897-99. Named by the fourth Chilean Antarctic Exp. (1949-50) after the *Lientur*, one of the ships used during this expedition.

Lieske Glacier 80°05'S., 156°50'E.

A tributary glacier draining the N. slopes of Mt. Olympus in Britannia Range and flowing N. between Johnstone and Dusky Ridges into Hatherton Glacier. Named by the US-ACAN for Bruce J. Lieske, meteorologist who wintered at Little America V in 1957.

Light, Mount 74°16'S., 61°59'W.

Mountain along the S. side of Barcus Gl., 6 mi. ESE. of Mt. Nash, in the Hutton Mtns., Palmer Land. Mapped by the RARE-FIDS joint sledge party of 1947-48. Named by Finn Ronne for Richard Upjohn Light, then Pres. of the American Geographical Society. The RARE had applied the name "Cape Light" to part of the extremity of Smith Peninsula, but that name is now dropped as Cape Fiske provides adequate reference to that feature.

Lighthouse Bay 54°03'S., 37°08'W.

Small bay between Cape Crewe and Point Abrahamson, forming the N. arm of Cook Bay along the N. coast of South Georgia. Charted by DI personnel in 1929. Probably so named at that time because a lighthouse (now disused) was located on nearby Sheep Point.

Light Lake 60°42'S., 45°39'W.

A small lake 0.2 mi. east of Thulla Point in western Signy Island. Named by UK-APC after Jeremy J. Light, BAS limnologist and leader at Signy Island station, 1970-72.

Lilienthal Glacier 64°21'S., 60°48'W.

Glacier flowing W. into Cayley Gl. between Pilcher and Baldwin Peaks, on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Otto Lilienthal (1848-1896), German pioneer of flight in gliders.

Lilienthal Island 66°12'S., 110°23'E.

One of the Donovan Islands, lying just N. of Glasgal I. in Vincennes Bay. The island was mapped from air photographs taken by USN Op. Hjp., 1946-47.

Named by C. R. Eklund for Billie R. Lilienthal, USN, aerographer at Wilkes Station, 1957.

Liljequist Heights 72°06'S., 2°48'W.

The heights about 2 mi. S. of Grunehogna Peaks, in the Ahlmann Ridge of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Gösta H. Liljequist, Swedish meteorologist with the NBSAE.

Liljequisthorga: see Liljequist Heights 72°06'S., 2°48'W.

Lille Jason: see Little Jason Lagoon 54°11'S., 36°36'W.

Lille Kari Rock 54°24'S., 3°28'E.

An insular rock 2 m. high which lies 1.2 mi. northwest of Cape Lollo, Bouvetøya. Charted from the ship *Norvegia* in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Named by Horntvedt in association with Store Kari Rock which lies 1 mi. westward.

Lillie Glacier 70°45'S., 163°55'E.

A large glacier, about 100 mi. long and 10 mi. wide, between Bowers Mtns. on the W. and Concord and Anare Mtns. on the E., flowing to Ob' Bay on the coast and forming the Lillie Glacier Tongue. The glacier tongue was discovered by the BrAE, 1910-13, and named for Dennis G. Lillie, biologist on the *Terra Nova*. The name Lillie has since been extended to the entire glacier as it is now known. The lower half of the glacier was plotted by ANARE (*Thala Dan*), 1962, which explored the area and utilized air photos taken by USN Operation Highjump, 1946-47. The whole feature was mapped by USGS from surveys and U.S. Navy air photos, 1960-62.

Lillie Glacier Tongue 70°34'S., 163°48'E.

The prominent seaward extension of the Lillie Glacier into Ob' Bay. Discovered by the BrAE, 1910-13, when the *Terra Nova* explored westward of Cape North in February 1911. Named by BrAE for Dennis G. Lillie, biologist on the *Terra Nova*.

Lillie Ice Tongue: see Lillie Glacier Tongue 70°34'S., 163°48'E.

Lillie Range 84°50'S., 170°25'W.

A range of mountains extending northward from the Prince Olav Mtns. (in the vicinity of Mt. Fisher) to the Ross Ice Shelf. Mounts Hall, Daniel, Krebs and Mason are in the range. Named by the Southern Party of NZGSAE (1963-64) for A. R. Lillie, Prof. of Geology at the Univ. of Auckland.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lilliput Nunataks 66°08'S., 62°40'W.

Three nunataks, from 600 to 700 m. high and trending SE.-NW., located 3 mi. N. of Gulliver Nunatak on the E. side of Graham Land. The nunataks are snow free on their SE. sides. They were charted by FIDS and photographed from the air by RARE in 1947. The name, from Jonathan Swift's *Gulliver's Travels*, means land of small people and was applied by UK-APC in association with Gulliver Nunatak.

Limburg Stirum, Mount 72°34'S., 31°19'E.

Mountain, 2,350 m., standing on the E. side of Norsk Polarinstitut Gl. and 1 mi. N. of Mt. Boë in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Count Charles de Limburg Stirum, a patron of the expedition.

Limestone Valley 60°42'S., 45°37'W.

A valley extending northwest from Cemetery Bay, Signy Island. The valley leads directly to Jane Col and serves as a route to the west coast of the island. So named by UK-APC because of an exposure of limestone in the cliff above the valley.

Limit Rock 61°54'S., 57°39'W.

Rock lying 2 mi. E. of North Foreland, the NE. cape of King George I., in the South Shetland Islands. Charted in 1937 by DI personnel on the *Discovery II*, and probably so named because it marks the E. limit of foul ground surrounding North Foreland.

Limitrophe Island 64°48'S., 64°01'W.

An oval-shaped island 0.5 mi. long, lying directly E. of Christine Island and 1 mi. S. of Anvers Island. A suggestive name given by Palmer Station personnel in 1972, because the island lies at the limit of normal field operations from the station.

Limpet Island 67°38'S., 68°18'W.

The southernmost of the Léonie Is., lying in the entrance to Ryder Bay, close off the SE. coast of Adelaide Island. The Léonie Is. were disc. and first roughly surveyed in 1909 by the FrAE under Charcot. Limpet Island was surveyed in 1948 by the FIDS and so named by them because of the large number of limpet shells found there.

Linck Nunataks 82°41'S., 104°12'W.

A group of four small, ice-covered nunataks at the SE. end of the Whitmore Mountains. Three of the nunataks are together and aligned while the fourth lies 2.5 mi. distant. Visited and surveyed on Jan. 2, 1959 by the Horlick Mountains Traverse Party. William H. Chapman, party surveyor, proposed the naming for M. Kerwin Linck, Chief of the Branch of Special Maps, U.S. Geological Survey.

Lincoln Ellsworth, Mount: see Ellsworth, Mount 85°45'S., 161°00'W.

Lincoln Nunatak 67°27'S., 68°43'W.

Snow-capped nunatak with a rocky W. face, at the end of a ridge running westward from Mt. Mangin on Adelaide Island. Named by the UK-APC for Flight Lt. Warren D. Lincoln, RAF, pilot with the BAS Aviation Unit based at Adelaide station in 1962-63.

Lincayan, Punta: see Rey, Cape 66°36'S., 66°27'W.

Lindenberg Island 64°55'S., 59°40'W.

Circular island 0.5 mi. in diameter, lying 11 mi. N. of Robertson I. and some 35 mi. ENE. of Cape Fairweather, off the E. coast of Antarctic Peninsula. Disc. by a Nor. whaling exp. under C. A. Larsen in December 1893. Named by Larsen for a member of the firm of Wolterreck and Robertson of Hamburg which sent him to the Antarctic.

Lindenberg's Sugar-Loaf: see Lindenberg Island 64°55'S., 59°40'W.

Lindenberg Zuckerhut: see Lindenberg Island 64°55'S., 59°40'W.

Linder Glacier 71°41'S., 163°03'E.

A steep tributary glacier that drains the S. slopes of Mt. Bernstein and moves S. to enter Hunter Glacier, in the Lanterman Range, Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Lt. (j.g.) Michael A. Linder, USNR, communications and administrative officer with the McMurdo Station winter party, 1967.

Linder Peak 79°52'S., 83°12'W.

A somewhat lower but very imposing peak standing immediately S. of Mt. Dolence in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Harold W. Linder, geophysicist with the USARP Ross Ice Shelf party, 1961-62.

Lind Glacier 65°23'S., 64°01'W.

Glacier flowing W. from Alencar Peak into the S. part of Collins Bay, on the W. coast of Graham Land. First charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1959 for James Lind (1716-1794), Scottish "founder of modern naval hygiene," who was the first to publish a convincing account of experimental work establishing the dietary cause and cure of scurvy, in 1753.

Lindley, Mount 81°46'S., 159°05'E.

A mountain, 1,760 m., standing on the W. side of Starshot Gl., 4 mi. N. of Mt. Hoskins. Discovered by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

BrNAE (1901-4) and named for Lord Nathaniel Lindley, a member of the committee that made the final draft of instructions for the expedition.

Lind Ridge 75°48'S., 132°33'W.

A ridge forming the S. wall of Coleman Glacier in the Ames Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Larry W. Lind, glaciologist at Byrd Station, 1968-69.

Lindsay, Cape: see Lindsey, Cape 61°06'S., 55°29'W.

Lindsay Nunatak: see Syningen Nunatak 68°20'S., 59°09'E.

Lindsay Peak 84°37'S., 163°32'E.

A basalt peak, 3,210 m., standing 4 mi. WNW. of Blizard Peak in the Marshall Mountains. Named by the Ohio State Univ. party to Queen Alexandra Range (1966-67) for John Lindsay, geologist with the party.

Lindsay Reef 54°26'S., 3°29'E.

A reef lying close north of Cape Meteor on the east side of Bouvetøya. First charted in 1898 by a German expedition under Karl Chun. Recharted in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Named by the Norwegians after Capt. James Lindsay, British whaler in command of the *Swan* who, in the company of Capt. Thomas Hopper with the *Otter*, sighted Bouvetøya in 1808.

Lindsayrevet: see Lindsay Reef 54°26'S., 3°29'E.

Lindsey, Cape 61°06'S., 55°29'W.

Cape which forms the W. extremity of Elephant I. in the South Shetland Islands. The name appears on Powell's map published by Laurie in 1822.

Lindsey Islands 73°37'S., 103°18'W.

A group of islands lying just off the NW. tip of Canisteo Pen. in Amundsen Sea. Delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Alton A. Lindsey, biologist with the ByrdAE, 1933-35.

Lindstrøm Peak 86°18'S., 160°10'W.

A peak, 2,640 m., standing 2 mi. NW. of Mt. Kristensen on the W. side of Nilsen Plateau, in the Queen Maud Mountains. Named by US-ACAN for Adolf H. Lindstrøm, cook for the land party at Framheim on Amundsen's exp. of 1910-12. This naming preserves the spirit of Amundsen's commemoration of "Mt. A. Lindström," a name applied in 1911 for an unidentified mountain in the general area.

Line Glacier 72°59'S., 167°50'E.

A glacier that drains the S. part of the E. slopes of Malta Plateau and flows E. between Collins Peak and Mt. Alberts into Borchgrevink Glacier, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Kenneth Line, traverse engineer with the USARP glaciological party at Roosevelt Island, 1967-68.

Linehan Glacier 83°15'S., 162°41'E.

A glacier, 11 mi. long, flowing NE. from Prince Andrew Plateau along the N. side of Turnabout Ridge to enter Lowery Glacier. Named by US-ACAN for Fr. Daniel Linehan, who made seismic soundings of ice thickness from the USS *Atka*, 1954-55, and in the Ross Sea area, 1955-56.

Line Islands 67°56'S., 67°14'W.

Small group of islands between Horseshoe I. and Camp Pt., lying off the W. side of Graham Land. First plotted by BGLE, 1934-37. The name, applied by UK-APC in 1971, is descriptive of the group which lies in a straight line.

Link Island 63°16'S., 57°56'W.

A small island at the outer (northern) margin of the Duroch Islands, approximately 3 mi. northwest of Halpern Point, Graham Land. Named by US-ACAN for David A. Link, field assistant with the University of Wisconsin (USARP) geological party during reconnaissance of this area, 1960-61.

Link Stack 65°36'S., 64°34'W.

Rocky pillar at the NW. end of Chavez I., off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because it was here that the 1957 winter surveys by FIDS from the Prospect Point station were linked with the 1957-58 summer surveys by the British Naval Hydrographic Survey Unit.

Linn Mesa 73°32'S., 163°20'E.

A small mesa located 3 mi. S. of Chisholm Hills in the Southern Cross Mtns. of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Paul E. Linn, USN, utilitiesman at McMurdo Station in 1963 and 1967.

Linnormegget Hill 72°08'S., 14°27'E.

A rock hill 3 mi. S. of Linnormen Hills in the Payer Mtns. of Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Linnormegget (the dragon's egg).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Linnormen Hills 72°04'S., 14°33'E.

Hills extending SW.-NE. and rising close E. of Skavlhø Mountain in the Payer Mtns. of Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Linnormen (the dragon).

Linsley Peninsula 72°03'S., 98°11'W.

A broad, roughly rectangular ice-covered peninsula which protrudes into the S. part of Murphy Inlet, northern Thurston Island, dividing the inlet into two arms at the head. The peninsula was first plotted from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Lt. Cdr. Richard G. Linsley, USN, pilot of LC-130 Hercules aircraft who made flights in support of the USARP geological party working at Thurston Island in the 1968-69 season.

Linton-Smith Nunataks 70°17'S., 72°45'E.

A group of nunataks between Jennings Promontory and Reinbolt Hills on the E. side of Amery Ice Shelf. First photographed by USN Operation Highjump (1946-47). The position was fixed by intersection from Corry Rocks and Rubeli Bluff by ANARE surveyors in 1968. Named by ANCA for N. Linton-Smith, senior technical officer with the Antarctic Division, Melbourne, a member of the ANARE Amery Ice Shelf glaciological traverse in 1970.

Linwood Peak 77°36'S., 147°13'W.

An isolated peak on Hershey Ridge, standing 14 mi. W. of Mt. Ronne in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939-41). Named by US-ACAN for Linwood T. Miller, sailmaker with the ByrdAE (1933-35).

Lion Island 64°41'S., 63°08'W.

Island 1.5 mi. long and 1 mi. wide, lying off the E. side of Anvers I. and 1 mi. NE. of Cape Astrup, Wiencke I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache. The name appears on a map based on a 1927 survey by DI personnel on the *Discovery*. The profile of the island suggests a reclining lion when viewed from the southwest.

Lion Island 66°39'S., 140°01'E.

A small rocky island 0.2 mi. NNE. of Pétrel Island in the Géologie Archipelago. Surveyed and named by the FrAE (1949-51) under André Liotard. The name derives from the rock summit of the island which has the shape of a lion's head.

Lion Island 76°51'S., 162°33'E.

A small island lying E. of the mouth of Hunt Gl. in Granite Harbor, Victoria Land. Named by the BrAE, 1910-13.

Lion Sound 64°40'S., 63°09'W.

Small passage between Lion I. and the SE. coast of Anvers I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache. The name appears on a map based on a 1927 survey by DI personnel on the *Discovery*. Named for its association with Lion Island.

Lions Rump 62°08'S., 58°07'W.

Conspicuous headland forming the W. side of the entrance to King George Bay, on King George I., in the South Shetland Islands. Charted and given this descriptive name in 1937 by DI personnel on the *Discovery II*.

Lion's Rump, Cape: see Lions Rump 62°08'S., 58°07'W.

Liotard, Mount 67°37'S., 68°34'W.

Mountain having a conspicuous ice-covered peak, 2,225 m., standing midway between Mt. Gaudry and Mt. Ditte in the S. part of Adelaide Island. Disc. and first surveyed by the FrAE in 1909. Resurveyed in 1948 by the FIDS and named by the UK-APC for André F. Liotard, French observer with the FIDS in 1947-48 and leader of the FrAE, 1949-51.

Liotard Glacier 66°37'S., 139°30'E.

Channel glacier about 3 mi. wide and 6 mi. long, flowing NNE. from the continental ice and terminating in a small tongue about 4 mi. W. of Hélène Island. Delineated from air photos taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for André-Frank Liotard, leader of the FrAE, 1949-51, whose group completed the initial survey of the coastal features as far westward as this glacier.

Liouville Point 65°10'S., 64°09'W.

Point marking the NE. end of Petermann I., in the Wilhelm Archipelago. Disc. by the FrAE, 1908-10, and named by Charcot for J. Liouville, asst. medical officer and zoologist of the expedition.

Lippert Peak 79°59'S., 81°56'W.

A sharp pointed peak at the end of a ridge that extends W. from Douglas Peaks into Horseshoe Valley, located 5 mi. SE. of Strong Peak (which this peak resembles) in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for George E. Lippert, USARP biologist at Palmer Station in 1965.

Lippman Island: see Lippmann Islands 65°30'S., 64°26'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lippmann Islands 65°30'S., 64°26'W.

Group of small islands 2 mi. in extent, lying close NW. of Lahille I. off the W. coast of Graham Land. Originally mapped as a single island by the FrAE, 1903-5, under Charcot, and named by him for Gabriel Lippmann, French physicist and Nobel Prize winner.

Lipps Island 64°46'S., 64°07'W.

A small rocky island 0.2 mi. W. of Litchfield Island, off the SW. coast of Anvers Island. Named by US-ACAN for Dr. Jere H. Lipps, leader (1971-74) of the USARP team making studies of shallow water benthic foraminifera along Antarctic Peninsula, including this area.

Liptak, Mount 78°45'S., 84°54'W.

A mountain over 3,000 m. with twin summits, located 7 mi. SE. of Mt. Craddock in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for L. H. Liptak, aviation machinist mate, USN, who served as plane captain on the first reconnaissance flights to this vicinity in January 1958.

Lira, Mount 67°52'S., 48°53'E.

A mountain located 5 mi. E. of Condon Hills, in Enderby Land. The geology of this feature was investigated by the SovAE, 1961-62, which called it "Gora Lira" (lyre mountain), probably because of its shape.

Lisboa Island 65°11'S., 64°11'W.

The southwesternmost of the small islands lying off the S. end of Petermann I., in the Wilhelm Archipelago. Disc. and named by the FrAE, 1908-10, under Charcot.

Lishness Peak 78°53'S., 84°45'W.

A peak (2,200 m.) near the S. end of the Sentinel Range of the Ellsworth Mtns., rising at the E. side of Nimitz Gl., 1 mi. SE. of Wilson Peak. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Alton R. Lishness, radio operator on a USN R4D exploratory flight to this area on Jan. 28, 1958.

Lisicky, Mount 78°27'S., 162°05'E.

A peak, 2,120 m., standing 7 mi. NW. of Mt. Cocks in the Royal Society Range. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1963 for Capt. Joseph F. Lisicky, USMC, maintenance officer for USN Op. DFrz., 1960, who served several summers at McMurdo Station.

Lisignoli Bluff 82°31'S., 42°41'W.

A rock bluff, 610 m., forming the N. end of Schneider Hills in the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos,

1956-67. Named by US-ACAN for Cesar Augusto Lisignoli, Argentine glaciologist and scientific leader at Ellsworth Station, winter 1961.

Lister, Mount 78°04'S., 162°41'E.

Massive mountain, 4,025 m., forming the highest point in the Royal Society Range of Victoria Land. Discovered by the BrNAE (1901-4) which named it for Lord Joseph Lister, Pres. of the Royal Society, 1895-1900.

Lister Cove 62°30'S., 60°05'W.

Cove lying midway between Williams Pt. and Edinburgh Hill along the NE. coast of Livingston I., in the South Shetland Islands. First charted and named by James Weddell in the brig *Jane* during the period 1820-23.

Lister Glacier 64°05'S., 62°19'W.

Glacier 5 mi. long and 1 mi. wide, flowing into Bouquet Bay just S. of Duclaux Pt. on the NE. side of Brabant I., in the Palmer Archipelago. Shown on an Argentine Govt. chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Joseph Lister, First Baron Lister (1827-1912), English surgeon and founder of antiseptic surgery.

Lister Glacier 77°59'S., 163°05'E.

Glacier on the E. side of the Royal Society Range, draining NE. from a large cirque immediately N. of Mt. Lister. It derives its name from Mt. Lister, and was surveyed in 1957 by the N. Z. Blue Glacier Party of the CTAE, 1956-58.

Lister Heights 80°31'S., 28°35'W.

Rock heights on the E. side of Stratton Gl., 4 mi. SW. of Flat Top in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Hal Lister, glaciologist with the transpolar party of the CTAE in 1956-58, and leader at the expedition's advance base, "South Ice", in 1957.

Lister Nunataks 73°27'S., 160°32'E.

Isolated nunataks located in the N. reaches of Priestley Névé, about 15 mi. SSW. of Brawn Rocks, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Larry W. Lister, helicopter flight crewman with USN Squadron VX-6 during Operation Deep Freeze 1966, 1967 and 1968.

Liston Nunatak 70°54'S., 63°45'W.

A large nunatak immediately NW. of Heintz Peak of the Welch Mtns. in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Cdr. John M. Lis-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ton, USN, Operations Officer for Antarctic Support Activities during Operation Deep Freeze 1969 and Executive Officer, 1970.

Liszt, Mount 71°27'S., 72°57'W.

Snow-covered mountain, 250 m., with a scarp on its S. side, midway between the heads of Brahms and Mendelssohn Inlets in the SW. part of Alexander Island. A number of mountains in this vicinity first appear on maps by the RARE, 1947-48. This mountain, apparently one of these, was mapped from RARE air photos by Searle of the FIDS in 1960. Named by the UK-APC for Franz Liszt (1811-1886), Hungarian composer.

Litchfield Island 64°46'S., 64°06'W.

Rocky island 0.5 mi. long and rising to 50 m., lying 0.5 mi. S. of Norsel Pt., off the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the FIDS in 1955. Named by the UK-APC for Douglas B. Litchfield of FIDS, general assistant and mountaineer at the Arthur Harbor station in 1955 who helped with the local survey and made numerous soundings through the sea ice in the vicinity of the island.

Litell Rocks 71°24'S., 162°00'E.

An area of rock outcrops within the lower Rennick Glacier, located 5 mi. E. of the N. end of Morozumi Range. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Richard J. Litell, public information officer, National Science Foundation, who served in four summer seasons in Antarctica, 1960-64.

Litke Nunatak 67°36'S., 51°40'E.

A nunatak 10 mi. E. of Perov Nunataks, lying at the E. margin of the Scott Mountains in Enderby Land. Named by the SovAE, 1961-62, after the Soviet ice-breaker *Litke*.

Little, Cape 74°05'S., 61°04'W.

Cape at the E. extremity of the peninsula between Wright and Keller Inlets, on the E. coast of Palmer Land. Probably seen from the air by members of the USAS who photographed Wright Inlet in December 1940. Photographed from the air during 1947 by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for Delbert M. Little, Asst. Chief for Operations, U.S. Weather Bureau, who arranged the program for sending weather reports from the RARE.

Little, Mount 70°30'S., 65°16'E.

A mountain immediately N. of Mt. Mervyn in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA

for S. G. Little, electrical fitter-mechanic at Mawson Station in 1967 and technical assistant at Casey Station in 1969.

Little, Mount 77°00'S., 143°51'W.

A mainly ice-free mountain 3 mi. SW. of Mt. Swan in the Ford Ranges, Marie Byrd Land. First mapped by the USAS, 1939-41, under Adm. Richard Byrd. Named by US-ACAN at the suggestion of Adm. Byrd for Capt. Harold H. Little, USN, who made financial contributions to the Byrd Antarctic Expeditions of 1928-30 and 1933-35, and assisted in the logistic plans for these expeditions.

Littleblack Nunataks 81°35'S., 156°20'E.

A group of about a dozen black nunataks at the SE. side of the Byrd Névé. This scattered group lies 4 mi. SE. of All-Blacks Nunataks and 15 mi. SW. of Mt. Nares of the Churchill Mountains. Charted and descriptively named by the NZGSAE, 1960-61.

Little Bucht: see Doris Bay 54°27'S., 36°08'W.

Little Bucht: see Saint Andrews Bay 54°26'S., 36°11'W.

Little Jason Lagoon 54°11'S., 36°36'W.

An almost circular lagoon, 0.4 mi. in diameter, lying at the head of Jason Hbr. to which it is connected by a narrow cut, in Cumberland West Bay, South Georgia. The name Little Jason was in use at South Georgia prior to 1920. The feature was surveyed in 1929 by DI personnel, who named it Nogood Lagoon because a motor boat could not get through the entrance. The SGS, 1951-52, reported that the feature is known locally as Little Jason or (in Norwegian) Lille Jason. In order to indicate the nature of the feature, and at the same time to conform with local usage, the name Little Jason Lagoon is approved.

Little Matterhorn 53°04'S., 73°30'E.

Rocky peak, 1,480 m., formed by a small volcanic cone 1.1 mi. NNW. of Fremantle Peak, on the N. flank of Big Ben, the dominating mountain on Heard Island. Surveyed and named in 1948 by the ANARE.

Little Moltke: see Little Moltke Harbor 54°32'S., 36°05'W.

Little Moltke Harbor 54°32'S., 36°05'W.

Small bay between Pirner Pt. and the ice cliffs of Ross Gl., lying 1 mi. S. of Moltke Hbr. in the W. side of Royal Bay, South Georgia. First surveyed by the German group of the International Polar Year Investigations, 1882-83, under Schrader. The name Little Moltke, derived from nearby Moltke Harbor, is used

GEOGRAPHIC NAMES OF THE ANTARCTIC

for this feature by the sealers in South Georgia. The full name, Little Moltke Harbor, is approved in order to indicate the nature of the feature.

Littlepage, Mount 77°12'S., 160°03'E.

Mountain over 2,000 m., standing between Mount DeWitt and Mt. Dearborn, just W. of the N. end of the Willett Range, in Victoria Land. Named by US-ACAN for Jack L. Littlepage, biologist at McMurdo Station in 1961, who worked additional summer seasons there, 1959-60 and 1961-62.

Little Razorback Island 77°40'S., 166°31'E.

Smallest and easternmost of the Dellbridge Is., lying in Erebus Bay off the W. side of Ross Island. Disc. by the BrNAE under Scott, 1901-4, and so named because of its size and similarity to nearby Big Razorback Island.

Littlepage Island: see Sucia Island 64°58'S., 63°36'W.

Little Thumb 68°19'S., 66°53'W.

Small isolated rock tower, 825 m., on the S. side of Neny Fjord, standing close S. of The Spire at the NW. end of the Blackwall Mtns. on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. It was climbed on Jan. 22, 1948 by members of RARE and FIDS, who used variations of this name in referring to the feature.

Littlewood Nunataks 77°53'S., 34°10'W.

A group of four lichen-covered rock outcrops, each about 50 yards in width, situated between Schweitzer and Lerchenfeld Glaciers. The nunataks are brick red in color. They were discovered and first roughly charted by the GerAE, 1911-12, under Wilhelm Filchner. They were visited by helicopter from the icebreaker USS *Edisto* on January 28, 1959, by John C. Behrendt of USGS and Lt. (j.g.) Erickson, USN. Named by Behrendt for William H. Littlewood, oceanographer with the then U.S. Navy Hydrographic Office, who worked in this and adjacent parts of the Weddell Sea area during Operation Deep Freeze 1957 and 1959.

Litvillingane Rocks 71°52'S., 1°44'W.

Two isolated nunataks, the eastern with a small outlier, lying 3 mi. S. of Bolten Peak, on the E. side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Litvillingane (the mountainside twins).

Livdebotnen Cirque 71°45'S., 11°21'E.

A cirque formed in the NE. side of Mt. Flånuten and W. side of Botnfjellet Mtn., in the Humboldt Mtns. of

Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Livdebotnen (the shelter cirque).

Lively, Cape: see Lively Point 65°52'S., 66°11'W.

Lively Point 65°52'S., 66°11'W.

Point forming the S. extremity of Renaud I. in the Biscoe Islands. The Biscoe Is. were disc. in 1832 by a Br. exp. under John Biscoe, and were first roughly surveyed by the FrAE, 1903-5, and 1908-10, both under Charcot. Renaud I. was again roughly surveyed in 1935-36 by the BGLE, under Rymill. The point was named in 1954 by the UK-APC for the cutter *Lively*, one of the two vessels of Biscoe's 1830-32 expedition.

Liverpool Bay: see Destruction Bay 61°59'S., 57°39'W.

Liv Glacier 84°55'S., 168°00'W.

A steep valley glacier, 40 mi. long, emerging from the polar plateau just SE. of Barnum Peak and draining N. through the Queen Maud Mtns. to enter Ross Ice Shelf between Mayer Crag and Duncan Mountains. Discovered in 1911 by Roald Amundsen, who named it for the daughter of Fridtjof Nansen.

Livingston Island 62°36'S., 60°30'W.

Island 38 mi. long and from 2 to 20 mi. wide, lying between Greenwich and Snow Islands in the South Shetland Islands. This island was known to sealers as early as 1820, and the name Livingston has been well established in international usage for over 100 years.

Livonia Rock 62°02'S., 57°36'W.

Rock lying 0.5 mi. S. of Cape Melville, the E. extremity of King George I., in the South Shetland Islands. Named by the UK-APC in 1960 for the sealing vessel *Livonia* from London, which visited the South Shetland Is. in 1821-22.

Lizard Hill 63°31'S., 57°01'W.

Narrow, curving rock ridge, 355 m., standing 2 mi. SW. of Trepassey Bay and 0.5 mi. E. of Ridge Peak, on Tabarin Peninsula. Probably first seen by the SwedAE, 1901-4, under Nordenskjöld. First charted in 1946 by the FIDS, who applied the descriptive name.

Lizard Island 65°41'S., 64°27'W.

Island 2 mi. long and 0.5 mi. wide, lying in the N. part of Bigo Bay along the W. coast of Graham Land. Disc. by the BGLE, 1934-37, under Rymill who so named it because of its shape.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lizard Point 84°48'S., 163°40'E.

A low morainic point along the W. side of upper Beardmore Glacier, marking the S. side of the entrance to glacier-filled Table Bay. Named by the BrAE, 1910-13.

Lizards Foot 77°13'S., 162°51'E.

Rocky spur forming the E. end of the Saint Johns Range in Victoria Land. Charted and named by the BrAE under Scott, 1910-13.

Llamativo, Islote: see Nobby 55°02'S., 34°38'W.

Llano, Mount 84°48'S., 173°21'W.

A mountain peak (1,930 m.) in the foothills of the Prince Olav Mtns., standing 6 mi. NE. of Mt. Wade. Discovered by the U.S. Ross Ice Shelf Traverse Party (1957-58) under A. P. Crary, and named by him for George A. Llano, biologist in Antarctica during the summer of 1957-58 and several succeeding seasons; later Program Manager (biological sciences), Office of Polar Programs, National Science Foundation.

Llanquihue, Grupo: see Llanquihue Islands 65°53'S., 65°06'W.

Llanquihue Islands 65°53'S., 65°06'W.

A group of islands to the E. of Larrouy I., extending northward for 9 mi. from the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. The name appears on a Chilean Govt. chart of 1947 and is after the Chilean province of the same name.

Lloyd, Cape 61°07'S., 54°01'W.

Cape which forms the N. end of Clarence I. in the South Shetland Islands. The name Lloyd's Promontory appears on charts of the 1821-25 period, but in more recent years the feature has become internationally known as Cape Lloyd.

Lloyd, Mount: see Humphrey Lloyd, Mount 72°19'S., 169°27'E.

Lloyd, Mount 83°13'S., 165°44'E.

A mountain (3,210 m.) in the Holland Range, standing N. of the head of Hewitt Gl., 7 mi. N. of Mt. Miller. Discovered and named by the BrAE (1907-9).

Lloyd Hill 62°30'S., 59°54'W.

Hill, 335 m., lying SW. of Mt. Plymouth on Greenwich I., in the South Shetland Islands. The name Lloyd's Land on H. Foster's manuscript chart (1820) may refer to Greenwich Island, but the latter is now firmly established. Lloyd Hill was applied by the UK-APC in 1961 to preserve this early name in the area.

Lloyd Icefall 72°04'S., 165°27'E.

A large icefall at the head of Lillie Gl., draining from the polar plateau between the King and Millen Ranges. Named by the Northern Party of NZFMCAE, 1962-63, for R. Lloyd, field assistant with the Southern Party of that expedition.

Lloyds Cape: see Lloyd, Cape 61°07'S., 54°01'W.

Lloyds Island: see Rugged Island 62°38'S., 61°15'W.

Lloyd's Promontory: see Lloyd, Cape 61°07'S., 54°01'W.

Loaf Rock 64°48'S., 63°55'W.

Rock lying 3 mi. W. of Biscoe Pt., off the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit in 1956-57. So named by the UK-APC in 1958 because the rock is shaped like a flat loaf of bread.

Lobel Island 64°59'S., 63°53'W.

Island nearly 1 mi. long, lying 2 mi. SW. of Brown I. in the Wauwermans Is., in the Wilhelm Archipelago. Charted by the FrAE under Charcot, 1903-5, and named for Loïcq de Lobel.

Lobodon Island 64°05'S., 61°35'W.

Island lying 3.5 mi. E. of Wauters Pt., Two Hummock I., in the Palmer Archipelago. Photographed by the FIDASE in 1955-57. Named by the UK-APC in 1960 after *Lobodon carcinophagus*, the crabeater seal.

Locator Island 65°11'S., 64°30'W.

The highest of the Roca Is., lying 0.2 mi. N. of the largest island in the group, in the Wilhelm Archipelago. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57 and from the helicopter of H.M.S. *Protector* in March 1958. So named by the UK-APC because this distinctive island provides a useful mark for locating one's position when navigating French Passage.

Locke, Mount 71°24'S., 169°06'E.

A snow-capped coastal peak (1,190 m.) at the NE. end of DuBridge Range, in the Admiralty Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Cdr. Jerry L. Locke, USN, helicopter pilot with Squadron VX-6 during Operation Deep Freeze 1968.

Lockhart, Mount 76°28'S., 145°06'W.

Prominent northerly projection from the main massif of the Fosdick Mtns. 4 mi. NE. of Mt. Avers, in the Ford Ranges of Marie Byrd Land. Discovered by the ByrdAE on a flight on Dec. 5, 1929. Named for Ernest

GEOGRAPHIC NAMES OF THE ANTARCTIC

E. Lockhart, physiologist at West Base of the USAS and a member of the biological party which visited this area in 1940.

Lockhart Ridge 85°02'S., 174°50'W.

A conspicuous ridge about 4 mi. long, extending W. along the S. side of Yeats Gl. and terminating at Shackleton Glacier. Named by the Texas Tech Shackleton Glacier Exp. (1964-65) for CWO James J. Lockhart, pilot with the U.S. Army Aviation Detachment which supported the expedition.

Lockley Point 64°47'S., 63°23'W.

Low, ice-covered point lying 1 mi. NE. of Noble Peak on the NW. side of Wiencke I., in the Palmer Archipelago. Disc. by the BelgAE under Gerlache in 1898. Resighted and charted by the FIDS in 1944, and named for Lt. J. G. Lockley, RNVR, base leader, biologist, and meteorologist at Port Lockroy in 1945.

Lockroy, Port 64°49'S., 63°30'W.

Harbor 0.5 mi. long and wide, entered between Flag Pt. and Lécuyer Pt. on the W. side of Wiencke I., in the Palmer Archipelago. Disc. by the FrAE, 1903-5, and named by Charcot for Édouard Lockroy, French politician and V. Pres. of the Chamber of Deputies, who assisted Charcot in obtaining government support for the expedition.

Lockwood, Mount 84°09'S., 167°24'E.

A projecting-type mountain 5 mi. S. of Mt. Bell, forming a part of the E. face of Grindley Plateau in Queen Alexandra Range. The above is the interpretation of Shackleton's intended position for this mountain made by the Southern Party of NZGSAE (1961-62), which explored this region. Named by BrAE (1907-9) for Dr. C. B. Lockwood of St. Bartholomew Hospital, where Dr. E. S. Marshall of BrAE had previously been employed.

Lockyer, Cape: see Lockyer Island 64°27'S., 57°36'W.

Lockyer, Cape 53°10'S., 73°38'E.

A steep rock point 1.5 mi. NE. of Lambeth Bluff on the SE. side of Heard Island. Surveyed in 1948 by ANARE and named by them for Lt. H.C.J. Lockyer, RANVR, one of the officers on HMAS *Labuan*, relief ship for the expedition.

Lockyer Island 64°27'S., 57°36'W.

Island 2.5 mi. long, lying off the S. shore of James Ross I. in the SW. entrance to Admiralty Sound. Named Cape Lockyer by Capt. James Clark Ross, Jan. 7, 1843, at the request of Capt. Francis R. M. Crozier in honor of the latter's friend, Capt. Nicholas Lockyer, RN. The insularity of the feature was determined by the SwedAE under Nordenskjöld in 1902.

Lodge Rock 68°41'S., 67°32'W.

Low, snow-capped rock, less than 30 m. high, between Barn Rock and Hayrick I. in the Terra Firma Is., off the W. coast of Graham Land. The Terra Firma Is. were first visited and surveyed in 1936 by the BGLE under Rymill. This rock was surveyed in 1948 by the FIDS, and so named by them because a low ledge onto which sledges could be driven provided lodgment clear of the sea ice pressure area.

Loewe, Mount 70°32'S., 67°43'E.

The most northerly of the Amery Peaks, 1,130 m., rising 6 mi. NE. of Mt. Seaton in eastern Aramis Range, Prince Charles Mountains. Disc. by the ANARE southern party led by W. G. Bewsher in 1956. Named by ANCA for Fritz Loewe, a member of the ANARE reconnaissance party in the *Wyatt Earp*, 1947-48, and Australian observer with the French Exp. on Adélie Coast, 1951-52.

Loewe Massif 70°34'S., 68°00'E.

A large rock massif in the E. part of the Aramis Range, Prince Charles Mountains. The surface of the massif is largely an undulating plateau from which Mount Loewe and Medveckey Peaks rise. The plateau lies at an average elevation of 1,000 m. above the sea level and 600 m. above the ice on its northern flank. Discovered by an ANARE party led by W. G. Bewsher in 1956. The name of the massif derives from Mount Loewe, which was named for Fritz Loewe, a member of the ANARE reconnaissance party in the *Wyatt Earp* in 1947-48 and Australian observer with the French expedition at Port Martin, Adélie Coast, in 1951.

Lofgren Peninsula 72°08'S., 96°00'W.

An ice-covered peninsula about 22 mi. long, projecting between Cadwalader and Morgan Inlets on the NE. side of Thurston Island. Disc. in helicopter flights from the USS *Glacier* and *Burton Island* by personnel of the USN Bellingshausen Sea Exp. in February 1960. Named by US-ACAN for Charles E. Lofgren, personnel officer with the ByrdAE, 1928-30.

Loftus Glacier 77°33'S., 162°46'E.

Valley glacier between Mounts Weyant and McLennan, which flows N. to join Newall Gl. in Victoria Land. Named by the US-ACAN in 1964 for Chief Journalist Leo G. Loftus, USN, who served five summer seasons at McMurdo Station, 1959-64.

Logie Glacier 85°18'S., 175°20'W.

A tributary glacier, about 10 mi. long and 2 mi. wide, flowing W. through the Cumulus Hills to enter Shackleton Glacier just NE. of Vickers Nunatak. Named by the Southern Party of the NZGSAE (1961-62) for W. R. Logie, N. Z. maintenance officer and field me-

GEOGRAPHIC NAMES OF THE ANTARCTIC

chanic who spent nearly two years in the Antarctic and was Deputy-Leader of Scott Base during the 1962-63 season.

Loïc de Lobel, Iles: see Lobel Island 64°59'S., 63°53'W.

Loïc de Lobel Islands: see Lobel Island 64°59'S., 63°53'W.

Loke, Mount 77°29'S., 162°33'E.

A horn shaped peak on the S. wall of Wright Valley, standing between Goodspeed and Denton Glaciers in the Asgard Range of Victoria Land. Named by the VUWAE, 1958-59, after one of the Norse gods.

Lokehellene Cliffs 71°56'S., 8°47'E.

Steep rock cliffs which form the W. side of Nupsskarvet Mtn., in the Kurze Mtns. of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named Lokehellene (Loki slopes, or Loke) after the god of Norse mythology.

Løken Moraines 66°17'S., 110°37'E.

A line of N.-S. trending moraines, about 7 mi. long, lying from 0.5 to 2 mi. inland from the Windmill Islands, just E. of the base of Clark, Bailey and Mitchell Peninsulas. First mapped from air photos taken by USN Op. Hjp. (1946-47) and Op. Wml. (1947-48). Named by C. R. Eklund for Olav Løken, Norwegian glaciologist who was a member of the Wilkes Station party, 1957.

Lokey Peak 71°50'S., 64°06'W.

A small, sharp peak, or nunatak, standing at the SE. extremity of the Guthridge Nunataks, in the Gutenko Mtns. of central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for William M. Lokey, Station Manager at Palmer Station, 1975. He previously wintered at McMurdo Station in 1970 and 1974.

Lola, Cape: see Lola, Point 60°44'S., 44°43'W.

Lola, Mount 60°44'S., 44°43'W.

Peak, 170 m., surmounting Point Lola at the E. side of the entrance to Uruguay Cove, on the N. coast of Laurie I. in the South Orkney Islands. The name appears on an Argentine Govt. chart of 1930, based upon surveys by two Argentine naval officers, I. Espíndola in the *Uruguay* in 1915 and A. Rodríguez in the *Primero de Mayo* in 1930.

Lola, Point 60°44'S., 44°43'W.

Point forming the E. side of the entrance to Uruguay Cove on the N. coast of Laurie I., in the South Orkney Islands. The name appears on an Argentine Govt. chart of 1930, based upon surveys by two Argentine

naval officers, I. Espíndola in the *Uruguay* in 1915 and A. Rodríguez in the *Primero de Mayo* in 1930.

Lollo, Cape 54°25'S., 3°29'E.

A cape which forms the NE. extremity of Bouvetøya. First charted in 1898 by a German expedition under Karl Chun. Recharted and named in December 1927 by a Norwegian expedition under Capt. Harald Hornvedt.

Lombard, Mount 64°28'S., 59°38'W.

The highest peak dominating the mountain mass whose S. extremity is Cape Sobral, Graham Land. Mapped from surveys by FIDS (1960-61). Named by UK-APC for Alvin O. Lombard, American engineer of the Lombard Steam Log Hauler Co., Waterville, Maine, who designed some of the earliest successful over-snow tractors, the first application of knowledge of snow mechanics to trafficability, 1901-13.

Lomonosova, Gory: see Lomonosov Mountains 71°31'S., 15°20'E.

Lomonosov Mountains 71°31'S., 15°20'E.

A somewhat isolated chain of mountains extending 18 mi. NE.-SW., located 20 mi. E. of the Wohlthat Mountains in Queen Maud Land. Disc. and first plotted from air photos by the GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1958-59, and SovAE, 1960-61. Named by USSR for M. V. Lomonosov, Russian scientist.

Lonely Island 54°03'S., 37°59'W.

Small island lying 0.8 mi. NE. of Cape Paryadin, along the S. coast and near the W. end of South Georgia. Charted and named by DI personnel during surveys of South Georgia in 1926-30.

Lonely One Nunatak 71°12'S., 161°18'E.

An eroded rock outcrop 16 mi. NW. of Morozumi Range. The low outcrop rises above the relatively featureless ice at the W. side of the confluence of the Gressitt and Rennick Glaciers. The name applied by the northern party of NZGSAE, 1963-64, alludes to the relative isolation of the feature.

Lonely Rock 64°06'S., 57°03'W.

Low, isolated rock about 50 yards long, lying 4 mi. N. of Cape Gage, James Ross I., on the W. margin of Erebus and Terror Gulf. Charted by the FIDS in 1945, and named Lone Rock by the UK-APC because of its small size and complete isolation. The name was modified in 1963 to avoid duplication with Lone Rock off Nelson Island.

Lone Rock 62°21'S., 58°50'W.

Isolated rock 1.5 mi. S. of the E. end of Nelson I., in the South Shetland Islands. Charted by DI personnel

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lopatin, Mount 72°51'S., 168°04'E.

A mountain (2,670 m.) situated 6 mi. ESE. of Mt. Riddolls in the Victory Mtns. of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Boris Lopatin, Soviet exchange scientist at McMurdo Station, 1968.

Lopez, Mount 72°01'S., 101°53'W.

A peak of the Walker Mtns., located 5 mi. E. of Landfall Peak in the W. part of Thurston Island. Delineated from aerial photographs taken by USN Operation Highjump, 1946-47. Named by US-ACAN for Ens. Maxwell A. Lopez, USN, a member of the expedition who lost his life in a seaplane crash at Thurston Island on Dec. 30, 1946.

Lopez, Picacho: see López Nunatak 62°29'S., 59°39'W.

López, Monte: see Doumer Hill 64°51'S., 63°34'W.

López Nunatak 62°29'S., 59°39'W.

A steep-sided granitic nunatak (275 m.) located 0.9 mi. SE. of Ash Pt. on Greenwich I., South Shetland Islands. Named by the First Chilean Antarctic Expedition for Lt. Sergio López Angulo, in 1947.

Loqui, Cap: see Garcia, Cape 65°44'S., 64°40'W.

Loqui Point 65°55'S., 64°58'W.

Point which marks the S. side of the entrance to Barilari Bay, on the W. coast of Graham Land. This feature was disc. and named "Cap Garcia" by the FrAE, 1903-5, under Charcot. At the same time Charcot gave the name "Cap Loqui" to the N. cape of Barilari Bay, after Captain Loqui of the Argentine Navy. The maps of Charcot's FrAE of 1908-10, showed "Cap Garcia" as the N. cape of Barilari Bay, and the name Cape Garcia (q.v.) has since become established in that position. Charcot did not use the name "Cap Loqui" on the maps of the FrAE, 1908-10, and with his shifting of the name Cape Garcia, this south entrance point to Barilari Bay has remained unnamed. For the sake of historical continuity, the name Loqui Point has been accepted for this feature.

Loren Nunataks 83°36'S., 53°52'W.

A line of low nunataks standing 3 mi. E. of Rivas Peaks in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Loren Brown, Jr., aviation machinist at Ellsworth Station, winter 1958.

Lorentzen Peak 71°45'S., 2°50'W.

A peak 5 mi. S. of Vesleskarvet Cliff, on the W. side of Ahlmann Ridge in Queen Maud Land. Mapped by

Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Bjarne Lorentzen, cook with the NBSAE.

Lorentzenpiggen: see Lorentzen Peak 71°45'S., 2°50'W.

Lorenz, Cape: see Laurens, Cape 52°59'S., 73°15'E.

Lorette, Mount 72°32'S., 31°09'E.

Ice-free mountain resembling a cathedral in form, rising to 2,200 m. close W. of Mt. Loodts in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Notre Dame de Lorette, patron saint of aviators.

Lorius, Mount 72°28'S., 162°21'E.

A mountain, 1,690 m., standing 2.5 mi. N. of Mt. Allison, in the Monument Nunataks. Mapped by the USARP Victoria Land Traverse Party, 1959-60. Named by US-ACAN for Claude Lorius, French glaciologist, a member of the traverse party.

Lorn Rocks 65°31'S., 64°56'W.

Group of rocks lying 12 mi. W. of the N. end of Lahille I., in the Biscoe Islands. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. So named by the UK-APC because the rocks are small, forlorn and deserted.

Lorten: see Cleft Island 69°21'S., 75°38'E.

Los Dientes: see Les Dents 68°57'S., 70°58'W.

Los Guías: see Guides, The 54°04'S., 36°52'W.

Los Mandaderos: see Office Boys, The 55°01'S., 34°39'W.

Los Provincianos, Islotes: see Yoke Island 63°58'S., 61°56'W.

Lote, Puerto: see Lagarrigue Cove 64°39'S., 62°34'W.

Loubat Point 65°04'S., 63°56'W.

Point forming the N. side of the entrance to Deloncle Bay, on the W. coast of Graham Land. Probably first seen by the BelgAE, 1897-99. Resighted by the FrAE, 1903-5, and named by Charcot for a Monsieur de Loubat.

Loubet Coast 67°00'S., 66°00'W.

That portion of the W. coast of the Antarctic Pen. between Cape Bellue and the head of Bourgeois Fjord. This coast was explored in Jan. 1905 by FrAE under J.B. Charcot, who named it for Émile Loubet, then Pres. of France.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Loubet Land: see Loubet Coast 67°00'S., 66°00'W.

Loubet Strait: see Gullet, The 67°10'S., 67°38'W.

Loudwater Cove 64°46'S., 64°05'W.

Small west-facing cove, 0.5 mi. long, lying immediately N. of Norsel Pt. along the SW. coast of Anvers I., in the Palmer Archipelago. Surveyed in 1955 by the FIDS and so named because of the thundering noise with which the sea beats into this cove.

Louise, Mount: see Louise Peak 65°05'S., 64°00'W.

Louise Island 64°36'S., 62°23'W.

Ice-covered island 0.6 mi. long, lying 1 mi. E. of Cape Anna in the SW. side of the entrance to Wilhelmina Bay, along the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, under Lt. Adrien de Gerlache, and named by him for his sister.

Louise Peak 65°05'S., 64°00'W.

Peak, 625 m., standing 1 mi. N. of Gourdon Peak on Booth I., in the Wilhelm Archipelago. First charted by the FrAE under Charcot, 1903-5, and named by him for the sister of Ernest Gourdon, geologist of the expedition.

Louis McHenry Howe, Mount: see Howe, Mount 87°22'S., 149°30'W.

Louis Philippe Land: see Trinity Peninsula 63°37'S., 58°20'W.

Louis Philippe Peninsula: see Trinity Peninsula 63°37'S., 58°20'W.

Louis Philippe Plateau 63°37'S., 58°27'W.

A plateau, about 11 mi. long and 5 mi. wide, which rises to 1,370 m. and occupies the central part of Trinity Peninsula between Russell West Glacier and Windy Gap. This application of the name, recommended by UK-APC in 1948, commemorates D'Urville's 1838 exploration of the Trinity Peninsula area, which he had named "Terre Louis Philippe," after King Louis Philippe of France.

Lovejoy Glacier 70°48'S., 160°10'E.

A broad glacier descending eastward through the Usarp Mountains between Anderson Pyramid and Sample Nunataks. In its lower course, the glacier runs side by side with the larger Harlin Glacier to the south without a ridge separating the two. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Lt. Owen B. Lovejoy of USN Squadron VX-6, pilot of R4D aircraft in Antarctica, 1962-63 and 1963-64.

Lovill Bluff 73°22'S., 126°54'W.

A rock and snow coastal bluff at the western end of Siple Island, off the coast of Marie Byrd Land. The bluff stands 14 mi. SW. of the summit of Mt. Siple and marks the N. side of the entrance to Pankratz Bay. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for James E. Lovill, USARP meteorologist-in-charge at Byrd Station in 1965.

Lowe, Mount 80°33'S., 30°16'W.

Mountain having two peaks, the highest 990 m., on the S. side of the mouth of Blaiklock Gl. in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Wallace G. Lowe, New Zealand photographer with the transpolar party of the CTAE in 1956-58.

Lowe Bluff 85°58'S., 137°12'W.

High, ice-covered bluff between the head of Kansas Gl. and Alaska Canyon, along the Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for William E. Lowe, radioman with the Byrd Station winter party, 1957.

Lowe Glacier 82°58'S., 160°25'E.

A tributary glacier 7 miles long in Queen Elizabeth Range. It flows south from a common saddle with the Prince of Wales Glacier 3 miles east of Mount Gregory to join the Princess Anne Glacier. The name was proposed by Holyoake, Cobham and Queen Elizabeth Ranges Party of the NZGSAE, 1964-65. Named after a member of the party, D. Lowe.

Lowell Thomas, Mount: see Thomas Mountains 75°33'S., 70°57'W.

Lowell Thomas Mountains: see Thomas Mountains 75°33'S., 70°57'W.

Lower Ferrar Glacier: see Ferrar Glacier 77°46'S., 163°00'E.

Lower Staircase 78°25'S., 161°45'E.

The lower, eastern portion of Skelton Gl., between The Landing and Clinker Bluff in Victoria Land. Surveyed and given this descriptive name in 1957 by the N.Z. party of the CTAE, 1956-58.

Lower Victoria Glacier: see Victoria Lower Glacier 77°18'S., 162°40'E.

Lower Wright Glacier: see Wright Lower Glacier 77°25'S., 163°00'E.

PHIC NAMES OF THE ANTARCTIC

S. Luff, sen-
in 1970, a
erse party on

Luis de Saboya, Pico: see Savoia Peak 64°51'S.,
63°26'W.

Luitpold Coast 77°30'S., 32°00'W.

That portion of the coast of Coats Land extending from the vicinity of Hayes Glacier, in 27°54'W., to 36°00'W. which is regarded as the east limit of the Filchner Ice Shelf. Discovered by Wilhelm Filchner, leader of the German Antarctic Expedition, 1911-12, and named for Prince Regent Luitpold of Bavaria.

Luitpold Land: see Luitpold Coast 77°30'S., 32°00'W.

Luke Glacier 65°42'S., 64°02'W.

Glacier at least 15 mi. long, flowing NW. into the head of Leroux Bay on the W. coast of Graham Land. First sighted and roughly surveyed in 1909 by the FrAE. Resurveyed in 1935-36 by the BGLE, and later named for George L. Johnston, 1st Baron Luke of Pavenham, Chairman of Messrs. Bovril Ltd., who contributed toward the cost of the BGLE, 1934-37.

Lully Foothills 70°44'S., 70°02'W.

Large group of peaks and nunataks extending 15 mi. in a NE.-SW. direction between Vivaldi Gap and Le-May Range in the W. central part of Alexander Island. Apparently first seen from the air and roughly mapped by the USAS in 1940. Remapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Jean-Baptiste Lully (1639-1687), French composer.

Lulow Rock 85°36'S., 68°30'W.

A prominent rock, 1,695 m., which is the northernmost exposed rock along the face of Pecora Escarpment, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for William F. Lulow, cook at Plateau Station, winter 1966.

Lumière Peak 65°18'S., 64°03'W.

Peak, 1,065 m., standing 3 mi. SE. of Cape Tuxen on the W. coast of Graham Land. Disc. by the FrAE, 1903-5, and named by Charcot for Louis Lumière, leader in photographic research and development in France at that time.

Lumus Reef: see Lumus Rock 65°13'S., 65°18'W.

Lumus Rock 65°13'S., 65°18'W.

A rock located 4 mi. WNW. of Sooty Rock, marking the SW. extremity of Wilhelm Archipelago. Discovered by BGLE, 1934-37, and named "Lumus Reef" after one of the BGLE cats, the only one to survive the Antarctic winter. The BGLE naming has been ac-

THE ANTARCTIC

alty chart for the NE. rock of this reef. The SGS, 6-57, reported that it is the reef which requires a ne to distinguish it from nearby Hauge Reef.

Rock: see Low Reef 54°30'S., 37°00'W.

Rock: see Bucentaur Rock 54°09'S., 36°33'W.

Rock 62°17'S., 58°39'W.

rock surrounded by foul ground, lying 1 mi. SW. of Ranger Pt., the S. extremity of King George I., in the South Shetland Islands. An unnamed rock in essentially this position appears on a chart by David Ferguson, Scottish geologist aboard the whaler *Hanka*, in the waters in 1913-14. Low Rock was more accurately charted by DI personnel on the *Discovery II* in 1937.

Rock Point 54°01'S., 37°50'W.

forming the W. side of the entrance to Church Bay near the W. end of the N. coast of South Georgia. Named by DI personnel in 1926-30, and named because a low rock lies off the point.

Mount 84°33'S., 64°09'W.

ain, 1,020 m., standing 2.5 mi. NW. of Wrigley in the Anderson Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for K. Lowry, biologist at Palmer Station, winter 1967.

Bluff 74°22'S., 163°19'E.

1,070 m., forming the E. extremity of Nash Range of the Eisenhower Range, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for George Lowry, biologist at McMurdo Station, 1965-66 season.

Lugue 67°33'S., 62°00'E.

of rock 0.1 mi. long, projecting from the icy coast of Mac. Robertson Land just W. of Holme Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named after the Lugtangen (the low tongue). The translated name recommended by ANCA has been

Mountain 71°37'S., 11°17'E.

2,130 m., surmounting the W. wall of a Cirque in the Humboldt Mtns., Queen Elizabeth Land. Disc. and plotted from air photos by the US-ACAN, 1938-39. Replotted from air photos and surveys by the NorAE, 1956-60, and SovAE, 1960-61. Named by the USSR after "Lose Platte," a name applied by the GerAE to an indeterminate feature in the area.

GEOGRAPHIC NAMES OF THE ANTARCTIC

cepted because of long use. A change in generic term, from reef to rock, was made on recommendation by UK-APC in 1971.

Luna, Bahía: see Moon Bay 62°35'S., 60°00'W.

Luna-Devyat' Mountain 71°40'S., 11°50'E.

Mountain, 1,880 m., forming the E. end of the Eids-haugane Peaks in the Humboldt Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Gora Luna-Devyat' (Luna Nine Mountain) by the USSR in 1966 as a token of the achievements of Soviet scientists in the study of space.

Luncke Range 72°02'S., 24°42'E.

Range of peaks rising to 3,020 m., extending in a N.-S. direction for 10 mi. between Jennings Gl. and Gjøl Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers from air photos taken by USN Op. Hjp., 1946-47, and named for Bernhard Luncke, Norwegian cartographer who plotted the maps in H.E. Hansen's *Atlas of Parts of the Antarctic Coastal Lands*, 1946, and a revision covering the Sør Rondane Mtns., 1957.

Luncke Ridge 68°29'S., 78°25'E.

A fairly prominent ridge on the northern side of the eastern extremity of Langnes Fjord in the Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lar Christensen Exp., 1936-37. It was seen in 1957 by an ANARE party and named for Bernhard Luncke, Norwegian cartographer who plotted the Vestfold Hills area for the Hansen Atlas.

Lunckerygge: see Luncke Range 72°02'S., 24°42'E.

Lunde, Mount 66°58'S., 50°28'E.

Mountain ridge close S. of Mt. Gleadell, in the W. part of the Tula Mtns. in Enderby Land. Sighted by the ANARE Amundsen Bay party, under P. W. Crohn in October 1956. Named by ANCA for J. Lunde, senior diesel mechanic at Wilkes Station in 1960.

Lundebreen: see Lunde Glacier 71°53'S., 6°15'E.

Lunde Glacier 71°53'S., 6°15'E.

A glacier about 25 mi. long flowing NW. between Håhellerskarvet and Jøkulkyrkja Mtn. in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named for T. Lunde, glaciologist with NorAE (1956-58).

Lund Island: see Petermann Island 65°10'S., 64°10'W.

Lunik Point 70°32'S., 163°06'E.

An ice-covered coastal point, lying 3 mi. NE. of Mt. Dergach on the W. side of Ob' Bay. Photographed and plotted by the SovAE, 1958, and named after the first Soviet moon module (called "Lunik").

Lupa, Mount 68°26'S., 66°43'W.

Flat-topped, ice-covered mountain over 1,625 m., standing between Romulus Gl. and Martin Gl. close ESE. of Black Thumb and 5 mi. E. of the head of Rymill Bay, on the W. coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948-49 by the FIDS who applied the name. This mountain lies near the heads of Romulus and Remus Glaciers, and the name derives from the mythological story of the she-wolf which fed these twins after they had been thrown into the Tiber.

Lurabee Channel: see Lurabee Glacier 69°15'S., 63°37'W.

Lurabee Glacier 69°15'S., 63°37'W.

Glacier 27 mi. long, flowing NE. between Scripps Heights and Finley Heights to the E. coast of Palmer Land. This glacier was disc. by Sir Hubert Wilkins on Dec. 20, 1928 on his pioneer Antarctic flight. He named it Lurabee Channel for Lurabee Shreck of San Francisco, in recognition of her aid in procuring equipment for this and an earlier Arctic flight, and for her editorial assistance on his book *Flying the Arctic*. The term channel has been amended to glacier, in keeping with the true nature of the feature.

Lurker Rock 68°03'S., 68°44'W.

A rock 3 m. high, located 3 mi. NE. of Dismal I., Faure Is., in Marguerite Bay. Charted by the Hydrographic Survey Unit from RRS *John Biscoe* in 1966. The name, applied by UK-APC in 1971, is descriptive of the feature, which is covered by ice and can easily be mistaken for a piece of floating ice, especially at high water.

Lussich, Anse: see Lussich Cove 62°06'S., 58°21'W.

Lussich Cove 62°06'S., 58°21'W.

Cove at the SE. side of Martel Inlet in Admiralty Bay, King George I., in the South Shetland Islands. Charted in 1909 by the FrAE under Charcot, and named by him for Antonio Lussich of Montevideo, who was of assistance to the expedition.

Luther Peak 72°22'S., 169°50'E.

Peak, 820 m., standing 11 mi. SE. of Mt. Peacock in the Admiralty Mtns. and overlooking Edisto Inlet in northern Victoria Land. Charted from radarscope photographs taken in March 1956 by members of

GEOGRAPHIC NAMES OF THE ANTARCTIC

USN Op. DFrz. I aboard the U.S.S. *Edisto*. Named by the US-ACAN for Cdr. Roger W. Luther, USN, captain of the *Edisto*.

Lüttich Island: see Liège Island 64°02'S., 61°55'W.

Lützow-Holm Bay 69°10'S., 37°30'E.

A large bay, about 120 mi. wide, indenting the coast of Queen Maud Land between Riiser-Larsen Peninsula and the coastal angle immediately east of the Flatvaer Islands. Discovered by Capt. Hjalmar Riiser-Larsen in two airplane flights from his expedition vessel, the *Norvegia*, on Feb. 21 and 23, 1931. The name, honoring Cdr. Finn Lützow-Holm of the Norwegian Naval Air Service, a pilot for Capt. Riiser-Larsen on the *Norvegia* exp. of 1929-30, was given by Bjarne Aagaard in 1935.

Luz Range 72°03'S., 4°49'E.

A mountain range 14 mi. long, including Petrellfjellet, Snøbjørga Bluff and associated features, lying next east of Gablenz Range in the Mühlig-Hofmann Mtns. of Queen Maud Land. Discovered by the GerAE under Alfred Ritscher, 1938-39, and named after the commercial director of the German Lufthansa Corporation.

L'va Berga, Gory: see Berg Mountains 69°13'S., 156°04'E.

Lyall Islands 70°41'S., 167°20'E.

A group of four islands, Unger, Surgeon, Novosad and Hughes, lying just outside the entrance to Yule Bay, Victoria Land. Disc. by Capt. James C. Ross, 1841, who named the group for David Lyall, Asst. Surgeon on the *Terror*. In keeping with this, US-ACAN has named some of the individual islands and nearby features for surgeons who have worked in Antarctica.

Lyddan Island 74°25'S., 20°45'W.

An ice-covered island at the SW. extremity of Riiser-Larsen Ice Shelf, about 20 mi. off Princess Martha Coast. The island is about 45 mi. long and has three narrow arms in the form of a trefoil. It was discovered and plotted by W.R. MacDonald on Nov. 5, 1967, in the course of a USN Squadron VXE-6 reconnaissance flight over the coast in LC-130 aircraft. Named by US-ACAN for Robert H. Lyddan, Chief Topographic Engineer of the USGS, who has been active in the planning and supervision of Antarctic mapping operations since the 1950's.

Lyell Glacier 54°17'S., 36°37'W.

Glacier flowing in a N. direction to Harpon Bay at the SE. head of Cumberland West Bay, South Georgia. Mapped by the SwedAE, 1901-4, under Norden-skjöld, who named it for Sir Charles Lyell (1797-1875), eminent British geologist.

Lyftingen Peak 72°17'S., 3°15'W.

A peak just SE. of Kjølrabane Hills, near the SW. end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Lyftingen.

Lykke Peak 54°27'S., 3°23'E.

A snow-covered summit (765 m.) that surmounts the SW. part of Bouvetøya. It stands 1 mi. E. of Norvegia Point. First roughly charted in 1898 by a German expedition under Karl Chun. Recharted and named in December 1927 by the *Norvegia* expedition under Capt. Harald Horntvedt.

Lykkes Topp: see Lykke Peak 54°27'S., 3°23'E.

Lykketoppen: see Lykke Peak 54°27'S., 3°23'E.

Lymburner, Mount 77°26'S., 86°30'W.

Mountain, 1,940 m., standing 4 mi. WNW. of Mt. Weems near the N. end of the Sentinel Range in the Ellsworth Mountains. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for J. H. Lymburner, asst. pilot on Ellsworth's expedition.

Lynch Island 60°39'S., 45°36'W.

Island lying in the E. part of Marshall Bay, close off the S. coast of Coronation I. in the South Orkney Islands. Roughly charted in 1912-13 by Petter Sørille, a Norwegian whaling captain, and surveyed in 1933 by DI personnel. Resurveyed in 1948-49 by the FIDS and named by the UK-APC for Thomas B. Lynch, an American sealer who visited the South Orkney Is. in the schooner *Express* in 1880.

Lynch Point 75°05'S., 137°44'W.

Rocky point at the seaward end of the peninsula between Frostman Glacier and Hull Glacier on the coast of Marie Byrd Land. Photographed from USAS (1939-41) aircraft on Dec. 18, 1940. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Ens. William R. Lynch II, USNR, Damage Control Officer aboard USS *Glacier* in exploring these coastal waters, 1961-62.

Lynsky Cove 66°19'S., 110°27'E.

A cove in the north side of Pidgeon Island in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Chief Builder James E. Lynsky, USN, a member of the Wilkes Station party of 1958.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lynx Rocks 62°32'S., 60°32'W.

Group of rocks lying in Hero Bay to the W. of Siddons Pt., Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 after the Australian sealer *Lynx* (Capt. Richard Siddons) from Sydney, which visited the South Shetland Islands in 1820-21 and 1821-22.

Lyon Nunataks 74°50'S., 73°50'W.

A group of isolated nunataks about 30 mi. NW. of the Behrendt Mtns., in Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Owen R. Lyon, hospital corpsman, USN, chief petty officer in charge of Eights Station in 1965.

Lyon Peak 63°47'S., 60°48'W.

Peak lying S. of Milburn Bay on the W. side of Trinity I., in the Palmer Archipelago. Phot. by the FIDASE in 1955-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Percy C. Lyon (1862-1952), of the British Department of Scientific and Industrial Research, who was chairman of the interdepartmental committee on research and development of the Antarctic area, 1917-20.

Lysaght, Mount 82°49'S., 161°19'E.

Peak, 3,755 m., standing 1.5 mi. N. of Mt. Markham in the northern part of the Queen Elizabeth Range. Discovered and named by the BrAE, 1907-9.

Lystad Bay 67°50'S., 67°17'W.

Bay 2.5 mi. wide which indents the W. side of Horsehoe I., in the NE. part of Marguerite Bay. First surveyed in 1936-37 by the BGLE under Rymill. The bay was visited by the U.S.M.S. *North Star* and U.S.S. *Bear* of the USAS in 1940. The name was proposed by the US-ACAN for Capt. Isak Lystad of the *North Star*.

Lystad Island: see Omega Island 64°20'S., 62°56'W.

Lyttelton, Cape 82°21'S., 164°39'E.

A cape forming the southern entrance point of Shackleton Inlet, along the western edge of the Ross Ice Shelf. Discovered by the BrNAE (1901-4) and named

after Lyttelton, New Zealand. The *Discovery* started on the last lap of its journey south from Lyttelton, where very generous assistance was given the expedition.

Lyttelton Peak 82°18'S., 158°56'E.

The highest peak, 2,335 m., of the Cobham Range. Mapped by the NZGSAE (1961-62) and given the family name of the former Governor-General of New Zealand, Lord Cobham.

Lyttelton Range 71°33'S., 167°45'E.

A narrow northwest-trending range located S. of Dundedin Range in the Admiralty Mountains. The range is 16 mi. long and forms the W. wall of the upper part of the Dennistoun Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN after the port of Lyttelton, New Zealand, where over the years, many expedition ships refueled and replenished supplies en route to Antarctica; also in recognition of the friendship and cooperation of its citizens with American participation in the U.S. Antarctic Research Program.

Lyttelton Ridge 66°22'S., 63°07'W.

Dark, jagged ridge, 425 m., extending 4 mi. in a NW.-SE. direction along the W. side of Churchill Pen., on the E. coast of Graham Land. Charted in 1947 by the FIDS, who named it for Rt. Hon. Oliver Lyttelton, M.P., then British Minister of Production and member of the War Cabinet. Photographed from the air during 1947 by the RARE under Ronne.

Lyttelton, Cape: see Lyttelton, Cape 82°21'S., 164°39'E.

Lyttelton, Mount 66°24'S., 65°22'W.

Conspicuous, almost entirely snow-covered mountain near the head of Cardell Gl., on the W. coast of Graham Land. Photographed from the air by the RARE under Ronne, 1947-48. Named by the UK-APC in 1960 for Westcote R. Lyttelton (1877-1956), New Zealand Works Dir. of Triplex Safety Glass Co. Ltd., London, who first introduced laminated safety glass for use in goggles in about 1912.

Lyttelton Peak: see Lyttelton Peak 82°18'S., 158°56'E.

M

Maagoe Peak 79°33'S., 85°00'W.

A peak (1,850 m.) at the N. end of Gifford Peaks in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961-66. Named by US-ACAN for Steffen Maagoe, ionospheric scientist at Eights Station in 1964.

Maaske Dome 85°58'S., 144°00'W.

An icecapped, dome-like elevation 2 mi. long, rising above the N. part of California Plateau. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Lt. Gary L. Maaske, USN, helicopter pilot at McMurdo Station, 1962-63 and 1963-64 seasons.

Mabel, Cape 60°41'S., 44°40'W.

Cape forming the N. tip of Pirie Pen. on the N. coast of Laurie I., in the South Orkney Islands. Probably first seen by the Br. sealing exp. under Weddell, who examined the N. coast of Laurie I. in 1823. Charted in 1903 by the ScotNAE under Bruce, who named it for Mrs. J. H. Harvey Pirie, wife of the surgeon-geologist to the expedition.

Mabel Island 60°40'S., 44°42'W.

Island 1.5 mi. NW. of Cape Mabel, off the N. coast of Laurie I. in the South Orkney Islands. Charted in 1933 by DI personnel on the *Discovery II*, who named it after nearby Cape Mabel.

Mabelle Sidley, Mount: see Sidley, Mount 77°02'S., 126°06'W.

Mabus Point 66°33'S., 93°01'E.

A point on the coast lying just south of Haswell Islands, marking the east limit of McDonald Bay. First charted by the AAE, 1911-14, under Douglas Mawson. Recharted by G.D. Blodgett in 1955 from aerial photographs taken by USN Operation Highjump, 1946-47. Named by US-ACAN for Lt. Cdr. Howard W. Mabus, USN, executive officer of the icebreaker *Edisto*, who was instrumental in providing close support to USN Operation Windmill parties in establishing astronomical control stations along this coast, 1947-48. Mabus Point subsequently became the site of the Soviet scientific station, Mirnyy.

MacAlpine Hills 84°13'S., 160°30'E.

A chain of mainly ice-free, bluff-type hills extending from Mt. Achnar SW. along the S. side of Law Gl., to Sylwester Glacier. Named by US-ACAN for Ens. Kenneth D. MacAlpine, USNR. A member of U.S. Navy Squadron VX-6, MacAlpine was injured in an airplane crash at McMurdo Sound, October 1956.

Macaroni Point: see Goldcrest Point 54°00'S., 38°05'W.

Macaroni Point 62°54'S., 60°32'W.

Point marking the NE. extremity of Deception I., in the South Shetland Islands. The name arose following survey by the FIDS in January 1954, because a colony of macaroni penguins (*Eudyptes chrysolophus*) is on this point.

Macbain, Mount 83°06'S., 162°18'E.

A prominent mountain, 2,205 m., standing between the mouths of Cornwall Glacier and Helm Glacier in the Queen Elizabeth Range. Named by US-ACAN for Cdr. Merle Macbain, USN, Public Information Officer, U.S. Naval Support Force, Antarctica, during USN Op. DFz. III and IV, 1957-58 and 1958-59.

MacDonald, Cape 71°32'S., 61°11'W.

Headland which rises to 435 m., forming the S. side of the entrance to Odom Inlet, on the E. coast of Palmer Land. Disc. by members of the USAS who explored this area by land and from the air in 1940, and named for J. E. MacDonald, field representative and secretary of the USAS.

Macdonald, Mount 84°31'S., 173°10'E.

A peak, 3,630 m., surmounting the massive N.-S. trending ridge between Ludeman Gl. and Pain Nêvé in the Commonwealth Range. Named by NZGSAE (1961-62) for the Hon. T. L. Macdonald, who was Minister of External Affairs and of Defence when the CTAE (1956-58) was being planned and who took a prominent part in obtaining New Zealand participation in the Antarctic.

Macdonald Bluffs 83°15'S., 157°50'E.

Prominent east-facing bluffs between Argosy and Argo Glaciers in the Miller Range, descending to the Marsh Glacier. Mapped by the N.Z. Southern Party of the CTAE (1956-58) and named for W.J.P. Macdonald, IGY scientist at Scott Base in 1957.

Macdonald Cliffs: see Macdonald Bluffs 83°15'S., 157°50'E.

Macdonald Group: see McDonald Islands 53°02'S., 72°36'E.

Macdonald Isle: see McDonald Island 53°03'S., 72°36'E.

MacDonald Nunataks 85°27'S., 157°38'W.

Two nunataks overlooking the head of the Ross Ice Shelf, standing just E. of the terminus of Amundsen Gl., 5 mi. W. of O'Brien Peak. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for John A. MacDonald, biologist, McMurdo Station winter party, 1964.

GEOGRAPHIC NAMES OF THE ANTARCTIC

MacDonald Peak 77°40'S., 86°40'W.

Peak, 1,940 m., midway between Shockey Peak and Mt. Crawford near the N. end of the main ridge of the Sentinel Range. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN (1961) for William R. MacDonald of the Branch of Special Maps, USGS, which prepared the 1962 map of this range. Subsequently, MacDonald participated in numerous expeditions to Antarctica to supervise aerial photography used in preparing USGS maps of the continent. At the time of his death (1977) he was Chief of the Branch of International Activities, USGS, and a member of the Advisory Committee on Antarctic Names, of the U.S. Board on Geographic Names.

MacDonald Point 79°52'S., 160°20'E.

A coastal point with some rocky exposures at the S. side of the mouth of Darwin Glacier, where the latter flows into Ross Ice Shelf. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959-63. Named by US-ACAN for James H. (Scot) MacDonald, journalist who as a member of U.S. Navy Squadron VX-6 worked several seasons at McMurdo Station between 1958 and 1961.

MacDonald Spur 76°47'S., 159°33'E.

A long, low ridge extending eastward from Ballance Peak in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964). Named for Ivan MacDonald, field assistant with the expedition.

Macdougall Bay 60°42'S., 44°33'W.

Small bay lying between Ferguslie and Watson Peninsulas on the N. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for J. Macdougall, third mate of the exp. ship *Scotia*.

Macelwane, Mount 81°54'S., 89°30'W.

The highest peak in the eastern part of the Nash Hills. The peak was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 14, 1958, and named for Rev. James B. Macelwane, S.J. (1883-1956), first chairman of the Technical Panel for Seismology and Gravity of the U.S. National Committee for the IGY, as set up by the National Academy of Sciences.

Macey, Mount 69°52'S., 65°18'E.

An isolated peak 1,960 m., about 15 mi. SE. of Stinear Nunataks in Mac. Robertson Land. Sighted in 1954 by an ANARE party led by R. G. Dovers, and named for L. E. Macey, technical superintendent at Mawson Station in 1954.

Macey Cone 52°59'S., 73°15'E.

Small hill, 125 m., which marks the remnants of an extinct volcanic cone surmounting the lava cliffs at the NW. end of Laurens Pen., about 0.6 mi. NE. of Cape Laurens, at the NW. end of Heard Island. The feature was surveyed in 1948 by the ANARE, who named it for L. E. Macey, senior radio operator with the expedition.

Mac Farlane, Estrecho: see McFarlane Strait 62°32'S., 59°55'W.

MacFerlane, Détroit de: see McFarlane Strait 62°32'S., 59°55'W.

Macfie Sound 67°22'S., 59°43'E.

Passage 1 mi. wide at its narrowest point, extending in an E.-W. direction between Islay and Bertha I. in the William Scoresby Archipelago. Disc. in February 1936 by DI personnel on the *William Scoresby*, and named by them for Lt. A. F. Macfie, RNR, who prepared the charts of the expedition.

Machatschek, Mount 66°52'S., 68°04'W.

A prominent, mainly snow-covered mountain in northern Adelaide I., about 14 mi. SW. of Mt. Vélain. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for Fritz Machatschek (1876-1957), Austrian geomorphologist; joint author with E. von Drygalski of *Gletscherkunde*, 1942.

Machin Nunatak 72°48'S., 64°53'E.

Small domed nunatak lying 7 mi. E. of Mt. Cresswell in the southern Prince Charles Mountains. Mapped from air photos and surveys by ANARE, 1956-60. Named by ANCA for D. K. Machin, radio officer at Mawson Station, 1960.

MacKay, Cape 77°42'S., 168°31'E.

Ice-covered cape which forms the SE. extremity of Ross Island. Discovered by the BrNAE (1901-4) and named for Capt. Harry MacKay, commander of the *Terra Nova*, one of the relief ships for the expedition.

Mackay Glacier 76°58'S., 162°00'E.

A large glacier in Victoria Land, descending eastward from the polar plateau, between the Convoy and Clare Ranges, into the southern part of Granite Harbor. Discovered by the South Magnetic Pole Party of the BrAE (1907-9) and named for Alistair F. Mackay, a member of the party.

Mackay Glacier Tongue 76°58'S., 162°20'E.

The glacier tongue of the Mackay Glacier, projecting into Granite Harbor, Victoria Land. First mapped by

GEOGRAPHIC NAMES OF THE ANTARCTIC

the BrAE (1910-13) and named in association with Mackay Glacier.

Mackay Mountains 77°30'S., 143°20'W.

Prominent group of peaks 10 mi. S. of the Allegheny Mtns. in the Ford Ranges, Marie Byrd Land. Discovered by the ByrdAE in 1934, and named for Clarence Mackay of the Postal Telegraph and Mackay Radio Companies, who was a benefactor of the expedition.

Mackay Tongue: see Mackay Glacier Tongue 76°58'S., 162°20'E.

Mac Kellar, Fiord: see Mackellar Inlet 62°05'S., 58°28'W.

Mackellar, Mount 83°59'S., 166°39'E.

A massive mountain, 4,295 m., standing at the head of Mackellar Gl., 3 mi. S. of Pagoda Pk., in Queen Alexandra Range. Discovered by the BrAE (1907-9) and named for Campbell Mackellar, a supporter of the expedition.

Mackellar Glacier 83°47'S., 167°15'E.

A large tributary glacier in Queen Alexandra Range, flowing N. along the E. side of Hampton Ridge from Mt. Mackellar, to enter Lennox-King Glacier. Named by the NZGSAE (1961-62) in association with Mt. Mackellar.

Mackellar Inlet 62°05'S., 58°28'W.

Inlet forming the NW. head of Admiralty Bay, at King George I. in the South Shetland Islands. Probably named by the FrAE under Charcot, who charted Admiralty Bay in December 1909.

Mackellar Islands 66°58'S., 142°40'E.

A group of about 30 small islands and rocks lying 1.5 mi. N. of Cape Denison in the center of Commonwealth Bay. Discovered by the AAE (1911-14) under Douglas Mawson, who named them for C.D. Mackellar of London, a patron of the expedition.

Mackellar Inlet: see Mackellar Inlet 62°05'S., 58°28'W.

Mackemer Point 66°27'S., 110°29'E.

The northwestern point of Peterson I., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Aerographer's Mate Frederick W. Mackemer, USN, a member of the Wilkes Station party of 1958.

MacKenzie Bay 68°38'S., 70°35'E.

A relatively small embayment of the western extremity of Amery Ice Shelf, about 20 mi. NE. of Foley Prom-

ontory. On Feb. 10, 1931, the BANZARE (1929-31) sighted a much larger embayment here and made an airplane flight to sketch its limits. They named it "MacKenzie Sea" after Captain K.N. MacKenzie, master of the expedition's ship *Discovery* in 1930-31. Break out of a large part of Amery Ice Shelf has drastically reduced the size of this feature; in 1968 the bay was 15 mi. wide. Several Norwegian whaling ships sighted the original embayment nearly simultaneously with BANZARE; the whale-catcher *Seksem* (Captain Brunvoll) reached this area on Jan. 13, 1931, the *Bouvet III* (gunner C.J. Sjøvold) on Jan. 23, 1931, and the *Torlyn* (Capt. Klarius Mikkelsen) on Feb. 13, 1931.

Mackenzie Glacier 64°17'S., 62°16'W.

Glacier 4 mi. long flowing eastward from Mt. Parry to join Malpighi Gl. at the E. coast of Brabant I., in the Palmer Archipelago. First roughly charted by the BelgAE, 1897-99, under Gerlache. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Sir James Mackenzie (1853-1925), English physician and pioneer of studies of heart disease.

Mackenzie Peninsula 60°45'S., 44°48'W.

Steep, rocky peninsula forming the W. end of Laurie I., in the South Orkney Islands. First seen and roughly charted by Capt. George Powell and Capt. Nathaniel Palmer in 1821. Surveyed in 1903 by the ScotNAE under William S. Bruce, who gave this peninsula the maiden name of his wife.

Mackenzie Sea: see MacKenzie Bay 68°38'S., 70°35'E.

Mackerel Island 66°01'S., 65°26'W.

Island immediately W. of Flounder I. in the Fish Is., off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because it is one of the Fish Islands.

Mackey Rock 76°36'S., 146°22'W.

An isolated rock on the E. side of Sulzberger Ice Shelf, 8 mi. SW. of Mt. Iphigene, on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Steven Mackey, field assistant with the USARP Marie Byrd Land Survey II, summer 1967-68.

Mackin Table 84°57'S., 64°00'W.

An ice-topped, wedge-shaped plateau, about 20 mi. long, standing just N. of Patuxent Ice Stream in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named for J. Hoover Mackin, professor of geology at the Univ. of Washington, at Seattle. The name was suggested by USARP geologists who investigated the

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pensacola Mountains, several having been students under Mackin.

Mackintosh, Cape 72°53'S., 60°03'W.

Low, ice-covered cape forming the N. tip of Kemp Pen. and the E. side of the entrance to Mason Inlet, on the E. coast of Palmer Land. Probably first seen by members of the USAS who photographed a portion of Kemp Pen. while exploring this coast from the air in December 1940. During 1947 the cape was photographed by the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Neil A. Mackintosh, British marine biologist and oceanographer, longtime member of the staff, and following 1936 Dir. of Research of the Discovery Investigations (now part of the National Inst. of Oceanography).

Mackintosh, Mount 74°22'S., 161°49'E.

A peak (2,300 m.) that rises from Skinner Ridge, 2 mi. SW. of Mt. Fenton, on the western margin of the Eisenhower Range of Victoria Land. Charted by the BrAE (1907-9) under Ernest Shackleton, who named it for A.L.A. Mackintosh, Second Officer on the expedition ship, the *Nimrod*.

Mackintosh Cove 60°42'S., 44°30'W.

Cove immediately SE. of Fraser Pt. along the N. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce. Named for Neil A. Mackintosh, then a member of the Discovery Committee zoological staff, by DI personnel on the *Discovery II* following their survey of the South Orkney Is. in 1933.

Macklin, Mount 54°45'S., 36°03'W.

Mountain having 2 peaks, the higher 1,900 m., between Mt. Carse and Douglas Crag in the S. part of the Salvesen Range of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Alexander H. Macklin, medical officer of the Br. exp. under Shackleton, 1914-16. Macklin accompanied Shackleton in the *James Caird* from Elephant I. to King Haakon Bay, South Georgia.

Macklin, Mount 69°57'S., 64°36'E.

A mainly snow-covered ridge with an exposed summit 2,005 m., just E. of Mt. Shaw in the Anare Nunataks of Mac. Robertson Land. First visited in November 1955 by an ANARE party led by J. M. Béchervaise. Named by ANCA for Eric Macklin, radio operator at Mawson Station in 1955.

Macklin Island 67°29'S., 63°39'E.

Small island in the E. part of the Robinson Group, 3 mi. NW. of Cape Daly, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos

taken by the Lars Christensen Exp., 1936-37. Named by ANCA for E. L. Macklin, radio officer at Mawson Station in 1955 and 1959.

Mackworth Rock 66°02'S., 66°34'W.

An insular rock in Pendleton Strait, about 2 mi. N. of Cape Leblond, Lavoisier Island. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Norman H. Mackworth, British experimental psychologist who in 1953 first demonstrated beyond doubt that man acclimatizes to cold.

Macleod Point 64°06'S., 61°58'W.

Point forming the SE. tip of Liège I., in the Palmer Archipelago. Shown on an Argentine Govt. chart in 1957, but not named. Photographed from the air by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS in 1959. Named by the UK-APC for John J. R. Macleod (1876-1935), Scottish physiologist who was one of the discoverers of insulin in 1922.

MacMahon Rock 54°18'S., 36°26'W.

Rock lying 0.5 mi. E. of Dartmouth Pt. in Cumberland East Bay, South Georgia. The name appears on a 1930 British Admiralty chart.

Macnab, Cape: see McNab, Cape 66°56'S., 163°14'E.

MacNamara Glacier 84°20'S., 63°40'W.

A glacier in the Patuxent Range, Pensacola Mountains, draining northeastward between the Thomas and Anderson Hills to Foundation Ice Stream. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Edlen E. MacNamara, USARP exchange scientist at Molodezhnaya Station, winter 1967.

Macnowski, Mount 74°59'S., 64°57'W.

A mountain in the N. part of the Scaife Mtns., about 5 mi. WSW. of Schmitt Mesa, near the base of Antarctic Peninsula. First observed from the air by the RARE, 1947-48. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Francis B. Macnowski, construction mechanic at South Pole Station in 1967.

Macpherson, Mount 82°29'S., 155°50'E.

Mountain, 2,360 m., standing 1.5 mi. N. of Mt. Csejety on the S. edge of Boucot Plateau in the Geologists Range. Seen by the northern party of the NZGSAE (1961-62) and named for E. O. Macpherson, formerly chief geologist of the New Zealand Geological Survey.

MacPherson Peak 70°33'S., 159°43'E.

A prominent rock peak (2,290 m.) on the NW. end of Pomerantz Tableland, Usarp Mountains. Mapped by

GEOGRAPHIC NAMES OF THE ANTARCTIC

USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Frank L. MacPherson, USA, helicopter mechanic in the field supporting the USGS surveys Topo North-South (1961-62) and Topo East-West (1962-63), the latter including survey of this peak.

Mac. Robertson Land 70°00'S., 65°00'E.

That portion of Antarctica lying southward of the coast between William Scoresby Bay and Cape Darnley. In the east it includes the Prince Charles Mountains. Named by the BANZARE, 1929-31, under Douglas Mawson, after Sir MacPherson Robertson of Melbourne, a patron of the expedition.

Macy Glacier 62°43'S., 60°09'W.

Glacier flowing into Brunow Bay, Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 for Robert Macy, Master of the brig *Aurora*, one of the fleet of American sealers from New York which visited the South Shetland Islands in 1820-21.

Madariaga, Isote: see Diamonen Island 64°02'S., 61°17'W.

Madden Island 77°27'S., 149°03'W.

An ice-covered island, 4 mi. long, in Marshall Archipelago. It lies between Moody I. and Grinder I. in Sulzberger Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Michael C. Madden, electrician's mate, USN, of the Byrd Station party, 1966.

Madder Cliffs 63°18'S., 56°29'W.

Reddish rock cliffs rising steeply from the sea to about 305 m. and forming the N. side of the entrance to Suspiros Bay, at the W. end of Joinville Island. Surveyed by the FIDS in 1953-54. The name, given in 1956 by the UK-APC, is descriptive of the red color of the rocks, madder being a red vegetable dye.

Maddox Peak 65°09'S., 62°50'W.

Peak standing at the S. side of the mouth of Carbutt Gl., E. of Flandres Bay, on the W. coast of Graham Land. The peak appears on an Argentine Govt. chart of 1954. Named by the UK-APC in 1960 for Richard L. Maddox (1816-1902), English physician and pioneer of photography who invented the gelatin emulsion process of dry-plate photography in 1871, revolutionizing photographic technique.

Madell Point 66°35'S., 66°22'W.

A point 2 mi. NE. of Cape Rey on the coast of Graham Land. Mapped from air photos taken by FIDASE (1956-57). Named for James S. Madell, FIDS surveyor at Detaille I. in 1957, who was responsible for the triangulation of this area.

Madey Ridge 83°28'S., 55°50'W.

A ridge trending NW. from Mt. Moffat along the N. side of Berquist Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Jules Madey of Clark, N.J., ham radio operator who has arranged innumerable phone patches between personnel in Antarctica and parties in the U.S. in the period 1957-67.

Madigan Nunatak 67°09'S., 143°21'E.

An isolated nunatak that rises above the continental ice 18 mi. S. of Cape Gray. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Cecil T. Madigan, meteorologist with the expedition.

Madison, Mount 80°26'S., 160°10'E.

A prominent, largely ice-covered mountain, 1,385 m., rising 7 mi. W. of Cape Selborne, on the S. side of Byrd Glacier. Named by US-ACAN for Lt. Cdr. Douglas W. Madison, aide to the Commander, U.S. Naval Support Force Antarctica, 1961-62, and Public Information Officer, 1963-64.

Mae-hyōga Rock 70°04'S., 38°54'E.

An exposed rock lying 3 mi. NW. of Oku-hyōga Rock on the E. side of Shirase Gl., in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Mae-hyōga-iwa (outer glacier rock) in association with nearby Oku-hyōga Rock.

Maere, Mount 72°32'S., 31°17'E.

Mountain, 2,300 m., on the W. side of Norsk Polarinstittut Gl. immediately SW. of Mt. Bastin, in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Xavier de Maere d'Aertrijcke, second-in-command and chief meteorologist of the expedition.

Magee Rock 66°13'S., 110°37'E.

An insular rock lying 0.2 mi. NE. of Cameron I., in the Swain Islands. This region was photographed from the air by USN Op. Hjp. (1946-47), ANARE (1956) and the Soviet exp. (1956). The rock was included in a 1957 ground survey by C. R. Eklund, who named it for George E. Magee, USN, carpenter at Wilkes Station, 1957.

Magga Peak 69°10'S., 157°11'E.

A triangular "flatiron" shaped wall of sheer rock forming the end of the northernmost of the Burnside Ridges. The summit is a sharp point. Photographed by USN Operation Highjump in 1947. A first landing from a ship was made on Feb. 20, 1959 by ANARE (*Magga Dan*) led by Phillip Law.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Maglione, Mount 77°18'S., 141°47'W.

A low mountain 1 mi. NE. of Mt. Ekblaw in the Clark Mtns., Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lt. (j.g.) Charles R. Maglione, USNR, navigator on LC-130F Hercules aircraft during Operation Deep Freeze 1968.

Magnet Bay 66°22'S., 56°20'E.

A shallow coastal indentation, 7 mi. wide and receding only 2 mi., located 9 mi. W. of Cape Davis at the NW. side of Edward VIII Plateau. The BANZARE, 1929-31, under Mawson, originally charted Magnet Bay as a larger bay extending from Cape Davis to Cape Borley, naming it after the vessel *Magnet*, in which Peter Kemp first sighted land in this vicinity in 1833. Later exploration, particularly that of the Lars Christensen Exp., 1936-37, has shown the bay to be less extensive.

Magnet Hill 63°22'S., 57°22'W.

A small, distinctive snow-covered hill rising from Mott Snowfield, 4 mi. NE. of Camel Nunataks, Trinity Peninsula. The hill was the site of magnetometer and topographical survey stations and was named by the British geophysical and survey party which worked in this area in 1959.

Magnetic Island 68°33'S., 77°54'E.

A small island 0.25 mi. NE. of Turner Island, lying off Breidnes Peninsula, Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Visited by an ANARE party led by Phillip Law on March 3, 1954. So named because magnetic observations taken there by J. Brooks showed the declination to be anomalous.

Magnier Peak: see Magnier Peaks 65°40'S., 64°18'W.

Magnier Peaks 65°40'S., 64°18'W.

Two peaks, the higher 1,345 m., surmounting the peninsula between Leroux and Bigo Bays on the W. coast of Graham Land. Disc. and named by the FrAE, 1908-10, under Charcot.

Magoke Point 69°40'S., 39°29'E.

A rock point on the southeast part of Skallen Hills, Queen Maud Land. The point projects into the inlet which lies between Skallen Hills and Skallen Glacier. Mapped from surveys and air photos by JARE, 1957-62. The name was applied by JARE Headquarters in 1972.

Maguire, Mount 74°01'S., 66°55'E.

A large flat-topped mountain with a distinctive pointed nunatak on the E. side, located 22 mi. S. of

Cumpston Massif near the head of Lambert Glacier. Mapped from ANARE air photos and surveys, 1956-58. Named by ANCA for Sgt. O. Maguire, RAAF, radio technician at Mawson Station in 1958.

Mahan, Mount 85°32'S., 140°04'W.

Mountain 1,260 m., standing 3 mi. E. of Mt. Fiedler in the Bender Mountains. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Shirley F. Mahan, radioman with the Byrd Station winter party, 1960.

Maher Island 72°58'S., 126°22'W.

A small horseshoe-shaped island which has numerous areas of exposed rock, lying 7 mi. north of the northwest end of Siple Island, off the coast of Marie Byrd Land. Discovered and photographed from aircraft of USN Operation Highjump, 1946-47. Named by US-ACAN for Cdr. Eugene Maher, USN, Commanding Officer of USS *Glacier* during Operation Deep Freeze, 1955-56.

Mahler Spur 69°48'S., 70°52'W.

Rock spur, 6 mi. long, extending W. into Mozart Ice Piedmont 7 mi. E. of the S. end of Debussy Heights, in N. Alexander Island. First seen from the air and roughly mapped by the BGLE in 1937. Accurately delineated from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Gustav Mahler (1860-1911), Austrian composer.

Mahogany Bluff 63°53'S., 57°14'W.

A rocky bluff 5 mi. SW. of Cape Gordon, forming the E. side of Pastorizo Bay, Vega Island. So named by UK-APC because of the striking deep red-brown color of the bluff.

Mahony, Mount 77°12'S., 161°35'E.

A massive mountain, 1,870 m., standing just E. of the head of Victoria Upper Glacier, in Victoria Land. Mapped by the Western Geological Party, led by G. Taylor, of the BrAE, 1910-13. Named for D. Mahony, geologist, of Melbourne, Australia.

Maibucht: see Maiviken 54°14'S., 36°30'W.

Maiden Castle 76°39'S., 159°50'E.

A prominent rock feature east of Halle Flat in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who so named it because of the resemblance to a pre-Roman earthwork of the same name in Dorsetshire, England.

Maigetter Peak 76°27'S., 146°29'W.

A rock peak, the northernmost of the Birchall Peaks, on the south shore of Block Bay in Marie Byrd Land.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Discovered by the ByrdAE (1928-30) and plotted from photos taken on the flight of Dec. 5, 1929. Mapped by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Robert Z. Maigetter, biologist with the USARP Marie Byrd Land Survey II, 1967-68.

Maignan, Cape: see Maignan Point 65°03'S., 64°02'W.

Maignan Point 65°03'S., 64°02'W.

Point marking the NE. end of Cholet I. and the W. side of the entrance to Port Charcot, lying close off the NW. part of Booth I. in the Wilhelm Archipelago. First charted by the FrAE, 1903-5, and named by Charcot for F. Maignan, a seaman of the *Français* who lost his life in a ship accident shortly after the expedition's departure from Le Havre.

Maigo Peak 68°08'S., 42°42'E.

A rocky hill situated 1.5 mi. ESE. of Cape Hinode and just W. of Bōhyō Heights on the coast of Queen Maud Land. Mapped from surveys and air photos by the JARE, 1957-62. The name "Maigo-yama" (straychild mountain) was applied by JARE Headquarters in 1973.

Main, Cape 73°33'S., 169°54'E.

A small cape situated 5 mi. N. of Cape Anne, along the E. side of Coulman Island, Victoria Land. Named by NZ-APC in 1966 for Brian Main, scientific technician at Hallett Station, 1962-63.

Main Bay 54°01'S., 38°03'W.

A cove which is the western arm of Jordan Cove along the south coast of Bird Island, South Georgia. The UK-APC has found that this descriptive name has been in local use at least since 1957.

Main Channel 54°10'S., 36°42'W.

A small channel lying S. of Bar Rocks and leading to the head of Husvik Harbor in Stromness Bay, South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Maines, Mount 66°39'S., 53°54'E.

Mountain, 2,190 m., standing 8 mi. SE. of Stor Hånakken Mtn. in the Napier Mtns., Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Stornuten (the big peak). Rephotographed by ANARE in 1956 and renamed by ANCA for R. L. Maines, cook at Wilkes Station in 1961.

Main Island 54°00'S., 38°13'W.

Island 1.7 mi. long and rising to 550 m., the largest of the Willis Is. off the W. end of South Georgia. Disc. in

1775 by a Br. exp. under Cook. Charted by DI personnel in the period 1926-30, and so named because it is the principal island in the group.

Mainland: see Coronation Island 60°37'S., 45°35'W.

Mainsail Rock 60°37'S., 46°03'W.

Rock lying 0.6 mi. SW. of Spine I. in Sandefjord Bay, South Orkney Islands. It is the largest and easternmost of a chain of three rocks trending in a NW.-SE. direction off the SE. side of Monroe Island. The rock was named by DI personnel following their survey in 1933.

Main South Range: see Prince Charles Mountains 72°00'S., 67°00'E.

Mai Point 54°14'S., 36°30'W.

Point marking the E. side of the entrance to Maiviken, a small bay in Cumberland West Bay, South Georgia. Charted by the SwedAE, 1901-4, under Nordenskjöld. The name derives from association with Maiviken.

Maipo Island 64°25'S., 62°17'W.

A low, snow-covered island lying at the entrance to Buls Bay, eastern Brabant Island, in the Palmer Archipelago. The island was first roughly charted by the BelgAE, 1897-99. The name appears on a 1947 Chilean government chart and commemorates the work of the *Maipo*, an oil tanker which participated in several Chilean Antarctic expeditions during the 1940's and 1950's.

Maish Nunatak 74°36'S., 99°28'W.

A nunatak located 5 mi. WSW. of Mt. Moses, in the central part of the Hudson Mountains. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for F. Michael Maish, ionospheric physicist at Byrd Station in 1967, who served as U.S. exchange scientist at Vostok Station in 1969.

Maitland Glacier 68°43'S., 65°00'W.

Glacier flowing along the W. flank of Hitchcock Heights into Mobiloil Inlet, on the E. coast of Antarctic Peninsula. This glacier may appear indistinctly in an aerial photograph taken by Sir Hubert Wilkins on his flight of Dec. 20, 1928, but it was more clearly shown in aerial photographs taken by Lincoln Ellsworth in 1935 and the USAS in 1940. Named by the US-ACAN in 1952 for O. Maitland Miller of the American Geographical Soc., who by utilizing Wilkins' and Ellsworth's photographs assisted in constructing the first reconnaissance map of this area.

Maiviken 54°14'S., 36°30'W.

A cove in Cumberland West Bay, indenting the N. part of the promontory separating the E. and W. arms of Cumberland Bay, South Georgia. Charted by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

SwedAE, 1901-4, under Nordenskjöld, and named for May Day, 1902, the day on which they entered the cove.

Mai Viken Glen: see Bore Valley 54°16'S., 36°31'W.

Mak-Mallin, Ostrov: see McMullin Island 66°17'S., 110°31'E.

Maldita, Bahía: see Brialmont Cove 64°16'S., 61°00'W.

Maling Peak 60°39'S., 45°40'W.

Peak, 430 m., which is southernmost of two conspicuous peaks 0.5 mi. NW. of Cape Vik on the S. coast of Coronation I., in the South Orkney Islands. Roughly surveyed in 1933 by DI personnel. Named by the UK-APC for Derek H. Maling, FIDS meteorologist at Signy I. in 1948 and 1949, who made a survey triangulation of Signy I. and the S. coast of Coronation Island.

Malleco, Grupo: see Pauling Islands 66°32'S., 66°58'W.

Mallis, Mount 75°40'S., 160°48'E.

A mountain, 1,360 m., midway between Mt. Joyce and Mt. Billing in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Robert R. Mallis, geomagnetist/seismologist with the South Pole Station winter party, 1966.

Mallory Bluff 84°02'S., 165°50'E.

A prominent bluff on the NW. slope of Grindley Plateau, just NE. of the head of Wahl Glacier. Named by US-ACAN for Roger P. Mallory, Jr., USARP meteorologist at South Pole Station, 1962, and at Wilkes Station, 1963.

Mallory Point 66°49'S., 108°39'E.

A steep rocky point close northward of Blunt Cove, projecting from the ice cliffs along the west side of Vincennes Bay. First mapped (1955) by G.D. Blodgett from air photos taken by USN Operation Highjump (1947). Named by US-ACAN for Ens. Charles W. Mallory, USN, construction officer with USN Operation Windmill (1947-48), who gave close support to shore parties that established astronomical control stations from Wilhelm II Coast to Budd Coast.

Malmgren Bay 65°45'S., 66°07'W.

Bay indenting the W. side of Renaud I. immediately N. of Speersneider Pt., in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Finn A. E. J. Malmgren (1895-1928), Swedish author of an important study on the properties of sea ice, in 1927.

Malone, Mount 77°52'S., 85°36'W.

Mountain (2,460 m.) located 8 mi. E. of Mt. Barden in the N. part of the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Capt. Wallace R. Malone, USAF, who participated in the establishment of the South Pole Station in the 1956-57 season.

Maloney, Mount 85°41'S., 163°35'W.

A mountain, 1,990 m., standing 4 mi. N. of Mt. Alice Gade at the SE. side of Bowman Gl., in the Queen Maud Mountains. Discovered and mapped by the ByrdAE, 1928-30. Named by US-ACAN for John H. Maloney, Jr., meteorologist with the South Pole Station winter party, 1960.

Malpighi Glacier 64°16'S., 62°15'W.

Glacier 5 mi. long and 1 mi. wide, flowing SE. from Harvey Heights to join Mackenzie Gl. at the E. coast of Brabant I., in the Palmer Archipelago. First roughly charted by the BelgAE, 1897-99, under Gerlache. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Marcello Malpighi (1628-1694), Italian physiologist and pioneer histologist who first demonstrated the existence of the blood capillaries.

Malta Plateau 72°58'S., 167°18'E.

An ice-covered plateau of about 25 mi. extent in the Victory Mtns., Victoria Land. The plateau is irregular in shape and is bounded on the S. and W. by Mariner Glacier, on the N. by tributaries to Trafalgar Glacier, and on the E. by tributaries to Borchgrevink Glacier. Named by the NZ-APC to commemorate the island of Malta in association with the Victory Mountains.

Malus Island 66°14'S., 65°45'W.

Island 4.5 mi. S. of Cape Evensen, lying in Auvert Bay off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1960 for Étienne L. Malus (1775-1812), French physicist who discovered the polarization of light by reflection, a fact subsequently used in the design of snow goggles.

Malva Bluff 71°55'S., 62°21'W.

A steep, south-facing rock bluff at the base of Condor Peninsula, overlooking the NW. extremity of Hilton Inlet on the E. side of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Antonio I. Malva-Gomes, topographic engineer with the USGS Lassiter Coast geologic and mapping party in 1970-71. He was also a member of the Pine Island Bay Reconnaissance aboard the USCGC *Burton Island*, 1974-75.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Malville, Mount 82°44'S., 48°10'W.

Mountain, 1,030 m., standing 5 mi. SW. of Ackerman Nunatak in northern Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for J. McKim Malville, auroral scientist, Ellsworth Station winter party, 1957.

Malysh Mountain 72°09'S., 11°24'E.

A small mountain, 2,640 m., standing just SW. of Skeidshovden Mtn. in the Wohlthat Mountains of Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Gora Malysh (small child mountain) by the USSR in 1966.

Malyutki Nunataks 72°04'S., 10°46'E.

A group of nunataks that trend N.-S. for 4 mi., situated at the SE. extremity of the Orvin Mountains, about 13 mi. WNW. of Skeidsberget Hill, in Queen Maud Land. The feature was mapped by Norsk Polar-institutt from surveys and air photos by NorAE, 1956-60. Also mapped by the SovAE in 1961 and named Skaly Malyutki (baby nunataks).

Mame Island 69°01'S., 39°29'E.

Small island lying 0.1 mi. W. of Ongul I. in the E. part of Lützow-Holm Bay. Mapped from surveys and air photos by JARE, 1957-62, and named Mame-jima (bean island).

Mamelon Island: see Mamelon Point 67°19'S., 64°49'W.

Mamelon Point 67°19'S., 64°49'W.

A point 11 mi. ENE. of Cape Northrop on the E. coast of Graham Land. The feature was charted as an island by FIDS in 1947 and given the name "Mamelon Island" because of its resemblance to a small, rounded hill or fort. Further exploration has disproved the insularity of the feature and the terminology has been altered accordingly.

Mame-zima Island: see Mame Island 69°01'S., 39°29'E.

Mana Mountain 72°51'S., 3°22'W.

A prominent ice-free mountain bordering the S. side of Frostlandet Valley about 5 mi. SW. of Møteplassen Peak, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Mana.

Manchot Island 66°49'S., 141°24'E.

Rocky island lying in the entrance to Port Martin, 0.2 mi. W. of Bizeux Rock and 0.2 mi. N. of Cape Mar-

gerie. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE, 1949-51, and so named by them because a large Adélie penguin rookery was located on the island. "Manchot" is the French word for penguin.

Manchots, Ile des: see Manchot Island 66°49'S., 141°24'E.

Manciple Island 64°56'S., 63°56'W.

Island lying between Reeve and Host Islands in the Wauwermans Is., in the Wilhelm Archipelago. Shown on an Argentine Govt. chart of 1952. Named by the UK-APC in 1958 after one of the characters in Chaucer's *Canterbury Tales*.

Mandible Bay: see Mandible Cirque 73°07'S., 169°15'E.

Mandible Cirque 73°07'S., 169°15'E.

A spectacular cirque indenting the coast of Daniell Peninsula 5 mi. WSW. of Cape Phillips, in Victoria Land. Named in 1966 by the NZ-APC for its appearance in plan and oblique views.

Mane Skerry 67°50'S., 67°18'W.

Small island in the central part of Lystad Bay, off Horseshoe Island. Named from association with nearby Mite Skerry. An initial misspelling of "might and main" became established at the FIDS station, 1955-57.

Manfull Ridge 75°05'S., 114°39'W.

A broad snow-covered ridge that descends gently from the N. side of Kohler Range about 5 mi. W. of Morrison Bluff, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-71. Named by US-ACAN for Byron P. Manfull, U.S. Dept. of State, Chairman of the Interagency Committee on Antarctica, 1967-69.

Manger, Mount 77°29'S., 153°15'W.

A snow-covered mountain located 3 mi. NW. of Mt. Josephine in the Alexandra Mtns., on Edward VII Peninsula. The mountain was photographed from the air and roughly mapped by the ByrdAE, 1928-30. Named by US-ACAN (at the suggestion of R. Adm. R.E. Byrd) for William Manger, of the family that owned the Manger Hotel chain, who assisted Byrd expeditions by providing free room for office space and for expedition personnel.

Mangin, Mount 67°25'S., 68°26'W.

Mountain, 2,040 m., standing 5 mi. NE. of Mt. Barré on Adelaide Island. Disc. by the FrAE, 1908-10, and named by Charcot for Louis A. Mangin, noted French botanist.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Manhaul Glacier 72°24'S., 169°45'E.

A glacier flowing from the E. slopes of Mt. Humphrey Lloyd to enter Edisto Inlet just S. of Luther Peak, in Victoria Land. So named by NZGSAE, 1957-58, because the seaward tongue of this glacier which is afloat was crossed several times during the season by NZGSAE parties using man-hauling methods of transport.

Manjū Rock 68°45'S., 40°25'E.

An exposed rock lying midway between Tama Gl. and Tama Point on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Manjū-iwa (bun-shaped rock).

Manke, Mount 85°28'S., 144°42'W.

A mountain, 900 m., marking the E. limit of the Harold Byrd Mountains. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Robert M. Manke, utilitiesman with the Byrd Station winter party in 1960.

Mankinen, Mount 73°54'S., 163°06'E.

A mountain (2,910 m.) situated 2 mi. NE. of Mt. Adamson in the Deep Freeze Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Edward A. Mankinen, geologist at McMurdo Station, 1965-66.

Mann, Mount 83°12'S., 49°20'W.

Mountain, 1,680 m., standing on the SE. edge of Lexington Table, 4 mi. S. of Mt. Zirzow, in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Capt. Edward K. Mann, USAF, an assistant in the Research Division of the U.S. Naval Support Force, Antarctica, 1966-68.

Manna Glacier 69°45'S., 159°40'E.

A broad depression glacier located N. of Stevenson Bluff and Mt. Steele in the Wilson Hills. It drains NE. into the E. part of Gillett Ice Shelf. So named by the northern party of NZGSAE, 1963-64, because of an airdrop of extra comforts from an aircraft which carried the Governor-General of New Zealand over this area.

Mannering, Mount 71°48'S., 164°57'E.

A mountain 4 mi. SSE. of Toilers Mountain in the King Range, Concord Mountains. Named by the northern party of NZGSAE, 1963-64, for Guy Mannering, photographer at Scott Base, 1962-63.

Manning Massif 70°42'S., 67°50'E.

A large rock massif between Loewe Massif and McLeod Massif in the E. part of Aramis Range, Prince

Charles Mountains. Plotted from air photographs. First visited by a party from the ANARE Prince Charles Mtns. survey in 1969. Named by ANCA for J. Manning, surveyor at Mawson Station in 1967, surveyor-in-charge of field survey operations during the ANARE Prince Charles Mtns. surveys of 1969, 1971 and 1972.

Manning Nunataks 71°00'S., 71°12'E.

A group of nunataks in the eastern side of the southern part of Amery Ice Shelf, about 20 mi. NNE. of Pickering Nunatak. Photographed from the air by ANARE in 1957. Named by ANCA for Sgt. A. S. Manning, RAAF, airframe fitter at Mawson Station in 1958.

Manoury Island 64°27'S., 62°50'W.

Island lying 1.5 mi. S. of Gand I. at the N. end of Schollaert Chan., in the Palmer Archipelago. Disc. by the FrAE, 1903-5, and named by Charcot for G. Manoury, secretary of the expedition.

Man-o-War Glacier 72°04'S., 168°03'E.

A tributary glacier in the Admiralty Mountains that drains the vicinity south of Mt. Black Prince and Mt. Royalist and flows southward to enter Tucker Glacier between McGregor Range and Novasio Ridge. Named in association with Admiralty Mountains by the NZGSAE, 1957-58.

Mansergh Snowfield 82°01'S., 159°50'E.

A snowfield feeding the central portion of the Starshot Gl., separating the Surveyors and Holyoake Ranges. Seen by the Holyoake, Cobham and Queen Elizabeth Ranges party of the NZGSAE (1964-65) and named for G. Mansergh, geologist with the party.

Mansfield Point 60°39'S., 45°44'W.

Point marking the E. side of the entrance to Norway Bight on the S. coast of Coronation I., in the South Orkney Islands. Surveyed by DI personnel in 1933 and by the FIDS in 1948-49. Named by the UK-APC for Arthur W. Mansfield of the FIDS, meteorologist at Grytviken, South Georgia, in 1951; leader, meteorologist and biologist at Signy I. in 1952.

Manthe, Mount 74°47'S., 99°21'W.

A mountain (575 m.) standing 5 mi. NNE. of Shepherd Dome, in the S. part of the Hudson Mountains. Mapped from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Lawrence L. Manthe, meteorologist at Byrd Station, 1967.

Manzyū Rock: see Manjū Rock 68°45'S., 40°25'E.

Mapple Glacier 65°25'S., 62°15'W.

A narrow glacier 15 mi. long, flowing eastward into the southern arm of Exasperation Inlet on the east side of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Graham Land. It lies 2 mi. north of Melville Glacier and is separated from it by a line of small peaks. Surveyed by FIDS in 1961. Named by UK-APC after Father Mapple, the whaler's Nantucket priest in Herman Melville's *Moby Dick*.

Maranga Island 65°12'S., 64°22'W.

The westernmost of the Anagram Is., lying on the S. side of French Passage in the Wilhelm Archipelago. Named by the UK-APC in 1961; maranga is an anagram of the name Anagram.

Marble Cape: see Marble Point 77°26'S., 163°50'E.

Marble Hills 80°17'S., 82°05'W.

A group of mainly ice-free hills on the W. side of Horseshoe Valley, located between the Liberty Hills and Independence Hills in the S. part of the Heritage Range, Ellsworth Mountains. So named by the Univ. of Minnesota Ellsworth Mountains Party, 1962-63, because the rocks in these hills are composed of marble.

Marble Knolls 60°42'S., 45°37'W.

Low marble knolls which lie near the shore of Borge Bay, just SW. of Waterpipe Beach, in eastern Signy Island. The descriptive name was applied by UK-APC in 1974.

Marble Peak 85°29'S., 156°28'W.

A coastal peak, the twin of O'Brien Peak 2 mi. to the SE. and almost the same height, overlooking the head of Ross Ice Shelf about midway between Amundsen and Scott Glaciers. The peak was mapped by USGS from surveys and U.S. Navy air photos, 1960-64. The name was applied by NZGSAE, 1969-70, because there are light-colored, whitish bands of marble crossing straight over its summit.

Marble Point 77°26'S., 163°50'E.

A rocky promontory of marble lying 3 mi. N. of Cape Bernacchi on the coast of Victoria Land. Mapped by the BrAE (1907-9) and so named because of the marble found there.

Marble Rock 67°36'S., 62°50'E.

A rock outcrop at the edge of the ice cliff about 0.8 mi. WSW. of West Arm and the Mawson Station, on the coast of Mac. Robertson Land. First plotted from air photos taken by the Lars Christensen Exp., 1936-37. So named by ANCA because of marble beds described there by D. S. Trail, geologist at Mawson Station in 1961.

Marcial Mora, Bahía: see Zubov Bay 65°42'S., 65°52'W.

Marcoux Nunatak 69°55'S., 159°04'E.

A nunatak (1,530 m.) about midway between Schmidt Nunataks and Poorman Peak in the Wilson Hills. It stands above the ice near the head of Manna Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for John S. Marcoux, USN, aviation structural mechanic with Squadron VX-6, who wintered at McMurdo Station in 1967.

Marégraphie Island 66°40'S., 140°00'E.

Small rocky island 0.05 mi. W. of the N. end of Carrel I. in the Géologie Archipelago. Charted in 1951 by the FrAE and so named by them because a recording tide gauge, or marigraph, was placed on the island and obtained data during 1951 and 1952.

Marescot, Cap: see Marescot Point 63°29'S., 58°35'W.

Marescot Point 63°29'S., 58°35'W.

A small but distinctive low rocky point projecting N. from Trinity Peninsula, 2.5 mi. E. of Thanaron Point. This feature is a re-identification of D'Urville's original "Cap Marescot," named for Jacques Marescot du Thilleul (1808-1839), ensign on the *Astrolabe* during D'Urville's exp. (1837-40), who died during the voyage.

Marescot Ridge 63°32'S., 58°32'W.

A ridge consisting of numerous ice-covered hills, the highest being Crown Peak (1,185 m.) at the S. end of the ridge. Located 2 mi. inland from Marescot Pt. along the NW. coast of Trinity Peninsula. This ridge was probably observed by Dumont D'Urville on Feb. 27, 1838, when he named nearby "Cap Marescot" (now Marescot Point). Following its 1946 survey, the FIDS gave the name Marescot Ridge to this ridge, thinking it to be the coastal feature named by D'Urville. The name Marescot has been retained for both the ridge and the nearby point.

Margaret Bay: see Marguerite Bay 68°30'S., 68°30'W.

Margaret Goodenough Glacier: see Goodenough Glacier 72°00'S., 66°40'W.

Margaret Wade, Mount: see Fitzsimmons, Mount 77°54'S., 154°55'W.

Margerie, Cape 66°49'S., 141°23'E.

Low, ice-covered cape, marked by prominent rock outcrops at its N. end, lying midway between Cape Mousse and Lacroix Nunatak and bounded on the N. by numerous rocky islands. Charted by the AAE under Mawson, 1911-14, who named this feature for Emmanuel de Margerie, French geographer and geologist. Cape Margerie served as the main base site for

GEOGRAPHIC NAMES OF THE ANTARCTIC

FrAE parties under Liotard, in 1950-51, and Barré, in 1951-52, until fire destroyed the main buildings of their base, known as Port Martin, in January 1952.

Marguerite Bay 68°30'S., 68°30'W.

An extensive bay on the W. side of Antarctic Pen., which is bounded on the N. by Adelaide I., and on the S. by Wordie Ice Shelf, George VI Sound, and Alexander Island. Disc. in 1909 by the FrAE under Dr. Jean B. Charcot, who named the bay for his wife.

Marguerite Island 66°47'S., 141°23'E.

Rocky island 0.7 mi. NW. of Empereur I. and 1.75 mi. NNW. of Cape Margerie. Charted in 1951 by the FrAE and named by them for a character in Goethe's *Faust*.

Mariana, Caleta: see Marian Cove 62°13'S., 58°48'W.

Marian Cove 62°13'S., 58°48'W.

Cove indenting the SW. part of King George I. between Collins Hbr. and Potter Cove, in the South Shetland Islands. The name was used by Scottish geologist David Ferguson in a 1921 report based upon his investigations of King George I. in 1913-14, but may reflect an earlier naming.

Marie, Pointe: see Marie Island 66°07'S., 65°45'W.

Marie Byrd Land 80°00'S., 120°00'W.

That portion of Antarctica lying east of the Ross Ice Shelf and the Ross Sea and south of the Pacific Ocean, extending eastward approximately to a line between the head of the Ross Ice Shelf and Eights Coast. The inclusion of the area between the Rockefeller Plateau and Eights Coast is based upon the leading role of Rear Admiral Richard E. Byrd in the exploration of this area. The name was originally applied by Admiral Byrd in 1929, in honor of his wife, to the northwestern part of the area, the part that was explored in that year.

Marie Island 66°07'S., 65°45'W.

An island 2 mi. long, which lies immediately N. of Cape Evensen, Graham Land. The name "Pointe Marie," after the elder sister of Dr. Jean B. Charcot, was applied by the FrAE (1903-5) to a point on the coast close N. of Cape Evensen. After the FrAE (1908-10) Charcot re-applied the name to the S. tip of an island, "Ile Waldeck-Rousseau," in approximately the same latitude. Correlating its survey with those of Charcot, the BGLE (1934-37) identified "Ile Waldeck-Rousseau" as Waldeck-Rousseau Peak on the mainland. The most prominent feature near the peak requiring a name is the island described. The name Marie Island for this feature preserves Charcot's naming in the locality.

Marien Bay: see Jacobsen Bight 54°25'S., 36°50'W.

Mariholm 60°45'S., 45°42'W.

The highest and easternmost island in a small group which lies 0.3 mi. S. of Moe I. in the South Orkney Islands. Named on a chart based upon a running survey of the South Orkney Is. by Capt. Petter Sørille in 1912-13.

Marikoppa 54°19'S., 36°42'W.

Mountain, 1,840 m., between Larssen Peak and Paulsen Peak in the Allardyce Range of South Georgia. The name, which is known locally, was used in 1950 by H. B. Paulsen. "Koppa" is a descriptive Finnish word meaning "basket with a lid on top." The mountain was surveyed by the SGS, 1951-52.

Marina Point 65°15'S., 64°16'W.

Low rocky point which forms the NW. tip of Galindez I. in the Argentine Is., Wilhelm Archipelago. First surveyed in 1935-36 by the BGLE under Rymill and named by members of the expedition for Princess Marina, later Duchess of Kent, who was married in November 1934, while the ship *Penola* was enroute to the Argentine Islands.

Marin Darbel Bay: see Darbel Bay 66°30'S., 65°55'W.

Marin-Darbel Fiord: see Darbel Bay 66°30'S., 65°55'W.

Marin Darbel Islands: see Darbel Islands 66°23'S., 65°58'W.

Mariner Glacier 73°15'S., 167°30'E.

A major glacier over 60 mi. long, descending SE. from the plateau of Victoria Land, between Mountaineer Range and Malta Plateau, and terminating at Lady Newnes Bay, Ross Sea, where it forms a floating glacier tongue. Its lower reaches and entrance to its valley were reconnoitered in December 1958 by Capt. John Cadwalader, USN, and two members of NZGSAE, in a flight from the icebreakers USS *Glacier* and USS *Staten Island* which were lying close off the S. end of Coulman I., in an attempt to land expedition members on the mainland. Named by NZGSAE, 1958-59, as a tribute to the work of mariners in Antarctic research and exploration.

Mariner Glacier Tongue 73°27'S., 168°20'E.

The broad seaward extension of the Mariner Glacier in Victoria Land. The feature is just west of and abuts the Borchgrevink Glacier Tongue where it discharges into Lady Newnes Bay. Named in association with Mariner Glacier.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mariner Islands 66°01'S., 101°09'E.

Group of rocky islands and rocks forming the north-central group of the Highjump Arch., bounded by Edisto Chan. on the W., Gossard Chan. on the S., and Remenchus Gl. on the east. Mapped from air photos taken by USN Op. Hjp., 1946-47, and named by the US-ACAN to commemorate the discovery of a large ice-free region at the western end of the Knox Coast by the crew of the PBM-Martin Mariner seaplane commanded by D. E. Bunger. During photographic reconnaissance of this coastal area in January 1947, the aircraft landed in one of the inlets indenting the Bunger Hills and ground-level photographs and water samples were obtained at that time.

Marinero Lagarrigue, Puerto: see Lagarrigue Cove 64°39'S., 62°34'W.

Marin Glacier 76°04'S., 162°22'E.

A glacier just W. of Cape Hickey, flowing SE. into Charcot Cove on the coast of Victoria Land. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for Bonifacio Marin, engineman at McMurdo Station, 1962.

Marion, Mount: see Marion Nunataks 69°33'S., 75°06'W.

Marion Cove: see Marian Cove 62°13'S., 58°48'W.

Marion Mountain: see Marion Nunataks 69°33'S., 75°06'W.

Marion Nunataks 69°33'S., 75°06'W.

Small group of relatively low rock peaks along the N. shore of Charcot I., midway between Mt. Monique and Mt. Martine. Disc. and roughly mapped on Jan. 11, 1910, by the FrAE under Dr. Jean B. Charcot, and named by him for his daughter, Marion. Phot. from the air on Feb. 9, 1947, by USN Op. Hjp. and mapped from these photos by Searle of the FIDS in 1960.

Marion Peak: see Marion Nunataks 69°33'S., 75°06'W.

Maris Nunatak 69°59'S., 73°09'E.

A small coastal nunatak 2 mi. ENE. of Whisnant Nunatak, situated at the junction of Rogers Glacier and the E. side of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946-47), and named by him for R.L. Maris, air crewman on Operation Highjump photographic flights over this and other coastal areas between 14° and 164° E. longitude.

Mark, Mount: see Hawthorne, Mount 72°10'S., 98°39'W.

Markab, Mount 70°56'S., 67°02'W.

A striking mountain with a pointed peak which provides a notable landmark. Located on the N. side of the Pegasus Mtns., about 10 mi. NE. of Gurney Point, on the W. coast of Palmer Land. Named by UK-APC after the star Markab in the constellation of Pegasus.

Marker Rock 66°05'S., 65°47'W.

Rock lying 1.5 mi. NNW. of Turnabout I. in the Saffery Is., off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because it marks the ships' passage through the Saffery Islands.

Markham, Mount 82°51'S., 161°21'E.

A majestic twin-peaked massif, 4,350 and 4,280 m., surmounting the N. end of Markham Plateau in the Queen Elizabeth Range. Discovered by the BrNAE (1901-4) and named for Sir Clements Markham who, as Pres. of the Royal Geographical Society, planned this Antarctic expedition and chose Scott as its leader.

Markham Bay 64°17'S., 57°18'W.

Bay 8 mi. wide, lying between Ekelöf Pt. and Hamilton Pt. on the E. side of James Ross Island. Possibly first seen by a Br. exp. under Ross, who explored this area in 1842-43. First charted by the SwedAE, 1901-4, under Nordenskjöld, who named it for Sir Clements Markham.

Markham Island: see Clements Island 65°56'S., 66°00'W.

Markham Island 74°36'S., 164°55'E.

A small but conspicuous island lying just off Oscar Point in the N. part of Terra Nova Bay, Victoria Land. Discovered in February 1900 by the BrAE (1898-1900) under C. E. Borchgrevink, who named it for Sir Clements Markham.

Markham Mountains: see Markham, Mount 82°51'S., 161°21'E.

Markham Plateau 82°56'S., 161°10'E.

A small, but prominent, high plateau which extends S. from Mt. Markham for about 10 mi. and forms the divide between east and west-flowing glaciers in the N. part of Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN in association with Mount Markham.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Markham Point 54°04'S., 37°25'W.

Point forming the W. side of Ample Bay, Bay of Isles, on the N. coast of South Georgia. The name appears on a chart by J. Innes Wilson in 1912.

Markinsenis Peak 71°35'S., 164°29'E.

A peak (1,790 m.) on the S. side of McCann Gl. at its junction with Lillie Gl., in the Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for radioman Ronald Markinsenis, USN, of the South Pole Station winter party, 1965.

Markov, Cape 66°46'S., 50°16'E.

An ice cape on the E. side of Amundsen Bay, situated 7 mi. W. of Mt. Riiser-Larsen in Enderby Land. Named by the SovAE, 1961-62, for K. K. Markov, professor of geography at Moscow State University, author of a number of reports on Antarctica.

Marks Peak 76°30'S., 125°45'W.

A rocky peak (3,325 m.) on the south side of the crater rim of Mount Hampton, in the Executive Committee Range of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958-60. Named by US-ACAN for Keith E. Marks, electronics engineer, National Bureau of Standards, a member of the Marie Byrd Land Traverse Party, 1959-60.

Marks Point 85°29'S., 155°40'W.

A rock point extending E. from the N. end of Medina Peaks, at the S. edge of the Ross Ice Shelf. This feature and nearby area were first seen by members of the ByrdAE, 1928-30. Named by US-ACAN for George R. Marks, logistics worker at McMurdo Station, winter party, 1962.

Marø Cliffs 79°04'S., 28°30'W.

Prominent rock cliffs standing SW. of Jeffries Gl. in the Theron Mountains. First mapped in 1956-57 by the CTAE and named for Harald Marø, captain of the Canadian sealer *Theron* which transported the advance party and other members of the CTAE to the Filchner Ice Shelf in 1955-56.

Marquis of Traversay Group: see Traversay Islands
56°36'S., 27°43'W.

Marr, Mount 66°24'S., 52°07'E.

A rock peak which rises above the surrounding ice surface 8 mi. S. of Johnston Peak and 8 mi. W. of Douglas Peak, in Enderby Land. Discovered in January 1930 by the BANZARE under Douglas Mawson. Named after James W. S. Marr, zoologist on the expedition,

whose services were lent to BANZARE by the British Discovery Investigations Committee.

Marr Bay 60°42'S., 44°31'W.

Bay lying between Cape Valavielle and Fraser Pt. along the N. coast of Laurie I., in the South Orkney Islands. Mapped in 1903 by the ScotNAE under Bruce. Named for James W. S. Marr, member of the Discovery Committee zoological staff, by personnel on the *Discovery II* following their survey of the South Orkney Is. in 1933.

Marr Bluff 69°47'S., 69°20'W.

Rock bluff, 1,065 m., immediately N. of Wager Gl. on the E. coast of Alexander Island. Surveyed by the FIDS in 1948 and named by them for John E. Marr, English geologist and prof. of geology at Cambridge Univ., 1917-30.

Marret Glacier 66°26'S., 137°44'E.

Channel glacier about 4 mi. wide and 4 mi. long, flowing NE. from the continental ice to the coast close E. of Cape Robert. Delineated from aerial photos taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for Mario Marret, leader of the FrAE, 1952-53, whose party extended reconnaissance of the coastal features to the W. side of Victor Bay.

Marr Glacier 77°43'S., 162°44'E.

Glacier 2 mi. W. of Goldman Gl., flowing N. from the Kukri Hills into Taylor Valley, Victoria Land. Charted by the BrAE under Scott, 1910-13, who it appears also applied the name.

Marr Ice Piedmont 64°33'S., 63°40'W.

Large ice piedmont which covers the NW. half of Anvers I., in the Palmer Archipelago. This feature was presumably first seen by a Ger. exp. under Dallmann, 1873-74, and was first roughly surveyed by the FrAE, 1903-5, and FrAE, 1908-10, both under Charcot. Named by the UK-APC for James W. S. Marr, British marine biologist, who was first commander of the FIDS, 1943-45, and leader of the base at nearby Port Lockroy. Marr was also a member of the BANZARE under Mawson, 1929-31, and Shackleton's expedition of 1921-22.

Marriner, Mount 68°10'S., 49°03'E.

A mountain 2 mi. WSW. of Mt. Flett in the central Nye Mountains. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for A. Marriner, radio officer at Wilkes Station in 1959.

Marsden, Mount 67°52'S., 66°03'E.

A bare rock mountain (600 m.) lying 3 mi. SW. of Mt. Rivett in the Gustav Bull Mountains of Mac. Robert-

GEOGRAPHIC NAMES OF THE ANTARCTIC

son Land. On February 13, 1931, the BANZARE (1929-31) under Douglas Mawson made a landing on nearby Scullin Monolith. They named this mountain for Ernest Marsden, Director of the Dept. of Scientific and Industrial Research, New Zealand.

Mars Glacier 71°54'S., 68°23'W.

Glacier in the SE. corner of Alexander I., 6 mi. long and 2 mi. wide, flowing S. into the ice shelf of George VI Sound between Two Step Cliffs and Phobos Ridge. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. First surveyed in 1949 by the FIDS and named by the UK-APC for the planet Mars.

Marsh, Cape 65°15'S., 59°28'W.

A prominent cape consisting of a rock cliff over 235 m. high, marking the SE. extremity of Robertson Island on the edge of Larsen Ice Shelf. The island was discovered and roughly charted by Capt. C.A. Larsen in 1893. The S. part of the island was resurveyed by FIDS in July, 1953. Named by UK-APC for George W. Marsh, FIDS leader and medical officer at Hope Bay, 1952 and 1953.

Marshall, Mount 84°41'S., 164°39'E.

A prominent peak, 3,160 m., standing 4 mi. SE. of Blizzard Peak in the Marshall Mountains, Queen Alexandra Range. The peak is named in association with the Marshall Mountains, the latter honoring Dr. Eric S. Marshall of the BrAE, 1907-9.

Marshall Archipelago 77°00'S., 148°30'W.

An extensive group of large ice-covered islands within Sulzberger Ice Shelf. Several of the islands were discovered and plotted by the Byrd Antarctic Expeditions (1928-30 and 1933-35) and by the USAS (1939-41), all led by Admiral Byrd. The full extent of the archipelago was mapped by USGS from surveys and U.S. Navy air photos (1959-65). The naming was proposed by Admiral Byrd for General of the Army George C. Marshall, who made financial contributions as a private individual and also, on the same basis, provided advisory assistance to the Byrd expedition of 1933-35.

Marshall Bay 60°39'S., 45°38'W.

Bay 2 mi. wide, lying between Capes Vik and Hansen on the S. side of Coronation I., in the South Orkney Islands. Roughly charted in 1912-13 by Petter Sørle, Norwegian whaling captain. Recharted in 1933 by DI personnel on the *Discovery II*, who gave the name for Dr. E. H. Marshall, surgeon and member of the Marine Executive Staff of the Discovery Committee.

Marshall Mountains 84°37'S., 164°30'E.

A group of mountains overlooking the Beardmore Gl. in Queen Alexandra Range, bounded on the N. by Berwick Gl., and on the S. by Swinford Glacier. Discovered by the South Polar Party of the BrAE (1907-9), and named for Dr. Eric Marshall, surgeon and cartographer to the expedition, a member of the Polar Party.

Marshall Nunatak 74°10'S., 75°41'W.

A somewhat isolated rock nunatak, 23 mi. ESE. of FitzGerald Bluffs in Ellsworth Land. It lies 9 mi. E. of Schwartz Peak and is the easternmost member in the chain of small summits located SE. of the bluffs. Mapped by USGS from surveys and U.S. Navy air photos, 1961-66. Named by US-ACAN for William F. Marshall, USGS Topographic Engineer in Antarctica, 1967-68.

Marshall Peak 71°09'S., 61°32'W.

Peak, 1,205 m., which is ice covered except for its rocky NE. side, standing 6 mi. NW. of the head of Palmer Inlet on the E. coast of Palmer Land. This coast was first explored in 1940 by members of the USAS, but the peak was first charted by a joint party consisting of members of the RARE and FIDS in 1947. Named by the FIDS for Norman B. Marshall, zoologist at the FIDS Hope Bay base in 1945-46.

Marshall Stream 78°04'S., 164°18'E.

A meltwater stream about 6 mi. long that flows through the Marshall Valley from the Rivard Glacier to the Koettlitz Glacier, in Victoria Land. The stream was observed by Troy L. Péwé, glacial geologist with USN Op. DFrz., 1957-58. The name was applied by the NZ-APC and US-ACAN in consultation, and derives from its location in Marshall Valley.

Marshall Valley 78°04'S., 164°10'E.

Small valley, which is ice free except for Rivard Gl. at its head, lying between the Garwood and Miers Valleys on the coast of Victoria Land. Named by the N.Z. Blue Glacier Party (1956-57) for Dr. Eric Marshall, surgeon and cartographer of the BrAE (1907-9), who accompanied Shackleton on his journey to within 97 mi. of the South Pole.

Marsh Glacier 82°52'S., 158°30'E.

Glacier about 70 mi. long, flowing N. from the polar plateau between the Miller Range and Queen Elizabeth Range into Nimrod Glacier. Seen by a N.Z. party of the CTAE (1956-58) and named for G. W. Marsh, a member of the party.

Marsh Ridge 85°46'S., 146°10'W.

A rocky ridge, 3 mi. long, midway along the S. side of Leverett Gl. and 11 mi. ENE. of Mt. Gould. Mapped

GEOGRAPHIC NAMES OF THE ANTARCTIC

by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Robert D. Marsh, a cook with the Byrd Station winter party, 1957.

Marsh Spur 65°53'S., 62°38'W.

A spur about 4.5 mi. S. of Bildad Peak and 4.5 mi. W. of Scar Inlet on the E. side of Graham Land. The spur is important geologically for the contact between Basement Complex gneisses and volcanics of probable Upper Jurassic age. Named by UK-APC for Anthony F. Marsh, BAS geologist at Fossil Bluff and Hope Bay, 1963-65.

Marsland, Mount 67°11'S., 51°14'E.

Mountain standing 6 mi. S. of the E. part of Beaver Gl. in Enderby Land. Plotted from air photos taken by ANARE in 1956. Named by ANCA in 1962 for F. L. Marsland, a member of the crew of the *Discovery* during BANZARE, 1929-31.

Marsteinen Nunatak 71°26'S., 1°42'W.

A coastal nunatak 6 mi. NE. of Valken Hill, at the N. end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Marsteinen (the sea stone).

Marston, Mount 76°54'S., 162°12'E.

A whaleback-shaped mountain, 1,245 m., standing at the N. side of Kar Plateau, 3 mi. N. of the terminus of Mackay Gl. in Victoria Land. First mapped by the BrAE (1907-9) and named for George E. Marston, artist with the expedition.

Marston Glacier 76°54'S., 162°30'E.

A glacier draining eastward from Mt. Marston and Doublefinger Peak and entering Granite Harbor between Dreikanter Head and the Kar Plateau. The N.Z. Northern Survey Party of the CTAE (1956-58) ascended this glacier en route to Mt. Marston in October 1957. They named it for its proximity to that mountain.

Martel, Fiord: see Martel Inlet 62°05'S., 58°22'W.

Martel Inlet 62°05'S., 58°22'W.

Inlet forming the NE. head of Admiralty Bay, King George I., in the South Shetland Islands. Probably named by the FrAE under Charcot, who charted Admiralty Bay in December 1909.

Martello Rock: see Martello Tower 62°06'S., 58°08'W.

Martello Tower 62°06'S., 58°08'W.

Rock 10 m. high, lying in King George Bay 2 mi. NNW. of Lions Rump, in the South Shetland Islands.

Charted in 1937 by DI personnel on the *Discovery II*, who named it after the fortified towers by that name.

Mar Tendida, Punta: see Swell Point 59°27'S., 27°06'W.

Martens Peak 85°34'S., 131°02'W.

A rock peak in the NE. part of Ford Nunataks in the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Edward A. Martens, radio-man with the winter party at Byrd Station in 1960 and McMurdo Station in 1965.

Martillo, Cabo: see Wollaston, Cape 63°40'S., 60°47'W.

Martin, Cap: see Martins Head 62°11'S., 58°14'W.

Martin, Mount 69°40'S., 62°59'W.

Mountain, 1,360 m., with conspicuous rock exposures on its SE. side, standing immediately N. of the head of Anthony Gl. on the E. coast of Palmer Land. The mountain lies on the fringe of the area explored by the BGLE in 1936, and was photographed from the air by the USAS in 1940. During 1947 the mountain was photographed from the air by members of the RARE, under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for Orville Martin, electronics engineer who was of assistance in planning and obtaining radio equipment necessary for Ronne's expedition.

Martin, Point 60°47'S., 44°41'W.

Point on the E. side of Mossman Pen. 0.8 mi. NW. of Cape Murdoch, on the S. coast of Laurie I. in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for J. Martin, able-bodied seaman on the exp. ship *Scotia*.

Martin, Port 66°49'S., 141°24'E.

Anchorage lying immediately off Cape Margerie. Disc. in 1950 by the FrAE under Liotard, and named by them in conjunction with the exp. base established on Cape Margerie. Named for André-Paul (J. A.) Martin, second-in-command of the exp., who died en route to the Antarctic.

Martin Dome 83°18'S., 157°12'E.

An elevated, snow-covered prominence between Argosy Gl. and Argo Gl. in the Miller Range. Sighted in December 1957 by the N.Z. Southern Party of the CTAE. Named for L. Martin, leader at Scott Base in 1958.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Martine, Mount 69°33'S., 74°58'W.

Massive mountain, 750 m., with a prominent rocky N. face and ice-covered S. slopes, overlooking the N. shore of Charcot I. close S. of Cheesman Island. Disc. and roughly mapped on Jan. 11, 1910, by the FrAE under Dr. Jean B. Charcot, and named by him for his daughter, Martine. Phot. from the air on Feb. 9, 1947, by USN Op. Hjp. and mapped from these photos by Searle of the FIDS in 1960.

Martine Mountain: see Martine, Mount 69°33'S., 74°58'W.

Martin Glacier: see Balch Glacier 66°50'S., 64°48'W.

Martin Glacier 68°29'S., 66°53'W.

Glacier, 3 mi. wide and 9 mi. long, which flows W. and then NW. from the S. side of Mt. Lupa to the SE. corner of Rymill Bay where it joins the Bertrand Ice Piedmont, on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948-49 by the FIDS and named for James H. Martin, member of the BANZARE under Mawson, 1929-31, and first mate of the *Penola* during the BGLE, 1934-37.

Martin Hill 72°48'S., 169°14'E.

A conspicuous ice-free hill at the W. side of Whitehall Gl. in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for P. J. Martin, New Zealand senior scientist at Hallett Station, 1961.

Martin Hills 82°04'S., 88°01'W.

An isolated range of hills, or peaks, nearly 4 mi. long, lying about 50 mi. S. of Pirrit Hills. The feature was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958. Named by US-ACAN for Larry R. Martin, Scientific Leader at Byrd Station in 1962.

Martin Island 66°44'S., 57°00'E.

Small island in the N. part of Edward VIII Bay, just off the S. shore of Edward VIII Plateau. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and called Utvikalten (the outer bay boar). Remapped by ANARE; the island was renamed by ANCA in 1958 for A. R. Martin, officer in charge of the ANARE party at Macquarie Island in 1948.

Martin Islands 65°37'S., 65°22'W.

Group of islands and rocks 5 mi. in extent lying 5 mi. E. of the N. part of Renaud I. and 1 mi. W. of Vieugué I. in Grandidier Channel. A group of islands to the N. of "Pitt Island" was roughly charted and named Martin Islands for Capt. Martin, Argentine Navy, by the

FrAE, 1903-5, under Charcot. Aerial surveys have shown that what appeared to be one large island, Pitt, is actually a group of small islands. As they lie in one group with no logical division between them, the earlier name of Pitt was amended to Pitt Islands and extended to cover all the islands N. of Renaud Island. The name Martin Islands was transferred to the group now described in order to preserve Charcot's name in the area.

Martin Massif 70°28'S., 65°40'E.

A massif in the Porthos Range, Prince Charles Mountains, just E. of Mt. Lied to which it is connected by a low col. Plotted from ANARE air photos. Named for P. J. Martin, officer in charge at Mawson Station in 1964.

Martin Mountain: see Martine, Mount 69°33'S., 74°58'W.

Martin Nunataks 74°57'S., 158°46'E.

Two isolated nunataks situated along the northern margin of David Glacier, 9 mi. SE. of Mt. Wood, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1956-62. Named by US-ACAN for Robert D. Martin, USGS topographic engineer at McMurdo Station, 1961-62.

Martin Peak 84°22'S., 65°21'W.

A peak, 1,045 m., standing 2 mi. NE. of Nance Ridge in the Thomas Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Christopher Martin, biologist at Palmer Station, 1966-67.

Martin Peninsula 74°25'S., 114°10'W.

A peninsula about 60 mi. long and 20 mi. wide that is ice covered except for a few rock outcrops along its margins, located between the Getz and Dotson Ice Shelves on the coast of Marie Byrd Land. Delineated from aerial photographs taken by USN Op. Hjp. in January 1947. Named by US-ACAN for Col. Lawrence Martin, USA (Ret.), American geographer and authority on the history of Antarctic exploration.

Martin Reef 67°34'S., 65°31'E.

A reef awash, lying 7 mi. N. of the coast and slightly W. of Cape Fletcher. This reef was apparently encountered by Capt. Carl Sjøvold in the Norwegian whale catcher *Bowet III* in January 1931, and by the BANZARE under Mawson in February 1931. Named by Mawson for the boatswain of the *Discovery*.

Martin Ridge 84°25'S., 165°30'E.

A broad ice-covered ridge bordering the W. side of upper Moody Gl. in Queen Alexandra Range. Named

GEOGRAPHIC NAMES OF THE ANTARCTIC

by US-ACAN for Maj. Wilbur E. Martin, USA, in charge of trail operations during USN Op. DFrz., 1963.

Martins, Punta: see Martins Head 62°11'S., 58°14'W.

Martins Dome: see Martin Dome 83°18'S., 157°12'E.

Martins Head 62°11'S., 58°14'W.

Prominent headland forming the S. side of the entrance to Legru Bay on the S. coast of King George I., in the South Shetland Islands. The name dates back to at least 1820, when it was described by Edward Bransfield, Master, RN, during his exploration of these islands.

Martinskjeret: see Martin Reef 67°34'S., 65°31'E.

Martyn, Mount 69°24'S., 157°10'E.

A cluster of bare rock faces with one peak, standing 3 mi. S. of Eld Peak in the Lazarev Mountains. This is probably the most prominent rock outcrop on the W. side of Matusевич Glacier. Photographed by USN Operation Highjump, 1946-47. Photographed on Feb. 20, 1959, by ANARE (*Magga Dan*) led by Phillip Law, and named for D.F. Martyn, a member of the ANARE Executive Planning Committee.

Maruff Peaks: see Billingane Peaks 68°21'S., 59°18'E.

Marujupu, Mount: see Marujupu Peak 76°31'S., 145°37'W.

Marujupu Peak 76°31'S., 145°37'W.

Conspicuous nunatak standing above the main flow of Ochs Gl., between Mounts Iphigene and Ferranto in the Ford Ranges, Marie Byrd Land. Discovered and so named by R. Adm. Byrd on the ByrdAE flight of Dec. 5, 1929. Marujupu combines the letters from the names of three daughters and a son of Mr. and Mrs. Arthur Sulzberger. The daughters are Marian, Ruth and Judy; Punch is the nickname of son Arthur. The Sulzbergers were patrons of the expedition.

Marvel, Mount 78°45'S., 159°22'E.

Mountain, 1,540 m., standing 7 mi. S. of Escalade Peak, near the head of Mulock Glacier. Named by US-ACAN in 1964 for Cdr. R. Marvel, USN, officer in charge of Detachment Alpha at McMurdo Station in 1963.

Mary Louise Ulmer, Mount: see Ulmer, Mount 77°35'S., 86°09'W.

Mary Ulmer, Mount: see Ulmer, Mount 77°35'S., 86°09'W.

Marze Peak 78°52'S., 84°30'W.

A rock peak with twin summits near the S. end of the ridge between Wessbecher and Hudman Glaciers, at the S. end of Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Marion O. Marze, aviation machinist's mate, USN, who perished in the crash of a P2V Neptune airplane at McMurdo Sound on Oct. 18, 1956.

Marzolf, Mount 70°28'S., 159°41'E.

An elongated partially ice-free mountain standing at the head of Svendsen Glacier, 2 mi. W. of Mt. Gillmor, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-65. Named by US-ACAN for John E. Marzolf, USARP biologist at McMurdo Station, 1967-68.

Mascart, Cape 66°38'S., 67°41'W.

Cape forming the northern extremity of Adelaide Island. Disc. by the FrAE, 1903-5, under Charcot, and named by him for Eleuthère Mascart, French physicist and Dir. of the Bureau Central Météorologique.

Mascías Cove 64°54'S., 63°01'W.

Cove indenting the W. coast of Graham Land immediately E. of Mt. Banck. First roughly charted by the BelgAE under Gerlache, 1897-99, and later, by the Scottish geologist David Ferguson, 1913-14. Named for Lt. Eladio Mascías of the tug *Chiriguano* which made a survey of the area during the Argentine Antarctic Expedition of 1949-50.

Maskelyne Passage 65°50'S., 65°24'W.

Passage between Larrouy and Tadpole Islands to the E. and Cat I., Runnelstone Rock and Hummock I. to the W., off the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Nevil Maskelyne (1732-1811), English Astronomer Royal, 1757-1811, who started the *Nautical Almanac* in 1767.

Maslen, Mount 67°42'S., 49°07'E.

Mountain, 1,200 m., standing 1 mi. W. of Mt. Currie in the Raggatt Mtns., Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for A. W. G. Maslen, officer-in-charge at Mawson Station in 1961.

Masley, Mount 72°59'S., 162°54'E.

A prominent flat-topped summit, 2,605 m., in the narrow, northern part of Pain Mesa, situated 11 mi. E. of Silva Ridge in the Mesa Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Andrew J. Masley, ionospheric physics scientist at McMurdo Station, summer 1962-63.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mason, Mount 84°43'S., 169°48'W.

A peak (815 m.) at the edge of Ross Ice Shelf, surmounting the N. extremity of Lillie Range. Discovered and photographed by the ByrdAE (1928-30) and named for Howard F. Mason, radio engineer who wintered with that expedition at Little America.

Mason Glacier 78°53'S., 161°41'E.

Glacier draining the E. slopes of Worcester Range, immediately S. of Bareface Bluff, and flowing E. into Skelton Glacier. Named by US-ACAN in 1964 for David T. Mason, biologist at McMurdo Station, 1961-62 and 1962-63.

Mason Inlet 72°57'S., 60°25'W.

Ice-filled inlet which recedes 15 mi. SW. between Cape Mackintosh and the coastline south of Cape Herdman, along the E. coast of Palmer Land. First seen and photographed from the air in December 1940 by members of the USAS. During 1947 the inlet was photographed from the air by the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for D. P. Mason, their surveyor on the joint British-American sledge journey during the charting of this coast in 1947.

Mason Peaks 72°46'S., 74°44'E.

A prominent serrated ridge with several peaks, standing 8 mi. NW. of Mt. Harding in the Grove Mountains. Mapped by ANARE from air photos, 1956-60. Named by ANCA for A. C. Mason, topographic draftsman, Division of National Mapping, Australian Dept. of National Development, who has contributed substantially to the compilation of Antarctic maps.

Mason Spur 78°33'S., 164°25'E.

An elevated spur, partially ice-covered and over 1,300 m. high, which projects eastward from Mt. Morning in Victoria Land. Named by US-ACAN in 1963 for Robert Mason, USARP Representative at McMurdo Station, 1962-63.

Masquerade Ridge 83°04'S., 164°40'E.

Prominent rock ridge, 5 mi. long, located 16 mi. N. of Clark Peak on the E. side of Robb Glacier. Rocks were collected here by John Gunner and John Splettstoesser in December 1969. The name was suggested by Gunner because the ridge is pictured on the cover of the Feb. 7, 1970 issue of *Saturday Review*, in which an article about the 1969-70 Ohio State University Geological Expedition to the general area appears. The ridge on the photograph was evidently confused with Coalsack Bluff, and the individual in the foreground of the photograph is not David Elliot, as the caption states.

Massam, Mount 81°44'S., 158°12'E.

A broad ice-covered mountain about 8 mi. W. of Mt. Lindley, in the Churchill Mountains. Named by the

Holyoake, Cobham, and Queen Elizabeth Ranges Party of the NZGSAE (1964-65) for D. Massam, member of the party.

Massam Glacier 84°33'S., 175°12'W.

A glacier, 11 mi. long, flowing N. between Waldron Spurs and Longhorn Spurs to enter the Ross Ice Shelf just E. of the mouth of Shackleton Glacier. Named by the Southern Party of NZGSAE (1963-64) for D. Massam, a member of that party.

Massell, Mount 72°29'S., 163°21'E.

A mountain, 1,880 m., standing 6 mi. SE. of Mt. Jackman, in the Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Wulf Massell, Biolab Manager at McMurdo Station in 1967.

Massey Glacier 71°53'S., 168°24'E.

A tributary glacier, 6 mi. long, draining the W. slopes of Meier Peak in the Admiralty Mountains. It flows W. along the S. side of Wylie Ridge to join Man-o-War Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for C. Stanton Massey, meteorologist at South Pole Station, 1968.

Massey Heights 63°58'S., 57°58'W.

Prominent, flat-topped rock heights, with steeply cliffed sides, 6 mi. SW. of Andreassen Point on James Ross Island. Surveyed by FIDS in 1945 and 1955. Named for Paul M.O. Massey, FIDS medical officer at Hope Bay in 1955.

Masson Island 66°08'S., 96°35'E.

Ice-covered island about 17 mi. long and rising to 465 m., lying 9 mi. NW. of Henderson I. within the Shackleton Ice Shelf. Disc. in February 1912 by the AAE under Mawson, who named it for Prof. Sir David Orme Masson of Melbourne, a member of the AAE Advisory Committee.

Masson Range 67°51'S., 62°50'E.

High broken chain of mountains, consisting primarily of North Masson, Central Masson, and South Masson Ranges, forming a part of the Framnes Mountains. Having several peaks over 1,000 m., the range extends in a N.-S. direction for 15 miles. Disc. and charted by the BANZARE, 1929-31, under Mawson, and named for Prof. Sir David Orme Masson, a member of the Advisory Committee for this exp. as well as the AAE, 1911-14, under Mawson. First visited by an ANARE party led by John Béchervaise in 1956.

Mast Hill 68°11'S., 67°00'W.

A hill 14 m. high at the western end of Stonington Island, Marguerite Bay, on the west side of Antarctic

GEOGRAPHIC NAMES OF THE ANTARCTIC

Peninsula. Surveyed by the East Base party of the U.S. Antarctic Service, 1939-41, which erected a flag staff on this hill and built its base close northeastward.

Mast Point 66°22'S., 110°26'E.

The westernmost point of Ardery I., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by US-ACAN for Construction Man Clarence W. Mast, USN, a member of the Wilkes Station party of 1958.

Matador Mountain 85°10'S., 176°50'W.

A prominent, ice-free mountain, 1,950 m., standing at the S. side of the mouth of Gallup Gl. where the latter enters Shackleton Glacier. Named by F. Alton Wade, leader of the Texas Tech Shackleton Glacier Exp. (1962-63) because all three members of the party were affiliated with this college. Matador is the general name for the student body at Texas Technological College.

Mataquito, Islas: see Martin Islands 65°37'S., 65°22'W.

Mateer, Mount 66°59'S., 51°08'E.

Mountain 1 mi. E. of Mt. Degerfeldt, in the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for N. C. Mateer, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Matha Bay: see Matha Strait 66°34'S., 67°30'W.

Matha Strait 66°34'S., 67°30'W.

Strait lying between Adelaide I. and the S. end of the Biscoe Islands. The strait takes its name from Matha Bay, the name originally applied by Charcot, leader of the FrAE, 1908-10, to the water feature as he conceived it. The BGLE under Rymill, 1934-37, recognizing that it is really a strait rather than a bay, changed the name to Matha Strait. Named for Lt. A. Matha, second-in-command of the FrAE, 1903-5, under Charcot.

Mather, Mount 73°34'S., 61°00'E.

A peak 3.5 mi. W. of Mt. Menzies in the Prince Charles Mountains. Sighted by Flying Officer J. Seaton from ANARE aircraft in 1956. Mapped by an ANARE seismic party of 1957-58 led by Keith B. Mather, for whom it is named.

Matheson, Mount 66°57'S., 50°56'E.

Mountain between Mt. Harvey and Mt. Degerfeldt, in the W. part of the Tula Mtns., in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for J. Matheson, a

member of the crew of the *Discovery* during BANZARE, 1929-31.

Matheson, Mount 75°05'S., 72°10'W.

A mountain 2 mi. NW. of Mt. Boyer, in the Merrick Mtns., Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Lorne D. Matheson, ionospheric physics researcher at Eights Station in 1963.

Matheson Glacier 70°47'S., 62°05'W.

Glacier 11 mi. long, lying 2 mi. S. of Ashton Gl., which it parallels, and flowing in an E. direction to the W. side of Lehrke Inlet, on the E. coast of Palmer Land. First sighted by members of the USAS who explored this coast by land and from the air in December 1940. First charted by a joint party consisting of members of the RARE and FIDS in 1947. Named by the FIDS for J. Matheson, a member of the FIDS at the Port Lockroy and Hope Bay bases, 1944-46.

Mathew, Mount 81°41'S., 159°57'E.

A peak, 2,030 m., standing at the E. side of Starshot Gl., 2 mi. N. of Mt. Hotine, in the Surveyors Range. Named by the NZGSAE (1960-61) for Felton Mathew, the first Surveyor-General of New Zealand, in 1840.

Mathews, Mount: see Mathew, Mount 81°41'S., 159°57'E.

Mathewson Point 74°23'S., 132°33'W.

A steep, rocky point at the N. tip of Shepard Island, which lies on the seaward edge of the Getz Ice Shelf, Marie Byrd Land. The point, the site of an Adélie penguin rookery, was charted by personnel of the USS *Glacier* on Feb. 4, 1962. Named by US-ACAN for Lt. (j.g.) David S. Mathewson, USN, then supply officer of the *Glacier*.

Mathias Point 58°28'S., 26°14'W.

Point about 1.5 mi. N. of Allen Pt., Montagu I., in the South Sandwich Islands. Named by UK-APC for W. A. Mathias, RN, pilot in HMS *Protector's* ship's flight during the survey of the South Sandwich Islands in 1964.

Mathieu Rock 66°20'S., 136°49'E.

Ice-free rock, midway between Cape Bickerton and Rock X, at the E. side of the entrance to Victor Bay. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE under Marret, 1952-53, and named for Claude Mathieu, French astronomer of the 19th century.

Mathis Nunataks 77°08'S., 143°27'W.

An isolated cluster of nunataks near the head of Arthur Glacier, 8 mi. ESE. of Mt. Warner, in the Ford

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Terry R. Mathis, traverse engineer with the Byrd Station glaciological strain network, summer season (1967-68), and station engineer with the Byrd Station winter party (1968).

Mathis Spur 83°20'S., 51°17'W.

A rock spur along the W. side of Saratoga Table, 3 mi. N. of Mt. Stephens, in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Melvin Mathis, hospital corpsman at Ellsworth Station, winter 1957.

Matikonis Peak 75°21'S., 138°14'W.

Small, rather isolated rock peak that protrudes through the snow mantle of central Coulter Heights, near the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for William P. Matikonis, DC2, USN, Damage Controlman aboard USS *Glacier*, 1961-62.

Matin, Mount 65°08'S., 63°40'W.

A massive mainly snow-covered mountain which surmounts the mountainous divide N. of Hotine Glacier, on the W. side of Graham Land. First charted by the FrAE, 1903-5, led by J.B. Charcot, who named it after the newspaper *Le Matin* which contributed generously to the cost of the expedition.

Matkah Point 63°58'S., 58°19'W.

The northern entrance point to Holluschickie Bay, on the W. coast of James Ross Island. The name, recommended by UK-APC, arose from association with Holluschickie Bay; Matkah was the mother of the white seal, Kotick, in Rudyard Kipling's *Jungle Book*.

Matney Peak 79°10'S., 86°14'W.

A mostly ice-free peak, 1,810 m., near the middle of the line of peaks at the E. side of Webster Glacier in the Heritage Range of the Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Chief Aviation Boatswain's Mate William R. Matney, USN, who contributed significantly to improving fuel operations in Antarctica and for a portion of Operation Deep Freeze 1966, acted as fuels officer.

Matsuyama Rocks 66°40'S., 66°35'W.

A small group of rocks close off the W. side of Stefan Ice Piedmont, Graham Land. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Montonori Matsuyama, Japanese geologist who made laboratory studies of the crystal forms of ice, in 1920.

Matterhorn: see Vogel Peak 54°34'S., 36°14'W.

Matterhorn 77°40'S., 162°27'E.

Peak, 1,600 m., surmounting the N. wall of Taylor Valley between Lacroix and Matterhorn Glaciers. So named by Griffith Taylor of the BrAE under Scott, 1910-13, because of its resemblance to the famous Swiss mountain.

Matterhorn Glacier 77°41'S., 162°27'E.

Small alpine glacier on the edge of the N. wall of Taylor Valley, just W. of the Matterhorn, in Victoria Land. Named after the Matterhorn by U.S. geologist T. L. Péwé, who visited the area in December 1957.

Matterson Inlet 80°50'S., 160°30'E.

An ice-filled inlet between Penny Point and Cape Douglas, on the W. side of Ross Ice Shelf. Named by the NZGSAE (1960-61) for Garth John Matterson, leader of the party that surveyed the area.

Matthes Glacier 67°30'S., 65°40'W.

Glacier 9 mi. long, flowing E. into Whirlwind Inlet between Demorest and Chamberlin Glaciers, on the E. coast of Graham Land. Disc. by Sir Hubert Wilkins on a flight of Dec. 20, 1928, and photographed from the air by the USAS in 1940. Charted by the FIDS in 1947 and named for François E. Matthes, glaciologist, then chief geologist with the U.S. Geological Survey.

Matthews Glacier 75°45'S., 65°30'W.

A glacier on the E. side of the Wilkins Mtns., draining S. to enter the Ronne Ice Shelf just W. of Dodson Peninsula. Mapped by the USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for J. D. Matthews, engineman at South Pole Station in 1963.

Matthews Island 60°45'S., 45°09'W.

The largest of the Robertson Is. in the South Orkney Islands. It lies immediately SE. of Coronation I., from which it is narrowly separated by The Divide. Mapped as part of Coronation I. until January 1957 when a FIDS party established its insularity. Named by the UK-APC in 1959 for Drummond H. Matthews, FIDS geologist at Signy Island in 1956.

Matthews Point 54°02'S., 37°58'W.

Point forming the W. side of the entrance to Undine Hbr., along the S. coast and near the W. end of South Georgia. Charted in the period 1926-30 by DI personnel and named for L. Harrison Matthews, British zoologist, member of the staff of the Discovery Investigations, 1924-35, who worked at South Georgia in 1924-27.

Matthews Point: see Harrison Point 54°10'S., 36°36'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

McNaughton. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Robert J. McCarthy, USN, pilot on flights to the general area during Operation Highjump, 1946-47.

McCarthy Inlet 78°50'S., 45°00'W.

An ice-filled inlet which is the largest and northernmost of three inlets indenting the eastern side of Berkner Island. Discovered by U.S. ground and flying personnel at Ellsworth Station (1957-58) under Capt. Finn Ronne, USNR. Named by US-ACAN for Lt. Cdr. Charles J. McCarthy, USNR, commander of the USN Squadron VX-6 aircraft unit at Ellsworth Station during this period.

McCarthy Island 54°10'S., 37°26'W.

Island, 1 mi. long, lying in the entrance to King Haakon Bay on the S. side of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Timothy McCarthy, a seaman on the *Endurance* during the Br. exp. under Shackleton, 1914-16. McCarthy accompanied Shackleton in the *James Caird* from Elephant I. to King Haakon Bay.

McCarthy Island 67°16'S., 59°25'E.

An island 2 mi. long, lying just NE. of Fold I., off the coast of Enderby Land. Mapped as part of Fold I. (Foldøya) by Nor. cartographers from air photos taken by Lars Christensen Exp., 1936-37. Identified as a separate island by an ANARE geological party, 1961. Named by ANCA for W. R. McCarthy, Australian petrologist, who described several hundred specimens from Antarctica collected by ANARE geologists.

McCarthy Nunatak 69°07'S., 64°45'E.

A small nunatak, the top of which is almost at the same level as the surrounding ice plateau, about 5 mi. SE. of Depot Peak, Mac. Robertson Land. Discovered from an ANARE aircraft in 1970. Named by ANCA for I. McCarthy, senior weather observer at Mawson in 1970, a member of the ANARE Prince Charles Mtns. survey party in 1971.

McCarthy Point 74°25'S., 130°59'W.

Ice-covered point that marks the NE. extremity of Grant Island on the seaward edge of the Getz Ice Shelf. Discovered and charted from the USS *Glacier* on Feb. 4, 1962. Named by US-ACAN for Lt. (j.g.) J. F. McCarthy, USN, Disbursing Officer on the *Glacier* at the time of discovery.

McCarthy Ridge 74°37'S., 163°03'E.

A broad, mainly ice-covered ridge with steep sides forming the E. wall of Carnein Gl., in the foothills of SE. Eisenhower Range, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63.

Named by US-ACAN for Peter C. McCarthy, biolab manager at McMurdo Station, winter party 1966.

McCarthy Valley 85°18'S., 119°20'W.

An ice-filled valley, 3 mi. long, between Peters Butte and Todd Ridge in the NW. part of Long Hills, Horlick Mountains. Mapped by USGS from surveys and U.S. Navy aerial photography, 1958-60. Named by US-ACAN for James E. McCarthy, meteorological electronics technician at Byrd Station in 1960.

McCaslin Nunatak 85°38'S., 140°57'W.

Isolated nunatak 5 mi. S. of the W. end of the Bender Mountains. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for James C. McCaslin, a member of the U.S. Army Aviation Unit which supported the USGS Topo East survey in 1962-63.

McCauley, Mount 73°12'S., 63°15'E.

A prominent mountain between Mt. Scherger and Mt. Dummett on the N. side of Fisher Gl., in the Prince Charles Mountains. Disc. from ANARE aircraft in 1956 and visited by an ANARE party in 1960. Named by ANCA for Air Marshal Sir John McCauley, Chief of the Australian Air Staff, 1954-57.

McCauley Rock 83°02'S., 48°53'W.

A rock, 1,020 m., situated just off the E. edge of Lexington Table, 6 mi. N. of Mt. Zirzow, in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Clyde J. McCauley, USN seaman at Ellsworth Station, winter 1957.

McCaw Ridge 75°21'S., 65°00'W.

An isolated ridge lying 4 mi. S. of the central part of Ueda Gl., near the base of Antarctic Peninsula. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for D. McCaw, construction electrician at South Pole Station in 1963.

McClary Glacier 68°04'S., 67°00'W.

A glacier 10 mi. long and 2 mi. wide on the W. coast of Graham Land. It flows SW. along the N. side of Butson Ridge into Marguerite Bay between Cape Calmette and Debenham Islands. First roughly surveyed by BGLE, 1936-37, and resurveyed by FIDS, 1946-50. This application by UK-APC is for George B. McClary, father of Nelson McClary, mate on the *Port of Beaumont* during the RARE, 1947-48.

McClary Ridge 66°55'S., 64°09'W.

A small, crescent-shaped ridge 5 mi. SSE. of Mt. Hayes on the S. side of Cole Peninsula in Graham Land. In Dec. 1947 it was charted by FIDS and was

GEOGRAPHIC NAMES OF THE ANTARCTIC

photographed from the air by RARE under Ronne. Named by Ronne for George B. McClary of Winnetka, Ill., contributor to the expedition.

McCleary Glacier 79°33'S., 156°50'E.

A broad glacier about 10 mi. long, draining southward into Darwin Gl. just W. of Tentacle Ridge. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959-63. Named by US-ACAN for George McCleary, public information officer on the staff of the U.S. Antarctic Projects Officer (1959-61), whose labors helped to start the *Bulletin* of the USAPO.

McClintock, Mount 80°13'S., 157°26'E.

The highest mountain (3,490 m.) in Britannia Range, surmounting the S. end of Forbes Ridge, 6 mi. E. of Mt. Olympus. Discovered by the BrNAE (1901-4) and named for Adm. Sir Leopold McClintock, RN, a member of the Ship Committee for the expedition.

McClung, Mount 77°11'S., 144°26'W.

A mountain midway between Asman Ridge and Mt. Crow in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939-41). Named by US-ACAN for Lt. Herbert C. McClung, MC, USN, officer in charge at Byrd Station, 1965.

McCollum Peak 65°32'S., 64°02'W.

Peak, 735 m., standing S. of Beascochea Bay 2 mi. SE. of Mt. Waugh, on the W. coast of Graham Land. First charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1959 for Elmer V. McCollum, American biochemist who first isolated vitamins A and B, in 1915.

McConnel Islands 66°29'S., 65°51'W.

Islands lying in Darbel Bay SE. of Kidd Is., off the W. coast of Graham Land. Photographed by the FIDASE, 1956-57. Named by the UK-APC in 1960 for James C. McConnel (1860-1890), English physicist who made pioneer experiments on the plastic deformation of ice, both single and polycrystals, 1881-90.

McCormick, Cape 71°50'S., 170°58'E.

Cape marking the E. extremity of Adare Peninsula in Victoria Land. Discovered by Capt. James Ross, 1841, who named it for Robert McCormick, Surgeon on the *Erebus*.

McCormick, Mount 77°00'S., 144°26'W.

A mountain 2 mi. SE. of Mt. Ralph in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939-41). Named by US-ACAN for W. S. McCormick, airplane pilot with the ByrdAE (1933-35).

McCormick Island: see McCormick, Cape 71°50'S., 170°58'E.

McCoy, Mount 75°52'S., 141°10'W.

A high table-topped massif with dark, snow-free, vertical walls, at the E. side of Land Glacier in Marie Byrd Land. Discovered by members of West Base of the USAS (1939-41) and named for James C. McCoy, chief pilot at West Base.

McCrilliss Nunatak 85°27'S., 128°55'W.

A nunatak marking the N. end of the Gierloff Nunataks on the N. side of the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Harold G. McCrilliss, construction electrician, a member of the winter parties at Byrd Station in 1959 and South Pole Station in 1964.

McCrary, Mount 75°29'S., 139°26'W.

A mountain 2 mi. ESE. of Mt. Vance in the E. part of the Ickes Mtns., Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Capt. Eugene E. McCrary, USCG, Commanding Officer of USCGC *Glacier*, during Operation Deep Freeze 1969 and 1970.

McCuddin Mountains 75°47'S., 128°42'W.

A small cluster of mountains consisting mainly of two large mountains, Mt. Flint and Mt. Petras, along with several scattered peaks and nunataks. Located in Marie Byrd Land, 40 mi. E. of the Ames Range. The mountains were discovered and photographed from the air in a flight from West Base of the U.S. Antarctic Service on Dec. 14, 1940. They were mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for R. Adm. Leo B. McCuddin, USN, Commander of the U.S. Naval Support Force, Antarctica, 1972.

McCue, Mount 84°45'S., 174°41'W.

A peak (1,710 m.) standing 5.5 mi. NW. of Mt. Wade in the Prince Olav Mountains. Discovered by the USAS, 1939-41. Surveyed by A. P. Crary (1957-58) and named by him for James A. McCue, USN, radio mechanic, who was in charge of the first Beardmore Camp during the 1957-58 season.

McCuistion Glacier 84°49'S., 175°30'W.

A tributary glacier, 4 mi. long, which flows W. along the N. side of Lubbock Ridge to enter Shackleton Glacier, in the Queen Maud Mountains. Named by US-ACAN for Joshua P. McCuistion, Construction Driver 1st Class, USN, who was injured in an Otter airplane crash on Dec. 22, 1955, following take-off from the Cape Bird area.

GEOGRAPHIC NAMES OF THE ANTARCTIC

McDaniel Nunatak 75°48'S., 161°48'E.

A ridgelike projection at the N. side of the head of Davis Glacier, about 5 mi. N. of Mt. George Murray, in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for James R. McDaniel, satellite geodesist with the McMurdo Station winter party, 1966.

McDonald, Mount 72°30'S., 166°36'E.

A peak (2,470 m.) on the N. side of Trafalgar Gl., 4 mi. NW. of Mt. Burton, in the Victory Mtns., Victoria Land. Named by NZFMCAE, 1962-63, for William McDonald, crew member on the *Terra Nova* during the BrAE, 1910-13. McDonald, who lives in New Zealand, was a guest of the U.S. Navy during the 1962-63 Antarctic season when he visited the continent again with two others of Scott's veterans.

McDonald Bay 66°36'S., 92°44'E.

Open bay, 10 mi. wide at its entrance between Adams I. and the Haswell Is., lying immediately W. of Mabus Pt. on the coast of Antarctica. Charted by the AAE under Mawson, 1911-14. Named by the US-ACAN for Cdr. Edwin A. McDonald, USN, Commander of the U.S.S. *Burton Island*, flagship of the two icebreakers which supported the USN Op. Wml. parties which established astronomical stations along Wilhelm II, Queen Mary, Knox and Budd Coasts during the 1947-48 summer season.

McDonald Beach 77°15'S., 166°21'E.

An extensive beach lying W. of Inclusion Hill and 6 mi. SW. of Cape Bird on Ross Island. Named by the NZGSAE, 1958-59, for Capt. Edwin S. McDonald, then Deputy Commander, U.S. Naval Support Force, Antarctica, who provided extensive transport and other facilities to the NZGSAE in support of the survey of the Cape Bird area.

McDonald Glacier: see McDonald Ice Rumples 75°28'S., 26°18'W.

McDonald Heights 74°55'S., 136°00'W.

Broad, mainly snow-covered heights about 35 mi. long and rising over 1,000 m. between Cape Burks and Morris Head on the coast of Marie Byrd Land. The heights are bounded southward by the Hull, Kirkpatrick and Johnson Glaciers. The feature was photographed from aircraft of the USAS, 1939-41. It was observed and partially mapped from the USS *Glacier* during Feb. 1962, and was mapped in detail by USGS in 1965. Named by US-ACAN for Capt. Edwin A. McDonald, USN, Deputy Commander of the U.S. Naval Support Force, Antarctica, in 1962, and Commander of the Task Unit that explored this coast in the *Glacier* in Feb. 1962.

McDonald Ice Rumples 75°28'S., 26°18'W.

A severely disturbed area in the Brunt Ice Shelf, which is assumed to be aground and pushed upward in this vicinity. It covers an area 3 by 2 miles. In 1957 the maximum elevation above the general surface of the ice shelf was about 18 meters, a few hundred meters from the ice front. The Royal Society IGY expeditions occupied a base nearby (1955-59) and were familiar with this feature. It has now been identified with "Allan McDonald Glacier" reported by Shackleton's expedition in January 1915. For the sake of historical continuity the UK-APC has given the name McDonald to these ice rumples. Allan McDonald of the British Association of Magallanes at Punta Arenas was chiefly responsible for raising funds for sending the *Emma* on the third attempt, in July 1916, to rescue the 22 men of the *Endurance* left on Elephant Island.

McDonald Island 53°03'S., 72°36'E.

Rocky island, nearly 1 mi. long, marking the largest feature in the McDonald Islands. This feature was charted and named on an 1874 chart by a Br. exp. under Nares in the *Challenger*. Capt. William McDonald of the British ship *Samarang* discovered the island group in January 1854.

McDonald Islands 53°02'S., 72°36'E.

Small island group consisting of several islands and rocks, situated about 23 mi. W. of Heard Island. Named for Captain William McDonald of the British ship *Samarang* who discovered the islands in January 1854.

McDonald Point 67°21'S., 59°40'E.

A point marking the western end of Islay, an island in William Scoresby Archipelago. The name appears to have been applied by crew members of the *William Scoresby*, a ship used in charting these islands in February 1936.

McDonald Ridge 66°20'S., 52°15'E.

A mostly ice-covered ridge between Johnston and Douglas Peaks, about 22 mi. SE. of Mt. Biscoe in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for K. R. McDonald, radio officer at Mawson Station in 1961.

McDonalds Rocks: see McDonald Islands 53°02'S., 72°36'E.

McDonough Nunataks 85°08'S., 179°59'E.

Small group of isolated rock nunataks at the S. margin of the Queen Maud Mtns., rising above the ice plateau 5 mi. W. of Mt. Rosenwald. Named by US-ACAN for John W. McDonough, USARP ionospheric physicist at the South Pole Station, 1962.

GEOGRAPHIC NAMES OF THE ANTARCTIC

McElroy, Mount 74°09'S., 63°12'W.

Prominent mountain at the W. end of the Hutton Mtns., in SE. Palmer Land. Disc. by the RARE, 1947-48, led by Ronne, who named the mountain for T. P. McElroy, of Boston, who contributed the radio and communication instruments for the expedition.

McElroy Glacier 70°58'S., 166°58'E.

A tributary glacier just W. of Matthews Ridge on Tapsell Foreland, Victoria Land. It drains S. to join Barnett Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Clifford T. McElroy, USARP geologist at McMurdo Station, 1964-65 and 1966-67.

McElroy Ridge 72°37'S., 168°03'E.

A high mountainous ridge, 16 mi. long, in the Victory Mountains of Victoria Land. The ridge is bounded by the Gruendler, Trainer, Trafalgar and Rudolph Glaciers. Mapped in part by the NZGSAE, 1957-58. Mapped in detail by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for William D. McElroy, Director of the National Science Foundation, 1969-72.

McFarlane Strait 62°32'S., 59°55'W.

Strait lying between Greenwich and Livingston Islands, in the South Shetland Islands. The name appears on an 1822 chart by Capt. George Powell, a British sealer, and is now well established in international usage.

McGaw Peak 75°52'S., 140°59'W.

A prominent peak (over 800 m.) on the ridge between Land Glacier and Paschal Glacier in Marie Byrd Land. It stands midway between Mt. McCoy and Pearson Peak. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959-65. Named by US-ACAN for Maj. Hugh R. L. McGaw, USA, Logistics Research Officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, during Operation Deep Freeze 1971 and 1972.

McGee, Mount 74°03'S., 164°33'E.

A mountain, 1,410 m., rising from a ridge at the N. side of Clausnitzer Gl. in the Random Hills, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Lawrence E. McGee, geologist at McMurdo Station, 1965-66 season.

McGee Rock 75°54'S., 142°59'W.

An isolated rock at the S. side of Parker Pass, about 5 mi. S. of Zuncich Hill, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Wayne R. McGee,

EO3, USN, Equipment Operator at Byrd Station, 1966.

McGhee, Mount 66°56'S., 52°39'E.

Mountain 4 mi. S. of Mt. Smethurst in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for J. McGhee, mechanic and driver at Wilkes Station in 1961.

McGinnis Peak 84°32'S., 177°52'W.

A prominent peak (1,270 m.) with a large, bare cirque in the N. slope, standing near the edge of the Ross Ice Shelf, just E. of the lower part of Kosco Gl. and 3.5 mi. SW. of Oppegaard Spur. Discovered by the USAS, 1939-41. Surveyed by A. P. Crary in 1957-58, and named by him for Lyle McGinnis, seismologist with the U.S. Victoria Land Traverse Party in 1958-59.

McGrady Cove 66°16'S., 110°34'E.

Cove at the head of Newcomb Bay in the Windmill Islands. First mapped from air photos taken by USN Operation Highjump and Operation Windmill in 1947 and 1948. Named by the US-ACAN for Chief Photographer's Mate E. D. McGrady, USN, who participated in the flights of USN Operation Highjump over the Windmill Islands in 1947.

McGrath, Mount 70°53'S., 65°28'E.

A mountain 1 mi. NE. of Mt. Bewsher in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos. Named by ANCA for A. E. McGrath, assistant diesel mechanic at Mawson Station in 1963.

McGrath Nunatak 68°03'S., 63°01'E.

A ridge-like nunatak at the W. end of the Blånabbane Nunataks, standing 7 mi. SE. of Van Hulssen Nunatak in Mac. Robertson Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for P.J. McGrath, radio officer at Mawson Station who assisted in the ANARE Framnes Mountains-Depot Peak survey during 1965.

McGregor, Mount 70°37'S., 66°39'E.

A peak surmounting the SW. end of Thomson Massif in the Aramis Range, Prince Charles Mountains. Sighted in December 1956 by the ANARE southern party led by W. G. Bewsher, and named for Peter McGregor, geophysicist at Mawson Station in 1956.

McGregor Glacier 85°08'S., 174°50'W.

A tributary glacier, 14 mi. long and 3 mi. wide, draining the SW. slopes of the Prince Olav Mtns. and flowing W. to enter Shackleton Gl. just N. of Cumulus

GEOGRAPHIC NAMES OF THE ANTARCTIC

Hills. Named by the Southern Party of NZGSAE (1961-62) for V. R. McGregor, geologist with that party.

McGregor Range 71°58'S., 167°51'E.

Mountain range 13 mi. long in the south-central Admiralty Mountains. The range is circumscribed by the flow of the Tucker, Leander, Fitch and Man-o-War Glaciers. Partially mapped by the NZGSAE, 1957-58. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for Cdr. Ronald K. McGregor, USN, leader of Antarctic Support Activities at McMurdo Station, winter party 1962.

McGuire Island 64°46'S., 64°24'W.

Island in the NE. portion of the Joubin Islands. Named by US-ACAN for Thomas J. McGuire, Oiler in R.V. *Hero* in her first voyage to Antarctica and Palmer Station in 1968.

McIntosh Cove: see Mackintosh Cove 60°42'S., 44°30'W.

McIntyre, Mount 87°17'S., 153°00'W.

A rocky, flat, projecting-type mountain that forms the NE. extremity of D'Angelo Bluff. It rises at the W. side of Scott Glacier, near the head, directly opposite Mt. Howe. Discovered in Dec. 1934 by the ByrdAE geological party led by Quin Blackburn. Named by Admiral Byrd for Marvin H. McIntyre, secretary to the President of the United States at that time, Franklin D. Roosevelt.

McIntyre Island 66°14'S., 110°34'E.

A small island just W. of Blakeney Point, Clark Peninsula, in the Windmill Islands. The island was photographed from the air by USN Op. Hjp. (1946-47) and was included in a 1957 ground survey by C. R. Ek-lund. Named by the latter for construction mechanic Robert McIntyre, USN, of the Wilkes Station party, 1957.

McIntyre Island 67°22'S., 49°05'E.

The easternmost of the Hydrographer Is., lying just S. of Sakellari Pen., Enderby Land. Plotted from ANARE air photos in 1957 and visited by an ANARE party in 1959. Named by ANCA for Sgt. H. McIntyre, RAAF, engine fitter at Mawson Station in 1959.

McIntyre Promontory 84°57'S., 179°40'E.

A promontory having the ground plan of a sharp V pointed toward the N., with steep cliffs on either flank, forming a part of the Bush Mtns. at the head of Ramsey Glacier. Discovered and photographed by USN

Op. Hjp. on Flight 8A of Feb. 16, 1947, and named by US-ACAN for Capt. Eugene C. McIntyre, USMC, copilot on this flight.

McKaskle Hills 70°01'S., 73°00'E.

A group of moderately low, rocky coastal hills between Rogers Glacier and Mistichelli Hills, on the eastern margin of the Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946-47), and named by him for H.A. McKaskle, air crewman on Operation Highjump photographic flights over coastal areas between 14° and 164° East longitude.

McKay Cliffs 82°19'S., 156°00'E.

A line of cliffs about 20 mi. long, forming the N. wall of Geologists Range. Seen by the northern party of the NZGSAE (1961-62) and named for Alexander McKay, pioneer New Zealand geologist.

McKellar Glacier 72°12'S., 167°07'E.

A tributary glacier flowing S. along the E. side of Evans Ridge into Pearl Harbor Glacier in the Victory Mtns., Victoria Land. Named by the northern party of NZFMCAE, 1962-63, for I. C. McKellar, geologist and glaciologist to the NZGSAE, 1957-58, which undertook surveys in the nearby Tucker Glacier area.

McKelvey, Mount 85°21'S., 87°18'W.

A rocky, mostly ice-free peak (2,090 m.) situated less than 1 mi. E. of Mount Walcott in the eastern portion of the Thiel Mountains. Surveyed by the USGS Thiel Mountains party, 1960-61. Named by US-ACAN for Vincent E. McKelvey, ninth director of the U.S. Geological Survey, 1971-78. During this period numerous USGS geologic and topographic expeditions, for which he had administrative responsibility, were carried out in Antarctica.

McKelvey Valley 77°26'S., 161°33'E.

Valley between the western part of the Olympus Range and the Insel Range, in Victoria Land. Named by the VUWAE (1958-59) for B. C. McKelvey, a geologist of Victoria Univ., who, with P. N. Webb, did the first geological exploration of this area (1957-58), and was again in Wright Valley with the VUWAE, 1958-59.

McKenny, Mount 71°40'S., 160°22'E.

A mountain (1,890 m.) at the S. end of Daniels Range, 4 mi. SE. of Mt. Toogood, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Clarence D. McKenny, USARP meteorologist who wintered at the South Pole Station in 1959 and 1961, and at Eights Station in 1963.

GEOGRAPHIC NAMES OF THE ANTARCTIC

McKenzie, Mount 70°40'S., 67°01'E.

A pyramidal peak, 2,255 m., situated 3.5 mi. SE. of Saxton Ridge in the Amery Peaks of the Aramis Range, Prince Charles Mountains. Seen by the ANARE southern party led by W. G. Bewsher, 1956-57. Named by ANCA for John A. McKenzie, cook at Mawson Station in 1956.

McKenzie Nunatak 71°14'S., 163°25'E.

A very prominent nunatak (1,620 m.) which rises above the ice between McLin and Graveson Glaciers, in the Bowers Mountains. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Garry D. McKenzie, glaciologist, who participated in the study of Meserve Gl. in 1966-67.

McKenzie Peak 70°18'S., 65°38'E.

A peak just S. of Mt. Albion in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for J. F. McKenzie, radio technician at Wilkes Station in 1963.

McKeown, Mount 77°56'S., 85°31'W.

A mountain (1,880 m.) on the N. side of Embree Gl., 3 mi. NE. of Mt. Schmid, in the N. portion of the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for First Lt. Donald F. McKeown, USAF, who participated in establishing the South Pole Station in the 1956-57 season.

McKercher, Mount 86°09'S., 150°02'W.

A mountain, 2,230 m., standing at the E. side of Scott Gl., just N. of the mouth of Griffith Gl., in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named for Miss Hazel McKercher, secretary to R. Adm. Byrd during the period of this expedition.

McKerrow, Mount 81°45'S., 159°48'E.

A prominent mountain on the E. side of Starshot Gl., standing 5 mi. N. of Thompson Mtn. in Surveyors Range. Discovered by the NZGSAE (1960-61) and named for James McKerrow, a former Surveyor General of New Zealand.

McKibben, Mount 75°23'S., 64°42'W.

A mountain standing 5 mi. SW. of Hansen Inlet and 3 mi. SE. of McCaw Ridge, near the base of Antarctic Peninsula. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for L. D. McKibben, USN, shipfitter with the South Pole Station winter party in 1963.

McKinley Nunatak 85°18'S., 170°03'W.

The southernmost of three large nunataks in upper Liv Glacier, about 5 mi. NNE. of Barnum Peak. Named by the Southern Party of the NZGSAE (1961-62) for Capt. Ashley C. McKinley, photographer with R. Adm. Richard E. Byrd on his South Pole flight of 1929.

McKinley Peak 77°54'S., 148°18'W.

Peak standing 15 mi. W. of Hershey Ridge at the S. end of the Ford Ranges in Marie Byrd Land. Discovered on the ByrdAE flight of Dec. 5, 1929, and named by Byrd for Grace McKinley, wife of Capt. Ashley C. McKinley, aerial photographer and third-in-command of the expedition.

McKinnis Peak 69°34'S., 159°21'E.

A peak (510 m.) 2 mi. SE. of Holladay Nunataks in the Wilson Hills. It surmounts the peninsula that is bounded by Tomilin and Noll Glaciers on the west and Gillett Ice Shelf on the east. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Joe D. McKinnis of USN Squadron VX-6, Aviation Electronics Technician and air crewman on LC-130F aircraft in five Operation Deep Freeze deployments through 1969.

McKinnon Glacier 70°38'S., 67°45'E.

A glacier flowing SE. from the Nemesis Gl. to Beaver Lake in the E. part of the Aramis Range, Prince Charles Mountains. The area was first visited by an ANARE party in 1956 and mapped from ANARE air photographs. Named by ANCA for G. W. McKinnon, Geographical Officer with the Antarctic Division, Melbourne, Officer in Charge of the ANARE Prince Charles Mtns. survey party in 1969.

McKinnon Island 67°36'S., 47°35'E.

Large island, mostly ice covered, in the Hannan Ice Shelf along the coast of Enderby Land. Plotted from air photos taken by ANARE in 1956. Named for Graeme W. McKinnon, Geographical Officer of the Antarctic Division, Melbourne, and Secretary of the Antarctic Names Committee of Australia.

McKinzie Islands 74°03'S., 101°50'W.

A group of small islands in the NE. extremity of Cranston Bay. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Richard H. McKinzie, USN, hospital corpsman at Byrd Station, 1967.

McLaren Ridge 70°52'S., 67°38'E.

A rock ridge at the head of Battye Gl., about 5 mi. W. of Radok Lake in the Aramis Range, Prince Charles

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for W. A. McLaren, glaciologist at Wilkes Station in 1965.

McLaughlin Cliffs 71°35'S., 67°32'W.

The abrupt rock cliffs that overlook George VI Sound between the Armstrong and Conchie Glaciers, in west Palmer Land. Named by US-ACAN for Lt. Donald J. McLaughlin, CEC, USNR, Officer-in-Charge of Palmer Station in 1970. The steep cliffs provide nesting sites for a colony of Snow Petrels (*Pagodroma nivea*).

McLaughlin Peak 74°35'S., 64°18'W.

A peak standing 9 mi. ESE. of Mt. Aaron in the N. part of the Latady Mtns., in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Robert H. McLaughlin, USN, engineman with the South Pole Station winter party in 1964.

McLean Buttress 77°19'S., 160°58'E.

A buttress-like mountain or promontory at the N. side of Webb Lake and Barwick Valley in Victoria Land. It rises abruptly from the valley and marks the S. limit of the cliffs known as The Fortress. Named by US-ACAN for Capt. Frank E. McLean, USCG, Commanding Officer of USCGC *Burton Island* in the Ross Sea during Operation Deep Freeze 1970 and 1971.

McLean Glacier 70°59'S., 164°45'E.

Tributary glacier located N. of Mt. Hemphill in the SW. part of Anare Mtns., draining W. and entering the lower part of Ebbe Gl. just S. of Beaman Glacier. Named by US-ACAN for Kenneth S. McLean, topographic engineer with the USGS Topo East-West party that surveyed this area in the 1962-63 season.

McLean Nunataks 67°50'S., 143°57'E.

A group of three nunataks lying within the western part of Mertz Glacier, near the head. Discovered by the AAE (1911-14) under Douglas Mawson, who named them after Dr. Archie L. McLean, medical officer and bacteriologist with the expedition.

McLean Peak 85°51'S., 141°35'W.

A peak, 2,290 m., surmounting a spur descending from the NW. end of Stanford Plateau, along the Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Lt. William E. McLean, USN, medical officer and officer in charge of the South Pole Station winter party in 1964.

McLean Ridge 70°44'S., 66°51'E.

A small, partly ice-covered ridge about 3 mi. SE. of Mt. Butterworth in the Aramis Range, Prince Charles

Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for C. V. McLean, senior diesel mechanic at Wilkes Station in 1963.

McLea Nunatak 75°59'S., 159°30'E.

A nunatak between Richards Nunatak and Sharks Tooth, in the Prince Albert Mtns., Victoria Land. Named by the Southern Party of the NZGSAE, 1962-63, for F. McLea, radio operator at Scott Base who was responsible for the field party radio communications.

McLennan, Mount 67°12'S., 51°05'E.

Mountain 4 mi. S. of Howard Hills in the NE. part of the Scott Mtns., Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for K. McLennan, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

McLennan, Mount 77°35'S., 162°56'E.

Prominent mountain rising over 1,600 m. at the N. side of Taylor Valley, surmounting the area at the heads of Canada, Commonwealth and Loftus Glaciers, in Victoria Land. Named by C. S. Wright of the BrAE (1910-13) for Professor McLennan, physicist of Toronto University, Canada.

McLeod Glacier 60°44'S., 45°38'W.

Glacier 1 mi. long, flowing in a SE. direction into Clowes Bay on the S. side of Signy I., in the South Orkney Islands. Named by the UK-APC in 1954 for Michael McLeod, following a survey by the FIDS in 1947. On Dec. 12, 1821, the cutter *Beaufoy* under McLeod sailed to a position at least 60 mi. W. of the South Orkney Is., where a chart annotation indicates that land was sighted, possibly Coronation Island.

McLeod Glacier 69°22'S., 158°22'E.

Glacier that descends from the Wilson Hills, between Stanwix and Arthurson Ridges, into Davies Bay. Plotted by Australian cartographers from air photos taken by USN Operation Highjump, 1946-47. Named by ANCA for Ian R. McLeod, geologist and leader of an airborne field party that visited this area with the ANARE (*Magga Dan*), 1961.

McLeod Hill 68°05'S., 66°30'W.

Rounded, ice-covered hill, 1,790 m., which forms a prominent landmark 1 mi. E. of the head of Northeast Gl. in Graham Land. First roughly surveyed in 1936 by the BGLE, and resurveyed by the USAS, 1939-41. It was resurveyed in 1946 by the FIDS and named for Kenneth A. McLeod, FIDS meteorological observer who, during July-December 1947, occupied with a member of the RARE the plateau meteorological station 1 mi. E. of this hill.

GEOGRAPHIC NAMES OF THE ANTARCTIC

McLeod Massif 70°46'S., 68°00'E.

A large rock massif just S. of Manning Massif in the E. part of Aramis Range, Prince Charles Mountains. Plotted from air photographs. First visited by the ANARE Prince Charles Mtns. survey in 1969. Named by ANCA for I.R. McLeod, geologist-in-charge of geological field operations during the ANARE Prince Charles Mtns. surveys of 1969 and 1970.

McLeod Nunataks 67°29'S., 52°42'E.

Isolated group of nunataks 35 mi. SE. of the Tula Mtns. in Enderby Land. Photographed in 1956 by ANARE aircraft. First visited in December 1958 by ANARE dog-sledge party with position fixed by G. A. Knuckey. Named by ANCA for I. R. McLeod, geologist at Mawson Station in 1958, a member of the dog-sledge party.

McLin Glacier 71°12'S., 163°27'E.

A tributary glacier which flows N. of McKenzie Nunatak into Graveson Glacier, in the Bowers Mountains. The glacier saddles with Carryer Glacier on the W. and is nourished in part by Edlin Névé. Named by the NZGSAE to this area, 1967-68, for Lt. Cdr. Robert D. McLin, USN, pilot of Hercules LC-130 aircraft in Antarctica that season.

McMahon, Mount 70°52'S., 65°09'E.

A mountain about 5 mi. W. of Mt. Bewsher in the Prince Charles Mountains. Plotted from ANARE air photos. Named for R. McMahon, officer in charge at Mawson Station in 1963.

McMahon Glacier 70°45'S., 165°45'E.

Glacier about 18 mi. long in the Anare Mtns., Victoria Land. It drains N. between Buskirk Bluffs and Gregory Bluffs into Nielsen Fjord. Named by ANCA for F. P. McMahon, Logistics Officer with the Australian Antarctic Division, who led a number of expeditions to Macquarie Island and was second-in-charge of several expeditions to Antarctica.

McMahon Islands 67°38'S., 45°58'E.

Two low, peaked, rocky islands, 0.5 mi. N. of the Thala Hills, Enderby Land. Plotted from ANARE air photos taken in 1956 and visited by the ANARE (*Thala Dan*) in February, 1961. Named by ANCA for F. P. McMahon, Supply Officer, Antarctic Division, Melbourne, and second-in-command of the ANARE (*Thala Dan*), 1960-61.

McMahon Rock: see MacMahon Rock 54°18'S., 36°26'W.

McMorrin Glacier 67°59'S., 67°10'W.

A glacier flowing W. from Mt. Metcalfe to Marguerite Bay in Graham Land. Named by UK-APC for Ian

McMorrin, BAS general assistant at Stonington I., 1961-63, who helped survey this area in 1962.

McMullin Island 66°17'S., 110°31'E.

Rocky island, 0.3 mi. long, lying between Shirley and Kilby Islands in the S. part of the entrance of Newcomb Bay, in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for John P. McMullin, air crewman with USN Op. Wml. which established astronomical control in the area in January 1948.

McMurdo Ice Shelf 78°00'S., 166°30'E.

That portion of the Ross Ice Shelf bounded by McMurdo Sound and Ross Island on the north and Minna Bluff on the south. Studies show this feature has characteristics quite distinct from the Ross Ice Shelf and merits individual naming. A. J. Heine, who made investigations in 1962-63, suggested the name for the ice shelf bounded by Ross Island, Brown Peninsula, Black Island and White Island. US-ACAN has extended the application of this name to include the contiguous ice shelf southward to Minna Bluff.

McMurdo Sound 77°30'S., 165°00'E.

A sound about 35 mi. long and wide, lying at the junction of the Ross Sea and Ross Ice Shelf between Ross Island and Victoria Land. Discovered by Capt. James Clark Ross in February 1841 and named for Lt. Archibald McMurdo of the *Terror*.

McMurdo Strait: see McMurdo Sound 77°30'S., 165°00'E.

McNab, Cape 66°56'S., 163°14'E.

A cape (350 m.) which forms the S. end of Buckle Island in the Balleny Islands. Named for John McNab, 2d mate of the schooner *Eliza Scott*, who made a sketch of the Balleny Islands when they were discovered by John Balleny in 1839.

McNair Nunatak 67°52'S., 63°23'E.

Small, clearly defined rock exposure, situated 12 mi. E. of the central part of Masson Range and 5 mi. SSE. of Russell Nunatak. Seen first by R. Dovers during the ANARE southern journey of 1954. Named by ANCA for Richard McNair, cook at Mawson Station, 1955.

McNally Peak 86°35'S., 153°24'W.

A peak 2,570 m., standing 3.5 mi. W. of Mt. Farley, near the SE. side of Holdsworth Gl., in the Queen Maud Mountains. Named by US-ACAN for Cdr. Joseph J. McNally, USN, supply officer at McMurdo Station, winter 1959; on the staff of the Commander, U. S. Naval Support Force, Antarctica, during USN Op. DFrz. 1967.

GEOGRAPHIC NAMES OF THE ANTARCTIC

McNamara Island 72°34'S., 93°12'W.

A mainly ice-covered island, 6 mi. long, which is partly within the N. edge of Abbot Ice Shelf, about 20 mi. E. of Dustin Island. Disc. by R. Adm. Byrd and members of the USAS on flights from the *Bear*, Feb. 27, 1940. Named by Byrd for John McNamara, boatswain on the *Jacob Ruppert* of the ByrdAE, 1933-35.

McNaughton, Mount 85°58'S., 128°12'W.

A large mountain rising over 3,000 m., standing 2 mi. S. of Haworth Mesa in western Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for John T. McNaughton, Asst. Sec. of Defense for International Security Affairs, a member of the Antarctic Policy Group from 1965 until his death in 1967.

McNaughton Ridges 67°32'S., 50°27'E.

A group of ridges 12 mi. NE. of Simpson Peak in the Scott Mtns., Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for I. L. K. McNaughton, physicist at Mawson Station in 1961.

McNeile Glacier 63°54'S., 59°26'W.

Glacier flowing northward to the SE. side of Almond Pt. where it enters Charcot Bay, on the W. side of Graham Land. Charted in 1948 by the FIDS and named for S. St. C. McNeile, surveyor at the FIDS Hope Bay base in 1948-49.

McNeish Island 54°09'S., 37°28'W.

The larger of two islands lying at the E. side of Cheapman Bay on the S. side of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Harry McNeish (1886-1930), carpenter on the Br. exp. under Shackleton, 1914-16. McNeish accompanied Shackleton in the *James Caird* from Elephant I. to King Haakon Bay, South Georgia.

McCormick, Cape: see McCormick, Cape 71°50'S., 170°58'E.

McPherson Crags 54°29'S., 37°04'W.

A group of prominent crags rising to 460 m. in central Annenkov Island, South Georgia. Named by the UK-APC after Miss Ray McPherson (1916-75), clerical officer with the BAS, 1967-75.

McPherson Peak 78°32'S., 84°42'W.

A peak (2,200 m.) located at the W. side of the head of Remington Gl., in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for William C. McPherson, Jr., Navy radioman at the South Pole Station in 1957.

McSaveney Spur 77°17'S., 160°35'E.

A prominent rock spur 2 mi. NE. of Mt. Bastion in the Willett Range of Victoria Land. The spur descends NE. from the plateau level toward the NW. flank of Webb Glacier. Named by US-ACAN for Maurice J. McSaveney and Eileen R. McSaveney, husband and wife geologists who made investigations of Meserve Glacier and the Wright Valley area, he in 1968-69, 1972-73 and 1973-74; she in 1969-70 and 1972-73.

McSweeney Point 82°49'S., 166°40'E.

A sharp rock point 3 mi. E. of the terminus of Davidson Gl., overlooking the Ross Ice Shelf. Mapped by the USGS from tellurometer surveys (1961-62) and Navy air photos (1960). Named by US-ACAN for Lt. R. H. McSweeney, USN, Commanding Officer of the USS *Tombigbee* during USN Op. DFrz. 1963.

McVitie, Cape: see Hartree, Cape 60°48'S., 44°44'W.

McWhinnie Peak 77°16'S., 162°14'E.

A peak 2 mi. NE. of Mt. Harker in Saint Johns Range, Victoria Land. Named by US-ACAN for Mary A. McWhinnie, USARP biologist who wintered-over at McMurdo Station in 1974. She worked on several Antarctic cruises in USNS *Ellanin* between 1962 and 1972.

Meade Islands 62°27'S., 60°05'W.

Group of small islands and rocks lying in the N. entrance to McFarlane Strait, in the South Shetland Islands. Charted and named in 1935 by DI personnel on the *Discovery II*.

Meads Peak 83°45'S., 57°08'W.

A peak, 1,165 m., standing 0.5 mi. off the NW. end of Hudson Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Edward C. Meads, construction driver at Ellsworth Station, winter 1958.

Meander Glacier 73°16'S., 166°55'E.

A large meandering tributary to the Mariner Glacier in Victoria Land. The glacier emerges in the vicinity of Mt. Supernal and Hobbie Ridge and drains generally eastward for 30 mi. through the Mountaineer Range to join Mariner Glacier just E. of Engberg Bluff. The descriptive name was given by the NZGSAE, 1962-63.

Meares Cliff 71°12'S., 168°25'E.

An angular coastal cliff that rises to 600 m., located 5.5 mi. WNW. of Nelson Cliff along the N. coast of Victoria Land. First charted by the Northern Party, led by Campbell, of the BrAE, 1910-13. Named by Camp-

GEOGRAPHIC NAMES OF THE ANTARCTIC

bell for Cecil H. Meares who had charge of the dogs on this expedition.

Mechanics Bay 53°01'S., 73°31'E.

A bay, 1 mi. wide, lying immediately E. of Saddle Pt. on the N. coast of Heard Island. Named by American sealers after the schooner *Mechanic*, a tender to the *Corinthian* in Capt. Erasmus Darwin Rogers' sealing fleet which landed at Heard I. in 1855.

Mechnikova, Gora: see Mechnikov Peak 71°37'S., 11°28'E.

Mechnikov Peak 71°37'S., 11°28'E.

Prominent peak, 2,365 m., at the base of the spur separating Schüssel and Grautskåla Cirques in the northern Humboldt Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Russian geographer L. I. Mechnikov, 1838-88.

Medea Dome 66°11'S., 62°03'W.

Snow dome, 350 m., marking the E. end of Philippi Rise on the E. coast of Graham Land. Surveyed by the FIDS in 1953. Named in 1956 by the UK-APC in association with Jason Peninsula; Medea helped Jason to obtain the golden fleece and later became his wife.

Medhalsen Saddle 72°09'S., 3°10'E.

An ice saddle just S. of Risemedet Mtn. in the Gjelsvik Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Medhalsen (the landmark neck).

Medhovden Bluff 72°01'S., 3°18'E.

A high ice-covered bluff with a steep, eastern rock face, forming the NE. end of Risemedet Mtn. in the Gjelsvik Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Medhovden (the landmark bluff).

Median Snowfield 83°30'S., 52°30'W.

A large snowfield in the Pensacola Mtns. between Torbert Escarpment, in the Neptune Range, and the southern part of the Forrestal Range. Mapped by USGS from surveys and USN air photos, 1956-66. This name given by US-ACAN reflects the position of the feature between the Neptune and Forrestal Ranges.

Medina, Mount 68°27'S., 66°15'W.

A prominent ice-covered mountain (1,845 m.) which rises from the NE. part of Hadley Upland and over-

looks the head of Gibbs Glacier in southern Graham Land. Photographed by RARE in Nov. 1947 (trimetrogon air photography). Surveyed by FIDS, 1958. Named by UK-APC after Pedro de Medina (1493-1567), Spanish Cosmographer Royal, who wrote *Arte de Navegar* (Valladolid, 1545), an important manual of navigation.

Medina Peaks 85°36'S., 155°54'W.

Rugged, mainly ice-free peaks surmounting a ridge 15 mi. long, extending N. along the E. side of Goodale Gl. to the edge of the Ross Ice Shelf. Portions of the peaks were first seen and roughly mapped by the ByrdAE, 1928-30. Named by US-ACAN for Guillermo Medina, Technical Director of the U.S. Navy Hydrographic Office, 1954-60, and of the Naval Oceanographic Office, 1960-64.

Medley Rocks 62°58'S., 56°01'W.

Group of reefs and rocks lying close off the NE. side of D'Urville I., in the Joinville Island group. Surveyed by the FIDS in 1953-54 and named in 1956. The name arose because of the medley of reefs and rocks in this area.

Medmullen Spurs 72°01'S., 3°08'E.

A group of rock spurs extending from the N. side of Risemedet Mtn., in the Gjelsvik Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Medmullen (the landmark snout).

Medusa Pool 57°04'S., 26°42'W.

A tidal lagoon which occupies the W. side of the central lowlands of Candlemas I., South Sandwich Islands. The name, given by UK-APC in 1971, is associated in classical mythology with the geomorphologically similar Gorgon Pool, nearby.

Medvecky Peaks 70°34'S., 67°38'E.

A group of peaks rising from the NW. part of Loewe Massif, in the E. part of Aramis Range, Prince Charles Mountains. Plotted from ANARE air photographs. Named by ANCA for A. Medvecky, geologist with the ANARE Prince Charles Mtns. survey in 1969.

Meek Channel 65°15'S., 64°15'W.

A narrow channel separating Galindez Island from Grotto Island and Corner Island in the Argentine Islands, Wilhelm Archipelago. Charted in 1935 by the BGLE under Rymill, and named for William McC. Meek, marine architect and surveyor, who was of assistance in preparing the expedition ship *Penola* for the voyage.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Meeks, Mount 86°13'S., 148°51'W.

A mountain, 2,470 m., surmounting the rocky divide between the Griffith and Howe Glaciers, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-63. Named by US-ACAN for Lt. Harman T. Meeks of USN Squadron VX-6, navigator on aircraft during Operation Deep Freeze 1966 and 1967.

Mefford Knoll 76°01'S., 136°16'W.

A rocky knoll or ledge on the lower W. slopes of Mt. Berlin massif, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Michael Mefford, a member of the USARP team that studied ice sheet dynamics in the area NE. of Byrd Station, 1971-72.

Meffell: see Griffiths, Mount 66°29'S., 54°03'E.

Meffellbreen: see Mefjell Glacier 71°58'S., 25°00'E.

Mefjell Glacier 71°58'S., 25°00'E.

Glacier, 5 mi. long, flowing NW. into Gjøl Glacier between Menipa Peak and Mefjell Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Mefjellbreen (the middle mountain glacier).

Mefjell Mountain 72°05'S., 25°03'E.

Large mountain rising to 3,080 m., standing 5 mi. W. of Mt. Bergersen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Mefjell (middle mountain) by the Norwegians because of its central location in the mountain group.

Megalestris Hill 65°11'S., 64°10'W.

Rocky hill, 35 m., in the S. part of Petermann I. in the Wilhelm Archipelago. First charted and named by the FrAE, 1908-10, under Charcot. Megalestris is an obsolete generic name for the South Polar skua.

Megaptera Island: see Huemul Island 63°40'S., 60°50'W.

Megaw Island 66°55'S., 67°36'W.

The easternmost of the Bennett Islands in Hanusse Bay. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for Helen Dick Megaw, British physicist who in 1934 made accurate measurements of the cell dimensions of ice.

Mehaugen Hill 71°44'S., 25°33'E.

The central hill in the group at the E. side of Kamp Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Mehaugen (the middle hill) by the Norwegians.

Meholmane: see Jocelyn Islands 67°35'S., 62°53'E.

Meholmen Island 68°58'S., 39°32'E.

A small island lying midway between Ongul Island and Utholmen Island in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Meholmen (the middle island).

Meier, Cape: see Meier Point 60°38'S., 45°54'W.

Meier Peak 71°51'S., 168°40'E.

Peak (3,450 m.) rising at the S. side of the head of Ironside Gl., 4 mi. SSW. of Mt. Minto, in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Cdr. Miron D. Meier, USNR, helicopter pilot with Squadron VX-6 during Operation Deep Freeze 1967 and 1968.

Meier Point 60°38'S., 45°54'W.

Point forming the W. side of the entrance to Norway Bight on the S. side of Coronation I., in the South Orkney Islands. Named on a chart by Capt. Petter Sørllø, Norwegian whaler who made a running survey of the South Orkney Is. in 1912-13.

Meier Valley 67°08'S., 67°24'W.

A valley close E. of Mount St. Louis on Arrowsmith Pen. in Graham Land. Mapped from air photos taken by FIDASE, 1956-57. Named by UK-APC for Mark F. Meier, American geologist who made the first detailed study of strain all over the surface of a glacier, in 1952.

Meiklejohn Glacier 70°33'S., 67°44'W.

Glacier, 12 mi. long and 4 mi. wide, flowing SW. from the Dyer Plateau of Palmer Land to George VI Sound, immediately S. of Moore Point. In its lower reaches the S. side of this glacier merges with Millett Glacier. First surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Ian F. Meiklejohn, radio operator of the BGLE, 1934-37.

Meinardus Glacier 73°22'S., 61°55'W.

Extensive glacier flowing in an ENE. direction to a point immediately E. of Mt. Barkow, where it is joined from the NW. by Haines Gl., and then E. to enter

GEOGRAPHIC NAMES OF THE ANTARCTIC

New Bedford Inlet close W. of Court Nunatak, on the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Wilhelm Meinardus, German meteorologist and climatologist and author of many publications including the meteorological results of the GerAE under Drygalski, 1901-3.

Meister, Mount 74°14'S., 162°47'E.

A mountain, 2,520 m., on the W. side of Priestley Gl., surmounting the N. end of Nash Ridge of the Eisenhower Range, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Laurent J. Meister, geologist at McMurdo Station, 1965-66 season.

Mekammen: see Central Masson Range 67°50'S., 62°52'E.

Mekammen Crest: see Central Masson Range 67°50'S., 62°52'E.

Meknattane Nunataks 69°48'S., 75°12'E.

A cluster of rock outcrops on the E. side of Polarforschung Glacier where it flows to Publications Ice Shelf. The feature consists of a massive ridge with broken outcrops to the south and east. Mapped from air photos by the Lars Christensen Exp. (1936) and named Meknattane (the middle crags). Also photographed by USN Operation Highjump (1946-47). The geology of the feature was investigated by I.R. McLeod, geologist with the ANARE Prince Charles Mtns. survey party in Jan. 1969.

Melania, Mount 78°07'S., 166°08'E.

A prominent rounded hill, 330 m., at the N. end of Black I., in the Ross Archipelago. It was first climbed by Ferrar and Bernacchi of the BrNAE, 1901-4. The name is a Greek word connoting black, an appropriate name for a feature on Black Island. Named by the NZGSAE, 1958-59.

Melba Peninsula 66°31'S., 98°18'E.

Broad, ice-covered peninsula between Reid Gl. and the Bay of Winds, fronting on Shackleton Ice Shelf. Disc. by the AAE under Mawson, 1911-14, who named it for Dame Nellie Melba, of Melbourne, a patron of the expedition.

Melbert Rocks 78°02'S., 155°07'W.

Rock outcrops close NW. of Mt. Paterson in the Rockefeller Mtns., on Edward VII Peninsula. Discovered by the ByrdAE, 1928-30. Named by US-ACAN

for George W. Melbert, UTCN, USN, Utilitiesman at Byrd Station, 1966.

Melbourne, Mount 74°21'S., 164°42'E.

A massive volcanic cone of great beauty, 2,730 m., surmounting the projection of the coast between Wood Bay and Terra Nova Bay, in Victoria Land. Discovered in 1841 by Capt. James Clark Ross, RN, who named it for Lord Melbourne, British Prime Minister when the expedition was being planned.

Melbourne Bluff 53°02'S., 73°32'E.

Rocky bluff, 385 m., standing 1.3 mi. S. of Cape Bidlingmaier and protruding above the ice-covered slopes at the N. side of Heard Island. The feature was surveyed in 1948 by the ANARE and so named by them because it trends roughly ENE. in the general direction of Melbourne, Australia, the home headquarters of the expedition.

Melbourne Glacier: see Campbell Glacier 74°25'S., 164°22'E.

Melchior, Ile: see Melchior Islands 64°19'S., 62°57'W.

Melchior, Puerto: see Melchior Harbor 64°19'S., 62°59'W.

Melchior Archipelago: see Melchior Islands 64°19'S., 62°57'W.

Melchior Harbor 64°19'S., 62°59'W.

Small harbor in the Melchior Is., Palmer Arch., formed by the semi-circular arrangement of Delta, Alpha, Beta, Kappa and Gamma Islands. The name, derived from the name of the island group, was probably given by DI personnel who roughly surveyed the harbor in 1927. The harbor was surveyed by Argentine expeditions in 1942, 1943 and 1948.

Melchior Islands 64°19'S., 62°57'W.

Group of many low, ice-covered islands lying near the center of Dallmann Bay in the Palmer Archipelago. First seen but left unnamed by a Ger. exp. under Dallmann, 1873-74. Resighted and roughly charted by the FrAE under Charcot, 1903-5. Charcot named what he believed to be the large easternmost island in the group "Ile Melchior" after Vice Admiral Melchior of the French Navy, but later surveys proved Charcot's "Ile Melchior" to be two islands, now called Eta Island and Omega Island. The name Melchior Islands has since become established for the whole island group now described, of which Eta Island and Omega Island form the eastern part. The group was roughly surveyed in 1927 by DI personnel in the *Discovery*, and was re-surveyed by Argentine expeditions in 1942 and 1943, and again in 1948.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Melchoir Archipelago: see Melchior Islands 64°19'S., 62°57'W.

Melfjellet 68°21'S., 59°12'E.

A prominent rock outcrop in the eastern part of the Hansen Mtns., about 2 mi. SE. of See Nunatak. Mapped and named by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37.

Mellanby, Mount: see Rouge, Mount 65°37'S., 63°42'W.

Mellebyuten: see Melleby Peak 73°16'S., 1°15'W.

Melleby Peak 73°16'S., 1°15'W.

A peak marking the eastern end of the Neumayer Cliffs in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Peter Melleby, who was in charge of sledge dogs with the NBSAE.

Mellizos, Pináculos: see Twin Pinnacles 62°08'S., 58°06'W.

Mellona Rocks 62°18'S., 59°30'W.

Group of rocks lying 2 mi. NE. of Newell Pt., Robert I., in the South Shetland Islands. Named by the UK-APC in 1961 after the British sealing vessel *Mellona* (Captain Johnson) from Newcastle, which visited the South Shetland Islands in 1821-22.

Mello Nunatak 72°21'S., 165°03'E.

An isolated nunatak standing 7 mi. E. of Mt. Staley of the Freyberg Mtns., in the NE. part of Evans Névé. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Gerald L. Mello, chief engineman, USN, petty officer in charge of Hallett Station, summer 1966-67, and member of the McMurdo Station winter party of 1967.

Mellor Glacier 73°30'S., 66°30'E.

Tributary glacier, flowing NNE. between Mounts Newton and Maguire and coalescing with Collins Gl. just prior to junction with Lambert Gl. at Patrick Point, in the Prince Charles Mountains. Mapped from air photos taken by ANARE in 1956. Named by ANCA for Malcolm Mellor, glaciologist at Mawson Station, 1957.

Mel Moraine 71°53'S., 9°18'E.

A moraine at the N. end of the Gagarin Mtns., in the Orvin Mtns. of Queen Maud Land. Mapped by Nor. cartographers from air photos and surveys by NorAE, 1956-60, and named Mel (meal).

Melrose Peak 82°19'S., 160°14'E.

A peak 4 mi. S. of Peters Peak in the Holyoake Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Robert L. Melrose, USARP meteorologist at Hallett Station, 1963-64.

Melsom Rocks 60°31'S., 46°10'W.

Group of isolated rocks lying 2 mi. N. of Despair Rocks and 7 mi. W. of Penguin Pt., the NW. end of Coronation I., in the South Orkney Islands. First seen and rudely charted by Capt. George Powell and Capt. Nathaniel Palmer during their joint cruise in December 1821. Named for Capt. H. G. Melsom, manager of the Thule Whaling Co., by Capt. Petter Sørille, who conducted a running survey of the South Orkney Is. in 1912-13.

Melville, Cape 62°02'S., 57°37'W.

Cape forming the E. extremity of King George I., in the South Shetland Islands. This name was applied to the NE. cape of King George I. on some early charts, but in recent years has been consistently used for the E. cape. The name dates back to 1820 when it was used by Edward Bransfield, Master, RN, during his explorations of the South Shetland Islands.

Melville, Mont: see Melville Peak 62°01'S., 57°41'W.

Melville Glacier 65°28'S., 62°10'W.

A glacier, 12 mi. long, between Mapple Glacier and Pequod Glacier on the E. coast of Graham Land. It flows into Exasperation Inlet southward of Mt. Ahab. Surveyed by FIDS in 1947 and 1955. Named by UK-APC after Herman Melville (1819-91), author of *Moby Dick*. Other features in the area are named after characters in the story.

Melville Peak 62°01'S., 57°41'W.

Prominent peak surmounting Cape Melville, the E. cape of King George I., in the South Shetland Islands. This peak, which was probably known to early sealers in the area, was charted by the FrAE under Charcot, 1908-10. It takes its name from nearby Cape Melville.

Melville Point 74°35'S., 135°31'W.

A point marking the E. side of the entrance to Siniff Bay on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Capt. Frederick C. Melville, Master of the *City of New York* in voyages to the Bay of Whales during the ByrdAE, 1928-30.

Melville's Island: see Laurie Island 60°44'S., 44°37'W.

Melvold Nunataks 72°51'S., 74°09'E.

A group of small nunataks located 14 mi. W. of Mt. Harding in the Grove Mountains. Mapped by

GEOGRAPHIC NAMES OF THE ANTARCTIC

ANARE from air photos, 1956-60. Named by ANCA for C. D. Melvold, radio officer at Mawson Station, 1962.

Mendeleyeva, Lednik: see Mendeleyev Glacier 71°55'S., 14°33'E.

Mendeleyev Glacier 71°55'S., 14°33'E.

Glacier, 10 mi. long, draining northeastward through the northern outcrops of the Payer Mountains, in Queen Maud Land. Plotted from air photos by the SovAE, 1960-61. Named by USSR in 1966 for Dmitri I. Mendeleyev (1834-1907), Russian chemist.

Mendelssohn Inlet 71°15'S., 73°00'W.

Ice-filled inlet, 25 mi. long and 9 mi wide, which is northeasternmost of three inlets indenting the N. side of Beethoven Pen. on Alexander Island. First seen from the air and roughly mapped by the USAS, 1939-41. Resighted and phot. from the air by the RARE, 1947-48. Remapped from the RARE photos by Searle of the FIDS in 1960. Named by the UK-APC for Felix Mendelssohn (1809-1847), German composer.

Mendenhall Peak 85°24'S., 87°19'W.

A peak (2,130 m.) 0.5 mi. W. of Mt. Wrather in the E. part of the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960-61. Named for Walter C. Mendenhall, fifth director of the U.S. Geological Survey, 1931-43.

Mendori Island 69°00'S., 39°32'E.

The northernmost in a group of three small islands which lie 0.5 mi. northwest of the strait separating Ongul Island and East Ongul Island. Mapped from surveys and air photos by JARE, 1957-62. The name "Mendori-jima" (hen island) was given by JARE Headquarters in 1972 in association with Ondori Island, which lies 0.2 mi. northward.

Menelaus Ridge 64°35'S., 63°40'W.

Snow-covered ridge having four small summits, 1,370 m., between Mt. Agamemnon and Mt. Helen in the Achaean Range of central Anvers I., in the Palmer Archipelago. Surveyed in 1955 by the FIDS and named by the UK-APC for Menelaus, husband of Helen and younger brother of Agamemnon in Homer's *Iliad*.

Menhir, The 60°39'S., 45°12'W.

Isolated pinnacle rock, 395 m., overlooking the W. side of Gibbon Bay in eastern Coronation I., South Orkney Islands. Surveyed by the FIDS in 1956-58 and named

by the UK-APC in 1959. A menhir is an upright monumental stone.

Menier, Islotes: see Screen Islands 65°01'S., 63°43'W.

Ménier Island 64°59'S., 63°37'W.

Island, largest in a small island group lying in the mouth of Flandres Bay, 4 mi. NE. of Cape Renard, off the W. coast of Graham Land. The island group was disc. by the FrAE under Charcot, 1903-5, who gave them the name "Iles Ménier." The name Ménier is here applied to the largest of these islands.

Menipa: see Menipa Peak 71°56'S., 25°10'E.

Menipa Mountain: see Menipa Peak 71°56'S., 25°10'E.

Menipa Peak 71°56'S., 25°10'E.

Peak, 2,590 m., standing 5 mi. N. of Mefjell Mtn. in the central part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Menipa (the middle peak) by the Norwegians.

Mensa Bay: see Table Bay 61°09'S., 55°24'W.

Mentzel, Mount 71°22'S., 13°40'E.

A peak (2,330 m.) standing 6 mi. E. of Mt. Zimmermann in the Gruber Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for the president of the Deutsche Forschungsgemeinschaft (German Research Society).

Menzel, Cape 72°00'S., 95°43'W.

A bold rock cape marking the N. extremity of otherwise ice-covered Lofgren Pen., in the NE. part of Thurston Island. Disc. on helicopter flights from the USS *Burton Island* and *Glacier* by personnel of USN Bellingshausen Sea Exp. in February 1960. Named by US-ACAN for Reinhard W. Menzel, geomagnetist-seismologist with the Eights Station winter party, 1965.

Menzies, Mount 73°30'S., 61°50'E.

The culminating peak (3,355 m.) on the large massif between Mounts Mather and Bayliss, standing on the S. side of Fisher Gl. in the Prince Charles Mountains. Sighted by Flying Officer J. Seaton from ANARE aircraft in 1956. Mapped by an ANARE party under K. B. Mather in 1957-58. Named by ANCA for Robert Gordon Menzies, Prime Minister of Australia.

Meoto Rocks 68°07'S., 42°36'E.

Two large rocks lying just W. of Cape Hinode, off the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Meoto-iwa (husband and wife rocks).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Meöya: see Alphard Island 66°58'S., 57°25'E.

Mercanton Heights 67°30'S., 67°26'W.

Heights standing between Bigourdan Fjord and Nye Gl. in the SW. part of Arrowsmith Pen. in Graham Land. Mapped by FIDS from surveys and air photos, 1948-59. Named by UK-APC for Paul-Louis Mercanton, Swiss glaciologist who for many years was Secretary of the International Commission on Snow and Ice.

Mercator Ice Piedmont 68°37'S., 65°30'W.

A gently-sloping ice piedmont at the head of Mobiloil Inlet, formed by the confluence of the Gibbs, Lambers, Cole and Weyerhaeuser Glaciers in eastern Graham Land. The feature was first photographed from the air by Lincoln Ellsworth in Nov. 1935, and was plotted from these photos by W.L.G. Joerg as the lower end of a 'major valley depression' along the coast. First seen from the ground by F. Ronne and C.R. Eklund of USAS, 1939-41, which also obtained air photos. Surveyed by the FIDS in Dec. 1958. Named by UK-APC after Gerardus Mercator (1512-94), Flemish mathematician and geographer, originator of the map projection which bears his name, 1568.

Mercer, Mount 70°13'S., 65°39'E.

A mountain 2 mi. W. of Farley Massif in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for B. Mercer, weather observer at Davis Station in 1961.

Mercer Bay 54°16'S., 36°40'W.

Small bay marked by Geikie Gl. at its head, at the SW. end of Cumberland West Bay, South Georgia. The bay appears on a sketch map of Cumberland Bay by Lt. S. A. Duse of the SwedAE, 1901-4. The name is first used on a chart based upon survey work by DI personnel in 1926-30. Probably named for Lt. Cdr. G. M. Mercer, RNR, captain of the DI research ship *William Scoresby*, which engaged in whale marking and oceanographic work off South Georgia in 1926-27.

Mercer Ridge 84°50'S., 113°45'W.

A prominent, partly ice-free ridge that forms the SW. end of Mt. Schopf in Ohio Range, Horlick Mountains. Named by US-ACAN for John H. Mercer, glacial geologist, a member of the Ohio State Univ. expedition to the Horlick Mountains in 1960-61. He returned to work in the Horlick Mountains in 1964-65.

Mercik Peak 85°05'S., 169°06'W.

A conspicuous peak, 1,425 m., located 7 mi. NE. of Mt. Wells, on the ridge descending from the latter, in the Prince Olav Mountains. Named by US-ACAN for James E. Mercik, USARP aurora scientist at South Pole Station, winter 1965.

Mercury Bluff 62°29'S., 60°49'W.

Perpendicular bluff lying SW. of Cape Shirreff and Scarborough Castle on the N. coast of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 after the sealer *Mercury* (Captain Wetherell) from London, which visited the South Shetland Islands in 1820-21, and anchored in nearby Shirreff Cove.

Mercury Glacier 71°34'S., 68°14'W.

Glacier on the E. coast of Alexander I., 5 mi. long and 2 mi. wide, flowing E. into George VI Sound between Waitabit Cliffs and Keystone Cliffs. Probably first seen by Lincoln Ellsworth, who flew near it and phot. segments of this coast on Nov. 23, 1935. Named by the UK-APC for the planet Mercury following rough surveys from George VI Sound by the FIDS in 1948 and 1949. Mapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960.

Meredith, Mount 71°12'S., 67°45'E.

A fairly massive, almost flat-topped mountain standing 10 mi. N. of Fisher Massif in the Prince Charles Mountains. Photographed from ANARE aircraft in 1956 and 1957. Named by ANCA for Sgt. N. Meredith, RAAF, engine fitter at Mawson Station in 1957.

Merger Island 70°06'S., 71°13'W.

Ice-covered island 3 mi. long at the entrance to Haydn Inlet, off the W. coast of Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. The name given by the UK-APC is descriptive, the island being almost submerged in the surrounding ice shelf.

Mericle Rock 73°39'S., 163°15'E.

A nunatak in the middle of Campbell Gl., approximately 9 mi. from its head, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for David L. Mericle, USN, electronics technician at McMurdo Station, 1967.

Meridian Glacier 68°45'S., 66°37'W.

A broad glacier, 9 mi. long, which flows S. along the W. side of Godfrey Upland and joins the Clarke Glacier between Behaim Peak and Elton Hill, in southern Graham Land. F. Ronne and C.R. Eklund of USAS travelled along this glacier in Jan. 1941. It was photographed from the air by RARE in Nov. 1947, and it was surveyed by FIDS in Dec. 1958. So named by UK-APC because the glacier flows from N. to S. along the meridian.

Merrell Valley 76°50'S., 160°50'E.

A long, narrow ice-free valley in the Convoy Range, running N. from its head immediately E. of Mt. Gunn

GEOGRAPHIC NAMES OF THE ANTARCTIC

into the Greenville Valley. Mapped in 1957 by the N.Z. Northern Survey Party of the CTAE, 1956-58. Named by them after the USNS *Private Joseph F. Merrell*, a freighter in the main American convoy into McMurdo Sound in the 1956-57 season.

Merrem Peak 76°03'S., 136°03'W.

A prominent peak of 3,000 m. that is the secondary summit and is located 2 mi. W. of Berlin Crater on the Mount Berlin massif, in Marie Byrd Land. The peak was discovered and charted by the Pacific Coast Survey Party, led by Leonard Berlin, of the U.S. Antarctic Service in December 1940. Subsequently mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Frank H. Merrem, Jr., ionospheric physicist and Scientific Leader at South Pole Station, 1970.

Merrick, Mount 67°42'S., 49°18'E.

Mountain, 1,120 m., standing 3 mi. W. of Mt. Humble in the Raggatt Mountains. Plotted from air photos taken by ANARE in 1956 and 1957. Named by ANCA for W. R. Merrick, geophysicist at Mawson Station in 1960.

Merrick Glacier 80°13'S., 158°52'E.

A steep tributary glacier just east of Sennet Glacier in Britannia Range, descending southwestward to enter Byrd Glacier at the west end of Horney Bluff. Named by US-ACAN, in association with nearby Byrd Glacier, for the USS *Merrick*, cargo ship (Central Group of Task Force 68) of USN Op. Hjp., 1946-47, led by Admiral Byrd.

Merrick Mountains 75°06'S., 72°04'W.

A cluster of mountains, 8 mi. long, standing 7 mi. NE. of the Behrendt Mtns. in eastern Ellsworth Land. Discovered and photographed from the air by the RARE, 1947-48, under Finn Ronne. Named by US-ACAN for Conrad G. Merrick, USGS topographic engineer with the Antarctic Peninsula Traverse Party, 1961-62, who participated in the survey of these mountains.

Merritt Island 66°28'S., 107°12'E.

A small rocky island lying close to the coast of Antarctica, 13 mi. WNW. of Cape Nutt. Mapped (1955) by G.D. Blodgett from air photos taken by USN Operation Highjump (1947). Named by US-ACAN for Everett L. Merritt, photogrammetrist, Navy Hydrographic Office, who served as surveyor with USN Operation Windmill parties which established astronomical control stations along Wilhelm II, Knox, and Budd Coasts (1948).

Mersey Spit 62°05'S., 57°55'W.

A spit on the S. coast of King George I., close N. of Penguin I., in the South Shetland Islands. Charted

and named during 1937 by DI personnel on the *Discovery II*.

Merton Passage 54°14'S., 36°24'W.

Narrow passage between Right Whale Rocks and a small rock 0.1 mi. N. of Barff Pt., at the E. side of the entrance to Cumberland Bay, South Georgia. The name Merton, the former name for Right Whale Rocks, was applied to this passage by DI personnel as a result of surveys during the period 1926-30.

Merton Rocks: see Right Whale Rocks 54°14'S., 36°24'W.

Mertz Glacier 67°30'S., 144°45'E.

A heavily crevassed glacier, about 45 mi. long and averaging 20 mi. wide. It reaches the sea between Cape De la Motte and Cape Hurley where it continues as a large glacier tongue. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Xavier Mertz, a member of the expedition who lost his life, Jan. 7, 1913, on the far-east sledge journey.

Mertz Glacier Tongue 67°10'S., 145°30'E.

A glacier tongue, about 45 mi. long and 25 mi. wide, forming the seaward extension of Mertz Glacier. Discovered and named by the AAE (1911-14) under Douglas Mawson.

Mervyn, Mount 70°31'S., 65°13'E.

A very sharp peak standing S. of the main body of the Porthos Range in the Prince Charles Mtns., about 6 mi. S. of Mt. Kirkby. Sighted in December 1956 by an ANARE southern party led by W. G. Bewsher, and named for Mervyn Christensen, weather observer at Mawson Station in 1956.

Merz Peninsula 72°15'S., 61°05'W.

Irregular, ice-covered peninsula, about 15 mi. long in an E.-W. direction and averaging 25 mi. wide, between Hilton and Violante Inlets on the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Alfred Merz, 1880-1925, noted German oceanographer and original leader of the Ger. exp. in the *Meteor*, 1925-26.

Mesa, Bahía: see Table Bay 61°09'S., 55°24'W.

Mesa, Isla: see Table Island 62°21'S., 59°49'W.

Mesa Range 73°11'S., 162°55'E.

A range of remarkable flat-topped mesas comprising the Sheehan, Pain, Tobin and Gair Mesas, situated at

GEOGRAPHIC NAMES OF THE ANTARCTIC

the head of the Rennick Glacier in Victoria Land. Given this descriptive name by the northern party of NZGSAE, 1962-63.

Meserve Glacier 77°31'S., 162°17'E.

A hanging glacier on the south wall of Wright Valley, Victoria Land, between the Bartley and Hart Glaciers. Named by U.S. geologist Robert Nichols for William Meserve, geological assistant to Nichols at nearby Marble Point in the 1959-60 field season.

Mesteinene: see Wigg Islands 67°32'S., 62°34'E.

Mesyatseva, Gora: see Gårneevkalven Nunatak 72°00'S., 14°47'E.

Metavolcanic Mountain 86°13'S., 126°15'W.

A large flat-topped mountain (2,480 m.) located 5 mi. N. of Hatcher Bluffs on the E. side of Reedy Glacier. Composed of dark metavolcanic rock, this mountain contrasts with lighter-colored granites elsewhere along the glacier. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960-64. The name was suggested by geologist J. H. Mercer, Institute of Polar Studies, Ohio State University, following field work in the vicinity.

Metcalf, Mount 67°59'S., 66°57'W.

A mountain at the S. side of the head of McMorrin Gl., 1.5 mi. S. of Mt. Wilcox, in Graham Land. Named by UK-APC for Robert J. Metcalfe, BAS surveyor at Stonington I., 1960-62, who surveyed the area in 1962.

Metchnikoff Point 64°03'S., 62°34'W.

Point forming the W. extremity of Pasteur Pen. in northern Brabant I., in the Palmer Archipelago. First charted by the FrAE, 1903-5, and named by Charcot for Élie Metchnikoff, Russian-born zoologist and bacteriologist, who succeeded Pasteur as director of the Pasteur Institute in Paris.

Meteor, Cape 54°26'S., 3°29'E.

A cape marked by steep cliffs which forms the E. extremity of Bouvetøya. The cape was roughly charted in 1898 by the German expedition under Karl Chun. Named after the *Meteor*, the ship in which the German expedition under Capt. F. Spiess visited Bouvetøya in 1926. The name appears on a British chart based upon a 1930 survey by personnel on the *Discovery II*, but this may reflect an earlier naming.

Methuen Cove 60°46'S., 44°33'W.

Cove between Cape Anderson and Cape Whitson on the S. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for H. Methuen, accountant of the expedition.

Metoppen: see Gap Nunatak 67°54'S., 62°29'E.

Metschel, Mount 78°17'S., 159°00'E.

A prominent ice-free mountain, 1,845 m., standing 4 mi. SE. of Angino Buttress and the Skelton Icefalls. Mapped by the USGS from ground surveys and Navy air photos. Named by US-ACAN for Cdr. John J. Metschel, USN, commander of the icebreaker USS *Staten Island* in the Antarctic and the Arctic in 1962 and 1963. Metschel was killed in the Arctic, Oct. 15, 1963, while engaged in ice reconnaissance in a helicopter from his ship.

Meusnier Point 64°33'S., 61°38'W.

Point within Charlotte Bay, lying 4 mi. SE. of Portal Pt. on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Jean B. M. Meusnier (1754-1793), French military engineer and prophetic designer of the first dirigible airship, in 1785.

Meyer Desert 85°08'S., 166°45'E.

A triangular ice-free area of about 50 square miles at the N. end of the Dominion Range, near the confluence of the Beardmore and Mill Glaciers. Named by NZGSAE (1961-62) for George Meyer of USARP, who was scientific leader at McMurdo Station, 1961, and led a field party into this area, summer 1961-62.

Meyer Hills 79°47'S., 81°06'W.

A small group of hills located between the Enterprise Hills and the head of Constellation Inlet, in the Heritage Range, Ellsworth Mountains. Named by the Univ. of Minnesota Ellsworth Mountains Party, 1962-63, for Harvey J. Meyer, geologist with that party.

Meyer Rock 53°01'S., 72°34'E.

A pinnacle rock 1 mi. NW. of McDonald Island in the McDonald Islands. This feature was charted as Meyers Rock on an 1874 chart by the British *Challenger* expedition, but the form Meyer Rock is now approved. Capt. Johann Meyer of the German ship *La Rochelle* sighted the island group in 1857, not realizing the prior discovery by Captain McDonald in 1854.

Meyers Nunatak 74°54'S., 98°46'W.

A nunatak located 10 mi. ESE. of Mt. Manthe, at the SE. end of the Hudson Mountains. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Herbert Meyers, USARP geomagnetist at Byrd Station, 1960-61.

Meyers Rock: see Meyer Rock 53°01'S., 72°34'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mezzo Buttress 66°03'S., 64°31'W.

Rocky buttress at the head of Barilari Bay just E. of Lawrie Gl., on the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because the face of this buttress is conspicuously divided diagonally, half being composed of black rock and the other half of red rock.

Mhire Spur 79°33'S., 83°50'W.

A spur descending W. from the heights associated with Mt. Sporli to form the S. limit of Larson Valley, in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for chief equipment operator Clifford J. Mhire, USN, responsible for supervising the movement of jet fuel from McMurdo Station to nearby Williams Field during Deep Freeze 1966.

Mica Islands 69°20'S., 68°36'W.

Group of about four mainly ice-covered islands lying 7 mi. W. of Mt. Guernsey and 6 mi. NE. of Cape Jeremy, off the W. coast of Antarctic Peninsula. First seen from the air and photographed by the BGLE in 1936, and later roughly mapped from the photographs. The islands were visited and surveyed from the ground in 1948 by the FIDS, and so named by them because there is mica in the schists which form them.

Micalvi, Punta: see Maurstad Point 65°39'S., 66°05'W.

Michael, Mount 57°48'S., 26°28'W.

Active volcanic mountain, 805 m., surmounting Saunders I. in the South Sandwich Islands. The island was disc. by a Br. exp. under Cook in 1775, but the mountain was presumably first charted in 1820 by a Russ. exp. under Bellingshausen. Recharted in 1930 by DI personnel on the *Discovery II* and named for Michael J. de C. Carey, son of Cdr. W. M. Carey, RN, captain of the *Discovery II* at the time of the survey.

Michailoff's Island: see Cornwallis Island 61°04'S., 54°28'W.

Michelsen Island 60°44'S., 45°02'W.

Small island in the South Orkney Is., joined to the S. end of Powell I. by a narrow isthmus of occasionally submerged boulders. First observed and rudely mapped in 1821 by Capt. George Powell and Capt. Nathaniel Palmer. Named on a map by Capt. Petter Sørllø, Norwegian whaler who made a running survey of the South Orkney Is. in 1912-13.

Michigan Plateau 86°08'S., 133°30'W.

An undulating ice-covered plateau, 30 mi. long, which rises to 3,000 m. at the western side of Reedy Glacier. The northern and eastern sides of the plateau are

marked by the steep Watson Escarpment; the western and southern sides grade gradually to the elevation of the interior ice. Mapped by USGS from ground surveys and U.S. Navy aerial photography, 1960-64. Named by US-ACAN after the University of Michigan at Ann Arbor, Michigan, which has sent numerous research personnel to work in Antarctica.

Mickle Island 77°34'S., 166°13'E.

A very small island 1 mi. SE. of Flagstaff Pt., close off the W. side of Ross Island. Charted and so named by the BrAE led by Shackleton, 1907-9. The name appears to be capricious or whimsical, mickle meaning "great."

Mickler Spur 85°49'S., 130°45'W.

A narrow spur, 4 mi. long, forming the S. wall of Hueneme Gl. in western Wisconsin Range and terminating at Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Raymond R. Mickler, equipment operator, a member of the winter parties at Byrd Station in 1961 and McMurdo Station in 1964.

Midas Island 64°10'S., 61°07'W.

Island lying NW. of Apéndice I. in Hughes Bay, off the W. coast of Graham Land. First seen by the BelgAE under Gerlache in 1898 and described as an island with two summits "like the ears of an ass." The name, given by the UK-APC in 1960, derives from this description; Midas, King of Phrygia, was represented in Greek satyric drama with the ears of an ass.

Midbresrabben Hill 72°44'S., 2°06'W.

An isolated rock hill protruding above the ice between the Penck Trough and Jutulstraumen Glacier, E. of the Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Midbresrabben (the mid-glacier ridge).

Middle Crest: see Central Masson Range 67°50'S., 62°52'E.

Middle Glacier: see Wiggins Glacier 65°14'S., 64°03'W.

Middle Ground Rock 54°08'S., 36°36'W.

Submerged kelp-covered rock lying 1.5 mi. E. of Framnaes Pt., in the middle of the entrance of Stromness Bay, South Georgia. The name appears to be first used on a 1952 British Admiralty chart.

Middle Head 54°16'S., 36°39'W.

A small headland lying at the W. side of the entrance to Mercer Bay at the head of Cumberland West Bay,

GEOGRAPHIC NAMES OF THE ANTARCTIC

South Georgia. The same appears to be first used on a 1929 British Admiralty chart and describes its position at the head of the bay.

Middle Island 61°58'S., 57°38'W.

Island 1.5 mi. S. of Foreland I. and midway along the E. coast of King George I., in the South Shetland Islands. Charted in 1937 by DI personnel on the *Discovery II*, and so named because of its position.

Middle Island: see Day Island 67°15'S., 67°42'W.

Middle Mountain: see Mefjell Mountain 72°05'S., 25°03'E.

Midgley Island 66°20'S., 110°24'E.

Rocky island, 0.8 mi. long, lying immediately S. of Hollin I. in the Windmill Islands. First mapped from air photos taken by USN Op Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Lt. E. W. Midgley, Army Medical Corps observer who assisted USN Op. Wml. parties in establishing astronomical control stations between Wilhelm II Coast and Budd Coast during the 1947-48 season.

Midgley Reefs 66°20'S., 110°22'E.

Several tidal and submerged rocks among the islands lying off the W. side of Midgley Island, in the Windmill Islands. Discovered from small craft from Wilkes Station in 1961. Named by ANCA after Midgley Island.

Midkiff Rock 77°28'S., 145°06'W.

A rock outcrop on the broad ice-covered ridge between Hammond and Swope Glaciers, 6 mi. ESE. of Mt. West, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Frank T. Midkiff, Jr., aviation machinist's mate, USN, helicopter flight crewman during Operation Deep Freeze 1968.

Midnight, Mount 71°56'S., 167°28'E.

A peak nearly 2,000 m. high, standing on the N. side of Tucker Gl., 3.5 mi. W. of Shadow Bluff, in the Admiralty Mountains. Climbed by a geological team of the NZGSAE, 1957-58, in Jan. 1958. Named by them in association with Mt. Shadow, just eastward, and Shadow Bluff.

Midnight Plateau 79°53'S., 156°15'E.

A prominent ice-covered plateau, over 2,200 m., forming the central feature of the Darwin Mountains. It is the only area of snow accumulation in the Darwin Mountains. Discovered by the VUWAE (1962-63) and so named because the feature was visited by expedition members at midnight on December 27, 1962.

Midori, Lake 69°01'S., 39°36'E.

A small lake just NE. of Lake Kamome and 0.3 mi. SE. of Hachinosu Peak on East Ongul Island. Mapped from surveys and air photos by JARE, 1957, and named Midori-ike (green pond).

Midtre Petermannkjeda: see Mittlere Petermann Range 71°30'S., 12°28'E.

Midway Glacier 72°10'S., 166°50'E.

A tributary glacier that flows S. along the W. side of Evans Ridge into Pearl Harbor Glacier, in the Victory Mtns., Victoria Land. At the head, it shares a common snow saddle with Jutland Glacier which flows north. Named by the southern party of NZFMCAE, 1962-63, to continue the series of glaciers named after famous naval battles.

Midway Island Glacier: see Midway Glacier 72°10'S., 166°50'E.

Midzhli, Ostrov: see Midgley Island 66°20'S., 110°24'E.

Miers, Lake 78°06'S., 163°51'E.

A small lake in Miers Valley, lying 1 mi. E. of the snouts of Miers and Adams Glaciers, and filled by meltwater from these glaciers. A stream from the lake flows down the valley in the warmest weather to reach the coast of Victoria Land. Named after Miers Glacier in 1957 by the N.Z. Blue Glacier Party of the CTAE, 1956-58.

Miers Bluff 62°43'S., 60°27'W.

Bluff marking the S. end of Hurd Peninsula which separates False and South Bays on the S. coast of Livingston I., in the South Shetland Islands. The name Elephant Point (q.v.), given by Robert Fildes in 1820-22 to another feature, has been for a number of years applied in error to this bluff. It is now approved as originally intended and a new name has been substituted for the feature here described. Miers Bluff is named for John Miers (1789-1879), English engineer and botanist, who was responsible for the first published chart of the South Shetland Is., based on the work of William Smith.

Miers Glacier 78°05'S., 163°40'E.

A small glacier N. of Terminus Mtn. in Victoria Land, occupying the upper (western) portion of Miers Valley. Mapped and named by the BrAE, 1910-13.

Miers Point: see Miers Bluff 62°43'S., 60°27'W.

Miers Valley 78°06'S., 164°00'E.

A valley just S. of Marshall Valley and W. of Koettlitz Gl., on the coast of Victoria Land. The valley is ice

GEOGRAPHIC NAMES OF THE ANTARCTIC

free except for Miers Glacier in its upper (western) part and Lake Miers near its center. Mapped and named by the BrAE, 1910-13.

Miethe Glacier 64°56'S., 63°06'W.

Glacier 3 miles long, flowing NW. into Gerlache Strait to the S. of Mt. Banck, on the W. coast of Graham Land. The glacier appears on an Argentine Govt. chart of 1952. Named by the UK-APC in 1960 for Adolf Miethe (1862-1927), German chemist who introduced the first panchromatic emulsion for photographic plates in 1903.

Migmatitovaya Rock 71°47'S., 10°38'E.

A rock at the E. end of a spur, lying 3 mi. NE. of Terletskiy Peak in the Shcherbakov Range, Orvin Mtns., Queen Maud Land. Roughly plotted from air photos by the GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Skala Migmatitovaya (migmatite rock) by USSR in 1966.

Miguel, Monte: see Michael, Mount 57°48'S., 26°28'W.

Miharashi Peak 69°00'S., 39°37'E.

A hill 40 m. high, the highest point in the NE. extremity of East Ongul Island. Mapped from surveys and air photos by JARE, 1957, and named Miharashi-iwa (extensive view peak).

Miharasi Peak: see Miharashi Peak 69°00'S., 39°37'E.

Miho, Cape: see Akarui, Cape 68°29'S., 41°23'E.

Mikhaylov, Cape 66°54'S., 118°32'E.

An ice-covered point about 42 mi. E. of Totten Glacier, Wilkes Land. Photographed by USN Operation Highjump in 1947. Plotted on base compilation maps by Gardner Blodgett of the Office of Geography, U.S. Department of the Interior, in 1955. Photographed by the Soviet Antarctic Expedition in 1956. Named after Pavel N. Mikhaylov, artist with the Bellingshausen expedition, 1819-21.

Mikhaylov Island 66°48'S., 85°30'E.

Ice-covered island in the West Ice Shelf, rising to 240 m., 6 mi. SE. of Leskov Island. Disc. by the Soviet exp. of 1956, who named it for Pavel N. Mikhaylov, artist on the Bellingshausen exp., 1819-21.

Mikhaylov Point 56°44'S., 27°12'W.

Small promontory marking the S. extremity of Visokoi I. in the South Sandwich Islands. It was named Low Point by DI personnel following their survey of 1930, but the name has been changed to avoid duplication with Low Point on nearby Vindication Island.

Mikhaylov Point was recommended by the UK-APC in 1953 and is named for Pavel N. Mikhaylov, artist aboard the *Vostok* during the Russ. exp. under Bellingshausen, 1819-21. Mikhaylov made an excellent series of sketches of the South Sandwich Islands.

Mikheyeva, Gory: see Skeidshovden Mountain 72°08'S., 11°31'E.

Mikkelsen Bay 68°43'S., 67°10'W.

Bay, 15 mi. wide at its mouth and indenting 10 mi., entered between Bertrand Ice Piedmont and Cape Berteaux along the W. coast of Graham Land. First seen from a distance in 1909 by the FrAE under Charcot, but not recognized as a large bay. First surveyed in 1936 by the BGLE under Rymill, and resurveyed by the FIDS in 1948-49. The name was proposed by members of BGLE for Ejnar Mikkelsen, Danish Arctic explorer and Inspector for East Greenland, 1934-50.

Mikkelsen Harbor 63°54'S., 60°47'W.

Small bay indenting the S. side of Trinity I. between Skottsberg and Borge Points, in the Palmer Archipelago. Disc. by the SwedAE, 1901-4. The origin of the name has not been ascertained, but it was apparently in common usage by 1913, at the time of the geologic reconnaissance by Scottish geologist David Ferguson in the whale-catcher *Hanka*.

Mikkelsen Island: see Watkins Island 66°22'S., 67°06'W.

Mikkelsen Islands 67°38'S., 68°11'W.

Small group of islands and rocks lying off the SE. coast of Adelaide I., 2 mi. SE. of the Léonie Islands. Disc. by the FrAE under Charcot, 1908-10, and named by him for Otto Mikkelsen, Norwegian diver who inspected the damaged hull of the *Pourquoi-Pas?* at Deception Island.

Mikkelsen Peak 67°47'S., 66°43'E.

The highest peak, 420 m., of the Scullin Monolith in Mac. Robertson Land. In January and February 1931 several Norwegian whale catchers, exploring along this coast, made sketches of the shore from their vessels and named this mountain for Capt. Klarius Mikkelsen, master of the *Torlyn*.

Mikkelsen Harbor: see Mikkelsen Harbor 63°54'S., 60°47'W.

Mikus Hill 70°27'S., 63°50'W.

A hill with a number of bare rock exposures, surmounting the SW. wall of Richardson Glacier in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Edward J. Mikus, PH3, USN, photographer of the cartographic aerial mapping crew in LC-130 aircraft of Squadron VXE-6, 1968-69.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Milan Ridge 83°15'S., 156°08'E.

A mainly ice-free ridge, 5 mi. long, bordering the W. side of Ascent Gl. in the Miller Range. Named by US-ACAN for Frederick M. Milan, physiologist at Little America V, 1957.

Milan Rock 76°01'S., 140°41'W.

A rock along the eastern margin of Land Glacier, 2 mi. SE. of Mt. Hartkopf, in Marie Byrd Land. It is the southernmost outcrop near the head of the glacier. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959-65. Named by US-ACAN for Frederick T. Milan, aviation structural mechanic, USN, a member of Squadron VX-6 air crew on LC-130 aircraft for several seasons; crew member on first midwinter flight to Antarctica, June 25, 1964.

Milburn Bay 63°44'S., 60°44'W.

Bay indenting the NW. side of Trinity I., in the Palmer Archipelago. Shown on an Argentine Govt. chart of 1952. Named by the UK-APC in 1960 for M. R. Milburn, air traffic control officer of the FIDASE, which photographed this area in 1955-57.

Miles Bay 54°04'S., 37°39'W.

Small bay in the S. side of Ice Fjord, South Georgia. The name South Bay was given to this feature by the Scottish geologist David Ferguson during his visit to South Georgia in 1911-12. Since the same name is well established for an arm of Prince Olav Hbr. 18 mi. away, the UK-APC recommended in 1957 that a new name be substituted for the feature now described. Miles Bay is after the catcher *Don Miles*, built in 1926, which was owned by the Compañía Argentina de Pesca in 1934.

Miles Island 66°04'S., 101°15'E.

Rocky island 3 mi. long, lying just N. of Booth Pen. in the Mariner Islands. Mapped from air photos taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for R. A. Miles, air crewman on USN Op. Hjp. photographic flights in this area and other coastal areas between 14° and 164° East longitude.

Milestone Bluff 67°38'S., 68°45'W.

Rock-faced, snow-backed bluff rising to about 830 m. just WSW. of Mt. Liotard, in the S. part of Adelaide Island. So named by the UK-APC in 1964 because the bluff is an important landmark on the inland route N. of Adelaide station.

Milieu, Glacier du: see Wiggins Glacier 65°14'S., 64°03'W.

Milky Way 71°11'S., 68°55'W.

Col between the S. part of LeMay Range and Planet Heights, which is the highest point on a possible sledg-

ing route between Jupiter and Uranus Glaciers in the E. part of Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC from association with nearby Planet Heights and the glaciers which are named for planets.

Mill, Mount 65°15'S., 64°03'W.

Mountain, 735 m., standing 2 mi. W. of Mt. Balch on the NE. shore of Waddington Bay, on the W. coast of Graham Land. First charted by the BelgAE, 1897-99. Named by the FrAE, 1908-10, under Charcot, for Hugh Robert Mill, British geographer, Antarctic historian and author in 1905 of *The Siege of the South Pole*.

Mill Cove 60°46'S., 44°35'W.

Cove entered between Cape Anderson and Valette I. on the S. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for Hugh Robert Mill, British geographer and polar historian.

Millen Range 72°20'S., 166°15'E.

A prominent NW.-SE. trending range, located W. of Cartographers Range in the Victory Mountains. Peaks in the range include Inferno, Omega, Le Couteur, Head, Cirque, Gless, Turret, Crosscut and Mount Aorangi. Named by the NZFMCAE, 1962-63, for John M. Millen, leader of this expedition.

Miller, Mount 66°57'S., 51°16'E.

Mountain 1 mi. NW. of Pythagoras Peak, in the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for J. J. Miller, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Miller, Mount 83°20'S., 165°48'E.

A prominent mountain, 4,160 m., standing in the Holland Range, 7 mi. S. of Mt. Lloyd. Discovered and named by the BrAE, 1907-9.

Millerand, Cap: see Millerand Island 68°09'S., 67°13'W.

Millerand Island 68°09'S., 67°13'W.

A high rugged island 3 mi. in diameter, lying 4 mi. S. of Cape Calmette, off the W. coast of Graham Land. Disc. by the FrAE under Charcot, 1908-10. Named by Charcot, presumably for Alexandre Millerand, French statesman.

Miller Bluffs 77°35'S., 85°45'W.

A line of steep, east-facing bluffs about 15 mi. long which extend WNW. from the mouth of Newcomer Glacier in the Sentinel Range, Ellsworth Mountains.

GEOGRAPHIC NAMES OF THE ANTARCTIC

The N. end of the feature was photographed by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. The bluffs were mapped by USGS in 1961 from air photos obtained by U.S. Navy Squadron VX-6 in 1959. Named by US-ACAN for the Hon. George P. Miller, former chairman of the House Science and Astronautics Committee, whose great interest in Antarctic activities was of assistance in assuring successful completion of U.S. research of that continent, 1958-72.

Miller Butte 72°42'S., 160°15'E.

A large rock butte located 2 mi. SE. of Roberts Butte in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Carl D. Miller, geophysicist at McMurdo Station, 1967-68.

Miller Crag 73°40'S., 94°42'W.

A bold and conspicuous outcropping of bare rock (1,450 m.), standing 3 mi. WSW. of Sutley Peak in the W. extremity of the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61, who named it for Thomas P. Miller, geologist with the party.

Miller Glacier 77°12'S., 162°00'E.

A glacier about 1 mi. wide, described by Griffith Taylor as a transection glacier lying in a transverse trough and connecting the Cotton and Debenham Glaciers in Victoria Land. Discovered by the Western Geological Party, led by Taylor, of the BrAE, 1910-13. Named by Taylor for M.J. Miller, Mayor of Lyttelton, and the shipwright who repaired the expedition vessel, *Terra Nova*, prior to its voyage from New Zealand.

Miller Heights 66°01'S., 65°14'W.

A series of elevations extending eastward from Sharp Peak, on the W. coast of Graham Land. Roughly charted by the BGLE under Rymill, 1934-37. Named by the UK-APC for Ronald Miller, FIDS general assistant at Dettale Island in 1956 and leader at Prospect Point in 1957.

Miller Island 64°54'S., 63°59'W.

Island lying 1 mi. NE. of Knight I. in the Wauwermans Is., in the Wilhelm Archipelago. Shown on an Argentine Govt. chart of 1950. Named by the UK-APC in 1958 after one of the characters in Chaucer's *Canterbury Tales*.

Miller Nunatak 74°26'S., 164°15'E.

A sharp pointed nunatak rising above the ice at the lower end of Campbell Gl., 5 mi. ESE. of Mt. Dickason, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN

for Herman T. Miller, biologist at McMurdo Station, 1965-66 season.

Miller Nunataks 67°02'S., 55°11'E.

Group of nunataks standing 11 mi. SW. of Mt. Storegutt in Enderby Land. Mapped from ANARE surveys and air photos, 1954-66. Named by ANCA for K. R. Miller, weather observer at Mawson Station, 1962.

Miller Peak 70°59'S., 162°53'E.

A peak (2,420 m.) located 2 mi. S. of Mt. Ford in Explorers Range, Bowers Mountains. Explored by the northern party of NZGSAE, 1963-64, and named for J. H. "Bob" (now Sir J. Holmes) Miller, leader-surveyor of that party.

Miller Peak 78°49'S., 84°14'W.

A peak with twin summits on the central part of the ridge between Hudman and Carey Glaciers, at the S. end of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Charles S. Miller, aviation electronics technician, USN, who was killed in a crash of a P2V Neptune airplane at McMurdo Sound in October 1956.

Miller Point 68°56'S., 63°23'W.

Black, rock cape rising to 250 m. and forming the N. side of the entrance to Casey Inlet, on the E. coast of Palmer Land. Disc. by Sir Hubert Wilkins in a flight on Dec. 20, 1928, and named by him for George E. Miller of Detroit, Michigan. It has been more fully defined as a result of flights by Lincoln Ellsworth in 1935, and by the flights and sledge journey along this coast from East Base by members of the USAS in 1940.

Miller Range 83°15'S., 157°00'E.

A range of mountains extending S. from Nimrod Glacier for 50 mi. along the western edge of Marsh Glacier. Named for J. H. "Bob" (now Sir J. Holmes) Miller, a member of the N.Z. party of the CTAE (1958) who, with G.W. Marsh, mapped this area.

Miller Ridge 70°08'S., 65°30'E.

A rock ridge 1 mi. E. of Mt. Seedsman on the N. side of the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for L. D. Miller, radio operator at Mawson Station in 1964.

Miller Spur 75°07'S., 137°29'W.

An ice-covered spur that descends NE. from Mt. Giles, near the coast of Marie Byrd Land. The spur terminates in a small rock bluff about 1 mi. W. of lower Hull Glacier. The feature was observed and photographed on Dec. 18, 1940, from aircraft of the USAS (1939-41)

GEOGRAPHIC NAMES OF THE ANTARCTIC

led by Adm. Richard Byrd. Named by US-ACAN for Linwood T. Miller, sailmaker and member of the ByrdAE, 1933-35, who produced windproof shirts, parkas, tents and other canvas materials for the expedition.

Miller Valley 83°39'S., 55°14'W.

A small ice-free valley between Drury Ridge and Brown Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Lt. Donald R. Miller, LC-47 pilot with USN Squadron VX-6, who flew logistical support for the Neptune Range field party, 1963-64.

Milles Nunatak 70°55'S., 160°06'E.

A nunatak lying 3 mi. NE. of Howell Peak on the N. end of Daniels Range, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960-62. Named by US-ACAN for David B. Milles, USARP biological laboratory technician at McMurdo Station, 1967-68.

Millett Glacier 70°37'S., 67°40'W.

Heavily crevassed glacier, 13 mi. long and 7 mi. wide, flowing W. from the Dyer Plateau of Palmer Land to George VI Sound, immediately N. of Wade Point. In its lower reaches the N. side of this glacier merges with Meiklejohn Glacier. It was first surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Hugh M. Millett, chief engineer of the *Penola* during the BGLE, 1934-37.

Mill Glacier 85°10'S., 168°30'E.

A tributary glacier, 10 mi. wide, flowing NW. between the Dominion Range and the Supporters Range into Beardmore Glacier. Discovered by the BrAE (1907-9) and named for Hugh Robert Mill, British geographer and Antarctic historian.

Millington Glacier 84°32'S., 178°00'E.

A narrow tributary glacier, 10 mi. long, flowing from the eastern slopes of Hughes Range into Ramsey Gl., northward of Mt. Valinski. Named by US-ACAN for Lt. Cdr. Richard E. Millington, USN, medical officer with USN Op. DFrz., 1963 and 1964.

Mill Inlet 67°00'S., 64°20'W.

Ice-filled inlet which recedes 8 mi. in a NW. direction and is some 20 mi. wide at its entrance between Cape Robinson and Monnier Pt., along the E. coast of Graham Land. Charted by the FIDS in 1947 and named for Hugh Robert Mill. Photographed from the air during 1947 by the RARE under Ronne.

Mill Island 65°30'S., 100°40'E.

An ice-domed island, 25 mi. long and 16 mi. wide, lying 25 mi. N. of the Bunger Hills. Discovered in Feb-

ruary 1936 by personnel on the *William Scoresby*, and named for Hugh Robert Mill.

Mill Mountain 79°26'S., 157°52'E.

A large flat-topped mountain (2,730 m.) forming the eastern end of Festive Plateau in the Cook Mountains. This mountain was probably sighted by the BrNAE (1901-4) under Capt. Robert F. Scott, who gave the name "Mount Mill", after British Antarctic historian Hugh Robert Mill, to a summit in nearby Reeves Bluffs. This area was mapped by USGS from surveys and U.S. Navy photography (1959-63). A prominent mountain does not rise from the bluffs, and since the name Mount Mill is in use elsewhere in Antarctica, the US-ACAN (1965) altered the original name to Mill Mountain and applied it to the prominent mountain described.

Mill Peak: see Mill, Mount 65°15'S., 64°03'W.

Mill Peak 67°58'S., 61°08'E.

Prominent peak, 1,760 m., rising above the ice sheet 10 mi. S. of Pearce Peak and 30 mi. S. of Cape Simpson. Disc. in February 1931 by the BANZARE under Mawson, who named it for Dr. Hugh Robert Mill.

Mills, Mount 85°12'S., 165°17'E.

A mountain, 2,955 m., forming part of the N. escarpment of the Dominion Range, overlooking the Beardmore Gl. 8 mi. N. of Mt. Saunders. Discovered by the BrAE (1907-9) and named for Sir James Mills who, with the Govt. of New Zealand, paid the cost of towing the expedition ship *Nimrod* to Antarctica in 1908.

Mills Peak 74°14'S., 163°54'E.

A sharp peak in the Deep Freeze Range, 1,420 m., standing along the W. side of Campbell Gl. between Mt. Queensland and the terminus of Bates Gl., in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Peter J. Mills, geologist at McMurdo Station, 1965-66 season.

Mill Stream Glacier 85°20'S., 171°00'E.

A tributary glacier, about 10 mi. wide, flowing W. between Supporters Range and Otway Massif to enter Mill Glacier. Named by the NZGSAE (1961-62) in association with Mill Glacier.

Mills Valley 73°06'S., 163°12'E.

An ice-filled valley indenting the E. side of Pain Mesa between Biretta Peak and Diversion Hills, in the Mesa Range, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Cdr. Norman J. Mills, USNR, officer in charge of the Detachment A winter party at McMurdo Station, 1967.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. Mapped by USGS from surveys and U.S. trimetrogon photography, 1958-60. Named by US-ACAN for Jerome Mintz, Meteorological Electronics Technician at Byrd Station, 1959.

Mirabilite Pond 78°11'S., 163°56'E.

Alkali pond at a high elevation in the southern part of Hidden Valley, west of Koettlitz Glacier. The pond is located on the northern side of the ridge that bounds the southeast part of Hidden Valley. The feature was discovered by U.S. geologist Troy L. Péwé (1957-58) during the finding of a thin film of white salt (mirabilite or Glauber's salt) around the edge of the pond suggested the name.

Mirabito Range 71°40'S., 165°27'E.

Low, northwest-trending mountain range, 40 mi. long and 4 mi. wide, standing between the upper part of the Victoria Gl. and the Greenwell Gl. in northern Victoria Land. Mapped by USGS from surveys and U.S. aerial photography, 1960-63. Named by US-ACAN for Lt. Cdr. John A. Mirabito, USN, staff Meteorological Officer on four Deep Freeze Operations, 1955-59.

Mirage Island 66°48'S., 141°27'E.

Small rocky island 0.25 mi. long lying 0.3 mi. W. of Cape Aden. Charted in 1950 by the FrAE and so named because mirages were frequently observed in the vicinity of the island.

Mirages, Ile des: see Mirage Island 66°48'S., 141°27'E.

Miranda Nunataks: see Miranda Peaks 71°28'S., 68°36'W.

Miranda Peaks 71°28'S., 68°36'W.

Group of about six peaks trending N.-S. on the S. side of Uranus Glacier, in eastern Alexander Island. The peaks were photographed by Lincoln Ellsworth, Nov. 1935, in the course of a trans-Antarctic flight and were plotted from the air photos by W.L.G. Joerg. Named by UK-APC from association with Uranus Glacier after Miranda, one of the moons of the planet Uranus.

Mirazh Mountain 71°18'S., 13°25'E.

Peak, 1,485 m., on the north-central part of Stein- en Shoulder in the Gruber Mtns., Queen Maud Land. Disc. and Plotted from air photos by GerAE, 1933-39. Replotted from air photos and surveys by GerAE, 1956-60, and SovAE, 1960-61. Named Gora Mirazh (mirage mountain) by the USSR in 1966.

Mirfak Nunatak 81°58'S., 156°05'E.

Nunatak near the polar plateau, 10 mi. SW. of Ice Bluff. Named by US-ACAN after the USNS

Mirfak, cargo vessel in the U.S. convoy to McMurdo Sound in USN Op. DFrz. 1963.

Mirnyy Peak 69°20'S., 72°34'W.

Prominent peak, 750 m., 4 mi. NE. of Enigma Peak in the N. part of Rothschild Island. Presumably first seen from a distance by the Russ. exp. of 1821 under Bellingshausen. Phot. from the air by the USAS, 1939-41, and roughly mapped. Mapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for the sloop *Mirnyy*, one of the ships of the Bellingshausen expedition.

Mirotvortsev, Mount 71°50'S., 12°17'E.

Mountain, 2,830 m., standing 1.5 mi. NE. of Mt. Neustruyev in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for K. N. Mirotvortsev (1880-1950), Soviet geographer and explorer.

Mirotvortseva, Gora: see Mirotvortsev, Mount 71°50'S., 12°17'E.

Mirounga Flats 60°42'S., 45°36'W.

Small partially enclosed tidal area in the inner, northwestern corner of Borge Bay, Signy I., in the South Orkney Islands. Its E. limit is formed by the Thule Is.; its N. and W. limits by Signy Island. The tidal area dries at low water. Roughly surveyed in 1933 by DI personnel. Resurveyed in 1947 by the FIDS, and so named by them because elephant seals (*Mirounga leonina*) are found there in large numbers during the moulting period.

Mirsky Ledge 84°37'S., 111°40'W.

A snow-covered ledge, or shelflike feature, about 10 mi. NE. of Mt. Schopf in the Ohio Range. Urbanak Peak and Iversen Peak rise above the ledge which is the apparent NE. extremity of the Horlick Mountains. The geology of these mountains was investigated by researchers from the Institute of Polar Studies, Ohio State University, 1958-62. The ledge was named by US-ACAN for Arthur Mirsky, Assistant Director of the Institute in that period.

Misery Peak 85°31'S., 178°16'W.

A peak (2,725 m.) at the extreme W. side of Roberts Massif, occupied as a survey station. So named by the Southern Party of NZGSAE (1961-62) to describe the many miserable hours spent here while waiting for clouds to disperse.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mislaid Rock 54°30'S., 37°08'W.

Rock lying SW. of First Pt., Annenkov I., off the S. coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Misnomer Point 62°22'S., 59°42'W.

A point immediately N. of Carlota Cove on the W. coast of Robert I., South Shetland Islands. So named by UK-APC in 1971. For several years this feature was identified incorrectly on charts as "Cornwall Point," a variant form of the name originally given to nearby Cornwall Island.

Missen Ridge 70°41'S., 166°24'E.

A long, ice-covered ridge situated S. of the Davis Ice Piedmont and extending along the peninsula of which Cape Hooker is the NE. point, on the N. coast of Victoria Land. Named by ANARE for R. Missen, weather technician on the ANARE (*Thala Dan*) cruise along this coast, 1962.

Mission Island: see Masson Island 66°08'S. 96°35'E.

Mission Rock 67°49'S., 68°25'W.

Low-lying rock lying SW. of the Guébriant Is., off the S. end of Adelaide Island. Surveyed by the RN Hydrographic Survey Unit, 1962-63. So named by the UK-APC in 1963 because of the rock's proximity to Guébriant Islands, which were named for the French missionary Father Guébriant.

Mistake Peak 77°26'S., 160°13'E.

Snowy peak, about 2,600 m., rising 3 mi. WSW. of Shapeless Mtn., at the S. end of the Willett Range in Victoria Land. So named in 1957 by the N. Z. Northern Survey Party of the CTAE (1956-58), because they mistakenly climbed the mountain in the belief they were on Shapeless Mountain.

Misthound Cirque 79°46'S., 156°12'E.

A cirque forming a large embayment in the E. side of Haskell Ridge in the Darwin Mountains. It is the type locality for the Misthound Coal measures, a formation of the Beacon Sequence of the Darwin Mountains. So named by VUWAE, 1962-63, because of the eerie bleakness and often mist-filled floor of the cirque, which contains many peculiarly shaped boulders resembling large dogs.

Mistichelli Hills 70°02'S., 72°52'E.

A group of moderately low, rocky coastal hills, 1 mi. SW. of McKaskle Hills, on the E. margin of the Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946-47). Named by Roscoe for G. Mistichelli, air crewman on Operation Highjump photographic flights over the area.

Mist Rocks 66°48'S., 66°37'W.

A group of insular rocks close NW. of Holdfast Point at the entrance to Lallemand Fjord, Graham Land. Mapped from air photos taken by FIDASE (1956-57). The name arose locally; the first FIDS party sledging N. from Detaille I. on Aug. 21, 1956, fortuitously discovered these rocks while searching in the mist for a secure camp site.

Misty Mountain: see Elder, Mount 61°13'S., 55°12'W.

Misty Pass 63°29'S., 57°59'W.

Pass, 700 m. high, between the head of Broad Valley and a valley descending N. to Bransfield Str., situated 8 mi. SE. of Cape Ducorps on Trinity Peninsula. Mapped by the FIDS in 1946, and so named because clouds pouring E. through the pass had been noted by the survey party to herald bad weather.

Mitchell, Mount 82°43'S., 165°36'E.

Mountain, 1,820 m., standing 5 mi. SW. of Cape Goldie in the N. part of the Holland Range. Mapped by the USGS from tellurometer surveys (1961-62) and Navy air photos (1960). Named by US-ACAN for Cdr. G. W. Mitchell, Commanding Officer of the USS *Burton Island* during USN Op. DFrz., 1964.

Mitchell Island: see Mitchell Peninsula 66°20'S., 110°32'E.

Mitchell Nunatak 70°58'S., 71°30'E.

The central nunatak in a group of three nunataks in the N. part of the Manning Nunataks. The Manning Nunataks were photographed by USN Op. Hjp. (1946-47) and by ANARE (1957). They were visited by the SovAE in 1965 and by the ANARE Prince Charles Mtns. survey party in 1969. Named by ANCA for R. Mitchell, senior diesel mechanic at Mawson Station in 1969.

Mitchell Peak 76°25'S., 147°22'W.

A solitary peak 13 mi. W. of Birchall Peaks on the S. side of Guest Peninsula in Marie Byrd Land. It was sighted by R. Adm. Byrd, Dec. 5, 1929, while on an airplane flight over this coast. Named by Byrd for Hugh C. Mitchell, mathematician of the U.S. Coast and Geodetic Survey, a member of the National Geographic Soc. committee of experts which determined that Byrd reached both the North and South Poles by airplane in 1926 and 1929, respectively.

Mitchell Peninsula 66°20'S., 110°32'E.

Rocky peninsula, 2.5 mi. long and 2 mi. wide, lying between O'Brien Bay and Sparkes Bay at the E. side of the Windmill Islands. First mapped from aerial photographs taken by USN Op. Hjp. in February

GEOGRAPHIC NAMES OF THE ANTARCTIC

1947 and thought to be an island connected by a steep snow ramp to the continental ice overlying Budd Coast. The term peninsula was considered more appropriate by the Wilkes Station party of 1957. Named by the US-ACAN for Capt. Ray A. Mitchell, USN, captain of the U.S.S. *Cacapon*, tanker of the western task group of USN Op. Hjp., Task Force 68, 1946-47.

Mitchell Point 64°13'S., 62°03'W.

Point at the S. side of the entrance to Hill Bay on the E. coast of Brabant I., in the Palmer Archipelago. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Silas W. Mitchell (1829-1914), American surgeon, founder of neurology in the United States.

Mitchells Island: see Robert Island 62°24'S., 59°30'W.

Mite Skerry 67°52'S., 67°19'W.

Small island in the S. part of the entrance to Lystad Bay, off Horseshoe Island. Named by UK-APC in 1958; the name is descriptive of its small size.

Mitre, Isla: see Lavoisier Island 66°12'S., 66°44'W.

Mitsudomoe Islands 69°57'S., 38°45'E.

Three small islands lying close together 1 mi. W. of Strandnebbba in the SE. extremity of Lützow-Holm Bay. Mapped from surveys and air photos by JARE, 1957-62, and named Mitsudomoe-shima (commas-united-to-form-a-circle islands).

Mitten, The 75°59'S., 160°30'E.

Bare flat-topped mountain, which resembles a mitten when viewed from above, standing 3 mi. NW. of Mt. Armytage in Victoria Land. Named by the Southern Party of the NZGSAE (1962-63) because of its shape.

Mitterling Glacier 66°50'S., 64°18'W.

Glacier on the E. coast of Graham Land, draining between Mt. Vartdal and Mt. Hayes into the N. part of Mill Inlet. Named by UK-APC for Philip I. Mitterling, American historian and author of *America in the Antarctic to 1840*.

Mittlere Petermann Range 71°30'S., 12°28'E.

One of the Petermann Ranges, extending N.-S. for 17 mi. from Johnson Peaks to Store Svarthorn Peak, in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39, and so named by them for its middle position in the northern part of the Petermann Ranges.

Mitudomoe Islands: see Mitsudomoe Islands 69°57'S., 38°45'E.

Mixon Rocks 76°43'S., 159°23'E.

Rock outcrops about 2.5 mi. west of Gadarene Ridge in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition, 1964, who named this feature for Lt. William A. Mixon, a U.S. Navy medical officer at McMurdo Station who treated an injured member of the expedition.

Mizar Nunataks 81°52'S., 154°35'E.

Small cluster of rock nunataks near the polar plateau, 12 mi. S. of Wilhoite Nunataks. Named by US-ACAN after the USNS *Mizar*, cargo vessel in the U.S. convoy to McMurdo Sound in USN Op. DFrz., 1962.

Mizuho Plateau 71°30'S., 39°00'E.

A mainly featureless ice plateau, situated eastward of the Queen Fabiola Mountains and southward of the Shirase Glacier in Queen Maud Land. A field party of the JARE studied the Mizuho Plateau in November-December 1960 and gave its name. At the Japanese station on East Ongul Island it was called "Japan Highland," but this name was not adopted officially. Mizuho is one of the ancient names of Japan.

Mizukuguri Cove 69°11'S., 39°38'E.

A cove in the east side of Lützow-Holm Bay, Queen Maud Land. It indents the western shore of Langhovde Hills 0.5 mi. west of Mount Chōtō. This area was the site of SCUBA diving by members of the JARE in February 1968. The name "Mizukuguri-ura" (diving cove) was applied by JARE Headquarters in 1972.

Mizukumi Stream 69°00'S., 39°35'E.

A small meltwater stream 0.1 mi. N. of Hachinosu Peak on East Ongul Island. Mapped from surveys and air photos by JARE, 1957, and named Mizukumi-zawa (water-drawing stream).

Mjellbreen: see Mjell Glacier 72°07'S., 26°06'E.

Mjell Glacier 72°07'S., 26°06'E.

Glacier 9 mi. long, flowing NE. between Mt. Bergersen and Isachsen Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Mjellbreen (the dry-snow glacier).

Mjøllføykje Bluff 73°32'S., 3°45'W.

A prominent bluff at the E. side of Belgen Valley, in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59) and named Mjøllføykje.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mjøllkvaevane Cirques 71°53'S., 14°27'E.

A series of small snow-filled cirques that indent the E. side of Kvaevfjellet Mtn. in the Payer Mtns., Queen Maud Land. Plotted from air photos and surveys by NorAE, 1956-60, and named Mjøllkvaevane.

M'Kean Point 62°42'S., 60°01'W.

Point lying 3.5 mi. E. of Brunow Bay on the SE. coast of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1961 for Captain M'Kean, Master of the British sealing vessel *Princess Charlotte* from Calcutta, who visited the South Shetland Islands and moored in nearby Johnsons Dock in 1821-22.

Moawhango Névé 72°15'S., 163°34'E.

A small névé between Mount Camelot and Monte Cassino, in the Freyberg Mountains. Named by the NZGSAE, 1967-68, in association with a locality of the same name in New Zealand.

Moberly, Mount 64°44'S., 63°41'W.

Steep-sided, snow-covered mountain, 1,535 m., at the end of the ridge extending SW. from Mt. Français in the S. part of Anvers I., in the Palmer Archipelago. It is separated from Mt. William to the S. by the col at the head of Hooper Glacier. In 1832, John Biscoe named a mountain in this area for Capt. John Moberly, RN, but the mountain was not located by subsequent expeditions. The feature described was identified as Mt. Moberly by the FIDS who made surveys in the area in 1944 and 1955.

Mobiloil Bay: see Mobiloil Inlet 68°35'S., 64°45'W.

Mobiloil Inlet 68°35'S., 64°45'W.

Ice-filled inlet, nurtured by several NE. and E. flowing glaciers, lying between Rock Pile Peaks and Hollick-Kenyon Pen. along the E. coast of Antarctic Peninsula. Disc. by Sir Hubert Wilkins in a flight on Dec. 20, 1928, and named by him after a product of the Vacuum Oil Co. of Australia.

Moe Island 60°45'S., 45°42'W.

Island 1 mi. long separated from the SW. end of Signy I. by Fyr Chan., in the South Orkney Islands. The name appears on a chart by Capt. Petter Sørille, Norwegian whaler who mapped the islands in 1912-13. Probably named for Thoralf Moe of Sandefjord, Norway, a whaling captain working in Antarctic waters in that period.

Moe Point 70°19'S., 62°23'W.

A point comprised of a small bare rock bluff, located just S. of Croom Glacier on the NW. side of Smith Inlet, in Palmer Land. Mapped by USGS in 1974.

Named by US-ACAN for Richard Moe, USARP biologist at Palmer Station in 1974.

Moffat, Mount 83°32'S., 55°17'W.

Mountain, 1,250 m., standing 4 mi. NE. of Mt. Ege in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Robert J. Moffat, construction electrician at Ellsworth Station, winter 1958.

Moffett Glacier 85°52'S., 161°00'W.

A tributary glacier, 13 mi. long, flowing E. from Rawson Plateau to enter Amundsen Gl. just S. of Mt. Benjamin, in the Queen Maud Mountains. Discovered by R. Adm. Byrd on the South Pole flight of Nov. 28-29, 1929, and named by him for R. Adm. William A. Moffett, USN, first Chief of the Bureau of Aeronautics, Dept. of the Navy.

Mogensen, Mount 77°34'S., 85°50'W.

A snow-covered mountain, 2,790 m., standing 5 mi. NE. of Mt. Ulmer in the N. part of the Sentinel Range. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Palle Mogensen, scientific leader at South Pole Station, 1957-58.

Mogote, Isla: see Hummock Island 65°53'S., 65°29'W.

Mohai, Islotes: see Sewing-Machine Needles 62°58'S., 60°30'W.

Mohaupt Point 66°04'S., 100°47'E.

The eastern point of Currituck I., in the Highjump Archipelago. The name "Mohaupt Island" was given by US-ACAN in 1956 to the northern portion of Currituck I., then thought to be a separate feature. Subsequent Soviet expeditions (1956-57) found that feature to be part of Currituck Island and US-ACAN has reapplied the name to the point described. Named for H. E. Mohaupt, air crewman on USN Op. Hjp. photographic flights in this area in 1946-47.

Mohl, Mount 78°33'S., 85°05'W.

A mountain (3,710 m.) at the E. side of Vinson Massif, surmounting the ridge between the heads of Dater and Thomas Glaciers, in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Cdr. Edgar A. Mohl, USN, hydrographic officer on the staff of Commander, USN Task Force 43, during Deep Freeze Operations I and II, 1955-56 and 1956-57.

Mohn Basin 86°30'S., 168°00'W.

A major depression in the surface near the edge of the polar plateau. It extends southward from the western

GEOGRAPHIC NAMES OF THE ANTARCTIC

Shetland Islands. Charted and named by the Antarctic Expedition, 1949-50, after the daughter of Lieutenant Venturini.

Roca: see Lay-brother Rock 60°34'S., V.

Mountain: see Monique, Mount 69°32'S., V.

ie, Mount 69°32'S., 75°14'W.

in, 750 m., with a prominent rocky N. face -covered S. slopes, 3 mi. W. of Marion Nuna- the N. coast of Charcot Island. Disc. and mapped on Jan. 11, 1910, by the FrAE under n B. Charcot, and named by him for his daugh- nique. Phot. from the air on Feb. 9, 1947, by Op. Hjp. and mapped from these photos by of the FIDS in 1960.

Peak: see Monique, Mount 69°32'S., V.

Islands 60°40'S., 45°55'W.

of very small islands and rocks lying 1.5 mi. S. r Pt., off the S. coast of Coronation I. in the Orkney Islands. First charted and named en" (The Monk) by Norwegian whaling cap- tter Sørllie in 1912-13. The name approved is ized form of the earlier Norwegian name ap- on the chart by DI personnel on the *Discovery* surveyed the islands in 1933.

er Point 67°06'S., 64°45'W.

ainly ice-covered point forming the S. side of rance to Mill Inlet, on the E. coast of Graham During 1947 it was photographed from the air RARE under Ronne, and charted from the by the FIDS. Named by the FIDS for Franz R. ionnier, Austrian polar bibliographer.

th, The 66°57'S., 163°17'E.

rkable pinnacle rock (80 m.), broad at the base ndering to a point. It lies close off the N. end of : S. of Sabrina Island, in the Balleny Islands. So because of its shape.

e Island 60°36'S., 46°03'W.

of the Larsen Islands, lying off the W. end of tion I. in the South Orkney Islands. The Lar- unds were disc. by Capt. George Powell and Nathaniel Palmer in December 1821, but were on a chart by the Norwegian whaler Capt. Pet- le in 1912-13. They were recharted in 1933 by onnel on the *Discovery II*, who used the name Islands for the group and named the largest

island Larsen Island. Because the names were found to be confusing, the island was renamed in 1954 by the UK-APC for the sloop *James Monroe*, which was com- manded by Captain Palmer at the time of discovery and anchored in this vicinity in December 1821.

Monroe Island: see Snow Island 62°47'S., 61°23'W.

Monroe Point 62°49'S., 61°30'W.

Point lying 3 mi. NW. of Cape Conway on the SW. side of Snow I., in the South Shetland Islands. It was named Low Point by DI personnel on the *Discovery II* in 1935, but this name has not since been used. In order to avoid duplication, a new name was applied by the UK-APC in 1961. Monroe Point derives from Monroe Island, the name used for Snow Island by sealers in the 1820's.

Monsimet, Anse: see Monsimet Cove 62°11'S., 58°34'W.

Monsimet Cove 62°11'S., 58°34'W.

Cove 0.5 mi. W. of Hervé Cove along the S. side of Ezcurra Inlet, in Admiralty Bay, King George I., in the South Shetland Islands. First charted by the FrAE, 1908-10, under Charcot, and named by him for a member of the expedition.

Monson, Mount 77°31'S., 143°31'W.

The highest summit (1,155 m.) in the Mackay Mtns., situated 1.5 mi. NE. of Vivian Nunatak in the SW. part of the group, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Lt. Laurence C. Monson III, USNR, co-pilot of LC-130F Hercules aircraft during Operation Deep Freeze 1968.

Montague Island: see Montagu Island 58°25'S., 26°20'W.

Montagu Island 58°25'S., 26°20'W.

Island 9 mi. long and 5 mi. wide, lying between Saun- ders and Bristol Islands, in the South Sandwich Is- lands. Disc. in 1775 by a Br. exp. under Cook, who named it for John Montagu, the fourth Earl of Sand- wich and First Lord of the Admiralty.

Monteagle, Mount 73°43'S., 165°28'E.

A high, sharp peak (2,780 m.) standing 10 mi. N. of Cape Sibbald in the Mountaineer Range, Victoria Land. It surmounts Aviator Gl. to the west and the large cirque of Parker Gl. to the east. Disc. in January 1841 by Sir James Clark Ross who named this peak for Baron Monteagle, Chancellor of the Exchequer, 1835-39.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Montecchi Glacier 72°04'S., 167°35'E.

A tributary glacier that drains E. from Bertalan Peak to enter Tucker Glacier just N. of Mt. Hazlett, in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Pietrantonio Montecchi, geophysicist at McMurdo Station, 1966-67.

Monteverdi Peninsula 72°30'S., 72°00'W.

A large ice-covered peninsula between Bach Ice Shelf and George VI Sound, forming the southernmost part of Alexander Island. The southern side of the feature was first seen and charted by Finn Ronne and Carl Eklund of USAS, 1939-41, who traversed the entire length of George VI Sound. Mapped from trimetrogon air photography taken by RARE, 1947-48, and from survey by FIDS, 1948-50. Named by UK-APC after Italian composer Claudio Monteverdi, 1568-1643.

Montflier, Cape: see Monflier Point 65°55'S., 66°04'W.

Montgolfier Glacier 64°47'S., 62°15'W.

Glacier flowing to Piccard Cove between Rozier and Woodbury Glaciers on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Joseph M. Montgolfier (1740-1810) and his brother Etienne J. Montgolfier (1745-1799), French papermakers, inventors of the hot-air balloon, 1782-83, and pioneer balloonists.

Montgomerie Glacier 83°47'S., 166°55'E.

A narrow tributary glacier, 10 mi. long, flowing N. along the W. side of Hampton Ridge in Queen Alexandra Range to enter Lennox-King Glacier. Named by the Northern Party of the NZGSAE (1961-62) for John Montgomerie, assistant surveyor of that party.

Montgomery Glacier: see Montgomerie Glacier 83°47'S., 166°55'E.

Montigny Glacier 71°05'S., 163°24'E.

A steep tributary glacier in the Bowers Mtns., flowing eastward and at the terminus coalescing with Irwin Gl. (from the south), with which it enters the larger Graveson Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Raymond J. Montigny, glaciologist, who participated in the study of Meserve Gl. in 1966-67.

Montravel Rock 63°09'S., 58°02'W.

Rock lying 11 mi. NW. of C. Legoupil off the NW. coast of Trinity Peninsula. Discovered in Feb. 1838 by Dumont D'Urville, who named it for Ens. Louis Tardy de Montravel of the ship *Zélée*.

Montreuil, Mount 73°04'S., 166°11'E.

A mountain (2,680 m.) along the N. side of Gair Glacier 8.5 mi. E. of Mt. Supernal, in the Mountaineer Range of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Paul L. Montreuil, biologist at McMurdo Station, 1964-65.

Montrol, Rocas: see Northtrap Rocks 62°54'S., 56°35'W.

Montrol Rock 62°58'S., 56°21'W.

The largest of a group of rocks lying E. of Cape Juncal, D'Urville I., in the Joinville Island group. Discovered and named by the Fr. exp. under D'Urville, 1837-40.

Montura, Ile: see Saddle Island 60°38'S., 44°50'W.

Monument, The 63°44'S., 57°53'W.

Isolated rock pillar on the NW. side of Red I., 495 m. high, which is level with the main summit of the island and has the appearance of a monument. It lies in Prince Gustav Chan., 2 mi. S. of Trinity Peninsula. The island was disc. by the SwedAE under Norden-skjöld, 1901-4. The Monument was charted and named by the FIDS in 1945.

Monument Nunataks 72°35'S., 162°15'E.

A group of nunataks that have numerous pinnacles and odd-shaped projections resembling monuments, situated N. of Sculpture Mountain in the upper part of Rennick Glacier. Named by the Northern Party of NZGSAE, 1962-63.

Monument Rocks 64°01'S., 60°57'W.

A group of rocks lying 4 mi. NE. of Cape Sterneck in the entrance to Curtiss Bay, northern Graham Land. Roughly charted and given this descriptive name by James Hoseason, First Mate of the sealer *Sprightly* in 1824.

Moody, Cape: see Moody Point 63°18'S., 55°01'W.

Moody, Mount 71°31'S., 162°52'E.

A peak (2,040 m.) located 5 mi. SE. of Carnes Crag in northwestern Lanterman Range, Bowers Mountains. Named by the northern party of NZGSAE, 1963-64, for Lt. Daniel M. Moody, USN, of Squadron VX-6, who flew support flights for this New Zealand expedition.

Moody Glacier 84°30'S., 165°48'E.

A glacier between Martin Ridge and Adams Mtns. in the Queen Alexandra Range, draining S. into Berwick Glacier. Named by US-ACAN for Construction Electrician P. R. Moody, USN, at McMurdo Station, winter 1963.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Moody Island 77°20'S., 149°12'W.

An ice-covered island 10 mi. long, between Kizer and Steventon Islands in the Sulzberger Ice Shelf. Mapped from surveys by the USGS and U.S. Navy air photos (1959-65). Named by US-ACAN for E. L. Moody, dog-driver with the ByrdAE (1933-35).

Moody Nunatak 83°07'S., 159°30'E.

A prominent isolated nunatak at the E. side of Marsh Gl., 4 mi. W. of Bartrum Plateau, Queen Elizabeth Range. Named by the NZGSAE (1964-65) for Lt. D.M. Moody, pilot with USN Squadron VX-6, who flew the southern party of NZGSAE in and out of the field.

Moody Peak 78°22'S., 158°35'E.

Peak over 1,800 m., marking the N. limit of Boomerang Range. Named by US-ACAN in 1964 for Junior L. Moody, Aviation Boatswain's Mate, USN, in charge of loading and offloading aircraft at McMurdo Station, 1959-60.

Moody Point 63°18'S., 55°01'W.

Point which forms the E. end of Joinville I., off the NE. end of Antarctic Peninsula. Disc. by a Br. exp. under Ross, 1839-43, and named by him for Lieutenant Governor Moody of the Falkland Islands.

Moon Bay 62°35'S., 60°00'W.

Bay 7 mi. wide which recedes 4 mi. between Edinburgh Hill and Renier Pt., on the E. side of Livingston I., in the South Shetland Islands. This bay was known to sealers in the area as early as 1821. Recharted in 1935 by DI personnel on the *Discovery II*, and probably named by them for nearby Half Moon Island.

Mooney, Mount 86°34'S., 145°48'W.

A ridge-shaped mountain, 2,850 m., standing just N. of the La Gorce Mtns., where it rises above the middle of Robison Glacier, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by R. Adm. Byrd for James E. Mooney, who assisted this and later Byrd expeditions. From 1959-65, Mooney served as Deputy United States Antarctic Projects Officer.

Moonie, Mount 70°13'S., 65°07'E.

A mountain just S. of Mt. Dart and 1 mi. W. of Mt. Cardell in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1965. Named by ANCA for P. J. Moonie, radio operator at Mawson Station in 1967 and 1969. Moonie was a member of the Prince Charles Mountains survey party in 1969.

Moonlight Range: see Athos Range 70°13'S., 64°50'E.

Moore, Cape 70°56'S., 167°54'E.

Cape at the E. end of Tapsell Foreland which forms the N. side of the entrance to Smith Inlet, on the N. coast of Victoria Land. Discovered by Capt. James C. Ross, 1841, who named it for Thomas E. L. Moore, mate on the *Terror*.

Moore, Mount 80°25'S., 97°45'W.

An isolated mountain mass that rises 305 m. above the snow surface. With only Mt. Woollard nearby, 8 mi. to the S., it stands about 150 mi. W. of the Heritage Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party on Feb. 4, 1958, and named for Lt. John P. Moore (1928-55), USNR, helicopter pilot aboard the USS *Atka* who perished in a helicopter crash near Kainan Bay in January 1955.

Moore Bay: see Moore Embayment 78°45'S., 165°00'E.

Moore Embayment 78°45'S., 165°00'E.

A large ice-filled embayment between Shults Peninsula and Minna Bluff, along the northwest side of the Ross Ice Shelf. Discovered and named by Capt. Robert F. Scott's *Discovery* expedition, 1901-4. Admiral Sir Arthur Moore, Naval Commander-in-Chief at Cape Town, placed the resources of the naval dockyard at Cape Town at the disposal of the *Discovery* for much-needed repairs before the ship proceeded to New Zealand and the Antarctic.

Moore Mountains 83°21'S., 160°45'E.

A small but conspicuous group of mountains just N. of New Year Pass in the Queen Elizabeth Range. Observed in 1957 by the N.Z. Southern Party of the CTAE (1956-58) and named for R. D. Moore, Treasurer of the Ross Sea Committee.

Moore Point 70°30'S., 67°53'W.

Rocky point surmounted by a small peak, fronting on George VI Sound and marking the N. side of the mouth of Meiklejohn Gl., on the W. coast of Palmer Land. First surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for James I. Moore, second engineer of the *Penola* during the BGLE, 1934-37.

Moore Pyramid 70°18'S., 65°08'E.

A snow-covered mountain, resembling a pyramid, standing 1 mi. NW. of Mt. Wishart on the N. side of Scylla Gl. in the Prince Charles Mountains. Plotted from ANARE air photos. Named for A. L. Moore, radio operator at Mawson Station in 1963.

Moore Ridge 73°07'S., 161°45'E.

The northernmost ridge of the Caudal Hills, in Victoria Land. Mapped by USGS from surveys and U.S.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Navy air photos, 1960-64. Named by US-ACAN for Bruce F. Moore, photographer with USN Squadron VX-6 at McMurdo Station, 1966.

Mooring Point 60°43'S., 45°37'W.

Point along the S. side of Borge Bay between Drying Pt. and Knife Pt., on the E. side of Signy I. in the South Orkney Islands. The name appears on a chart based on a 1927 survey of Borge Bay by DI personnel on the *Discovery*, but may reflect an earlier naming by whalers.

Moos Inseln: see Moss Islands 64°09'S., 61°03'W.

Moot Point: see Redondo Point 65°12'S., 64°06'W.

Moraenefjord: see Moraine Fjord 54°19'S., 36°29'W.

Moraine Bluff 78°46'S., 162°12'E.

A bluff, 930 m., on the E. side of the Skelton Gl., lying N. of Red Dike Bluff. Surveyed and named in 1957 by the N.Z. party of the CTAE (1956-58). So named because a long morainic strip extends from the foot of the bluff on to the Skelton Glacier.

Moraine Canyon 86°09'S., 157°30'W.

A canyon with very steep rock walls, 8 mi. long, indenting northern Nilsen Plateau just west of Fram Mesa, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. So named by US-ACAN because the canyon floor is completely covered by glacial moraine.

Moraine Cove 68°35'S., 67°08'W.

Small cove at the N. end of Mikkelsen Bay along the W. coast of Graham Land. A moraine descends to the cove from the SW. end of Pavie Ridge. The name derives from the provisional name "Moraine Point," used by Prof. Robert L. Nichols of the RARE, who examined the geology of this area in 1947. The name Moraine Cove retains the spirit of the naming by Nichols, and is considered more essential for reference purposes than a name for the moraine itself.

Moraine Fjord 54°19'S., 36°29'W.

Inlet 3.5 mi. long with a reef (a terminal moraine) extending across its entrance, forming the W. head of Cumberland East Bay, South Georgia. Charted by the SwedAE under Nordenskjöld, 1901-4, who so named it because of the large glacial moraine at its entrance.

Moraine Plain: see Hestesletten 54°18'S., 36°31'W.

Moraine Ridge 72°18'S., 168°03'E.

A small ridge in the NE. part of Cartographers Range, descending to the SW. flank of Tucker Glacier just S.

of the junction with Pearl Harbor Glacier, in Victoria Land. So named by the NZGSAE, 1957-58.

Moraine Valley 60°43'S., 45°37'W.

Valley filled with morainic debris, 0.75 mi. long, which drains N. into Elephant Flats on the E. side of Signy I., in the South Orkney Islands. In summer a stream, fed by the ice slopes at its S. end, runs in this valley. Named by the FIDS following their survey of 1947.

Morales, Islotes: see Wideopen Islands 63°00'S., 55°49'W.

Morales Peak 86°15'S., 126°22'W.

A peak which rises from the S. part of Metavolcanic Mountain, just E. of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Tommy S. Morales, radio-man at Byrd Station in 1962.

Moran Bluff 74°23'S., 132°37'W.

A steep coastal bluff close W. of Mathewson Pt. on the N. side of Shepard Island, along the edge of Getz Ice Shelf. The feature was visited by personnel of USS *Glacier* (Capt. Edwin A. McDonald, USN) on Feb. 4, 1962. Name applied by US-ACAN for Gerald F. Moran, CM1, USN, construction mechanic who wintered-over at McMurdo Station (1965) and Plateau Station (1968), and worked at Byrd Station, summer season 1969-70.

Moran Buttress 85°31'S., 125°38'W.

A steep bluff 2 mi. S. of Koopman Peak, rising over 2,600 m. and forming a major projection between Davisville and Quonset Glaciers along the N. wall of the Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Cdr. Clifford D. Moran, USN, aircraft pilot during USN Op. DFrz. 1966 and 1967.

Moränen Fjord: see Moraine Fjord 54°19'S., 36°29'W.

Mordrins Island: see Elephant Island 61°10'S., 55°14'W.

Moreland Nunatak 81°15'S., 87°05'W.

An isolated nunatak lying about 15 mi. W. of the Pirrit Hills. The feature was positioned from U.S. Navy aerial photography taken in 1961. Named by US-ACAN for William B. Moreland, meteorologist at Little America V, winter party 1957.

Morelli Glacier 72°59'S., 102°33'W.

A glacier in the W. part of King Peninsula, 18 mi. SE. of Cape Waite, draining NE. to Abbot Ice Shelf in Peacock Sound. Mapped by USGS from surveys and

GEOGRAPHIC NAMES OF THE ANTARCTIC

USN air photos, 1960-66. Named by US-ACAN for Panfilo S. Morelli, glaciologist at Byrd Station, 1961-62.

Morency Island 71°02'S., 61°09'W.

Island 1 mi. long, lying close W. of Steele I. and 10 mi. NW. of Cape Bryant, off the E. coast of Palmer Land. Disc. by members of the East Base of the USAS who explored this coast by land and from the air in 1940. Named for Anthony J. L. Morency, tractor driver for the East Base.

Morennaya Hill 66°34'S., 93°00'E.

Hill rising to 40 m., standing 1 mi. SW. of Mabus Pt. on the coast of Antarctica. Discovered by AAE under Mawson, 1911-14. Mapped by the Soviet exp. of 1956, who named it Morennaya (morainic).

Moreno, Isote: see Diamonen Island 64°02'S., 61°17'W.

Moreno, Point 60°45'S., 44°42'W.

Point at the E. side of the entrance to the small cove at the head of Scotia Bay, on the S. coast of Laurie I. in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for Francisco P. Moreno, noted Argentine scientist and director of the Museo de la Plata.

Moreno Island: see Moreno Rock 64°05'S., 61°18'W.

Moreno Rock 64°05'S., 61°18'W.

A rock lying in Gerlache Strait, 7 mi. WSW. of Cape Sterneck, Antarctic Peninsula. Named by the BelgAE (1897-99) under Lt. Adrien de Gerlache for Argentine scientist and statesman Francisco P. Moreno.

Moreton Point 60°37'S., 46°02'W.

Point 1 mi. N. of Return Pt. at the W. end of Coronation I., in the South Orkney Islands. Roughly charted by Capt. George Powell and Capt. Nathaniel Palmer in 1821. Named by DI personnel on the *Discovery II* who charted the islands in 1933.

Morgagni, Mount: see Cabeza, Mount 64°08'S., 62°11'W.

Morgan, Mount 76°53'S., 143°34'W.

A mountain 5 mi. NE. of Mt. Swan in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939-41). Named by US-ACAN for C. G. Morgan, geologist with the ByrdAE (1933-35).

Morgan Inlet 72°12'S., 96°00'W.

Ice-filled inlet about 18 mi. long, with two branches, indenting the E. end of Thurston I. between Lofgren

and Tierney Peninsulas. Disc. in helicopter flights from USS *Glacier* and *Burton Island* by personnel of the USN Bellingshausen Sea Exp. in February 1960. Named by US-ACAN for Lt. Cdr. Joseph R. Morgan, USN, hydrographic and oceanographic officer of USN Task Force 43 during this expedition.

Morgan Island 53°01'S., 73°34'E.

A small island which is the largest feature in a group of islands located 1 mi. E. of Cape Bidlingmaier, off the N. side of Heard Island. The island group was charted as extending across "Morgan Bay" on an 1860 sketch map compiled by Capt. H. C. Chester, an American sealer, and "Morgan Islands" appears on the 1874 chart and the scientific reports of a Br. exp. under Nares in the *Challenger*. Surveyed in 1948 by the ANARE, who restricted the name Morgan to the largest feature in the group.

Morgan Nunataks 75°22'S., 70°35'W.

A small group of nunataks located at the SW. extremity of the Sweeney Mtns., in Ellsworth Land. First observed from the air by the RARE, 1947-48. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for William R. Morgan, cook at Eights Station in 1965.

Morgan Ridge 70°29'S., 64°41'E.

A small rock ridge trending E.-W., standing between Mt. Pollard and Mt. Small in the Porthos Range, Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1956-65. Named by ANCA for P. J. Morgan, glaciologist at Wilkes Station, 1964.

Morgan's Iceberg: see Compton Glacier 53°03'S., 73°37'E.

Morgan's Point: see Bidlingmaier, Cape 53°01'S., 73°32'E.

Morgan Upland 69°00'S., 66°00'W.

Featureless undulating snow plateau in central Antarctic Peninsula bounded by Cole Gl. and Clarke Gl. on the north and west, by Weyerhaeuser Gl. on the east, by Airy Gl. on the south, and Harriot Gl. on the southwest. The area was photographed from the air in Sep. 1962 by the BAS air unit. The photos were used for compiling a map by Ivor P. Morgan, BAS surveyor, 1961-64, for whom the upland is named.

Moriarty, Mount 73°40'S., 165°58'E.

A mountain (1,700 m.) located 4 mi. NE. of Mt. Casey in the Mountaineer Range of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Cdr. Jack O. Moriarty, USN, air operations officer at McMurdo Station, winter party 1966.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mørkenatten Peak 71°52'S., 10°34'E.

Peak, 2,515 m., located 1 mi. S. of Chervov Peak in the Shcherbakov Range, Orvin Mtns., in Queen Maud Land. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Mørkenatten (the dark night).

Morley, Mount 69°33'S., 71°37'W.

Mountain, 1,750 m., surmounting the S. part of Lassus Mtns. in N. Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Thomas Morley (1557-1603), English composer.

Morley Glacier 71°12'S., 162°45'E.

A steep tributary to the Carryer Glacier, flowing S. between Hicks Ridge and Mt. Tokoroa in the Explorers Range, Bowers Mountains. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Keith T. Morley, Australian IGY observer, Weather Central Meteorologist at Little America V in 1958.

Morning, Lake 78°21'S., 163°53'E.

An ice lake, nearly 2 mi. long, lying 9 mi. N. of Mt. Morning along the E. side of the Koettlitz Glacier. Mapped by USGS from ground surveys and Navy air photos. Named in 1963 by US-ACAN in association with Mt. Morning.

Morning, Mount 78°31'S., 163°35'E.

Dome-shaped mountain, 2,725 m., standing WSW. of Mt. Discovery and E. of Koettlitz Gl. in Victoria Land. Discovered by the BrNAE (1901-4) which named it for the *Morning*, relief ship to the expedition.

Morozumi Range 71°39'S., 161°55'E.

A spectacular mountain range of unusual scenic beauty, extending NW.-SE. for 25 miles, with its northern elevations overlooking the convergence of the Gressitt and Rennick Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Henry M. Morozumi, aurora scientist at South Pole Station, 1960, and Station Scientific Leader at Byrd Station, 1963.

Morrel Island: see Thule Island 59°27'S., 27°19'W.

Morrell Island: see Thule Island 59°27'S., 27°19'W.

Morrell Point 59°26'S., 27°25'W.

The northernmost point on the W. coast of Thule I., South Sandwich Islands. Named by UK-APC in 1971 for Benjamin Morrell, sealer of Stonington, Connecticut, who visited the island in the *Wasp* in 1823.

Morrell Reef 54°27'S., 3°29'E.

A reef reported to lie close off the southeast coast of Bouvetøya, about 0.4 mi. northward of Cape Fie. First charted in 1898 by a German expedition under Karl Chun. Recharted in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Named by the Norwegians after Capt. Benjamin Morrell, American sealer who visited the northwest side of Bouvetøya in the *Wasp* in 1822, perhaps making the first landing on the island.

Morrellrevet: see Morrell Reef 54°27'S., 3°29'E.

Morris, Cape: see Fort William 62°23'S., 59°43'W.

Morris, Mount 78°19'S., 86°10'W.

A steep, sharp mountain about 1 mi. S. of Mt. Ostenso, in the main ridge of the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Wesley R. Morris, meteorologist at Byrd Station in 1957.

Morris Basin 75°39'S., 159°09'E.

A basin of about 9 square miles in area in the N. part of the Ricker Hills, in the Prince Albert Mtns., Victoria Land. The S. portion of the basin is ice free but the N. portion is occupied by a large lobe of ice. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Robert W. Morris, biologist at McMurdo Station in the 1965-66 and 1966-67 seasons.

Morris Cliff 80°20'S., 81°49'W.

A steep, east-facing cliff between the Marble Hills and Independence Hills in the Heritage Range, Ellsworth Mountains. Named by US-ACAN for Lt. Harold M. Morris, USN, pilot of LC-47 aircraft, who perished in a crash on the Ross Ice Shelf, Feb. 2, 1966.

Morris Glacier 54°05'S., 37°14'W.

Glacier flowing N. to the head of Sea Leopard Fjord in the Bay of Isles, South Georgia. Charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who named it for Edward Lyman Morris, a botanist who was then head of the Dept. of Natural Science at the Brooklyn Museum.

Morris Glacier 84°46'S., 169°30'W.

A glacier, 10 mi. long, which drains N. from Mt. Daniel to the Ross Ice Shelf between Lillie Range and Clark Spur. Named by the southern party of NZGSAE, 1963-64, for Cdr. Marion E. Morris, USN, Executive Officer (later Commanding Officer) of Squadron VX-6, who piloted the aircraft which flew the 1963-64 party's reconnaissance.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Morris Head 74°54'S., 134°50'W.

Ice-covered headland marking the seaward end of Hagey Ridge and NE. extremity of McDonald Heights, on the coast of Marie Byrd Land. The headland was photographed from aircraft of the USAS on Dec. 18, 1940, and was mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lloyd Morris, QMC, USN, Chief Quartermaster and senior member of the bathythermograph team aboard USS *Glacier* in exploring this coast, 1961-62.

Morris Heights 83°28'S., 169°42'E.

Relatively smooth ice-covered heights, forming a peninsula-like divide between Beaver and King Glaciers at the N. end of Queen Alexandra Range. Named by US-ACAN for Lt. Clarence T. Morris, USN, aerology officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1962 and 1963.

Morris Hills 80°23'S., 27°27'W.

Scattered group of hills 6 mi. NE. of Petersen Peak, in the La Grange Nunataks of north-central Shackleton Range. First mapped in 1957 by the CTAE; photographed in 1967 by U.S. Navy (trimetrogon aerial photography). Named by UK-APC for Leslie F. Morris, member of the Royal Soc. IGY Exp. at Brunt Ice Shelf, who in 1957 spent several weeks helping with the final preparations for the CTAE transpolar journey.

Morris Island 76°37'S., 147°48'W.

An ice-covered island about 7 mi. long, lying 5 mi. W. of Farmer I. in Sulzberger Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lt. (j.g.) J.E. Morris, USNR, aboard USS *Glacier* along this coast in 1961-62.

Morris Nunataks: see Morris Hills 80°23'S., 27°27'W.

Morrison, Mount 66°48'S., 51°27'E.

Mountain 1.5 mi. NE. of Mt. Best, in the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for H. C. Morrison, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Morrison, Mount 76°54'S., 161°32'E.

Mountain, 1,895 m., standing between the head of Cleveland Gl. and the Benson Gl. in Victoria Land. Discovered by the BrNAE (1901-4) which named it for J. D. Morrison of the *Morning*, relief ship to the expedition.

Morrison Bluff 75°05'S., 114°20'W.

A high rock and ice bluff on the W. side of Kohler Glacier, located 12 mi. SW. of Mt. Isherwood in the

Kohler Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Charles E. Morrison, USGS topographic engineer, who participated in surveys of Marie Byrd Land in 1966-67 and Ellsworth Land in 1967-68.

Morrison Glacier 66°10'S., 63°30'W.

Glacier 3 mi. long between Attlee and Eden Glaciers, flowing S. to the head of Cabinet Inlet, on the E. coast of Graham Land. Charted in 1947 by the FIDS, who named it for Rt. Hon. Herbert Morrison, M.P., British Sec. of State for Home Affairs and Home Security and member of the War Cabinet. Photographed from the air during 1947 by the RARE under Ronne.

Morrison Hills 84°12'S., 168°40'E.

A series of rugged E.-W. trending hills between Garrard Gl. and Hewson Gl. in the Queen Alexandra Range. Named by US-ACAN for Lt. I. James Morrison, USN, who did preliminary work leading to the induction of C-130 aircraft into Antarctica, and who also participated in USN Op. DFrz. for several seasons beginning in 1958-59.

Morrison Rocks 76°51'S., 117°39'W.

A group of rocks which outcrop along the southern slope of Mount Frakes, in the Crary Mountains, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy aerial photographs, 1959-66. Named by US-ACAN for Paul W. Morrison, USN, hospital corpsman at the South Pole Station in 1974.

Morris Peak 84°56'S., 167°22'W.

A prominent peak (910 m.) marking the NW. end of the Duncan Mtns., at the E. side of the mouth of Liv Glacier where the latter enters Ross Ice Shelf. Named by US-ACAN for Lt. Cdr. H. C. Morris, USN, commanding officer of the USS *Mills* during Operation Deep Freeze 1963.

Morris Point 54°01'S., 38°04'W.

A point 0.5 mi. E. of Pearson Pt. on the S. side of Bird Island, South Georgia. Named by UK-APC for Lt. (later Cdr.) Roger O. Morris, hydrographic officer in HMS *Owen* during survey of Stewart Strait and approaches in 1960-61.

Morris Rock 62°23'S., 59°48'W.

Rock lying 2 mi. W. of Fort William in the Aitcho Is., in the South Shetland Islands. The name Cape Morris was given by DI personnel on the *Discovery II* in 1935 to the W. extremity of Robert Island, but this point has since been identified as the original location of Fort William. Morris Rock was applied by the UK-APC in 1961 to preserve the name in the area.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Morriss Peak 76°50'S., 144°29'W.

A peak (950 m.) at the SW. end of the Wiener Peaks, in the Ford Ranges of Marie Byrd Land. The peak was mapped by the USAS, 1939-41, led by Byrd, and by the USGS from surveys and U.S. Navy air photos, 1959-65. The naming was proposed by Admiral Byrd for P.G.B. Morriss, manager of the Hotel Clark in Los Angeles, who provided office space and quarters for Byrd Antarctic Expeditions of 1928-30 and 1933-35.

Morro, Punta: see Naze, The 63°57'S., 57°32'W.

Morro Chato, Península: see Flat Top Peninsula 62°13'S., 59°02'W.

Morsa Bay 54°03'S., 37°44'W.

Small bay 2.5 mi. E. of Weddell Pt., indenting the N. side of Ice Fjord along the S. coast of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for the catcher *Morsa*, which was built in 1929, and later owned by the Compañía Argentina de Pesca, Grytviken.

Morse, Cape 66°15'S., 130°10'E.

A low, ice-covered cape which marks the E. side of the entrance to Porpoise Bay and forms the division between Banzare and Clarie Coasts, Wilkes Land. Delineated from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for William H. Morse, purser's steward on the brig *Porpoise* of the USEE (1838-42) under Wilkes. Due to an inadvertent error, this place name was incorrectly spelled "Cape Mose" for a number of years.

Morse Glacier 66°21'S., 130°05'E.

A channel glacier flowing to the E. side of Porpoise Bay, about 3 mi. SW. of Cape Morse. Delineated from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for William H. Morse, purser's steward on the brig *Porpoise* of the USEE (1838-42) under Wilkes. Due to an inadvertent error, this place name was incorrectly spelled "Mose Glacier" for a number of years.

Morse Nunataks 84°16'S., 160°50'E.

Isolated rock nunataks standing 4.5 mi. S. of Mt. Achernar, between Lewis Cliff and MacAlpine Hills. Named by US-ACAN for Oliver C. Morse III, USARP ionospheric scientist at South Pole Station, 1960.

Morse Point 54°05'S., 36°56'W.

Point marking the E. side of the entrance of Antarctic Bay on the N. coast of South Georgia. The point appears roughly charted on maps dating back to about 1900. It was roughly surveyed by DI personnel in the

period 1925-31, and resurveyed by the SGS, 1951-52. Named by the UK-APC after the British sealing vessel *Morse*, which was working in South Georgia in 1799-1800, probably the first British sealer to do so. She was based at Antarctic Bay when encountered by Edmund Fanning, who published an account of the meeting.

Morton, Mount 64°24'S., 61°01'W.

Mountain standing between Blériot and Cayley Glaciers, on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Grant Morton, American aviator who made the first parachute descent from an airplane using a parachute carried loosely.

Morton Glacier 83°12'S., 168°00'E.

A glacier, 15 mi. long, descending eastward from Holland Range between Vaughan Promontory and Lewis Ridge to the Ross Ice Shelf. Named by US-ACAN for Lt. Cdr. John A. Morton, officer in charge of USN Squadron VX-6 Detachment ALFA, which wintered at McMurdo Station, 1964.

Mortons Strait: see Morton Strait 62°42'S., 61°14'W.

Morton Strait 62°42'S., 61°14'W.

Strait between Snow I. on the SW. and Rugged and Livingston Islands on the NE., in the South Shetland Islands. The strait was named on a chart by James Weddell, published in 1825, and is now established in international usage.

Mosby Glacier 73°09'S., 61°40'W.

Glacier 5 mi. wide at its mouth, flowing in a SE. direction to the NW. corner of New Bedford Inlet, on the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS mapped its terminus from the ground. Named by the FIDS for Håkon Mosby, Norwegian meteorologist and oceanographer.

Mosby Peak 54°26'S., 3°21'E.

A snow-covered peak (670 m.) which rises above the W. part of Bouvetøya, 0.7 mi. NE. of Norvegia Point. Charted by the Norwegian expedition in the *Norvegia*, 1927-28, under Capt. Harald Horntvedt. Named by the expedition for Håkon Mosby, oceanographer and meteorologist, who was one of two scientists on the expedition.

Mosbys Topp: see Mosby Peak 54°26'S., 3°21'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mosbytoppen: see Mosby Peak 54°26'S., 3°21'E.

Mose, Cape: see Morse, Cape 66°15'S., 130°10'E.

Mose Glacier: see Morse Glacier 66°21'S., 130°05'E.

Moser Glacier 64°51'S., 62°22'W.

Glacier flowing into Andvord Bay just SE. of Arago Gl., on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Ludwig F. Moser (1805-1880), German physicist who invented stereoscopic photography in 1844.

Moses, Mount 74°33'S., 99°11'W.

The highest (750 m.) and most prominent of the Hudson Mountains, located near the center of the group, about 14 mi. NNE. of Mt. Manthe. Mapped from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Robert L. Moses, geomagnetist-seismologist at Byrd Station, 1967.

Moss Islands 64°09'S., 61°03'W.

Group of small islands and rocks lying E. of Midas I. and N. of Apéndice I. in Hughes Bay, off the W. coast of Graham Land. First charted in detail and given the descriptive name "Moos Inseln" (Moss Islands) by the SwedAE under Nordenskjöld in 1902.

Moss Lake 60°42'S., 45°37'W.

The southernmost lake in Paternoster Valley on Signy Island. So named by UK-APC because a luxuriant stand of moss covers the deeper part of the lake.

Mossman Inlet 73°17'S., 60°32'W.

Narrow ice-filled inlet which recedes N. 10 mi. between Cape Kidson and the SW. end of Kemp Pen., along the E. coast of Palmer Land. This inlet was first seen and photographed from the air in December 1940 by the USAS. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Robert C. Mossman, 1870-1940, British meteorologist and climatologist and member of the ScotNAE under Bruce, 1902-4.

Mossman Peninsula 60°46'S., 44°43'W.

Narrow peninsula 3 mi. long, extending S. from the W. part of Laurie I. and separating Scotia and Wilton Bays, in the South Orkney Islands. Disc. in 1821 by Capt. George Powell and Capt. Nathaniel Palmer, and roughly charted on Powell's map of 1822. Surveyed in 1903 by the ScotNAE under Bruce, who named it for Robert C. Mossman, meteorologist of the expedition.

Mossyface, Cape: see Canwe, Cape 74°43'S., 163°41'E.

Møteplassen Peak 72°47'S., 3°09'W.

The northernmost peak in the group bordering the S. side of Frostlandet Valley, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Møteplassen (the meeting place).

Møtesudden: see Well-met, Cape 63°47'S., 57°19'W.

Motherway Island 66°26'S., 110°31'E.

A small rocky island about 0.2 mi. N. of Peterson I., near the S. end of the Windmill Islands. First mapped from aerial photographs taken by USN Op. Hjp. in February 1947. Named by the US-ACAN for Paul T. Motherway, member of one of the two USN Op. Wml. photographic units which obtained aerial and ground photographic coverage of this area in January 1948.

Motherway Rock: see Motherway Island 66°26'S., 110°31'E.

Mothes Point 67°14'S., 67°52'W.

A point 7 mi. SW. of The Gullet on the E. side of Adelaide Island. Mapped by FIDS from air photos taken by RARE, 1947-48, and FIDASE, 1956-57. Named by UK-APC for Hans Mothes, German glaciologist who, with B. Brockhamp, made the first seismic soundings of a glacier, in Austria in 1926.

Mott Snowfield 63°20'S., 57°20'W.

A snowfield in NE. Trinity Peninsula between Laclavère Plateau and Antarctic Sound. Named by UK-APC for Peter G. Mott, leader of FIDASE, 1955-57.

Moubray Bay 72°11'S., 170°15'E.

A bay in western Ross Sea, indenting the coast of Victoria Land between Capes Roget and Hallett. Discovered in 1841 by Sir James Clark Ross and named by him for George H. Moubray, clerk in charge of the expedition ship *Terror*.

Moubray Glacier 71°52'S., 170°18'E.

A rather steep glacier flowing S. to Moubray Bay from Adare Saddle on Adare Peninsula. It is one of the main contributors of ice to Moubray Piedmont Glacier. Named by the NZGSAE, 1957-58, for its proximity to Moubray Bay.

Moubray Piedmont Glacier 71°55'S., 170°20'E.

A piedmont glacier filling the N. part of Moubray Bay, formed by the confluence of Moubray Gl. and ice streams falling from the W. side of the S. end of Adare Peninsula. The greater part of it is probably afloat. Named by the NZGSAE, 1957-58, for Moubray Bay.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mouillard Glacier 64°18'S., 60°53'W.

Glacier flowing into the SE. corner of Brialmont Cove, on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Louis P. Mouillard (1834-1897), French pioneer of gliding flight.

Moulder Peak 80°05'S., 83°02'W.

A sharp peak 3 mi. SE. of Mt. Rosenthal in the Liberty Hills, Heritage Range. Named by US-ACAN for storekeeper Andrew B. Moulder, USN, who was fatally injured in a cargo unloading accident at South Pole Station, Feb. 13, 1966.

Moulton, Mount 76°03'S., 135°08'W.

Broad, ice-covered mountain 3,070 m., standing 10 mi. E. of Mt. Berlin in the Flood Range, Marie Byrd Land. Discovered on aerial flights by the USAS in 1940, and named for Richard S. Moulton, chief dog driver at West Base and a member of the survey party which sledged to the W. end of the Flood Range in December 1940.

Moulton Escarpment 85°10'S., 94°45'W.

A rock and ice escarpment, 8 mi. long, in a semi-isolated position about 10 mi. west of Ford Massif where it forms the western shoulder of the Thiel Mountains. Surveyed by the USGS Thiel Mountains party, 1960-61. Named by US-ACAN for Kendall N. Moulton of the Div. of Polar Programs, National Science Foundation. As program manager of the Foundation's Field Operation Program, Moulton made more than a dozen deployments to Antarctica in the years 1958-77.

Moulton Icefalls 76°00'S., 134°35'W.

The steep icefalls draining the northern slopes of Mount Moulton, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys and the U.S. Navy air photos, 1959-66. Named by US-ACAN in association with Mount Moulton.

Mountaineer Range 73°28'S., 166°15'E.

The range of mountains lying between the Mariner and Aviator Glaciers in Victoria Land. The seaward parts of the range were first viewed by Ross in 1841, and subsequently by several British and later American expeditions. The precise mapping of its overall features was accomplished from U.S. Navy air photographs and surveys by New Zealand and American parties in the 1950's and 1960's. Named by the NZGSAE, 1958-59, in keeping with the backgrounds of members of the 1957-58 and 1958-59 field parties who made a reconnaissance of the area, and also in association with the names Aviator and Mariner.

Mountainview Ridge 78°55'S., 83°42'W.

A gentle ice-covered ridge which forms the SE. extremity of the Sentinel Range in the Ellsworth Mountains. So named by the Univ. of Minnesota Geological Party, 1963-64, because an excellent view of the high peaks of the Sentinel Range was obtained from the ridge.

Mount Pisgah Island: see Smith Island 63°00'S., 62°30'W.

Mount Tricorn Inlet: see Wright Inlet 73°57'S., 61°26'W.

Moureaux, Cap: see Moureaux Point 63°57'S., 61°49'W.

Moureaux Islands 65°05'S., 63°08'W.

Two islands and off-lying rocks lying 2.5 miles WNW. of Pelletan Pt. in Flandres Bay, off the W. coast of Graham Land. First charted and named by members of the BelgAE under Gerlache, who made a landing on one of the islands in February 1898.

Moureaux Point 63°57'S., 61°49'W.

Point which forms the N. extremity of Liège I., in Palmer Archipelago. Charted by the FrAE under Charcot, 1903-5, who named it for T. Moureaux, director of the Parc Saint-Maur Observatory, near Paris.

Mousinho Island 70°38'S., 71°58'E.

A partly ice-covered island, 235 m. high, about 2 mi. from the S. end of Gillock I. in the Amery Ice Shelf. Photographed by USN Op. Hjp. (1946-47) and ANARE (1958). First visited by a party led by J. Manning, from the ANARE Prince Charles Mtns. survey in Jan. 1969. Named by ANCA for A. Mousinho, pilot of the Beaver aircraft with the 1969 ANARE Prince Charles Mtns. party.

Mousse, Cape 66°48'S., 141°28'E.

Small rocky cape, fringed by many small islands and backed by moraine close to the S., protruding through the coastal icecap 2.5 mi. SW. of Cape Découverte. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE, 1949-51, and so named by them because several patches of lichens were found on the exposed rocky surfaces. "Mousse" is French for moss.

Mousses, Cap des: see Mousse, Cape 66°48'S., 141°28'E.

Moutonnée Lake 70°52'S., 68°20'W.

A meltwater lake 4 mi. S. of Ablation Point on the E. side of Alexander Island. Mapped by Directorate of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. So named by UK-APC because of the presence of *roches moutonnées* (sheep back rocks).

Möven See: see Gull Lake 54°17'S., 36°31'W.

Möwensee: see Gull Lake 54°17'S., 36°31'W.

Moxley, Mount 78°25'S., 162°21'E.

A peak in the Royal Society Range, surmounting the divide between Potter and Wirdnam Glaciers. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1963 for Lt. (jg) Donald F. Moxley, USN, Otter and helicopter pilot with Squadron VX-6 at McMurdo Station in 1960.

Moyano, Islas: see Pitt Islands 65°26'S., 65°30'W.

Moyes, Cape 66°35'S., 96°25'E.

Ice-covered point fronting on the Shackleton Ice Shelf, 18 mi. W. of Cape Dovers. Disc. by the AAE under Mawson, 1911-14, and named by him for Morton H. Moyes, meteorologist with the AAE Western Base party.

Moyes Islands 67°01'S., 143°51'E.

A group of small islands lying in the W. part of Watt Bay, 2.5 mi. SE. of Cape-Pigeon Rocks. Discovered by the AAE (1911-14) under Douglas Mawson, who named them for Morton H. Moyes who served as meteorologist with the expedition.

Moyes Peak 67°45'S., 61°13'E.

Small rock peak projecting slightly above the ice sheet 2 mi. N. of Pearce Peak, 12 mi. SW. of Falla Bluff. Disc. in February 1931 by the BANZARE under Mawson, and named by him for Cdr. Morton H. Moyes, RAN, cartographer of the expedition. The approximate position of this peak was verified in aerial photographs taken by the USN Op. Hjp. on February 26, 1947.

Moyes Point 60°45'S., 45°40'W.

Point in the SW. part of Signy I., South Orkney Is., forming the E. side of the SE. entrance to Fyr Channel. First charted in 1933 by DI personnel on the *Discovery II*. Surveyed by the FIDS in 1956-58 and named by the UK-APC in 1959 for William Moyes, British Govt. representative at Signy Island in 1912-13.

Mozart Ice Piedmont 70°00'S., 71°00'W.

Ice piedmont, 60 mi. long in a NW.-SE. direction and 15 mi. wide in its widest part, on the W. coast of Alexander Island. Mapped from air photos taken by the

RARE in 1947, by Searle of the FIDS in 1960. Named by the UK-APC for Wolfgang Mozart (1756-1791), Austrian composer.

Mozar Glacier: see Moser Glacier 64°51'S., 62°22'W.

Mramornyye, Nunataki: see Sigurd Knolls 71°21'S., 7°38'E.

Mt. Ginnis Peak: see McGinnis Peak 84°32'S., 177°52'W.

Muck Glacier 84°39'S., 177°30'E.

A glacier between Campbell Cliffs and Sullivan Ridge in the Queen Maud Mountains. It flows generally northward from Husky Heights, and then eastward around the N. end of Sullivan Ridge to enter Ramsey Glacier. Named by US-ACAN for Maj. James B. Muck, USA, of the U.S. Army Aviation Detachment which supported the Texas Tech Shackleton Glacier Exp. to this area, 1964-65.

Muckle Bluff 61°09'S., 54°52'W.

Bluff 5 mi. W. of Walker Pt. on the S. coast of Elephant I., South Shetland Islands. Mapped by U.K. Joint Services Exp., 1970-71. The descriptive name for this prominent feature was applied by UK-APC in 1971; muckle being an old Scottish word meaning large.

Mudrey Cirque 77°39'S., 160°44'E.

A cirque between Northwest Mtn. and West Goin in the S. part of Asgard Range, Victoria Land. Named by US-ACAN for Michael G. Mudrey, Jr., USARP geologist with the Dry Valley Drilling Project in Victoria Land in three seasons, 1972-75.

Mueller, Mount 66°55'S., 55°32'E.

Ice-covered mountain standing close E. of Mount Storegutt, 22 mi. W. of Edward VIII Bay. Mapped from aerial photos taken by ANARE in 1956 and named for F. von Mueller, a member of the Australian Antarctic Exploration Committee of 1886.

Mügge Island 66°55'S., 67°45'W.

One of the Bennett Islands, lying 1.5 mi. N. of the W. end of Weertman Island in Hanusse Bay. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for Johannes O.C. Mügge (1858-1932), German mineralogist who made pioneer studies of the plasticity of ice, in 1895.

Muhlig-Hofman Mountains: see Mühlig-Hofmann Mountains 72°00'S., 5°20'E.

Mühlig-Hofmann Mountains 72°00'S., 5°20'E.

A major group of associated mountain features extending E.-W. for 65 mi. between the Gjelsvik Mountains

GEOGRAPHIC NAMES OF THE ANTARCTIC

and Orvin Mountains in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for the division director of the German Air Ministry. Remapped by the NorAE, 1956-60.

Muir Peak 79°09'S., 86°25'W.

A conspicuous rock peak near the middle of Frazier Ridge in the Founders Peaks, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Hugh M. Muir, USARP auroral scientist and member of the winter party at the Plateau Station in 1966.

Mukai Rocks 69°03'S., 39°42'E.

A small cluster of rocks on the coast of Queen Maud Land. The rocks are situated on the east margin of Ongul Sound, opposite East Ongul Island, site of the scientific station of the Japanese Antarctic Research Expeditions. The name Mukai-iwa, meaning "facing rocks" or "opposite rocks," was given by JARE Headquarters in 1972.

Mulach, Mount 71°07'S., 164°04'E.

A mountain (1,080 m.) standing 4 mi. NE. of Mt. Draeger on the E. side of Posey Range, Bowers Mtns., where it overlooks the Lillie Glacier. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Chief Electrician's Mate William J. Mulach, USN, of the McMurdo Station winter party, 1967.

Mulebreen 67°28'S., 59°21'E.

Glacier 6 mi. wide, flowing WNW. into the SE. side of Stefansson Bay. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Mulebreen (the snout glacier).

Mule Island 68°39'S., 77°50'E.

A small island lying immediately SW. of Hawker Island, off the W. tip of Mule Peninsula, Vestfold Hills, in Prydz Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37) and named "Muløy" (snout island).

Mule Peninsula 68°39'S., 77°58'E.

An irregular-shaped rocky peninsula between Ellis Fjord and Krok Fjord in the southern part of the Vestfold Hills. Mapped from air photos taken by the Lars Christensen Exp. (1936-37) and called Breidnesmulen (the broad point snout) by Norwegian cartographers. Mule Peninsula is an adaptation of the original Norwegian name by ANCA.

Mule Point 67°05'S., 58°12'E.

Rocky point just S. of East Stack, at the E. side of Hoseason Glacier. Mapped by Norwegian cartogra-

phers from aerial photographers taken by the Lars Christensen Exp., 1936-37, and called Mule (snout).

Muleta, Pico: see Crutch Peaks 62°28'S., 59°56'W.

Mulga Island 67°14'S., 46°43'E.

Small island 3 mi. off the coast and 5 mi. NE. of Kirkby Head, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Mulga is the vernacular name for species of *Acacia* found in semi-desert areas of Australia.

Mulgrew Nunatak 79°38'S., 157°56'E.

A prominent nunatak, 1,600 m., standing 4 mi. E. of Tentacle Ridge in the Cook Mountains. Mapped by the Darwin Glacier Party of the CTAE (1956-58) and named for P. D. Mulgrew, chief radio operator at Scott Base, who accompanied Sir Edmund Hillary to the South Pole.

Mull, Mount 74°33'S., 63°08'W.

A mountain on the E. flank of Irvine Gl., standing 11 mi. SW. of Mt. Owen in the Guettard Range, Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for William B. Mull, cook at South Pole Station in 1964.

Müller Crest 72°11'S., 8°08'E.

A short ridgelike nunatak (2,620 m.) marking the SE. extremity of the Filchner Mtns. in the Orvin Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Johannes Müller, navigation officer of the *Deutschland*, the ship of the GerAE under Filchner, 1911-12. Remapped from air photos and survey by NorAE, 1956-60.

Müller Glacier 72°16'S., 166°24'E.

A tributary glacier, flowing NE. from Millen Range to enter Pearl Harbor Gl. close NW. of Mt. Pearson. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Dietland Müller-Schwarze, USARP biologist at Hallett Station (1964-65), Cape Crozier (1969-70 and 1970-71), and Palmer Archipelago (1971-72). His wife, Christine Müller-Schwarze, joined him as a member of the biology research parties in the last three summer seasons.

Müllerkammen: see Müller Crest 72°11'S., 8°08'E.

Müller Point 54°41'S., 35°55'W.

Point on the E. coast of South Georgia, forming the E. limit of Iris Bay. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Johannes Müller, Second Officer and navigator of the *Deutschland* during the GerAE, 1911-12. His survey and astronomical fixes included the mapping of this point and resulted in considerable improvements to the existing maps of South Georgia.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mulligan Peak 77°11'S., 160°15'E.

An ice-free peak 1 mi. N. of Robison Peak, at the N. end of Willett Range in Victoria Land. Named by US-ACAN for John J. Mulligan of the U.S. Bureau of Mines, who scaled this peak and the peak to the south of it during December 1960 and found coal beds and fossil wood.

Mulock Glacier 79°00'S., 160°00'E.

A large glacier draining ESE. into Mulock Inlet in the NW. corner of the Ross Ice Shelf. Named by the NZ-APC in association with Mulock Inlet.

Mulock Inlet 79°08'S., 160°40'E.

A re-entrant about 10 mi. wide between Capes Teall and Lankester. The feature is occupied by lower Mulock Glacier which drains through it to the Ross Ice Shelf. Discovered by the BrNAE (1901-4) and named for Lt. George F. A. Mulock, RN, surveyor with the expedition.

Muloy: see Mule Island 68°39'S., 77°50'E.

Mulroy Island 71°45'S., 98°06'W.

Small island which lies just off Black Crag, the E. extremity of Noville Pen., Thurston Island. Disc. by the USN Bellingshausen Sea Exp. in February 1960. Named by US-ACAN for Thomas B. Mulroy, fuel engineer with ByrdAE in 1928-30.

Mulvik: see Ellis Fjord 68°36'S., 78°05'E.

Mumford, Mount 71°33'S., 65°09'W.

The central summit in the line of low rock peaks 4 mi. N. of the W. end of Rathbone Hills, in the Gutenko Mtns. of central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Joel H. Mumford, USN, Medical Officer at Palmer Station, 1972.

Mumm Islands 65°01'S., 63°59'W.

A group of several small islands and rocks lying 1.5 mi. NW. of Turquet Point, Booth Island, off the W. coast of Graham Land. Disc. by the FrAE, 1903-5, under J.B. Charcot, who applied the name.

Mummy Pond 77°40'S., 162°39'E.

A pond between Suess and Lacroix Glaciers in Taylor Valley, Victoria Land. So named by T. L. Péwé, U.S. geologist who visited the area in December 1957, because of the mummified seals found around the pond.

Mundlauga Crags 71°57'S., 8°24'E.

A group of rock crags, 2,455 m., which form the S. end of Fenriskjeften Mtn. in the Drygalski Mtns., Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Mundlauga.

Munita, Península: see Waterboat Point 64°49'S., 62°51'W.

Munizaga Peak 85°32'S., 177°37'W.

An ice-free peak (2,590 m.) located 3 mi. ESE. of Misery Peak in the Roberts Massif, Queen Maud Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-65. Named by US-ACAN for Fernando S. Munizaga, Chilean geologist who participated in the USARP Ellsworth Land Survey, 1968-69, and accompanied the Texas Technological College geological party in a survey of Roberts Massif in the same season.

Munken: see Monk Islands 60°40'S., 45°55'W.

Munson, Mount 84°48'S., 174°26'W.

A mountain (2,800 m.) rising from the NW. flank of Mt. Wade, 3 mi. from its summit, in the Prince Olav Mountains. Discovered and photographed by R. Adm. Byrd on flights to the Queen Maud Mountains in November 1929. Named by US-ACAN for Capt. William H. Munson, USN, Commanding Officer of USN Air Development Squadron Six, otherwise known as VX-6, 1959-61.

Mural Nunatak 64°59'S., 61°32'W.

A conspicuous nunatak on the E. side of Hektoría Gl., 5 mi. NW. of Shiver Point, in Graham Land. Surveyed by FIDS in 1947 and 1955. The name, given by UK-APC, is descriptive of the nunatak's wall-like appearance when seen from the southwest.

Murch, Mount 84°38'S., 65°25'W.

A small mountain, 1,100 m., standing 5 mi. S. of Mt. Suydam in Anderson Hills in central Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Paul L. Murch, cook at Palmer Station, winter 1966.

Murchison, Mount 67°19'S., 144°15'E.

A dome-shaped, mostly snow-covered mountain (565 m.) on the W. side of the Mertz Glacier, about 11 mi. SW. of the head of Buchanan Bay. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Roderick Murchison of Melbourne, a patron of the expedition.

Murchison, Mount 73°25'S., 166°18'E.

A very prominent mountain, 3,500 m., marking the high point on the rugged divide between Fitzgerald and Wylde Glaciers in the Mountaineer Range, Victoria Land. Discovered in January 1841 by Sir James Clark Ross who named this feature for Sir Roderick Impey Murchison, then general secretary of the British Association.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Murdoch, Cape 60°48'S., 44°41'W.

Cape which forms the SE. tip of Mossman Pen. on the S. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for W. G. Burn Murdoch, Scottish artist on the *Balaena*, one of the Dundee whaling ships in the Antarctic in 1892-93, and a supporter of Bruce's expedition.

Murdoch Nunatak 65°01'S., 60°02'W.

Nunatak 3 mi. NE. of Donald Nunatak in the Seal Nunataks group, off the E. coast of Antarctic Peninsula. First charted by the FIDS in 1947, and named by them for W. G. Burn Murdoch.

Murmanskiy, Cape 69°40'S., 13°20'E.

An ice cape that projects from the W. side of Lazarev Ice Shelf, about 25 mi. NNE. of Leningradskiy Island, in Queen Maud Land. Mapped by the SovAE in 1959 and named by them for the city of Murmansk.

Murphy, Mount 75°20'S., 110°44'W.

A massive, snow-covered mountain with steep, rocky slopes, rising to 2,705 m. directly S. of Bear Peninsula, Marie Byrd Land. The mountain is bounded by the Smith, Pope and Haynes Glaciers. Delineated from aerial photographs taken by USN Op. Hjp. in January 1947. Named by US-ACAN for Robert Cushman Murphy of the American Museum of Natural History, noted authority on Antarctic and sub-Antarctic bird life. While serving on the whaler *Daisy* during the 1912-13 summer, he investigated wild life and charted the Bay of Isles region of South Georgia.

Murphy Bay 67°42'S., 146°19'E.

A bay 7 mi. wide between Penguin Point and Cape Bage. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Herbert D. Murphy, a member of the expedition.

Murphy Glacier 66°54'S., 66°20'W.

A glacier in Graham Land, flowing generally westward to Orford Cliff and merging with Wilkinson Gl. before terminating in Lallemand Fjord. Mapped from air photos taken by FIDASE (1956-57). Named for Thomas L. Murphy, FIDS leader and assistant surveyor at Detaille I. in 1956.

Murphy Inlet 71°56'S., 98°03'W.

Ice-filled inlet about 18 mi. long, with two parallel branches at the head, lying between Noville and Edwards Peninsulas on the N. side of Thurston Island. Delineated from aerial photographs taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Charles J. V. Murphy, assistant to R. Adm. Byrd after ByrdAE of 1928-30, and member of the wintering party of ByrdAE of 1933-35.

Murphy Rocks 77°35'S., 144°55'W.

Rock outcrops 12 mi. SE. of Mt. West on the broad ice-covered ridge between the Hammond and Boyd Glaciers, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Dion M. Murphy, aviation machinist's mate, USN, a helicopter flight crewman during Operation Deep Freeze 1968.

Murphy Wall 54°05'S., 37°24'W.

Series of N.-S. trending peaks, the highest 905 m., resembling a wall along the W. side of Grace Gl. on the N. side of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Robert Cushman Murphy, American ornithologist who made observations and collections in the Bay of Isles in 1912-13 for the American Museum of Natural History, New York.

Murray, Cape 64°21'S., 61°38'W.

A cape forming the western end of Murray Island, off the west coast of Graham Land. First charted by the BelgAE under Lt. Adrien de Gerlache (1897-99) and at the time considered to be joined to Graham Land. Named by Gerlache, presumably for Sir John Murray, British marine zoologist and oceanographer, an ardent advocate of Antarctic research.

Murray, Cape 79°35'S., 160°11'E.

A mainly ice-covered coastal bluff at the N. side of the mouth of Carlyon Gl., on the W. side of the Ross Ice Shelf. Discovered by the BrNAE (1901-4) and named for George R. M. Murray, temporary director of the scientific staff of the expedition, who had accompanied the *Discovery* as far as Cape Town.

Murray, Mount 76°09'S., 161°50'E.

Sharp granite peak, 1,005 m., standing 8 mi. W. of Bruce Point on the N. side of Mawson Gl. in Victoria Land. First charted by the BrAE (1907-9) which named it for James Murray, biologist with the expedition.

Murray Dome 70°42'S., 67°12'E.

A dome-shaped rock feature about 3 mi. SE. of Mt. McKenzie in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for Dr. L. Murray, medical officer at Macquarie I. in 1963 and at Wilkes Station in 1964.

Murray Foreland 74°00'S., 114°30'W.

A high ice-covered peninsula, 20 mi. long and 10 mi. wide, forming the northwestern arm of the Martin Peninsula on the coast of Marie Byrd Land. First

GEOGRAPHIC NAMES OF THE ANTARCTIC

mapped from aerial photographs taken by USN Operation Highjump in January 1947. Named by US-ACAN for Grover E. Murray, American geologist, member of the Board of Directors, National Science Foundation (1964-), President of Texas Tech University, Lubbock, Texas (1966-76).

Murray Glacier 71°39'S., 170°00'E.

Valley glacier, 20 mi. long, draining seaward along the E. side of Geikie Ridge in the Admiralty Mountains. Its terminus coalesces with that of Dugdale Gl. where both glaciers discharge into Robertson Bay along the N. coast of Victoria Land. First charted by the BrAE, 1898-1900, under C.E. Borchgrevink, who named this feature for Sir John Murray of the *Challenger* expedition, 1872-76.

Murray Harbor 64°21'S., 61°35'W.

A small harbor lying E. of Cape Murray on the N. side of Murray I., off the W. coast of Graham Land. The name was used by whalers in the area in 1922.

Murray Island 64°22'S., 61°34'W.

Island 6 mi. long lying at the SW. side of Hughes Bay, off the W. coast of Graham Land. The feature has been known to sealers operating in the area since the 1820's, although it was shown on charts as part of the mainland. In 1922 the whale catcher *Graham* passed through the channel separating it from the mainland, proving its insularity. Named in association with Cape Murray, the seaward extremity of the island.

Murray Islands 60°47'S., 44°31'W.

Group of small islands 1.2 mi. SE. of Cape Whitson, off the S. coast of Laurie I. in the South Orkney Islands. Disc. in 1823 by Matthew Brisbane, who explored the S. coast of Laurie I. under the direction of James Weddell. The name "Murrays Is." appears on Weddell's chart, but the islands are probably named for James Murray of London, maker of the chronometers used on Weddell's voyage.

Murray Monolith 67°47'S., 66°54'E.

The detached front, 370 m., of Torlyn Mtn., standing 4 mi. E. of Scullin Monolith in Mac. Robertson Land. Early in January 1930 the BANZARE under Mawson sighted land in this area, and an airplane flight was made from the ship *Discovery* for observation. On Feb. 13, 1931 Mawson landed on nearby Scullin Monolith. Named by Mawson for Sir George Murray, Chief Justice of South Australia and Chancellor of the University of Adelaide, a patron of the expedition.

Murray Snowfield 54°09'S., 37°09'W.

Snowfield centered 2 mi. S. of Possession Bay in South Georgia. The name "John Murray-Gletscher" was given to a glacier flowing into the head of Possession Bay

by members of the GerAE, 1911-12. The SGS, 1955-56, reported that there is no true glacier in this position, but that the nearby snowfield requires a name.

Murrish Glacier 71°02'S., 61°45'W.

A glacier about 15 mi. long on the E. side of Palmer Land. It drains ENE., to the N. of Stockton Peak and Abendroth Peak, and merges with the N. side of Gain Glacier before the latter enters Weddell Sea opposite Morency Island. Named by US-ACAN for David E. Murrish, USARP biologist, party leader for the study of peripheral vascular control mechanisms in birds in the Antarctic Peninsula region for three seasons, 1972-75.

Murry Peak: see Nemesis, Mount 68°12'S., 66°54'W.

Murrays Islands: see Murray Islands 60°47'S., 44°31'W.

Murtaugh Peak 85°41'S., 130°15'W.

A sharp peak, 3,085 m., surmounting a ridge 4 mi. WNW. of Mt. Minshew in the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for John E. Murtaugh, geologist with the Ohio State Univ. geological party to the Horlick Mountains, 1964-65.

Museum Ledge 84°45'S., 113°48'W.

The ledge is a flat sandstone bed about 25 m. long and 9 to 12 m. wide exposed by erosion. The feature is a fossil locality. It contains excellently displayed fossil wood and is located on the SW. shoulder of Mt. Glossopteris in the Ohio Range, Horlick Mountains. The name alludes to the display of fossil wood found here and was suggested by William E. Long, geologist with the Ohio State Univ. expedition who worked in these mountains in the 1960-61 and 1961-62 austral summers.

Mushketov Glacier 71°20'S., 14°55'E.

A large glacier trending northeastward, draining the area between the Wohlthat Mtns. on the west and the Weyprecht, Payer and Lomonosov Mtns. on the east, in Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by SovAE, 1958-59, and named after Ivan V. Mushketov (1850-1902), Russian geologist and geographer.

Mushroom Island 68°53'S., 67°53'W.

Ice-covered island lying 10 mi. WSW. of Cape Berteaux, off the W. coast of Graham Land. First charted by the BGLE under Rymill, 1934-37, and so named because of its resemblance to a mushroom cap.

Musjketovsökket: see Mushketov Glacier 71°20'S., 14°55'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Muskeg Gap 64°23'S., 59°39'W.

A low isthmus at the N. end of Sobral Peninsula, Graham Land. The gap provides a coastal route which avoids a long detour around Sobral Peninsula. Mapped from surveys by FIDS (1960-61). Named by UK-APC after the Canadian "Muskeg" tractor.

Musselman, Cape 71°17'S., 61°00'W.

Cape forming the S. side of the entrance to Palmer Inlet, on the E. coast of Palmer Land. Disc. by members of the USAS who explored this coast by land and from the air from East Base in 1940. Named for Lytton C. Musselman, member of the East Base party which sledged across Dyer Plateau to the vicinity of Mount Jackson, which stands inland from this cape.

Musson Nunatak 71°31'S., 63°27'W.

A pyramidal nunatak standing 10 mi. S. of Mt. Jackson, at the E. margin of the Dyer Plateau of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for John M. Musson, PH2, USN, photographer and member of the cartographic aerial mapping crew in LC-130 aircraft of Squadron VXE-6, 1968-69.

Mussorgsky Peaks 71°30'S., 73°19'W.

Two rocky peaks, 500 m., overlooking the N. shore of Brahms Inlet, 6 mi. NW. of Mt. Grieg in the SW. part of Alexander Island. A number of peaks in this vicinity first appear on maps by the RARE, 1947-48. These peaks, apparently included within that group, were mapped from RARE air photos by Searle of the FIDS in 1960. Named by the UK-APC for Modeste Mussorgsky (1839-1881), Russian composer.

Musy Dzhililya, Gora: see Dzhilil', Mount 72°01'S., 14°36'E.

Mutel Peak 76°31'S., 146°03'W.

A rock peak (860 m.) 2 mi. SW. of Mt. Iphigene in the Ford Ranges, Marie Byrd Land. Photographed and roughly plotted by the ByrdAE, 1928-30, and USAS, 1939-41. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Robert L. Mutel, ionospheric physicist at Byrd Station, 1969.

Mutilla, Islas: see Palosuo Islands 65°37'S., 66°05'W.

Mutt and Jeff: see Saluta Rocks 54°03'S., 37°57'W.

Mutton Cove 66°00'S., 65°39'W.

An anchorage 0.5 mi. NE. of the S. end of Beer I. in the Biscoe Islands. The cove is formed by four small islands, Harp, Upper, Cliff and Girdler Islands. Beer I. shelters the cove from the west. Charted in 1936 by the BGLE under Rymill and, at the suggestion of Lt. R.E.D. Ryder, RN, captain of the *Penola*, named Mutton Cove, a name which recalled early days in a training ship at Devonport.

Mutton Cove Island: see Beer Island 66°00'S., 65°41'W.

Mutton Island: see Grass Island 54°09'S., 36°40'W.

Muus Glacier 71°26'S., 61°36'W.

A glacier entering the N. side of Odom Inlet between Snyder Peninsula and Strømme Ridge, on the E. coast of Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for David Muus, USARP oceanographer aboard USCGC *Northwind* in the Ross Sea area, 1971-72, and a participant in the Weddell Sea Oceanographic Investigations aboard USCGC *Glacier*, 1974-75.

Myall Islands 67°40'S., 45°43'E.

Two islands lying close W. of the Thala Hills, off the coast of Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA after Myall, vernacular name for species of *Acacia* found in Australia.

Myers Glacier 72°14'S., 100°18'W.

Valley glacier about 7 mi. long, flowing SW. from Mt. Noxon on Thurston I. to Abbot Ice Shelf in Peacock Sound. Delineated from aerial photographs taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Lt. (j.g.) Dale P. Myers, USN, helicopter pilot aboard USS *Burton Island* who made exploratory flights to Thurston I. in February 1960.

Myoto Islands: see Meoto Rocks 68°07'S., 42°36'E.

Myriad Islands 65°05'S., 64°25'W.

Scattered group of small islands and rocks extending for about 5 mi., lying W. of the Dannebrog and Vedel Islands in the Wilhelm Archipelago. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because of the very many islands in the group.

Naab, Mount 76°36'S., 160°56'E.

Mountain, 1,710 m., which surmounts the E. part of Eastwind Ridge in the Convoy Range. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for Capt. Joseph Naab, Jr., USCG, commanding officer of the icebreaker *Eastwind* during 1961 and 1962.

Nabbodden: see Tilley Nunatak 67°24'S., 60°03'E.

Nabbøya 69°16'S., 39°35'E.

A high, small, bare rock island lying 1 mi. W. of Hamnenabben Head in the E. part of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nabbøya (the peg island).

Nabbvika: see Tilley Bay 67°24'S., 60°04'E.

Nachtigal Glacier 54°29'S., 36°09'W.

A glacier 2 mi. long flowing N. from Mt. Fagan toward Doris Bay, South Georgia. Charted by the German group of the International Polar Year Investigations, 1882-83, who named the glacier after Dr. Gustav Nachtigal (1834-85), German physician and explorer of Africa.

Nachtigal Peak 54°29'S., 36°14'W.

Rocky peak on a spur projecting northward from the SE. extremity of the Allardyce Range, South Georgia. It rises to 1,160 m. at the W. side of the head of Cook Gl., 4 mi. E. of Nordenskjöld Peak. The name "Kleine Pic" (Little Peak) was given to this feature by the German group of the International Polar Year Investigations, 1882-83. The SGS, 1951-52, reported that "Kleine Pic" is not particularly descriptive or distinctive for the peak described, and that name has been rejected. The name Nachtigal Peak, recommended by the UK-APC in 1954, derives from nearby Nachtigal Glacier (q.v.), which was named by the German group of 1882-83.

Nadeau Bluff 84°04'S., 175°09'E.

A mainly ice-covered bluff just SW. of Giovinco Ice Piedmont, protruding into Canyon Gl. from that glacier's E. side. Named by US-ACAN for F. A. Nadeau, Jr., a member of the support party at McMurdo Station, 1963.

Nadezhdy, Poluostrov: see Nadezhdy Island 70°44'S., 11°40'E.

Nadezhdy Island 70°44'S., 11°40'E.

A bare rock island nearly 1 mi. long, lying just off the north-central side of Schirmacher Hills, Queen Maud Land. First photographed from the air by the GerAE,

1938-39. Mapped by the SovAE in 1961 and named Ostrov Nadezhdy (hope island).

Naess Glacier 70°22'S., 67°55'W.

Small glacier, which is separated from Chapman Gl. to the N. by a rocky ridge, flowing from the W. coast of Palmer Land into George VI Sound. First surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Erling D. Naess, Mgr. of the Vestfold Whaling Co., who was of great assistance to the BGLE, 1934-37.

Nagagutsu Point 69°41'S., 38°21'E.

An ice-covered point which forms the SE. extremity of Padda I. in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Remapped by JARE, 1957-62, and named Nagagutsu-misaki (boot point).

Nagagutu Point: see Nagagutsu Point 69°41'S., 38°21'E.

Naga-iwa Rock 67°27'S., 41°31'E.

A conspicuous rock on the shore protruding into the sea 2 mi. E. of Cape Akarui, in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Naga-iwa (long rock).

Nakano-seto Strait 69°01'S., 39°33'E.

A very narrow strait between Ongul Island and East Ongul Island in the E. part of Lützow-Holm Bay. The strait was first noted in 1957 by JARE who named it Nakano-seto (central strait).

Nakaya Islands 66°27'S., 66°14'W.

A small group of islands in Crystal Sound, 10 mi. NE. of Cape Rey, Graham Land. Mapped from surveys by FIDS (1958-59). Named by UK-APC for Ukichiro Nakaya, Japanese physicist who has specialized in investigations of the structure and properties of single ice crystals and snowflakes.

Nakayubi, Cape 69°14'S., 39°39'E.

A rocky point marking the south extremity of a U-shaped peninsula which extends seaward in finger-like fashion from the west side of Langhovde Hills, Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62. The name "Nakayubi-misaki" (middle finger point) was given by JARE Headquarters in 1972 in association with Cape Koyubi, which lies 0.5 mi. northwestward.

Nälegga Ridge 72°39'S., 4°03'W.

A narrow rock ridge marking the N. end of Seilkopf Peaks in the Borg Massif, Queen Maud Land. Mapped by Norwegian cartographers from surveys

GEOGRAPHIC NAMES OF THE ANTARCTIC

and air photos by NBSAE (1949-52) and named Nålægga (the needle ridge).

Nameless Glacier 71°38'S., 170°18'E.

A glacier that descends westward from Adare Peninsula and discharges into Protection Cove, Robertson Bay, 2 mi. N. of Newnes Glacier. It was charted and named by the Northern Party of the BrAE, 1910-13. This was the only one of the Robertson Bay glaciers that was left unnamed by C.E. Borchgrevink, who headed the BrAE, 1898-1900.

Nameless Point 53°59'S., 37°41'W.

Point at the NW. side of the entrance to Right Whale Bay, near the W. end of the N. coast of South Georgia. Charted and probably named by DI personnel in the period 1926-30.

Nan Anderson, Cape: see Anderson, Cape 60°46'S., 44°35'W.

Nance Ridge 84°23'S., 65°36'W.

A rock ridge 2 mi. NE. of Mt. Yarbrough in the Thomas Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Vernon L. Nance, radioman at Palmer Station, winter 1966.

Nancy Rock 62°13'S., 59°06'W.

Rock lying 2 mi. W. of Flat Top Peninsula, King George I., in the South Shetland Islands. Named by the UK-APC in 1961 after the American sealing vessel *Nancy* (Capt. Benjamin Upton) from Salem, Massachusetts, which visited the South Shetland Islands in 1820-22.

Nansen, Mount 74°33'S., 162°36'E.

A prominent mountain, 2,740 m., surmounting the steep eastern escarpment of the Eisenhower Range, 11 mi. S. of Mt. Baxter, in Victoria Land. Discovered by the BrNAE, 1901-4, and named for Fridtjof Nansen, Norwegian Arctic explorer from whom Capt. Scott obtained much practical information for his expedition.

Nansen, Mount: see Fridtjof Nansen, Mount 85°21'S., 167°33'W.

Nansen Bank: see Nansen Reef 54°18'S., 36°09'W.

Nansen Harbour: see Stromness Harbor 54°09'S., 36°41'W.

Nansen Ice Sheet 74°53'S., 163°10'E.

An ice shelf, about 30 mi. long and 10 mi. wide, nourished by the Priestley and Reeves Glaciers and abutting the N. side of Drygalski Ice Tongue, along the

coast of Victoria Land. This feature was explored by the South Magnetic Polar Party of the BrAE, 1907-9, and by the Northern Party of the BrAE, 1910-13. Frank Debenham, geologist with the latter expedition, applied the name "Nansen Sheet" as the feature is adjacent to Mt. Nansen, the dominating summit in the area.

Nansen Island 64°35'S., 62°06'W.

The largest of the islands lying in Wilhelmina Bay off the W. coast of Graham Land. Disc. by the BelgAE under Gerlache, 1897-99, and named for Dr. Fridtjof Nansen, noted Arctic explorer.

Nansen Island: see Lavoisier Island 66°12'S., 66°44'W.

Nansen Norte, Isla: see Enterprise Island 64°32'S., 62°00'W.

Nansen Reef 54°18'S., 36°09'W.

A submerged rocky ridge with a depth of about 2 m. over it, situated 4.5 mi. ESE. of Cape George, off the N. coast of South Georgia. Named after the S.S. *Fridtjof Nansen* which struck this reef and sank, Nov. 10, 1906.

Nansen Rocks: see Nansen Reef 54°18'S., 36°09'W.

Nansen Sheet: see Nansen Ice Sheet 74°53'S., 163°10'E.

Nansen Sur, Isla: see Nansen Island 64°35'S., 62°06'W.

Nantucket Inlet 74°35'S., 61°45'W.

Ice-filled inlet 6 mi. wide, which recedes 13 mi. in a NW. direction between the Smith and Bowman Peninsulas, along the E. coast of Palmer Land. Disc. by members of the USAS in a flight from East Base on Dec. 30, 1940, and named for Nantucket Island, Massachusetts, home of early New England whalers of the first half of the 19th century.

Napier Birks, Mount: see Birks, Mount 65°18'S., 62°10'W.

Napier Birks, Mount: see Alibi, Mount 65°55'S., 62°40'W.

Napier Ice Rise 69°14'S., 67°47'W.

An ice rise in the SW. portion of Wordie Ice Shelf, western Antarctic Peninsula, 12 mi. NW. of Mt. Balfour. Surveyed by FIDS in Nov. 1958. Named by UK-APC after John Napier (1550-1617), Scottish mathematician who invented logarithms and published his first tables in 1614.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Napier Mountains 66°30'S., 53°40'E.

Group of more-or-less separated peaks, the highest 2,300 m., extending 40 mi. in a NW.-SE. direction and centering about 40 mi. S. of Cape Batterbee in Enderby Land. Disc. in January 1930 by the BANZARE under Mawson, who named them for the Hon. John Mellis Napier, a judge of the Supreme Court of South Australia.

Napier Range: see Napier Mountains 66°30'S., 53°40'E.

Napier Rock 62°10'S., 58°26'W.

Rock lying 1.75 mi. ESE. of Point Thomas in Admiralty Bay, King George I., in the South Shetland Islands. Charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1960 for Ronald G. Napier (1925-1956) of FIDS, general assistant and handyman at the Signy Island station in 1955, and then leader at Admiralty Bay until he was drowned on March 24, 1956.

Narabi Rocks 68°24'S., 41°47'E.

Three aligned rocks extending nearly 3 mi. along the coast, between Temmondai Rock and Kozō Rock, in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Narabi-iwa (row rocks).

Nares, Mount 81°27'S., 158°10'E.

A massive mountain, over 3,000 m., standing just S. of Mt. Albert Markham and overlooking the head of Flynn Gl., in the Churchill Mountains. Discovered by the BrNAE (1901-4) led by Scott, who named it for Sir George S. Nares, captain of the *Challenger* during part of its cruise of 1872-74, leader of an Arctic exp. in 1875-76, and a member of the Ship Committee for Scott's expedition.

Narrow Isle: see Gibbs Island 61°28'S., 55°34'W.

Narrow Neck 73°06'S., 169°03'E.

A narrow, but elevated isthmus or neck of land between Langevad Gl. and Mandible Cirque in the S. part of Daniell Peninsula, Victoria Land. The feature serves to join Tousled Peak and the Mt. Lubbock vicinity to the main mass of Daniell Peninsula. The descriptive name was applied by NZ-APC in 1966.

Narrows, The 67°36'S., 67°12'W.

Narrow channel between Pourquoi Pas I. and Blaiklock I., connecting Bigourdan and Bourgeois Fjords off the W. coast of Graham Land. Disc. and given this descriptive name by the BGLE, 1934-37, under Ry-mill.

Narval Bay 54°02'S., 37°41'W.

Bay 1.5 mi. wide in the N. side of Ice Fjord, South Georgia. The name North Bay was given to this feature by the Scottish geologist David Ferguson during his visit to South Georgia in 1911-12. Since the same name is well established for an arm of Prince Olav Hbr. 20 mi. away, the UK-APC recommended in 1957 that a new name be substituted for this feature. Narval Bay is after the catcher *Narval*, built in 1929, which was owned by the Compañía Argentina de Pesca in 1934.

Nascent Glacier 73°22'S., 167°37'E.

A short, fairly smooth glacier in the E. extremity of Mountaineer Range, draining SE. to the coast of Victoria Land between Gauntlet Ridge and Index Point. So named in 1966 by NZ-APC, presumably as descriptive of the emerging or youthful development of the feature.

Nash, Mount 74°14'S., 62°20'W.

Mountain, 1,295 m., standing 13 mi. WNW. of the head of Keller Inlet and 12 mi. NNE. of Mt. Owen, on the E. coast of Palmer Land. Disc. by the RARE, 1947-48, under Ronne, who named it for H. R. Nash, of Pittsburgh, Pa., a contributor to the expedition.

Nash Glacier 71°15'S., 168°10'E.

Glacier, 20 mi. long, draining the N. slopes of Dunedin Range in the Admiralty Mountains. The terminus of this glacier merges with that of Wallis Glacier and Dennistoun Glacier before reaching the sea E. of Cape Scott. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Arthur R. Nash, USN, helicopter pilot with Squadron VX-6 during Operation Deep Freeze 1967 and 1968.

Nash Hills 81°53'S., 89°23'W.

A short range of isolated ice-covered hills about 25 mi. NW. of Martin Hills. The feature was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958. Named by US-ACAN for Lt. Archie R. Nash, USN, Officer-in-Charge at Byrd Station in 1962.

Nashornet Mountain 72°22'S., 2°00'W.

A mountain 6 mi. NE. of Viddalskollen Hill, on the S. side of Viddalen Valley in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Nashornet (the rhinoceros).

Nashornkalvane Rocks 72°19'S., 1°56'W.

A group of rocks 2 mi. N. of Nashornet Mtn., at the S. side of the mouth of Viddalen Valley in Queen Maud Land. Mapped by Norwegian cartographers from sur-

GEOGRAPHIC NAMES OF THE ANTARCTIC

veys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Nashornkalvane (the rhinoceros' calves).

Nash Range 81°55'S., 162°00'E.

A mainly ice-covered coastal range, 40 mi. long, bordering the W. side of the Ross Ice Shelf between Dickey and Nimrod Glaciers. Named by the Ross Sea Committee for Walter Nash who, as Leader of the Opposition and later as Prime Minister of New Zealand, gave strong support to N.Z. participation in the CTAE, 1956-58.

Nash Ridge 74°17'S., 163°00'E.

A high, massive ridge of eastern Eisenhower Range, about 10 mi. long and 5 mi. wide, projecting between the flow of the O'Kane and Priestley Glaciers, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Harold A. Nash, biologist at McMurdo Station in the 1965-66 and 1966-67 seasons.

Näsudden: see Naze, The 63°57'S., 57°32'W.

Natani Nunatak 84°46'S., 66°32'W.

A nunatak 1.5 mi. NNE. of the extremity of Snake Ridge in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Kirmach Natani, biologist at South Pole Station, winter 1967.

Nathan Hills 73°25'S., 164°24'E.

A series of hills in the E. part of the Arrowhead Range of the Southern Cross Mtns., in Victoria Land. Named by the southern party of NZGSAE, 1966-67, for Simon Nathan, senior geologist with this party.

Natho, Punta: see Aguda Point 65°02'S., 63°41'W.

Nattriss Head 54°51'S., 35°56'W.

Small but prominent rock headland marking the S. side of the entrance to Drygalski Fjord on the SE. coast of South Georgia. Charted by GerAE, 1911-12, under Filchner. It was named Nattriss Point for E. A. Nattriss, shipping officer to the Discovery Committee, following survey by DI personnel in 1927. The name Nattriss Head is approved for this feature because the term head is more descriptive than point, and because acceptance of this form will avoid confusion with Nattriss Point (also named for E. A. Nattriss) on Saunders I. in the South Sandwich Islands.

Nattriss Point: see Nattriss Head 54°51'S., 35°56'W.

Nattriss Point 57°48'S., 26°22'W.

Rocky point forming the E. end of Saunders I. in the South Sandwich Islands. First charted in 1819 by a

Russ. exp. under Bellingshausen. Recharted in 1930 by DI personnel on the *Discovery II* and named by them for E. A. Nattriss, shipping officer to the Discovery Committee.

Nautilus Head 67°38'S., 67°07'W.

Prominent headland rising to 975 m. near the NE. extremity of Pourquoi Pas I., off the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS who named it after the submarine *Nautilus* in Jules Verne's *Twenty Thousand Leagues Under The Sea*. Other features on Pourquoi Pas I. are named for characters in this book.

Navarrette Peak 75°55'S., 128°45'W.

A rock peak marking the SW. extremity of the Mt. Petras massif, in the McCuddin Mtns. of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-69. Named by US-ACAN for Capt. Claude Navarrette, USN, Deputy Commander and Chief of Staff to the Commander, U.S. Naval Support Force, Antarctica, during Operation Deep Freeze 1972. He also served on the staff during 1969 and 1970.

Navegante Vidal, Islote: see Vidal Rock 62°30'S., 59°43'W.

Navigator Nunatak 73°15'S., 164°13'E.

A large nunatak in the middle of the head of Aviator Glacier in Victoria Land. Named by the northern party of NZGSAE, 1962-63, because it is a good landmark for navigation and the name is also in association with Aviator, Pilot and Co-pilot Glaciers, nearby.

Navigator Peak 79°23'S., 85°48'W.

A sharp and prominent peak, 1,910 m., standing 4 mi. E. of Zavis Peak in the N. part of the White Escarpment, Heritage Range. So named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, because the peak served as a landmark to navigators and pilots returning to camp from flights in the southern part of the Heritage Range.

Navy, Mount: see Butler, Mount 78°10'S., 155°17'W.

Navy Range: see Colbert Mountains 70°35'S., 70°35'W.

Nayls, Ostrov: see Niles Island 66°26'S., 110°24'E.

Naze, The 63°57'S., 57°32'W.

Peninsula in N. James Ross I., marking the SE. entrance to Herbert Sound and extending about 5 mi. NE. from Terrapin Hill toward the south-central shore of Vega Island. Disc. and named "Näsudden" by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

SwedAE, 1901-4, under Nordenskjöld. The recommended form is the English version used by Norden-skjöld.

N. D. Lorette, Mont: see Lorette, Mount 72°32'S., 31°09'E.

Neall Massif 72°04'S., 164°28'E.

A mountain massif rising between the Salamander and West Quartzite Ranges. Named by the NZ-APC for V. E. Neall, leader and geologist of the NZGSAE, 1967-68.

Neb Bluff 67°00'S., 66°35'W.

A conspicuous rock bluff 6 mi. S. of Orford Cliff, Graham Land, overlooking the E. side of Lallemand Fjord. Surveyed by FIDS in 1956 and so named because of its snout-like appearance.

Nebesnaya, Bukhta: see Sparkes Bay 66°22'S., 110°32'E.

Nebles Point 62°12'S., 58°52'W.

Point forming the W. side of the entrance to Collins Hbr. in the SW. part of King George I., South Shetland Islands. On his chart of 1825 James Weddell, Master, RN, applied the name Nebles Harbour to Collins Hbr., or possibly to an anchorage close N. of Ardley Island; the detail of this part of his map cannot be interpreted with certainty. Nebles Point was given by the UK-APC in 1960 in order to preserve Weddell's naming in the area. The point lies between the two possible positions of his name.

Neck or Nothing Passage 62°29'S., 60°21'W.

Narrow passage leading from Blythe Bay between the S. end of Desolation I. and a small group of islands 0.2 mi. southward, in the South Shetland Islands. The name was applied prior to 1930, probably by whalers who frequented Blythe Bay and who at times ran their vessels to sea via this passage to escape severe easterly gales.

Neder, Mount 71°02'S., 167°40'E.

Mountain with a small, pointed summit (1,010 m.) that surmounts the NW. part of Quam Heights in the Anare Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Irving R. Neder, USARP geologist in the Ohio Range and Wisconsin Range area, 1965-66, and McMurdo Sound area, 1966-67.

Nedresjöen: see Unter-See, Lake 71°20'S., 13°27'E.

Needle, The: see Spire, The 68°18'S., 66°53'W.

Needle Island 53°02'S., 72°35'E.

A pinnacle rock lying 0.2 mi. W. of the N. end of McDonald Island in the McDonald Islands. Surveyed and given this descriptive name by ANARE in 1948.

Needle Peak 62°44'S., 60°11'W.

Sharply-pointed black peak, 370 m., standing at the W. side of Brunow Bay on the S. coast of Livingston I., in the South Shetland Islands. The feature was named Barnards Peak on James Weddell's chart published in 1825, but the name Needle Peak given by DI personnel following a 1935 survey has succeeded it in usage. The name Barnard Point (q.v.) has been approved for the nearby point at the SE. side of False Bay.

Needles, The: see Les Dents 68°57'S., 70°58'W.

Negra, Mesa: see Birdsend Bluff 64°45'S., 62°33'W.

Negra, Punta: see Black Point 62°29'S., 60°43'W.

Negra, Punta: see Siffrey Point 63°13'S., 57°12'W.

Negra, Roca: see Black Rock 53°39'S., 41°48'W.

Negra, Roca: see Tomblin Rock 57°04'S., 26°39'W.

Negrita, Cabo: see Marescot Point 63°29'S., 58°35'W.

Negro, Cabo: see Siffrey Point 63°13'S., 57°12'W.

Negro, Islote: see Stark Rock 65°15'S., 64°33'W.

Negro, Nunatak: see Spigot Peak 64°38'S., 62°34'W.

Negros Head: see Bidlingmaier, Cape 53°01'S., 73°32'E.

Neighbour Peak 54°31'S., 36°06'W.

A peak rising 1 mi. W. of Pirner Peak at Royal Bay, South Georgia. The Br. Combined Services Exp., 1964-65, identified this feature as "Nachbar" (meaning neighbor), the name used by the Ger. exp. under Schrader, 1882-83. The UK-APC recommended in 1971 that "Nachbar" be used in the English form Neighbour and the descriptive term peak be added to it.

Neill Peak 67°50'S., 66°37'E.

Mountain, 460 m., standing 3 mi. SW. of Scullin Monolith in Mac. Robertson Land. Disc. on Feb. 13, 1931 by BANZARE under Mawson, who presumably applied the name.

Neil Peak: see Neill Peak 67°50'S., 66°37'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Neilsen Glacier: see Nielsen Glacier 71°31'S., 169°41'E.

Neilson Peak 70°57'S., 62°13'W.

A peak in the central part of Parmelee Massif at the head of Lehrke Inlet, on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for David R. Neilson, USARP biologist at Palmer Station, 1975.

Neith Nunatak 83°17'S., 55°55'W.

A nunatak 3 mi. N. of Baker Ridge in northern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Willard Neith, photographer with the Electronic Test Unit in the Pensacola Mountains, 1957-58.

Neko Harbor 64°50'S., 62°33'W.

Small bay indenting the E. shore of Andvord Bay 6 mi. SE. of Beneden Head, along the W. coast of Graham Land. First seen and roughly charted by the BelgAE under Gerlache, 1897-99. Named after Messrs. Chr. Salvesen's floating factory *Neko*, which operated in the South Shetland Is. and Antarctic Pen. area for many seasons between 1911-12 and 1923-24, and which often used this bay. The name was published by the Scottish geologist David Ferguson in 1921, following his visit to this area in 1913.

Nella Island 70°37'S., 166°04'E.

The northern of two small, rocky islands lying just off the NW. edge of Davis Ice Piedmont, off the N. coast of Victoria Land. Named by ANARE after M. V. *Nella Dan*, one of two expedition ships used by ANARE in 1962 to explore this area.

Nella Rock 67°31'S., 62°51'E.

A reef sounding 2 fathoms 3 feet situated 2.5 cables from and bearing 81° from the eastern extremity of the largest of the Sawert Rocks, at the entrance to Holme Bay. Named by ANCA. The rock was struck by the *Nella Dan* on Mar. 4, 1969 on passage from Mawson Station to Melbourne.

Nelly Island 66°14'S., 110°11'E.

The largest and easternmost of the Frazier Islands, lying in Vincennes Bay. The Frazier Islands were delineated from aerial photographs taken by USN Op. Hjp. in February 1947. Nelly I. was visited on Jan. 21, 1956 by a party of the ANARE who established an astronomical control station there. So named by ANARE because there are several Giant Petrel, or Nelly, rookeries on the island.

Nelson, Mount 85°47'S., 153°48'W.

A mountain, 1,930 m., standing 3 mi. NE. of Mt. Pulitzer, near the W. side of Scott Gl. in the Queen Maud

Mountains. First mapped by the ByrdAE, 1933-35. Named by US-ACAN for Randy L. Nelson, who made satellite geodesy studies at McMurdo Station, winter party 1965.

Nelson Channel 57°03'S., 26°43'W.

Navigable channel between Candlemas and Vindication Islands, in the South Sandwich Islands. First roughly charted by Capt. James Cook, discoverer of these islands in 1775. Recharted in 1930 by DI personnel on the *Discovery II*, who gave the name Nelson Strait for Lt. A. L. Nelson, RNR, chief officer and navigator of the ship. The name has been amended to avoid duplication with Nelson Strait in the South Shetland Islands.

Nelson Cliff 71°14'S., 168°42'E.

A prominent rock cliff at the W. side of Simpson Gl. on the N. coast of Victoria Land. First charted by the Northern Party, led by Victor Campbell, of the BrAE, 1910-13. Named for Edward W. Nelson, biologist of the expedition.

Nelson Cliffs: see Nelson Cliff 71°14'S., 168°42'E.

Nelson Island 62°18'S., 59°03'W.

Island 12 mi. long and 7 mi. wide, lying SW. of King George I. in the South Shetland Islands. The name dates back to at least 1821 and is now established in international usage.

Nelson Nunatak 72°56'S., 167°54'E.

A mainly ice-covered nunatak in the middle of Hand Glacier, in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Thomas R. Nelson, USN, construction mechanic at McMurdo Station, 1967.

Nelson Peak 83°40'S., 55°03'W.

A peak, 1,605 m., standing at the eastern end of Drury Ridge and Brown Ridge where the two ridges abut Washington Escarpment, in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Willis H. Nelson, geologist with the Neptune Range field party, 1963-64.

Nelson Rock 67°23'S., 62°45'E.

A solitary, dark rock, partly ice-covered, 3 mi. N. of Williams Rocks, off the coast of Mac. Robertson Land. Mapped by R. G. Dovers of ANARE in 1954. Named by ANCA for R. Nelson, weather observer at Mawson Station in 1962, who assisted with the triangulation of this rock and the erection of a beacon.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Nelson's Isles: see Nelson Island 62°18'S., 59°03'W.

Nelson Strait: see Nelson Channel 57°03'S., 26°43'W.

Nelson Strait 62°20'S., 59°18'W.

Strait lying between Nelson and Robert Islands, in the South Shetland Islands. Probably first charted in 1821 by Capt. Nathaniel B. Palmer, American sealer, who named it Harmony Strait. Renamed King George's Strait on Capt. George Powell's chart of 1822, and Parrys Straits by James Weddell, Master, RN, on his chart of 1825. It has since become known as Nelson Strait, probably taking its name from Nelson Island, which it adjoins on the east.

Nemesis, Mount 68°12'S., 66°54'W.

Mountain, 790 m., which lies 2 mi. NE. of the seaward extremity of Roman Four Promontory and close N. of Nyen Fjord, on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. The name is believed to have been given by members of the USAS, 1939-41.

Nemesis Glacier 70°32'S., 67°30'E.

A large glacier which flows NE. through the center of the Aramis Range, Prince Charles Mountains. Disc. in January 1957 by ANARE southern party under W. G. Bewsher, and named after Homer's Nemesis because considerable difficulty was experienced in traversing the region due to the glacier.

Nemesis Mountain: see Nemesis, Mount 68°12'S., 66°54'W.

Nemesis Peak: see Nemesis, Mount 68°12'S., 66°54'W.

Nemo Cove 67°43'S., 67°18'W.

Cove midway along the E. side of Pourquoi Pas I., off the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS and named after Captain Nemo, designer and captain of the *Nautilus* in Jules Verne's *Twenty Thousand Leagues Under the Sea*. Other features on the island are named after characters in this book.

Nemo Peak 64°46'S., 63°16'W.

Conspicuous peak, 865 m., standing 1 mi. NE. of Nipple Peak in the N. part of Wiencke I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache. The name appears on a chart based on a 1927 survey by DI personnel in the *Discovery*, but may reflect an earlier naming.

Neny Bay 68°12'S., 66°58'W.

Small indentation in the W. coast of Graham Land which is bounded on the W. by Nyen Island, and on the NW. and SE. respectively by Stonington I. and Roman Four Promontory. The bay was first charted

by the BGLE under Rymill, 1934-37. The name, derived from Nyen Island, was suggested by members of East Base of the USAS, 1939-41, who referred to it as Nyen Island Bay.

Neny Fjord 68°16'S., 66°50'W.

Bay 10 mi. long in an E.-W. direction and 5 mi. wide, between Red Rock Ridge and Roman Four Promontory on the W. coast of Graham Land. This coast was first explored in 1909 by Dr. Jean B. Charcot who, it appears, gave this name to a feature somewhat north of the bay described. The BGLE made a detailed survey of this area in 1936-37, and in correlating their work with that of Charcot applied the name Nyen Fjord to the bay between Red Rock Ridge and Roman Four Promontory. The name has become established in this latter position through international acceptance and use.

Neny Fjord Thumb: see Little Thumb 68°19'S., 66°53'W.

Neny Glacier 68°15'S., 66°25'W.

A glacier flowing NW. into the N. part of Nyen Fjord on the W. side of Antarctic Peninsula. This feature together with Gibbs Glacier, which flows SE., occupy a transverse depression between Nyen Fjord and Mercator Ice Piedmont on the E. side of Antarctic Peninsula. The name Nyen Glacier, derived from association with Nyen Fjord, was first used by the U.S. Antarctic Service, 1939-41, whose members used the glacier as a sledging route.

Neny Glacier Island: see Pyrox Island 68°12'S., 66°41'W.

Neny Island 68°12'S., 67°03'W.

Island 1.5 mi. long which rises to 675 m., lying 1 mi. NW. of Roman Four Promontory and directly N. of the mouth of Nyen Fjord, off the W. coast of Graham Land. Disc. by the BGLE under Rymill, 1934-37, and named after nearby Nyen Fjord.

Neny Island Bay: see Nyen Bay 68°12'S., 66°58'W.

Neny Islands: see Nyen Island 68°12'S., 67°03'W.

Neny Matterhorn 68°20'S., 66°51'W.

Sharp, pyramid-shaped peak over 1,125 m., standing in the NW. part of the Blackwall Mtns. on the S. side of Nyen Fjord, Graham Land. First roughly surveyed in 1936-37 by the BGLE under Rymill, and resurveyed in 1948-49 by the FIDS. The name was apparently first used by members of the RARE, 1947-48, under Ronne, and the FIDS, and derives from its location near Nyen Fjord, and its resemblance to the Swiss Matterhorn.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Neny Trough: see Neny Glacier 68°15'S., 66°25'W.

Neptune Glacier 71°44'S., 68°17'W.

Glacier on the E. coast of Alexander I., 12 mi. long and 4 mi. wide, flowing E. into George VI Sound to the S. of Triton Point. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. The mouth of the glacier was positioned in 1936 by the BGLE. Named by the UK-APC for the planet Neptune following a FIDS survey in 1949. The head of the glacier was mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960.

Neptune Nunataks 76°37'S., 145°18'W.

A small group of nunataks between the Chester and Fosdick Mountains, in the Ford Ranges, Marie Byrd Land. Mapped by the USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Gary D. Neptune, geologist with the Marie Byrd Land Survey II, 1967-68 season.

Neptune Range 83°30'S., 56°00'W.

A mountain range, 70 mi. long, lying WSW. of Forrestal Range in the central part of the Pensacola Mountains. The range is comprised of Washington Escarpment with its associated ridges, valleys and peaks, the Iroquois Plateau, and the Schmidt and Williams Hills. It was discovered and photographed on Jan. 13, 1956 on a USN transcontinental plane flight from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for the Navy P2V-2N "Neptune" aircraft with which this flight was made.

Neptunes Bellows 63°00'S., 60°34'W.

Channel on the SE. side of Deception I. forming the entrance to Port Foster, in the South Shetland Islands. The name was appended by American sealers prior to 1822 because of the strong gusts experienced in this narrow channel.

Neptunes Window 62°59'S., 60°33'W.

Narrow gap between two rock pillars, situated close E. of Whalers Bay on the SE. side of Deception I., in the South Shetland Islands. So named by Lt. Cdr. D. N. Penfold, RN, following his survey of Deception I. in 1948-49, because weather and ice conditions in the approach to Neptunes Bellows could conveniently be observed from this gap.

Nergaard Peak 72°00'S., 9°27'E.

A peak (2,475 m.) located 3 mi. south of Niels Peak in the Gagarin Mountains of Queen Maud Land. Mapped by Norwegian cartographers from air photos and surveys by the NorAE, 1956-60, and named for Niels Nergaard, scientific assistant with NorAE, 1956-58.

Nero, Mount 71°12'S., 159°50'E.

A mountain (2,520 m.) surmounting the W. wall of Daniels Range 3 mi. N. of Forsythe Bluff, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Leonard L. Nero, USARP biologist at McMurdo Station, 1967-68.

Nervo, Mount 83°14'S., 58°00'W.

A mountain, 1,070 m., standing 3 mi. N. of Mt. Coulter in the Schmidt Hills portion of the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for George W. Nervo, radioman at Ellsworth Station, winter 1958.

Nesholmen Island 69°44'S., 38°12'E.

A small island lying 0.5 mi. off Djupvikneset Peninsula in southern Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nesholmen (the ness island) because of its proximity to Djupvikneset Peninsula.

Neshyba Peak 71°14'S., 62°45'W.

A small, sharp peak, mostly snow covered, surmounting the N. part of a complex ridge 16 mi. ENE. of Mt. Jackson, in E. Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Stephen Neshyba, USARP oceanographer who studied the laminar structure of the bottom water in the Antarctic Peninsula area, 1972-73.

Nesos, Mount 78°12'S., 167°06'E.

The remnants of a volcanic core, over 400 m. high, projecting through the ice near the SW. end of White Island, in the Ross Archipelago. Named by the NZGSAE (1958-59) from the Greek word *nesos* (*nisos*), meaning island, and referring to the fact that although isolated by the ice sheet the hill is a part of White Island.

Nesøya 69°00'S., 39°35'E.

Island, 0.5 mi. long, lying close off the N. point of East Ongul I. in the E. side of the entrance of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nesøya (the point island).

Nespelen, Mount 76°47'S., 161°48'E.

A massive mountain, the highest in the coastal ranges between the Mackay and Fry Glaciers, lying on the N. side of Benson Gl., 4 mi. S. of Mt. Davidson. Named by the N.Z. Northern Survey Party (1956-57) of the CTAE after the *Nespelen*, one of the vessels of the American convoy to McMurdo Sound that season.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ness, Mount 71°20'S., 66°52'W.

Northernmost of the Batterbee Mtns., 1,890 m., standing 9 mi. NE. of the summit of Mt. Bagshawe and 14 mi. inland from George VI Sound on the W. coast of Palmer Land. The mountain was first seen and photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, and was mapped from these photographs by W. L. G. Joerg. It was surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Mrs. Patrick Ness, who contributed toward the cost of the BGLE, 1934-37.

Nestling Rock 71°23'S., 170°24'E.

A rock lying in the sea just E. of the N. portion of Adare Peninsula, along the coast of Victoria Land. The descriptive name applied by NZ-APC suggests the location of this relatively small feature beside towering Downshire Cliffs.

Nestor, Mount 64°25'S., 63°28'W.

Mountain, 1,250 m., the northernmost of the Achaean Range in Anvers I., in the Palmer Archipelago. Its W. side rises steeply from Marr Ice Piedmont; its E. side is a jumble of crevasses and jagged rock pinnacles. Surveyed by the FIDS in 1955 and named by the UK-APC for Nestor, oldest of the Achaean chieftains fighting at Troy in Homer's *Iliad*.

Neuburg Peak 82°37'S., 52°54'W.

A jagged rock peak, 1,840 m., rising 2.5 mi. E. of Walker Peak in the SW. part of Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Hugo A. C. Neuburg, glaciologist at Ellsworth Station, a member of the first party to visit Dufek Massif, in December 1957.

Neufortuna Bay: see Ocean Harbor 54°20'S., 36°16'W.

Neumann Peak 67°04'S., 67°34'W.

A peak on the N. end of Hansen I., in Hanusse Bay in Graham Land. Mapped from air photos taken by RARE, 1947-48, and FIDASE, 1956-57. Named by UK-APC for Franz E. Neumann (1798-1895), German physicist who made an important contribution to understanding of the thermal conductivity of ice.

Neumayer, Cape 63°42'S., 60°34'W.

Cape forming the NE. end of Trinity I., in the Palmer Archipelago. Charted and named by the SwedAE under Nordenskjöld, 1901-4, for Georg B. von Neumayer (1826-1909), distinguished German geophysicist. In recent years the name Cape Wollaston has been applied to this cape, but the feature so named by Henry Foster has now been identified as the NW. cape of Trinity Island.

Neumayer, Mount 75°16'S., 162°17'E.

A mountain (720 m.) surmounting D'Urville Wall on the N. side of the terminus of David Glacier, in Victoria Land. Discovered by the BrNAE, 1901-4, under Scott, who named this feature for Georg von Neumayer, German geophysicist, who was active in organizing Antarctic exploration.

Neumayer Channel 64°47'S., 63°30'W.

Channel 16 mi. long in a NE.-SW. direction and about 1.5 mi. wide, separating Anvers I. from Wiencke I. and Doumer I., in the Palmer Archipelago. The SW. entrance to this channel was seen by Dallmann, leader of the Ger. exp., 1873-74, who named it Roosen Channel. The BelgAE, 1897-99, under Gerlache, sailed through the channel and named it for Georg von Neumayer. The second name has been approved because of more general usage.

Neumayer Cliffs 73°07'S., 1°45'W.

A series of abrupt rock cliffs forming the NE. end of Kirwan Escarpment in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for German geophysicist Georg von Neumayer. Surveyed by the NBSAE, 1949-52.

Neumayer Escarpment: see Neumayer Cliffs 73°07'S., 1°45'W.

Neumayer Glacier 54°15'S., 36°41'W.

Glacier, 8 mi. long and 2 mi. wide, which flows E. along the N. flank of Allardyce Range to the W. side of the head of Cumberland West Bay, South Georgia. Charted by the SwedAE under Nordenskjöld, 1901-4, and named for Georg von Neumayer.

Neumayer Steilwand: see Neumayer Cliffs 73°07'S., 1°45'W.

Neuner, Mount 75°18'S., 72°41'W.

A mountain 3.5 mi. SW. of Mt. Chandler, in the Behrendt Mtns., Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Charles S. Neuner, station engineer at Camp Sky-Hi, summer 1961-62.

Neupokoyeva, Zaliiv: see Neupokoyev Bight 70°05'S., 4°45'E.

Neupokoyev Bight 70°05'S., 4°45'E.

A bight 30 mi. wide, indenting the ice shelf that fringes the coast of Queen Maud Land about 20 mi. NE. of Tsiolkovskiy Island. The feature was photographed from the air by NorAE in 1958-59 and roughly mapped from these photos. It was also mapped by SovAE in 1961 and named for K. K. Neupokoyev,

GEOGRAPHIC NAMES OF THE ANTARCTIC

Soviet hydrographer, who worked in northern polar areas in the 1920's.

Neu-Schwabenland: see New Schwabenland 72°30'S., 0°30'E.

Neustruyev, Mount 71°51'S., 12°14'E.

Peak, 2,900 m., standing 5 mi. NNE. of Gneiskopf Peak in the Südliche Petermann Range, Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet geographer S. S. Neustruyev (1874-1928).

Neustruyeva, Gora: see Neustruyev, Mount 71°51'S., 12°14'E.

Nevada, Isla: see Snow Island 62°47'S., 61°23'W.

Nevado, Pico: see Snow Peak 54°00'S., 37°55'W.

Névé Nunatak 78°17'S., 160°54'E.

An isolated nunatak just N. of Halfway Nunatak, between the Upper Staircase and the E. side of Skelton Névé. Surveyed in 1957 by the N.Z. Northern Survey party of the CTAE (1956-58) and named for its association with Skelton Névé.

Nevlingen Peak 67°59'S., 55°05'E.

A prominent isolated peak, 2,100 m., standing 13 mi. SE. of Doggers Nunataks in Enderby Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nevlingen.

Nevskiye Nunataks 71°40'S., 8°05'E.

A group of scattered nunataks comprising the Sørensen Nunataks and Hemmestad Nunataks in the Drygalski Mountains, Queen Maud Land. Mapped by Norsk Polarinstitut from surveys and air photos by NorAE, 1956-60. Also mapped by the SovAE in 1961; the name is an adjective derived from Neva, a river in the Soviet Union.

Newall, Mount 77°30'S., 162°42'E.

A peak, 1,920 m., the NE. extremity of Asgard Range, in Victoria Land. Discovered by the BrNAE (1901-4) and named for one of the men who helped raise funds to send a relief ship for the expedition.

Newall Glacier 77°30'S., 162°50'E.

Glacier in the E. part of the Asgard Range of Victoria Land, flowing E. between Mt. Newall and Mt. Weyant into the Wilson Piedmont Glacier. Mapped by the N.Z. Northern Survey Party of the CTAE, 1956-58, who named it after nearby Mt. Newall.

Newark Bay 54°21'S., 36°55'W.

Bay 3 mi. long, entered at the SE. end of Fanning Ridge, along the S. coast of South Georgia. The presence of this bay seems to have been first noted in 1819 by a Russ. exp. under Bellingshausen, who roughly charted a small inlet in this approximate position. The name dates back to about 1927 and has become established for the feature.

New Bedford Inlet 73°22'S., 61°15'W.

Large pouch-shaped, ice-filled embayment between Cape Kidson and Cape Brooks, along the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by members of the USAS, and named after New Bedford, Massachusetts, the center of the New England whaling industry in the middle of the 19th century.

Newburg Point 66°06'S., 66°46'W.

A point on the NW. coast of Lavoisier I., Biscoe Islands. Mapped from air photos taken by FIDASE (1958-59). Named by UK-APC for Louis H. Newburg, American physiologist who has specialized in the physiology of heat regulation and clothing for cold environments.

Newcomb Bay 66°16'S., 110°33'E.

Sheltered bay about 1 mi. in extent, between Clark Peninsula and Bailey Peninsula in the Windmill Islands. First mapped from USN Op Hjp. aerial photographs taken in February 1947. In February 1957 Willis L. Tressler, oceanographer, led a party from the U.S.S. *Glacier* in charting and sounding the bay. The name was suggested by Tressler for Lt. Robert C. Newcomb, USN, navigator of the *Glacier* and member of the survey party.

Newcomer Glacier 77°47'S., 85°27'W.

Glacier 20 mi. long transecting the N. part of the Sentinel Range, flowing SE. from the vicinity of Allen Peak and then E. to where it leaves the range N. of Bracken Peak. Named by the US-ACAN for Cdr. Loyd E. Newcomer of USN Squadron VX-6, pilot on photographic flights over the range on Dec. 14-15, 1959.

Newell, Mount: see Newall, Mount 77°30'S., 162°42'E.

Newell Point 62°20'S., 59°32'W.

Point on the N. side of Robert I., 2.5 mi. E. of the N. end of the island, in the South Shetland Islands. Charted and named in 1935 by DI personnel on the *Discovery II*.

New Fortuna Bay: see Ocean Harbor 54°20'S., 36°16'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mount 83°27'S., 168°48'E.
 Mountain, 1,480 m., standing between Len-
 and Beaver Glaciers, 4 mi. SW. of Yeates
 Queen Alexandra Range. Named by US-
 r Cdr. N. E. Nickerson, USN, commanding
 USS *Edisto* during USN Op. DFrz. 1965.

Ice Shelf 75°45'S., 145°00'W.
 Shelf about 35 mi. wide, lying N. of Siemi-
 glacier and the W. part of Ruppert Coast,
 rd Land. First observed and roughly mapped
 yrDAE (1928-30). Named by US-ACAN for
 J. Nickerson, USN, administrative officer on
 of the Commander, Task Force 43, during
 eeze 1966.

Cape: see Nicolas Rocks 60°34'S., 46°06'W.

Rocks 60°34'S., 46°06'W.
 f rocks at the NW. side of the Larsen Is., lying
 off the W. end of Coronation I. in the South
 Islands. Disc. by Cape George Powell and
 athaniel Palmer in December 1821. Named
 "Nicolas" by Powell after the feast day of Saint
 s, December 6, the approximate day of discov-
 well's spelling "Nicolas" has been retained be-
 f long usage, but the term rocks is considered
 escriptive of the feature.

II, Ile: see Nicholas, Mount 69°22'S.,
 N.

Bay: see Nilsen Bay 67°36'S., 64°34'E.

Fjord 70°42'S., 165°50'E.
 12 mi. wide between Cape North and Gregory
 on the N. coast of Victoria Land. Named by
 RE for Capt. Hans Nielsen, master of the M.V.
Dan used in exploring this coast, 1962.

Glacier: see McMahon Glacier 70°45'S.,
 5'E.

Glacier 71°31'S., 169°41'E.
 er, 4 mi. long, discharging into the W. side of
 rtson Bay just W. of Calf Point, northern Victoria
 . First charted by the BrAE, 1898-1900, under
 Borchgrevink, who named it for Prof. Yngvar
 en of Christiania University, Norway.

Napen: see Niels Peak 71°57'S., 9°23'E.

on Bay: see Nilsen Bay 67°36'S., 64°34'E.

s Peak 71°57'S., 9°23'E.

Victoria Land. Charted and named by the BrNAE,
 1901-4.

Newnes, Cape: see Nuñez, Cape 54°16'S., 37°25'W.

Newnes Glacier 71°41'S., 170°14'E.

Glacier dropping sharply from the Adare Saddle to
 empty into Protection Cove at the head of Robertson
 Bay, Victoria Land. Charted by BrAE, 1898-1900,
 under C.E. Borchgrevink, who named it for Sir George
 Newnes, sponsor of the expedition.

New Plymouth 62°37'S., 61°12'W.

Small bay bordered by an extensive line of beaches,
 lying S. of Start Pt. and between Rugged I. and the W.
 end of Livingston I., in the South Shetland Islands.
 This name, used by early sealers, dates back to at least
 1822 and is now established in international usage.

New Rock 63°01'S., 60°44'W.

Rock, 105 m. high, lying 0.75 mi. off the SW. coast of
 Deception I., in the South Shetland Islands. The name
 of the rock derives from its relatively recent charting in
 about 1929.

New Schwabenland 72°30'S., 0°30'E.

An area name for the mountainous upland of Queen
 Maud Land extending from the Kraul Mountains to
 Vorposten Peak. This area, more than 500 miles in
 extent, was first explored from aircraft by the German
 Antarctic Expedition of 1938-39 led by Capt. Alfred
 Ritscher. They named it after the expedition ship
Schwabenland and the province of that name in Ger-
 many. The maps published by this expedition were of
 an uneven quality, features in the eastern portion of
 the area being plotted with greater reliability. It has
 not been possible for US-ACAN to identify some fea-
 tures plotted and named by the expedition. The west-
 ern part of the area was surveyed by the NBSAE,
 1949-52. The entire area was mapped from air photos
 and survey undertaken by Norwegian Antarctic Expe-
 ditions in the years 1956-60.

New South Britain: see South Shetland Islands
 62°00'S., 58°00'W.

New South Shelland: see South Shetland Islands
 62°00'S., 58°00'W.

Newton, Mount 74°01'S., 65°30'E.

A large humped mountain with a boulder strewn sur-
 face and conical peak near the center, standing be-
 tween flow of Collins and Mellor Glaciers in the Prince
 Charles Mountains. Mapped by ANARE from air
 photos taken in 1956. Named by ANCA for Dr. G.
 Newton, medical officer at Mawson Station, 1960.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. Mapped by Nor. cartographers from air photos and surveys by the NorAE, 1956-60, and named for Niels Nergaard, scientific assistant with NorAE, 1956-58.

Niépe Glacier 65°07'S., 63°22'W.

Glacier which joins with Daguerre Gl. and flows into Lauzanne Cove, Flandres Bay, on the W. coast of Graham Land. Shown on an Argentine Govt. chart of 1954. Named by the UK-APC in 1960 for Joseph N. Niépce (1765-1833), French physicist, the first man to produce a permanent photographic record, 1816-29, who, with J. L. M. Daguerre, invented the daguerreotype process of photography perfected in 1839.

Nigg Rock 60°43'S., 44°51'W.

Insular rock, 155 m. high, lying 0.5 mi. NW. of Route Pt., the NW. tip of Laurie I. in the South Orkney Islands. First seen and roughly charted by Capt. George Powell and Capt. Nathaniel Palmer on the occasion of their joint cruise in 1821. Recharted in 1903 by the ScotNAE under William S. Bruce, who named it for the birthplace of his wife in Scotland.

Nikolaya Vavilova, Gora: see Vavilov Hill 72°02'S., 13°11'E.

Nikolayev, Mount 71°44'S., 12°26'E.

The central peak, 2,850 m., of Aurdalsegga Ridge in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1963 for Soviet petrographer V. A. Nikolayev.

Nikolayeva, Gora: see Nikolayev, Mount 71°44'S., 12°26'E.

Nikolayev Range 71°54'S., 6°02'E.

A range standing between Austreskorve Glacier and Lunde Glacier in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norsk Polarinstitut from surveys and air photos by NorAE, 1956-60. Also mapped by SovAE in 1961 and named for Andriyan G. Nikolayev, Soviet astronaut.

Niles Island 66°26'S., 110°24'E.

Rocky island, 0.2 mi. long, lying close off the S. end of Holl I. in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for G. W. Niles, a member of the USN Op. Hjp. and USN Op. Wml. photographic units which photographed the area in February 1947 and January 1948, respectively.

Niles Rock: see Niles Island 66°26'S., 110°24'E.

Nils, Mount 68°04'S., 48°01'E.

Prominent, ice-covered mountain standing close W. of Rayner Gl. and 3 mi. S. of Mt. Christensen, Enderby Land. Plotted from air photos taken by ANARE in 1956 and 1957. Named by ANCA for Capt. Nils Larsen, master of the Norwegian exploration ship *Norvegia*, which was in the vicinity of Amundsen Bay in January 1930.

Nilse Hullet 54°10'S., 37°35'W.

Cove indenting the S. coast of South Georgia, 1.5 mi. SW. of Cheapman Bay and 1 mi. ENE. of Samuel Islands. Surveyed by the SGS in the period 1951-57. The name is well established in local use.

Nilsen, Mount 78°03'S., 155°00'W.

A peak 4 mi. WSW. of Mt. Paterson in the Rockefeller Mtns., on Edward VII Peninsula. Discovered in 1929 by the ByrdAE, and named by Byrd for Captain Nilsen of the Norwegian whaler *C.A. Larsen*, which towed the *City of New York* through the pack ice.

Nilsen Bay 67°36'S., 64°34'E.

Small bay just W. of Strahan Gl., and 18 mi. ESE. of Cape Daly. Disc. in February 1931 by the BANZARE under Mawson, who named it after the master of the Norwegian whaler *Sir James Clark Ross* which transported coal to Antarctic waters for the *Discovery*. On the map published in the *Geographical Journal* of August 1932, a wide bay between Cape Daly and the Strahan Gl. is called Nielsen Bay. Recent examination of Mawson's notes shows that the bay was placed too far west and the name misspelled.

Nilsen Island 54°39'S., 36°25'W.

Small island lying 1.5 mi. W. of the N. part of Novosilski Bay, off the S. coast of South Georgia. The island has appeared on charts since the 1930's. It was recharted by SGS in the period 1951-57, and named by the UK-APC for Nochart Nilsen, gunner of the Compañía Argentina de Pesca, Grytviken, 1939-40 and 1946-48, and of the South Georgia Whaling Company, Leith Hbr., for several years beginning in 1949.

Nilsen Mountains: see Nilsen Plateau 86°20'S., 158°00'W.

Nilsen Peak 84°32'S., 175°25'W.

A prominent peak (780 m.) at the N. end of Waldron Spurs, marking the E. side of the mouth of Shackleton Glacier. Named by US-ACAN for W. B. Nilsen, Master of the USNS *Chattahoochee* during Operation Deep Freeze 1965.

Nilsen Plateau 86°20'S., 158°00'W.

A rugged, ice-covered plateau which, including Fram Mesa, is about 30 mi. long and 1 to 12 mi. wide, rising

GEOGRAPHIC NAMES OF THE ANTARCTIC

to 3,940 m. between the upper reaches of the Amundsen and Scott Glaciers, in the Queen Maud Mountains. Discovered in November 1911 by the Nor. exp. under Roald Amundsen, and named by him for Capt. Thorvald Nilsen, commander of the ship *Fram*.

Nilsevidda: see Nils Plain 72°07'S., 0°27'E.

Nils Jørgennutane: see Nils Jørgen Peaks 71°52'S., 2°36'W.

Nils Jørgen Peaks 71°52'S., 2°36'W.

A group of small peaks about 6 mi. NE. of Mt. Schumacher on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Nils Jørgen Schumacher, senior meteorologist with the NBSAE.

Nils Larsen, Mount 72°14'S., 23°06'E.

Mountain, 2,190 m., standing 3 mi. SW. of Mt. Widerøe in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named for Capt. Nils Larsen, leader of the Norwegian exp., 1928-29.

Nils Larsenfjellet: see Nils Larsen, Mount 72°14'S., 23°06'E.

Nils Larsen Glacier 68°44'S., 90°39'W.

A glacier descending to the west coast of Peter I Island close northward of Norvegia Bay. In February 1929 the crew of the *Norvegia* carried out a series of investigations of this island, landing on February 2. Named for Nils Larsen, captain of the *Norvegia*.

Nils Plain 72°07'S., 0°27'E.

An ice plain of about 25 mi. extent, lying northward of Mt. Roer in the Sverdrup Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Nils Roer, surveyor of the NBSAE.

Nilsson Rocks 71°45'S., 67°42'E.

A group of fairly low rock outcrops which enclose a meltwater lake, situated 9 mi. S. of Fisher Massif in the Prince Charles Mountains. Plotted from air photos taken by ANARE aircraft in 1956. Named by ANCA for C. S. Nilsson, physicist at Mawson Station in 1957.

Nimbus Hills 79°35'S., 82°50'W.

A rugged line of hills and peaks about 14 mi. long, forming the SE. part of Pioneer Heights in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961-66.

Named by US-ACAN after the National Aeronautics and Space Administration weather satellite, Nimbus, which took photographs of Antarctica (including the Ellsworth Mountains) from approx. 500 mi. above earth on Sep. 13, 1964.

Nimitz Glacier 78°55'S., 85°10'W.

A glacier about 40 mi. long and 5 mi. wide, draining the area about 10 mi. W. of the Vinson Massif and flowing SE. between the Sentinel Range and Bastien Range to enter Minnesota Glacier, in the central Ellsworth Mountains. Discovered by USN Squadron VX-6 on photographic flights of Dec. 14-15, 1959, and mapped by USGS from these photos. Named by US-ACAN for Fleet Adm. Chester W. Nimitz, USN, who as Chief of Naval Operations at the time of Operation Highjump, 1947-48, made possible that unprecedentedly large and complex Antarctic expedition.

Nimrod, Mount 85°25'S., 165°45'E.

A mountain, 2,835 m., standing 4 mi. SSE. of Mt. Saunders in the Dominion Range. Discovered by the BrAE (1907-9) and named after the expedition ship *Nimrod*.

Nimrod Glacier 82°21'S., 163°00'E.

A major glacier, about 85 mi. long, flowing from the polar plateau in a northerly direction between the Geologists and Miller Ranges, then northeasterly between the Churchill Mtns. and Queen Elizabeth Range, and finally spilling into Shackleton Inlet and the Ross Ice Shelf between Capes Wilson and Lyttelton. It was photographed from the air by USN Op. Hjp., 1946-47. The name, given by US-ACAN, is in association with Shackleton Inlet and is for the *Nimrod*, the ship of the BrAE (1907-9) under Shackleton.

Nimrod Passage 64°59'S., 63°58'W.

A marine passage leading to the northern end of Le Maire Channel between Wauwermans Islands and Dannebrog Islands in Wilhelm Archipelago. Surveyed by the RN Hydrographic Survey Unit in March-April 1964, and safely navigated by RRS *John Biscoe* at this time. Named after the motor survey boat *Nimrod* which was used to take most of the soundings.

Nims Peak 72°34'S., 160°58'E.

A sharp rock peak about 3 mi. NW. of Mt. Weihaupt in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for David J. Nims, ionospheric physicist at McMurdo Station, 1968.

Ninnis Glacier 68°22'S., 147°00'E.

A large, heavily hummocked and crevassed glacier descending steeply from the high interior to the sea in a broad valley, on George V Coast. Discovered by AAE

GEOGRAPHIC NAMES OF THE ANTARCTIC

(1911-14) under Douglas Mawson, who named it for Lt. B.E.S. Ninnis, who lost his life on the far east sledge journey of the expedition, Dec. 14, 1912.

Ninnis Glacier Ice Tongue: see Ninnis Glacier Tongue 68°05'S., 147°45'E.

Ninnis Glacier Tongue 68°05'S., 147°45'E.

A broad glacier tongue which forms the seaward extension of Ninnis Glacier. It was recorded (1962) as projecting seaward about 30 miles. Discovered by the AAE (1911-14) under Douglas Mawson and named after Ninnis Glacier.

Nipebreen: see Nipe Glacier 71°52'S., 25°15'E.

Nipe Glacier 71°52'S., 25°15'E.

Broad glacier between Austkampane Hills and Menipa Peak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Nipebreen (the mountain peak glacier).

Nipha, Mount 78°09'S., 167°24'E.

A hill, 760 m., standing almost precisely in the center of White I., in the Ross Archipelago. Nipha is a Greek word for snow. So named by the NZGSAE (1958-59) because the hill is surrounded by ice and snow.

Nipple Peak 64°47'S., 63°17'W.

Peak, 675 m., standing 1 mi. NE. of Channel Gl. in the N. part of Wiencke I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache. The name, which suggests the shape of the feature, was given by the FIDS who mapped the peak in 1944.

Nishi-naga-iwa Glacier 68°31'S., 41°18'E.

A glacier flowing to the sea between Daruma Rock and Cape Akarui in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and, in association with Higashi-naga-iwa Glacier lying 5 mi. eastward, named Nishi-naga-iwa-hyōga (western long rock glacier).

Nishino-seto Strait 69°01'S., 39°29'E.

A narrow strait between Ongulkalven I. and Ongul I. in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Surveyed by JARE, 1957-62, and named Nishino-seto (western strait) because of its location in the Flatvaer Islands.

Nishino-ura Cove 69°01'S., 39°34'E.

A cove indenting the western side of East Ongul Island. First mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37.

Surveyed by JARE, 1957, and named Nishino-ura (western cove).

Nisi-naga-iwa Glacier: see Nishi-naga-iwa Glacier 68°31'S., 41°18'E.

Nisinseto, Proliv: see Kitano-seto Strait 69°00'S., 39°35'E.

Nisi-no-seto Strait: see Nishino-seto Strait 69°01'S., 39°29'E.

Nisi-no-ura Cove: see Nishino-ura Cove 69°01'S., 39°34'E.

Nivea, Mount 60°35'S., 45°29'W.

Conspicuous, snow-topped mountain, 1,265 m., at the head of Sunshine Gl. on Coronation I., in the South Orkney Islands. A number of rock towers lie on the NW. side. Surveyed by the FIDS in 1948-49, and named by them for the snow petrel (*Pagodroma nivea*) which breeds in this area.

Niznic Island: see Niznik Island 69°47'S., 68°30'W.

Niznik Island 69°47'S., 68°30'W.

Island in the N. part of George VI Sound, lying opposite the mouth of Eureka Gl. near the coast of Palmer Land. Disc. by the RARE, 1947-48, under Ronne, who named it for the Theodore T. Niznik family of Baltimore, Md., contributors to the expedition.

Nobble Head: see Knobble Head 63°09'S., 56°32'W.

Nobby 55°02'S., 34°38'W.

Rock at the SE. end of the Clerke Rocks, lying some 40 mi. ESE. of the SE. end of South Georgia. The Clerke Rocks were disc. by Capt. James Cook in 1775. Nobby was probably given this descriptive name by DI personnel, who made surveys of the South Georgia area in the period 1926-30.

Nobby Nunatak 63°25'S., 56°59'W.

Nunatak, 270 m., standing 1 mi. S. of Lake Boeckella and 1 mi. E. of Mt. Flora, at the NE. end of Antarctic Peninsula. This area was first explored by a party under J. Gunnar Andersson of the SwedAE, 1901-4. Nobby Nunatak was first charted and named by the FIDS in 1945. The name is descriptive.

Nobile Glacier 64°32'S., 61°28'W.

Glacier flowing into the SE. part of Recess Cove, Charlotte Bay, on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Umberto Nobile, Italian designer of the rigid airships *Norge* and *Italia*,

GEOGRAPHIC NAMES OF THE ANTARCTIC

which reached the North Pole in 1926 and 1928, respectively.

Nob Island 65°12'S., 64°19'W.

The largest of the Anagram Is., lying on the S. side of French Passage in the Wilhelm Archipelago. So named by the UK-APC in 1961 because there is a black knob of rock, almost permanently snow free, on the N. side of the island which is a useful navigational mark for vessels using French Passage; nob is a spelling of knob.

Noble, Mount 60°39'S., 45°16'W.

Mountain, 1,165 m., standing at the N. side of Roald Gl. 2 mi. W. of Gibbon Bay, in the E. portion of Coronation I. in the South Orkney Islands. Presumably first sighted by Capt. Nathaniel Palmer and Capt. George Powell in 1821. The peak was named by James Weddell in 1823 for his friend James Noble of Edinburgh, orientalist.

Noble Glacier 62°04'S., 58°26'W.

Small glacier lying just N. of Flagstaff Gl. on the E. side of Keller Pen., King George I., in the South Shetland Islands. Named by the UK-APC in 1960 for Hugh M. Noble of FIDS, glaciologist at Admiralty Bay in 1957, who made detailed studies of the regime of Flagstaff and Stenhouse Glaciers.

Noble Nunatak 85°12'S., 121°29'W.

An isolated nunatak in the N. part of the Horlick Mountains, lying 8 mi. N. of Widich Nunatak along the N. side of Shimizu Ice Stream. Mapped by USGS from surveys and USN air photos, 1959-60. Named by US-ACAN for William C. Noble, meteorologist, Byrd Station winter party, 1958.

Noble Peak 64°48'S., 63°25'W.

Peak, 560 m., standing 1 mi. SW. of Lockley Pt. and marking the NE. end of a prominent ridge on the NW. side of Wiencke I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache. The name appears on a chart based on a 1927 survey by DI personnel on the *Discovery*, but may reflect on earlier naming.

Noble Rocks 67°52'S., 68°41'W.

Group of about 19 small, low rocks in Marguerite Bay, lying E. of Jester Rock in the Dion Islands. The Dion Is. were first sighted and roughly charted in 1909 by the FrAE. Noble Rocks were surveyed in 1949 by the FIDS, and so named by the UK-APC because of their association with Emperor Island.

Noble's Peak: see Noble, Mount 60°39'S., 45°16'W.

Nødtvedt Nunataks 86°32'S., 162°18'W.

Isolated nunataks standing in mid-stream of the Amundsen Gl., rising 7 mi. ENE. of Mt. Bjaaland. Named by US-ACAN for J. Nødtvedt, a member of the sea party of Amundsen's Nor. exp. of 1910-12.

Nodule Nunatak 63°19'S., 56°05'W.

Small but prominent isolated nunatak, 440 m., standing 3 mi. S. of Mt. Tholus in the southern part of Joinville Island. Surveyed by the FIDS in 1953-54. The descriptive name was given by the UK-APC in 1956.

Nodwell Peaks 64°18'S., 59°47'W.

Two outstanding peaks, less than 1 mile apart, on the E. side of Edgeworth Gl., Graham Land. Mapped from surveys by FIDS (1960-61). Named by UK-APC after Robin-Nodwell Mfg. Ltd. of Calgary, Canada, makers of Nodwell tracked carriers, used in Antarctica since 1960.

Noel Hill 62°14'S., 58°46'W.

Conspicuous slate knob, 255 m., on Barton Pen. in the W. part of King George I., in the South Shetland Islands. The name was used by Scottish geologist David Ferguson in a 1921 report based upon his investigations of King George I. in 1913-14.

Nogood Lagoon: see Little Jason Lagoon 54°11'S., 36°36'W.

Noice, Mount 73°17'S., 164°40'E.

A mountain (2,780 m.) surmounting the SW. edge of Deception Plateau, 8 mi. S. of Mt. Overlord, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Gary E. Noice, USN, navigator with Squadron VX-6 at McMurdo Station, 1966.

Noir, Rocher: see Tristan Island 66°44'S., 140°54'E.

Noire Rock 64°40'S., 62°35'W.

Dark pinnacle rock 1.5 mi. SW. of Mt. Dedo on the W. coast of Graham Land. Charted and descriptively named (noire means black) by the BelgAE under Gerlache in 1898.

Nøkkelholmane Islands 69°24'S., 39°29'E.

A scattered group of about 24 islands and rocks lying just off the W. side of Skarvsnes Foreland in the E. part of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nøkkelholmane (the key islands).

Nøkkel Island 69°28'S., 39°28'E.

The southernmost of the Nøkkelholmane Islands, lying off the W. side of Skarvsnes Foreland in the E. part of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nøkkeløya (the key island).

Nolan Island 77°13'S., 147°24'W.

An ice-covered island 6 mi. long, lying 2 mi. N. of Court Ridge in Sulzberger Ice Shelf, along the coast of Marie Byrd Land. Discovered and mapped by the USAS, 1939-41. Named by US-ACAN for William G. Nolan, RD1, USN, Radarman aboard USS *Glacier* in Antarctica, 1957-58 and 1961-62.

Nolan Pillar 85°27'S., 86°52'W.

A rock pinnacle (1,940 m.) standing 3 mi. SE. of Smith Knob and marking the E. extremity of the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960-61. Named for Thomas B. Nolan, seventh director of the U.S. Geological Survey, 1956-65.

Noll Glacier 69°33'S., 159°09'E.

Glacier, nearly 20 mi. long, draining NE. from Jones Nunatak in central Wilson Hills. The glacier turns NW. at Wegert Bluff and enters the lower part of Tomilin Glacier before the latter debouches into the sea. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Maj. Edmund P. Noll, USMC, Cargo Officer and LC-130 Aircraft Commander with USN Squadron VX-6 during Operation Deep Freeze 1968.

Nomad Rock 63°13'S., 57°42'W.

An isolated rock in Bransfield Strait, 5 mi. off the N. coast of Trinity Peninsula and 9 mi. NE. of Cape Legoupil. So named by UK-APC because of confusion about the identity of geographic points along this coast, and because of the wandering of features and names on charts of this vicinity.

Nonplus Crag 70°58'S., 69°10'W.

Prominent rock cliff, 1,250 m., in the LeMay Range, near the head of Jupiter Gl. in the E. central part of Alexander Island. First phot. from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W. L. G. Joerg. Remapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Name given by the UK-APC is descriptive of the perplexity which arose over FIDS identification of the feature.

Noonan Cove 66°15'S., 110°31'E.

A cove in the W. side of Clark Peninsula, to the S. of Stonehocker Point and Wilkes Station. First mapped from air photos taken by USN Op. Hjp. (1946-47) and included in a 1957 ground survey by C. R. Ek-

lund. Named by the latter for Paul F. Noonan, USN, photographer with the Wilkes Station party, 1957.

Nora Island: see Stedet Island 67°33'S., 61°27'E.

Nordbukta 69°38'S., 38°21'E.

A bay on the N. side of Padda I. in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nordbukta (the north bay).

Nordenskiöld Barrier: see Nordenskjöld Ice Tongue 76°11'S., 162°45'E.

Nordenskiöld Glacier: see Nordenskjöld Glacier 54°22'S., 36°22'W.

Nordenskiöld Glacier Tongue: see Nordenskjöld Ice Tongue 76°11'S., 162°45'E.

Nordenskiöld Ice Barrier: see Nordenskjöld Ice Tongue 76°11'S., 162°45'E.

Nordenskiöld Ice Tongue: see Nordenskjöld Ice Tongue 76°11'S., 162°45'E.

Nordenskiöld Tongue: see Nordenskjöld Ice Tongue 76°11'S., 162°45'E.

Nordenskjöld Coast 64°30'S., 60°30'W.

That portion of the E. coast of the Antarctic Pen. between Cape Longing and Cape Fairweather. The name was proposed in 1909 by Edwin Swift Balch, for Dr. Otto Nordenskjöld, Swedish geographer and leader of the SwedAE, 1901-4, who explored this coast in 1902.

Nordenskjöld Glacier 54°22'S., 36°22'W.

Large glacier flowing N. to the head of Cumberland East Bay, on the N. coast of South Georgia. Charted by the SwedAE, 1901-4, and named for Dr. Otto Nordenskjöld, leader of the expedition.

Nordenskjöld Ice Tongue 76°11'S., 162°45'E.

A broad glacier tongue extending eastward from the Mawson Glacier into the Ross Sea. Discovered by the BrNAE (1901-4) and named for Otto Nordenskjöld, Swedish geographer who led an expedition to Antarctica in 1901. This feature had become well established by the name Nordenskjöld Ice Tongue prior to initiation of systematic application of common specific names to a glacier and its glacier tongue. Although this feature is a glacier tongue, the generic term ice tongue is retained in the name to reduce ambiguity.

Nordenskjöld Peak 54°29'S., 36°22'W.

Conspicuous, partly snow-covered mountain, 2,355 m., which rises at the head of Nordenskjöld Glacier and

GEOGRAPHIC NAMES OF THE ANTARCTIC

stands close E. of Mt. Roots in the Allardyce Range of South Georgia. The name derives from nearby Nordenskjöld Glacier, and was given by David Ferguson, Scottish geologist who visited South Georgia in 1911-12.

Nordhaugen Hill 71°43'S., 25°27'E.

The northernmost of three hills bordering the E. side of Kamp Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Nordhaugen (the north hill) by the Norwegians.

Nordhill, Mount 70°55'S., 63°27'W.

A high, sharp-pointed peak between Steel Peak and Kosky Peak in the east ridge of the Welch Mtns., in Palmer Land. The peak was mapped by USGS in 1974. Named by US-ACAN for Cdr. Claude H. Nordhill, USN, Operations Officer of Squadron VXE-6 in Antarctica during Operation Deep Freeze, 1970, and Commanding Officer, 1972.

Nord Island 66°45'S., 141°33'E.

Small rocky island which is the northernmost feature in the Curzon Islands. Charted in 1951 by the FrAE and so named by them because of its position in the group, "nord" being French for north.

Nordkammen: see North Masson Range 67°47'S., 62°49'E.

Nordkammen Crest: see North Masson Range 67°47'S., 62°49'E.

Nordöyane: see Sirius Islands 66°57'S., 57°27'E.

Nordtoppen Nunatak 71°29'S., 25°14'E.

Nunatak, 1,100 m., standing 16 mi. N. of the Austkampane Hills of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Nordtoppen (the north peak) by the Norwegians because of its position in the group.

Nordvestöya: see Nordwestliche Insel Mountains 71°27'S., 11°33'E.

Nordwestliche Insel Mountains 71°27'S., 11°33'E.

A small, detached group of mountains, island-like in appearance, and forming the northern extremity of the Humboldt Mtns., in the Wohlthat Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named Nordwestliche Insel (northwest island). The feature lies at the northwest extremity of the Wohlthat Mountains.

Noreste, Punta: see Macaroni Point 62°54'S., 60°32'W.

Norfolk Glacier 85°53'S., 130°18'W.

A glacier, 12 mi. long, draining westward from Wisconsin Range to enter Reedy Gl. between Mounts Soyat and Bolton. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN after Norfolk, Virginia, location of Detachment Three, the Meteorological Support Unit of the U.S. Naval Support Force, Antarctica.

Norman Glacier 71°25'S., 67°30'W.

Glacier, 5 mi. long, flowing SW. from Palmer Land to enter George VI Sound just N. of Bushell Bluff. Named by UK-APC for Shaun M. Norman, base commander with the BAS at Stonington Island, 1966-68.

Normann, Mount 54°51'S., 36°04'W.

Mountain, 1,240 m., standing 1 mi. N. of Smaaland Cove at the S. end of South Georgia. The feature has appeared on charts since the 1930's. It was surveyed by the SGS in the period 1951-57, and named by the UK-APC for Wilhelm Normann (1870-1939), German chemist, whose work led to the introduction in about 1907 of the hydrogenation process for hardening whale oil.

Normanna Reef 64°21'S., 62°59'W.

Reef lying near the center of the S. entrance to The Sound in the Melchior Is., Palmer Archipelago. The name appears on a chart based upon a 1927 survey by DI personnel, but this may reflect an earlier naming by whalers. The name presumably derives from the Normanna Whaling Co. of Sandefjord, Norway, or one of its ships that worked in this area.

Normanna Strait 60°40'S., 45°38'W.

Strait 1 mi. wide between Signy I. and Coronation I. in the South Orkney Islands. Disc. by Matthew Brisbane, who roughly charted the S. coast of Coronation I. under the direction of James Weddell in 1823. The name appears on a chart based upon a survey of these islands by Capt. Petter Sørle in 1912-13, and is probably after the Normanna Whaling Co. of Sandefjord, Norway, operators of the floating factory ship *Normanna*.

Norris Island: see Teksla Island 67°27'S., 60°56'E.

Norris Reef 54°25'S., 3°20'E.

A reef lying close off the western shore of Bouvetöya, 0.5 mi. southwest of Cape Circoncision. First charted in 1898 by a German expedition under Karl Chun. Recharted in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Named by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

Norwegians after British sealer Capt. George Norris who, with the *Sprightly* and *Lively*, visited Bouvetøya in 1825.

Norrisrevet: see Norris Reef 54°25'S., 3°20'E.

Norselbukta: see Norsel Iceport 71°01'S., 11°00'W.

Norsel Iceport 71°01'S., 11°00'W.

A small iceport in the front of the Quar Ice Shelf, along the coast of Queen Maud Land. This feature was named by the NBSAE, 1949-52, which used it to moor and unload the expedition ship *Norsel*. The low ice front permitted easy access onto Quar Ice Shelf, where NBSAE established Maudheim Station about 1 mi. S. of the iceport.

Norsel Point 64°46'S., 64°06'W.

Rocky point on the NW. side of Arthur Hbr., on the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the FIDS in 1955. Named by the UK-APC for the Norwegian sealing vessel *Norsel*, which was chartered by the FIDS for the 1954-55 summer season to establish the station at Arthur Harbor.

Norseman Point 68°12'S., 67°00'W.

Easternmost point of Nyen I., lying in Marguerite Bay off the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Named by the FIDS after the Norseman airplane which landed near the point to relieve the FIDS party on Stonington I. in February 1950.

Norsk Polarinstitut Glacier 72°34'S., 31°16'E.

Glacier flowing SW. between Mt. Perov and Mt. Limburg Stirum in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it after the Norsk Polarinstitut of Oslo.

Nørsteholmen: see Wyatt Earp Islands 68°22'S., 78°32'E.

Norte, Bahía: see Narval Bay 54°02'S., 37°41'W.

Norte, Brazo: Lientur Channel 64°50'S., 63°00'W.

Norte, Islote: see D'Hainaut Island 63°54'S., 60°47'W.

Norte, Islote: see Mane Skerry 67°50'S., 67°18'W.

Norte, Punta: see Salamander Point 59°25'S., 27°05'W.

North, Cape 70°41'S., 165°48'E.

A large bluff with much rock exposed along the N. and E. sides, standing at the W. side of Nielsen Fjord on the N. coast of Victoria Land. The top of the bluff is

snow covered and rises to about 500 m. Although it is not the northernmost coastal point in the immediate area, the feature is conspicuous and presumably is the one observed by Capt. James Clark Ross in 1841 and given the name Cape North. On the chart by Ross, Cape North is depicted as the northernmost cape observed westward of Cape Hooker.

North, Cape 53°58'S., 37°44'W.

Cape marking the northernmost point of South Georgia, near the W. end of the island. This name was first applied to the NW. tip of South Georgia on a map by Capt. James Cook in 1775. Since 1912 it has become established for the northernmost point of the island, which is in keeping with the geographical position inferred by the name.

North, Cape: see Alexandra, Cape 54°00'S., 38°00'W.

Northampton, Mount 72°41'S., 169°06'E.

A mountain (2,465 m.) that rises above the central part of the ridge just E. of Bowers Gl. in the Victory Mtns., Victoria Land. Discovered in January 1841 by Sir James Clark Ross who named it for the Marquis of Northampton, then Pres. of the Royal Society.

North Barrier 53°04'S., 73°35'E.

A narrow rock ridge which descends northward from Campbell Peak to Mt. Separation, and then along the NW. flank of Compton Glacier in northern Heard Island. The descriptive name was applied by ANARE in 1948.

North Bay: see Narval Bay 54°02'S., 37°41'W.

North Bay 77°38'S., 166°23'E.

A small bay on the north side of Cape Evans, Ross Island. Named by members of the BrAE, 1910-13.

North Bay 54°04'S., 37°09'W.

Cove forming the northern head of Prince Olav Hbr., along the N. coast of South Georgia. Probably named by DI personnel who charted Prince Olav Hbr. in 1929.

Northcliffe Glacier 66°40'S., 98°52'E.

Glacier descending to the coast immediately E. of Davis Peninsula. Disc. by the AAE, 1911-14, under Mawson, and named for Lord Northcliffe, of London, a patron of the expedition.

Northcliffe Peak 78°44'S., 161°08'E.

Prominent peak, 2,255 m., rising 4 mi. SE. of Mt. Harmsworth in the Worcester Range. Surveyed and named in 1957 by the N.Z. party of the CTAE (1956-58) because of its association with Mt. Harms-

GEOGRAPHIC NAMES OF THE ANTARCTIC

worth. Sir Alfred Harmsworth, a generous contributor to the BrNAE (1901-4), was later created Viscount Northcliffe.

North Crest: see North Masson Range 67°47'S., 62°49'E.

Northeast Glacier 68°09'S., 66°58'W.

Steep, heavily crevassed glacier, 13 mi. long and 5 mi. wide at its mouth, which flows from McLeod Hill westward and then SW. into Marguerite Bay between the Debenham Is. and Roman Four Promontory, on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1940 by members of the USAS, who first used this glacier as a sledging route, and so named by them because it lies at the northeast side of their base at Stonington Island.

Northern Foothills 74°44'S., 163°55'E.

A line of coastal hills on the west side of Terra Nova Bay, Victoria Land, lying southward of Browning Pass and forming a peninsular continuation of the Deep Freeze Range. So named by the Northern Party of the BrAE, 1910-13, because during field operations Inexpressible Island, close southward, was originally referred to as the "Southern Foothills."

Northern Islands: see Wyatt Earp Islands 68°22'S., 78°32'E.

North Foreland 61°54'S., 57°44'W.

Cape forming the NE. extremity of King George I., in the South Shetland Islands. Named on Oct. 16, 1819 by Capt. William Smith in the brig *Williams*. Since this was the easternmost point which he saw on this trip, he named it after the headland in England which forms its most easterly land.

North Foreland: see Brimstone Peak 61°55'S., 57°48'W.

North Foreland, Cape: see North Foreland 61°54'S., 57°44'W.

North Foreland Head: see Caroline Bluff 61°55'S., 57°42'W.

North Forel Glacier: see Sharp Glacier 67°20'S., 66°27'W.

North Fork: see Taylor Glacier 77°44'S., 162°10'E.

North Fork 77°32'S., 161°15'E.

The northern arm of Wright Valley in Victoria Land. The feature is separated from the South Fork by the Dais. Named by the VUWAE, 1958-59.

North Heim Glacier: see Antevs Glacier 67°15'S., 66°47'W.

North Island: see Hansen Island 67°06'S., 67°37'W.

North Masson Range 67°47'S., 62°49'E.

The Masson Range is divided into three parts of which this segment is the northern, rising to 1,030 m. and extending 3 mi. in a N.-S. direction. The Masson Range was disc. and named by BANZARE, 1929-31, under Mawson. This northern range was mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nordkammen (the north comb or crest). The approved name, suggested by ANCA in 1960, more clearly identifies the feature as a part of Masson Range.

North Nansen Island: see Enterprise Island 64°32'S., 62°00'W.

North Point: see Salamander Point 59°25'S., 27°05'W.

North Point 60°41'S., 45°38'W.

Point marking the northern extremity of Signy I. in the South Orkney Islands. The name appears on a chart based upon a survey of the South Orkney Is. by DI personnel on the *Discovery II* in 1933.

Northrop, Cape 67°24'S., 65°16'W.

Conspicuous, rocky bluff which rises to 1,160 m., forming the N. side of the entrance to Whirlwind Inlet, on the E. coast of Graham Land. Disc. by Sir Hubert Wilkins on a flight of Dec. 20, 1928, and named for Jack Northrop, designer of the Lockheed airplane used on the expedition. The cape was photographed by the USAS in 1940 and charted by the FIDS in 1947.

Northrup Head 69°52'S., 160°09'E.

An ice-covered headland on the N. side of Suvorov Glacier. The headland, a coastal extension of the Wilson Hills, stands 3.5 mi. WSW. of Belousov Point. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for David A. Northrup, ATN2, USN, Aviation Electronics Technician with Squadron VX-6 at McMurdo Station, 1967.

Norths Highland 66°40'S., 126°00'E.

An ice-covered upland close S. of Cape Goodenough, surmounting the Banzare Coast between Maury and Porpoise Bays. The name "North's High Land" after James H. North, acting master on the brig *Porpoise*, was applied to an elevated coastal area by the USEE (1838-42) under Wilkes. Subsequently, because of inadequate data regarding the nature of this feature, the name "Norths Coast" was applied to a coastal area in the vicinity of 127°45'E. US-ACAN's identification of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Norths Highland is based upon correlation of Wilkes' chart with G.D. Blodgett's reconnaissance map (1955) compiled from air photos taken by USN Operation Highjump (1946-47). The name is adopted for this recently verified upland region in 126°00'E. in keeping with Wilkes' original naming.

North Spit 62°13'S., 58°49'W.

Rocky spit forming the N. side of the entrance to Marian Cove, King George I., in the South Shetland Islands. The descriptive name appears on a chart showing the results of a survey by DI personnel on the *Discovery II* in 1935.

North Star Island: see Eta Island 64°19'S., 62°55'W.

Northstar Island 68°11'S., 67°07'W.

Low rocky island 1 mi. NW. of the W. tip of Neny I., lying in Marguerite Bay off the W. coast of Graham Land. First roughly charted in 1936 by the BGLE under Rymill. Surveyed by the FIDS in 1947, and named by them for U.S.M.S. *North Star*, one of the ships of the USAS, 1939-41, which visited Marguerite Bay in 1940.

Northtrap Rocks 62°54'S., 56°35'W.

Small isolated group of rocks lying NW. of Cape Juncal, D'Urville I., in the Joinville Island group. So named by the UK-APC in 1963 because the rocks are the northernmost of two groups of features which should be avoided by vessels entering Antarctic Sound from the north.

North Undine Harbour: see Undine Harbor 54°02'S., 37°58'W.

North West Cornice 53°04'S., 73°26'E.

A narrow rock ridge descending in a northwest direction from Big Ben on Heard Island, and terminating at Schmidt Glacier in the northwest part of the island. Surveyed and given this descriptive name by ANARE in 1948.

Northwest Mountain 77°38'S., 160°38'E.

Massive mountain just NE. of Beehive Mtn., on the N. side of upper Taylor Gl. in Victoria Land. The name appears on the maps of the BrAE, 1910-13.

Northwind Glacier 76°40'S., 161°18'E.

A large glacier, one of the major sources of the Fry Gl., flowing N. from a high névé SW. of Flagship Mtn. on the E. side of the Convoy Range. A lobe of the glacier flows W. a short distance into the mouth of Greenville Valley. Named by the N.Z. Northern Survey Party (1956-57) of the CTAE after the USCGC *Northwind*,

an icebreaker in the main American convoy into McMurdo Sound that season.

Norvegia, Cape 71°20'S., 12°18'W.

A prominent cape on the coast of Queen Maud Land which marks the northeast extremity of Riiser-Larsen Ice Shelf. Discovered by Commander Hjalmar Riiser-Larsen in February 1930 while on an airplane flight from the *Norvegia*, the ship in which the expedition was made. The cape was named by Riiser-Larsen for the ship.

Norvegia, Mount 67°51'S., 48°08'E.

Large ice-covered mountain, 1,340 m., standing 6 mi. N. of Mt. Christensen, Enderby Land. Plotted from air photos taken by ANARE aircraft in 1956 and 1957. Named after the Norwegian exploration ship, *Norvegia*, which was off Enderby Land in December 1929-January 1930.

Norvegiabåen: see Norvegia Rock 54°24'S., 3°25'E.

Norvegia Bay 68°45'S., 90°42'W.

A cove at the north side of Cape Ingrid on the west side of Peter I Island. Named after the *Norvegia*, the Norwegian research vessel which visited the island in February 1929. The *Norvegia* remained in the vicinity for a week while the crew engaged in charting the island and in sounding and dredging operations.

Norvégian Rock: see Norwegian Rock 53°02'S., 73°19'E.

Norvegia Point 54°27'S., 3°21'E.

A point 2 mi. south of Cape Circumcision on the west side of Bouvetøya. First roughly charted from the *Valdivia* in 1898 by a German expedition under Karl Chun. Recharted in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Named by Horntvedt after his expedition ship, the *Norvegia*.

Norvegia Rock 54°24'S., 3°25'E.

A submerged rock with less than 2 m. of water over it, lying off the N. coast of Bouvetøya, approximately 0.5 mi. ENE. of Cape Valdivia. The *Norvegia*, the ship of the Norwegian expedition under Capt. Harald Horntvedt, struck a rock here on December 3, 1927. Named by the expedition after the *Norvegia*.

Norway Bight 60°37'S., 45°49'W.

Bay 4 mi. wide indenting the S. coast of Coronation I. between Meier Pt. and Mansfield Pt., in the South Orkney Islands. The name appears on a chart by Pøtter Sørille, Norwegian whaling captain who made a running survey of the South Orkney Is. in 1912-13.

Norway Fjord: see Norway Bight 60°37'S., 45°49'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Norway Glacier 86°30'S., 164°00'W.

A tributary glacier about 10 mi. long, descending the polar plateau just W. of Mt. Prestrud, and flowing NE. to enter Amundsen Gl. between Mt. Bjaaland and Mt. Hassel, in the Queen Maud Mountains. Named by US-ACAN in association with the many features named in this area for members of Amundsen's Nor. exp. of 1910-12.

Norway Rocks 76°10'S., 168°20'E.

A reef of rocks, the charted position of which is doubtful, reported to extend about 4 mi. southward from Bernacchi Head, Franklin Island, in the Ross Sea. Discovered in 1841 by Ross. Named by C. E. Borchgrevink, a native of Norway, leader of the BrAE, 1898-1900.

Norwegian Rock 53°02'S., 73°19'E.

A sunken rock outside the entrance to West Bay, about 1.2 mi. SE. of West Cape, off the W. side of Heard Island. The name Norwegian Rock appears in a supplement to the 1930 British Admiralty *Antarctic Pilot* and probably reflects the work of Norwegian whalers in the vicinity in that general period. The form Norwegian Rock was recommended by ANCA in 1954.

Norwood Scarp 68°50'S., 65°23'W.

A well-defined escarpment, 11 mi. long and rising to 1,525 m., forming part of the E. flank of Weyerhaeuser Gl. in eastern Antarctic Peninsula. Photographed from the air by the USAS on Sep. 28, 1940 and by FIDS, Aug. 14, 1947. Roughly surveyed by FIDS in Dec. 1958 and Nov. 1960. Named by UK-APC after Richard Norwood (1590-1675), English mathematician who expounded the advantages of great-circle sailing and who, in 1635, measured an arc of meridian in order to improve the practice of navigation.

Nøst Island 67°37'S., 62°41'E.

Island less than 0.5 mi. long, lying 2 mi. WSW. of Evans I. in the S. part of Holme Bay. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37, and called by them Nøstet (the boatshed).

Nostoc Lake 80°24'S., 30°05'W.

Lake lying 1 mi. SW. of Mt. Provender in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and given the generic name of the freshwater alga found growing in the lake.

Notre-Dame de Lorette, Mont: see Lorette, Mount 72°32'S., 31°09'E.

Nottarp Glacier 82°37'S., 162°54'E.

Small glacier draining eastward into Lowery Gl. just S. of Mt. Damm in the Queen Elizabeth Range. Mapped

by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Klemens J. Nottarp, USARP glaciologist on the Ross Ice Shelf, 1962-63 and 1965-66.

Notter, Cabo: see Notter Point 63°40'S., 59°11'W.

Notter Point 63°40'S., 59°11'W.

A rocky point 6 mi. NE. of Cape Kjellman marking the W. limit of Bone Bay, Trinity Peninsula. The name, applied by Argentina in 1953, memorializes Tomás Notter, a commander of English origin in Admiral Brown's squadron in the struggle for Argentine independence. He died fighting against the Spanish commander Romarate on March 21, 1814 aboard his small vessel *Santísima Trinidad*, when his vessel grounded under enemy batteries.

Nouveau, Rocher: see New Rock 63°01'S., 60°44'W.

Novasio Ridge 72°03'S., 168°22'E.

A long, ice-covered ridge separating the lower portions of Freimanis and Man-o-War Glaciers in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Richard A. Novasio, USN, radioman at Hallett Station, 1957.

Novel Rock: see Nueva Rock 67°44'S., 69°10'W.

Noville, Mount 86°27'S., 146°10'W.

A mountain, 2,410 m., standing between Van Reeth and Robison Glaciers and 4 mi. E. of Mt. Bowlin, in the Queen Maud Mountains. Discovered by the geological party under Quin Blackburn of the ByrdAE, 1933-35, and named by Byrd for George O. Noville, executive officer of the expedition.

Noville Mountains: see Hudson Mountains 74°25'S., 99°30'W.

Noville Peninsula 71°50'S., 98°46'W.

High ice-covered peninsula about 30 mi. long, between Peale and Murphy Inlets on the N. side of Thurston Island. Delineated from aerial photographs made by USN Op. Hjp. in December 1946. Named for George O. Noville, executive officer of ByrdAE, 1933-35.

Novocin Peak 76°01'S., 69°33'W.

One of the Bean Peaks, located near the SE. end of this group, in the Hauberg Mtns., Ellsworth Land. First observed from aircraft by the RARE, 1947-48. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Norbert W. Novocin, meteorologist at Byrd Station, summer 1965-66.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Novoliskigletscher: see Novosilski Glacier 54°40'S., 36°18'W.

Novosad Island 70°42'S., 167°29'E.

Small, ice-covered island, one of the Lyall Islands, lying 4 mi. NNE. of Cape Dayman, off the N. coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Charles L. Novosad, Jr., USN, Medical Officer at the Naval Air Facility, McMurdo Sound, 1957.

Novosilski Bay 54°39'S., 36°21'W.

Bay 2 mi. wide, indenting the S. coast of South Georgia immediately S. of Mt. Fraser. Disc. by a Russ. exp. under Bellingshausen in 1819 and named for Lt. Pavel M. Novosilskiy of the *Mirnyy*, which accompanied Bellingshausen's flagship the *Vostok*. The spelling Novosilski has become established for the feature through long usage.

Novosilski Glacier 54°40'S., 36°18'W.

Glacier, 8 mi. long and 2 mi. wide, flowing in a westerly direction from the SW. slopes of the Salvesen Range to Novosilski Bay on the S. coast of South Georgia. First surveyed and named by a Ger. exp., 1928-29, under Kohl-Larsen. The name derives from nearby Novosilski Bay.

Novyy Island 70°50'S., 2°50'W.

The larger and southern island of two similar ice covered features that serve to delimit the Jelbart and Fimbul Ice Shelves, on the coast of Queen Maud Land. The summit of this feature rises about 250 m. above the surrounding ice shelf. The island was partly delineated by the NorAE, 1956-60. It was mapped by the SovAE in 1961 and named Kupol Novyy (new dome).

Nowoselskji Bai: see Novosilski Bay 54°39'S., 36°21'W.

Noxious Bluff 56°19'S., 27°34'W.

Dark bluff 50 m. high on the SW. coast of Zavodovski I., South Sandwich Islands. The name applied by UK-APC in 1971 refers to the volcanic fumes and generally forbidding nature of the locality.

Noxon, Mount 72°08'S., 100°06'W.

A peak of the Walker Mtns., rising at the head of Myers Gl. on Thurston Island. Delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Sgt. W. C. Noxon, USMC, who served as navigator on aerial photographic flights over this area by USN Squadron VX-6 in January 1960.

Nozal, Sommet: see Nozal Hill 65°11'S., 63°57'W.

Nozal Hill 65°11'S., 63°57'W.

Ice-covered hill probably over 610 m., standing 1 mi. N. of Mt. Shackleton and midway between Régnard Peaks and Blanchard Ridge on the W. coast of Graham Land. Disc. by the FrAE, 1908-10, under Charcot, who named it for Monsieur Nozal, seaman, and later lieutenant on the ship *Pourquoi-Pas?*

Nozal Peak: see Nozal Hill 65°11'S., 63°57'W.

Nozzle, The 79°55'S., 159°05'E.

A comparatively narrow constriction through which the lower Darwin Glacier flows, causing the ice to bank up somewhat in the vicinity of Diamond Hill. The descriptive name was given by the Darwin Glacier Party of the CTAE (1956-58).

N. Persson Island: see Persson Island 64°13'S., 58°24'W.

N. Perssons Ö: see Persson Island 64°13'S., 58°24'W.

Nubian, Mount 78°15'S., 166°25'E.

A sharp point of rock at the end of a ridge formed by a lava flow, situated 1 mi. SE. of Mt. Aurora on Black I., in the Ross Archipelago. The rock forming the mountain is a glossy basalt and appears exceptionally black. Named by the NZGSAE (1958-59) after a negroid tribe resident in Sudan, and in keeping with Black Island.

Nueva, Roca: see New Rock 63°01'S., 60°44'W.

Nueva Rock 67°44'S., 69°10'W.

Submerged rock lying S. of Cono I. and W. of Cox Reef, off the S. end of Adelaide Island. The name appears on an Argentine Govt. chart of 1957 and suggests the recent discovery of the rock; nueva is a Spanish word meaning new.

Numbat Island 67°34'S., 47°58'E.

Small island just E. of Pinn I., off the coast of Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA after the numbat (banded anteater), a native animal of Australia.

Nunes, Cape: see Nuñez, Cape 54°16'S., 37°25'W.

Nuñez, Cape 54°16'S., 37°25'W.

Cape forming the SW. extremity of Nuñez Pen. on the S. coast of South Georgia. The name dates back to at least 1912 and was probably given by whalers who frequented this coast.

Nuñez Peninsula 54°15'S., 37°21'W.

Rocky and comparatively snow-free peninsula, 5 mi. long, lying between Queen Maud Bay and Jossac

GEOGRAPHIC NAMES OF THE ANTARCTIC

Bight on the S. coast of South Georgia. The feature was known to early whalers and sealers on South Georgia. It was surveyed by the SGS in the period 1951-57, and named by the UK-APC in association with Cape Nuñez, the SW. extremity of the peninsula.

Nuñez Point 65°33'S., 64°15'W.

Point forming the W. extremity of Takaki Promontory, between Beascochea and Leroux Bays on the W. coast of Graham Land. Disc. by the FrAE, 1903-5, and named by Charcot for Captain Nuñez, Argentine Navy.

Nunn Island 74°17'S., 117°00'W.

An ice-covered island, 9 mi. long, lying within Getz Ice Shelf just S. of Wright Island, along the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for R. Adm. Ira Nunn, USN, responsible for legal elements of the Navy's Antarctic support during the IGY.

Nupkins Island 65°26'S., 65°41'W.

Island lying 3 mi. W. of Sawyer I., Pitt Is., in the Biscoe Islands. Shown on an Argentine Govt. chart of 1957. Named by the UK-APC after George Nupkins, Esquire, the principal magistrate in Charles Dickens' *Pickwick Papers*.

Nupshamrane Peaks 71°57'S., 3°20'W.

Peaks just E. of Klumpene Peaks, on the W. side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Nupshamrane (the high peaks).

Nupskammen Ridge 72°09'S., 2°19'E.

A ridge of jagged peaks 8 mi. long, standing N. of Von Essen Mtn. in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Nupskammen (the peak crest).

Nupskåpa Peak 72°43'S., 0°16'E.

An icecapped peak, 2,450 m., just S. of Reece Valley in the Sverdrup Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Nupskåpa (the peak cloak).

Nupsskåka Valley 71°58'S., 8°48'E.

An ice-filled valley at the SW. side of Nupsskarvet Mtn. in the Kurze Mtns. of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named Nupsskåka (the peak shaft).

Nupsskarvet Mountain 71°56'S., 8°52'E.

A broad mountain at the N. side of Hålsrimen Peak in the Kurze Mountains of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named Nupsskarvet.

Nurkammen, Gora: see North Masson Range 67°47'S., 62°49'E.

Nurket Rock 73°25'S., 3°06'W.

A rock face just E. of Mt. Hallgren in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Nurket (the pygmy).

Nursel', Bukhta: see Norsel Iceport 71°01'S., 11°00'W.

Nursery Glacier 81°16'S., 160°30'E.

Glacier about 20 mi. long, flowing SE. along the W. side of Darley Hills to enter Ross Ice Shelf just S. of Cape Parr. So named by the NZGSAE (1959-60) because it was on this glacier that a litter of husky pups was born.

Nussbaum, Mount: see Nussbaum Riegel 77°40'S., 162°46'E.

Nussbaum Bar: see Nussbaum Riegel 77°40'S., 162°46'E.

Nussbaum Riegel 77°40'S., 162°46'E.

A riegel or rock-bar across Taylor Valley in Victoria Land, extending from the vicinity of Sollas Gl. toward Lake Chad. Charted and named by the BrAE under Scott, 1910-13.

Nusser Island 65°43'S., 65°43'W.

Island lying 1.5 mi. N. of Laktionov I., off the E. side of Renaud I. in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Franz Nusser, Austrian meteorologist who has specialized in sea ice studies.

Nutt, Cape 66°38'S., 108°12'E.

A mostly ice-covered cape with several rock outcrops at the extremity, forming the W. side of the entrance to Vincennes Bay. The position of Cape Nutt correlates closely with the eastern end of "Knox's High Land" as charted as a coastal landfall in 1840 by the USEE under Lt. Charles Wilkes. The cape was mapped from air photos taken by USN Operation Highjump, 1946-47. Named by US-ACAN for Cdr. David C. Nutt, USNR, research assistant in geogra-

GEOGRAPHIC NAMES OF THE ANTARCTIC

phy at Dartmouth College, who served as a marine biologist on USN Operation Windmill, 1947-48.

Nye Glacier 67°28'S., 67°31'W.

A glacier on Arrowsmith Pen. flowing SW. to Whistling Bay, in Graham Land. Mapped by FIDS from surveys and air photos, 1948-59. Named by UK-APC for John F. Nye, English physicist who has made important theoretical contributions to the study of the flow of glaciers and ice sheets.

Nye Islands 66°10'S., 110°25'E.

Two small islands lying between Midgley I. and Pidgeon I., in the Windmill Islands. The two islands were photographed by USN Op. Hjp. (1946-47) and USN Op. Wml. (1947-48), and though rather clearly shown in the photography were not shown on the resulting charts. Named by the US-ACAN for Harvey M. Nye, meteorological electronics technician at Wilkes Station in 1959.

Nye Mountains 68°10'S., 49°00'E.

A group of mountains, 30 mi. long and 10 to 15 mi. wide, which trend eastward from the head of Rayner Glacier. They were sighted by Squadron Leader D. Leckie, RAAF, during an ANARE flight in Oct. 1956. Named by ANCA for P.B. Nye, former Director of the

Bureau of Mineral Resources, Australian Department of National Development.

Nygren, Cape: see Nygren Point 64°23'S., 58°13'W.

Nygren, Mount 65°09'S., 63°48'W.

An outstanding pointed mountain, bearing the aspect of a stark rock nunatak of pyramidal shape, which rises sharply above the middle of Hotine Glacier in western Antarctic Peninsula. The mountain was photographed from aircraft of U.S. Navy Squadron VXE-6 in 1969. Named by US-ACAN for Rear Admiral Harley D. Nygren, Director, National Oceanic and Atmospheric Administration Corps, 1970- ; U.S. observer with the British Antarctic Survey, 1961-62, when he conducted oceanographic research in the *Shackleton*, *John Biscoe* and *Kista Dan*.

Nygren Point 64°23'S., 58°13'W.

Rocky point 4 mi. SE. of Cape Brooms, on the SW. side of James Ross Island. First seen and surveyed in 1903 by the SwedAE under Nordenskjöld, who named it Cape Nygren after G. Nygren, Swedish chemist who contributed toward the cost of the expedition. It was resurveyed by the FIDS in 1952. Point is considered a more suitable descriptive term for this feature than cape.

Oakeley, Cape 71°01'S., 167°54'E.

Bold headland on the NE. side of Quam Heights. It forms the S. side of the entrance of Smith Inlet in northern Victoria Land. Discovered in 1841 by Capt. James Ross, RN, who named it for Henry Oakeley, mate on the *Erebus*.

Oakley, Cape: see Oakeley, Cape 71°01'S., 167°54'E.

Oakley Glacier 73°42'S., 166°08'E.

A glacier in the Mountaineer Range that descends east from Mt. Casey to merge with the floating tongue from the Icebreaker Glacier at Lady Newnes Bay, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Cdr. Donald C. Oakley, USN, Protestant chaplain with the winter party at McMurdo Station, 1967.

Oates Coast 69°30'S., 159°00'E.

That portion of the coast of Antarctica between Cape Hudson and Cape Williams. The eastern portion of this coast was discovered in February 1911 by Lt. Harry Pennell, RN, commander of the expedition ship *Terra Nova* during the BrAE, 1910-13. He named the coast after Capt. Lawrence E.G. Oates who, with Capt. Robert F. Scott and three BrAE companions, perished on the return journey from the South Pole in 1912. The western portion of the coast, the vicinity of the Mawson Peninsula, was first delineated from air photos taken by USN Operation Highjump, 1946-47.

Oates Land: see Oates Coast 69°30'S., 159°00'E.

Oates Piedmont Glacier 76°25'S., 162°35'E.

An extensive lowland ice sheet E. of the Kirkwood Range, occupying the whole of the coastal platform between the Fry and Mawson Glaciers in Victoria Land. Surveyed in 1957 and named by the N.Z. Northern Survey Party of the CTAE (1956-58) after Capt. Lawrence E. G. Oates who, with Captain Scott and three companions, perished on the return from the South Pole in 1912.

Ob' Bay 70°35'S., 163°22'E.

A bay lying between Lunik Point and Cape Williams. Lillie Glacier Tongue occupies the east part of the bay. Charted by the SovAE (1958) and named after the expedition ship *Ob'*.

Obelisco, Cabo: see Obelisk, Cape 64°08'S., 58°27'W.

Obelisk, Cape 64°08'S., 58°27'W.

Cape at the N. side of the entrance to Röhss Bay, on the W. side of James Ross Island. Disc. and named by the SwedAE, 1901-4, under Nordenskjöld. The name is descriptive of a conspicuous rock pinnacle about 2

mi. within the headland, which is visible from north-westward and southward.

Obelisk, The 71°50'S., 70°33'W.

Prominent pillar, 750 m., centrally located within Staccato Peaks, 18 mi. WNW. of Mimas Peak in the S. part of Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos taken on that flight by W. L. G. Joerg. Remapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Name given by the UK-APC is descriptive.

Obelisk Mountain 77°37'S., 161°37'E.

Mountain, about 2,200 m., between Catspaw Gl. and Mt. Odin in the Asgard Range of Victoria Land. Given this descriptive name by the Western Journey Party, led by Taylor, of the BrAE, 1910-13.

Obeliskudden: see Obelisk, Cape 64°08'S., 58°27'W.

Obélisque, Pointe: see Obelisk, Cape 64°08'S., 58°27'W.

Oberon Peak 71°24'S., 69°32'W.

Isolated nunatak, 1,250 m., at the head of Uranus Gl. and 8 mi. NNW. of Titania Peak in central Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for its association with Uranus Glacier, Oberon being one of the satellites of Uranus.

Ober-See, Lake 71°17'S., 13°39'E.

A meltwater lake lying between Sjøneset Spur and Mt. Seekopf in the Gruber Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, who named it Ober-See (upper lake).

Oberstbreen: see Oberst Glacier 72°03'S., 27°04'E.

Oberst Glacier 72°03'S., 27°04'E.

Glacier draining the W. side of Balchen Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Oberstbreen (the colonel glacier) because of its association with Balchen Mountain. Bernt Balchen, a famous Norwegian polar aviator, achieved the rank of colonel in the U.S. Army Air Force in World War II.

Obiglio, Mount 74°27'S., 131°50'W.

A moderate rock summit (510 m.) in the west-central portion of Grant Island, along the edge of the Getz Ice Shelf, coastal Marie Byrd Land. Discovered and charted from the USS *Glacier* on Feb. 4, 1962 during Operation Deep Freeze 1961-62. Named by US-ACAN for Lt. G. M. Obiglio, Argentine naval ob-

GEOGRAPHIC NAMES OF THE ANTARCTIC

server aboard *Glacier*, at the suggestion of the Task Unit Commander, Capt. Edwin A. McDonald, USN.

Oblachnaya Nunatak 67°41'S., 51°16'E.

A nunatak lying 6 mi. SE. of Perov Nunataks, at the E. margin of Scott Mountains in Enderby Land. The geology of the nunatak was investigated by the SovAE, 1961-62, which called it "Gora Oblachnaya" (cloudy mountain).

Ob' Passage 66°33'S., 93°01'E.

Passage 0.4 mi. wide between Khmary I. and Mabus Pt. on the coast of Antarctica. First observed by the AAE (1911-14) under Mawson. Mapped by the Soviet exp. (1956), who named it for the ship *Ob'*.

O'Brien Bay 66°18'S., 110°32'E.

Bay lying between Bailey and Mitchell Peninsulas in the Windmill Islands area. First mapped from air photos taken by USN Operation Highjump and Operation Windmill in 1947 and 1948. Named by the US-ACAN for Lt. Clement E. O'Brien, USN, communications officer with USN Operation Windmill which established astronomical control stations in the Windmill Islands in 1948.

O'Brien Island 61°30'S., 55°58'W.

Small rocky island which rises to 540 m., lying 2 mi. SW. of Aspland I. in the South Shetland Islands. The name dates back to at least 1822 and is now established in international usage.

O'Brien Islet: see Pidgeon Island 66°19'S., 110°27'E.

O'Brien Peak 85°28'S., 156°42'W.

A rock peak, 670 m., standing 3 mi. W. of the N. extremity of Medina Peaks, along the edge of the Ross Ice Shelf. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named by Byrd for John S. O'Brien, surveyor with that party.

O'Brien's Island: see O'Brien Island 61°30'S., 55°58'W.

Obruchev, Mount 68°54'S., 154°10'E.

A mountain 15 mi. ESE. of Scar Bluffs, near the base of Mawson Peninsula. Mapped by the Soviet Antarctic Expedition, 1958, and named for Soviet geologist V.A. Obruchev.

Obruchev Hills 66°35'S., 99°46'E.

A group of rounded hills on the coast between Denman Glacier and Scott Glacier. The hills were plotted by the Western Base Party of the AAE (1911-14) as a great rock face. They were plotted in greater detail

from aerial photographs taken by USN Operation Highjump (1946-47) and later by the Soviet expedition (1956). Named by the latter for Vladimir A. Obruchev, Soviet geologist (1863-1956).

Observation Bluff 60°43'S., 45°36'W.

The eastern summit, 110 m., of the ice-free ridge which forms the N. side of Paal Hbr. in Signy I., in the South Orkney Islands. The area was roughly surveyed by DI personnel in 1933. The bluff was surveyed in 1947 by the FIDS, and so named by them because it marks the position from which daily sea ice observations were made.

Observation Hill 77°51'S., 166°40'E.

Conical hill, 230 m., surmounting Cape Armitage at the S. end of Hut Point Peninsula on Ross Island. Disc. by the BrNAE, 1901-4, under Scott, and so named because it forms an excellent lookout station.

Observation Island 67°01'S., 50°24'E.

Small irregular island lying just W. of the mouth of Beaver Gl. in the E. part of Amundsen Bay. Visited in 1956 by an ANARE party led by P. W. Crohn, and so named because the island was occupied as a magnetic and astronomical observation station.

Observatorio, Isla: see Gamma Island 64°20'S., 63°00'W.

O'Cain Point 62°16'S., 58°53'W.

Point lying 3 mi. NW. of Duthoit Pt. on the E. side of Nelson I., in the South Shetland Islands. The name O'Cain's Island, after the American sealing vessel *O'Cain* (Capt. Jonathan Winship) from Boston, Massachusetts, was applied by the Stonington sealers in 1820-21 to Nelson Island, but this name did not become established. O'Cain Point was applied by the UK-APC in 1961 to preserve the American name in the area.

O'Cain's Island: see Nelson Island 62°18'S., 59°03'W.

Ocaso, Fiord: see Sunset Fjord 54°03'S., 37°27'W.

Oceana Insel: see Oceana Nunatak 65°08'S., 59°48'W.

Oceana Nunatak 65°08'S., 59°48'W.

One of the Seal Nunataks, lying at the NW. corner of Robertson I., off the E. coast of Antarctic Peninsula. Disc. by a Nor. whaling exp. under C. A. Larsen in December 1893, and named after the Oceana Co. of Hamburg, a sponsor of the expedition.

Ocean Harbor 54°20'S., 36°16'W.

Deeply indented bay on the N. coast of South Georgia which is entered 1.5 mi. WNW. of Tijuca point. The

GEOGRAPHIC NAMES OF THE ANTARCTIC

names New Fortune Bay and Neufortuna Bay, probably for the *Fortuna*, Norwegian-Argentine whaling vessel which participated in establishing the first permanent whaling station at Grytviken, South Georgia in 1904-5, were used for this feature in 1922 by Filchner, following the GerAE, 1911-12. Following a survey of the island in 1951-52, the SGS reported that the feature is known to whalers and sealers as Ocean Harbor, a name derived from the Ocean Whaling Co. which at one time had a station there. The name Ocean Harbor is approved for this feature on the basis of local usage, and also to avoid confusion of the name New Fortuna Bay with Fortuna Bay, only 22 mi. to the northwest.

Oceanite, Mount 58°29'S., 26°15'W.

A conspicuous ice-covered mountain (probably an extinct volcano) rising to 915 m. in the extreme SE. corner of Montagu I., South Sandwich Islands. The name applied by UK-APC in 1971 refers to the oceanite lavas present in this area, which occur nowhere else in the South Sandwich Islands.

Ochre, Mount 78°14'S., 166°33'E.

A volcanic crater, partly eroded away, lying 3 mi. E. of Mt. Aurora on Black I., in the Ross Archipelago. So named by the NZGSAE (1958-59) because reddish-brown scoria covers much of the upper slopes.

Ochs Glacier 76°30'S., 145°35'W.

Glacier flowing to the head of Block Bay between Mt. Iphigene and Mt. Avers, in the Ford Ranges of Marie Byrd Land. Discovered by the ByrdAE in 1929, and named for Adolph S. Ochs, publisher of the *New York Times*, a patron of the expedition.

O'Connell Nunatak 84°43'S., 65°08'W.

A peaked rock nunatak, 1,210 m., standing 6 mi. SSE. of Mt. Murch in southern Anderson Hills, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Richard V. O'Connell, seismologist at South Pole Station, winter 1967.

O'Connor Island 66°25'S., 110°28'E.

Rocky island, 1 mi. long, between Holl and Ford Islands in the S. part of the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Joseph (Jerry) J. O'Connor, who served as air crewman with the eastern task group of USN Op. Hjp., 1946-47, and assisted USN Op. Wml. parties in establishing astronomical control stations between Wilhelm II Coast and Budd Coast during the 1947-48 season.

O'Connor Nunataks 76°26'S., 143°25'W.

Group of rock exposures rising above the ice near the head of Balchen Gl., 5 mi. NE. of Griffith Nunataks in the Ford Ranges, Marie Byrd Land. Discovered by the USAS in aerial flights over this area in 1940, and named for Raymond O'Connor, a member of the West Base of the USAS (1939-41).

O'Connor Peak 54°16'S., 36°19'W.

Peak, 675 m., standing W. of Long Pt. on Barff Pen., South Georgia. The name appears on a chart showing the results of a survey by DI personnel in 1929, and is probably for Midshipman W. P. O'Connor, who assisted with the survey.

O'Connors Rock 62°05'S., 58°24'W.

Rock 0.1 mi. SW. of Stenhouse Bluff, King George I., lying in Visca Anchorage in the N. part of Admiralty Bay, in the South Shetland Islands. First charted by the FrAE, 1908-10, under Charcot. The name "O'Connor's Rock" was first used for this feature on a British chart and is probably after Midshipman W. P. O'Connor, RNR, who assisted in a sketch survey of Visca Anchorage in the *Discovery* in 1927.

Odbert Island 66°22'S., 110°33'E.

Rocky island, 1.5 mi. long, between Ardery I. and Robinson Ridge in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Lt. Jack A. Odbert, USN, assistant aerological officer with USN Op. Wml. which established astronomical control stations in the area in January 1948.

Odde Nunatak 72°02'S., 10°43'E.

The northernmost of a small chain of nunataks at the E. side of Glopeflya Plain, close S. of the E. part of the Orvin Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named for Odde Gjeruldsen, scientific assistant with NorAE (1956-58).

Oddesteinen: see Odde Nunatak 72°02'S., 10°43'E.

Odell Glacier 76°44'S., 159°55'E.

A glacier draining NE. between Allan Hills and Coombs Hills into the upper Mawson Gl. in Victoria Land. Named by the NZ-APC for Prof. N. E. Odell, formerly of Otago University, New Zealand.

Oden Rock: see Ko-iwa Rock 68°42'S., 40°33'E.

Odin, Mount 66°26'S., 64°03'W.

A saddle-top mountain consisting of two ice-covered peaks, 1,465 m., situated close SW. of Frigga Peak on

GEOGRAPHIC NAMES OF THE ANTARCTIC

the divide between Anderson and Sleipnir Glaciers, on the E. coast of Graham Land. During 1947 the peak was photographed from the air by the RARE and charted from the ground by the FIDS. Named by the FIDS after the Norse god Odin, the mythological husband of Frigga.

Odin, Mount 77°35'S., 161°39'E.

The most prominent, though not the highest peak in the Asgard Range, rising over 2,000 m. just S. of Lake Vanda in Victoria Land. Named by the VUWAE (1958-59) for one of the Norse gods.

Odin Glacier 77°35'S., 161°36'E.

A small glacier that drains the W. slopes of Mt. Odin in the Asgard Range, Victoria Land. Named by NZ-APC in association with Mt. Odin.

Odinokaya Nunatak 71°32'S., 6°10'E.

A small, isolated nunatak about 15 mi. NW. of the Jaren Crags, Mühlig-Hofmann Mountains, in Queen Maud Land. Mapped by Norsk Polarinstitut from surveys and air photos by NorAE, 1956-60. Also mapped by the SovAE in 1961 and named Gora Odinokaya (solitary hill).

Odin Valley 77°36'S., 161°43'E.

An ice free valley immediately E. of Mt. Odin in the Asgard Range, Victoria Land. Named by NZ-APC in association with Mt. Odin.

Odishaw, Mount 84°42'S., 174°54'E.

A high, prominent mountain, 3,965 m., forming a distinctive landmark 9 mi. SSW. of Mt. Kaplan, in the Hughes Range. Discovered and photographed by R. Adm. Byrd on the Baselaying Flight of Nov. 18, 1929, and surveyed by A. P. Crary in 1957-58. Named by the latter for Hugh Odishaw, Executive Sec. of the U.S. National Committee for the IGY.

Odom Bay: see Odom Inlet 71°30'S., 61°20'W.

Odom Inlet 71°30'S., 61°20'W.

Ice-filled inlet 9 mi. long, between Cape Howard and Cape MacDonald along the E. coast of Palmer Land. Disc. by members of the USAS who explored this coast from East Base both by land and from the air in 1940. Named for Howard Odom, radio operator at the East Base.

O'Donnell Peak 72°24'S., 166°01'E.

A peak on the polar plateau, situated 5 mi. W. of Joice Icefall of the Millen Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Frank B. O'Donnell, meteorologist at Hallett Station in 1962.

Oehlschlager Bluff 75°03'S., 136°42'W.

A steep rock bluff overlooking Hull Gl. from the north. It marks the SW. extremity of Erickson Bluffs and McDonald Heights in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Richard J. Oehlschlager, member of the biological party that made population studies of seals, whales, and birds in the pack ice of the Bellingshausen and Amundsen Seas using USCGC *Southwind* and its two helicopters, 1971-72.

Oeschger Bluff 76°24'S., 111°48'W.

A flat-topped snow and rock bluff that projects from the southeast part of Mt. Takahe in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy tri-camera aerial photography, 1959-66. Named by US-ACAN for Hans Oeschger (Univ. of Bern, Switzerland), USARP glaciologist at Byrd Station, 1968-69 and 1969-70.

Office Boys, The 55°01'S., 34°39'W.

Group of rocks at the NE. end of the Clerke Rocks, lying some 40 mi. ESE. of the SE. end of South Georgia. Clerke Rocks were disc. by Capt. James Cook in 1775. The Office Boys were charted and probably named by DI personnel who made surveys in the South Georgia area in the period 1926-30.

Office Girls, The 72°20'S., 160°01'E.

Two prominent rock nunataks along an ice cliff, situated 7 mi. SW. of Welcome Mountain in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN to express appreciation for the dedicated support provided to Antarctic programs by home-based personnel.

Offset Ridge 71°41'S., 68°32'W.

A ridge extending W. from Triton Point between Venus Gl. and Neptune Gl. in eastern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. The ridge is kinked in the middle and is effectively formed of two ridges offset from one another; thus, the descriptive name applied by UK-APC.

Ogden Heights 73°58'S., 161°40'E.

Flattish, mainly ice-covered heights, about 7 mi. long, forming a part of the S. wall of upper Priestley Glacier to the SE. of Tantalus Peak, Victoria Land. The heights are near where the southern party of the NZGSAE, 1962-63, was landed. Named by them for Lt. John H. Ogden, USN, pilot who airlifted the party to this point, flew in their resupply, and later flew the party back to base at the end of the season.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ōgi Beach 69°08'S., 39°26'E.

A beach at the head of the cove in southern Rumpa Island, in the eastern part of Lützow-Holm Bay. Mapped by the JARE. The name Ōgi-hama (Oogi Hama), meaning "fan beach," was applied by JARE Headquarters in 1973.

O'Gorman Rocks 68°34'S., 77°57'E.

Two small insular rocks lying off the Vestfold Hills, about 0.5 mi. S. of Trigwell Island. The rocks were plotted from ANARE air photos of 1957 and 1958. Named by ANCA for M. O'Gorman, weather observer at Davis Station in 1959.

O'Hara Glacier 70°49'S., 166°40'E.

A glacier just W. of Ackroyd Pt., flowing NW. into the S. side of Yule Bay, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Norbert W. O'Hara, a member of the USARP party which conducted studies of the Ross Ice Shelf, 1965-66.

O'Higgins, Tierra de: see Antarctic Peninsula 69°30'S., 65°00'W.

Ohio Range 84°45'S., 114°00'W.

A range about 30 mi. long and 10 mi. wide, extending WSW.-ENE. from Eldridge Peak to Mirsky Ledge. The range forms the NE. end of the Horlick Mountains and consists primarily of a large snow-topped plateau with steep northern cliffs and several flat-topped ridges and mountains. The highest point, 2,990 m., is the summit of Mt. Schopf. The range was surveyed in 1958-59 by the USARP Horlick Mountains Traverse, and was investigated in 1960-61 and 1961-62 by geologists of the Institute of Polar Studies of Ohio State University, for which the range is named.

Ohlin Island 63°30'S., 60°07'W.

Island lying 6 mi. W. of the N. end of Tower I. in the Palmer Archipelago. Disc. by the SwedAE, 1901-4, and named by Nordenskjöld for Axel Ohlin, zoologist with the expedition.

Ō-ike, Lake 69°01'S., 39°34'E.

A lake just SE. of Shōwa Flat in the E. extremity of Ongul Island. Mapped from surveys and air photos by JARE, 1957-62, and named Ō-ike (big pond) because it is the largest lake on the island.

O'Kane Canyon 74°19'S., 162°30'E.

A steep-walled canyon at the head of O'Kane Glacier, indenting the E. side of Eisenhower Range between Mt. Baxter and Eskimo Point, in Victoria Land.

Named by the Southern Party of NZGSAE, 1962-63, for H. D. O'Kane, photographer at Scott Base, 1961-62. O'Kane had made several reconnaissance flights to provide aerial photographs of the area.

O'Kane Glacier 74°26'S., 163°06'E.

A steep glacier, 15 mi. long, draining the E. wall of Eisenhower Range between Mt. Baxter and Eskimo Point and flowing SE. to its terminus opposite the mouths of the Priestley and Corner Glaciers at the N. extremity of Nansen Ice Sheet, in Victoria Land. Named by US-ACAN in association with O'Kane Canyon, located at the head of the glacier.

O'Keefe Hill 70°20'S., 64°24'E.

An isolated ice-covered hill, located 1.5 mi. S. of Baldwin Nunatak and 8 mi. SSW. of Mt. Starlight in the Prince Charles Mountains. Mapped from ANARE air photos, 1965. Named by ANCA for J. O'Keefe, cook at Mawson Station, 1964.

O'Konnor, Ostrov: see O'Connor Island 66°25'S., 110°28'E.

Okskaya Nunatak 71°58'S., 13°47'E.

Elongated nunatak, 2,295 m., at the N. end of the Rimekalvane Nunataks in the Weyprecht Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966, probably for Oka, a Soviet river.

Oku-hyōga Rock 70°06'S., 39°01'E.

A rock which is the farthest south bare rock exposed along the E. side of Shirase Gl., in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Oku-hyōga-iwa (inner glacier rock) because of its position.

Oku-iwa Glacier 68°42'S., 40°46'E.

Glacier flowing to the sea just W. of Oku-iwa Rock on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named after nearby Oku-iwa Rock.

Oku-iwa Rock 68°42'S., 40°50'E.

A substantial rock exposure just E. of Oku-iwa Glacier on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Oku-iwa (interior rock). The name presumably suggests the interior position of the rock with respect to the minor recession of the coast along which the rock is located.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Okuma Bay 77°50'S., 158°20'W.

A bay indenting the front of the Ross Ice Shelf at its juncture with Edward VII Peninsula. It was discovered by the BrNAE under Scott in 1902. Named by the Japanese exp. under Shirase (1911-12) for Count Okuma, Premier of Japan.

Olaf Bjaaland, Mount: see Bjaaland, Mount 86°33'S., 164°14'W.

Olaf Prydz Bukt: see Prydz Bay 69°00'S., 75°00'E.

Olander Nunatak 74°25'S., 72°07'W.

One of several somewhat scattered nunataks which rise above the ice of eastern Ellsworth Land, lying 5 mi. E. of Tollefson Nunatak and 27 mi. NNW. of Sky-Hi Nunataks. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for R. E. Olander, electronics technician at Eights Station in 1963.

Olav Peak 54°25'S., 3°25'E.

A snow-covered peak (780 m.) which stands 1.5 mi. south of Cape Valdivia and surmounts the north-central part of Bouvetøya. The recommended name was applied in December 1927 by the *Norvegia* expedition under Capt. Harald Horntvedt. Although the name "Kaiser Wilhelm Pik" appears on the chart of the German *Valdivia* expedition of 1898 as applying to this peak, the accompanying expedition report indicates that name is intended for the entire summit area of the island, not this single peak.

Olav Rocks 54°03'S., 37°07'W.

Small group of rocks lying 0.6 mi. ESE. of Cape Crewe off the N. coast of South Georgia. Charted by DI personnel during the period 1927-30, and so named because the rocks serve as a guide to vessels entering Prince Olav Harbor. The incorrect spelling, "Prince Olaf Rocks," appearing on the charts by DI personnel has been corrected. A shortened form of the original name is approved.

Olavtoppen: see Olav Peak 54°25'S., 3°25'E.

Old Ben Mountain: see Big Ben 53°06'S., 73°31'E.

Oldenburg, Mount 82°04'S., 87°55'W.

A partly snow-covered peak 0.5 mi. E. of Mt. Helms in the E. part of Martin Hills. The peak was sketched by J. Campbell Craddock in January 1963. Named by US-ACAN for Miss Margaret Oldenburg who has been interested in polar exploration and research for a number of years, and who is well known to polar workers because of her gifts of books, photographs and other materials to isolated IGY and Weather Bureau sta-

tions. Application of the name was suggested by a number of persons including Edward C. Thiel who, with J. Campbell Craddock, conducted an airlifted geophysical traverse along the 88th meridian near this feature in 1959-60.

Oldfield, Mount 66°50'S., 50°38'E.

A coastal mountain at the E. side of Amundsen Bay, standing close W. of Mt. Hardy in the Tula Mountains. Photographed and mapped by ANARE in 1956. Visited and positioned by G. A. Knuckey of ANARE in November 1958. Named by ANCA for R. E. T. Oldfield, radio officer at Mawson Station in 1958.

Oldham Island 67°32'S., 61°42'E.

An island in the E. part of the Stanton Group, off Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Andöya (duck island). Renamed by ANCA for Hugh Oldham, biologist and magnetician at Mawson Station in 1955.

Old Man, The 54°04'S., 37°08'W.

Point lying between Squire and Sheep Points in Cook Bay, South Georgia. The name appears on a 1938 British Admiralty chart.

Old Mans Head 72°22'S., 60°45'W.

Dark headland marking the S. side of the entrance to Wüst Inlet, on the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by members of the USAS. During 1947 the headland was photographed from the air by the RARE, who in conjunction with the FIDS charted it from the ground. This descriptive name was given by the FIDS.

Oldroyd Island 68°32'S., 77°54'E.

A small island 0.2 mi. NW. of Magnetic Island, lying off the Vestfold Hills in the E. part of Prydz Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Remapped by ANARE (1957-58) and named by ANCA for K. C. Oldroyd, weather observer at Davis Station in 1960.

Olds Peak 84°40'S., 174°41'W.

A peak (1,480 m.) standing 6 mi. NE. of Mt. Kenney in the S. part of Longhorn Spurs, Queen Maud Mountains. Named by US-ACAN for Cdr. Corwin A. Olds, USN, who participated in Antarctic Support Activity during USN Op. DFrz. 1964.

O'Leary Peak 84°27'S., 179°14'W.

A partly snow-covered peak (1,040 m.), the northernmost summit along the E. wall of Erickson Glacier,

GEOGRAPHIC NAMES OF THE ANTARCTIC

where the latter enters the Ross Ice Shelf. Discovered and photographed by the USAS, 1939-41. Named by US-ACAN for Paul V. O'Leary, builder, USNR, a member of the U.S. Naval Support Force, Antarctica, who lost his life by accidental poisoning on Nov. 28, 1959.

O'Leary Ridges 70°58'S., 67°19'E.

Three partly snow-covered ridges extending in a line NW.-SE. for about 5 mi., situated 20 mi. SE. of Mt. Bunt in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named by ANCA for R. A. O'Leary, officer in charge at Wilkes Station in 1964.

Ole Engelstad, Mount: see Engelstad, Mount 85°29'S., 167°24'W.

Olentangy Glacier 86°00'S., 127°20'W.

A glacier draining that portion of the Wisconsin Plateau of the Horlick Mountains that stands ENE. of Sisco Mesa, flowing S. to merge into McCarthy Gl. and the larger Reedy Glacier to the SW. of Mt. McNaughton. Mapped by USGS from surveys and USN air photos, 1960-64. The name was proposed by the Ohio State University geological party to the Horlick Mountains, 1964-65. The Olentangy River flows through the University campus.

Oliphant Islands 60°45'S., 45°36'W.

Group of small ice-free islands and rocks lying S. of Gourlay Pen., the SE. extremity of Signy I. in the South Orkney Islands. Dove Channel extends through this group in a general E.-W. direction. The group was roughly charted in 1912-13 by Petter Sørle, Norwegian whaling captain, and again in 1933 by DI personnel. Surveyed in 1947 by the FIDS and named by them for Prof. Marcus L. E. Oliphant, then prof. of physics, Birmingham Univ.; later Dir. of the Research School of Physical Sciences, Australian National Univ., who gave assistance to the FIDS in obtaining equipment.

Oliver, Mount 84°56'S., 173°44'W.

A peak over 3,800 m., standing 2 mi. SE. of Mt. Campbell in the Prince Olav Mountains. Discovered and photographed by the USAS, 1939-41. Surveyed by A. P. Crary (1957-58) and named by him for Norman Oliver, Air Force Cambridge Research Center, who was Antarctic Project Leader for aurora operations, 1957-60.

Oliver Glacier 82°34'S., 163°45'E.

Glacier draining the area west and south of Mt. Christchurch and entering Lowery Gl. just N. of the Taylor Hills. Mapped by the USGS from tellurometer

surveys and Navy air photos, 1960-62. Named by US-ACAN for Edward J. Oliver, USARP glaciologist at South Pole Station, 1961-62.

Oliver Nunatak 84°05'S., 66°08'W.

One of the Rambo Nunataks, lying 2 mi. S. of Sowle Nunatak on the W. side of Foundation Ice Stream, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Thomas H. Oliver, electronics technician at Plateau Station, winter 1967.

Oliver Peak 77°37'S., 161°03'E.

A prominent peak (2,410 m.) located 4 mi. NNW. of Round Mountain in the Asgard Range, Victoria Land. Named by US-ACAN for Leon Oliver of New Zealand, who participated in the international Dry Valley Drilling Project as chief driller (1973-74) and drilling superintendent (1974-75).

Olivine Point 60°40'S., 45°29'W.

The southern end of the low-lying peninsula which forms the E. limit of Iceberg Bay on the S. coast of Coronation I., in the South Orkney Islands. Surveyed by the FIDS in 1948-49, and so named by them because the mineral olivine occurs in the igneous dikes intersecting the peninsula just N. of the point.

Ollivant Point 57°46'S., 26°31'W.

The westernmost point of Saunders I., South Sandwich Islands. Named by UK-APC for Captain Martin S. Ollivant, RN, Captain of HMS *Protector* at the time of her survey of the island in 1964.

Olliver Peak 84°34'S., 173°33'W.

A rock peak (630 m.) along the edge of Ross Ice Shelf. It stands at the E. side of the mouth of Barrett Gl. and is the northwesternmost summit in Gabbro Hills. Named by US-ACAN for Cdr. George R. Olliver, USN, who was injured in the crash of an Otter aircraft on Dec. 22, 1955, following a take-off from near Cape Bird.

Olsen, Mount 53°01'S., 73°20'E.

A snow-covered peak (635 m.) standing 0.2 mi. E. of Hayter Peak on Laurens Pen., in the NW. part of Heard Island. The feature appears to have been roughly charted on an 1860 sketch map compiled by Capt. H.C. Chester, American sealer operating in the area during this period. It was surveyed in 1948 by ANARE, who named it for Bjarne Olsen, first mate on the whale catcher *Kidalkey* which visited the island in January 1929.

Olsen Crag 86°12'S., 160°48'W.

Rugged crags surmounting a small but conspicuous mountain block that projects into the E. side of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Amundsen Gl. just N. of Epler Gl., in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Karinius Olsen, cook on the *Fram*, the ship of Amundsen's Nor. exp. of 1910-12. This naming preserves the spirit of Amundsen's 1911 commemoration of "Mt. K. Olsen," a name applied for an unidentifiable mountain in the general area.

Olsen Névé: see Olson Névé 82°07'S., 158°00'E.

Olsen Peak 77°32'S., 86°29'W.

Peak, 2,140 m., standing 2 mi. NW. of Mt. Wyatt Earp near the N. end of the Sentinel Range. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Hartveg Olsen, captain of Ellsworth's exp. ship *Wyatt Earp* in 1935-36.

Olsen Rock 54°04'S., 38°00'W.

Rock lying 0.5 mi. SE. of Cape Paryadin, off the W. end of South Georgia. Charted by DI personnel in 1926-27. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Søren Olsen, gunner of the South Georgia Whaling Co. at Leith Hbr., 1926-30, 1933-39 and 1945-53.

Olsen Valley 54°12'S., 36°41'W.

Valley extending from Husvik Hbr. in Stromness Bay to Carlita Bay in Cumberland West Bay, on the N. side of South Georgia. The feature was known to early whalers and sealers at South Georgia. It was surveyed by the SGS in the period 1951-57, and named by the UK-APC for Nils E. Olsen, Manager of Tønsberg Hvalfangeri, Husvik, 1950-56.

Olson Glacier 72°49'S., 166°41'E.

A tributary glacier descending westward from Malta Plateau to enter Seafarer Glacier, in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Richard D. Olson of the Office of Antarctic Programs, National Science Foundation, who participated in research administration activities at McMurdo Station, 1967-68.

Olson Island 77°14'S., 153°17'W.

The largest and northernmost of the ice-covered White Islands, in southern Sulzberger Bay. The feature is rudely delineated on the map of the ByrdAE, 1928-30, and is indicated as "low ice cliffs" that rise above the ice shelf in this part of the bay. Mapped in detail by USGS from surveys and U.S. Navy air photos, 1959-65. Named for Michael L. Olson, USARP ionospheric physicist at Byrd Station, winter party 1968, and a member of the Plateau Station summer party, 1968-69.

Olson Névé 82°07'S., 158°00'E.

A névé on the NW. side of Cobham Range which nourishes the Lucy and Prince Philip Glaciers, in the Churchill Mountains. Mapped by the Holyoake, Cobham and Queen Elizabeth Ranges party of the NZGSAE (1964-65). Named for Lt. Dennis A. Olson, USN, who flew the New Zealand party to the névé and supported it during the summer season. The feature is incorrectly identified as "Olsen Névé" on some maps of the late 1960's.

Olson Nunatak 74°55'S., 162°28'E.

A bare rock nunatak lying at the S. side of the terminus of Reeves Glacier, 4 mi. N. of the summit of Mt. Gerlache, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for James J. Olson, geophysicist with the USARP Ross Ice Shelf party in the 1961-62 season.

Olson Peaks 79°16'S., 160°05'E.

Two close-lying peaks, the higher 1,335 m., standing 4 mi. W. of Cape Lankester on the N. side of Bertoglio Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959-63. Named by US-ACAN for Gary D. Olson, a member of the U.S. Army aviation support unit for Topo North and Topo South (1961-62) which conducted the tellurometer surveys.

Olstad Glacier 68°50'S., 90°41'W.

A heavily crevassed glacier descending to the west coast of Peter I Island about 2 mi. south of Tofte Glacier. Peter I Island was circumnavigated by the Norwegian whale catcher *Odd I* in January 1927 and was explored from the *Norvegia* in February 1929. The glacier is named for Ola Olstad, Norwegian zoologist who, transported by various whaling ships, conducted research in South Georgia, South Shetland Islands and Palmer Archipelago in 1927-28.

Olstad Peak 54°29'S., 37°05'W.

Peak, 650 m., surmounting Annenkov I. off the S. coast of South Georgia. First observed in 1775 by a Br. exp. under Cook. It was surveyed by the SGS in the period 1951-57, and named by the UK-APC for Ola Olstad, Norwegian zoologist, member of the Nor. exp. under Hornvedt, 1927-28, and chief scientist of the Nor. exp. under Nils Larsen, 1928-29.

Oluf Rocks 63°41'S., 60°10'W.

Small group of rocks lying 3.5 mi. E. of Cape Neumayer, Trinity I., in the Palmer Archipelago. Photographed by the FIDASE in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 after the Danish freighter *Oluf Sven* (Capt. J. C. Ryge) which transported the FIDASE to Deception I.

GEOGRAPHIC NAMES OF THE ANTARCTIC

in 1955 and 1956, and was used during the two summer seasons as a mobile base for operations by ground survey parties.

Olympus, Mount 80°13'S., 156°46'E.

A rectangular, flat, ice-covered mountain over 2,400 m., standing 5 mi. E. of Mt. Henderson in the Britannia Range. Named by US-ACAN, in association with nearby Byrd Glacier, after the *Mount Olympus*, flagship of USN Op. Hjp., 1946-47, led by Admiral Byrd.

Olympus Range 77°29'S., 161°30'E.

A primarily ice-free mountain range of Victoria Land with peaks over 2,000 m., between Victoria and McKelvey Valleys on the north and Wright Valley on the south. Mapped by the VUWAE, 1958-59, and named for the mythological home of the Greek gods. Peaks in the range are named for figures in Greek mythology.

Omega, Cape 68°34'S., 40°59'E.

A prominent rock cape between Omega Glacier and Daruma Rock on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, who gave the name.

Omega Glacier 68°37'S., 41°01'E.

A glacier flowing to the coast just S. of Cape Omega in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, who gave the name.

Omega Island 64°20'S., 62°56'W.

Island 2 mi. long, which lies immediately S. of Eta I. in the Melchior Is., Palmer Archipelago. This island, the largest feature in the SE. part of the Melchior Is., is part of what was called "Île Melchior" by the FrAE under Charcot, 1903-5, but the name Melchior now applies for the whole island group. Omega Island was roughly surveyed by DI personnel in 1927. The name Omega, derived from the last letter of the Greek alphabet, appears to have been first used on a 1946 Argentine govt. chart following surveys of the Melchior Is. by Arg. expeditions in 1942 and 1943.

Omega Nunatak 81°55'S., 29°12'W.

Isolated, flat-topped nunatak 21 mi. SSW. of the Whichaway Nunataks. First mapped in 1957-58 by the CTAE and so named because it was the last rock outcrop seen, until Victoria Land was reached, on the transpolar route of the CTAE in 1957-58.

Omega Peak 72°09'S., 166°03'E.

A peak 1 mi. NE. of Le Couteur Peak, in the Millen Range. So named by the Southern Party of NZFMCAE, 1962-63, because this was the last major peak climbed by the party, Jan. 2, 1963.

Omicron Islands 64°21'S., 62°55'W.

Group of small islands and rocks which lie close SE. of Omega I. in the Melchior Is., Palmer Archipelago. The name, derived from the 15th letter of the Greek alphabet, appears to have been first used on a 1946 Argentine govt. chart following surveys of these islands by Arg. expeditions in 1942 and 1943.

Ommaney Glacier: see Ommanney Glacier 71°32'S., 169°29'E.

Ommanney Bay 60°33'S., 45°32'W.

Bay 2 mi. wide between Prong Pt. and Foul Pt. on the N. coast of Coronation I., in the South Orkney Islands. First seen and roughly charted by Capt. George Powell and Capt. Nathaniel Palmer in 1821. Recharted in 1933 by DI personnel on the *Discovery II* and named for Francis D. Ommanney, zoologist on the staff of the Discovery Committee.

Ommanney Glacier 71°32'S., 169°29'E.

Valley glacier, 20 mi. long, meandering northward in the Admiralty Mtns. to discharge into Relay Bay, on the W. side of Robertson Bay, along the N. coast of Victoria Land. Charted by the BrAE, 1898-1900, under C.E. Borchgrevink, who named it for Adm. Sir Erasmus Ommanney, who had served in the Arctic Expedition of 1850.

Ommundsen Island 66°20'S., 110°22'E.

An island just W. of Midgley I., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Audon Ommundsen, transport specialist at Wilkes Station in 1958.

Ondina, Puerto: see Undine Harbor 54°02'S., 37°58'W.

Ondina Sur, Puerto: see Undine South Harbor 54°31'S., 36°33'W.

Ondori Island 69°00'S., 39°32'E.

A small island lying 1 mi. N. of Ongul Island and 0.8 mi. W. of Nesøya in the NE. part of Lützow-Holm Bay. Mapped from surveys and air photos by the JARE, 1957-62. The name "Ondori-jima" (rooster island) was given by JARE Headquarters in 1972 in association with nearby Mendori Island.

O'Neal Ridge 72°48'S., 168°45'E.

A high ridge trending NE.-SW., bounded by Ingham Gl. and Humphries Gl. in the Victory Mtns. of Victoria Land. Named by US-ACAN for Russell D. O'Neal, member of the National Science Board, 1972-77. As part of his official duties in support of the U.S. science program, he visited several sites in Antarctica in 1975.

GEOGRAPHIC NAMES OF THE ANTARCTIC

One Day Islet: see Hedgehog Island 72°12'S., 170°00'E.

O'Neil, Mount 85°40'S., 136°20'W.

Mountain, 2,090 m., just NE. of Mt. Ratliff at the N. side of Kansas Glacier. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Robert J. O'Neil, utilitiesman with the Byrd Station winter party in 1961.

O'Neill Nunataks 79°01'S., 85°00'W.

A small, linear group of nunataks that mark the S. end of Bastien Range, in the Ellsworth Mountains. Named by the Univ. of Minnesota geological parties to the Ellsworth Mountains for Jerry O'Neill, aerographer with these parties in 1963-64 and 1964-65.

Onezhskiye Nunataks 71°35'S., 7°03'E.

A small group of nunataks, the largest being Stor-kvarvsteinen Peak, situated 9 mi. NNE. of Slettefjellet in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norsk Polarinstitut from surveys and air photos by NorAE, 1956-60. Also mapped by SovAE in 1961; the name is an adjective derived from Onega, a river in the Soviet Union.

Ongley Island 62°26'S., 59°54'W.

Small island lying 2.5 mi. W. of Dee I., close off the N. side of Greenwich I., in the South Shetland Islands. Charted in 1935 by DI personnel on the *Discovery II*, but the name appears to have been first used on a 1948 Admiralty chart based upon this survey.

Ongulgalten Island 69°04'S., 39°36'E.

The northernmost of three aligned islands lying 1 mi. SE. of the Te Islands, at the S. end of the Flatvaer Islands. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Ongulgalten (the fishhook boar) in association with nearby Ongul Island.

Ongul Island 69°01'S., 39°32'E.

An island 1.5 mi. long, which is the largest feature in the Flatvaer Islands lying just within the E. side of the entrance of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. They believed this island to be connected to East Ongul Island (q.v.) and applied the name "Ongul" (fishhook), which is suggestive of the outline of the two islands taken together. In 1957, the JARE found East Ongul Island to be a separate entity, but the name Ongul Island is retained for this largest island in the group.

Ongul Islands: see Flatvaer Islands 69°01'S., 39°33'E.

Ongulkalven Island 69°01'S., 39°27'E.

An island lying 1 mi. W. of Ongul Island in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Ongulkalven (the fishhook calf).

Ongulöy: see Partizan Island 68°31'S., 78°10'E.

Ongul Sound 69°02'S., 39°38'E.

A sound, 2 mi. wide, between the E. shore of Lützow-Holm Bay and the Flatvaer Islands in which Ongul Island is the principal feature. Mapped by cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named for its association with Ongul Island.

Ongul Strait: see Ongul Sound 69°02'S., 39°38'E.

Ong Valley 83°14'S., 157°37'E.

A mainly ice-free valley 5 mi. long, just W. of Kreiling Mesa in the Miller Range. Named by US-ACAN for John S. Ong, USARP traverse engineer on the South Pole Traverse (1962-63).

Onley Hill 67°43'S., 63°02'E.

A bare rock hill, 840 m., standing 1 mi. S. of Mt. Henderson in the NE. part of the Framnes Mtns., Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Sörkollen (the south knoll). Renamed by ANCA for L. Onley, weather observer at Mawson Station in 1959.

Onlooker Nunatak 71°54'S., 162°22'E.

An isolated nunatak which protrudes prominently above the ice of the Rennick Glacier just SE. of Morozumi Range. Named by the northern party of NZGSAE, 1963-64. The name is suggestive of the aspect of the feature.

Onyx River 77°32'S., 161°45'E.

A meltwater stream which flows westward through the Wright Valley from Wright Lower Glacier to Lake Vanda. Mapped and named by the VUWAE, 1958-59.

Oogi Hama: see Ögi Beach 69°08'S., 39°26'E.

Oom Bay 67°26'S., 60°44'E.

A well-defined bay, 2 mi. wide, indenting the coast between Cape Bruce and Campbell Head. Disc. in February 1931 by the BANZARE under Mawson, who named it for Lt. K. E. Oom, RAN, cartographer with the expedition.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Oom Island 67°24'S., 60°39'E.

Small island 0.5 mi. NE. of Campbell Head, off the coast of Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Uksøy. Renamed by ANCA for Lt. K. E. Oom, RAN, a member of the BANZARE, 1929-31.

Oona, Mount 83°09'S., 162°36'E.

A mountain, 2,170 m., at the N. end of the ridge between Helm Glacier and Lowery Glacier in the Queen Elizabeth Range. Named by US-ACAN for Henn Oona, USARP aurora scientist at South Pole Station, 1964.

Oona Cliff 72°27'S., 160°09'E.

A north-facing rock and ice cliff, about 4 mi. long, situated just NW. of Mt. Walton in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Hain Oona, ionospheric physicist at South Pole Station, 1968.

Opornyy Point 69°48'S., 13°00'E.

An ice point along the W. side of Lazarev Ice Shelf, about 15 mi. N. of Leningradskiy Island, in Queen Maud Land. Mapped by the SovAE in 1959 and named Mys Opornyy (support point) because the ice shelf at this point rests on the ocean floor.

Oppegaard Spur 84°29'S., 177°22'W.

A narrow rock spur, 2 mi. long, extending NW. from the SW. portion of Mt. Speed, standing just E. of Kosco Gl. where the latter enters Ross Ice Shelf. Discovered and photographed by the USAS, 1939-41. Named by US-ACAN for Richard D. Oppegaard, Seaman Apprentice, USN, a member of the U.S. Naval Support Force, Antarctica, who lost his life in a shipboard accident, Nov. 8, 1957.

Oppkuven Peak 72°37'S., 0°24'E.

A peak 2 mi. N. of Gavlen Ridge in the Roots Heights, Sverdrup Mtns., in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Oppkuven (the ascent peak).

Óptimo, Cabo: see Best, Cape 54°05'S., 36°49'W.

Orca Peak 54°16'S., 36°32'W.

Peak, 395 m., standing W. of Grytviken on the N. coast of South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Oread Spur 72°35'S., 163°53'E.

A rock spur on the S. side of Tucker Gl., 10 mi. W. of Crater Cirque, on which a survey station was placed at a height of 1,185 m. by the NZGSAE, 1957-58. They named it Oread (mountain nymph), which is derived from Greek mythology.

Orejas Blancas: see Shewry Peak 64°45'S., 63°38'W.

Orejas de Burro, Islas: see Potmess Rocks 62°19'S., 59°45'W.

Orejas Negras: see Gateway Ridge 64°43'S., 63°33'W.

Orel Ice Fringe 64°46'S., 62°36'W.

A strip of coastal ice bordering the S. side of Errera Channel between Beneden Head and Porro Bluff, on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Eduard von Orel (1877-1941), Austrian surveyor who in 1905 designed the first stereoautograph for plotting maps directly from horizontal photographs.

Orella, Islas: see Vize Islands 65°40'S., 65°37'W.

Orestes, Mount 77°28'S., 161°55'E.

Prominent peak, over 1,600 m., just E. of Bull Pass in the Olympus Range of Victoria Land. Named by the VUWAE (1958-59) for a figure in Greek mythology.

Orestes Valley 77°28'S., 161°55'E.

A small ice-free valley at the N. side of Mount Orestes in the Olympus Range, Victoria Land. Named in 1964 for its association with Mount Orestes by American geologist Parker E. Calkin.

Orford Cliff 66°55'S., 66°29'W.

A coastal cliff of Graham Land, overlooking the E. side of Lallemand Fjord just E. of Andresen Island. Surveyed by FIDS in 1956. Named for Michael J. H. Orford, FIDS assistant surveyor at Detaille I. in 1956, a member of the party which found a route from Detaille I. to Avery Plateau, via Orford Cliff and Murphy Glacier.

Organ Peak 66°56'S., 67°00'W.

The northernmost peak of Arrowsmith Peninsula, Graham Land. Mapped in 1960 from surveys by FIDS. The name, which arose locally in 1956, is descriptive; the fluted appearance of this peak resembles the pipes of an organ.

Organ Pipe Cliffs 68°25'S., 149°04'E.

A line of coastal cliffs in the form of palisades of columnar dolerite overlooking the sea to the west of Cape

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wild. Discovered by the AAE (1911-14) under Douglas Mawson, who named them because of the similarity of the rock structure to organ pipes.

Organ Pipe Peaks 86°03'S., 150°00'W.

A row of aiguille type rock peaks, 7 mi. long, standing just N. of Mt. Harkness at the E. flank of Scott Glacier. Discovered by the geological party of the ByrdAE, 1933-35, who gave the descriptive name.

Orgelpipe Klippene: see Organ Pipe Cliffs 68°25'S., 149°04'E.

Orheim Point 79°23'S., 84°19'W.

A rock point at the end of Inferno Ridge in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Olav Orheim, Norwegian glaciologist on the USARP South Pole-Queen Maud Land Traverse II, 1965-66.

Orion Massif 70°23'S., 66°47'W.

A prominent massif, 14 mi. long, with a complicated network of peaks, passes, ridges and cirques. Located 4 mi. ENE. of Scorpio Peaks, between the upper parts of Meiklejohn and Millett Glaciers, in Palmer Land. Named by UK-APC after the constellation of Orion.

Orléans Channel: see Orléans Strait 63°50'S., 60°20'W.

Orleans Inlet: see Orléans Strait 63°50'S., 60°20'W.

Orléans Strait 63°50'S., 60°20'W.

Strait, extending in a NE.-SW. direction between the northeastern part of the Palmer Arch. and the W. coast of Antarctic Peninsula. Possibly first seen by Nathaniel B. Palmer, captain of the *Hero*, on Nov. 18, 1820. Named and outlined in part by the FrAE, 1837-40, under D'Urville. Charted in greater detail by the SwedAE, 1901-4, under Nordenskjöld. Presumably named for the royal house of Orléans; Louis Philippe, formerly Duke of Orléans, was King of France at the time of D'Urville's voyage.

Ormay, Mount 70°44'S., 66°42'E.

A ridgelike mountain 1 mi. S. of Mt. Butterworth in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for P. I. Ormay, plumber at Wilkes Station in 1963.

Ormehausen Peak 72°01'S., 14°38'E.

A peak at the N. end of Linnormen Hills in the Payer Mtns. of Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian

cartographers from surveys and air photos by the NorAE (1956-60) and named Ormehausen (the serpent's head).

Ormeryggen 72°04'S., 14°33'E.

The three major hills forming the central portion of Linnormen Hills, standing SE. of Skavlhø Mtn. in the Payer Mtns. of Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Ormeryggen (the serpent's back).

Ormesporden Hill 72°05'S., 14°19'E.

A hill at the SW. end of Linnormen Hills in the Payer Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Ormesporden (the serpent's tail).

Orn, Rocher de l': see Ørnen Rocks 62°01'S., 57°35'W.

Orndorff, Mount 84°37'S., 175°26'W.

A peak (1,520 m.) standing 5 mi. S. of Nilsen Peak, at the W. side of Massam Gl., in the Queen Maud Mountains. Named by US-ACAN for Lt. Cdr. Howard J. Orndorff, USN, a member of the winter party at McMurdo Station in 1963.

Orne Harbor 64°37'S., 62°32'W.

Cove 1 mi. wide, indenting the W. coast of Graham Land 2 mi. SW. of Cape Anna. Disc. by the BelgAE under Gerlache in 1898. The name Orne Harbor was probably in use by Norwegian whalers, because it was used by Scottish geologist David Ferguson following his geologic reconnaissance of this area aboard the whaler *Hanka* in 1913.

Orne Islands, 64°40'S., 62°40'W.

Group of small islands lying close N. of Rongé I., off the W. coast of Graham Land. First roughly surveyed in 1898 by the BelgAE under Gerlache. The name Orne Islands was probably in use by Norwegian whalers, because it was used by Scottish geologist David Ferguson following his geological reconnaissance of this area aboard the *Hanka* in 1913.

Ørnen Rocks 62°01'S., 57°35'W.

Group of rocks, some of which are above water, 1 mi. NE. of Cape Melville, King George I., in the South Shetland Islands. Named after the Norwegian whaler *Ørnen* which went aground there about 1908 or 1909.

Orr Glacier 71°36'S., 162°52'E.

A tributary glacier which drains the large cirque between Mounts Moody and Bernstein in the Lanter-

GEOGRAPHIC NAMES OF THE ANTARCTIC

man Range, Bowers Mtns., and flows W. into Rennick Glacier. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Maj. Thomas L. Orr, USA, Asst. Logistics Officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1968 and 1969.

Orr Island 77°38'S., 149°36'W.

An ice-covered island 5 mi. long, lying 3 mi. SW. of Grinder I. in Marshall Archipelago, off the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lt. Cdr. Thomas E. Orr, Supply Officer and Officer-in-Charge of the Para Rescue Team of USN Squadron VX-6 during Operation Deep Freeze 1968.

Orr Peak 83°29'S., 157°49'E.

A peak in the Miller Range overlooking Marsh Gl., forming the eastern salient in the bluffs southward of Argo Glacier. Observed in December 1957 by the N.Z. Southern Party of the CTAE (1956-58). Named for H. Orr, IGY scientist at Scott Base in 1957.

Ortiz Island 63°18'S., 57°52'W.

An island in the Duroch Islands. It lies 0.2 mi. south of the eastern end of Largo Island and a like distance from the northern coast of Trinity Peninsula. The name was given by Martin Halpern, leader of the University of Wisconsin (USARP) field party which geologically mapped the Duroch Islands, 1961-62. It honors Marcos Ortiz G., Captain of the Chilean ship *Lientur* which assisted in transporting the party during its study of this area.

Orton Cave 66°23'S., 110°27'E.

A cave in the western wall of Cave Ravine, Ardery I., in the Windmill Islands. Discovered in 1961 by Dr. M. N. Orton, medical officer at Wilkes Station, for whom it was named by ANCA.

Orton Reef 66°16'S., 110°33'E.

A reef with a least depth of 2 feet in the N. part of Newcomb Bay, located 0.5 mi. N. of Molholm I. in the Windmill Islands. Discovered and charted in February 1957 by a party from the U.S.S. *Glacier*. Named for Dr. M. N. Orton, medical officer at Wilkes Station, who assisted in an ANARE survey of Newcomb Bay in the 1961-62 season.

Orville Coast 75°45'S., 65°30'W.

That portion of the coast of Antarctica lying W. of Ronne Ice Shelf between Cape Adams and Cape Zumberge. Discovered by the RARE, 1947-48, under Ronne, who named this coast for Capt. Howard T.

Orville, USN, Head of the Naval Aerological Service, who was largely responsible for formulating the RARE meteorological program. The name Orville Coast is considered a more useful reference than "Orville Escarpment," the name originally applied for this area.

Orville Escarpment: see Orville Coast 75°45'S., 65°30'W.

Orvinfjella: see Orvin Mountains 72°00'S., 9°00'E.

Orvin Mountains 72°00'S., 9°00'E.

Major group of mountains extending for about 65 mi. between the Wohlthat and Mühlig-Hofmann Mtns. in Queen Maud Land. First photographed from the air and roughly plotted by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named for Anders K. Orvin, Dir. of the Norsk Polarinstitut (1945-48) and Under-Director after 1948.

Orwell Bight 60°43'S., 45°23'W.

Body of water lying S. of the eastern half of Coronation I., bounded on the west by Signy I. and on the east by the Robertson Is., in the South Orkney Islands. The general nature of this bight was first delineated by Petter Sørille, Norwegian whaling captain who mapped this area in 1912-13. It was surveyed by DI personnel in 1933 and by the FIDS in 1948-49. Named by the UK-APC for the Norwegian transport *Orwell*, the second ship of that name belonging to the Tønsberg Hvalfangeri, which anchored in Borge Bay, Signy I., on the W. side of this bight in the seasons 1925-26 to 1929-30.

Orwell Glacier 60°43'S., 45°38'W.

Small glacier, less than 0.5 mi. long, which descends steeply from the S. slopes of Snow Hills and terminates in 20 m. ice cliffs along the S. margin of Elephant Flats in the E. part of Signy I., in the South Orkney Islands. Surveyed by DI personnel in 1927 and named by them for the Norwegian transport *Orwell*, which anchored in Borge Bay, Signy I., throughout the seasons 1925-26 to 1929-30. Resurveyed by the FIDS in 1947.

Osborne, Mount 78°37'S., 84°47'W.

A mountain (2,600 m.) on the SW. side of Thomas Gl., 5 mi. E. of Mt. Craddock, in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Thomas M. Osborne, Navy builder, who helped construct and served at the South Pole Station with the winter party, 1957.

Oscar Island: see Oscar Point 74°35'S., 164°53'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Oscar Point 74°35'S., 164°53'E.

A small rock point along the N. shore of Terra Nova Bay, 1 mi. NW. of Markham Island, in Victoria Land. Discovered by the BrAE, 1898-1900, and named for King Oscar of Norway and Sweden. C. E. Borchgrevink, the leader of this expedition, was a native of Norway. Originally charted by Borchgrevink as an island, the feature is now known to be joined to the coast.

Oscar Wisting, Mount: see Wisting, Mount 86°27'S., 165°26'W.

Oscar II Coast 65°45'S., 62°30'W.

That portion of the E. coast of the Antarctic Pen. between Cape Fairweather and Cape Alexander. Discovered in 1893 by Capt. C.A. Larsen, who named it for King Oscar II of Norway and Sweden.

Osechka Peak 71°31'S., 15°26'E.

Small peak, 1,740 m., standing 6 mi. S. of Vorposten Peak in the Lomonosov Mtns., Queen Maud Land. Plotted from air photos and surveys by NorAE, 1958-59, and SovAE, 1960-61. Named Gora Osechka (misfire mountain) by the USSR in 1966.

Osen Cove 69°27'S., 39°40'E.

A lake-like cove that indents the N. part of Skarvsnes Foreland and opens on Byvågen Bay at the E. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Osen (the outlet).

O'Shea, Mount 70°15'S., 65°35'E.

A mountain 2 mi. NNW. of Mt. Albion in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for A. J. O'Shea, assistant diesel mechanic at Mawson Station in 1964.

O'Shea Peak 70°26'S., 66°31'E.

A small peak just S. of Mt. McCarthy in the eastern part of the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named for J. H. O'Shea, radio officer at Wilkes Station in 1962 and 1964 and at Macquarie I. in 1966.

Oshiage Beach 69°38'S., 39°27'E.

A beach on the NE. side of Skallen Hills on the coast of Queen Maud Land. The beach faces an inlet which lies between Skallen Hills and the terminus of Skallen Glacier. Mapped from surveys and air photos by the JARE, 1957-62. The name "Oshiage-hama" (raised beach) was applied by JARE Headquarters in 1972.

Osicki Glacier 84°41'S., 170°45'E.

A narrow, deeply entrenched glacier just S. of Mt. Deakin in the Commonwealth Range, flowing W. into

Beardmore Glacier. Named by US-ACAN for Kenneth J. Osicki, USARP biologist at McMurdo Station, 1963.

Oskeladden Rock 71°18'S., 11°27'E.

Rock lying 0.9 mi. S. of Pål Rock in the Arkticheskiy Institut Rocks, at the NW. extremity of the Wohlthat Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Oskeladden.

Osmic Hill 54°19'S., 36°30'W.

Conspicuous rounded hill which rises abruptly from the surrounding plain to 305 m., marking the N. limit of an undulating ridge of hills on the W. side of Moraine Fjord, South Georgia. Roughly surveyed by the SwedAE, 1901-4, under Nordenskjöld. Named by the FIDS following their sketch survey in 1951. The name is one in a group in the vicinity of Discovery Pt. derived from the chemical fixatives used there in biological work by the FIDS.

Osomo, Bajo: see Pesky Rocks 66°09'S., 65°54'W.

Osøya 69°27'S., 39°37'E.

Island in the middle of Osen Cove, which indents the N. coast of Skarvsnes Foreland, on the E. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Osøya (the outlet island) in association with Osen Cove.

Ostenso, Mount 78°18'S., 86°11'W.

A mountain (4,180 m.) 2 mi. S. of Mt. Giovinetto in the main ridge of the Sentinel Range, Ellsworth Mountains. First mapped by the Marie Byrd Land Traverse Party (1957-58) led by C.R. Bentley, and named for Ned A. Ostenso, traverse seismologist at Byrd Station (1957) and a member of the party.

Osterrieth Mountains: see Osterrieth Range 64°40'S., 63°15'W.

Osterrieth Range 64°40'S., 63°15'W.

Mountain range extending in a NE.-SW. direction along the SE. coast of Anvers I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache, and named by him for Mme. Ernest Osterrieth, a patron of the expedition.

Osterrleth Mountains: see Osterrieth Range 64°40'S., 63°15'W.

Östliche Petermann Range 71°26'S., 12°44'E.

One of the Petermann Ranges, trending in a N.-S. direction for 15 mi. from Per Spur to Gornyy Inzhe-

GEOGRAPHIC NAMES OF THE ANTARCTIC

nery Rocks, in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39, and so named by them for its eastern location in the Petermann Ranges.

Östre Shelf-Is: see Ekström Ice Shelf 71°00'S., 8°00'W.

Ostry Point 69°55'S., 12°00'E.

A projecting point of the ice shelf that fringes the coast of Queen Maud Land. The feature forms the W. side of the entrance to Leningradskiy Bay. Mapped by the SovAE in 1959 and named Mys Ostryy (angular point).

Osuga Glacier 72°34'S., 166°55'E.

A tributary glacier flowing NE. to Trafalgar Glacier just E. of Mt. Burton, in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for David T. Osuga, biologist at McMurdo Station, 1966-67.

O'Sullivan Peak 71°26'S., 62°06'W.

Ice-covered peak, 1,765 m., which forms the highest point and is near the S. end of a N.-S. trending ice-covered ridge, standing 11 mi. W. of the N. arm of Odom Inlet, on the E. coast of Palmer Land. The peak was photographed from the air by the USAS in December 1940, and was probably seen by the expedition's ground party that explored this coast. First charted by a joint party consisting of members of the RARE and the FIDS in 1947. Named by the FIDS for T. P. O'Sullivan, a member of the FIDS at the Hope Bay base in 1946-47.

Otago Glacier 82°32'S., 161°10'E.

Glacier about 20 mi. long draining the NE. side of Mt. Markham and entering Nimrod Gl. just E. of Svaton Peaks. Named by the northern party of the NZGSAE (1961-62) for Otago University, New Zealand.

Otdel'naya, Gora: see Gløymdehorten Nunatak 72°07'S., 12°11'E.

Otis, Mount 75°05'S., 136°13'W.

A small rocky summit along the N. side of Kirkpatrick Glacier. The feature is 1.5 mi. SW. of Mt. Sinha at the SE. margin of Erickson Bluffs in McDonald Heights, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Jack Otis, member of the biological party that made population studies of seals, whales, and birds in the pack ice of the Bellingshausen and Amundsen Seas using USCGC *Southwind* and its two helicopters, 1971-72.

Otlet Glacier 65°48'S., 64°38'W.

Glacier 9 mi. long, flowing along the S. side of Fontaine Heights to the W. coast of Graham Land. Roughly charted by the BGLE under Rymill, 1934-37. More accurately mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC for Paul Otlet (1868-1944), Belgian documentalist, co-founder of the Institut International de Bibliographie at Brussels, 1895, and of the Universal Decimal Classification. He was a pioneer of the rational organization of polar information by an international classification scheme.

Otome-no-hana: see Otome Point 68°08'S., 42°36'E.

Otome Point 68°08'S., 42°36'E.

A point 2 mi. SW. of Cape Hinode on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62. The name "Otomenohana" or "Otome-no-hana" (girl's nose) was applied by JARE Headquarters in 1973.

Ottehallet Slope 72°12'S., 0°13'W.

An ice slope between Straumsvola Mtn. and Brekke-rista Ridge in the Sverdrup Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Ottehallet (the early-morning slope).

Otterflya: see Otter Plain 71°30'S., 7°30'E.

Otter Plain 71°30'S., 7°30'E.

An ice plain between Sigurd Knolls on the N. and the Mühlig-Hofmann and Drygalski Mountains on the S., in Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named after the Otter aircraft used by the expedition.

Otter Rock 63°38'S., 59°12'W.

A high distinctive rock lying 3 mi. N. of Notter Point, Trinity Peninsula. Named by UK-APC after the Otter aircraft used by BAS.

Otto Borchgrevinkfjellet: see Borchgrevink, Mount 72°07'S., 23°08'E.

Otto Grotevolya, Gory: see Südliche Petermann Range 71°46'S., 12°20'E.

Otto Nordenskjöld, Terre: see Nordenskjöld Coast 64°30'S., 60°30'W.

Otto v. Gruberfjella: see Gruber Mountains 71°22'S., 13°25'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Otway Massif 85°27'S., 172°00'E.

A prominent, mainly ice-free massif, about 10 mi. long and 7 mi. wide, standing at the NW. end of the Grosvenor Mtns. at the confluence of Mill Glacier and Mill Stream Glacier. Surveyed and named by the Southern Party of the NZGSAE (1961-62) for P. M. Otway, who had wintered over at Scott Base and was a member of this party and the Northern Party during the summer of 1960-61.

Ouellette Island 64°47'S., 64°25'W.

Island 0.5 mile west of Howard Island in southern Joubin Islands. Named by US-ACAN for Gerald L. Ouellette, Chief Engineer in the *Hero* in her first voyage to Antarctica and Palmer Station in 1968.

Outback Nunataks 72°30'S., 160°30'E.

A series of bare rock nunataks and mountains which are distributed over an area about 40 mi. long by 20 mi. wide. The group lies S. of Emlen Peaks of the Usarp Mtns. and W. of Monument Nunataks and upper Rennick Gl., adjacent to the featureless interior plateau. Discovered by the U.S. Victoria Land Traverse party, 1959-60, and mapped by USGS from surveys and U.S. Navy air photos, 1959-64. So named by US-ACAN for their remote position at the posterior side of the large mountain belt that extends from the Ross Sea to the interior ice plateau.

Outcast Islands 64°49'S., 64°08'W.

Two small islands, nearly 0.5 mi. apart, and a number of surrounding rocks lying 2 mi. SW. of Bonaparte Pt., off the SW. coast of Anvers I. in the Palmer Archipelago. Named by the UK-APC following a survey in 1955 by the FIDS. The name arose because of their isolated position some distance from the other islands in the vicinity of Arthur Harbor.

Outer Island 60°43'S., 45°35'W.

Island fringed by submerged rocks, lying 0.3 mi. E. of Berntsen Pt. on the E. side of Signy I., in the South Orkney Islands. Charted in 1933 by DI personnel on the *Discovery II*, and so named because of its position close outside the entrance to Borge Bay.

Outer Lee Island 54°02'S., 37°14'W.

Small island 1.5 mi. NNW. of Bellingshausen Pt., lying in the outer part of the Bay of Isles, South Georgia. This island was charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who included it as one of two islands which he called the Lee Islands. These islands were recharted in 1929-30 by DI personnel, who renamed this northeastern of the two, Outer Lee Island. The southwestern island is now known as Inner Lee Island.

Outer Moraine Reef 54°06'S., 37°08'W.

A reef extending from Alert Pt. to Steep Pt. in Possession Bay, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Outlaw Rock 67°53'S., 68°53'W.

Isolated rock, awash at low tide, lying W. of the Dion Is. off the S. end of Adelaide Island. First charted by the RN Hydrographic Survey Unit in 1963. So named by the UK-APC because of its isolation.

Outlook Peak 85°59'S., 150°50'W.

A low peak that rises steeply 2 mi. SE. of Mt. Zanuck in the Queen Maud Mountains. Mapped by the USGS from surveys and U.S. Navy air photos, 1960-64. So named by members of NZGSAE, 1969-70, who obtained a good view of the next stage of their route from here.

Outpost, The: see Vorposten Peak 71°25'S., 15°31'E.

Outpost Nunataks 75°50'S., 158°12'E.

Three aligned nunataks standing 4 mi. SW. of Brimstone Peak in the Prince Albert Mtns., Victoria Land. Mapped by the Southern Party of the NZGSAE, 1962-63, and presumably named by the party because of the position of the nunataks near the edge of the polar plateau.

Outrider Nunatak 69°28'S., 156°23'E.

A prominent nunatak (1,250 m.) in the north-central portion of the Arkhangel'skiy Nunataks. The feature was photographed from aircraft of U.S. Navy Operation Highjump on Jan. 4, 1947. The summit of the nunatak was intersected by members of the USGS Topo West Traverse, 1962-63. Named by the NZGSAE, 1963-64, presumably because of its forward position in the group.

Ovbratten Peak 72°47'S., 3°44'W.

A steep, pyramidal rock peak about 2 mi. SW. of Høgfonna Mtn., in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Ovbratten.

Ovenuten: see Ove Peak 72°11'S., 3°27'W.

Ove Peak 72°11'S., 3°27'W.

The northernmost peak in the group at the W. side of Wilson Saddle, near the SW. end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named for Ove Wilson, medical officer with NBSAE.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Overflow Glacier 77°47'S., 163°11'E.

Steep tributary glacier spilling into Ferrar Gl. from the S., just E. of Briggs Hill, in Victoria Land. Given this descriptive name by the Western Journey Party, led by Taylor, of the BrAE, 1910-13.

Overlord, Mount 73°10'S., 164°36'E.

A very large mountain (3,395 m.) which is an extinct volcano, situated at the NW. limit of Deception Plateau and just E. of the head of Aviator Gl., in Victoria Land. So named by the northern party of NZGSAE, 1962-63, because it "overlords" lesser peaks in the area.

Övresjöen: see Ober-See, Lake 71°17'S., 13°39'E.

Övrevollen Bluff 72°11'S., 3°45'E.

A rock and ice bluff just S. of Festninga Mtn. in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Övrevollen (the upper wall).

Owen, Isla: see Tartar Island 61°56'S., 58°29'W.

Owen, Mount 74°25'S., 62°30'W.

Mountain, 1,105 m., standing 2 mi. NW. of Kelsey Cliff at the S. side of Johnston Glacier, on the E. coast of Palmer Land. This mountain was photographed from the air in December 1940 by the USAS, and in 1947 by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for Arthur Owen, trail man with the RARE.

Owen Hills 83°44'S., 169°50'E.

An area of rugged ice-covered hills on the W. side of Beardmore Gl., between Socks and Evans Glaciers, in the Queen Alexandra Range. Named by US-ACAN for George Owen, Special Assistant for Antarctica in the Dept. of State, 1959-62.

Owen Island 61°56'S., 58°26'W.

Island lying between Round Pt. and Pottinger Pt. close off the N. coast of King George I., in the South Shetland Islands. Charted and named in 1935 by DI personnel on the *Discovery II*.

Owen Peak 71°53'S., 63°08'W.

A peak standing inland from Hilton Inlet, eastern Palmer Land, on the S. side of Gruening Glacier. Discovered from the air during a flight of the RARE (1947-48) on Nov. 21, 1947, and named "Mount Russell Owen" after the *New York Times* correspondent with the first Byrd Antarctic Expedition, 1928-30. The name was later shortened and changed to its present form by US-ACAN.

Owen Ridge 79°50'S., 84°50'W.

A very high and rugged mountain ridge, 22 mi. long, which forms the southwesternmost element of the Sentinel Range, Ellsworth Mountains. It extends SSE. from Mt. Strybing (3,200 m.) and includes Mt. Southwick and Lishness Peak. Mapped by USGS from surveys and U.S. Navy aerial photography, 1957-60. Named by US-ACAN (1974) for Thomas B. Owen, Assistant Director of National and International Programs, National Science Foundation.

Owen Shoals 53°58'S., 38°07'W.

Area of shoals 2.5 mi. NW. of the NW. extremity of Bird Island, South Georgia. Named by the UK-APC after HMS *Owen*, which surveyed the feature in 1960-61.

Owlshead Peak 66°19'S., 65°49'W.

Peak 1.5 mi. E. of Cape Bellue on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57. The name is descriptive of the feature when seen from Crystal Sound and Darbel Bay.

Owlston Islands: see Owston Islands 66°23'S., 66°06'W.

Owston Islands 66°23'S., 66°06'W.

A group of small islands lying 1 mi. W. of Darbel Islands in Crystal Sound. Mapped from surveys by FIDS (1958-59). Named by UK-APC for P. G. Owston, British crystallographer who has interpreted x-ray diffraction work on ice in terms of structure and movement of molecules.

Oyako Islands 68°28'S., 41°24'E.

Two small islands, one very tiny, lying immediately N. of Cape Akarui on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Oyako-shima (parent and child islands).

Oyayubi Island 69°14'S., 39°40'E.

A narrow rock island 1.5 mi. long. It lies close off Langhovde Hills, 2 mi. S. of Mount Chôtō, in eastern Lützow-Holm Bay. Mapped from surveys and air photos by JARE, 1957-62. The name "Oyayubi-jima" (thumb island) was given by JARE Headquarters in 1972 in association with Oyayubi Point (thumb point), the southern point of this island.

Oyayubi Point 69°15'S., 39°39'E.

A rocky point marking the southern end of Oyayubi Island which lies close off Langhovde Hills, Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62. The name "Oyayubi-misaki" (thumb

GEOGRAPHIC NAMES OF THE ANTARCTIC

point) was given by JARE Headquarters in 1972 in association with Cape Nakayubi, which lies immediately northward.

Øydeholmen, Mount 67°24'S., 55°41'E.

Mostly ice-covered mountain standing 4 mi. W. of Rayner Peak, southward of Edward VIII Bay in Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Øydeholmen (the desolate islet).

Øygarden Group 66°58'S., 57°25'E.

Group of rocky, irregular islands which extends about 11 mi. in an E.-W. direction, lying in the S. part of the entrance to Edward VIII Bay. First sighted in February 1936 by DI personnel on the *William Scoresby*, and

considered by them to be part of the mainland. They were charted as islands by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp. in January-February 1937, and named Øygarden, a descriptive term for a protective chain of islands lying along and off the coast.

Øygarden Islands: see Øygarden Group 66°58'S., 57°25'E.

Ozhidaniya Cove 70°44'S., 11°39'E.

A cove 0.5 mi. E. of Tyuleny Point on the N. side of Schirmacher Hills, Queen Maud Land. Nadezhdy Island lies across the mouth of the cove. Mapped by the SovAE in 1961 and named Zaliv Ozhidaniya (anticipation cove).

Paal Harbor 60°43'S., 45°36'W.

Small bay 0.5 mi. S. of Borge Bay along the E. side of Signy I., in the South Orkney Islands. The name appears on a map based upon a running survey of the South Orkney Is. in 1912-13 by Norwegian whaling captain Petter Sørllé.

Pabellón Island 64°19'S., 62°57'W.

The southernmost of two islands which lie close off the N. tip of Omega I. and mark the S. side of the western entrance to Andersen Harbor in the Melchior Is., Palmer Archipelago. The island was roughly surveyed by DI personnel in 1927. Named by the Argentine expedition during a survey of these islands in 1946-47. They erected a mast on this island from which they flew the Argentine national colors (pabellón).

Pacific Point 56°19'S., 27°36'W.

Small rounded point on the NW. side of Zavodovski I. in the South Sandwich Islands. It was named Low Point by DI personnel following their survey in 1930, but that name has been changed because it has also been used for several other features in the vicinity. Pacific Point was recommended in 1953 by the UK-APC and is named for the American schooner *Pacific* which, under Capt. James Brown, visited Zavodovski I. in 1830, making a landing there.

Packard Glacier 77°21'S., 162°10'E.

Glacier just W. of Purgatory Peak in the Saint Johns Range of Victoria Land, flowing S. into Victoria Valley. Mapped and named by the VUWAE, 1958-59, for Andrew Packard, summer biologist who worked in this area with the N.Z. party of the CTAE in 1957-58.

Padda Island 69°39'S., 38°20'E.

Island lying near the W. side of the entrance to Havsbotn in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Padda (the toad) because of its shape.

Paddocks Cove: see Elsehul 54°01'S., 37°59'W.

Pagano Nunatak 83°41'S., 87°40'W.

A notable rock nunatak with a pointed summit (1,830 m.) which stands in relative isolation, 8 mi. E. of Hart Hills and 80 mi. NNE. of Ford Massif, Thiel Mountains. The nunatak was examined and sketched by Edward Thiel in the course of an airlifted seismic traverse along meridian 88° W. in the 1959-60 season. Named by US-ACAN for Chief Warrant Officer Gerald Pagano, USA, assistant for plans and operations on the staff of the Commander, U.S. Naval Support Force, Antarctica, 1960-65.

Page, Cape 63°55'S., 60°18'W.

Cape lying 13 mi. SW. of Cape Kater on the W. coast of Graham Land. Roughly shown by the SwedAE under Nordenskjöld, 1901-4. Photographed by Hunting Aerosurveys Ltd. in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Sir Frederick H. Page, English pioneer aircraft designer, and President of the Royal Aeronautical Society, 1945-47.

Pageant Point 60°44'S., 45°36'W.

The central and highest of three ice-free points at the E. end of Gourlay Pen. on Signy I., in the South Orkney Islands. Surveyed in 1933 by DI personnel, and resurveyed in 1947 by the FIDS. The name, given by the FIDS, derives from the penguin rookery there, with its associated pageantry.

Page Rock: see Jester Rock 67°52'S., 68°42'W.

Paget, Mount 54°26'S., 36°33'W.

Saddle-shaped mountain, 2,935 m., marking the summit of the Allardyce Range in the central part of South Georgia. This feature was known to early sealers and whalers at South Georgia, and the name has long been established through general usage.

Paget Glacier 54°24'S., 36°28'W.

Glacier in South Georgia, 4 mi. long and 1 mi. wide, which flows NE. from the N. slopes of Mt. Paget into the W. side of Nordenskjöld Glacier. Roughly surveyed in 1928-29 by a Ger. exp. under Kohl-Larsen, and resurveyed in 1951-52 by the SGS. The name, which is derived from nearby Mt. Paget, was given by the SGS, 1951-52.

Pagoda Peak 83°56'S., 166°45'E.

A sharp peak, 3,040 m., between the heads of Tillite and Montgomerie Glaciers, 3 mi. N. of Mt. Mackellar in Queen Alexandra Range. So named by the NZGSAE (1961-62) because of its shape.

Pagoda Ridge 71°53'S., 68°33'W.

A ridge with a small peak resembling a pagoda at the summit, located between Phobos Ridge and Deimos Ridge on the N. side of Saturn Gl., in SE. Alexander Island. The feature was mapped from trimetrogon air photography taken by RARE, 1947-48, and from survey by FIDS, 1948-50. This descriptive name was applied by UK-APC.

Pagodroma Gorge 70°50'S., 68°08'E.

A steep-sided gorge 3 mi. long which joins Radok and Beaver Lakes, in the Prince Charles Mountains. Photographed from ANARE aircraft in 1956. The gorge was traversed by A. Medvecký, ANARE geologist in

GEOGRAPHIC NAMES OF THE ANTARCTIC

Jan.-Feb., 1969. Named by ANCA after the Snow Petrels (*Pagodroma nivea*) which nest in the weathered sandstone walls of the gorge.

Paige, Mount 76°20'S., 144°42'W.

A mountain 3 mi. W. of Mt. Carbone in the Phillips Mtns., Marie Byrd Land. Discovered and mapped from air photos taken by the ByrdAE (1928-30). Named by US-ACAN for David Paige, artist with the ByrdAE (1933-35).

Paine, Mount 86°46'S., 147°32'W.

A massive, flat-topped mountain, 3,330 m., forming a buttress-type projection of the western part of the La Gorce Mtns., in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Stuart D. L. Paine, navigator and radio operator of that party.

Paine Ridge 71°50'S., 162°00'E.

A saber-shaped ridge largely composed of bare rock, extending southward from DeGoes Cliff at the SW. end of the Morozumi Range. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Roland D. Paine, Public Information Officer, National Science Foundation, who worked at McMurdo Station, 1960-61 and 1968-69.

Pain Mesa 73°08'S., 163°00'E.

A large mesa just N. of Tobin Mesa in the Mesa Range, Victoria Land. Named by the northern party of NZGSAE, 1962-63, for Kevin Pain, deputy leader of this party.

Pain Névé 84°36'S., 174°20'E.

A névé between Commonwealth Range and Hughes Range from which the Keltie Glacier drains southwestward to enter Beardmore Glacier. Named by the Southern Party of NZGSAE (1961-62) for Kevin Pain, field assistant with the party.

Pain Tableland: see Pain Mesa 73°08'S., 163°00'E.

Painted Cliffs 83°50'S., 162°20'E.

An irregular line of cliffs which extend SW. from Mt. Picciotto and mark the SE. edge of Prince Andrew Plateau. Named by the NZGSAE (1961-62) because of the colored sedimentary and igneous rock layers exposed on the face of the cliffs.

Painted Hill: see Painted Peak 67°45'S., 62°51'E.

Painted Peak 67°45'S., 62°51'E.

Prominent peak, 710 m., on the northern spur of the North Masson Range in the Framnes Mtns., Mac.

Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Visited by an ANARE party in 1955, and so named because of its conspicuous red-brown coloring.

Paish, Mount 66°51'S., 52°48'E.

Mountain 1.5 mi. E. of Mt. Torckler and 27 mi. SW. of Stor Hånakken Mtn. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for P. G. Paish, weather observer at Wilkes Station in 1961.

Pájaro, Isla: see Bird Island 54°00'S., 38°03'W.

Palaver Point 64°09'S., 61°45'W.

Point on the W. side of Two Hummock I., in the Palmer Archipelago. Photographed by the FIDASE in 1955-57. The name arose because the feature is the site of a penguin rookery, with its attendant ceaseless noise resembling the profuse and idle discussion denoted by the word "palaver."

Palestrina Glacier 69°21'S., 71°35'W.

Glacier in the N. part of Alexander I., 11 mi. long and 8 mi. wide, flowing W. from Nichols Snowfield into Lazarev Bay. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Giovanni da Palestrina (1525-1594), Italian composer.

Palets Rock 70°46'S., 11°36'E.

An isolated rock which rises above the ice midway between Aerodromnaya Hill and the Schirmacher Hills, in Queen Maud Land. First photographed from the air and roughly mapped by the GerAE, 1938-39. Remapped by the SovAE in 1961 and named Skala Palets (toe rock).

Palindrome Buttress 70°59'S., 71°17'W.

Conspicuous rock buttress, 500 m., marking the S. end of the N. group of Walton Mtns., in the W. central part of Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. Remapped in greater detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. The name, given by the UK-APC, arose because the characteristic shape of the buttress is recognizable from a considerable distance from all quarters.

Palisade Nunatak 64°04'S., 58°15'W.

A substantial rock nunatak just N. of Röhss Bay and 2 mi. SE. of Hidden Lake on James Ross Island. Mapped from surveys by FIDS (1960-61). This dis-

GEOGRAPHIC NAMES OF THE ANTARCTIC

tinctive ridge-backed nunatak with vertical columnar structure is the largest outcrop of hard intrusive rock on James Ross Island. Named by UK-APC for its resemblance to a palisade.

Palisades, The 82°50'S., 159°10'E.

A steep escarpment at the W. side of Cotton Plateau in the Queen Elizabeth Range, overlooking Marsh and Nimrod Glaciers. Seen by the northern party of the NZGSAE (1961-62) and so named because of the resemblance to a protective wall at the junction of two rivers.

Palisade Valley 79°47'S., 158°26'E.

Valley about 2 mi. long and 1,000 m. high, dominated for its entire length by a large dolerite sill, situated at the SW. side of Pleasant Plateau and 3 mi. NE. of Bastion Hill in the Brown Hills. Explored by VUWAE, 1962-63, and so named because of resemblance to the Palisades bordering the Hudson River near New York.

Pallas Peak 72°06'S., 69°43'W.

A steep triangular peak which forms part of an impressive ridge midway between Ceres Nunataks and Stephenson Nunatak, in southern Alexander Island. The western face of the peak is seamed with many gullies, but the eastern side has a gentle slope of snow and rock. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC after one of the asteroids lying between the orbits of Mars and Jupiter.

Pallid Peak 84°37'S., 178°49'W.

A small peak (1,500 m.) along the W. side of Kosco Glacier, 7 mi. SW. of McGinnis Peak, in the Queen Maud Mountains. The descriptive name was proposed by Edmund Stump of the USARP Ohio State University party which geologically mapped the peak on Dec. 3, 1970. Composed entirely of white crystalline marble, the peak lacks contrast with the snow that skirts it to a high level.

Palmer, Cape: see Palmer, Mount 71°40'S., 98°52'W.

Palmer, Mount 71°40'S., 98°52'W.

An ice-covered mountain, visible from seaward, surmounting the N. end of Noville Pen. on Thurston Island. Delineated from aerial photographs taken by USN Op. Hjp. in December 1946. Named by US-ACAN for James Troxall Palmer, acting surgeon on the ship *Relief* and later on the sloop of war *Peacock* of the USEE under Wilkes, 1838-42, and later Surgeon-General of the Navy.

Palmer Archipelago 64°15'S., 62°50'W.

Group of islands extending from Tower I. in the N. to Anvers I. in the S., lying NW. of Antarctic Peninsula, from which it is separated by Gerlache Strait. Named by Gerlache, leader of the BelgAE, 1897-99, for Capt. Nathaniel Palmer who navigated these waters in 1820.

Palmer Bay 60°37'S., 45°20'W.

Bay 1 mi. wide, lying immediately W. of Crown Head on the N. coast of Coronation I., in the South Orkney Islands. Disc. in December 1821 in the course of a joint cruise by Capt. George Powell, a British sealer in the sloop *Dove* and Capt. Nathaniel Palmer, an American sealer in the sloop *James Monroe*. Named for Captain Palmer.

Palmer Bay: see False Bay 62°43'S., 60°22'W.

Palmer Coast: see Davis Coast 64°00'S., 60°00'W.

Palmer Inlet 71°15'S., 61°10'W.

Ice-filled inlet 7 mi. long, lying between Cape Bryant and Cape Musselman along the E. coast of Palmer Land. Essentially rectangular in shape, it is bordered by almost vertical cliffs. Disc. by members of East Base of the USAS who explored this coast by land and from the air in 1940. Named for Robert Palmer, assistant to the meteorologist at the East Base.

Palmer Inseln: see Palmer Archipelago 64°15'S., 62°50'W.

Palmer Land 71°30'S., 65°00'W.

That portion of the Antarctic Peninsula which lies south of a line joining Cape Jeremy and Cape Agassiz. This application of Palmer Land is consistent with the 1964 agreement between US-ACAN and UK-APC, in which the name Antarctic Peninsula was approved for the major peninsula of Antarctica, and the names Graham Land and Palmer Land for the northern and southern portions, respectively. This feature is named after Capt. Nathaniel B. Palmer, American sealer who explored the Antarctic Peninsula area southward of Deception Island in the *Hero* in November 1820.

Palmer Peninsula: see Antarctic Peninsula 69°30'S., 65°00'W.

Palmer Point 69°43'S., 74°02'E.

A rock point on the coast of Antarctica, about 2 mi. W. of Strover Peak and 8 mi. WNW. of Mt. Caroline Mikkelsen. Photographed by USN Op. Hjp., 1946-47. Visited by I. R. McLeod, geologist with the ANARE Prince Charles Mtns. survey party, 1969. Named by ANCA for J. Palmer, helicopter pilot with ANARE (*Nella Dan*) in 1968.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Palmers Bay: see Palmer Bay 60°37'S., 45°20'W.

Palmers Bay: see False Bay 62°43'S., 60°22'W.

Palombo, Mount 77°29'S., 143°12'W.

A mountain (1,030 m.) marking the NE. end of the Mackay Mtns., in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Lt. Robert A. Palombo, USN, aircraft commander during Operation Deep Freeze 1968.

Palosuo Islands 65°37'S., 66°05'W.

Group of small islands and rocks lying 1.5 mi. N. of Maurstad Pt., off the W. side of Renaud I. in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Erkki Palosuo, Finnish oceanographer who has specialized in sea ice studies.

Pål Rock 71°18'S., 11°26'E.

Rock lying between Per and Oskeladden Rocks in the Arkticheskiy Institut Rocks at the NW. extremity of the Wohlthat Mtns., Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Pål (Paul).

Pálsson, Mount 67°20'S., 65°32'W.

A large and conspicuous mountain rising to 1,190 m. The feature is located at the N. end of Whirlwind Inlet between Flint Gl. and Demorest Gl. on the E. coast of Graham Land. The mountain was photographed by the USAS, 1939-41. Named by UK-APC for Sveinn Pálsson (1762-1840), Icelandic naturalist who carried out pioneer work on glaciers and ice caps in Iceland.

Pampa Island 64°20'S., 62°10'W.

An island 1.5 mi. long and 475 m. high, which lies off the E. coast of Brabant Island in the Palmer Archipelago. The island lies 1 mi. NE. of Pinel Point and is separated from Brabant Island by the southern part of Pampa Passage. First roughly charted by the BelgAE, 1897-99. Named by the Argentine expedition of 1947-48 in association with Pampa Passage.

Pampa Passage 64°18'S., 62°10'W.

A ship passage along the east side of Brabant Island, trending southwestward between the latter island and off-lying Lecoite Island and Pampa Island. The name "Bahía Pampa" was given by the Argentine Antarctic expedition of 1947-48 after the *Pampa*, a transport vessel used by the expedition. The term passage is considered apt for this feature.

Pan de Azucar, Islote: see Sugarloaf Island 61°11'S., 54°00'W.

Pan de Azucar, Pico: see Sugartop, Mount 54°22'S., 36°38'W.

Pandemonium Point 60°45'S., 45°40'W.

Point marking the S. end of a sharp ice-free ridge which forms the S. extremity of Signy I. in the South Orkney Islands. Surveyed in 1947 by the FIDS, and so named by them because of the ceaseless noise from the penguin rookeries on the W. side of the ridge close N. of the point.

Pandora Spire 77°47'S., 161°13'E.

Sharply pointed feature, 1,670 m., the highest in the Solitary Rocks, on the N. side of Taylor Gl. in Victoria Land. Named by the NZGSAE, 1957-58.

Pan Glacier 68°48'S., 64°24'W.

A glacier 7 mi. long, flowing N. and terminating at the E. coast of Antarctic Peninsula 2 mi. SW. of Victory Nunatak. The lower part of the glacier was plotted by W.L.G. Joerg from air photos taken by Lincoln Ellsworth in Nov. 1935. The glacier was subsequently photographed by RARE (Trimetrogon air photography) in Dec. 1947, and roughly surveyed by FIDS in Dec. 1958. Named by UK-APC after Pan, god of the shepherds in Greek mythology.

Panhard Nunatak 63°42'S., 58°17'W.

The nearest nunatak to the coast on the north side of Russell East Glacier, Trinity Peninsula. Named by UK-APC for René Panhard (1841-1908), French engineer who in 1891 was jointly responsible with E. Levassor for a motor car design which originated the principles on which most subsequent developments were based.

Panimavida, Isla: see Roux Island 66°54'S., 66°57'W.

Pankratz Bay 73°27'S., 126°38'W.

A bay in the western end of Siple Island, off the coast of Marie Byrd Land. The bay is just south of Lovill Bluff and opens on Wrigley Gulf. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959-65. Named by US-ACAN for Leroy M. Pankratz, USARP geomagnetician and seismologist at Byrd Station in 1965.

Panorama Peak 77°37'S., 161°24'W.

A rock peak 0.5 mi. N. of Mt. Thundergut on the ridge extending to Plane Table, in the Asgard Range, Victoria Land. The name applied by NZ-APC presumably alludes to excellent views available from the summit.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Panorama Point 82°49'S., 159°10'E.

Point surmounted by a small hill on the NW. side of Cotton Plateau, overlooking the junction of Marsh and Nimrod Glaciers. So named by the Holyoake, Cobham and Queen Elizabeth Ranges party of the NZGSAE (1964-65) because it affords an excellent view.

Pantalón, Roca: see Trousers Rock 57°04'S., 26°45'W.

Panther Cliff 66°23'S., 65°36'W.

Conspicuous cliff at the NE. corner of Darbel Bay, just N. of the mouth of Cardell Gl., on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57. The name is descriptive of the appearance of the cliff, which is a landmark for parties sledging in Darbel Bay.

Pantomime Point 60°44'S., 45°36'W.

The northernmost of three ice-free points at the E. end of Gourelay Pen. on Signy I., in the South Orkney Islands. Surveyed in 1933 by DI personnel, and resurveyed in 1947 by the FIDS. The name, given by the FIDS, arose from the behavior observed in the penguin rookeries on Gourelay Peninsula.

Panzarini Hills 82°10'S., 41°30'W.

A group of hills lying N. of San Martín Glacier and forming the N. half of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Adm. Rodolfo N. Panzarini, Director of the Instituto Antártico Argentino in this period.

Papanin Nunataks 68°13'S., 50°15'E.

A small group of nunataks lying 11 mi. E. of Alderdice Peak in the Nye Mountains, Enderby Land. Named by the SovAE (1961-62) for Soviet polar expert Adm. Ivan D. Papanin.

Pape Rock 75°32'S., 159°04'E.

A lone rock at the S. side of David Glacier, 3 mi. NW. of Shomo Rock, in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Bernard C. Pape, builder with the South Pole Station winter party, 1966.

Papua Beach 54°15'S., 36°34'W.

Beach 1.5 mi. long on the SE. shore of Cumberland West Bay, South Georgia. The name derives from "Papua Cove," now an obsolete name, applied for a minor recession of the shore of this beach by the SwedAE under Nordenskjöld, 1901-4, because a colony of gentoo penguins (*Pygoscelis papua*) was found there. The cove was called "Pinguinbucht" on a 1907 chart by A. Szielasko, and the form Penguin Bay ap-

pears on some later charts. Following this survey in 1951-52, the SGS reported that the beach now described, rather than the cove or bay, is the significant feature for which a name is required.

Papua Cove: see Papua Beach 54°15'S., 36°34'W.

Papua Island 63°07'S., 55°57'W.

Small circular island lying 4 mi. W. of Boreal Pt., off the N. coast of Joinville Island. The name was applied by the Argentine Antarctic Exp. (1953-54) because large numbers of gentoo penguins (*Pygoscelis papua*) were sighted on this island.

Paradise Bay: see Paradise Harbor 64°51'S., 62°54'W.

Paradise Beach 54°50'S., 36°10'W.

Small sealing beach 2.5 mi. NW. of Rogged Bay on the S. coast of South Georgia. Surveyed by the SGS in the period 1951-57. The name is well established in local use.

Paradise Harbor 64°51'S., 62°54'W.

Wide embayment behind Lemaire and Bryde Islands, indenting the W. coast of Graham Land between Duthiers and Leniz Points. The name was applied by whalers operating in this vicinity and was in use by 1920.

Paradise Ridge 85°27'S., 157°10'W.

A low ridge that parallels the coast at the head of Ross Ice Shelf, located E. of Amundsen Gl. and midway between MacDonald Nunataks and O'Brien Peak. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. So named by NZGSAE, 1969-70, because the ridge is rather flat on top and provides easy traversing.

Paragon Point 65°38'S., 64°17'W.

Small but prominent point on the SW. side of Leroux Bay, 3 mi. WSW. of Eijkman Pt. on the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959.

Parallactic Island 67°32'S., 62°46'E.

The most northwesterly of the Parallactic Islands in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. So named by ANCA because a photo-theodolite was erected on the island for parallactic measurement of the aurora by ANARE in 1961.

Parallactic Islands 67°32'S., 62°46'E.

Group of 6 small islands between the Azimuth and Kellas Islands in Holme Bay, Mac. Robertson Land.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA after Parallactic Island, one of the group.

Parasite Bay 66°46'S., 141°33'E.

Small bay between Péage I. and the coastal angle formed by the W. side of Cape Découverte. Charted by the FrAE in 1951 and named by them for the study of atmospheric parasites made here, and by analogy with Ionosphere Bay at the E. side of Cape Découverte.

Parasite Cone 73°06'S., 164°18'E.

A small parasite cone on the NW. flank of Mt. Overlord, 6.5 mi. distant from the latter's summit, in the Mountaineer Range, Victoria Land. Given this descriptive name by the northern party of NZGSAE, 1962-63.

Parasites, Baie des: see Parasite Bay 66°46'S., 141°33'E.

Pardoe, Mount 67°08'S., 50°11'E.

Mountain, 790 m., between Wyers Ice Shelf and Priestley Peak on the shore of Amundsen Bay in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for Dr. R. Pardoe, medical officer at Mawson Station in 1961.

Pardoe Peak 73°29'S., 61°38'E.

The summit of the SW. part of the Mt. Menzies massif, located about 3.5 mi. SW. of the summit of Mt. Menzies, in the Prince Charles Mountains. Plotted from ANARE air photos and surveys, 1957-61. Named by ANCA for Dr. R. Pardoe, medical officer at Mawson Station, 1961.

Pardoner Island: see Guido Island 64°55'S., 63°50'W.

Pardo Ridge 61°07'S., 54°51'W.

Ridge extending from The White Company in the W. to Cape Valentine in the E. end of Elephant I., South Shetland Islands. Mapped by U.K. Joint Services Exp., 1970-71, and named by UK-APC for Capt. Luis Pardo, commander of the Chilean tug *Yelcho* which rescued members of Shackleton's *Endurance* exp. from Elephant I. in August 1916.

Pardue Peak 79°06'S., 86°30'W.

The northernmost peak, 1,840 m., on Smith Ridge in the Founders Peaks, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Lt. A. Michael Pardue, (MC) USN, Flight Surgeon with Squadron VX-6 in Antarctica in 1960-61.

Paré Glacier 64°08'S., 62°13'W.

Glacier 7 mi. long and 1 mi. wide, flowing E. and then NE. into the head of Bouquet Bay on the NE. side of Brabant I., in the Palmer Archipelago. Shown on an Argentine Govt. chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Ambroise Paré (1510-1590), French surgeon who first taught the importance of clean wound dressings, improved operative techniques and fracture treatment.

Pariadin, Cape: see Paryadin, Cape 54°04'S., 38°00'W.

Paris, Massif: see Paris, Mount 68°58'S., 70°50'W.

Paris, Mount 68°58'S., 70°50'W.

Conspicuous mountain, 2,750 m., 4 mi. SE. of Mt. Bayonne in N. Alexander Island. First mapped by the FrAE, 1908-10, under Charcot, who named it for the French capital. Resighted in 1936 by the BGLE and charted as mountains, but subsequent study of air photos taken by the RARE, 1947-48, has caused the name to be restricted to this single mountain.

Paris Mountains: see Paris, Mount 68°58'S., 70°50'W.

Paris Peak 64°30'S., 63°22'W.

Conspicuous peak, 1,645 m., standing 4 mi. NE. of Mt. Priam in the Trojan Range of Anvers I., in the Palmer Archipelago. It is snow covered on the S. side, but the N. side is formed by sheer rock scarps. Surveyed by the FIDS in 1955 and named by the UK-APC for Paris, son of Priam, whose abduction of Helen caused the Trojan War in Homer's *Iliad*.

Parizhskaya Kommuna Glacier 71°38'S., 12°04'E.

Glacier, 8 mi. long, draining NW. between Zwiesel Mtn. and Gråkammen Ridge to Humboldt Graben in the Petermann Ranges, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Lednik Parizhskoy Kommuny (Paris commune glacier) by the USSR in 1966.

Parizhskoy Kommuny, Lednik: see Parizhskaya Kommuna Glacier 71°38'S., 12°04'E.

Parjadine, Kap: see Paryadin, Cape 54°04'S., 38°00'W.

Park, Mount 67°14'S., 51°00'E.

Mountain 3 mi. W. of Mt. Tomlinson in the NE. part of the Scott Mtns., Enderby Land. Plotted from air

GEOGRAPHIC NAMES OF THE ANTARCTIC

photos taken from ANARE aircraft in 1956. Named by ANCA for J. A. Park, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Parker, Mount 71°15'S., 168°05'E.

A bluff-type mountain (1,260 m.) along the W. side of Nash Gl. in the Admiralty Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. The name Mount Parker was given to a mountain in this general vicinity by Capt. James Ross, RN, in 1840, honoring V. Adm. Sir William Parker, a senior naval lord of the Admiralty, 1834-41. For the sake of historical continuity US-ACAN has retained the name for this mountain.

Parker Bluff 86°17'S., 145°38'W.

A bold, rounded bluff at the S. end of the California Plateau, overlooking Van Reeth Gl. about 5 mi. E. of Mt. Blackburn, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for John J. Parker, photographer with USN Squadron VX-6 on Operation Deep Freeze 1966 and 1967.

Parker Glacier 73°47'S., 165°33'E.

A valley glacier in the Mountaineer Range of Victoria Land which drains the area just E. and NE. of Mt. Monteagle, and flows S. to Lady Newnes Bay where it terminates in a floating glacier tongue adjacent to Andrus Point. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Anthony G. H. Parker, biologist at Hallett Station in 1963-64, and McMurdo Station, 1964-65 and 1966-67.

Parker Hill 68°31'S., 78°26'E.

A hill exceeding 135 m., located just E. of Lake Cowan in the E. part of the Vestfold Hills. The hill was the site of a wind-run pole erected by an ANARE party from Davis Station in 1969. Named by ANCA for Dr. D. Parker, Officer-in-Charge and medical officer at Davis Station in 1969.

Parker Mesa 77°15'S., 160°55'E.

A prominent snow covered mesa 4 mi. SE. of Skew Peak, in the S. part of Clare Range, Victoria Land. This high, flattish feature was named by US-ACAN for Bruce C. Parker, USARP biologist who conducted limnological studies at Antarctic Peninsula (1969-70) and in Victoria Land (1973-74 and 1974-75).

Parker Pass 75°53'S., 142°48'W.

A broad ice-covered pass on the S. side of Zuncich Hill in Marie Byrd Land. It leads from the head of Siemiatkowski Glacier to the névé area lying SW. of El-Sayed Glacier. Mapped by USGS from surveys and

U.S. Navy air photos, 1959-65. Named by US-ACAN for Dana C. Parker, USARP geophysicist at McMurdo Station, 1967-68.

Parker Peak 72°14'S., 97°30'W.

A peak of the Walker Mtns. rising at the base of Evans Pen. on Thurston Island. Delineated from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Alton N. Parker, aviation pilot of the ByrdAE in 1928-30.

Park Glacier 74°20'S., 110°38'W.

A glacier in the N. part of Bear Peninsula, flowing to the sea along the W. side of Gurnon Peninsula, in Marie Byrd Land. First mapped by USGS from air photos obtained by USN Op. Hjp., 1946-47. Named by US-ACAN for Chung G. Park, an ionospheric physics researcher at Byrd Station, 1966.

Parkinson Peak 69°33'S., 159°00'E.

A pyramidal peak (690 m.) near the coast in the north-central Wilson Hills. It surmounts the N. extremity of the ridge complex that is the divide between Tomilin and Noll Glaciers. Visited in March 1961 by an airborne field party from the ANARE (*Magga Dan*, 1961) led by Phillip Law. Named for W.D. Parkinson, geophysicist with the expedition.

Parks, Mount: see Paris, Mount 68°58'S., 70°50'W.

Parks Glacier 77°07'S., 125°55'W.

A glacier draining southeastward from Weiss Amphitheater, a caldera in southern Mount Sidley, in the Executive Committee Range, Marie Byrd Land. Mapped by USGS on the Executive Committee Range Traverse of 1959. Named by US-ACAN for Perry E. Parks, Jr., exploration geophysicist and assistant seismologist on the Marie Byrd Land Traverse, 1959-60.

Parmelee Massif 70°58'S., 62°10'W.

A rugged mountain massif standing W. of the base of Imshaug Peninsula at the head of Lehrke Inlet, on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for David F. Parmelee, USARP biologist who studied birds of the Antarctic pack ice ecosystems in the Antarctic Peninsula area from aboard icebreakers in 1972-73, 1973-74 and 1974-75.

Parpen Crag 60°35'S., 45°49'W.

Precipitous, isolated rock face, near the head of Norway Bight on the S. side of Coronation I., in the South Orkney Islands. Named by the UK-APC following survey by the FIDS in 1948-50. Parpen is a term used in masonry to denote a stone extending through the thickness of a wall.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Parr, Cape 81°14'S., 161°04'E.

A large snow-covered cape along the W. side of the Ross Ice Shelf, about 8 mi. S. of Gentile Point. Discovered by the BrNAE (1901-4) under Scott, who named it for Adm. Alfred Arthur Chase Parr, one of Scott's advisors who had served in Arctic exploration.

Parrish Peak 79°55'S., 82°01'W.

A very pointed, partly snow-topped peak, 1,775 m., surmounting the ridge next S. of Seal Gl. in the Enterprise Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Edward N. Parrish, glaciologist on the USARP South Pole-Queen Maud Land Traverses (I and II), 1964-65 and 1965-66.

Parry, Mount 64°16'S., 62°25'W.

A mountain (2,520 m.) which rises eastward of Minot Point and dominates the central portion of Brabant Island, in the Palmer Archipelago. The feature appears to have been named by Capt. Henry Foster, RN, of the *Chanticleer* expedition in 1829 and since has gained international usage.

Parry Berg: see Parry, Mount 64°16'S., 62°25'W.

Parry Patch 62°17'S., 59°22'W.

A shoal lying in Nelson Strait 3 mi. NW. of Harmony Pt., Nelson I., in the South Shetland Islands. The name Parry's Straits or Perry's Straits was applied to Nelson Strait by the British sealer Richard Sherratt in 1820-21, but the name did not become established. Parry Patch was applied by the UK-APC in 1961 to preserve Sherratt's name in the area.

Parry Point 79°30'S., 30°20'W.

Prominent rock outcrop lying N. of the mouth of Slesor Gl. and 25 mi. SW. of Mt. Faraway in the Theron Mtns., on the E. side of the Filchner Ice Shelf. First mapped in 1957-58 by the CTAE and named for R. Adm. Cecil R. L. Parry, Secretary to the CTAE of 1955-58.

Parrys Straits: see Nelson Strait 62°20'S., 59°18'W.

Parsons, Mount 67°47'S., 62°35'E.

Prominent pointed peak, 1,120 m., standing in the David Range, 1 mi. SSW. of its N. extremity. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37. The peak was visited in January 1956 by an ANARE party led by John Béchervaise. Named by ANCA for Neville Parsons, cosmic ray physicist at Mawson Station, 1955.

Partida, Punta: see Start Point 62°35'S., 61°13'W.

Partizan Island 68°31'S., 78°10'E.

A hook-shaped island, 3 mi. long, lying in the middle of the entrance to Langnes Fjord, Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37). They gave the name Onguløy (fishhook island), but that name might be confused with the better known Ongul Island, the site of recent Japanese Antarctic Research Expeditions. The area was subsequently photographed from the air by USN Operation Highjump (1946-47), ANARE (1954-58), and the Soviet Antarctic Exp. (1956). Renamed Ostrov Partizan (partisan island) by the Soviet expedition.

Partridge Nunatak 75°42'S., 140°20'W.

The westernmost of three aligned nunataks lying southward of the Ickes Mtns. in Marie Byrd Land. The nunatak (730 m.) is located along the N. side of White Gl., about 5 mi. W. of Bailey Nunatak. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Billy W. Partridge, EOC, USN, Chief Equipment Operator at Byrd Station, 1966.

Parus, Gora: see Småspønen Nunatak 72°00'S., 3°55'E.

Parvenu Point 67°34'S., 67°17'W.

Low but prominent point forming the N. extremity of Pourquoi Pas I., off the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. The point was resurveyed in 1948 by the FIDS and found to be more conspicuous from the W. than had previously been supposed, its new stature thus suggesting the name.

Parviainen, Mount 66°45'S., 51°07'E.

Mountain close NE. of Mt. Hensken, in the N. part of the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for L. Parviainen, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Paryadin, Cape 54°04'S., 38°00'W.

Cape which forms the southernmost point of the W. tip of South Georgia. Discovered in 1775 by a Br. exp. under Cook. The cape was resighted in 1819 by a Russ. exp. under Bellingshausen, who named it for Ya. Poryadin, navigator on the *Vostok*. The spelling "Paryadin" for the cape has become established through long usage.

Paryadin-Kamm: see Paryadin Ridge 54°02'S., 38°00'W.

Paryadinkette: see Paryadin Ridge 54°02'S., 38°00'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Paryadin Peak: see Dixon Peak 54°03'S., 38°01'W.

Paryadin Ridge 54°02'S., 38°00'W.

Ridge extending from Cape Alexandra to Cape Paryadin at the W. end of South Georgia. The name "Paryadin-Kamm," derived from nearby Cape Paryadin, was given by Ludwig Kohl-Larsen during his visit to South Georgia in 1928-29. An English form of the name has been approved.

Pascal Island 66°47'S., 141°29'E.

Small rocky island 0.2 mi. ESE. of Descartes I. and 1 mi. NE. of Cape Mousse. Charted in 1951 by the FrAE and named by them for Blaise Pascal (1623-1662), French physician and philosopher.

Pasco, Mount 66°59'S., 54°44'E.

Mountain standing westward of Edward VIII Bay, 18 mi. WSW. of Mt. Storegutt. Plotted from aerial photos taken by ANARE in 1956 and named by ANCA for Cdr. C. Pasco, RN, member of the Australian Antarctic Exploration Committee of 1886.

Paschal Glacier 75°54'S., 140°40'W.

A glacier about 20 mi. long and 4 mi. wide, draining NW. between two ridges, the terminal points of which are Mt. McCoy and Lewis Bluff. The lower end of this glacier merges with the flow of White Glacier and the larger Land Glacier near Mt. McCoy before the latter feature debouches into Land Bay on the coast of Marie Byrd Land. Paschal Glacier was photographed from aircraft of the USAS, 1939-41, and was mapped by USGS from surveys and U.S. Navy aerial photography, 1959-65. Named by US-ACAN for Evans W. Paschal, Scientific Leader at Byrd Station, 1970.

Passage Rock 62°23'S., 59°45'W.

Rock in the Aitcho Is. at the N. entrance to English Strait, 0.5 mi. W. of Fort William, Robert I., in the South Shetland Islands. Charted in 1935 by DI personnel on the *Discovery II*, and so named because it serves as a guide to vessels passing through the strait.

Passat Nunatak 71°18'S., 3°55'W.

A nunatak (145 m.) nearly 1 mi. NE. of Boreas Nunatak at the mouth of Schytt Gl. in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named after *Passat*, one of the Dornier flying boats of the expedition.

Passel, Mount 76°53'S., 144°56'W.

A ridgelike mountain 4 mi. N. of the Swanson Mtns. in the Ford Ranges, Marie Byrd Land. Discovered in December 1940 by members of a geological party of the USAS which visited this area, and named for Charles F. Passel, geologist and radio operator of that party.

Passel Pond 76°53'S., 145°05'W.

A meltwater pond lying at the SW. foot of Mount Passel in the Denfeld Mtns. of the Ford Ranges, Marie Byrd Land. The pond was first mapped by the USAS, 1939-41. Named by US-ACAN in association with Mount Passel.

Passes Peak 63°27'S., 57°03'W.

Pyramidal peak, 535 m., standing next S. of Mt. Carrel and 2 mi. S. of the head of Hope Bay, at the NE. end of Antarctic Peninsula. First charted in 1945 by the FIDS, and so named because it lies between two passes used by Hope Bay sledging parties in traveling to Duse Bay and to the head of Depot Glacier.

Pasteur Island 66°37'S., 140°06'E.

Small rocky island at the SE. end of the Dumoulin Is., close N. of Astrolabe Glacier Tongue. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE, 1949-51. Named by the FrAE, 1951-52, for Louis Pasteur, famous French chemist who made notable contributions to medical science.

Pasteur Peninsula 64°04'S., 62°24'W.

Broad peninsula 5 mi. long in a N.-S. direction and ranging from 5 to 8 mi. wide between Guyou Bay and Bouquet Bay, forming the N. end of Brabant I., in the Palmer Archipelago. Mapped by the FrAE, 1903-5, and named by Charcot in honor of Louis Pasteur, famous French chemist.

Pastorizo Bay 63°54'S., 57°17'W.

A bay 2 mi. wide, indenting the S. side of Vega I. just W. of Mahogany Bluff. The name appears on an Argentine chart of 1959.

Pastor Peak 85°54'S., 134°42'W.

A peak rising to 2,000 m. along the N. wall of Colorado Gl., located midway between Teller Peak and Eblen Hills on the ridge descending from Michigan Plateau. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Stephan E. Pastor, equipment operator, a member of the winter parties at the Naval Air Facility, McMurdo Sound, 1956, Byrd Station in 1960 and McMurdo Station in 1964.

Pata de Perro, Fiordo: see Dogs Leg Fjord 67°43'S., 66°52'W.

Patcha Point 64°37'S., 62°08'W.

The S. end of Nansen I. in Wilhelmina Bay, off the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Jan Patcha, helicopter pilot with the FIDASE which photographed this area in 1956-57.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Patella Island 63°08'S., 55°29'W.

Small but prominent island, more than 75 m. high, lying 2 mi. NW. of Ambush Bay off the N. coast of Joinville Island. Surveyed by the FIDS in 1953. The name is descriptive of the island's shape; *Patella* is the Latin name for a limpet.

Paternoster Valley 60°41'S., 45°37'W.

A valley extending southwestward from Stygian Cove in northern Signy Island. So named by UK-APC from the occurrence of three small paternoster lakes at different levels in the valley.

Paternostro Glacier 69°24'S., 158°37'E.

A glacier, 11 mi. long, in the Wilson Hills. It flows between Cook Ridge and Goodman Hills to enter the E. part of Davies Bay. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. (j.g.) Joseph L.A. Paternostro, USNR, Navigator in LC-130F Hercules aircraft during Operation Deep Freeze 1967 and 1968.

Paterson, Mount 54°39'S., 36°08'W.

Mountain, 2,195 m., standing 2 mi. NNW. of Mt. Carse in the Salvesen Range of South Georgia. Surveyed by the SGS in the period 1951-57, and named for Stanley B. Paterson, assistant surveyor of the SGS, 1955-56.

Paterson, Mount 78°02'S., 154°36'W.

Pyramidal mountain about 2 mi. NE. of Mt. Schlossbach, at the NE. end of the S. group of the Rockefeller Mtns. on Edward VII Peninsula. Discovered by the ByrdAE (1928-30) and later named by Byrd for Seward M. Paterson, manufacturer who furnished shoes and ski boots for the ByrdAE (1933-35).

Paterson Islands 67°32'S., 63°10'E.

Group of small islands lying 4 mi. NE. of Klung Is., close along the coast of Mac. Robertson Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for A.J.F. Paterson, supervisory technician (radio) at Mawson Station, 1963.

Patience Rocks 67°45'S., 68°56'W.

Group of rocks lying 1.5 mi. NW. of Avian I., close off the S. end of Adelaide Island. Named by the UK-APC for Leading Engineer Mechanic Donald Patience, a member of the RN Hydrographic Survey Unit which charted this area in 1963.

Paton Peak 76°57'S., 166°57'E.

The highest point, 740 m., on Beaufort Island, in the Ross Archipelago. Named by the NZGSAE (1958-59) for James Paton, a seaman who made at least six voy-

ages to the Ross Sea area. He first served on the *Morning*, relief ship of the BrNAE (1901-4), and made the first landing on the island by walking to it against orders, over sea ice from the ship.

Patricia Islands 66°51'S., 56°47'E.

Three small islands 15 mi. SW. of Austnes Pt. in the W. part of Edward VIII Bay. Disc. and named in February 1936 by DI personnel on the *William Scoresby*. The islands were mapped in greater detail by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. They were visited by an ANARE party under R. G. Dovers in 1954.

Patrick, Mount 83°13'S., 172°00'E.

A massive largely ice-covered mountain in the Commonwealth Range, rising to 2,380 m. just E. of Wedge Face on the E. side of the Beardmore Glacier. Discovered and named by the BrAE, 1907-9.

Patrick Nunatak 84°04'S., 55°35'W.

A nunatak 3.5 mi. SE. of Gambacorta Peak in southern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Frank M. Patrick, aerographer at Ellsworth Station, winter 1958.

Patrick Point 73°28'S., 66°51'E.

The northern point of Cumpston Massif, at the junction of Mellor and Lambert Glaciers in the Prince Charles Mountains. Mapped from air photos taken by ANARE in 1956. Named by ANCA for Patrick Albion, radio operator at Mawson Station, 1956.

Patriot Hills 80°20'S., 81°25'W.

A line of rock hills 5 mi. long, located 3 mi. E. of the N. end of Independence Hills in Horseshoe Valley, Heritage Range. Patriot Hills were mapped by USGS from ground surveys and USN air photos, 1961-66. The name was applied by US-ACAN in association with the name Heritage Range.

Patroclus Hill 64°28'S., 63°37'W.

Rounded, snow-covered hill, 760 m., separated by a low col from the NW. side of Mt. Achilles in the Achaean Range of Anvers I., in the Palmer Archipelago. Surveyed by the FIDS in 1955 and named by the UK-APC for Patroclus, the squire and close friend of Achilles in Homer's *Iliad*.

Patterson, Mount: see Paterson, Mount 78°02'S., 154°36'W.

Patterson Peak 85°44'S., 155°59'W.

A peak, 1,610 m., standing at the S. end of Medina Peaks, 4 mi. NW. of Anderson Ridge, in the Queen Maud Mountains. Mapped by USGS from ground

GEOGRAPHIC NAMES OF THE ANTARCTIC

surveys and USN air photos, 1960-64. Named by US-ACAN for Clair C. Patterson, glaciologist at Byrd Station, summer 1965-66.

Patterson Rock 66°13'S., 110°35'E.

An insular rock 0.5 mi. W. of Cameron I., in the Swain Islands. This region was photographed from the air by USN Op. Hjp. (1946-47), ANARE (1956) and the Soviet exp. (1956). The rock was included in a 1957 ground survey by C. R. Eklund, who named it for Acy H. Patterson, USN, electrician at Wilkes Station, 1957.

Patton Bluff 75°13'S., 133°40'W.

A bluff situated between Shibuya Peak and Coleman Nunatak on the E. side of Berry Gl., in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Delbert E. Patton, USARP ionospheric physicist at Byrd Station, 1962.

Patton Glacier 78°16'S., 85°25'W.

A broad tributary glacier in the Sentinel Range, Ellsworth Mountains. It drains the E. slope of the main ridge between Mounts Ostenso and Tyree and flows E. to enter Ellen Glacier. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Sgt. Richard J. Patton, USAF, first ever to parachute land at the South Pole, Nov. 26, 1956. He gave valuable assistance on the ground in directing the air drops from Globemaster aircraft, used in transporting supplies to establish the South Pole Station.

Patuxent Ice Stream 85°15'S., 67°45'W.

A broad ice stream between Patuxent Range and Pecora Escarpment in the Pensacola Mtns., draining northwestward to the upper part of Foundation Ice Stream. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for its proximity to the Patuxent Range.

Patuxent Mountains: see Patuxent Range 84°43'S., 64°30'W.

Patuxent Range 84°43'S., 64°30'W.

A major range of the Pensacola Mountains, comprising the Thomas Hills, Anderson Hills, Mackin Table and various nunataks and ridges bounded by the Foundation Ice Stream, Academy Glacier and the Patuxent Ice Stream. Discovered and partially photographed on Jan. 13, 1956 in the course of a transcontinental nonstop plane flight by personnel of U.S. Navy Operation Deep Freeze I from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for the U.S. Naval Air Station (at Cedar Point, Maryland)

located on the south side of the mouth of the Patuxent River. The range was mapped in detail by USGS from surveys and USN air photos, 1956-66.

Paul Beach 54°04'S., 37°24'W.

A shingle beach at the W. end of Ample Bay in the Bay of Isles, South Georgia. It is about 1,100 yards long, tussock-covered at the higher levels and backed by 35 m. cliffs. It is bounded to the E. by Grace Gl. and to the W. by the cliffs which extend eastward from Markham Point. The beach was occupied by two members of the FIDS in 1953-54 for biological work. Named by the FIDS for the *Southern Paul*, a buoy-boat of the Salvesen whaling fleet based at Leith Harbor, which transported the party to the Bay of Isles and visited it on many other occasions.

Paul Block, Mount: see Block, Mount 85°46'S., 176°13'E.

Paul Block Bay: see Block Bay 76°15'S., 146°22'W.

Paulcke, Mount 65°59'S., 64°53'W.

Mountain, at least 915 m., standing W. of Huitfeldt Pt., Barilari Bay, on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Wilhelm Paulcke (1873-1949), German pioneer exponent of skiing who, with three companions, demonstrated the possibilities of long distance ski-mountaineering for the first time.

Paulding Bay 66°35'S., 123°15'E.

A bay along the coast just W. of Clark Point. The outer portions of the bay are bounded by the Moscow University and Voyeykov Ice Shelves. Mapped by G.D. Blodgett (1955) from aerial photographs obtained by USN Operation Highjump (1946-47), and named by US-ACAN for James K. Paulding, Secretary of the Navy under President Martin Van Buren. Paulding had previously served as U.S. Navy agent for New York and was instrumental in the outfitting of the USEE (1838-42) under Lt. Charles Wilkes.

Paulet Island 63°35'S., 55°47'W.

Circular island about 1 mi. in diameter, lying 3 mi. SE. of Dundee I., off the NE. end of Antarctic Peninsula. Disc. by a Br. exp. under Ross, 1839-43, and named by him for Capt. the Right Honorable Lord George Paulet, RN.

Pauling Islands 66°32'S., 66°58'W.

A separate group of islands lying 3 mi. SE. of Barcroft Is., in Crystal Sound. Mapped from surveys by FIDS (1958-59). Named by UK-APC for Linus C. Pauling, American chemist; originator of a theory of the structure of ice, in about 1935.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Paul Islands 64°16'S., 63°44'W.

Group of islands 3 mi. in extent, lying NW. of Quinton Pt. off the NW. coast of Anvers I., in the Palmer Archipelago. Disc. and named by the Ger. exp. under Dallmann, 1873-74.

Paul Lee, Mount: see Lee, Mount 71°27'S., 74°35'W.

Paulsen Mountains 72°10'S., 1°21'E.

A group of mountains including Brattskarvet Mountain, Vendeholten Mountain and Tverrveggen Ridge, located in the northern part of the Sverdrup Mountains in Queen Maud Land. Discovered by the GerAE under Alfred Ritscher, 1938-39, and named for Karl-Heinz Paulsen, oceanographer on the expedition.

Paulsen Peak 54°20'S., 36°40'W.

Rock peak, 1,875 m., standing near the head of Lyell Gl., 2 mi. NW. of Mt. Sugartop in the Allardyce Range of South Georgia. Named by the UK-APC, following mapping by the SGS, 1951-52, for Harald B. Paulsen (1898-1951), a leading figure in the Norwegian whaling industry.

Pauls Hole 64°41'S., 62°38'W.

Small harbor lying along the E. side of Rongé I. just S. of Cuverville I., off the W. coast of Graham Land. The name was probably given by whalers operating in the area prior to 1921-22.

Paulus, Mount 72°37'S., 31°00'E.

Mountain, 2,420 m., close S. of Mt. Rossel in the SW. part of the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Jean-Pierre Paulus, a patron of the expedition.

Paumelle Point 65°04'S., 64°03'W.

Point marking the S. side of the entrance to Libois Bay and the NW. end of the peninsula which forms the W. extremity of Booth Island, in the Wilhelm Archipelago. First charted by the FrAE, 1903-5, and named by Charcot for R. Paumelle, steward of the ship *Français*.

Pavie, Cap: see Pavie Ridge 68°34'S., 66°59'W.

Pavie, Ile: see Pavie Ridge 68°34'S., 66°59'W.

Pavie Ridge 68°34'S., 66°59'W.

Isolated rocky ridge rising over 500 m., which extends S. and W. from Martin Gl. to Moraine Cove, and forms the SE. limit of Bertrand Ice Piedmont, on the W. coast of Graham Land. The name "Ile Pavie" was given in 1909 by the FrAE under Charcot to an island, or possible cape, shown on the FrAE maps in 68°27'S., 66°40'W. From a position 15 mi. SE. of Jenny Island,

Maurice Bongrain, FrAE surveyor, made sketches of this feature which were labeled "Ile Pavie" and "Cap Pavie." This general area was surveyed in 1936 by the BGLE under Rymill, but the feature named by Charcot was not identified. Following further surveys by the FIDS in 1948, Charcot's "Ile Pavie" was identified from Bongrain's sketches as the feature now named Red Rock Ridge. The name Red Rock Ridge is now too firmly established to alter. The name Pavie Ridge has therefore been approved for the isolated rocky ridge described above as forming the S. limit of Bertrand Ice Piedmont, and whose position is not far removed from the original position indicated by Charcot. Named by Charcot, presumably for Auguste J. M. Pavie (1847-1925), French diplomat and explorer.

Pavlak Glacier 82°58'S., 163°12'E.

A glacier that drains E. from the Queen Elizabeth Range into Lowery Gl. close S. of Mt. Predoehl. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Thomas L. Pavlak, USARP glaciologist at South Pole Station, 1962-63.

Pavlov Peak 64°03'S., 61°58'W.

Peak lying N. of Mt. Vesalius on Liège I., in the Palmer Archipelago. Shown on an Argentine Govt. chart of 1954. Named by the UK-APC in 1960 for Ivan P. Pavlov (1849-1936), Russian experimental physiologist noted for his work on conditioned reflexes.

Pawson, Mount 73°10'S., 61°01'W.

A mountain 7 mi. SE. of Mohn Peaks, on the E. coast of Palmer Land. First mapped by the FIDS-RARE joint sledge party of 1947-48. Remapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for David L. Pawson, biologist with the Palmer Station-Eastwind Expedition, summer 1965-66.

Payer Group: see Payer Mountains 72°02'S., 14°35'E.

Payer Mountains 72°02'S., 14°35'E.

A group of scattered mountains extending N.-S. for about 23 mi., standing 10 mi. E. of the Weyprecht Mtns. and forming the eastern half of the Hoel Mtns. in central Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Julius Payer, Austrian explorer, who in company with Karl Weyprecht discovered Franz Josef Land in 1873.

Payne Creek 54°00'S., 38°04'W.

A narrow cove just S. of Goldcrest Point along the W. side of Bird Island, South Georgia. Named by UK-APC for Michael R. Payne, BAS principal investigator on fur seals, Bird Island, 1971-74.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Paz Cove 66°14'S., 100°47'E.

Cove, 1 mi. wide and 4 mi. long, indenting the N. side of the Bunger Hills 2.5 mi. SE. of Cape Henderson. Mapped from aerial photographs taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for H. J. Paz, air crewman on USN Op. Hjp. photographic flights in this area and other coastal areas between 14° and 164° East longitude.

P. Curie, Pointe: see Curie Point 64°50'S., 63°29'W.

Peace Island 64°18'S., 62°57'W.

Small island which is northernmost of several islands which extend northward about 1 mi. from the W. extremity of Eta I., in the Melchior Is., Palmer Archipelago. The name was probably given by DI personnel who roughly surveyed the island in 1927. The island was resurveyed by Argentine expeditions in 1942, 1943 and 1948.

Peacock, Mount 72°13'S., 169°27'E.

A high peak (3,210 m.) standing directly at the head of Kelly Glacier, 1.6 mi. SW. of Mt. Herschel, in the Admiralty Mtns. of Victoria Land. Discovered in January 1841 by Sir James Clark Ross who named it for the Very Reverend Dr. George Peacock, Dean of Ely.

Peacock Peak 75°11'S., 134°30'W.

A peak 1 mi. S. of Bennett Bluff on the W. side of upper Berry Glacier, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Dennis S. Peacock, ionospheric physicist at Byrd Station, 1970-71.

Peacock Ridge 66°48'S., 51°00'E.

A ridge standing between Mt. Soucek and Mt. Porteus, in the N. part of the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for D. Peacock, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Peacocks Bay: see Deakin Bay 68°23'S., 150°10'E.

Peacock Sound 72°45'S., 99°00'W.

An ice-filled sound, 135 mi. long and 40 mi. wide, separating Thurston Island from the Eight Coast of Ellsworth Land. The sound is not navigable by ships, it being occupied by the western part of Abbot Ice Shelf. The feature was discovered by members of the USAS in flights from the ship *Bear* in February 1940, and was further delineated from air photos taken by USN Op. Hjp. in December 1946. The sound was first noted to parallel the entire S. coast of Thurston Island, thereby establishing insularity, by the USN Bellingshausen Sea

Exp. in February 1960. Named after the sloop of war *Peacock* in which Capt. William L. Hudson, in company with the tender *Flying Fish* under Lt. William M. Walker, both of the USEE, 1838-42, sailed along the edge of the pack ice to the north of Thurston Island for several days in March 1839.

Péage Island 66°46'S., 141°32'E.

Small rocky island 0.5 mi. SW. of Cape Découverte. Charted in 1951 by the FrAE and named by them for its position, which seems to command access to the Curzon Is. for parties arriving from Port Martin, "péage" being French for toll.

Peake-Jones Rock 67°38'S., 62°48'E.

Low, bean-shaped rock lying just off the coast and 2 mi. NE. of Ring Rock in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for K. Peake-Jones, weather observer at Mawson Station in 1959.

Peale Inlet 71°55'S., 99°12'W.

Ice-filled inlet about 16 mi. long, lying immediately W. of Noville Pen. and indenting the N. side of Thurston Island. Delineated from aerial photographs taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Titian Ramsay Peale, noted artist-naturalist who served on the sloop of war *Peacock* of the USEE under Wilkes, 1838-42. The *Peacock*, accompanied by the tender *Flying Fish*, sailed along the edge of the pack ice to the north of Thurston Island for several days in March 1839.

Pearce Peak 67°48'S., 61°12'E.

A partially snow-covered ridge, 1,200 m., which appears as a peak when viewed from the N., standing 2 mi. S. of Moyes Peak and 15 mi. SSW. of Falla Bluff. Disc. in February 1931 by the BANZARE under Mawson, who named it for Sir George Pearce, Chairman of the Australian Antarctic Committee, 1929.

Pearigen, Mount 72°01'S., 168°50'E.

A prominent mountain (3,020 m.) standing 6 mi. NW. of Mt. Hart in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Cdr. Jare M. Pearigen, USN, helicopter pilot in Operation Deep Freeze 1968, 1969 and 1970.

Pear Island 64°31'S., 62°54'W.

A small island lying immediately SW. of False Island, off the NE. coast of Anvers Island in the Palmer Archipelago. The existence of the island is noted on a British hydrographic chart of 1929; the name is presumably descriptive of shape and appears on a British hydrographic chart of 1952.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pearl Harbor Glacier 72°15'S., 167°40'E.

Major tributary glacier flowing generally E. from the Victory Mtns. and entering the SW. side of Tucker Glacier 17 mi. NW. of Bypass Hill. Named by the NZGSAE, 1957-58, to commemorate the heroism of the United States forces at Pearl Harbor in 1941.

Pearl Harbour Glacier: see Pearl Harbor Glacier 72°15'S., 167°40'E.

Pearl Rocks 63°35'S., 59°56'W.

A group of rocks covering an area 3 mi. by 2 mi., close off the W. coast of Tower I., Palmer Archipelago. The name was given by FIDASE (1955-57) and is descriptive of the numerous snow-covered rocks in this group.

Pearse Valley 77°43'S., 161°32'E.

Ice-free valley 3 miles long, lying immediately W. of Catspaw Gl., at the S. side of the Asgard Range in Victoria Land. Named by US-ACAN for John S. Pearse, biologist at McMurdo Station, 1961, and the season 1961-62.

Pearson, Mount 72°17'S., 166°43'E.

A prominent snow peak (2,440 m.) situated at the W. side of the mouth of Lensen Glacier where the latter joins Pearl Harbor Glacier, in the Victory Mtns., Victoria Land. Named by the northern party of NZFMCAE, 1962-63, for F. H. Pearson, surveyor with the party.

Pearson, Mount: see Pearson Peak 75°54'S., 140°57'W.

Pearson Peak 75°54'S., 140°57'W.

A rock peak rising 1 mi. S. of McGaw Peak on the ridge that trends S. from Mt. McCoy, coastal Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Herbert E. Pearson, USARP geomagnetician and seismologist at Byrd Station, 1963.

Pearson Point 54°01'S., 38°05'W.

Point forming the SW. extremity of Bird I., off the W. end of South Georgia. The name appears on a 1921 British Admiralty chart.

Peary, Massif: see Peary, Mount 65°15'S., 63°52'W.

Peary, Mount 65°15'S., 63°52'W.

Conspicuous massif, 1,900 m., with a flat, snow-covered summit several miles in extent, surmounted by a marginal peak on the W., standing 7 mi. ENE. of Cape Tuxen and dominating the area between Wiggins and Bussey Glaciers on the W. coast of Graham Land. Disc. by the FrAE, 1908-10, under Charcot and

named by him for R. Adm. Robert E. Peary, USN, American Arctic explorer and first to attain the North Pole, in 1909.

Pebbly Mudstone Island 63°18'S., 57°51'W.

A small island in the SE. part of Duroch Islands. It lies 0.3 mi. SW. of Halpern Point, Trinity Peninsula. Named by Martin Halpern, leader of the University of Wisconsin (USARP) party during geological mapping of this area, 1961-62. The principal outcrop of pebbly mudstone was found on this island and provides valuable data to the geologic history of the region.

Pechell, Mount 71°05'S., 167°16'E.

A peak (1,360 m.) surmounting the W. end of Hedg-peth Heights in the Anare Mountains. Discovered and rudely mapped in Jan. 1841 by Capt. James Ross, RN, who named this feature for Capt. Sir Samuel J. Brooke Pechell, a junior lord of the Admiralty at that time.

Peckham Glacier 80°21'S., 157°25'E.

A steep tributary glacier in the Britannia Range, flowing S. from Mt. McClintock into Byrd Glacier. Named by US-ACAN for Verne E. Peckham, biologist, McMurdo Station winter party 1962, who with use of SCUBA gear made numerous dives under the sea ice of McMurdo Sound at Winter Quarters Bay and off Cape Evans.

Pecora Escarpment 85°38'S., 68°42'W.

An irregular escarpment, 7 mi. long, standing 35 mi. SW. of Patuxent Range and marking the southernmost exposed rocks of the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by Dwight Schmidt, geologist to the Pensacola Mtns., 1962-66, for William T. Pecora, eighth director of the U.S. Geological Survey, 1965-71.

Peddie, Mount 76°01'S., 145°01'W.

An isolated mountain 5 mi. N. of Webster Bluff, at the N. end of the Ford Ranges in Marie Byrd Land. Mapped from surveys by USGS and U.S. Navy air photos (1959-65). Named by US-ACAN for Norman W. Peddie, geomagnetician and seismologist at Byrd Station, 1964.

Peden Cliffs 74°57'S., 136°28'W.

A line of cliffs, 6 mi. long, breached near the center by Rhodes Icefall. The cliffs border the N. side of Garfield Gl. in the W. part of McDonald Heights, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Irene C. Peden, ionospheric physicist who made investigations on electrical measurements of the ice sheet near Byrd Station, 1970-71.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pedersen, Mount 72°05'S., 164°02'E.

A mountain, 2,070 m., standing 9 mi. SE. of Galatos Peak in Salamander Range, Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for John M. Pedersen, biologist at McMurdo Station, summers 1965-66 and 1966-67.

Pedersen Nunatak 64°56'S., 60°44'W.

The westernmost of the Seal Nunataks, lying 8 mi. NE. of Cape Fairweather, off the E. coast of Antarctic Peninsula. First charted in 1947 by the FIDS, and named for Capt. Morten Pedersen of the Norwegian sealer *Castor*, which operated in Antarctic waters during the 1893-94 season.

Pedro, Monte: see Pierre, Mount 63°58'S., 61°50'W.

Pedro, Punta: see Azufre Point 65°03'S., 63°39'W.

Pedro Nelson, Isla: see Jinks Island 65°22'S., 65°38'W.

Peeler Bluff 72°35'S., 93°20'W.

A prominent rock bluff along the middle of the west coast of McNamara Island. The island lies within the northern edge of Abbot Ice Shelf, but Peeler Bluff is a conspicuous navigation mark from seaward. This area was explored by personnel aboard the USS *Glacier* and *Staten Island* in February 1961. Named by US-ACAN for Lt. Cdr. James C. Peeler, USN, who camped here, February 7-9, 1961, and obtained position data for the bluff and other points in the vicinity.

Peeler Point: see Peeler Bluff 72°35'S., 93°20'W.

Pegasus Mountains 71°00'S., 67°12'W.

Mountains, 16 mi. long, consisting of a system of ridges and peaks broken by two passes. Located between Bertram and Ryder Glaciers and immediately E. of Gurney Point on the W. coast of Palmer Land. Named by UK-APC after the constellation of Pegasus.

Peggotty Bluff 54°09'S., 37°17'W.

Bluff on the N. side and near the head of King Haakon Bay, South Georgia. In 1916, Sir Ernest Shackleton's party from Elephant I. established a camp near the head of King Haakon Bay which they called Peggotty Camp. During the SGS, 1955-56, King Haakon Bay was surveyed and the approximate position of the camp deduced. The name Peggotty Bluff was given to the feature now described, which is close to the campsite.

Pegmatite Peak 85°39'S., 154°39'W.

A peak (790 m.) along the W. side of Koerwitz Gl., about midway between the main summits of Medina

Peaks and Mt. Salisbury, in the Queen Maud Mountains. First mapped by USGS from surveys and U.S. Navy air photos, 1960-64. So named by NZGSAE, 1969-70, because of the occurrence of large, whitish pegmatite dykes in a rock wall at the SE. spur of the peak.

Pegmatite Point 85°01'S., 165°20'W.

A distinctively banded point which juts into the head of Ross Ice Shelf from the Duncan Mountains. The point is 7 mi. ENE. of Mt. Fairweather. It was first roughly plotted from ground surveys and aerial photographs by the Byrd Antarctic Expedition, 1928-30. The Southern Party of NZGSAE, 1963-64, visited the point and gave the name because of the abundance of the rock Pegmatite.

Pegtop Mountain 77°04'S., 161°15'E.

An elongated mountain marked by several conspicuous knobs, the highest and westernmost rising to 1,395 m., situated at the S. side of Mackay Gl., 3 mi. W. of Sperm Bluff, in Victoria Land. Mapped and given this descriptive name by the BrAE, 1910-13.

Pegtop Nunatak: see Pegtop Mountain 77°04'S., 161°15'E.

Peleg Peak 65°51'S., 62°33'W.

A rock peak (920 m.) on the massif between Flask Gl. and Leppard Gl. on the E. coast of Graham Land. It stands 4 mi. NW. of Ishmael Peak. Surveyed by FIDS in 1955. Named by UK-APC after Captain Peleg, part-owner of the whaling ship *Pequod* in Herman Melville's *Moby Dick*.

Peletier Plateau 83°55'S., 159°40'E.

An ice-covered plateau, about 20 mi. long and 5 mi. wide, forming the southern part of Queen Elizabeth Range. Named by US-ACAN for Rear Adm. Eugene Peletier, CEC, USN, Bureau of Yards and Docks, who was of assistance to Rear Adm. George Dufek in the preparation of USN Op. DFrz. II, 1956-57.

Peleus, Mount 77°29'S., 162°05'E.

Small peak, 1,790 m., about 3 mi. W. of Mt. Theseus in the Olympus Range of Victoria Land. Named by the VUWAE (1958-59) for a figure in Greek mythology.

Pelias Bluff 66°04'S., 61°23'W.

Conspicuous rock bluff rising to more than 150 m. at the head of the inlet lying immediately W. of Standing Inlet, on the N. coast of Jason Pen. in Graham Land. Surveyed by the FIDS in 1953. Named in 1956 by the UK-APC in association with Jason Peninsula;

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pelias, who was his uncle, deprived Jason of his kingdom, but was later killed through the agency of Medea.

Peligro, Islotes: see Danger Islands 63°25'S., 54°40'W.

Peligrosa, Punta: see Foul Point 60°32'S., 45°29'W.

Peligroso, Cabo: see Danger, Cape 62°27'S., 60°23'W.

Pelletan Point 65°06'S., 63°02'W.

Long, narrow point projecting into the head of Flandres Bay 3 miles S. of Briand Fjord, on the W. coast of Graham Land. Charted by the FrAE (1903-5) under Charcot, who applied the name "Baie Pelletan" to the indentations N. and S. of the point here described. In 1960 the UK-APC transferred the name Pelletan to the point; the two indentations do not together form an identifiable feature and they can be easily described by reference to this point. Charles-Camille Pelletan (1846-1915) was a French politician and Minister of the Navy, 1902-5.

Pelseneer Island 64°39'S., 62°13'W.

Island 2 mi. long and 1 mi. wide, with three prominent rocky peaks projecting through its icecap, lying 2 mi. W. of Brooklyn I. in the south-central portion of Wilhelmina Bay, off the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, and named by Gerlache for P. Pelseneer, member of the *Belgica* Commission and writer of some of the zoological reports of the expedition.

Pelter Glacier 71°52'S., 98°20'W.

A glacier about 5 mi. long on Thurston I., flowing from the E. side of Noville Pen. into the W. side of Murphy Inlet. Delineated from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for J. A. Pelter, aerial photographer with the ByrdAE in 1933-35.

Peltier Channel 64°52'S., 63°32'W.

Channel 6 mi. long, in a NE.-SW. direction, separating Doumer and Wiencke Islands to the S. of Port Lockroy, in the Palmer Archipelago. Disc. by the FrAE, 1903-5, and named by Charcot for Jean Peltier, noted French physicist.

Pemmican Bluff 73°31'S., 94°22'W.

A short but prominent bluff with steep rock N. face and sloping snow S. slope. It overlooks the W. side of upper Basecamp Valley just W. of Pillsbury Tower, in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. So named by this party because the bluff is composed of complex

volcanic rocks giving the N. face a very mottled appearance similar to the pemmican eaten in the field.

Pemmican Step 72°00'S., 167°33'E.

A step-like rise in the level of Tucker Glacier above its junction with Leander Glacier, in Victoria Land. It is very crevassed in its southern half, but there is easy traveling over it toward its north end. Named by the NZGSAE, 1957-58. It is the second of the steps on this glacier.

Penance Pass 78°04'S., 163°51'E.

The lowest, and easternmost, pass from Shangri-la to the Miers Valley. Named by the New Zealand VUWAE, 1960-61.

Penck, Cape 66°43'S., 87°43'E.

Ice-covered point fronting on West Ice Shelf about 35 mi. WNW. of Gaussberg, separating Leopold and Astrid Coast from Wilhelm II Coast. Roughly charted by the Western Base Party of the AAE, 1911-14, under Mawson, and named for Albrecht Penck, internationally known German geographer.

Penck Glacier: see Albrecht Penck Glacier 76°40'S., 162°20'E.

Penck Glacier 77°57'S., 34°42'W.

A small glacier flowing northward along the west side of Bertrab Glacier to Vahsel Bay. Discovered by the GerAE, 1911-12, under Wilhelm Filchner, who named this feature for German geographer Albrecht Penck.

Penck-Gletscher: see Ryan Glacier 54°03'S., 37°36'W.

Penck Ledge 73°03'S., 4°18'W.

A mainly ice-covered ledge at the W. side of the head of Penck Trough in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named in association with Penck Trough.

Penck-Mulde: see Penck Trough 73°00'S., 2°45'W.

Pencksökket: see Penck Trough 73°00'S., 2°45'W.

Pencksökkkrabbane: see Penck Ledge 73°03'S., 4°18'W.

Penck Trough 73°00'S., 2°45'W.

A broad ice-filled valley trending SW.-NE. for about 60 mi. between Borg Massif and the NE. part of Kirwan Escarpment, in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for German geographer Albrecht Penck. Maps of the

GEOGRAPHIC NAMES OF THE ANTARCTIC

GerAE incorrectly represent this feature with a N.-S. axis, but it was accurately mapped by the NBSAE under Giaever, 1949-52.

Pendant Ridge 85°04'S., 174°45'W.

A ridge about 3 mi. long, extending SW. to the N. side of the mouth of McGregor Glacier, 1.5 mi. NW. of Simplicity Hill, in the Queen Maud Mountains. So named by the Texas Tech Shackleton Gl. Exp. (1964-65) because a pyramidal peak at its southern extremity appears to be dangling from the ridge as a pendant.

Pendleton Baie: see Pendleton Strait 66°00'S., 66°30'W.

Pendleton Island: see Tower Island 63°33'S., 59°51'W.

Pendleton Strait 66°00'S., 66°30'W.

A strait between Rabot and Lavoisier Islands, in the Biscoe Islands. The FrAE, in accordance with Charcot's conception of this water feature, applied the name Pendleton Bay in January 1909. The BGLE under Rymill, 1934-37, recognizing that it is really a strait, renamed it Pendleton Strait. Named by Charcot for Capt. Benjamin Pendleton, Yankee sealer of Stonington, Connecticut. Captain Pendleton was commodore of the little fleet which included the sloop *Hero* under Capt. Nathaniel B. Palmer who, at Pendleton's direction, explored this area in January 1821.

Pendragon, Mount 61°15'S., 55°14'W.

A mountain (975 m.) 1.5 mi. NW. of Cape Lookout, Elephant Island, South Shetland Islands. Mapped by U.K. Joint Services Exp., 1970-71. The name was applied to this highest mountain on Elephant Island by UK-APC in 1971 and acknowledges Prince Charles as royal patron of the Joint Services Expedition. Pendragon is the ancient title for a British or Welsh Prince.

Pendulum Cove 62°56'S., 60°36'W.

Cove at the NE. side of Port Foster, Deception I., in the South Shetland Islands. The name of the cove derives from the pendulum and magnetic observations made there by the Br. exp. under Foster in 1829.

Penelope Point 71°30'S., 169°47'E.

A bold rock headland between Nielsen Gl. and Scott Keltie Gl. on the N. coast of Victoria Land. First charted by the Northern Party, led by Campbell, of the BrAE, 1910-13. Named by them after the nickname "Penelope" given to Lt. Harry L.L. Pennell, commander of the expedition ship *Terra Nova*.

Peneplain Peak 83°51'W., 167°02'E.

A peak (2,650 m.) located midway along Hampton Ridge, which lies between Montgomerie Gl. and Mac-

kellar Gl. in Queen Alexandra Range. So named by the Ohio State Univ. Geological Party, 1967-68, because an excellent exposure of the "Kukri Peneplain," an ancient erosion surface, is present on the peak.

Penfold Point 62°59'S., 60°35'W.

Point which forms the NW. side of the entrance to Whalers Bay, Deception I., in the South Shetland Islands. Named for Lt. Cdr. D. N. Penfold, RN, who conducted a survey of the island during 1948-49.

Pengin Dai: see Penguin Heights 68°08'S., 42°38'E.

Penguin Bay 54°20'S., 36°14'W.

Small, kelp-infested bay lying just SE. of Ocean Hbr. on the N. coast of South Georgia. The name appears on a 1931 British Admiralty chart.

Penguin Bay: see Papua Beach 54°15'S., 36°34'W.

Penguin Heights 68°08'S., 42°38'E.

A relatively low, rocky elevation about 1 mi. SW. of Cape Hinode, on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62. The name Penguin Heights was given by JARE Headquarters in 1973.

Penguin Island 62°06'S., 57°54'W.

Island 1 mi. long, which lies close off the S. coast of King George I. and marks the E. side of the entrance to King George Bay, in the South Shetland Islands. Sighted in January 1820 by a Br. exp. under Bransfield, and so named by him because penguins occupied the shores of the island.

Penguin Island: see Afuera Islands 64°20'S., 61°36'W.

Penguin Island: see Pingvin Island 65°45'S., 81°50'E.

Penguin Isle: see Penguin Island 62°06'S., 57°54'W.

Pengüino, Isla: see Penguin Island 62°06'S., 57°54'W.

Penguin Point: see Irving Point 56°43'S., 27°07'W.

Penguin Point: see Tijuca Point 54°20'S., 36°13'W.

Penguin Point 60°31'S., 45°56'W.

Point which forms the NW. extremity of Coronation I. in the South Orkney Islands. Disc. on Dec. 7, 1821 by Capt. George Powell, British sealer in the sloop *Dove*, and Capt. Nathaniel Palmer, American sealer in the sloop *James Monroe*. Named by Powell because of the number of penguins which were on this point.

Penguin Point 64°19'S., 56°43'W.

Point located centrally along the S. shore of Seymour I., lying SE. of James Ross I. at the S. margin of Er-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ebus and Terror Gulf. The point was possibly seen in 1843 by a Br. exp. under Ross, and was roughly charted by Capt. C. A. Larsen who landed on the island in 1892 and 1893. Recharted by the SwedAE under Nordenskjöld, 1901-4, who so named it because a large penguin colony was found there.

Penguin Point 67°39'S., 146°12'E.

A rock point at the W. side of the entrance to Murphy Bay. The point rises to 95 m. and marks the termination of a granite wall about 3 mi. long. Discovered and named in 1912 by the eastern coastal party led by Cecil T. Madigan of the AAE (1911-14) under Douglas Mawson.

Penguin River 54°17'S., 36°30'W.

Small meandering stream which flows in a general NE. direction from Hamberg Lakes to the coast close S. of Horse Head in Cumberland East Bay, South Georgia. First roughly surveyed by the SwedAE under Nordenskjöld, 1901-4, and named by Carl Skottsberg, botanist with the expedition.

Penitent Peak 67°52'S., 67°14'W.

A peak between Mt. Breaker and Ryan Peak on Horseshoe Island. Surveyed by FIDS in 1955-57 and so named because of the snow penitents which are a characteristic feature in the vicinity of the peak.

Penk Glacier: see Ryan Glacier 54°03'S., 37°36'W.

Pennell Coast 71°00'S., 167°00'E.

That portion of the coast of Antarctica between Cape Williams and Cape Adare. Named by NZ-APC in 1961 after Lt. Harry L.L. Pennell, RN, commander of the *Terra Nova*, the expedition ship of the BrAE, 1910-13. Pennell engaged in oceanographic work in the Ross Sea during this period. In Feb. 1911 he sailed along this coast in exploration and an endeavor to land the Northern Party led by Lt. Victor Campbell.

Pennell Glacier: see Matushevich Glacier 69°20'S., 157°27'E.

Pennell Glacier Tongue: see Matushevich Glacier Tongue 69°05'S., 157°15'E.

Penney Bay 66°26'S., 110°36'E.

A large bay extending from Robinson Ridge to Brown-ing Peninsula, at the E. side of the Windmill Islands. First mapped from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Richard L. Penney, ornithologist and biologist at Wilkes Station in 1959 and 1960.

Penney Landing 66°22'S., 110°28'E.

The only practical landing place toward the eastern end of the northern side of Ardery I., in the Windmill

Islands. Discovered in 1959 by Richard L. Penney, biologist at Wilkes Station, for whom it was named by ANCA.

Penney Ravine 66°22'S., 110°27'E.

A small ravine on Ardery Island in the Windmill Islands. It is on the northern side of the island just west of center. Discovered in February 1960 by a biological field party from Wilkes Station. Named by ANCA for Richard L. Penney, biologist at Wilkes Station in 1959 and 1960.

Pennilea, Lake: see Kroner Lake 62°59'S., 60°35'W.

Penny Lake 78°16'S., 163°12'E.

A coin-shaped lake perched in moraine near the mouth of Roaring Valley, just S. of Walcott Gl. in Victoria Land. It was the site of a base camp of the VUWAE, 1960-61, which gave this descriptive name.

Penny Point 80°48'S., 160°41'E.

An ice-covered point on the S. side of Nicholson Peninsula, marking the N. side of the entrance to Matterson Inlet along the Ross Ice Shelf. Named by US-ACAN for Lt. Cdr. H. C. Penny, USN, commanding officer of USS *Vance*, ocean station ship in support of aircraft flights between New Zealand and Antarctica in USN Op. DFrz. 1962.

Penola, Glacier: see Zélée Glacier 66°52'S., 141°10'E.

Penola Island 62°03'S., 57°51'W.

Small island in Sherratt Bay lying close off the S. coast of King George I., in the South Shetland Islands. Charted in 1937 by DI personnel on the *Discovery II*, and named for the *Penola*, the BGLE ship which assisted the *Discovery II* in the search for a survey party stranded on King George I. in January 1937.

Penola Strait 65°10'S., 64°07'W.

Strait 11 mi. long and averaging 2 mi. wide, separating the Argentine Is., Petermann I. and Hovgaard I. from the W. coast of Graham Land. Traversed by the BelgAE under Gerlache on Feb. 12, 1898. Named by the BGLE, 1934-37, under Rymill, for the exp. ship *Penola*.

Peñón, Punta: see Trulla Bluff 59°02'S., 26°31'W.

Peñón, Roca: see Fort Point 62°34'S., 59°34'W.

Penrod Nunatak 85°35'S., 134°53'W.

A nunatak 2 mi. NW. of Abbey Nunatak, lying at the W. side of Reedy Gl. just N. of the mouth of Kansas Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Jack R. Penrod, builder with the Byrd Station winter party, 1957.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pensacola Mountains 83°45'S., 55°00'W.

A large group of mountain ranges and peaks, extending 280 mi. in a NE.-SW. direction, comprising the Argentina Range, Forrestal Range, Dufek Massif, Cordiner Peaks, Neptune Range, Patuxent Range, Rambo Nunataks and Pecora Escarpment. These mountain units lie astride the extensive Foundation Ice Stream and Support Force Glacier which drain northward to the Ronne Ice Shelf. Discovered and photographed on Jan. 13, 1956 in the course of a trans-continental nonstop plane flight by personnel of USN Operation Deep Freeze I from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for the U.S. Naval Air Station, Pensacola, Florida, in commemoration of the historic role of that establishment in training aviators of the U.S. Navy. The mountains were mapped in detail by USGS from surveys and USN air photos, 1956-67.

Penseroso Bluff 71°04'S., 160°06'E.

A prominent bluff (1,945 m.) surmounting the narrow, northern neck of the Daniels Range, 10 mi. NE. of Mt. Nero, in the Usarp Mountains. The Northern Party of the NZGSAE, 1963-64, reached this bluff in gloomy weather. The feature appeared dark and sombre; hence, the party gave the name from Milton's "Il Penseroso" in antithesis to Allegro Valley 14 miles to the south.

Pépin, Cape 66°32'S., 138°34'E.

Ice-covered cape between Ravin Bay and Barré Glacier. Disc. in 1840 by the Fr. exp. under D'Urville and named by him, presumably for his wife Adèle Pépin. The area was charted by the AAE in 1912-13, and again by the BANZARE in 1931, both under Mawson. The cape was more recently delineated from aerial photographs taken by USN Op. Hjp., 1946-47.

Pepper Peak 83°12'S., 57°55'W.

A sharp peak, 940 m., standing 2 mi. N. of Mt. Nervo in the Schmidt Hills portion of the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Clifford G. Pepper, hospital corpsman at Ellsworth Station, winter 1958.

Pequeña, Isla: see Small Island 64°00'S., 61°27'W.

Pequod Glacier 65°30'S., 62°03'W.

A glacier over 15 mi. long, draining E. into Exasperation Inlet on the E. coast of Graham Land. It lies parallel and just S. of Melville Glacier. The lower part of the glacier was surveyed by FIDS in 1947 and the upper reaches were surveyed in 1955. Named by UK-APC after the whaling ship *Pequod* in Herman Melville's *Moby Dick*.

Peralta Rocks 63°16'S., 58°08'W.

A group of about 8 small rocks covering an area 4 mi. by 2 mi., lying 7 mi. N. of Cape Ducorps, Trinity Peninsula. Named by the Chilean Antarctic Exp., 1949-50, for Lt. Roberto Peralta Bell, second-in-command of the oil tanker *Lientur*.

Perce, Cape: see Perce Point 72°08'S., 74°38'W.

Perce Point 72°08'S., 74°38'W.

A low ice-covered point 12 mi. WNW. of Berlioz Point on the southern coast of Beethoven Peninsula, Alexander Island. Discovered by Snow, Perce and Carroll of the USAS expedition in a flight from Stonington Island on Dec. 22, 1940. Originally named "Cape Perce" after Earl B. Perce, co-pilot of the discovery aircraft, but the term point is considered appropriate for this feature.

Perch Island 66°00'S., 65°22'W.

Island lying just off Prospect Pt. in the Fish Is., off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because it is one of the Fish Islands.

Perchot, Mount 65°44'S., 64°10'W.

Mountain, 2,040 m., surmounted by a prominent ridge extending in a general N.-S. direction, standing 4 mi. SE. of Magnier Peaks on the W. coast of Graham Land. Disc. by the FrAE, 1908-10, and named by Charcot for Monsieur Perchot, an acquaintance who donated seventy pairs of boots to the expedition.

Percy, Mount 63°15'S., 55°49'W.

Prominent mountain, 765 m., the highest feature on Joinville I., standing immediately N. of Mt. Alexander near the center of the island. Disc. by a Br. exp. under Ross on Dec. 30, 1842, and named for R. Adm. the Honorable Josceline Percy, RN, 1784-1856. Although this mountain is not surmounted by twin peaks, as described by Ross, there are a number of peaks of similar height in its vicinity, one of which may have given rise to Ross' description.

Percy Berg: see Percy, Mount 63°15'S., 55°49'W.

Perdida, Roca: see Mislaid Rock 54°30'S., 37°08'W.

Peregrinus Peak 69°09'S., 65°50'W.

A peak (1,915 m.) along the N. side of Airy Gl., 3 mi. SE. of Mt. Timosthenes, in central Antarctic Peninsula. Photographed from the air by RARE Nov. 27, 1947. Surveyed by FIDS in Dec. 1958. Named by UK-APC after Petrus Peregrinus de Maricourt, of Luceria, author of *Epistola de magnete* (1269), the first scientific treatise on the magnet.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Peremenny, Cape 66°12'S., 105°24'E.

An ice point on the coast of Antarctica 45 mi. WNW. of Merritt Island. First mapped (1955) by G. D. Blodgett from aerial photographs taken by USN Operation Highjump (1947). Photographed by the Soviet Antarctic Expedition and ANARE (1956). Named at the suggestion of members of the Soviet expedition. Peremenny means "variable" and probably refers to the nature of this ice coastline.

Peremenny, Cape: see Peremenny, Cape 66°12'S., 105°24'E.

Pérez, Cape 65°24'S., 64°06'W.

Prominent cape between Collins Bay and Beascochea Bay on the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, under Gerlache, but apparently not named by them until about 1904, when in working up their scientific reports they gave it the name Trooz. In the meantime, Charcot's FrAE, 1903-5, left for the Antarctic and in Nov. 1904 resighted the same cape, to which they gave the name Trois Pérez, for the brothers Fernando, Leopoldo and Manuel Pérez of Buenos Aires. Maurice Bongrain in his report of 1914 acknowledges the Belgian name Trooz for this cape. However, the US-ACAN has retained the Charcot name because of wider usage, and has given the name Trooz to the large glacier 5 mi. NE. of Cape Pérez.

Perez, Mount 70°00'S., 159°32'E.

A mountain (1,610 m.) at the S. side of the upper reaches of Suvorov Glacier, 6 mi. SW. of Hornblende Bluffs, in the Wilson Hills. Named by US-ACAN for Manuel J. Perez, Photographer's Mate, USN member of the USGS Topo West survey party that established geodetic control for features between Cape Adare and the Wilson Hills during 1962-63.

Perez Glacier 84°06'S., 177°00'E.

A glacier, 10 mi. long, flowing NE. from Mt. Brennan in the Hughes Range to the Ross Ice Shelf E. of Giovinco Ice Piedmont. Named by US-ACAN for Ensign Richard Perez, USN, of Squadron VX-6, Antarctic Support Activity, who participated in USN. Op. DFrz. 1964; wintered at McMurdo Station in 1961.

Pérez Peak 65°25'S., 64°05'W.

A distinctive peak 1 mi. SE. of Cape Pérez on the rugged peninsula between Collins Bay and Beascochea Bay, in western Graham Land. The name "Sommet du Grand Perez" was given by J. B. Charcot during the FrAE, 1908-10. It derived from nearby Cape Pérez, after three brothers Manuel, Fernando and Leopoldo Pérez of Buenos Aires. The name Pérez Peak has been well established in local use since 1957.

Perfil, Punta: see Crosscut Point 57°04'S., 26°46'W.

Perforada, Roca: see Hole Rock 61°53'S., 57°44'W.

Perigrinus Peak: see Peregrinus Peak 69°09'S., 65°50'W.

Periphery Point: see Rock Pile Point 68°25'S., 64°58'W.

Perkins, Mount 76°32'S., 144°08'W.

Mountain at the E. end of the Fosdick Mtns. in the Ford Ranges, Marie Byrd Land. Discovered by the ByrdAE on the Northeastern Flight of Dec. 15-16, 1934. Named for Jack E. Perkins, biologist at the USAS West Base (1939-41) and the leader of a biological party which visited this area in December 1940.

Perkins Canyon 85°27'S., 124°20'W.

A canyon at the head of Quonset Glacier, between Ruseski Buttress and Mt. LeSchack, along the N. side of Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1959-60. Named by US-ACAN for David M. Perkins, geomagnetist, Byrd Station winter party, 1961.

Perkins Glacier 74°54'S., 136°37'W.

A broad, low gradient glacier 8 mi. SSE. of Cape Burks on the coast of Marie Byrd Land. It drains W. from McDonald Heights into the E. side of Hull Bay. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Earle B. Perkins, biologist with the ByrdAE, 1933-35.

Perlebandet Nunataks 71°56'S., 23°03'E.

A linear group of nunataks 5 mi. NW. of Tanngarden Peaks in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Perlebandet (the string of beads).

Per Nunatak 71°52'S., 7°04'E.

A nunatak lying 4 mi. NE. of Larsen Cliffs in the Mühlig-Hofmann Mtns., Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named for Per Larsen, steward with NorAE (1956-57).

Perov, Mount 72°34'S., 31°12'E.

Mountain, 2,380 m., just W. of the terminus of Norsk Polarinstitut Gl. in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Cdr. V. Perov, Soviet pilot who came to the aid of four members of the BelgAE in December 1958.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Perov Nunataks 67°35'S., 51°06'E.

A small group of nunataks on the E. edge of the Scott Mtns., 19 mi. SE. of Debenham Peak. Photographed in October 1956 by ANARE aircraft and surveyed in November 1958 by an airborne field party. Named by ANCA for Viktor Perov, pilot of a Soviet aircraft which flew over this area and rescued the 1958 Belgian field party after an aircraft accident.

Perplex Ridge 67°39'S., 67°43'W.

Ridge, rising over 915 m., composed of four rocky masses separated by small glaciers, extending 6 mi. northeastward from Lainez Point along the NW. side of Pourquoi Pas I., off the W. coast of Graham Land. First sighted and roughly charted in 1909 by the FrAE under Charcot. It was surveyed in 1936 by the BGLE and in 1948 by the FIDS. So named by FIDS because of confusion in attempting to identify this ridge from earlier maps.

Perrier Bay 64°23'S., 63°45'W.

Bay 6 mi. wide indenting the NW. coast of Anvers I. between Giard Pt. and Quinton Pt., in the Palmer Archipelago. Disc. by the FrAE, 1903-5, and named by Charcot for Edmond Perrier, French naturalist.

Per Rock 71°17'S., 11°26'E.

Rock lying 0.8 mi. N. of Pål Rock in the Arkticheskiy Institut Rocks, at the NW. extremity of the Wohlthat Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Per (Peter).

Perry Bay 66°08'S., 132°49'E.

An open ice-filled bay about 12 mi. wide, indenting the coast between Freeman Point and a stubby peninsula terminating in Cape Keltie. Delineated from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for Lt. O. H. Perry on the sloop *Peacock* of the USEE (1838-42) under Wilkes.

Perry Range 75°00'S., 134°12'W.

A narrow range of mountains, 6 mi. long, separating the lower ends of Venzke Gl. and Berry Gl. where they enter Getz Ice Shelf, on the coast of Marie Byrd Land. The range was discovered and photographed from aircraft of the U.S. Antarctic Service in December 1940. Named by US-ACAN for Lt. John E. Perry, CEC, USN, Public Works Officer at McMurdo Station, 1968. He commanded the Antarctic Construction Battalion Unit from January 1969 until it was decommissioned in May 1971, when he became project manager for the South Pole Station.

Persaksla: see Per Spur 71°19'S., 12°36'E.

Perseus, Mount 57°04'S., 26°40'W.

The lower (455 m.) and more northerly of twin ice domes in the E. part of Candlemas I., South Sandwich Islands. Named by UK-APC in 1971 in association with nearby Mt. Andromeda. In Greek mythology, Perseus married Andromeda after rescuing her from a sea monster.

Perseus Crag 70°36'S., 66°11'W.

A group of about twelve small nunataks dominated by a high whale-backed hill, located on the W. edge of the Dyer Plateau of Palmer Land, about 30 mi. ENE. of Wade Point. Named by UK-APC after the constellation of Perseus.

Perseverance, Mount 76°48'S., 162°12'E.

The high peak near the S. end of the ridge from Mt. Whitcombe, overlooking the lower Benson Gl. in Victoria Land. So named because it was the final station occupied by the N.Z. Northern Survey Party of the CTAE (1956-58) during a particularly long day's field work on October 22, 1957.

Perskjeret: see Per Nunatak 71°52'S., 7°04'E.

Per Spur 71°19'S., 12°36'E.

A rock spur which marks the northern extremity of Östliche Petermann Range, in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named for J. Per Madsen, a meteorologist with NorAE, 1958-59.

Persson Island 64°13'S., 58°24'W.

Island 1.5 mi. long, lying in the entrance to Röhss Bay on the SW. side of James Ross Island. Disc. by the SwedAE under Nordenskjöld, 1901-4, and named by him for Nils Persson, a patron of the expedition.

Peruque Point 54°08'S., 36°49'W.

Point at the S. side of Anchorage Bay on the W. side of Fortuna Bay, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Perutz Glacier 67°36'S., 66°33'W.

Glacier, 10 mi. long and 2 mi. wide, which flows WNW. into Bourgeois Fjord, close E. of Thomson Head, on the W. coast of Graham Land. The mouth of the glacier was first surveyed in 1936 by the BGLE under Rymill. The entire glacier was surveyed in 1946-47 and 1948-49 by the FIDS, and named by them for Max F. Perutz of the Cavendish Laboratory, Cambridge, who has made important studies on the mechanism of glacier flow.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pervomayskaya Peak 71°47'S., 11°40'E.

Peak, 2,795 m., standing 1 mi. NE. of Mt. Skarshovden in the central Humboldt Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Gora Pervomayskaya (May 1st Mountain) by the USSR in 1966.

Pesky Rocks 66°09'S., 65°54'W.

Small group of rocks lying 3.5 mi. W. of Cape Evensen, off the W. coast of Graham Land. Shown on a Chilean Govt. chart of 1947. So named by the UK-APC in 1959 because the rocks obstruct an otherwise clear shipping route.

Peter, Mount 70°11'S., 64°56'E.

A large dome-shaped rock outcrop with a flat, sheer N. face, about 2 mi. E. of Mt. Béchervaise in the Athos Range, Prince Charles Mountains. First visited in November 1955 by an ANARE party led by J. M. Béchervaise. Named by ANCA for Peter Crohn, geologist at Mawson Station, 1955-56.

Peterbreen: see Peter Glacier 73°20'S., 1°09'W.

Peter Glacier 73°20'S., 1°09'W.

A short, broad glacier draining NE. into Jutulstraumen Gl. just E. of Neumayer Cliffs and Melleby Peak in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Peter Melleby who was in charge of sledge dogs with the NBSAE.

Peterman Islands: see Petermann Island 65°10'S., 64°10'W.

Petermann Island 65°10'S., 64°10'W.

Island 1 mi. long, lying 1 mi. SW. of Hovgaard I. in the Wilhelm Archipelago. Disc. by a Ger. exp., 1873-74, and named by Dallmann for August Petermann, noted German geographer and founder of *Petermanns Mitteilungen*. The US-ACAN has rejected the name Lund Island, applied by the BelgAE, 1897-99, in favor of the original naming.

Petermann Range: see Petermann Ranges 71°40'S., 12°20'E.

Petermann Ranges 71°40'S., 12°20'E.

A group of associated mountain ranges including the Östliche Petermann, Mittlere Petermann, Westliche Petermann, Südliche Petermann and Pieck Ranges, located just E. of the Humboldt Mtns. in the central Wohlthat Mtns. of Queen Maud Land. Disc. and plot-

ted from air photos by the GerAE under Ritscher, 1938-39, who named it for August Petermann.

Peter Nunatak 75°55'S., 128°33'W.

A prominent, conical nunatak (2,440 m.) standing 3.5 mi. SE. of Mt. Petras at the S. extremity of the McCuddin Mtns., in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Capt. Peter J. Anderson, USAF, Technical Editor, History and Research Division, U.S. Naval Support Force, Antarctica, during Operation Deep Freeze 1971 and 1972.

Peters Bastion 70°27'S., 62°54'W.

The large, mainly ice-free mountain forming the northernmost summit of the Eland Mountains, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Cdr. Vernon W. Peters, USN, Commanding Officer of Squadron VXE-6 in Antarctica during Operation Deep Freeze, 1974.

Peters Butte 85°19'S., 119°32'W.

A flat-topped, steep-sided rock butte on the S. side of McCarthy Valley in Long Hills, Horlick Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1958-60. Named by US-ACAN for Norman L. Peters, meteorologist at Byrd Station in 1958.

Petersen, Cape 71°56'S., 101°46'W.

A rounded ice-covered cape on the N. side of Thurston I., about 18 mi. ENE. of Cape Flying Fish. Delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Carl O. Petersen, radio engineer with the ByrdAE in 1928-30 and 1933-35.

Petersen Bank 65°45'S., 110°10'E.

Submarine bank extending NNW. from the coast of Antarctica, just W. of Balaena Islands. A portion of the bank was sounded by ships of USN Op. Wml., 1947-48. The bank was more fully delineated by ANARE during January 1956 and 1957. Named by the ANARE for Capt. Hans C. Petersen, master of the *Kista Dan*, who explored the bank in this vessel in January 1956.

Petersen Island 67°35'S., 62°54'E.

Largest and most northerly island of the Jocelyn Is. in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for Capt. H. C. Petersen, master of the *Thala Dan*, 1959-61, and formerly master of the *Kista Dan*.

Petersen Peak 80°27'S., 27°57'W.

A rock peak (1,215 m.) standing 6 mi. SW. of Morris Hills in the north-central part of Shackleton Range.

GEOGRAPHIC NAMES OF THE ANTARCTIC

First mapped in 1957 by the CTAE and named for Hans C. Petersen, captain of the Danish ship *Magga Dan* which transported members of the CTAE to the Filchner Ice Shelf in 1956-57.

Peters Glacier 54°08'S., 37°33'W.

A glacier flowing southward into the west side of Cheapman Bay, South Georgia. Named by UK-APC for Nikolaus Peters, a leading German authority on whales and whaling and Director of Reichstelle für Walforschung, Hamburg, 1937-1940.

Peterson, Mount 74°40'S., 76°59'W.

A small mountain rising above the ice surface 22 mi. NW. of Mt. Rex, Ellsworth Land. The feature lies within a group of nunataks first sighted and photographed on Nov. 23, 1935 by Lincoln Ellsworth. The area was explored by the RARE (1947-48) under Finn Ronne, who named the mountain for Harries-Clichy Peterson, physicist with the expedition.

Peterson Bluff 71°09'S., 165°53'E.

A prominent bluff (1,480 m.) on the N. side of Ebbe Glacier. The feature forms the SE. end of the broad ridge descending from Mt. Bolt in the Anare Mountains. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for Donald C. Peterson, photographer's mate with USN Squadron VX-6 at McMurdo Station, 1967-68 and 1968-69.

Peterson Glacier 66°25'S., 110°44'E.

Glacier flowing W. into Penney Bay opposite Herring I. in the Windmill Islands. Mapped from aerial photographs taken by USN Op. Hjp., 1946-47, and named for Louie N. Peterson, radio operator and recorder with the USN Op. Wml. parties which established astronomical control stations along Wilhelm II, Knox and Budd Coasts during January-February 1948.

Peterson Hills 75°50'S., 67°55'W.

A group of hills just E. of Spear Gl., between the Hauberg and Wilkins Mountains, in Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for D. G. Peterson, electronics technician at South Pole Station in 1963.

Peterson Icefalls 70°05'S., 72°44'E.

A line of icefalls at the terminus of Stevenson Glacier, where the latter enters the east part of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from aerial photographs taken by USN Operation Highjump (1946-47). Named by Roscoe for J. C. Peterson, Jr., air crewman on Operation Highjump photographic flights in the area.

Peterson Island 66°28'S., 110°30'E.

Rocky island, 2 mi. long, with two inlets indenting the N. side, lying immediately W. of Browning Pen. in the S. part of the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Lt. Mendel L. Peterson, USN, supply officer with USN Op. Wml. which established astronomical control stations in the area in January 1948.

Peterson Ridge 84°34'S., 163°56'E.

High rock ridge that extends N. from the W. part of Storm Peak massif, in Queen Alexandra Range. Named by the Ohio State Univ. Geological Exp., 1969-70, for Donald N. Peterson, party member who collected basalt lavas from the ridge for petrologic and paleomagnetic studies.

Peters Peak 82°14'S., 160°04'E.

Snow-covered peak, 2,220 m., standing 4 mi. N. of Melrose Peak in the central part of Holyoake Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Merrill J. Peters, USARP field assistant, 1962-63.

Peter I Island 68°47'S., 90°35'W.

An isolated, mainly snow covered island, 11 mi. long and 5 mi. wide, located 200 mi. NE. of Cape Braathen, Thurston Island. The island is lofty with steep slopes, attaining a height of 1,755 m. in Lars Christensen Peak. Discovered in January 1821 by Capt. Thaddeus Bellingshausen, who named it for Peter the Great of Russia.

Petes Pillar 63°00'S., 60°33'W.

Pillar rock or stack lying immediately E. of Fildes Pt. at the N. side of the entrance to Port Foster, Deception I., in the South Shetland Islands. The pillar was presumably a well-known landmark to early sealers at Deception I. and appears on the chart drawn by Lt. E. N. Kendall of the *Chanticleer* in 1829. Named in 1950 by the UK-APC for Pilot Officer Pete St. Louis, RCAF, pilot with the FIDS in 1949-50.

Petinos, Mount 74°25'S., 132°43'W.

A mountain (500 m.) located 1 mi. ESE. of Worley Point in the NW. part of Shepard Island. Mapped from the USS *Glacier* on Feb. 4, 1962, and named for Lt. (j.g.) Frank Petinos, USN, First Lieutenant aboard the *Glacier*.

Petite Rocks 82°40'S., 51°30'W.

Two small isolated rocks in the W. part of Sallee Snowfield, about 5 mi. E. of central Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. The name applied by US-ACAN is descriptive of their small size.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Petlock, Mount 85°25'S., 172°16'E.

The most prominent mountain (3,195 m.) in the NE. part of Otway Massif, surmounting the N. end of the ridge which borders the E. side of Burgess Glacier. Named by US-ACAN for James D. Petlock, USARP ionospheric physicist at South Pole Station, 1963.

Petras, Mount 75°52'S., 128°39'W.

A high, prominent, ridge-shaped mountain, 2,865 m., standing 10 mi. SE. of Mt. Flint in the McCuddin Mountains, Marie Byrd Land. Discovered by the USAS on a flight from West Base on Dec. 14-15, 1940, and named for Theodore A. Petras, master technical sergeant, USMC, pilot of the airplane on this flight.

Petrel, Rada: see Petrel Cove 63°28'S., 56°13'W.

Petrel Cove 63°28'S., 56°13'W.

A small coastal indentation at the W. end of Dundee I. between Welchness and Diana Reef. The cove is adjacent to the Argentine station "Petrel," established in 1951-52, from which it takes its name.

Petrel Island 54°02'S., 37°17'W.

Island 0.75 mi. SW. of Prion I., lying in the Bay of Isles, South Georgia. First charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. Recharted in 1929-30 by DI personnel, who so named it because of its association with Prion Island. Petrels of the genus *Prion* were observed in these islands.

Petrel Island: see Dynamite Island 68°11'S., 67°00'W.

Pétrel Island 66°40'S., 140°01'E.

Rocky island, 0.5 mi. long and 45 m. in el., which lies NW. of Rostand I. and is the largest feature in the cluster of islands at the SE. end of Géologie Archipelago. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE, 1949-51, and so named by them because numerous snow petrel nests were found there. In January 1952, following destruction of the Port Martin base by fire, the FrAE under Marret, 1952-53, enlarged the hut on Pétrel Island to serve as the new base site.

Petrellfjellet 71°59'S., 4°50'E.

A prominent, mainly ice-free mountain between Slok-stallen Mtn. and Mt. Grytøyr in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Petrellfjellet (the petrel mountain).

Petrel Peak 54°16'S., 36°32'W.

Peak, 630 m., standing at the N. side of Hodges Gl., 1 mi. NW. of Grytviken, South Georgia. Surveyed by

the SGS in the period 1951-57. The name was proposed by J. Smith of the FIDS in 1958, following glaciological investigations as part of the IGY. Petrel Peak is named for the whale-catcher *Petrel*, belonging to the Compañía Argentina de Pesca at Grytviken, and for the snow petrels which nest on the higher rocks of the peak.

Pétrels, Ile des: see Pétrel Island 66°40'S., 140°01'E.

Petrides, Mount 75°04'S., 136°30'W.

A mountain with much exposed rock midway between Oehlenschläger Bluff and Mt. Sinha, in southern Erickson Bluffs, Marie Byrd Land. It overlooks the confluence of Kirkpatrick and Hull Glaciers from the north. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for George A. Petrides, member of the biological party that made population studies of seals, whales and birds in the pack ice of the Bellingshausen and Amundsen Seas using USCGC *Southwind* and its two helicopters, 1971-72.

Petter, Havre: see Potter Cove 62°14'S., 58°42'W.

Petter Bay 60°43'S., 45°10'W.

Bight 0.5 mi. S. of Spence Hbr. along the E. coast of Coronation I., in the South Orkney Islands. This coast was roughly charted by Capt. George Powell and Capt. Nathaniel Palmer in December 1821. The name Petters Bay appears on a chart drawn by Capt. Petter Sørllø in 1912 and corrected by Hans Borge in 1913. It seems likely that this name was first used by Borge and commemorates Capt. Sørllø.

Petters Bay: see Petter Bay 60°43'S., 45°10'W.

Pettersenegga: see Pettersen Ridge 71°47'S., 9°42'E.

Pettersen Ridge 71°47'S., 9°42'E.

Ridge extending N. for 6 mi. from Sandhø Heights in the Conrad Mtns. of the Orvin Mtns., Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from surveys and air photos by the NorAE, 1956-60, and named for Sverre Pettersen, steward with the NorAE, 1957-58.

Pettigrew Scarp 54°30'S., 37°04'W.

An escarpment nearly 0.5 mi. long in the S. part of Annenkov Island, South Georgia. It is terminated to the SW. by a ridge, and to the NE. by three rock pinnacles. Named by the UK-APC for Timothy H. Pettigrew, BAS geologist who worked on the island, 1972-73.

Pettus Glacier 63°48'S., 59°04'W.

A narrow deeply entrenched glacier 9 mi. long, which flows N. from Ebony Wall into Gavin Ice Piedmont

GEOGRAPHIC NAMES OF THE ANTARCTIC

een Poynter Hill and Tinsel Dome, Trinity Peninsula. Named by UK-APC for Robert N. Pettus, staff pilot with FIDASE, 1956-57.

Rocky Rocks 67°34'S., 67°29'W.

Group of small rocks lying 3 mi. SE. of Cape Sáenz e center of the W. part of Bigourdan Fjord, off the coast of Graham Land. First roughly surveyed in 1948 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS and named Petty Rock because of its size. Air photos have disclosed that there are several rocks instead of just one.

Glacier: see Suárez Glacier 64°56'S., 62°56'W.

Mount 72°19'S., 169°11'E.

Mountain (2,950 m.) that surmounts the central part of ridge separating Kelly and Towles Glaciers, in Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for James A. Pew, geophysicist at McMurdo Station, 1966-67.

Lake 77°56'S., 164°18'E.

Small lake at about 580 m. elevation, on the upper Koettlitz bench, 1 mi. SE. of Blackwelder Gl. in Marie Byrd Land. Named in honor of the glacial geomorphological work done in the Koettlitz Glacier area by René, Univ. of Alaska. It was near this lake that members of the VUWAE, 1960-61, found a note left by René, reporting observations on glacial erratics. Found by the VUWAE party.

Peak 78°02'S., 163°40'E.

Rocky peak, 860 m., composed of granite and gabbro with a dolerite sill. The peak is immediately SE. of the Glacier and is surrounded by glacial ice on the S. side. Named by US-ACAN for Troy L. Glacial geologist with USN Operation Deep Freeze 1957-58, who personally explored this peak as adjacent portions of Victoria Land.

Land 66°54'S., 67°44'W.

the Bennett Is., lying just S. of Gränicher I. in the Bay. Mapped from air photos taken by USN (1947-48) and FIDASE (1956-57). Named by US-ACAN for Alexius B.I.F. Pfaff (1825-1886), German geophysicist who made pioneer investigations of the deformation of ice, in Switzerland, in 1874-76.

Point 72°37'S., 89°35'W.

Overlooked point on the NW. extension of Fletcher Peninsula; it is partially encompassed by the Abbot Glacier. The point marks the division of Eights Coast from the Coast. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for L. Pfrogner, USARP geomagnetist-seismologist at Byrd Station, 1961-62.

Phantom Point 66°25'S., 65°41'W.

Point within Darbel Bay, lying 1.5 mi. W. of Shanty Pt. on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57, and mapped from these photos by the FIDS. The name arose because the position of the point was only vaguely known when first visited by an FIDS sledge party in 1957, and it was obscured by thick fog from which it finally loomed like a phantom.

Phelan, Mount 71°59'S., 160°37'E.

A mostly ice-free mountain (2,000 m.) located 5 mi. SE. of Killer Nunatak in the S. portion of Emlen Peaks, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Michael J. Phelan, geomagnetist/seismologist at South Pole Station, 1962; a member of the Byrd Traverse, 1963-64.

Phelps Island 66°17'S., 110°30'E.

Small island lying close W. of the N. end of Shirley I., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Robert F. Phelps, air crewman with USN Op. Wml. which established astronomical control stations in the area in January 1948.

Philbin Inlet 74°04'S., 113°58'W.

Narrow, ice-filled inlet about 15 mi. long that indents the N. end of Martin Peninsula, in Marie Byrd Land. First mapped by USGS from air photos taken by USN Op. Hjp. in January 1947. Named by US-ACAN for Brig. Gen. Tony Philbin, USA, who served the Sec. of Defense in liaison with the U.S. Navy during the 1957-58 IGY.

Philippi, Cape 75°14'S., 162°33'E.

A rocky cape rising abruptly to 490 m. along the coast of Victoria Land, marking the N. side of the terminus of David Glacier. Disc. by the BrAE, 1907-9, under Shackleton, who named this feature for Emil Philippi, distinguished geologist, who was a member of the GerAE, 1901-3, under Drygalski.

Philippine: see Philippi Rise 66°06'S., 62°18'W.

Philippi Glacier 54°49'S., 36°03'W.

Glacier flowing E. into Brandt Cove on the SW. side of Drygalski Fjord, at the SE. end of South Georgia. Charted by the GerAE, 1911-12, under Filchner, who named it for Emil Philippi, glaciologist with the GerAE, 1901-3, under Drygalski, and professor of geology at the Univ. of Jena.

Philippi Glacier 66°45'S., 88°20'E.

Coastal glacier about 15 mi. long, flowing N. to the E. end of the West Ice Shelf, 15 mi. W. of Gaussberg.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Delineated from aerial photographs taken by USN Op. Hjp., 1946-47. Named by the ANCA for Emil Philippi, geologist with the GerAE under Drygalski, 1901-3, who made scientific observations in the vicinity of Gaussberg.

Philippigletscher: see Philippi Rise 66°06'S., 62°18'W.

Philippi Ice Plateau: see Philippi Rise 66°06'S., 62°18'W.

Philippi Rise 66°06'S., 62°18'W.

Low, snow-covered promontory 7 mi. wide and extending some 10 mi. SE. from the E. coast of Graham Land. The ice surface is highest in the W., where it rises to about 395 m. and is broken by Borchgrevink and Gemini Nunataks. The SwedAE under Nordenskjöld, 1901-4, reported an ice wall or glacial terrace in the vicinity of Borchgrevink Nunatak. Although unable to determine its nature, Nordenskjöld named the feature Philippigletscher, after Emil Philippi. It was determined to be a snow-covered promontory by the FIDS during their 1947 survey of this coast.

Philip Wrigley Gulf: see Wrigley Gulf 74°00'S., 129°00'W.

Phillips, Cape 73°04'S., 169°36'E.

A cape approximately midway along the E. side of Daniell Peninsula, 8 mi. SE. of Mt. Brewster, in Victoria Land. Discovered in January 1841 by Sir James Clark Ross who named it for Lt. Charles G. Phillips of the *Terror*.

Phillips, Mount 73°01'S., 167°15'E.

The culminating summit (3,035 m.) in the S. part of the ice-covered Malta Plateau, in Victoria Land. Discovered in January 1841 by Sir James Clark Ross who named it for Prof. John Phillips, Asst. Sec. of the British Association.

Phillips Glacier: see Albanus Glacier 85°52'S., 151°00'W.

Phillips Mountains 76°16'S., 145°00'W.

A range of mountains on the N. side of Balchen Gl. and Block Bay in the Ford Ranges, Marie Byrd Land. Discovered by the ByrdAE (1928-30) and named by Byrd for Albanus Phillips, Sr., a manufacturer of Cambridge, Md., and patron of the Byrd expeditions.

Phillips Nunatak 84°45'S., 62°35'W.

A nunatak along the edge of a small ice escarpment 7 mi. N. of Mt. Wanous in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for

Harry G. Phillips, cook at Palmer Station, winter 1967.

Phillips Ridge 67°50'S., 62°49'E.

Ridge, 0.5 mi. long, standing 0.5 mi. W. of the main massif of the Central Masson Range in the Framnes Mtns., Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for J. Phillips, physicist at Mawson Station in 1962.

Phils Island 64°30'S., 63°00'W.

The southern of two small islands lying immediately S. of Guépratte I. in Discovery Sound, in the Palmer Archipelago. Charted and named in 1927 by DI personnel on the *Discovery*.

Phleger Dome 85°52'S., 138°24'W.

A massive dome-shaped mountain, 3,315 m., at the NE. end of Stanford Plateau along the Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Herman Phleger, one of the U.S. representatives in the discussions on the Antarctic Treaty of 1959.

Phobos Ridge 71°52'S., 68°30'W.

Rocky ridge of sandstones and shales forming the W. side of Mars Gl. in the SE. corner of Alexander Island. The coast in this vicinity was first seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. This ridge was first surveyed in 1949 by the FIDS and named by the UK-APC for its association with Mars Glacier, Phobos being the inner of the two satellites of Mars.

Phoebe, Mount 71°47'S., 68°47'W.

A mountain between the head of Neptune Glacier and the Saturn Glacier in eastern Alexander Island. The feature is situated at the junction of four radial ridges. The summit is a small mesa of conglomerate rising 300 m. above the surrounding ice. First photographed by Lincoln Ellsworth, Nov. 23, 1935, in the course of a trans-Antarctic flight and plotted from the air photos by W. L. G. Joerg. Named by UK-APC from association with Saturn Glacier after Phoebe, one of the satellites of Saturn.

Phoenix Peak 64°24'S., 59°39'W.

A peak immediately S. of Muskeg Gap at the N. end of Sobral Peninsula, Graham Land. Mapped from surveys by FIDS (1960-61). Named by UK-APC after the Phoenix Manufacturing Co. of Eau Claire, Wisconsin, which started in 1906-7 to design and build steam "locomotive sleds" for hauling logs over ice and snow, probably the earliest successful vehicles of their type.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Phoque Island 66°49'S., 141°24'E.

Rocky island 0.1 mi. long, the southernmost island in a small group 0.1 mi. N. of Cape Margerie. Charted in 1951 by the FrAE and so named by them because of numerous seals near the island, "phoque" being French for seal.

Phoques, Ile aux: see Phoque Island 66°49'S., 141°24'E.

Phoques, Iles des: see Seal Islands 60°58'S., 55°24'W.

Phyllis Bay 58°28'S., 26°18'W.

Small bight between Allen and Scarlett Points at the S. end of Montagu I., in the South Sandwich Islands. The feature was roughly outlined by Bellingshausen in 1819-20. Charted in 1930 by DI personnel on the *Discovery II* and named for Phyllis V. Horton, daughter of Lt. Cdr. W. A. Horton, RN, chief engineer of the *Discovery II* at the time of the survey.

Physeter Rocks 63°31'S., 60°09'W.

Small group of rocks lying close NW. of Ohlin I., in the Palmer Archipelago. Photographed by the FIDASE in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 after the sperm whale, *Physeter catodon*.

Piccard Cove 64°45'S., 62°19'W.

Cove forming the southernmost part of Wilhelmina Bay, along the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Auguste Piccard, Swiss physicist, stratosphere pioneer who reached a height of 9.5 mi. in a hydrogen-filled balloon in 1931.

Picciotto, Mount 83°46'S., 163°00'E.

A prominent, mainly ice-free mountain, 2,560 m., surmounting the NE. end of Painted Cliffs on Prince Andrew Plateau, Queen Elizabeth Range. Named by US-ACAN for Edgard E. Picciotto, glaciologist at South Pole Station, 1962-63; South Pole-Queen Maud Land Traverse, 1964-65 and 1965-66.

Pickergill Islands: see Pickersgill Islands 54°37'S., 36°45'W.

Pickering Nunatak 71°24'S., 70°47'E.

A prominent nunatak at the E. side of the mouth of Lambert Glacier, situated 20 mi. SSW. of Manning Nunataks. Sighted on a flight by an ANARE Beaver aircraft over the Amery Ice Shelf on Nov. 2, 1957. Named by ANCA for Flight Sgt. R. Pickering of the RAAF Antarctic Flight at Mawson Station, 1957.

Pickering Nunataks 71°49'S., 68°57'W.

A group of nunataks lying 2 mi. SW. of Mount Phoebe and on the NE. side of Saturn Glacier, in eastern Alex-

ander Island. The nunataks were photographed by Lincoln Ellsworth, Nov. 23, 1935, in the course of a trans-Antarctic flight and were plotted from the air photos by W.L.G. Joerg. Named by UK-APC from association with Saturn Glacier after William H. Pickering (1858-1938), the American astronomer who discovered Phoebe, one of the satellites of Saturn.

Pickersgill Islands 54°37'S., 36°45'W.

Small group of islands 15 mi. SE. of Annenkov I. and 9 mi. WSW. of Leon Head, South Georgia. Disc. in 1819 by a Russ. exp. under Bellingshausen, who charted the largest feature of the group as Pickersgill Island, erroneously thinking it to be the island sighted in 1775 by Capt. James Cook and named for Lt. Richard Pickersgill of the exp. ship *Resolution*. The name Pickersgill Islands has been established by usage for this group of islands; the island originally named by Cook has been known as Annenkov Island since 1819.

Pickersgills Island: see Pickersgill Islands 54°37'S., 36°45'W.

Pickwick Island 65°29'S., 65°38'W.

The largest of the Pitt Islands, in the Biscoe Islands. Very roughly charted by the BGLE under Rymill, 1934-37. More accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 after Samuel Pickwick, founder of the Pickwick Club in Charles Dickens' *Pickwick Papers*.

Picnic Passage 64°20'S., 56°55'W.

A marine channel, 1.5 mi. long and 0.5 mi. wide, between Snow Hill Island and Seymour Island in the James Ross Island group. First surveyed in 1902 by SwedAE, 1901-04, under Otto Nordenskjöld. The UK-APC name arose from the excellent sledging conditions experienced during the FIDS resurveying of the area of 1952, which gave to the work a picnic-like atmosphere.

Pico, Isla: see Beak Island 63°37'S., 57°18'W.

Pico, Mount 64°10'S., 62°27'W.

A peak over 1,700 m. in northern Brabant Island, Palmer Archipelago. It rises 3.5 mi. northeast of Driencourt Point. The name "Monte Pico" was used on a 1957 Argentine hydrographic chart. In Spanish, "pico" means beak or bill of a bird; peak or sharp point of any kind.

Pico, Rocas: see Montrol Rock 62°58'S., 56°21'W.

Pidgeon Island 66°19'S., 110°27'E.

Rocky island, 1 mi. long, between Midgley I. and Mitchell Pen. in the Windmill Islands. First mapped

GEOGRAPHIC NAMES OF THE ANTARCTIC

from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for E. C. Pidgeon, Photographer's Mate on USN Op. Hjp. flights in this area and other coastal areas between 14° and 164°, East longitude. Thought to be a separate unit, the E. part of this feature was previously named O'Brien Islet. The name O'Brien is now applied to the bay N. of Mitchell Peninsula.

Pidzhen, Ostrov: see Pidgeon Island 66°19'S., 110°27'E.

Pieck Range 71°45'S., 12°06'E.

A short mountain range surmounted by Zwiesel Mountain, located at the E. side of Humboldt Graben in the Petermann Ranges, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Re-plotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Wilhelm Pieck, first president of communist East Germany.

Piedrabuena, Isla: see Eta Island 64°19'S., 62°55'W.

Pierce Peak 84°52'S., 63°09'W.

A peak, 1,790 m., standing 2 mi. S. of Sullivan Peaks at the NE. edge of Mackin Table in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Chester M. Pierce who, with Jay T. Shurley, studied the psychophysiology of men while asleep and awake—both before, during, and after sojourns at the South Pole Station, in 1966-67.

Pierre, Mount 71°18'S., 35°45'E.

A massif (2,200 m.) standing next north of Mt. Goossens in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by the BelgAE, under Guido Derom, who named it for Michel Pierre, aircraft mechanic, member of the Belgian flight reconnoitering party in this area.

Pierre, Mount 63°58'S., 61°50'W.

Sharp conical peak, 210 m., standing immediately S. of Moureaux Pt., Liège I., in the Palmer Archipelago. Disc. and named by the BelgAE under Gerlache, 1897-99.

Pierre Baudin, Cap: see Baudin Peaks 68°49'S., 67°03'W.

Pierre Willems, Cap: see Willems, Cape 64°57'S., 63°16'W.

Pigmy Rock 68°43'S., 67°33'W.

Rock lying close off the SW. side of Alamode I. at the S. extremity of the Terra Firma Is., off the W. coast of

Graham Land. The Terra Firma Is. were first visited and surveyed in 1936 by the BGLE under Rymill. This rock was surveyed in 1948 by the FIDS, who so named it because of its size.

Pig Point 54°04'S., 37°09'W.

Point which forms the S. side of the entrance to North Bay, Prince Olav Hbr., on the N. coast of South Georgia. Probably named by DI personnel who charted Prince Olav Hbr. in 1929.

Pig Rock 62°19'S., 58°48'W.

Rock, 65 m. high, the largest of a group of rocks lying 1 mi. E. of the E. end of Nelson I., in the South Shetland Islands. This rock, known to sealers in the area as early as 1821, was charted and named by DI personnel on the *Discovery II* in 1935.

Pi Islands 64°20'S., 62°53'W.

Two islands and several rocks which lie 1 mi. E. of the NE. end of Omega I. in the Melchior Is., Palmer Archipelago. The name, derived from the 16th letter of the Greek alphabet, appears to have been first used on a 1946 Argentine govt. chart following surveys of these islands by Arg. expeditions in 1942 and 1943.

Pikstock: see Brooker, Mount 54°30'S., 36°14'W.

Pila Island 67°35'S., 62°43'E.

Small island 1.5 mi. W. of the Flat Is. in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Pila (the arrow).

Pilarryggen 72°42'S., 3°56'W.

A rock ridge at the W. side of Portalen Pass in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Pilarryggen (the pillar ridge).

Pilcher Peak 64°19'S., 60°49'W.

Peak between Mouillard and Lilienthal Glaciers, on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Percy S. Pilcher (1866-1899), British engineer and pioneer of gliding flight.

Pillar Peak: see Waldeck-Rousseau Peak 66°09'S., 65°38'W.

Pillar Rock: see Stina Rock 54°00'S., 37°58'W.

Pillar Rock 54°00'S., 38°01'W.

A prominent rock stack lying SW. of Square Rock, off the W. end of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pillow Knob 83°39'S., 58°41'W.

A peak, 810 m., protruding through the snow cover at the NE. end of Williams Hills in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. The descriptive name was suggested by Dwight L. Schmidt, USGS geologist to these mountains, 1962-66.

Pillsbury Tower 73°31'S., 94°20'W.

A remnant volcanic cone, 1,295 m., with a shear north-facing rock cliff and a gradual slope at the south side, standing directly at the base of Avalanche Ridge in the Jones Mountains. With its dark rock rising 100 m. above the surrounding area, it is clearly the most prominent landmark in these mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61, and named by them after Pillsbury Hall which houses the Dept. of Geology at the Univ. of Minnesota.

Pilon Peak 71°14'S., 164°57'E.

A prominent peak (1,880 m.) standing 2 mi. NE. of Mt. Works along the W. side of Horne Gl., in the Everett Range, Concord Mountains. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Cdr. Jerome R. Pilon, USN, Operations Officer of Antarctic Development Squadron Six (1967-68), Executive Officer (1968-69), and Commanding Officer (1969-70). Commander Pilon served on the Advisory Committee on Antarctic Names of the U.S. Board on Geographic Names, 1976-78.

Pilot Glacier 73°23'S., 165°03'E.

A short, deeply entrenched tributary glacier in the Mountaineer Range, descending along the SE. side of Deception Plateau to enter Aviator Glacier, in Victoria Land. Named by the northern party of NZGSAE, 1962-63, in recognition of services rendered by pilots of U.S. Navy Squadron VX-6 in Antarctica, and in association with Aviator Glacier.

Pilot Peak 65°51'S., 65°16'W.

The highest peak on Larrouy I., 745 m., off the W. coast of Graham Land. Charted by the FrAE under Charcot, 1908-10. So named by the UK-APC in 1959 because the peak, conspicuous from a great distance, is useful as a navigation mark for the passage of Grandier Channel.

Pilseneer Island: see Pelseneer Island 64°39'S., 62°13'W.

Pilten Nunatak 71°53'S., 24°48'E.

Nunatak in the N. part of Gjøl Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Pilten (the nipper).

Pimple, The 77°59'S., 162°40'E.

Small cone-shaped peak, 3,215 m., midway between Mt. Lister and Camels Hump in the Royal Society Range, in Victoria Land. Disc. and named by the BrNAE under Scott, 1901-4.

Pinafore Moraine 76°53'S., 159°26'E.

A sheet of moraine which extends northeastward from Carapace Nunatak, in Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964). The name is descriptive.

Pinboko Rock: see Oku-iwa Rock 68°42'S., 40°50'E.

Pincer Point 85°34'S., 150°30'W.

A narrow rock point lying 4 mi. ESE. of Durham Point, near the NW. end of the Tapley Mountains. First seen and roughly mapped by the ByrdAE, 1928-30. So named by US-ACAN because its appearance is similar to a part of a pincers.

Pinckard Table 74°00'S., 164°03'E.

An ice-covered tableland, 8 mi. long and 3 mi. wide, rising between the Styx and Burns Glaciers in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for William Pinckard, biologist at McMurdo Station, 1965-66 season.

Pinder Gully 60°43'S., 45°35'W.

A small gully in eastern Signy Island which runs north from Observation Bluff down to the sea. Named by UK-APC after Ronald Pinder, radio operator and meteorologist at Signy Island, 1959-61.

Pinegina, Gora: see Pinegin Peak 71°44'S., 12°33'E.

Pinegin Peak 71°44'S., 12°33'E.

A central peak, 2,595 m., on Isdalsegga Ridge in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet polar explorer N.V. Pinegin (1883-1940).

Pine Island Bay 74°50'S., 102°40'W.

A bay about 40 mi. long and 30 mi. wide, into which flows the ice of Pine Island Glacier, at the SE. extremity of Amundsen Sea. Delineated from aerial photographs taken by USN Op. Hjp. in December 1946. Named by US-ACAN for the USS *Pine Island*, seaplane tender and flagship of the eastern task group of USN Op. Hjp. which explored this area.

Pine Island Glacier 75°10'S., 100°00'W.

A broad glacier flowing WNW. along the S. side of the Hudson Mtns. into Pine Island Bay, Amundsen Sea.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN in association with Pine Island Bay.

Pinel Point 64°21'S., 62°12'W.

Point lying 5 mi. NE. of D'Ursel Pt. on the E. side of Brabant I., in the Palmer Archipelago. First roughly charted by the BelgAE, 1897-99, under Gerlache. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Philippe Pinel (1745-1826), French physician who held advanced views on investigation of disease and first succeeded in abolishing severe physical restraints on mental cases, in 1796.

Piner Bay 66°43'S., 140°17'E.

Open bay 8 mi. long and 2 mi. wide between Cape Bienvenue and the E. side of Astrolabe Glacier Tongue. Disc. on Jan. 30, 1840, by the USEE under Wilkes, who named it for Thomas Piner, signal quartermaster on the USEE flagship *Vincennes*. This feature correlates closely with portions of the sketch of "Piners Bay" as shown on Wilkes' chart of 1840.

Piñero Island 67°34'S., 67°49'W.

Island 2 mi. long and 0.5 mi. wide, lying about 4.5 mi. NW. of Pourquoi Pas I., off the W. coast of Graham Land. Disc. by the FrAE under Charcot, 1908-10, and named by him for Dr. Antonio F. Piñero, member of the Chamber of Deputies of the Argentine Republic, on whose motion the Govt. voted unlimited credit to meet the needs of the expedition.

Piners Bay: see Piner Bay 66°43'S., 140°17'E.

Pinet Butte 73°10'S., 161°41'E.

A small butte comprising the westernmost portion of the Caudal Hills, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Paul R. Pinet, geologist at McMurdo Station, 1966-67.

Pingouin, Ile: see Penguin Island 62°06'S., 57°54'W.

Pinguin-Bay: see Sacramento Bight 54°29'S., 36°01'W.

Pinguinbucht: see Papua Beach 54°15'S., 36°34'W.

Pinguinenkap: see Penguin Point 64°19'S., 56°43'W.

Pinguinera, Punta: see Stranger Point 62°16'S., 58°37'W.

Pingüino, Bahía: see Penguin Bay 54°20'S., 36°14'W.

Pingvinane Nunataks 72°00'S., 23°17'E.

Group of nunataks standing close N. of Tanngarden Peaks in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Pingvinane (the penguins).

Pingvin Island 65°45'S., 81°50'E.

Small island lying off the NW. side of the West Ice Shelf. First mapped by the Soviet exp., 1956-57, who named it Pingvin (penguin).

Piniero, Ile: see Piñero Island 67°34'S., 67°49'W.

Pinnacle: see Spire, The 68°18'S., 66°53'W.

Pinnacle Gap 73°15'S., 163°00'E.

A gap between Pain and Tobin Mesas in the Mesa Range of Victoria Land. The feature was traversed and so named by the northern party of NZGSAE, 1962-63, because it is readily identified by the high rock pinnacle (Mt. Ballou) on the N. ridge overlooking the gap.

Pinnacle Island: see Pinnacle Rock 61°06'S., 54°47'W.

Pinnacle Rock 61°06'S., 54°47'W.

Rock, 120 m. high, lying 2.5 mi. E. of Point Wild and close off the N. coast of Elephant I., in the South Shetland Islands. The name was probably suggested by members of the Br. exp. under Shackleton, 1914-16, who sighted and described this feature as a pillar of rock during their refuge at Elephant I. following the loss of the *Endurance*.

Pinn Island 67°34'S., 47°55'E.

Island lying close off the NE. end of McKinnon I., off the coast of Enderby Land. Plotted from ANARE air photos in 1956 and visited by an ANARE party in October 1957. Named by ANCA for John Pinn, geophysicist at Mawson Station in 1957.

Pin Point: see Renier Point 62°37'S., 59°48'W.

Pinther Ridge 70°22'S., 64°20'W.

An arc-shaped mountain ridge, 6 mi. long, that is somewhat isolated and mostly snow covered. It rises above the ice surface at the E. margin of the Dyer Plateau of Palmer Land, about 22 mi. S. of the Eternity Range. Mapped by USGS in 1974. Named by US-ACAN for Miklos Pinther, Chief Cartographer of the American Geographical Society in the 1970's, under whose supervision a number of excellent maps of Antarctica have been prepared.

Pioneer Crossing 68°29'S., 78°22'E.

A low pass across Langnes Peninsula, Vestfold Hills, leading from the southeast arm of Tryne Fjord to

GEOGRAPHIC NAMES OF THE ANTARCTIC

Langnes Fjord. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37). The feature was visited by an ANARE sledging party led by B. H. Stinear (1957), and was named to record this first known traverse of the pass.

Pioneer Heights 79°30'S., 83°30'W.

A group name in the Heritage Range, Ellsworth Mtns., encompassing the large area of hills, ridges and peaks located eastward of Schneider and Schanz Glaciers and between Splettstoesser and Union Glaciers. Among these features are the Inferno Ridge, the Nimbus, Gross, Buchanan and Collier Hills. The Pioneer Heights were mapped by USGS from ground surveys and USN air photos, 1961-66. The name was applied by US-ACAN in association with the name Heritage Range.

Pioneer Hills: see Pioneer Heights 79°30'S., 83°30'W.

Pionerskiy Dome 73°59'S., 73°08'E.

An ice-covered summit about 60 mi. SSW. of the Grove Mountains. Discovered by the SovAE in 1958 and named "kupol Pionerskiy" (Pionerskiy Dome).

Pio Point 54°01'S., 38°05'W.

Point forming the N. side of the entrance to Johnson Cove at the W. end of Bird I., South Georgia. Roughly charted by DI personnel on the *Discovery* in the period 1926-30 and surveyed by HMS *Owen* in 1960-61. Named by the UK-APC in 1963. "Pio" is an old sailors' name for the light-mantled sooty albatross (*Phoebastria palpebrata*), a bird which breeds on Bird Island.

Piore Ridge 72°40'S., 168°55'E.

A prominent ridge, 11 mi. long, located between Elder Glacier and Bowers Glacier in the Victory Mountains of Victoria Land. Mapped by the NZGSAE, 1957-58, and the USGS, 1960-62. Named by US-ACAN for Emanuel Ruben Piore, American physicist, member of the National Science Board, National Science Foundation, 1961-72.

Pipecleaner Glacier 78°14'S., 162°51'E.

A glacier formed by the coalescence of numerous small alpine glaciers on the E. side of Mt. Huggins. Together with Glimpse Gl. it joins the Radian Gl. where that stream meets the N. arm of Dismal Ridge. Its surface is marked by innumerable bands of moraine reminiscent of pipecleaners. Named by New Zealand VUWAE, 1960-61.

Pipe Peak 79°09'S., 86°15'W.

A sharp peak on a ridge, 1,720 m., rising 1.5 mi. N. of Matney Peak in the Founders Peaks, Heritage Range.

So named by members of the Univ. of Minnesota Geological Party, 1963-64, because a pipe was left here after a visit to the area.

Pipkin Rock 68°05'S., 68°50'W.

Ice-free island, 260 yards long, lying close NE. of Dismal I. in the Faure Is., off the W. coast of Graham Land. The Faure Is. were disc. and first charted in 1909 by the FrAE under Charcot. The group was surveyed in 1949 by the FIDS who named this island. The name suggests the insignificant nature of the feature.

Pippin Peaks 65°39'S., 62°28'W.

An E.-W. line of several peaks ranging in height from 880 m. to 1,160 m. and formed of white or pink granite. The feature is located at the W. end of Stubb Gl. where it forms a part of the glacier's N. wall. The name is one of several in this area applied by UK-APC from Herman Melville's *Moby Dick*, Pippin being the shipkeeper in the *Pequod* who was cast adrift by Stubb.

Pirámide, Cabo: see Minot Point 64°16'S., 62°31'W.

Pirie Peninsula 60°42'S., 44°39'W.

Narrow peninsula extending 3 mi. northward from the center of Laurie I., in the South Orkney Islands. The peninsula was surveyed in 1903 by the ScotNAE under Bruce, who named it for Dr. J. H. Pirie, surgeon and geologist of the expedition.

Pirner, Mount: see Pirner Peak 54°31'S., 36°04'W.

Pirner-Berg: see Pirner Peak 54°31'S., 36°04'W.

Pirner Peak 54°31'S., 36°04'W.

A peak 0.7 mi. NW. of Pirner Point, Royal Bay, South Georgia. Surveyed by the German group of the International Polar Year Investigations, 1882-83, and named by them for Captain Pirner of the expedition ship *Moltke*.

Pirner Point 54°31'S., 36°04'W.

Point marking the N. side of the entrance to Little Moltke Hbr. in Royal Bay, South Georgia. First surveyed by the German group of the International Polar Year Investigations, 1882-83, under Schrader, and named by them for Captain Pirner, commander of the exp. ship *Moltke*.

Pirrit, Mount: see Pirrit Hills 81°17'S., 85°21'W.

Pirrit Hills 81°17'S., 85°21'W.

An isolated group of peaks and nunataks about 7 mi. in extent, lying southward of the Ellsworth Mountains,

GEOGRAPHIC NAMES OF THE ANTARCTIC

between the Heritage Range and Nash Hills. The feature was positioned by the U.S. Ellsworth-Byrd Traverse Party in December 1958. Named by US-ACAN for John Pirrit, glaciologist with the traverse party who had wintered at Ellsworth Station. Pirrit was scientific leader at Byrd Station in 1959.

Pisco, Mount: see Pisgah, Mount 62°57'S., 62°29'W.

Pisgah, Mount 62°57'S., 62°29'W.

Peak, 1,860 m., standing nearly 3 mi. SW. of Mt. Christi and 4 mi. NE. of Mt. Foster in the north-central part of Smith I., South Shetland Islands. Because the peaks of Smith I. gave it a forked appearance when seen from a distance, American sealers in the 1820's called it Mount Pisgah Island after the double-topped Mount Pisgah in the town of Durham, Connecticut. The name has since been restricted to the peak described.

Piso, Mount: see Pisgah, Mount 62°57'S., 62°29'W.

Piterson, Ostrov: see Peterson Island 66°28'S., 110°30'E.

Pitkevitch Glacier 71°23'S., 168°52'E.

Glacier, 20 mi. long, flowing N. from the Admiralty Mtns. along the W. side of DuBridge Range. The glacier reaches the sea just E. of Atkinson Cliffs, where it forms Anderson Icefalls. A portion of the terminus merges northwestward with Fendley Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Staff Sergeant, Leonard M. Pitkevitch, USAF, who perished in the crash of a C-124 Globemaster aircraft in this vicinity in 1958.

Pitman, Mount 70°09'S., 67°42'W.

Mountain with two mainly ice-covered, dome-shaped summits, the higher and northern rising to 1,830 m., standing 9 mi. inland from George VI Sound, between Riley and Chapman Glaciers on the W. coast of Palmer Land. First surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for E. L. Pitman, an airplane carpenter of Byfleet, Surrey, who made the sledges used by the BGLE, 1934-37, introducing important new elements into the design of the Nansen-type sledge.

Piton Island 66°47'S., 141°36'E.

Small rocky island lying 0.1 mi. SW. of Guano I. in the Curzon Islands. Charted in 1951 by the FrAE and so named by them for its very pointed shape.

Pittard, Mount 71°31'S., 166°54'E.

Pointed mountain (2,410 m.) standing 12 mi. E. of the N. part of Homerun Range in the Admiralty Moun-

tains. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for Donald A. Pittard, USARP biologist at McMurdo Station, 1966-67 and 1967-68.

Pitt Island: see Pitt Islands 65°26'S., 65°30'W.

Pitt Islands 65°26'S., 65°30'W.

Group of small islands lying immediately off the N. extremity of Renaud I., at the N. end of the Biscoe Islands. The name "Pitt's Island," for William Pitt, British statesman, was applied by John Biscoe in 1832 to an island which he erroneously charted as lying about 25 mi. WNW. of these islands. The present application of Pitt Islands is based on the interpretation of the BGLE under Rymill, who charted the island group in 1935-36.

Pitt Point 63°51'S., 58°22'W.

Promontory, 90 m. high, at the S. side of the mouth of Victory Gl. on the S. coast of Trinity Peninsula. Charted by the FIDS in 1945, and named for K. A. J. Pitt, master of the *Fitzroy*, who assisted in establishing FIDS bases in 1944-45.

Pitzman Glacier 70°41'S., 160°10'E.

A glacier, 6 mi. long, draining the SE. slopes of Pomerantz Tableland in the Usarp Mountains. It flows between Mt. Lowman and Williams Bluff to an ice piedmont just eastward. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Frederick J. Pitzman, USARP biologist at McMurdo Station, 1967-68.

Pivot, Mount 80°41'S., 30°10'W.

Conspicuous mountain, 1,095 m., with steep rock slopes on its W. side, standing between Mt. Haslop and Turnpike Bluff in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and so named because this prominent landmark was the turning point for aircraft and sledging parties of the expedition rounding the SW. end of the Shackleton Range.

Pivot Peak 78°02'S., 161°01'E.

Prominent conical peak, 2,450 m., standing 6 mi. SE. of Monastery Nunatak at the NE. margin of the Skelton Névé. The N.Z. Northern Survey Party of the CTAE (1956-58) established a survey station on its summit on Jan. 21, 1958. So named by them because its prominent appearance and location make it the focal point of the topography in that area.

Plaice Island 66°01'S., 65°27'W.

Island lying W. of Mackerel I. in the Fish Is., off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because it is one of the Fish Islands.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Planck Point 79°18'S., 85°11'W.

A snow-covered, spur-like point along the N. side of Splettstoesser Gl., located 10 mi. SE. of Landmark Peak in the Heritage Range. Named by the Univ. of Minnesota Geological Party to the area, 1963-64, for Russell E. Planck, helicopter crew chief with the 62nd Transportation Detachment, who assisted the party.

Plane Table 77°36'S., 161°27'E.

A distinctive ice free mesa in the N. part of the Asgard Range, Victoria Land. This flattish feature surmounts the area between Nibelungen Valley and the Sykes Glacier and commands an extensive view of Wright Valley. A descriptive name given by NZ-APC.

Planet Heights 71°13'S., 68°47'W.

Series of summits along a ridge, extending 24 mi. in a N.-S. direction between the S. part of LeMay Range and George VI Sound in the E. part of Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC from association with the nearby glaciers named for planets.

Plankington Bluff 84°58'S., 64°37'W.

A large rock bluff along the SW. edge of Mackin Table, 5 mi. SE. of Shurley Ridge, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for John C. Plankington, Jr., meteorologist at South Pole Station, winter 1967.

Plano, Morro: see Flat Top Peninsula 62°13'S., 59°02'W.

Plata Passage 64°40'S., 62°01'W.

Passage in Wilhelmina Bay separating Brooklyn I. from the W. coast of Graham Land. First charted by the BelgAE under Gerlache, 1897-99, and named after the estuary between Argentina and Uruguay in recognition of the services rendered the expedition by the people of Argentina.

Platypus Ridge 70°42'S., 163°43'E.

Large ice-covered ridge bordering the W. side of the mouth of Lillie Glacier. It extends NE. from Bowers Mtns. to the head of Ob' Bay. Its position was fixed by S. L. Kirkby, surveyor with ANARE (*Thala Dan*) in Feb. 1962. Named by ANARE after this monotreme mammal, native only to Australia.

Plau, Ostrov: see Plog Island 68°32'S., 78°00'E.

Playa, Punta: see Beach Point 59°26'S., 27°19'W.

Playfair Mountains 73°55'S., 63°25'W.

A group of mountains between the Swann and Squires Glaciers in SE. Palmer Land. The mountains were

first seen and photographed from the air by the USAS, 1939-41. They were mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for John Playfair (1748-1819), Scottish mathematician and geologist.

Plaza Point 62°06'S., 58°26'W.

Point forming the S. tip of Keller Pen., which separates Mackellar and Martel Inlets in the N. part of Admiralty Bay, on King George I., in the South Shetland Islands. Charted and named by the FrAE under Charcot, 1908-10. The name suggests the central position of the feature at the head of Admiralty Bay.

Pleasant Plateau 79°46'S., 158°30'E.

A small, somewhat isolated ice-free plateau located close W. of Blank Peaks and Foggydog Glacier in the Brown Hills. Explored by the VUWAE, 1962-63, who so named it because of the agreeable weather encountered there on each occasion the area was visited.

Pleiades, The 72°42'S., 165°32'E.

Several extinct volcanic peaks in a cluster, overlooking the W. side of the head of Mariner Glacier. Named after the cluster of small stars in Taurus by the Northern Party of NZGSAE, 1962-63.

Pleiones, Mount 72°45'S., 165°29'E.

The southernmost and highest peak of The Pleiades, at the head of Mariner Glacier. Named by the NZ-APC after Pleiones of Greek mythology.

Pléneau, Pointe: see Pléneau Island 65°06'S., 64°04'W.

Pléneau Island 65°06'S., 64°04'W.

Island, 0.8 mi. long, lying just NE. of Hovgaard I. in the Wilhelm Archipelago. Charted as a peninsula of Hovgaard I. by the FrAE, 1903-5, under Charcot, who named its NE. point for Paul Pléneau, photographer of the expedition. The feature was first shown to be an island on an Argentine Govt. chart of 1957.

Plog Island 68°32'S., 78°00'E.

An island 1 mi. long in Prydz Bay, lying 0.5 mi. N. of Lake I. and 0.5 mi. W. of Breidnes Peninsula, Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37) and named "Plogöy" (plow island), as being descriptive of the island's shape.

Plogøy: see Plog Island 68°32'S., 78°00'E.

Plogskafet Nunataks 71°48'S., 5°12'E.

A row of nunataks about 5 mi. long lying close NW. of Cumulus Mtn. in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Plogskafet (the plow handle).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Plogsteinen: see Lucas Island 68°30'S., 77°57'E.

Plough Island: see Plog Island 68°32'S., 78°00'E.

P. L. Smith, Mount: see F. L. Smith, Mount 83°38'S., 169°29'E.

Plummer Glacier 79°58'S., 81°30'W.

A short glacier descending E. through the Enterprise Hills to the N. of Lippert Peak and the Douglas Peaks, in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Charles C. Plummer, USARP glaciologist at Palmer Station in 1965.

Plumstead Valley 76°37'S., 159°49'E.

A valley at the northern end of Shipton Ridge, east of Kirkcaldy Spur in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition, 1964. They named it after Dr. E. P. Plumstead for her work on *Glossopteris* fossils, especially those from Antarctica.

Plunket Point 85°05'S., 167°06'E.

A conspicuous rock point marking the northern end of the Dominion Range and the confluence of the Beardmore and Mill Glaciers. Discovered by the BrAE (1907-9) and named for Lord Plunket, at that time Governor of New Zealand.

Pluto Glacier 71°07'S., 68°22'W.

Glacier on the E. coast of Alexander I., 10 mi. long and 4 mi. wide, which flows E. into George VI Sound to the N. of Succession Cliffs. First phot. from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W. L. G. Joerg. Roughly surveyed in 1936 by the BGLE. Named by the UK-APC for the planet Pluto following FIDS surveys in 1948 and 1949.

Plymouth, Mount 62°28'S., 59°49'W.

Mountain, 635 m., standing 1.5 mi. NW. of Discovery Bay in the N. part of Greenwich I., in the South Shetland Islands. Charted in 1935 by DI personnel on the *Discovery II*, but the name appears to have been first used on a 1948 Admiralty chart based upon this survey.

Poa Cove 54°15'S., 36°30'W.

Small cove 0.8 mi. SW. of Mai Pt. in the SE. corner of Maiviken, Cumberland Bay, South Georgia. Roughly surveyed by the SwedAE, 1901-4, under Norden-skjöld. Resurveyed in 1929 by DI personnel, and in 1951 by the FIDS. Named by the UK-APC after the genus *Poa*, which includes the tussock grass which grows in profusion near this cove.

Podium, The 78°56'S., 161°09'E.

A high, flat ice-covered bluff, 1 mi. in extent, which projects at the S. end of the Worcester Range and surmounts the ice-filled embayment between Cape Teall and Cape Timberlake. So named by US-ACAN in 1964 because of its position relative to nearby features and its resemblance to a podium.

Podprudnoye Lake 70°45'S., 11°37'E.

A small lake lying just SE. of Prilednikovoye Lake in Schirmacher Hills, Queen Maud Land. Mapped by the SovAE in 1961 and named Ozero Podprudnoye (by-the-pond lake).

Pod Rocks 68°09'S., 67°30'W.

Small compact group of rocks, lying 5 mi. W. of Millebrand I. in Marguerite Bay, off the W. coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. The rocks were visited and resurveyed in 1949 by the FIDS, who established a sealing camp there. The name, proposed by FIDS, derives from the old sealers' term pod, meaning a group of seals hauled ashore.

Poindexter, Cape: see Reynolds, Mount 72°42'S., 61°16'W.

Poindexter Peak 75°13'S., 134°25'W.

Snow-covered peak (1,215 m.) rising 4 mi. SE. of Bennett Bluff, along the W. side of upper Berry Glacier in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Monte F. Poindexter, USARP meteorologist at Byrd Station, 1962.

Poinsett, Cape 65°46'S., 113°13'E.

An ice-covered cape, the northern extremity of Budd Coast, from which the coast recedes abruptly to the southeast and southwest. The position of Cape Poinsett correlates closely with the high seaward extremity of "Budd's High Land" as charted in 1840 by the USEE under Lt. Charles Wilkes. The cape was plotted from air photos taken by USN Operation Highjump, 1946-47. Named by US-ACAN after Joel R. Poinsett, Sec. of War under President Martin Van Buren, who was instrumental in the compilation and publication of the large number of scientific reports based on the work of the USEE, 1838-42.

Pointe Géologie, Archipel de: see Géologie Archipelago 66°39'S., 139°55'E.

Pointer Nunatak 80°37'S., 29°00'W.

Conspicuous nunatak, 1,245 m., immediately E. of Wedge Ridge in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and so named

GEOGRAPHIC NAMES OF THE ANTARCTIC

because it is an important landmark on the route from Blaiklock Gl. to Stratton Gl. which provides access from the W. to the E. part of the Shackleton Range.

Pointers, The 62°36'S., 61°19'W.

Two rocks lying NW. of Rugged I., in the South Shetland Islands. The name was applied by sealers in the area in the 1820's.

Pointing Cliff: see Ponting Cliff 71°12'S., 168°21'E.

Poisson, Cerro: see Poisson Hill 62°29'S., 59°39'W.

Poisson, Isla: see Bob Island 64°56'S., 63°26'W.

Poisson, Promontorio: see Poisson Hill 62°29'S., 59°39'W.

Poisson Hill 62°29'S., 59°39'W.

Rounded, ice-covered hill (80 m.) located 0.3 mi. NE. of Iquique Cove, Greenwich I., South Shetland Islands. The recommended name derives from "Promontorio Poisson" and "Cerro Poisson," forms appearing on Chilean hydrographic charts of the 1950's. Maurice Poisson E. signed the official act of inauguration of nearby Arturo Prat Station on Greenwich Island in 1947.

Polarårboken Glacier 69°36'S., 76°00'E.

A glacier, 3 mi. NE. of Stein Islands, draining westward into the N. part of Publications Ice Shelf. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946-47). Named by Roscoe after *Polarårboken*, a polar journal published by the Norsk Polarklubb, Oslo, Norway.

Polarforschung Glacier 69°50'S., 75°07'E.

A heavily crevassed glacier flowing northward along the west side of Mecnattane Nunataks to Publications Ice Shelf. Vestknatten Nunatak lies within the mouth of the glacier. Delineated in 1952 by John H. Roscoe from aerial photographs taken by USN Operation Highjump (1946-47), and named by him after *Polarforschung*, a polar journal published by the Archiv für Polarforschung, Kiel, West Germany.

Polaris Glacier 64°14'S., 59°31'W.

A distinctive glacier, 4 mi. long, flowing southward from Detroit Plateau, Graham Land, between Pyke and Eliason Glaciers. Mapped from surveys by FIDS (1960-61). Named by UK-APC after the "Polaris" motor sledge made by Polaris Industries, Roseau, Minnesota, and used in Antarctica since 1960.

Polaris Peak 84°39'S., 172°40'W.

A rounded peak (970 m.) rising 4 mi. SW. of Mt. Roth in the Gabbro Hills, Queen Maud Mountains. So

named by the Southern Party of NZGSAE (1963-64) because they drove a Polaris motor toboggan to the summit.

Polar Record Glacier 69°45'S., 75°30'E.

A large glacier flowing between Mecnattane Nunataks and Dodd Island to the central part of Publications Ice Shelf. Delineated in 1952 by John H. Roscoe from aerial photographs taken by USN Operation Highjump, 1946-47. Named by Roscoe after *The Polar Record*, a polar journal published by Scott Polar Research Institute, Cambridge, England.

Polar Subglacial Basin 85°00'S., 110°00'E.

A subglacial basin situated generally between Gamburtsev Subglacial Mountains and the Dominion Range in East Antarctica. The feature was roughly delineated by American, United Kingdom and Soviet seismic field parties, 1958-61. Named by US-ACAN (1961) for the proximity of the feature to the South Pole area.

Polarstar Peak 77°32'S., 86°09'W.

Peak rising above 2,400 m., standing 3 mi. N. of Mt. Ulmer in the N. part of the Sentinel Range. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for the airplane *Polar Star* in which Ellsworth made the historic flight.

Polar Times Glacier 69°46'S., 74°35'E.

A glacier on Ingrid Christensen Coast, flowing northward between Svarthausen Nunatak and Boyd Nunatak into the western part of Publications Ice Shelf. Delineated by John H. Roscoe from aerial photographs taken by USN Operation Highjump, 1946-47. Named by Roscoe after *The Polar Times*, a polar journal published by the American Polar Society, New York.

Pollard, Mount 70°28'S., 64°37'E.

A partly snow-covered mountain just S. of Corry Massif and 3 mi. W. of Crohn Massif in the Porthos Range, Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1956-65. Named by ANCA for J. R. Pollard, ionosphere physicist at Wilkes Station, 1964.

Pollard Glacier 65°49'S., 64°13'W.

Glacier flowing into the S. side of Comrie Gl. to the E. of Bradford Gl., on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC for Alan F. C. Pollard (1877-1948), English documentalist, founder and first President of the British Soc. for International Bibliography, and pioneer in the introduction of the Universal Decimal Classification into British libraries.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pollholmen 69°01'S., 39°36'E.

Island, 0.3 mi. long, situated 0.1 mi. off the SE. side of East Ongul Island, in the E. side of the entrance of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Pollholmen (the bay island), presumably because of its location opposite the narrow inlet or bay separating Ongul and East Ongul Islands.

Pollock, Cape 68°03'S., 146°50'E.

The northern point of Dixon Island, located at the W. side of the mouth of Ninnis Glacier. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Prof. J. A. Pollock of the Expedition Advisory Committee.

Pollock, Mount 73°45'S., 162°47'E.

A symmetrical mountain (2,640 m.) that rises above the mid-portion of Recoil Glacier just south of Archambault Ridge, in the Deep Freeze Range, Victoria Land. Mapped by USGS from surveys and US. Navy air photos, 1960-64. Named by US-ACAN for Herbert W. Pollock, USN, construction electrician at McMurdo Station, 1962 and 1967.

Pollux Nunatak 65°05'S., 59°53'W.

One of the Seal Nunataks, lying 2 mi. NW. of Robertson Island in Larsen Ice Shelf. The probable existence of the feature was first reported by FIDS in 1947 and its existence was confirmed during a FIDS survey in 1953. The UK-APC name derives from its association with Castor Nunatak 4.5 mi. to the SSW.; Castor and Pollux were sons of Zeus.

Pollux Rock 57°07'S., 26°47'W.

The southern of a pair of large off-lying rocks south of Vindication I., South Sandwich Islands. This rock, with its neighbor Castor Rock, was named "Castor and Pollux" during the survey of these islands from RRS *Discovery II* in 1930. In 1971 UK-APC recommended that they be assigned unambiguous names making each individually identifiable, and this has been done by naming the southern one Pollux Rock and the northern one Castor Rock.

Polotsk Island: see Robert Island 62°24'S., 59°30'W.

Polyarnoy Aviatsii, Ostrova: see Aviation Islands 69°16'S., 158°47'E.

Polygon Spur 86°00'S., 126°00'W.

A broad, ice-free spur lying 2 mi. SE. of Tillite Spur at the S. end of the Wisconsin Plateau, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. The name was proposed by John H. Mercer, USARP geologist to these mountains, 1964-65, because the surface of the spur is covered by a network of unsorted polygons.

Polynesia Point 60°43'S., 45°36'W.

Ice-free point forming the N. side of the entrance to Paal Hbr. on the E. side of Signy I., in the South Orkney Islands. Surveyed in 1933 by DI personnel, and resurveyed in 1947 by the FIDS. Named by the UK-APC in 1954 for the floating factory *Polynesia*, of the Rethval Whaling Co. of Oslo, which worked in the South Orkney Is. in 1913-14.

Pomerantz Tableland 70°38'S., 159°50'E.

A high (2,290 m.) ice-covered tableland about 10 mi. long, standing 15 mi. NW. of Daniels Range in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Martin A. Pomerantz, Director of the Barthol Research Foundation and Chairman of the U.S. Committee for the International Year of the Quiet Sun, who carried on cosmic ray studies in the McMurdo Sound area, 1959-60 and 1960-61.

Pomona: see Coronation Island 60°37'S., 45°35'W.

Pomona Plateau 60°35'S., 45°55'W.

Ice-covered plateau, over 300 m. elevation, extending between Sandefjord Peaks and Deacon Hill in the western part of Coronation I., in the South Orkney Islands. Named by the UK-APC following a survey by the FIDS in 1948-50. This naming revives in an altered form a name given by James Weddell in 1822. Being unaware of the prior discovery of Coronation I. by Capt. Nathaniel Palmer and Capt. George Powell, and its naming at that time, Weddell renamed the island "Pomona" or "Mainland" after the island in the northern Orkney Islands. That name was published by Weddell in 1825 but did not survive.

Ponce Island 63°18'S., 57°53'W.

An island 0.1 mi. E. of Ortiz Island and 0.3 mi. SE. of Largo Island in the Duroch Islands. The island lies 1 mi. NE. of the Chilean scientific station, General Bernardo O'Higgins. Named by Martin Halpern, leader of the University of Wisconsin field party during geological mapping of this area, 1961-62. Named for Lautaro Ponce, Chief of Antarctic Operations, University of Chile, in appreciation for Chilean logistical support provided to the Wisconsin field party.

Pond, Mount 62°57'S., 60°33'W.

Peak, 550 m., standing 1.5 mi. ESE. of Pendulum Cove, on Deception I. in the South Shetland Islands. The name appears on a 1829 chart based upon survey work by the Br. exp. under Foster, 1828-31. Probably named for John Pond, noted English astronomer and director of the Royal Observatory at Greenwich at that time.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Pond Peak 77°19'S., 162°24'E.

Conspicuous ice-free peak, 1,430 m., at the S. side of the mouth of Baldwin Valley in the St. Johns Range of Victoria Land. Named by US-ACAN in 1964 for James D. Pond, USN, who was in charge of electronic repair and maintenance at Hallett Station, 1962.

Pond Ridge 73°25'S., 93°33'W.

A flattish rock ridge which extends N. from Mt. Loweth, in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61, and so named by them because a small pond was discovered on the ridge.

Ponting Cliff 71°12'S., 168°21'E.

An angular cliff that is similar in appearance to Meares Cliff just eastward, located 3 mi. E. of the terminal confluences of the Dennistoun, Nash and Wallis Glaciers on the northern coast of Victoria Land. First charted by the Northern Party, led by Campbell, of the BrAE, 1910-13, which named it for Herbert G. Ponting, photographer of the expedition.

Ponton Island 65°06'S., 63°05'W.

Small island lying 1.5 mi. SE. of Moureaux Is. near the head of Flandres Bay, off the W. coast of Graham Land. The name "Isote Solitario" appears for the feature on an Argentine Govt. chart of 1954, but has been rejected to avoid confusion with Solitario Island at 67°52'S., 68°26'W. The island was renamed by the UK-APC in 1960, for Mungo Ponton (1802-1880), Scottish inventor who discovered in 1839 that potassium bichromate spread on paper is light sensitive, an important landmark in the development of photography.

Pony Lake 77°33'S., 166°09'E.

A small lake immediately N. of Flagstaff Point at Cape Royds, Ross Island. Named by BrAE (1907-9), who built their winter hut adjacent to this lake, because they had their ponies tethered nearby.

Pool, Mount 86°13'S., 127°00'W.

A peak, 2,090 m., standing at the NW. side of Metavolcanic Mountain, at the E. flank of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Douglas A. Pool, construction electrician at Byrd Station in 1962.

Poorman Peak 69°57'S., 159°15'E.

A rock peak (1,610 m.) near the head of Suvorov Gl., 9 mi. WSW. of Mt. Ellery, in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Dean A. Poorman, ADJ1, USN, Aviation Machinist's Mate with Squadron VX-6 at McMurdo Station, 1967.

Pope Glacier 75°15'S., 111°30'W.

A glacier about 20 mi. long, flowing N. along the W. side of Mt. Murphy into lower Smith Glacier, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Maj. Donald R. Pope, (CE) USA, civil engineer on the staff of the Commander, Naval Support Force, Antarctica, 1965-67.

Pope Mountain 69°44'S., 158°50'E.

A largely ice-free mountain (1,345 m.) rising directly at the head of Tomilin Gl., 3 mi. SE. of Governor Mtn., in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Thomas J. Pope, USNR, Navigator in LC-130F Hercules aircraft during Operation Deep Freeze, 1968.

Porkchop, Lake 78°16'S., 163°08'E.

A lake near the middle of Roaring Valley, having the shape similar to that of a pork chop. Given this descriptive name by the New Zealand VUWAE, 1960-61.

Porphyry Bluff 64°27'S., 59°11'W.

A prominent rocky bluff extending from the coast to 2 miles inland, between Larsen Inlet and Longing Gap, Graham Land. Mapped from surveys by FIDS (1960-61). Named by UK-APC after the buff-colored quartz-plagioclase-porphyry rock which is characteristic of this exposure.

Porpoise Bay 66°30'S., 128°30'E.

An ice-filled embayment about 90 mi. wide indenting the coast between Cape Goodenough and Cape Morse. The USEE (1838-42) under Wilkes applied the name Porpoise Bay, after the USEE brig *Porpoise*, to a large bay in about 66°S., 130°E. US-ACAN's identification of Porpoise Bay is based on the correlation of Wilkes' chart (1840) with G.D. Blodgett's reconnaissance map (1955) compiled from air photos taken by USN Operation Highjump (1946-47). The name has been applied to the large embayment lying close SW. in 66°30'S., 128°30'E. in keeping with Wilkes' original naming.

Porro Bluff 64°45'S., 62°33'W.

Bluff lying S. of Birdsend Bluff and overlooking Errera Channel on the W. coast of Graham Land. Shown on an Argentine Govt. chart of 1950. Named by the UK-APC in 1960 for Ignazio Porro (1795-1875), Italian engineer who in 1851 invented a prism combination, important in the development of stereo-plotting instruments.

Portal, The 78°02'S., 159°45'E.

The gap between the Lashly Mountains and Portal Mountain, through which the main stream of the Skel-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ton Glacier enters the Skelton Névé from the polar plateau. The descriptive name was given in January 1958 by a New Zealand party of the CTAE, 1956-58.

Portalen Pass 72°43'S., 3°53'W.

Mountain pass between Domen Butte and Píllarygen, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Portalen (the gateway).

Portal Mountain 78°06'S., 159°10'E.

A large mountain, 2,555 m., with a broad icecapped summit, standing S. of the Lashly Mtns., on the S. side of the main stream of the Skelton Gl. where it leaves the polar plateau. Discovered by the New Zealand party of the CTAE (1956-58) who named it because of its association with The Portal.

Portal Point 64°30'S., 61°46'W.

Narrow point in the NE. part of Reclus Pen., on the W. coast of Graham Land. In 1956, an FIDS hut was established on the point, from which a route to the plateau was established. So named by the UK-APC in 1960 because the point is the "gateway" of the route.

Portal Rock 83°50'S., 165°36'E.

A turret-like rock knob (1,990 m.) in Queen Alexandra Range, standing 1.5 mi. NW. of Fairchild Peak, just S. of the mouth of Tillite Glacier. So named by the Ohio State Univ. geology party (1966-67) because the only safe route to Tillite Gl. lies between this rock and Fairchild Peak.

Porten Pass 72°12'S., 2°23'E.

Mountain pass between Von Essen Mtn. and Nupskammen Ridge in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Porten (the gateway).

Porteous Point 60°44'S., 45°41'W.

Point at the SW. end of Signy I. forming the N. side of the NW. entrance to Fyr Chan., in the South Orkney Islands. Charted in 1933 by DI personnel on the *Discovery II* and named for A. N. Porteous, second engineer of the ship.

Porters Pinnacles 71°33'S., 99°09'W.

A group of low ice-covered rocks forming a menace to navigation along the N. coast of Thurston Island, located about 4 mi. N. of the E. extremity of Glacier Bight. Disc. by the USN Bellingshausen Sea Exp. in February 1960, and named for Cdr. Philip W. Porter, Jr., USN, commander of the icebreaker USS *Glacier* which made this discovery.

Porteus, Mount 66°49'S., 51°03'E.

Mountain just E. of Peacock Ridge, in the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for W. F. Porteus, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Porthos Range 70°25'S., 65°50'E.

The second range south in the Prince Charles Mtns., extending for about 30 mi. in an E.-W. direction between Scylla and Charybdis Glaciers. Visited in December 1956 by ANARE southern party under W. G. Bewsher and named after a character in Alexander Dumas' novel *The Three Musketeers*, the most popular book read on the southern journey.

Portnipa Peak 72°14'S., 2°24'E.

Peak, 2,665 m., surmounting Von Essen Mtn. and Porten Pass in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Portnipa (the gateway peak).

Poryadin Island 66°32'S., 92°59'E.

Island lying 0.5 mi. S. of Haswell I. in the Haswell Islands. Discovered and mapped by the AAE under Mawson, 1911-1914. Remapped by the Soviet exp. of 1956, and named for Ya. Poryadin, navigator of the ship *Vostok* with the Bellingshausen exp., 1819-21.

Posadowsky Bay 66°47'S., 89°27'E.

Open embayment in the vicinity of Gaussberg, just E. of the West Ice Shelf. Disc. in February 1902 by GerAE under Drygalski, who named it for Count Arthur von Posadowsky-Wehner, Imperial Home Secretary, who secured a government grant to cover the cost of the Drygalski expedition.

Posadowskybreen: see Posadowsky Glacier 54°25'S., 3°22'E.

Posadowsky Glacier 54°25'S., 3°22'E.

A glacier which flows to the north coast of Bouvetøya, 1 mi. eastward of Cape Circoncision. First charted and named by a German expedition under Karl Chun which visited the island in the *Valdivia* in 1898. Count Arthur von Posadowsky-Wehner, Imperial Home Secretary, was instrumental in obtaining government sponsorship of the expedition.

Posadowsky Glacier 66°50'S., 89°25'E.

Glacier about 9 mi. long, flowing N. to Posadowsky Bay immediately E. of Gaussberg. The glacier was observed from the summit of Gaussberg by the GerAE

GEOGRAPHIC NAMES OF THE ANTARCTIC

under Drygalski, 1901-3. It was named after Drygalski's Posadowsky Bay by US-ACAN in 1955, following studies of the aerial photographs taken by USN Op. Hjp., 1946-47.

Posadowskys Bre: see Posadowsky Glacier 54°25'S., 3°22'E.

Poseidon Pass 68°47'S., 63°40'W.

A pass about 375 m. high on the E. side of Antarctic Peninsula. It leads from Mobiloil Inlet to Larsen Ice Shelf between Cape Keeler and Cape Mayo. Photographed from the air by RARE, Dec. 1947, and roughly surveyed from the ground by FIDS, Nov. 1947. It was used by the east coast geological party from Stonington I., Nov. 1960, and was found to provide an ideal sledge route. Named by UK-APC after Poseidon, god of the sea and of earthquakes in Greek mythology.

Posey Range 71°12'S., 164°00'E.

A mountain range in eastern Bowers Mountains, bounded by the Smithson, Graveson, Lillie and Champness Glaciers. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Julian W. Posey, meteorologist, who was scientific leader at South Pole Station, winter party 1959.

Possession, Cape: see Possession, Cape 63°43'S., 61°51'W.

Possession, Cape 63°43'S., 61°51'W.

Cape which forms the W. extremity of Chanticleer I., just W. of Hoseason I. in the Palmer Archipelago. The name was applied by Capt. Henry Foster of the *Chanticleer*, whose party made a landing in this vicinity on January 7, 1829.

Possession Bay 54°06'S., 37°07'W.

Bay 2 mi. wide which recedes SW. for 5 mi., entered SE. of Black Head on the N. coast of South Georgia. Disc. and named by a Br. exp. under Cook in 1775. Cook made the first known landing on South Georgia in this vicinity.

Possession Island 71°52'S., 171°12'E.

Rocky island nearly 2 mi. long, which is the northernmost and largest of the Possession Islands. Disc. by a Br. exp. under Ross, 1839-43, and so named by him in commemoration of the planting of the British flag there on Jan. 12, 1841.

Possession Islands 71°56'S., 171°10'E.

A group of small islands and rocks extending over an area of about 7 mi., lying in the western part of Ross Sea, 5 mi. SE. of Cape McCormick, Victoria Land.

The group was named by Capt. James Ross, RN, in commemoration of the planting of the British flag here on Jan. 12, 1841.

Possession Nunataks: see Possession Rocks 66°45'S., 98°51'E.

Possession Rocks 66°45'S., 98°51'E.

Two small rock outcrops just E. of Northcliffe Gl., above which they rise to 160 meters. Disc. by the Eastern Sledge Party under Frank Wild of the AAE, 1911-14, and so named following a ceremony in December 1912 of claiming this area for the British Crown.

Postel Nunatak 84°53'S., 67°46'W.

A nunatak, 1,450 m., standing 8 mi. SW. of Snake Ridge along the ice escarpment that trends SW. from the ridge, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Philip A. Postel, meteorologist at South Pole Station, winter 1967.

Poste Point 65°05'S., 64°01'W.

Point on the W. side of Booth I. which marks the S. limit of Salpêtrière Bay, in the Wilhelm Archipelago. First charted by the FrAE, 1903-5, and named by Charcot for L. Poste, stoker on the ship *Français*.

Poster, Mount 74°41'S., 65°39'W.

A mountain lying W. of the Latady Mtns. and 9 mi. NW. of Mt. Tenney, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Carl K. Poster, geophysicist with the USARP South Pole-Queen Maud Land Traverse III, summer 1967-68.

Postern Gap 63°15'S., 55°59'W.

Pass in the central ridge of Joinville I., just E. of Mt. Tholus. Surveyed by the FIDS in 1954. So named by the UK-APC because this is the only way through the ridge which gives access to the central part of the S. coast of Joinville Island.

Postillion Rock 68°14'S., 66°53'W.

Small ice-free rock in the N. part of Nený Fjord, lying close S. of Roman Four Promontory along the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1949 by the FIDS and so named by them because of its outlying position.

Post Office Hill 77°28'S., 169°14'E.

Prominent hill, 430 m., standing 4 mi. NW. of The Knoll and overlooking the Adélie penguin rookery of Cape Crozier, Ross Island. Mapped and so named by

GEOGRAPHIC NAMES OF THE ANTARCTIC

the NZGSAE, 1958-59, because the ship *Discovery*, in January 1902, left messages attached to a pole in a cairn of rocks in the rookery for the relief ship *Morning*.

Post Ridge 76°56'S., 143°38'W.

A rock ridge, 3 mi. long and trending WNW-ESE., situated immediately NE. of Mt. Swan in the Ford Ranges, Marie Byrd Land. Discovered and first mapped by the USAS, 1939-41. Named by US-ACAN for Madison J. Post, ionospheric physicist at Byrd Station in 1970.

Post Rock 54°01'S., 37°59'W.

Small promontory 40 m. high, forming the W. side of the entrance to Elsehul, near the W. end of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Potaka Glacier: see Potaka Inlet 71°57'S., 99°35'W.

Potaka Inlet 71°57'S., 99°35'W.

Narrow ice-filled inlet about 8 mi. long, indenting the N. side of Thurston I. immediately E. of Starr Peninsula. First delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Dr. Louis H. Potaka, medical officer with the ByrdAE, 1933-35.

Pot Harbor: see King Edward Cove 54°17'S., 36°30'W.

Pothole Gulch 57°07'S., 26°46'W.

A gulch whose bed is broken by numerous potholes, draining the SE. portion of Vindication I., South Sandwich Islands. The descriptive name was applied by UK-APC in 1971.

Potmess Rocks 62°19'S., 59°45'W.

A group of large rocks, including the very distinctive feature named Asses Ears near the N. end, located 1.2 mi. W. of Heywood I., South Shetland Islands. The name arose from the midday stew served on *Nimrod* of the RN Hydrographic Survey Unit, January to March 1967, at the time the rocks were charted.

Potter Cove 62°14'S., 58°42'W.

Cove indenting the SW. side of King George I. to the E. of Barton Pen., in the South Shetland Islands. Potter Cove was known to sealers as early as 1821, and the named is now well established in international usage.

Potter Glacier 78°23'S., 162°12'E.

A glacier about 12 mi. long, between Mounts Huggins and Kempe in the Royal Society Range, flowing generally SW. into the Skelton Glacier. Mapped by USGS from ground surveys and Navy air photos.

Named by US-ACAN in 1963 for Lt. Cdr. Edgar A. Potter, USN, helicopter pilot at McMurdo Station in 1960.

Potter Nunataks 72°02'S., 161°10'E.

A group of small, rather isolated nunataks about 6 mi. SW. of the Helliwell Hills and 20 mi. NE. of Welcome Mountain of the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Neal Potter, economist, McMurdo Station, 1965-66, who made a study of the economic potentials of Antarctica.

Potter Peak 75°07'S., 68°45'W.

Peak standing 6 mi. E. of Mt. Jenkins in the Sweeney Mtns., Ellsworth Land. First observed from aircraft by the RARE, 1947-48. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Christopher J. Potter, glaciologist at Byrd Station, summer 1965-66.

Potters Cove: see Potter Cove 62°14'S., 58°42'W.

Pottinger Point 61°56'S., 58°24'W.

Point 2 mi. E. of Round Pt. on the N. coast of King George I., South Shetland Islands. Named by the UK-APC in 1960 for Captain Pottinger, Master of the *Tartar* from London, who visited the South Shetland Is. in 1821-22.

Potts Glacier 72°58'S., 166°50'E.

A steep glacier draining from the W. slopes of Malta Plateau and flowing S. to enter Mariner Glacier, in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Donald C. Potts, biologist at McMurdo Station, 1966-67.

Potts Peak 61°58'S., 58°18'W.

Peak standing at the W. side of Eldred Gl. on the N. coast of King George I., South Shetland Islands. Named by the UK-APC in 1960 for Captain Potts, Master of the sealing vessel *L. P. Simmons* from New London, Connecticut, who visited the South Shetland Is. in 1873-74.

Poulter Glacier 86°50'S., 153°30'W.

A tributary glacier draining E. along the S. flank of the Rawson Mtns. of the Queen Maud Mtns. to enter Scott Glacier. Discovered by the geological party of the ByrdAE, 1933-35, and named by Byrd for Thomas C. Poulter, second in command of the expedition.

Poulton Peak 68°02'S., 63°02'E.

The highest point on the elongated rock ridge in the NE. part of Blánabbane Nunataks, in Mac. Robertson

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. The summit has the appearance of a rock cairn. The peak was used as an unoccupied trigonometrical station by ANARE surveyor M. J. Corry in 1965. Named by ANCA for M. A. Poulton, weather observer at Mawson Station in 1965.

Pourquoi Pas Glacier 66°15'S., 135°55'E.

Glacier 4 mi. wide and 15 mi. long, flowing NNW. from the continental ice and terminating in a prominent tongue 9 mi. WNW. of Pourquoi Pas Point. Delineated by French cartographers from air photos taken by USN Op. Hjp., 1946-47. Named in 1952 by the French Antarctic Sub-committee after the *Pourquoi-Pas*², polar ship of the FrAE under Charcot, 1908-10, later used by Charcot in expeditions to Greenland.

Pourquoi Pas Glacier Tongue 66°10'S., 136°00'E.

Prominent glacier tongue 4 mi. wide and 6 mi. long, extending seaward from Pourquoi Pas Glacier. Delineated from air photos taken by USN Op. Hjp., 1946-47, and named for the French polar ship *Pourquoi-Pas*².

Pourquoi Pas Island 67°41'S., 67°28'W.

Mountainous island, 17 mi. long and from 5 to 11 mi. wide, lying between Bigourdan and Bourgeois Fjords off the W. coast of Graham Land. Disc. by the FrAE under Charcot, 1908-10. The island was charted more accurately by the BGLE under Rymill, 1934-37, who named it for Charcot's expedition ship, the *Pourquoi-Pas*².

Pourquoi Pas Point 66°12'S., 136°11'E.

Ice-covered point which forms the W. side of the entrance to Victor Bay. Charted by the FrAE, 1950-52, and named in 1954 for the French polar ship *Pourquoi-Pas*².

Powder Island 69°32'S., 68°47'W.

Small island lying 8 mi. SSE. of Cape Jeremy and 2 mi. off the W. coast of Palmer Land, in George VI Sound. First surveyed in 1948 by the FIDS, and so named by them because of the friable nature of the rock found on the island.

Powell, Mount 85°21'S., 87°56'W.

A prominent mountain (2,195 m.) sharing a small massif with King Peak which stands 1.5 mi. WNW., in the E. part of the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the Thiel Mountains party which surveyed these mountains in 1960-61. Named for John Wesley Powell, second director of the U.S. Geological Survey, 1881-94. Other peaks in the vicinity are named for directors of the USGS.

Powellboen: see Powell Rock 60°42'S., 45°36'W.

Powell Channel 68°08'S., 67°07'W.

A narrow channel between Millerand Island and Debenham Islands, off the west coast of Graham Land. Named by UK-APC for Lt. John M. Powell, RN, who surveyed the channel in 1972.

Powell Cove 66°15'S., 110°32'E.

A cove in the western side of Clark Peninsula, between Whitney and Stonehocker Points. First mapped from air photographs taken by USN Op. Hjp. (1946-47) and included in a 1957 ground survey by C. R. Ek-lund. Named by the latter for James T. Powell, USN, chief aerographer at Wilkes Station, 1957.

Powell Group: see South Orkney Islands 60°35'S., 45°30'W.

Powell Hill 81°56'S., 161°11'E.

A rounded, ice-covered prominence 6 mi. WSW. of Mt. Christmas, overlooking the head of Algie Glacier. Named by US-ACAN for Lt. Cdr. James A. Powell, USN, communications officer at McMurdo Station during USN Op. DFrz. 1963 and 1964.

Powell Island 60°41'S., 45°03'W.

Narrow island 7 mi. long and 2 mi. wide, lying between Coronation and Laurie Islands in the central part of the South Orkney Islands. Disc. on the occasion of the joint cruise by Capt. George Powell and Capt. Nathaniel Palmer in December 1821. It was correctly charted, though unnamed, on Powell's map published in 1822. Named for Captain Powell on an Admiralty chart of 1839.

Powell Islands: see South Orkney Islands 60°35'S., 45°30'W.

Powell Rock 60°42'S., 45°36'W.

Small submerged rock on the E. side of Signy I. in the South Orkney Islands. It lies off the mouth of Starfish Cove, about 0.3 mi. NE. of Balin Point. First charted by Petter Sørllie in 1912-13 and named "Powellboen," after his whale catcher *Powell*. The FIDS fixed the position of breakers here during rough weather in 1947.

Poynter Col 63°49'S., 59°07'W.

A snow-filled col, over 700 m. high, joining Poynter Hill and Ivory Pinnacles in northern Graham Land. The col is 9 mi. ESE. of Cape Kjellman. Charted by FIDS in 1948. Named by UK-APC from association with Poynter Hill.

Poynter Hill 63°46'S., 59°06'W.

Conspicuous hill, 825 m., standing 8 mi. ESE. of Cape Kjellman on the W. side of Trinity Peninsula. Charted

GEOGRAPHIC NAMES OF THE ANTARCTIC

in 1948 by the FIDS. Named by the UK-APC (1950) after Mr. Poynter, Master's Mate, who accompanied Edward Bransfield on the brig *Williams* in January 1820 when explorations were made in the South Shetland Islands and Bransfield Strait.

Prahl Crags 76°04'S., 134°43'W.

Rock crags at an elevation of 2,750 m. on the south slopes of the Mount Moulton massif, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Sidney R. Prahl, a member of the USARP team that studied ice sheet dynamics in the area NE. of Byrd Station, 1971-72.

Pram Point 77°51'S., 166°45'E.

Low rounded point on the SE. side of Hut Point Peninsula, about 1.5 mi. NE. of Cape Armitage, on Ross Island. Disc. by the BrNAE, under Scott, 1901-4, who so named it because it is necessary during the summer months to use a pram in the open water adjacent to the point when traveling between the S. end of Hut Point Peninsula and the Ross Ice Shelf.

Pranke Island 73°14'S., 124°55'W.

A small ice-covered island lying close to Siple Island in the W. extremity of Russell Bay, off the coast of Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for James B. Pranke, aurora researcher at Byrd Station in 1965.

Prat, Punta: see Edwards Point 62°29'S., 59°30'W.

Pratt, Mount 85°24'S., 176°41'E.

The northernmost nunatak in the Grosvenor Mountains, standing just E. of the head of Mill Stream Glacier, 17 mi. N. of Block Peak. Discovered by R. Adm. Byrd on the ByrdAE flight to the South Pole in November 1929, and named by him for Thomas B. Pratt, American financier and contributor to the expedition.

Pratt Peaks: see Pratts Peak 80°24'S., 29°21'W.

Pratts Peak 80°24'S., 29°21'W.

A rock peak 6 mi. E. of Mount Provender in the W. part of Shackleton Range. First mapped in 1957 by the CTAE; photographed in 1967 by U.S. Navy (trimetrogon aerial photography). Named by UK-APC for David L. Pratt, engineer, and John G.D. Pratt, geophysicist, with the transpolar party of the CTAE in 1956-58.

Prebble Glacier 84°16'S., 164°30'E.

A glacier, 9 mi. long, flowing westward from Mt. Kirkpatrick in Queen Alexandra Range to enter Walcott Névé N. of Fremouw Peak. Named by the Northern

Party of the NZGSAE (1961-62) for Michael Prebble, of the base support party, who assisted the party with preparations and training.

Prebble Icefalls 79°54'S., 155°55'E.

Icefalls on the southwestern side of Midnight Plateau in the Darwin Mountains. They occupy two large cirques southwestward of Mt. Ellis and fall about 900 meters. Discovered by the VUWAE (1962-63) and named for W.M. Prebble, geologist with the expedition.

Precious Peaks 62°04'S., 58°20'W.

A line of about three dark peaks at the NE. side of Martel Inlet, Admiralty Bay, on King George I. in the South Shetland Islands. Charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1960 for Alan Precious of FIDS, meteorological observer at Hope Bay in 1954 and 1955, and leader at the Admiralty Bay station in 1957.

Predoehl, Mount 82°56'S., 163°11'E.

Partly snow-covered mountain, 1,710 m., just N. of lower Pavlak Gl. in the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Martin C. Predoehl, USARP meteorologist at McMurdo Station, 1961-62 and 1962-63.

Prehn Peninsula 75°06'S., 63°30'W.

A mainly ice-covered peninsula, 20 mi. long and 10 mi. wide, between Hansen and Gardner Inlets, on the E. coast and at the base of Antarctic Peninsula. First observed from aircraft by the RARE, 1947-48. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Lt. Cdr. Frederick A. Prehn, Jr., USN, pilot on photographic flights in the Pensacola Mtns. and Alexander Island areas on Operation Deep Freeze 1967 and 1968.

Preikestolen Ridge 72°06'S., 2°51'W.

A ridge in the western part of Liljequist Heights, in the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Preikestolen (the pulpit).

President Beaches 62°39'S., 61°09'W.

A series of beaches which extend for 6 mi. along the broad western end of Byers Peninsula, Livingston Island, in the South Shetland Islands. The name "West Beaches" was proposed by K. R. Everett, USARP researcher who made a reconnaissance soil survey in the area during February 1969. The proposed name is locationally appropriate but would be repetitious. The US-ACAN has chosen instead to restore a historical

GEOGRAPHIC NAMES OF THE ANTARCTIC

name to the vicinity. In the early part of the 1820-21 season, the Stonington sealers used the name "President's Harbor" (now New Plymouth) for the anchorage immediately off these beaches.

President Head 62°44'S., 61°12'W.

Headland forming the E. extremity of Snow I., in the South Shetland Islands. The name President Island was applied by the Stonington sealers in 1820-21 to Snow Island, but that name did not become established. President Head was applied by the UK-APC in 1961 in order to preserve the name on this island.

President's Harbor: see New Plymouth 62°37'S., 61°12'W.

Press, Mount 78°05'S., 85°58'W.

A mountain (3,830 m.) just E. of the main ridge of the Sentinel Range and 3.5 mi. ENE. of Mt. Bentley, in the Ellsworth Mountains. Mapped by the Marie Byrd Land Traverse Party (1957-58) led by C. R. Bentley, and named for Frank Press, vice chairman of the technical panel on glaciology of the U.S. National Committee for the IGY; later (1977-) White House Science Advisor.

Pressure Bay 71°25'S., 169°20'E.

An arm of Robertson Bay, 3 mi. wide, lying between Cape Wood and Birthday Pt. along the N. coast of Victoria Land. Charted and named in 1911 by the Northern Party, led by Campbell, of the BrAE, 1910-13. The Northern Party experienced great difficulty in sledging across the pressure ice fringing the shore of Robertson Bay. This pressure was caused by the adjacent Shipley Glacier descending to the sea ice.

Preston Island 67°48'S., 68°59'W.

The largest of the Henkes Is., lying off the S. end of Adelaide Island. Named by the UK-APC in 1963 for Frank Preston, BAS officer in charge and surveyor at Adelaide station, 1961-62, and member of the first party to winter there.

Preston Point 70°17'S., 71°48'E.

An ice covered point with marginal rock exposures, marking the N. end of Gillock Island in the Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from aerial photographs taken by USN Operation Highjump, 1946-47. Named by Roscoe for J.C. Preston, Jr., air crewman on Operation Highjump photographic flights in this and other coastal areas between 14° and 164° East.

Prestrud, Mount 86°34'S., 165°07'W.

A peak over 2,400 m. which rises from the southwestern part of the massif at the head of Amundsen Glacier, in the Queen Maud Mountains. In November

1911, a number of mountain peaks in this general vicinity were observed and rudely positioned by the South Pole Party under Roald Amundsen. Amundsen named one of them for Lt. K. Prestrud, first officer of the *Fram* and leader of the Norwegian expedition's Eastern Sledge Party to the Scott Nunataks. The peak described was mapped by the USGS from surveys and U.S. Navy aerial photography, 1960-64. For the sake of historical continuity, the US-ACAN has selected this feature to be designated Mount Prestrud.

Prestrud Coast: see Shirase Coast 78°30'S., 156°00'W.

Prestrud Inlet 78°18'S., 156°00'W.

A re-entrant in the S. side of Edward VII Peninsula, at the NE. corner of the Ross Ice Shelf. Named by the U.S. Antarctic Service expedition (1939-41) in honor of Lt. K. Prestrud, leader of Amundsen's Eastern Sledge Party in 1911 who was first to traverse this region.

Preuschoff Range 72°04'S., 4°03'E.

A mountain range consisting of Mt. Hochlin and associated features, lying just W. of Kaye Crest in the Mühlig-Hofmann Mtns. of Queen Maud Land. The name "Preuschoff-Rücken" was applied in the general area by the GerAE under Ritscher, 1938-39, for Franz Preuschoff, engineer on the flying boat *Passat* used by this expedition. The correlation of the name with this feature may be arbitrary but is recommended for the sake of international uniformity and historical continuity.

Prevot Island 64°53'S., 63°58'W.

Small rocky island 0.5 mi. NE. of Miller I., forming the northernmost of the Wauwermans Is., in the Wilhelm Archipelago. The name was approved by the Argentine geographic coordinating committee in 1956, replacing the provisional toponym "Fernando." Named in memory of First Lieutenant Prevot, commander of the mobile detachment in the operations of the Argentine Air Force unit for Antarctica. He died on active duty.

Prezbecheski Island: see Przybyszewski Island 76°58'S., 148°45'W.

Priam, Mount 64°34'S., 63°24'W.

The central mass of the Trojan Range, standing 4 mi. N. of Mt. Français on Anvers I., in the Palmer Archipelago. It is flat topped and snow covered and rises to 1,980 m. Surveyed in 1955 by the FIDS and named by the UK-APC for Priam, King of Troy in Homer's *Iliad*.

Price, Mount 84°29'S., 166°38'E.

The eastern of two peaks, rising to 3,030 m. at the N. end of the Adams Mtns., Queen Alexandra Range.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Named by the US-ACAN for Rayburn Price, USARP meteorologist at Hallett Station, 1963.

Price Bluff 86°32'S., 144°34'W.

A large bluff 5 mi. NE. of Mt. Mooney, standing near the head of Robison Gl. in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Robert P. Price, USN, photographic officer who served as in-flight observer on many photographic missions during Operation Deep Freeze 1965 and 1966.

Price Glacier 54°07'S., 37°29'W.

Glacier 3.5 mi. long, flowing SW. to Cheapman Bay on the S. side of South Georgia. Surveyed by the SGS in the period 1951-57, and named for Thomas Price, member of the SGS, 1955-56.

Price Nunatak 67°57'S., 62°43'E.

Nunatak marking the N. end of the Trilling Peaks, 3 mi. S. of Mt. Burnett in the Framnes Mtns., Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for H. Price, senior diesel mechanic at Mawson Station in 1959.

Price Peak 85°43'S., 142°24'W.

Peak, 1,510 m., located at the N. side of Leverett Gl., 8 mi. N. of the extremity of California Plateau. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Floyd W. Price, personnelman with USN Squadron VX-6, who participated in Operation Deep Freeze for 5 seasons, 1963-67.

Pricker, The 54°01'S., 37°19'W.

Point forming the E. end of Albatross I. in the Bay of Isles, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Pride, Cape 54°00'S., 37°58'W.

Cape which forms the E. side of the entrance to Elsehul, a small bay along the N. coast and near the W. end of South Georgia. The name appears to have been applied by DI personnel who surveyed Elsehul in 1930.

Priest Island: see Goetschy Island 64°52'S., 63°31'W.

Priestley, Mount 75°11'S., 161°53'E.

A mountain, 1,100 m., rising at the N. side of David Gl., 5 mi. SW. of Mt. Bellingshausen, in the Prince Albert Mtns. of Victoria Land. First mapped by the BrAE, 1907-9, which named it for Raymond (later Sir Raymond) E. Priestley, geologist with the expedition, who was later a member of the BrAE, 1910-13.

Priestley Glacier 74°20'S., 163°22'E.

A major valley glacier, about 60 mi. long, originating at the edge of the polar plateau of Victoria Land and draining SE. between Deep Freeze Range and Eisenhower Range to enter the N. end of the Nansen Ice Sheet. First explored by the Northern Party of the BrAE, 1910-13, and named for Raymond E. Priestley, geologist with the Northern Party.

Priestley Névé 73°35'S., 160°20'E.

The névé at the head of Priestley Glacier in Victoria Land. Named by the NZ-APC in about 1966 in association with Priestley Glacier.

Priestley Peak 67°12'S., 50°23'E.

Peak between Mt. Pardoe and Mt. Tod on the S. side of Amundsen Bay in Enderby Land. Sighted on Jan. 14, 1930, by BANZARE under Mawson, who named it for Sir Raymond Priestley, a member of the BrAE, 1910-13.

Priestly Glacier: see Priestley Glacier 74°20'S., 163°22'E.

Prilednikovoye Lake 70°45'S., 11°35'E.

A lake 1.25 mi. SSW. of Tyuleniy Point in the Schirmacher Hills, situated at the edge of the continental ice sheet in Queen Maud Land. Mapped by the SovAE in 1961 and named Ozero Prilednikovoye (fore-glacier lake), presumably for its location.

Prime Head 63°13'S., 57°17'W.

Prominent rounded snow-covered headland which forms the N. extremity of Antarctic Peninsula. The name Siffrey was given to a cape in this vicinity by the Fr. exp. under D'Urville, 1837-40, and was previously approved for the feature here described. D'Urville's "Cap Siffrey" has since been identified by the UK-APC as a point 2 mi. to the ESE., now called Siffrey Point. The name Prime Head, given by the UK-APC in 1963, indicates that this is the first or northernmost feature of Antarctic Peninsula.

Primera, Punta: see First Point 54°28'S., 37°07'W.

Primera, Roca: see First Rock 54°55'S., 36°07'W.

Primer Mojón: see First Milestone 54°06'S., 36°40'W.

Primero de Mayo, Isla: see Lambda Island 64°18'S., 63°00'W.

Primero de Mayo Bay 62°58'S., 60°42'W.

Bay on the SW. side of Port Foster, Deception I., in the South Shetland Islands. The name "Bahía 1° de Mayo" appears on an Argentine Govt. chart of 1953.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Named after the *1° de Mayo*, an Argentine ship used in Antarctica in 1942 and 1943.

Primer Teniente Aciar, Monte: see Aciar, Mount 64°24'S., 62°33'W.

Primer Teniente Prevot, Isla: see Prevot Island 64°53'S., 63°58'W.

Prince, Mount 74°58'S., 134°11'W.

A prominent butte (640 m.) marking the N. end of Perry Range on the coast of Marie Byrd Land. The feature was discovered and photographed from aircraft of the USAS, 1939-41, and was mapped by USGS from surveys and air photos, 1959-65. Named by US-ACAN for Joseph F. Prince, ADR2, USN, Aviation Machinist's Mate with Squadron VXE-6 who participated in several Deep Freeze operations and wintered over at Little America V (1956) and McMurdo Station (1966).

Prince Albert Mountains 76°00'S., 161°30'E.

A major mountain group, over 200 mi. long, extending N.-S. between the Priestley Glacier and Ferrar Glacier in Victoria Land. Discovered by Sir James Clark Ross, Feb. 17, 1841, and named by him for His Royal Highness Prince Albert, consort of Queen Victoria of England. First exploration of the mountains was by British expeditions in the early 1900's; detailed survey and mapping was accomplished by New Zealand and American expeditions in the 1950's and 1960's.

Prince Andrew Plateau 83°38'S., 162°00'E.

An ice-covered plateau, about 40 mi. long and 15 mi. wide, lying S. of Mt. Rabot in the Queen Elizabeth Range. Named by the NZGSAE (1961-62) for Prince Andrew, son of Queen Elizabeth II of Great Britain.

Prince Charles Mountains 72°00'S., 67°00'E.

A major group of mountains in Mac. Robertson Land including the Athos, Porthos, and Aramis Ranges. These mountains together with other scattered peaks form an arc about 260 mi. long, extending from the vicinity of Mt. Starlight in the north to Goodspeed Nunataks in the south. These mountains were first observed and photographed from a distance by airmen of USN Op. Hjp., 1946-47. They were examined by several ANARE parties and mapped in the years 1954-61. Named by ANCA in 1956 for Prince Charles, heir apparent to the British throne.

Prince Charles Strait 61°05'S., 54°35'W.

Strait 5 mi. wide between Cornwallis and Elephant Islands, in the South Shetland Islands. This strait was known to sealers as early as 1821, but first record of its navigation was in 1839 by the brig *Porpoise* of the

USSEE squadron under Wilkes. Soundings of the strait were made by the vessel *John Biscoe* and the frigate H.M.S. *Sparrow* in December 1948. Named for Prince Charles, son of Queen Elizabeth II of Great Britain.

Prince Creek 54°01'S., 38°04'W.

A cove N. of Pio Pt. along the W. side of Bird Island, South Georgia. Named by UK-APC for Peter A. Prince, assistant in fur seal investigations, Bird Island, 1971-74, and principal investigator on fur seals and birds, 1975-76.

Prince de Ligne, Monts: see Prince de Ligne Mountains 72°20'S., 31°14'E.

Prince de Ligne Mountains 72°20'S., 31°14'E.

A small group of mountains rising to 2,285 m., standing 10 mi. N. of the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named them for Prince Antoine de Ligne, pilot and photographer with the expedition.

Prince Edward Glacier 82°46'S., 159°32'E.

Glacier draining the N. side of Cotton Plateau in the Queen Elizabeth Range and flowing N. for about 6 mi. along the W. side of Hochstein Ridge. Named by NZ-APC for Prince Edward, son of Queen Elizabeth II.

Prince Gustav Channel 63°50'S., 58°15'W.

Strait about 80 mi. long and from 4 to 15 mi. wide, separating James Ross and Vega Islands from Trinity Peninsula. Disc. in October 1903 by the SwedAE under Nordenskjöld, who named it for Crown Prince (later King) Gustav of Sweden.

Prince Harald Coast 69°30'S., 36°00'E.

That portion of the coast of Queen Maud Land encompassing Lützow-Holm Bay, lying between Riiser-Larsen Peninsula, in 34°E., and the E. entrance point of Lützow-Holm Bay, marked by the coastal angle at 40°E. Discovered during a flight, Feb. 4, 1937, by Viggo Widerøe, Nils Romnaes, and Mrs. Ingrid Christensen of the Lars Christensen Exp., 1936-37, and named after the infant son of the Crown Prince of Norway.

Prince Harald Land: see Prince Harald Coast 69°30'S., 36°00'E.

Prince of Wales Glacier 82°44'S., 160°10'E.

Glacier in the Queen Elizabeth Range, flowing generally N. for about 10 mi. between Hochstein and Kohmyr Ridges into Hamilton Glacier. Named by the northern party of the NZGSAE (1961-62) for the Prince of Wales (Prince Charles), eldest son of Queen Elizabeth II.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Prince Olaf Bay: see Prince Olav Harbor 54°04'S., 37°09'W.

Prince Olaf Harbor: see Prince Olav Harbor 54°04'S., 37°09'W.

Prince Olaf Mountains: see Prince Olav Mountains 84°57'S., 173°00'W.

Prince Olaf Rocks: see Olav Rocks 54°03'S., 37°07'W.

Prince Olav Coast 68°30'S., 42°30'E.

That portion of the coast of Queen Maud Land between the E. entrance point of Lützow-Holm Bay, marked by the coastal angle at 40°E., and Shinnan Glacier at 44°38'E. Discovered by Capt. Hjalmar Riiser-Larsen in January 1930 on a flight from the *Norvegia*. Named for Crown Prince Olav of Norway.

Prince Olav Harbor 54°04'S., 37°09'W.

Small harbor in the SW. portion of Cook Bay, entered between Point Abrahamsen and Sheep Pt., along the N. coast of South Georgia. The name was in use as early as 1912 and was given, probably by Norwegian whalers, for Crown Prince Olav of Norway.

Prince Olav Mountains 84°57'S., 173°00'W.

A mountain group of the Queen Maud Mountains stretching from Shackleton Glacier to Liv Glacier at the head of the Ross Ice Shelf. Discovered in 1911 by Roald Amundsen when on the way to the South Pole, and named by him for the then Crown Prince of Norway.

Prince Philip Glacier 82°21'S., 159°55'E.

Glacier flowing S. for about 20 mi. between Cobham and Holyoake Ranges into Nimrod Glacier. Named by the NZ-APC for Prince Philip, Duke of Edinburgh, husband of Queen Elizabeth II.

Prince-Regent Luitpold Land: see Luitpold Coast 77°30'S., 32°00'W.

Princess Anne Glacier 82°59'S., 159°20'E.

Glacier in the Queen Elizabeth Range, flowing from the area S. of Mt. Bonaparte between Cotton and Bartrum Plateaus into Marsh Glacier. Named by the northern party of the NZGSAE (1961-62) for Princess Anne, daughter of Queen Elizabeth II.

Princess Astrid Coast 70°45'S., 12°30'E.

That portion of the coast of Queen Maud Land lying between 5° and 20°E. The entire coast is bordered by ice shelves. Discovered by Capt. H. Halvorsen of the *Sevilla* in March 1931 and named for Princess Astrid of Norway.

Princess Martha Coast 72°00'S., 7°30'W.

That portion of the coast of Queen Maud Land lying between 5°00'E. and the terminus of Stancomb-Wills Glacier, in 20°00'W. The entire coastline is bounded by ice shelves with ice cliffs 20 to 35 m. high. The name Crown Princess Martha Land was originally applied by Capt. Hjalmar Riiser-Larsen to that section of the coast in the vicinity of Cape Norvegia which he discovered from the *Norvegia* and roughly charted from the air during February 1930.

Princess Ragnhild Coast 70°30'S., 27°00'E.

That portion of the coast of Queen Maud Land lying between 20°00'E. and Riiser-Larsen Peninsula, in 34°00'E. All but the eastern end of the coast is fringed by ice shelves. Discovered by Capt. Hjalmar Riiser-Larsen and Capt. Nils Larsen in aerial flights from the ship *Norvegia* on February 16, 1931, and named for Princess Ragnhild of Norway.

Principal, Cabo: see Principal Point 64°55'S., 63°27'W.

Principal, Canal: see Sound, The 64°19'S., 62°58'W.

Principal, Isla: see Main Island 54°00'S., 38°13'W.

Principal Point 64°55'S., 63°27'W.

Prominent ice-covered point lying 4 mi. E. of Cape Errera and forming the SE. end of Wiencke I., in the Palmer Archipelago. First charted by the FrAE under Chacot, 1903-5. The name, applied by the Argentine Antarctic Expedition, 1953-54, suggests the prominence of the feature.

Príncipe Gustavo, Canal: see Prince Gustav Channel 63°50'S., 58°15'W.

Prinsesse Astrid Land: see Princess Astrid Coast 70°45'S., 12°30'E.

Prinsesse Ragnhild Land: see Princess Ragnhild Coast 70°30'S., 27°00'E.

Prins Harald Land: see Prince Harald Coast 69°30'S., 36°00'E.

Prins Olavs Havn: see Prince Olav Harbor 54°04'S., 37°09'W.

Prinzregent Luitpold Land: see Luitpold Coast 77°30'S., 32°00'W.

Prion Island 54°01'S., 37°15'W.

Island 1.5 mi. NNE. of Luck Pt., lying in the Bay of Isles, South Georgia. Charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the

GEOGRAPHIC NAMES OF THE ANTARCTIC

brig *Daisy*, and so named because he observed petrels of the genus *Prion* on the island.

Prior, Mount 72°58'S., 168°47'E.

A mountain (1,220 m.) about 10 mi. W. of Mt. Brewster, rising at the head of Whitehall Gl. in the W. part of Daniell Peninsula, Victoria Land. Named by NZGSAE, 1957-58, for George T. Prior of the Mineral Department, British Museum, who studied and analyzed the rocks obtained from this region by the BrNAE, 1901-4.

Prioress Island 64°56'S., 63°53'W.

Narrow island lying 0.5 mi. E. of Host I. in the Wauwermans Is., in the Wilhelm Archipelago. Shown on an Argentine Govt. chart of 1954. Named by the UK-APC in 1958 after one of the characters in Chaucer's *Canterbury Tales*.

Prior Island 75°41'S., 162°52'E.

An island 1 mi. long, lying just E. of Lamplugh Island, off the coast of Victoria Land. First charted and named by the BrAE, 1907-9, under Shackleton. Probably named for George Thurland Prior, Keeper of the Dept. of Minerals, British Museum, 1909-27.

Prism Ridge 73°33'S., 94°14'W.

A small ridge with bare rock outcroppings located just N. of Haskell Gl. and 2 mi. SSW. of Bonnabeau Dome, in the Jones Mountains. Mapped and named by the Univ. of Minnesota-Jones Mountains Party, 1960-61. They found a large block of ice in the shape of a square prism standing as an isolated feature at the S. end of this ridge.

Proclamation Island 65°51'S., 53°41'E.

Small rocky island 2.5 mi. W. of Cape Batterbee and close E. of Aagaard Islands. Disc. by the BANZARE under Mawson, 1929-31, and so named, following the reading of a proclamation on its summit on Jan. 13, 1930 claiming the area for the British Crown.

Procyon Peaks 70°29'S., 66°30'W.

Two ridges of peaks connected by a sledgeable pass, located between the upper parts of Millett and Bertram Glaciers, about 25 mi. E. of Moore Pt. on the W. coast of Palmer Land. Named by UK-APC after the star Procyon in the constellation of Canis Major.

Promontorio, Islote: see Foreland Island 61°57'S., 57°39'W.

Promontorio Bajo, Cabo: see Low Head 62°09'S., 58°08'W.

Promontorio Norte, Cabo: see North Foreland 61°54'S., 57°44'W.

Prong Point 60°32'S., 45°34'W.

Narrow protruding point forming the W. side of the entrance to Ommanney Bay on the N. coast of Coronation I., in the South Orkney Islands. First seen in December 1821 in the course of a joint cruise by Capt. Nathaniel Palmer, American sealer, and Capt. George Powell, British sealer. Surveyed by the FIDS in 1956-58 and given this descriptive name by the UK-APC in 1959.

Proshchaniya Bay 70°10'S., 4°20'E.

A bay that indents the SW. side of Neupokoyev Bight, along the ice shelf that fringes the coast of Queen Maud Land. The feature was photographed from the air by NorAE in 1958-59 and roughly mapped from these photos. It was also mapped by the SovAE in 1961, and named Bukhta Proshchaniya (farewell bay).

Prospect Glacier 69°32'S., 67°20'W.

Glacier between Kinnear Mtns. and Mayer Hills, flowing N. into Forster Ice Piedmont on the W. coast of Antarctic Peninsula. First roughly surveyed in 1936 by the BGLE under Rymill. In 1954 the UK-APC gave the name Prospect Pass to a col between Eureka Gl. and the glacier here described. During resurvey of the area by the FIDS in 1958, the col was found to be an indeterminate feature, while this glacier is well marked and requires a name.

Prospect Mesa 77°30'S., 161°52'E.

A low mesa below Bull Pass on the N. side of Wright Valley in Victoria Land. Named by geologists C.G. Vucetich and W.W. Topping of the VUWAE, 1969-70, to designate the type locality of the geological "Prospect Formation."

Prospect Pass: see Prospect Glacier 69°32'S., 67°20'W.

Prospect Point 66°01'S., 65°21'W.

Point on the W. coast of Graham Land, nearly 2 mi. S. of Ferin Head and immediately E. of the Fish Islands. Roughly charted by the BGLE under Rymill, 1934-37. Photographed by Hunting Aerosurveys Ltd. in 1956-57. The name was suggested in 1957 by E. P. Arrowsmith, Governor of the Falkland Islands (Islas Malvinas).

Prospect Spur 83°57'S., 173°25'E.

A narrow spur at the SW. base of Cleft Peak in the Separation Range. The spur descends westward to the edge of Hood Glacier. So named because it was ascended to obtain a view up Hood Glacier in order to prospect a route to the south. Named by the N.Z. Alpine Club Antarctic Exp., 1959-60.

Protection Cove 71°39'S., 170°12'E.

A bay, 3 mi. wide, lying at the E. side of Cape Klövstad where it forms the head of Robertson Bay, north-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ern Victoria Land. First charted by BrAE, 1898-1900, under C.E. Borchgrevink, and so named because the expedition ship *Southern Cross* found protection here during a gale.

Protector Heights 66°42'S., 66°15'W.

Mountainous coastal heights which are separated from the Graham Land plateau by a narrow col, dominating the area between Wilkinson Glacier and southern Darbel Bay. Mapped from air photos taken by FI-DASE (1956-57). Named by UK-APC after HMS *Protector*, British naval vessel which assisted in survey work in the area 1955-58.

Proud Island 54°00'S., 38°08'W.

Small, relatively high, tussock-covered island, rising to a peak at its northern end, lying at the E. end of the Willis Is. at South Georgia. Roughly mapped by DI personnel on the *Discovery* in the period 1926-30 and by HMS *Owen* in 1960-61. The name was given in 1963 by the UK-APC and is descriptive, the expression "standing proud" in naval parlance being the equivalent of "sticking up."

Provender, Mount 80°23'S., 29°55'W.

Conspicuous rock mountain, 900 m., marking the NW. extremity of the Shackleton Range. First mapped in 1957 by the CTAE and so named because members of the CTAE established a depot of food and fuel and an airplane camp on the S. side of the mountain in 1957 to support sledging parties working in the Shackleton Range.

Providence Cove 68°19'S., 66°47'W.

Cove bounded by ice cliffs which lies at the foot of Remus Gl. in the SE. corner of Neny Fjord, along the W. coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. It was resurveyed in 1940-41 by members of the USAS, and so named by them because on first arrival it seemed providential that a site for the East Base was found so quickly and easily. It was soon determined, however, that the cove did not provide a suitable site for the base.

Pryamougol'naya Bay 70°10'S., 5°30'E.

A small bay that indents the SE. side of Neupokoyev Bight, along the ice shelf that fringes the coast of Queen Maud Land. The feature was photographed from the air by NorAE in 1958-59 and mapped from these photos. It was also mapped by the SovAE in 1961, and named Bukhta Pryamougol'naya (rectangle bay).

Prydz Bay 69°00'S., 75°00'E.

A deep embayment of the continent between the Lars Christensen Coast and Ingrid Christensen Coast. Portions of the bay were sighted in January and February

1931 by Norwegian whalers and the BANZARE. It was explored in February 1935 by Norwegian whaler Capt. Klarius Mikkelsen in the *Thorshavn*, and was mapped in considerable detail from aerial photographs taken by the Lars Christensen Expedition of 1936-37. Named for Olaf Prydz, general manager of the Hvalfangernes Assuranceforening in Sandefjord, Norway.

Pryor Cliff 73°53'S., 100°00'W.

A distinctive rock cliff which faces northward toward Cosgrove Ice Shelf, standing 5 mi. NE. of Mt. Nickens at the N. end of the Hudson Mountains. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Douglas A. Pryor, map compilation specialist who contributed significantly to construction of USGS sketch maps of Antarctica.

Pryor Glacier 70°05'S., 160°10'E.

A glacier flowing northeastward, to the north of Mt. Shields and Yermak Point, into Rennick Bay. The feature is about 30 mi. long and forms a physical separation between Wilson Hills and Usarp Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960-62. Named by US-ACAN for Madison E. Pryor, scientific leader at McMurdo Station (1959) and U.S. Exchange Scientist at the Soviet Mirnyy Station (1962).

Przybyszewski Island 76°58'S., 148°45'W.

An ice-covered island 12 mi. long in the Marshall Archipelago. It lies 3 mi. east of Cronenwett Island in the western part of Sulzberger Ice Shelf. The island was charted from aircraft of the USS *Glacier* under Capt. Edwin A. McDonald, USN, in 1962. Named by him for Lt. (j.g.) V.A. Przybyszewski, USNR, helicopter pilot on the *Glacier* who sighted the island from the air on Jan. 26, 1962. The name has been misspelled "Prezbecheski Island" on certain maps and charts.

Przywitowski, Mount 86°36'S., 154°08'W.

A mountain, 2,770 m., standing at the SE. side of Holdsworth Gl., 2.5 mi. W. of McNally Peak, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Richard F. Przywitowski, USARP scientific leader at South Pole Station, winter 1966.

Psi Islands 64°18'S., 63°01'W.

Group of small islands which lie close to the W. side of Lambda I. in the Melchior Is., Palmer Archipelago. The name, derived from the 23rd letter of the Greek alphabet, appears to have been first used on a 1946 Argentine govt. chart following surveys of these islands by Arg. expeditions in 1942 and 1943.

Ptolemy, Mount 68°33'S., 65°58'W.

An isolated block mountain with four main summits, the highest rising to 1,370 meters. It lies close north of

GEOGRAPHIC NAMES OF THE ANTARCTIC

the Traffic Circle on the northwestern side of Mercator Ice Piedmont, Antarctic Peninsula. First observed by Finn Ronne and Carl Eklund of the U.S. Antarctic Service, 1939-41, from their sledge route through the Traffic Circle. Surveyed by FIDS in 1947. Named by UK-APC after Claudius Ptolemy (2nd century A.D.), Egyptian mathematician, astronomer and geographer, who introduced the system of coordinates of latitude and longitude for fixing positions on the earth's surface.

Publications Ice Shelf 69°38'S., 75°20'E.

An ice shelf about 35 mi. long on the S. shore of Prydz Bay, between Mt. Caroline Mikkelsen and Stornes Peninsula. Several glaciers, listed from SW. to NE., nourish the ice shelf: Polar Times, Il Polo, Polarforschung, Polar Record and Polarårboken Glaciers. The feature was first mapped from air photos by the Lars Christensen Exp., 1936-37. The name "Publication Glacier Tongues" was applied by John H. Roscoe in 1952 following his study of USN Op. Hjp. (1946-47) air photos of the area, but the term ice shelf is more descriptive. So named by Roscoe because the several glaciers in the area commemorate polar publications.

Puccini Spur 69°53'S., 70°50'W.

Rock spur, 6 mi. long, extending SW. into Mozart Ice Piedmont close S. of Mahler Spur in the N. part of Alexander Island. First seen from the air and roughly mapped by the BGLE in 1937. Accurately delineated from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Giacomo Puccini (1858-1924), Italian operatic composer.

Pudding Butte 75°52'S., 159°59'E.

A butte standing 2 mi. SW. of Beta Peak, in the Prince Albert Mtns., Victoria Land. Named by the Southern Party of the NZGSAE, 1962-63, because of a splendid feast at the nearby camp.

Pudding Tableland: see Pudding Butte 75°52'S., 159°59'E.

Puffball Islands 69°02'S., 68°30'W.

Scattered group of small, low, mainly ice-covered islands and rocks which extend about 10 mi. in a NE.-SW. direction, lying in southern Marguerite Bay off the W. coast of Antarctic Peninsula. The center of the group lies 23 mi. NNE. of Cape Jeremy. First visited and surveyed in 1948 by the FIDS. The name, applied by FIDS, derives from association with Mushroom I. which lies 14 mi. NE. of this group.

Puget, Cape: see Puget Rock 63°29'S., 55°39'W.

Puget Rock 63°29'S., 55°39'W.

Rock lying E. of Eden Rocks, off the E. end of Dundee I. in the Joinville Island group. The name Cape Puget was given by Sir James Clark Ross on Dec. 30, 1842, for Capt. William D. Puget, RN, but it is not clear from Ross' text what feature he was naming. The name Puget Rock was given by the UK-APC in 1956 in order to preserve Ross' name in this vicinity.

Pugh Shoal 54°02'S., 38°13'W.

Area of shoal 1.5 mi. S. of Main I. in the Willis Islands, South Georgia. Named by the UK-APC for Able Seaman Peter J. Pugh of HMS *Owen*, which first charted this shoal in 1961.

Pujato Bluff 82°40'S., 42°57'W.

A rock bluff, 660 m., forming the S. end of Schneider Hills in the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Gen. Hernán Pujato, officer in charge of Argentine wintering parties at General Belgrano Station in 1955 and 1956.

Pukaki, Mount 82°49'S., 162°06'E.

Peak between Mt. Hawea and Mt. Rotoiti in the Frigate Range. Named by the northern party of the NZGSAE (1961-62) for the N.Z. frigate *Pukaki*.

Pukkelen Rocks 72°15'S., 27°09'E.

Rock outcrops just W. of Bollene Rocks at the head of Byrdreen, in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Pukkelen (the hump).

Pulfrich Peak 64°41'S., 62°28'W.

Peak near the E. part of Wild Spur on Arctowski Pen., on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Carl Pulfrich (1858-1927), "father of stereophotogrammetry," who independently developed a stereocomparator in 1901 and developed the principle of the "floating mark" established by Franz Stolze.

Pulitzer, Mount 85°49'S., 154°16'W.

A prominent mountain, 2,155 m., standing 7 mi. NE. of Mt. Griffith on the elevated platform between Koerwitz and Vaughan Glaciers, in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Joseph Pulitzer, publisher of the *St. Louis Post-Dispatch*, a patron of the ByrdAE of 1928-30 and 1933-35.

Pullen Island 72°35'S., 60°57'W.

Snow-covered island 5 mi. long, which rises to 495 m. at its N. end, lying near the center of Violante Inlet

GEOGRAPHIC NAMES OF THE ANTARCTIC

along the E. coast of Palmer Land. Disc. by the USAS in a flight from East Base on Dec. 30, 1940, and named for William A. Pullen, Aviation Machinist's Mate at the East Base.

Pull Point 54°01'S., 37°58'W.

Point lying 0.5 mi. S. of Cape Pride on the E. side of Elsehul, near the W. end of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Pulpit Mountain 60°41'S., 45°13'W.

Conspicuous, red-colored mountain, 940 m., standing 1.5 mi. W. of Spence Hbr. at the E. end of Coronation I., in the South Orkney Islands. Named by the FIDS following their survey of 1948-49. The feature resembles a pulpit when seen from the east.

Pulpit Rock 53°05'S., 73°21'E.

Rock lying 0.1 mi. S. of Cape Gazert, off the W. side of Heard Island. This feature was charted as a small island on an 1860 sketch map compiled by Capt. H.C. Chester, American sealer operating in the area during this period. The feature was surveyed and named in 1948 by the ANARE.

Pumphouse Lake 60°42'S., 45°37'W.

The southernmost lake in Three Lakes Valley on Signy Island. So named by UK-APC because of the abandoned pumphouse and pipeline on the east side of the lake which was built by whalers.

Punch Bowl: see Devils Punchbowl 77°01'S., 162°24'E.

Punchbowl Cirque 76°42'S., 159°47'E.

A cirque in the southern part of Shipton Ridge, about 0.5 mi. SW. of Roscolyn Tor, in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who gave the descriptive name.

Punchbowl Glacier 65°11'S., 61°57'W.

A glacier that enters the N. end of Exasperation Inlet, N. of Jorum Glacier, on the E. side of Graham Land. Surveyed by FIDS in 1947 and 1955. The name applied by UK-APC is descriptive of shape as the glacier is hemmed in by mountains.

Pungent Point 56°18'S., 27°31'W.

Low, dark lava cliffs forming the E. point of Zavodovski I., South Sandwich Islands. The name applied by UK-APC in 1971 refers to the pungent volcanic fumes which are characteristic of this island.

Puño, Pico: see Admiral Peak 62°06'S., 58°30'W.

Puntiagudo, Pico: see Sharp Peak 62°32'S., 60°04'W.

Puppis Pikes 71°16'S., 66°24'W.

A loosely-defined group of pointed nunataks and smaller outcrops running roughly east-west, located 7 mi. northeast of Mt. Cadbury in Palmer Land. Named by UK-APC after the constellation of Puppis.

Pup Rock 68°22'S., 67°03'W.

A rock about 200 m. in diameter, between Refuge Islands and Tiber Rocks in Rymill Bay, off the W. coast of the Antarctic Peninsula. Discovered by geologist Robert L. Nichols of RARE, 1947-48, who applied the name "Three Pup Island." The name has been shortened for the sake of brevity.

Purcell Snowfield 70°29'S., 69°55'W.

Snowfield, 15 mi. wide, between Colbert Mtns. and Douglas Range in the central part of Alexander Island. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Henry Purcell (1659-1695), English composer.

Purdy Point 60°32'S., 45°26'W.

Point 1.5 mi. ESE. of Foul Pt. on the N. coast of Coronation I., in the South Orkney Islands. First seen in December 1821 in the course of a joint cruise by Capt. George Powell, British sealer, and Capt. Nathaniel Palmer, American sealer, and roughly shown on Powell's chart. Surveyed by the FIDS in 1956-58 and named by the UK-APC in 1959 for John Purdy (1773-1843), a leading English hydrographer of his day, who compiled numerous nautical directories and charts, including the South Orkney Islands, the fore-runners of Admiralty sailing directions.

Purgatory Peak 77°21'S., 162°18'E.

Peak 2 mi. SW. of Pond Peak in the Saint Johns Range of Victoria Land. So named by the N.Z. Northern Survey Party of the CTAE, 1956-58, because of the extremely trying weather and surface conditions encountered while traveling toward and surveying from this peak.

Purka Mountain 68°15'S., 58°35'E.

A prominent mountain ridge with two outliers, about 5 mi. SE. of Mt. Gjeita in the Hansen Mountains. Mapped and named Purka (the sow) by Norwegian cartographers working from air photos taken by the Lars Christensen Exp., 1936-37.

Pursuit Point: see Principal Point 64°55'S., 63°27'W.

Purvis, Cape 63°35'S., 55°58'W.

Cape forming the S. extremity of Dundee I., off the N. tip of Antarctic Peninsula. Discovered in Dec. 1842 by

GEOGRAPHIC NAMES OF THE ANTARCTIC

Capt. James Ross, RN, and named by him for Commodore (later Rear Admiral) John B. Purvis, RN, who was of assistance to Ross' expedition.

Purvis, Point 54°10'S., 36°41'W.

Point lying 1 mi. SW. of Tønsberg Pt. in Husvik Hbr., South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Purvis Glacier 54°06'S., 37°10'W.

Glacier flowing generally NE. into the W. side of Possession Bay, on the N. coast of South Georgia. Charted by the GerAE under Filchner, 1911-12, and named for John Murray. It was renamed Purvis Glacier, possibly to avoid confusion with Murray Glacier in northern Victoria Land, for a seaman on the *Alert*, a motorboat used for survey work in South Georgia by DI personnel in 1928-30.

Purvis Peak 72°38'S., 169°09'E.

A peak (2,250 m.) 2 mi. NE. of Mt. Northampton in the Victory Mountains of Victoria Land. The peak overlooks the terminus of Tucker Glacier from the south. Mapped by NZGSAE, 1957-58, and the USGS, 1960-62. Named by US-ACAN for Lt. (later Lt. Cdr.) Ronald S. Purvis, USN, of Squadron VX-6, pilot of Otter aircraft at Ellsworth Station, 1956-57, and of R5D Skymaster aircraft at McMurdo Station, 1957-58.

Putzke Peak 75°49'S., 128°32'W.

A peak (2,325 m.) at the end of the spur which descends NE. from Mt. Petras, in the McCuddin Mtns., Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Capt. Stanley G. Putzke, USCG, Commanding Officer of USCGC *Staten Island* during Operation Deep Freeze 1971 and 1972.

Puzzle Islands 64°59'S., 63°40'W.

Group of small islands, rocks and reefs at the mouth of Flandres Bay, lying 1 mi. W. of Ménier I. off the W. coast of Graham Land. First charted by the FrAE under Charcot, 1903-5. So named by the UK-APC in 1958; the group is often hidden by icebergs which come to rest in the surrounding shallow waters.

Pyke Glacier 64°15'S., 59°36'W.

A glacier 5 mi. long, flowing southward from Detroit Plateau, Graham Land, between Albion and Polaris Glaciers. Mapped from surveys by FIDS (1960-61). Named by UK-APC for Geoffrey N. Pyke (1894-1948), English scientist who in 1941 originated the ideas developed by the Studebaker Corporation into the M-29 Tracked Cargo Carrier or "Weasel," the first really successful snow vehicle.

Pylon Point 68°06'S., 65°05'W.

Rocky promontory standing 4 mi. SW. of Three Slice Nunatak and marking the N. end of the main mountainous mass of Joerg Pen., on the E. coast of Graham Land. Pylon Point lies in the area first seen by Sir Hubert Wilkins on his flight of Dec. 20, 1928, and crossed by Lincoln Ellsworth on his flight of Nov. 21, 1935. So named by the US-SCAN because the various flights and sledge trips of the USAS, 1939-41, rounded it on their way S. along the E. coast of Antarctic Peninsula.

Py Point 64°53'S., 63°37'W.

Point forming the S. extremity of Doumer I., in the Palmer Archipelago. Disc. by the FrAE, 1903-5, and named by Charcot for Monsieur Py, Pres. of the French Chamber of Commerce in Buenos Aires at that time.

Pyramid, The: see Pyramid Island 62°26'S., 60°06'W.

Pyramid, The 63°26'S., 57°01'W.

Pyramidal nunatak, 565 m., standing 1 mi. E. of Mt. Carrel and 1.5 mi. SE. of the head of Hopè Bay, at the NE. end of Antarctic Peninsula. Disc. and named by a party under J. Gunnar Andersson of the SwedAE, 1901-4.

Pyramid, The 78°21'S., 163°30'E.

A small but distinctive peak just S. of Pyramid Trough, at the W. side of the Koettlitz Glacier. The descriptive name appears to have been first used by the BrAE, 1910-13.

Pyramiden: see Pyramid, The 63°26'S., 57°01'W.

Pyramiden Nunatak 72°17'S., 3°48'W.

A nunatak 2 mi. E. of Knallen Peak, on the E. side of the head of Schytt Gl. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Pyramiden (the pyramid).

Pyramid Island 62°26'S., 60°06'W.

Conspicuous, pillar-shaped island, 205 m. high, lying 2 mi. NNE. of Williams Pt., Livingston I., in the South Shetland Islands. This island, presumably known to sealers in the area since about 1821, was charted and given this name by DI personnel on the *Discovery II* in 1935.

Pyramid Mountain: see Rhamnus, Mount 68°11'S., 66°50'W.

Pyramid Mountain 81°19'S., 158°15'E.

A conspicuous pyramidal mountain, 2,810 m., standing 4 mi. N. of Mt. Albert Markham in the Churchill

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mountains. Discovered and named by the BrNAE, 1901-4.

Pyramid Peak: see Rhamnus, Mount 68°11'S., 66°50'W.

Pyramid Peak 54°00'S., 37°23'W.

Peak, 475 m., surmounting Cape Buller at the W. side of the entrance to the Bay of Isles, South Georgia. Charted and named by DI personnel in the 1929-30 season.

Pyramid Peak 72°16'S., 165°35'E.

A prominent pyramidal peak on the polar plateau, standing 7 mi. SW. of Gless Peak of the Millen Range and 1 mi. N. of Sphinx Peak. Descriptively named by the Northern Party of NZFMCAE, 1962-63.

Pyramid Point: see Tilt Rock 70°27'S., 68°44'W.

Pyramid Point 54°01'S., 37°58'W.

Point lying S. of Cape Pride on the E. side of Elsehul, near the W. end of South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Pyramid Rock 64°23'S., 63°07'W.

Rock lying close to the extremity of Gourdon Pen., off the NE. coast of Anvers I. in the Palmer Archipelago. Charted and named by DI personnel on the *Discovery* in 1927.

Pyramid Trough 78°18'S., 163°27'E.

A deep trough immediately W. of The Bulwark, through which a part of the Koettlitz Gl. formerly flowed N. to Walcott Bay. Named by the VUWAE (1960-61) for its proximity to The Pyramid.

Pyrites Island 61°55'S., 57°59'W.

The largest of three small islands lying SE. of Gam Pt. and forming the E. side of Esther Hbr., off the N. coast of King George I. in the South Shetland Islands. In 1913-14, the rocky extremity of Gam Pt. and the adjoining islands to the NW. and SE. were named Esther, Pyritis (sic) or Pyritic Islands by Scottish geologist David Ferguson, who reported they were composed of

pyrites and vein quartz. From Ferguson's description it appears that the ice cliff behind the Gam Pt. has advanced since 1914 so that this "island" is now joined to the mainland. The highest and most conspicuous of the remaining islands is the one here described. The name Pyrites Island was recommended by the UK-APC in 1960 to avoid confusion with the other existing "Esther" names in the vicinity.

Pyritic Islands: see Pyrites Island 61°55'S., 57°59'W.

Pyritis Islands: see Pyrites Island 61°55'S., 57°59'W.

Pyrox Island 68°12'S., 66°41'W.

Island lying at the head of Neny Fjord, along the W. coast of Graham Land. First surveyed by the USAS, 1939-41. Resurveyed in 1949 by the FIDS, who so named it because of pyroxenic rocks found there.

Pythagoras Peak 66°59'S., 51°20'E.

Highest peak, 1,275 m., in the central Tula Mtns., standing along the N. side of Beaver Gl., 8 mi. SE. of Mt. Storer. The peak has a prominent notch, the eastern aspect being a right-angled triangle with a perpendicular northern face. It was photographed from Mt. Riiser-Larsen in February 1958 by ANARE led by Phillip Law, but was first visited and surveyed in December 1958 by G. A. Knuckey, ANARE surveyor. Named by ANCA after Pythagoras, Greek philosopher, whose theorem concerning a right-angled triangle is well known.

Pythia Island 64°32'S., 61°59'W.

Island 0.2 mi. long, the largest of a group of small islands off the E. side of Enterprise I. in Wilhelmina Bay, off the W. coast of Graham Land. Named by the UK-APC in 1960 after Christen Christensen's whaling factory *Pythia*, which operated from nearby Gouvernøren Hbr. during the 1921-22 whaling season.

Pyxis Ridge 71°16'S., 66°48'W.

A narrow ridge of nunataks separated by passes, located 5 mi. NNW. of Mt. Cadbury from where it projects into the S. side of Ryder Glacier, in Palmer Land. Named by UK-APC after the constellation of Pyxis.

Quackenbush, Mount 80°21'S., 156°58'E.

A flat-topped mountain, 2,435 m., which forms a projecting angle along the steep cliffs bordering the N. side of Byrd Glacier, just W. of Peckham Glacier. Named by US-ACAN for Capt. Robert S. Quackenbush, Jr., chief of staff to Adm. Cruzen (Central Group of Task Force 68) in USN Op. Hjp., 1946-47, led by Admiral Byrd.

Quadrangle, The 71°35'S., 68°36'W.

An ice-covered area (essentially a glacial cirque) enclosed on three sides by rock ridges, but open to the south, lying between Mt. Umbriel and Venus Gl. in eastern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. The feature was so named by UK-APC in description of its shape.

Quadrant Peak 57°06'S., 26°47'W.

A peak (430 m.) forming the summit of Vindication I., South Sandwich Islands. The peak forms a narrow ridge above the uniform slopes of the original volcanic cone, and is a quadrant of what was probably once a circular mass cone. Named by UK-APC in 1971.

Quam Heights 71°03'S., 167°48'E.

Mostly snow-covered heights, 15 mi. long and 4 mi. wide, rising over 1,000 m. and forming the coastline between the Barnett and Dennistoun Glaciers in northern Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for Louis O. Quam, Chief Scientist, Office of Polar Programs, National Science Foundation, 1967-72.

Quandary, Mount 64°52'S., 61°34'W.

A mountain on the E. side and near the head of Hektoria Gl., 12 mi. NW. of Shiver Point, in Graham Land. Surveyed by FIDS in 1955; the name arose because when first viewed it could not be determined whether the feature was part of the central plateau of Graham Land or a detached summit in Hektoria Glacier.

Quar Ice Shelf 71°20'S., 11°00'W.

The ice shelf between Cape Norvegia and Søråsen Ridge along the coast of Queen Maud Land. Mapped by NBSAE, 1949-52, whose Maudheim Station was located on this ice shelf. Named for Leslie Quar, British radio mechanic and electrician with NBSAE, who drowned when the weasel (track-driven vehicle) in which he was riding drove over the edge of this ice shelf, Feb. 24, 1951.

Quarisen: see Quar Ice Shelf 71°20'S., 11°00'W.

Quarles Range 85°36'S., 164°30'W.

A high and rugged range of the Queen Maud Mtns., extending from the polar plateau between Cooper and Bowman Glaciers and terminating near the edge of Ross Ice Shelf. Peaks in the range were first sighted by Capt. Roald Amundsen in 1911, and the range was mapped in detail by the ByrdAE, 1928-30. Named by US-ACAN for Donald A. Quarles, Sec. of the Air Force, 1955-57, and Deputy Sec. of Defense, 1957-59, at the outset of the International Geophysical Year and organization of U.S. activity in Antarctica.

Quarterdeck Ridge 72°27'S., 170°16'E.

The undulating, north-south snow crest of Hallett Peninsula. For the most part this crest is very close to the great 1,500 meter Cotter Cliffs that fall abruptly to the Ross Sea. So named by NZGSAE, 1957-58, because impressions obtained in traversing along it recall those in walking the quarterdeck of a ship.

Quartermain Glacier 67°01'S., 65°09'W.

A well-defined, highly-crevassed glacier on the N. side of Fricker Gl., from which it is separated in its upper reaches by Mt. Kennett. It flows from the plateau into Mill Inlet on the E. coast of Graham Land. Named by UK-APC for Leslie B. Quartermain, New Zealand historian of the Antarctic and author of *South to the Pole. The early history of the Ross Sea Sector* (London, 1967).

Quartermain Point 72°03'S., 170°08'E.

Prominent point in the N. part of Moubray Bay between Helm Pt. and Cape Roget. Named by the NZGSAE, 1957-58, for L. B. Quartermain, Pres., New Zealand Antarctic Soc., who took a close interest in the work of the expedition.

Quartz Hills 85°56'S., 132°50'W.

An arcuate group of mainly ice-free hills and peaks standing immediately S. of Colorado Gl. along the W. side of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. The name was proposed by John H. Mercer, USARP geologist to these hills in 1964-65, because there is much rose quartz in the superficial deposits of the hills.

Quartz Pebble Hill 84°44'S., 113°59'W.

A flat-topped elevation on the N. escarpment of Buckeye Table, Ohio Range, in the Horlick Mountains. The hill is located where Discovery Ridge joins the main escarpment. The rock that forms the hill is composed of sandstone and quartz pebble conglomerate. The name was suggested by William E. Long, geologist of the Ohio State Univ. expedition, who worked in these mountains in 1960-61 and 1961-62.

Quaternary Icefall 77°18'S., 166°30'E.

A western lobe of the Mt. Bird icecap, descending steeply into Wohlschlag Bay 1 mi. S. of Cinder Hill on

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ross Island. Mapped and so named by the NZGSAE, 1958-59, because of the Quaternary glacial period marine shells carried by the glacier and deposited in terminal moraines.

Quebrada, Isla: see Broken Island 67°49'S., 66°57'W.

Queen Alexandra Range 84°00'S., 168°00'E.

A major mountain range, about 100 mi. long, bordering the entire W. side of Beardmore Glacier from the Ross Ice Shelf to the polar plateau. Discovered on the journey toward the South Pole by the BrAE (1907-9), and named by Shackleton for Alexandra, Queen of England, 1901-10.

Queen Elizabeth Range 83°20'S., 161°30'E.

A rugged mountain range paralleling the E. side of Marsh Glacier for nearly 100 mi., from Nimrod Glacier in the north to Law Glacier in the south. Mt. Markham, 4,350 m., is the highest elevation in the range. Named by J. H. Miller of the N.Z. party of the CTAE (1956-58) who, with G.W. Marsh, explored this area. It was named for Queen Elizabeth II of Great Britain, the patron of the expedition.

Queen Fabiola Mountains 71°30'S., 35°40'E.

A group of mountains, 30 mi. long, consisting mainly of seven small massifs which trend north-south, forming a partial barrier to the flow of inland ice. The mountains stand in isolation about 90 mi. SW. of the head of Lützow-Holm Bay. Discovered and photographed from aircraft by the Belgian Antarctic Expedition, 1960, under Guido Derom, on October 8, 1960, and named with the permission of the King for Doña Fabiola de Mora y Aragon, on the occasion of her wedding with King Baudouin of Belgium. In November-December 1960, the mountains were visited by a party of the Japanese Antarctic Research Expedition which made geomorphological and geological surveys. They applied the name "Yamato Mountains."

Queen Mary Coast 66°45'S., 96°00'E.

That portion of the coast of Antarctica lying between Cape Filchner, in 91°54'E., and Cape Hordern, in 100°30'E. Discovered in February 1912 by the AAE (1911-14) under the leadership of Douglas Mawson, who named it for Queen Mary of England.

Queen Mary Land: see Queen Mary Coast 66°45'S., 96°00'E.

Queen Maud Bay 54°14'S., 37°23'W.

A V-shaped bay 2.5 mi. wide at the entrance, lying immediately N. of Nuñez Pen. along the S. coast of South Georgia. Roughly charted in 1819 by a Russ. exp. under Bellingshausen. Named prior to 1922 for

Queen Maud, wife of King Haakon VII of Norway, probably by Norwegian whalers who frequented this coast.

Queen Maud Harbor: see Queen Maud Bay 54°14'S., 37°23'W.

Queen Maud Land 72°30'S., 12°00'E.

That part of Antarctica lying between the terminus of Stancomb-Wills Glacier, in 20°00'W., and Shinnan Glacier, in 44°38'E. This name, given for Queen Maud of Norway, represents an expansion from that of the original core area, between 37°00' and 50°00'E., discovered by Capt. Hjalmar Riiser-Larsen in 1930.

Queen Maud Mountains 86°00'S., 160°00'W.

A major group of mountains, ranges and subordinate features of the Transantarctic Mountains, lying between the Beardmore and Reedy Glaciers and including the area from the head of the Ross Ice Shelf to the polar plateau. Capt. Roald Amundsen and his South Pole party ascended Axel Heiberg Gl. near the central part of this group in November 1911, naming these mountains for the Queen of Norway. Elevations bordering the Beardmore Glacier, at the western extremity of these mountains, were observed by the British expeditions led by E.H. Shackleton (1907-9) and R.F. Scott (1910-13), but the mountains as a whole were mapped by several American expeditions led by R.E. Byrd (1930's and 1940's), and USARP and NZARP expeditions from the 1950's through the 1970's.

Queen Maud Range: see Queen Maud Mountains 86°00'S., 160°00'W.

Queen Mountain: see Queer Mountain 77°08'S., 161°45'E.

Queens Bay: see Borge Bay 60°43'S., 45°37'W.

Queensland, Mount 74°16'S., 163°56'E.

A prominent mountain, 1,910 m., standing 7 mi. N. of Mt. Dickason in the Deep Freeze Range, Victoria Land. Discovered by the BrNAE, 1901-4, which named this mountain for the State of Queensland, Australia, in recognition of the assistance given the expedition by its government.

Queequeg, Mount 65°39'S., 62°08'W.

Conspicuous, partly snow-covered mountain with three conical summits, the highest 900 m., between the mouths of Starbuck and Stubb Glaciers on the E. coast of Graham Land. Surveyed and photographed by the FIDS in 1947. Named by UK-APC in 1956 after Starbuck's harpooner on the *Pequod* in Herman Melville's *Moby Dick*.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Queer Mountain 77°08'S., 161°45'E.

A conspicuous black mountain (1,180 m.) with steep slopes showing bands of sandstone above the granite, standing 1 mi. W. of Killer Ridge, between the Cotton and Miller Glaciers, in Victoria Land. Mapped by the BrAE (1910-13) and so named because, though surrounded by glacier, it has nearly every rock in the district, including coal beds, represented on its cliffs.

Quensel Glacier 54°46'S., 35°50'W.

Small glacier flowing SE. into Cooper Bay at the E. tip of South Georgia. Named by the UK-APC after Percy D. Quensel, Swedish geologist of Uppsala University, who visited South Georgia with Carl Skottsberg in 1909.

Querthal: see Cross Valley 64°16'S., 56°42'W.

Quervain Peak 67°23'S., 66°39'W.

A peak in the central part of the Boyle Mtns. in Graham Land. Mapped by FIDS from surveys and air photos, 1956-59. Named by UK-APC for Alfred de Quervain, Swiss glaciologist who in 1909 first applied photogrammetric methods to the measurement of surface glacier flow.

Query Island 68°48'S., 67°12'W.

Prominent rocky island lying between the foot of Clarke Gl. and Keyhole I. on the S. side of Mikkelsen Bay, off the W. coast of Graham Land. Surveyed in 1948 by the FIDS, who so named it because of the difficulty in deciding from a distance whether the feature was an island or part of the mainland.

Quest Channel 67°48'S., 69°01'W.

A channel leading southwestward from Adelaide Anchorage between Hibbert Rock and Henkes Is., off the S. end of Adelaide Island. Named by the UK-APC after the survey motorboat *Quest* used by the RN Hydrographic Survey Unit which charted this area in 1963.

Quest Cliffs 82°36'S., 155°10'E.

A line of steep east-facing cliffs immediately N. of The Slot in the Geologists Range. Seen by the northern party of the NZGSAE (1961-62) and named after the *Quest*, the ship of the Shackleton-Rowett Antarctic Exp., 1921-22.

Quest Nunatak 81°31'S., 28°10'W.

Northeasternmost of the Whichaway Nunataks, 1,065 m. First mapped in 1957 by the CTAE and so named because it was the last rock outcrop visited on the transpolar route of the CTAE in December 1957 when a further search was made for plant fossils previously found in the area by the expedition's geologist.

Quest Nunatak: see Quest Cliffs 82°36'S., 155°10'E.

Quidora, Isla: see Pfaff Island 66°54'S., 67°44'W.

Quilmes, Mount 63°14'S., 55°37'W.

A mainly snow-covered mountain, 715 m., standing NE. of Haddon Bay on Joinville Island. The name was given during the course of the Argentine Antarctic Expedition (1953-54) and memorializes the battle of the same name in which the Argentine squadron of Admiral Guillermo Brown was engaged.

Quilp Rock 67°37'S., 67°47'W.

Small, isolated rock in Laubeuf Fjord, lying 3.5 mi. SSE. of the S. tip of Piñero I. and 1.5 mi. off the NW. side of Pourquoi Pas I., off the W. coast of Graham Land. First surveyed in 1948 by the FIDS, and named by them after the dwarf, Daniel Quilp, a vicious, ill-tempered character in *The Old Curiosity Shop*, by Charles Dickens.

Quilty Nunataks 75°45'S., 71°45'W.

A group of nunataks which extend over 8 mi., located 15 mi. SW. of Thomas Mtns. in eastern Ellsworth Land. Disc. by the RARE, 1947-48, led by Ronne. Named by US-ACAN for Patrick Quilty, geologist with the Univ. of Wisconsin survey party to this area, 1965-66.

Quintana Island 65°09'S., 64°57'W.

Small isolated island, lying 6 mi. NE. of Betbeder Is. in the SW. part of the Wilhelm Archipelago. First charted as a group of islands by the FrAE, 1903-5, and named by Charcot for Manuel Quintana (1836-1906), then Pres. of Argentina. A survey in 1957-58 by the Br. Naval Hydrographic Survey Unit found only one island in this position.

Quinton Point 64°19'S., 63°41'W.

Point at the N. side of the entrance to Perrier Bay, on the NW. coast of Anvers I. in the Palmer Archipelago. First charted by the FrAE, 1903-5, and named by Charcot for Dr. Quinton, assistant at the Collège de France.

Quirihue, Islas: see Darbel Islands 66°23'S., 65°58'W.

Quonset Glacier 85°19'S., 127°05'W.

A glacier about 20 mi. long which drains the N. slopes of Wisconsin Range between Mt. LeSchack and Ruse-ski Buttress and trends WNW. to enter the N. side of Davisville Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN after the Naval Air Station, Quonset Point, Rhode Island, home base of Antarctic Development Squadron Six (VXE-6).

R

Rabben, Mount 66°27'S., 54°07'E.

Mountain, 1,540 m., standing 2 mi. NE. of Mt. Griffiths in the Napier Mtns., Enderby Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Rabben (the small elongated elevation).

Rabben Ridge 71°52'S., 2°49'E.

A small, isolated ridge about 5 mi. N. of Stabben Mtn. in the N. part of the Gjelsvik Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Rabben (the small elongated elevation).

Rabot, Mount 83°11'S., 161°17'E.

A mountain, 3,335 m., standing 3 mi. SE. of Mt. Leconte in Queen Elizabeth Range. Discovered and named by the BrAE (1907-9). Charles Rabot was editor of *La Géographie*, bulletin of the Société Géographique, Paris, and was an outstanding glaciologist of that period.

Rabot Glacier 83°11'S., 160°10'E.

A glacier in the Queen Elizabeth Range, flowing W. from Mt. Rabot between Mt. Counts and Bartrum Plateau to enter Marsh Glacier. Named in association with Mt. Rabot by the NZGSAE, 1961-62.

Rabot Island 65°54'S., 65°59'W.

Island 5 mi. long and 2 mi. wide, lying 1 mi. S. of Renaud I. in the Biscoe Islands. First charted by the FrAE, 1903-5, under Charcot, who named it for Charles Rabot.

Rabot Point 64°17'S., 57°20'W.

A high rocky point on the E. side of James Ross Island. It lies in Markham Bay and separates the mouths of Gourdon and Hobbs Glaciers. The name "Rabot Gletscher" after the French glaciologist, Charles Rabot, was originally given by Otto Nordenskjöld, leader of the SwedAE, 1901-4, to a small glacier close W. of The Watchtower on the S. side of the island. The FIDS surveyed the S. part of the island in 1953 and found that the glacier is very insignificant and does not require a name. In order to preserve the name Rabot in the vicinity, the UK-APC has applied it to the point described.

Rachel Glacier 65°37'S., 62°10'W.

A glacier on the E. coast of Graham Land, 6 mi. long, flowing E. along the N. side of Mt. Baleen to join Larsen Ice Shelf. The name, applied by UK-APC, is taken from Herman Melville's *Moby Dick*, the *Rachel* being a ship from Nantucket which met the *Pequod* and brought news of a lost whaleboat.

Racine Nunatak 85°28'S., 136°18'W.

Nunatak, 960 m., located 3 mi. W. of the lower part of Reedy Gl. and 7 mi. ESE. of Berry Peaks. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Edward J. Racine, a member of the crew of the icebreaker *Eastwind* in Operation Deep Freeze 1967.

Racovitza Islands 64°31'S., 62°05'W.

Group of three islands lying just N. of Nansen I., off the W. coast of Graham Land. Surveyed by the FIDS from the *Norsel* in 1955. Named by the UK-APC for Emile G. Racovitza, zoologist and botanist of the BelgAE which explored this area in 1897-99.

Rade Point: see Kade Point 54°06'S., 37°44'W.

Radford Island 76°54'S., 146°36'W.

An ice-covered island surmounted by several peaks, lying 6 mi. W. of Saunders Mtn. in the E. part of Sulzberger Ice Shelf. Discovered by the ByrdAE on the Eastern Flight of Dec. 5, 1929. This feature was mapped as a part of the mainland by the USAS (1939-41) and named "Radford Mountains." It was determined to be an island by the U.S. Geological Survey from air photos taken by the U.S. Navy, 1962-65. Named by Byrd for V. Adm. Arthur W. Radford, USN, Deputy Chief of Naval Operations (Air) during the exploration by USN Op. Hjp. (1946-47) and later Adm. and Chairman of the Joint Chiefs of Staff.

Radford Mountains: see Radford Island 76°54'S., 146°36'W.

Radian Glacier 78°13'S., 163°00'E.

A glacier on the E. side of the Royal Society Range, descending from a high cirque just SE. of Mt. Rücker and flowing E. toward Walcott Glacier. In the measurements made of this glacier by the VUWAE (1960-61), one of the survey angles, by chance, was exactly one radian, and the glacier came to be referred to by this term.

Radio Hill 66°33'S., 93°00'E.

Hill rising to 50 m., standing 0.4 mi. SW. of Mabus Pt. on the coast of Antarctica. Discovered and first mapped by the AAE under Mawson, 1911-14. Remapped and named by the Soviet exp. of 1956.

Radlinski, Mount 82°31'S., 103°34'W.

A rounded, smooth, ice-covered mountain (2,750 m.) rising 4 mi. SE. of Mt. Seelig in the NE. part of the Whitmore Mountains. Surveyed on Jan. 2, 1959 by William H. Chapman, a member of the Horlick Mountains Traverse (1958-59). Named by Chapman for William A. Radlinski, Special Assistant (Antarctic)

GEOGRAPHIC NAMES OF THE ANTARCTIC

to the Chief Topographic Engineer, U.S. Geological Survey.

Radok Lake 70°52'S., 68°00'E.

A meltwater lake about 4 mi. long and marked by a slender glacier tongue feeding into it from the W., lying 3 mi. SW. of Beaver Lake and 15 mi. SE. of the Aramis Range, Prince Charles Mountains. Plotted by ANARE from air photos taken by the RAAF Antarctic Flight in 1956. Named for Uwe Radok, lecturer in meteorology at the Univ. of Melbourne, who greatly assisted ANARE's glaciological program.

Radspinner, Mount 71°29'S., 164°33'E.

A conspicuous ridge-like mountain, 1,785 m., located just E. of Mt. Freed and Copperstain Ridge in the E. part of Bowers Mountains. Named by US-ACAN for Capt. Frank H. Radspinner, Jr., USA, commanding officer of the helicopter detachment that supported the USGS Topo East-West party that surveyed this area in 1962-63.

Rae, Point 60°46'S., 44°37'W.

Point marking the NE. side of the entrance to Scotia Bay on the S. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for John Rae, Scottish Arctic explorer and member of the Sir John Richardson exp., 1854, who learned the fate of the Sir John Franklin Arctic exp., 1847.

Raggatt Mountains 67°42'S., 49°00'E.

A group of peaks westward from the Scott Mtns., lying E. of Rayner Gl. and N. of Thyer Glacier. Delineated by ANARE from air photos taken by RAAF Antarctic Flight of 1956. Named by ANCA for Dr. H. G. Raggatt, Secretary of the Australian Dept. of National Development.

Ragged Island: see Rugged Island 62°38'S., 61°15'W.

Ragged Peaks 66°59'S., 51°00'E.

Prominent group of peaks on the eastern side of Amundsen Bay in a line running almost N.-S. The peaks, extending 8 mi., contain several spires and the ridge connecting the peaks is much serrated. There are five peaks over 915 meters. Sighted in October 1956 by the ANARE Amundsen Bay party led by P. W. Crohn. The descriptive name was given by ANCA.

Raggett Mountains: see Raggatt Mountains 67°42'S., 49°00'E.

Ragle Glacier 76°28'S., 145°32'W.

A small glacier that drains the W. end of the Fosdick Mountains, between Mounts Ferranto and Avers, and flows NW. to Block Bay, in Marie Byrd Land. The

glacier was photographed by the USAS (1939-41), led by Admiral Byrd, and was mapped by the USGS from surveys and U.S. Navy air photos (1959-65). Named for Dr. B. Harrison Ragle, Admiral Byrd's personal physician in the late 1930's, who made financial contributions toward purchase of first aid equipment and medical supplies for USAS (1939-41) and was a consultant on medical matters for that expedition.

Ragotzkie Glacier 80°02'S., 157°45'E.

A glacier in the Britannia Range, about 10 mi. long, flowing northward along the west side of Mt. Aldrich and coalescing with other north-flowing glaciers which enter the Hatherton Glacier to the southwest of Junction Spur. Named by US-ACAN for Robert A. Ragotzkie, project director for USARP studies of lakes in the ice-free valleys. He made personal studies in Victoria Land in the 1962-63 season.

Rahir, Cape: see Rahir Point 65°04'S., 63°14'W.

Rahir Point 65°04'S., 63°14'W.

Point marking the NE. end of a small peninsula which extends into Flandres Bay just N. of Thomson Cove, on the W. coast of Graham Land. First charted by the BelgAE under Gerlache, 1897-99, and named "Cap Rahir," probably for Maurice Rahir, Belgian geographer and member of the Belgian Royal Geographical Society.

Rainbow, Mount 80°54'S., 156°55'E.

A peak, 2,050 m., along the S. side of Byrd Glacier, surmounting the broad ridge between Zeller and Sifton Glaciers. So named by the NZGSAE (1960-61) as the peak consists of multi-colored beds of sandstone with probable dolerite sitting on pink-green limestone.

Rainbow Ridge 78°06'S., 165°24'E.

A small ridge which forms a distinct western rim to the large crater-like depression high in the central part of Brown Peninsula, in Victoria Land. Given this geologically descriptive name by the NZ-APC, it arose from investigations by the N.Z. Geological Survey and the Victoria Univ. Exp. in 1964-65. The top of the ridge has been planed off by subsequent glaciation and the resultant surface exposes two basalt "pipes" (Nubian Formation) within the trachyte. These have altered the trachyte at their margins to various shades of brown, hence the name of the ridge.

Rainer Glacier: see Rayner Glacier 67°40'S., 48°25'E.

Rainey Glacier 73°40'S., 163°06'E.

A tributary glacier on the N. side of Archambault Ridge, descending from the Deep Freeze Range into Campbell Gl., in Victoria Land. Named by the north-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ern party of NZGSAE, 1962-63, for Denys Rainey, cartographer, who assisted this and other N.Z. Antarctic expeditions with their mapping problems.

Rainoff's Island: see Gibbs Island 61°28'S., 55°34'W.

Rakebosten Ridge 71°56'S., 7°12'E.

A high rock ridge with lateral western spurs, forming the S. part of Trollslottet Mtn. in the Filchner Mtns., Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Rakebosten (the shave bristles).

Rakekniven Peak 71°54'S., 7°17'E.

A peak, 2,365 m., at the N. end of Trollslottet Mtn. in the Filchner Mtns., Queen Maud Land. Plotted from surveys and air photos by NorAE (1956-60) and named Rakekniven (the razor).

Rakuda Glacier 68°03'S., 43°54'E.

A glacier flowing to the coast just E. of Rakuda Rock in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, who gave the name.

Rakuda Rock 68°02'S., 43°49'E.

A projecting coastal rock at the W. side of Rakuda Gl. in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, who gave the name.

Rallier Channel 65°04'S., 64°03'W.

Narrow channel lying between Rallier I. and the W. end of Booth I., in the Wilhelm Archipelago. Disc. and named by the FrAE under Charcot, 1903-5, in association with Rallier Island.

Rallier-du-Baty Channel: see Rallier Channel 65°04'S., 64°03'W.

Rallier du Baty Islet: see Rallier Island 65°04'S., 64°03'W.

Rallier Island 65°04'S., 64°03'W.

Small island with a small islet off its N. side, lying 0.25 mi. W. of the NW. extremity of Booth I., in the Wilhelm Archipelago. Disc. by the FrAE under Charcot, 1903-5, and named by him for Raymond Rallier du Baty, merchant marine cadet who signed on as seaman on the ship *Français*.

Ralph, Mount 76°58'S., 144°32'W.

A mountain between Mt. Gilmour and Mt. McCormick in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939-41). Named by the US-ACAN for Ralph W. Smith, airplane pilot with the ByrdAE (1933-35).

Ramage Point 73°39'S., 120°20'W.

An ice-covered point lying just W. of Beakley Glacier on the N. side of Carney Island, along the coast of Marie Byrd Land. Delineated from aerial photographs taken by USN Op. Hjp. in January 1947. Named by US-ACAN for R. Adm. L. P. Ramage, USN, Asst. Chief of Naval Operations, Ships Operations and Readiness, in the post 1957-58 IGY period.

Rambler Harbor 66°28'S., 66°27'W.

A small harbor in the N. side of Rambler I., Bragg Islands, in Crystal Sound. First mapped and named by Cdr. W.M. Carey, RN, of the *Discovery II* (1930-31). The location of the harbor was in doubt for several years, but in 1958 was reidentified and surveyed by FIDS.

Rambler Island 66°28'S., 66°27'W.

The largest of the Bragg Islands, lying in Crystal Sound about 7.5 mi. N. of Cape Rey, Graham Land. Mapped from surveys by FIDS (1958-59). The name derives from association with Rambler Harbor which lies on the north side of the island.

Rambo Nunataks 83°57'S., 66°20'W.

A loose chain of nunataks which lie NW. of Patuxent Range and extend along the W. side of the Foundation Ice Stream for 17 mi., in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for William L. Rambo, geophysicist in the Pensacola Mountains, 1965-66.

Ram Bow Bluff 80°48'S., 26°42'W.

Prominent rock bluff on the E. side of Stephenson Bastion in the south-central part of the Shackleton Range. First visited by the CTAE in 1957 and given this descriptive name because of the feature's resemblance to the ram bow of an old battleship.

Ramenskiy, Mount 71°46'S., 12°33'E.

Mountain, 2,560 m., forming the S. end of Isdalsegga Ridge in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet botanist L. G. Ramenskiy (1884-1953).

Ramenskogo, Gora: see Ramenskiy, Mount 71°46'S., 12°33'E.

Ram Head 54°01'S., 37°27'W.

Headland between Rosita Hbr. and Camp Bay, on the N. coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rampart Ridge 78°10'S., 161°55'E.

A prominent broken ridge on the W. side of the Royal Society Range, standing N. of Rutgers Gl. and extending from The Spire to Bishop Peak. Surveyed and given this descriptive name in February 1957 by the N.Z. Northern Survey Party of the CTAE, 1956-58.

Ramp Rocks 53°59'S., 38°18'W.

Three barren rocks, the largest being 23 m. high, lying 2.5 mi. NW. of Johannesen Point, Main Island, at the W. extremity of South Georgia. The name "Laavebrua," a descriptive Norwegian term meaning literally "threshing floor bridge" or "barn bridge," was used for the largest rock by whalers and sealers at South Georgia. In Norwegian barns used for storing hay, there is a ramp up which the wagons are driven before tipping. "Laavebrua," which is not strictly translatable, is this ramp. The UK-APC recommended in 1954 that "Ramp Rock" be approved for the large rock, but in 1976 altered the name to Ramp Rocks to include the three rocks. The name Låvebrua Island is already approved for an island near Deception Island.

Ramsay, Mount 60°45'S., 44°45'W.

Peak, 475 m., standing at the W. side of Uruguay Cove on the N. coast of Laurie I., in the South Orkney Islands. Charted by the ScotNAE under Bruce, 1902-4, and named for Allan Ramsay, chief engineer of the exp. ship *Scotia*, who died on Aug. 6, 1903, and was buried at the foot of the peak.

Ramseier Glacier 80°30'S., 156°18'E.

Steep cirque-type glacier, 5 mi. long, flowing SW. to enter Byrd Gl. immediately E. of Mt. Rummage. Named by the US-ACAN for René O. Ramseier, glaciologist at McMurdo and South Pole Stations, 1960-61 and 1961-62 seasons.

Ramsey Cliff 83°28'S., 54°09'W.

A rock cliff along Torbert Escarpment, standing 2 mi. NE. of Mt. Torbert in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Robert E. Ramsey, storekeeper at Ellsworth Station, winter 1958.

Ramsey Glacier 84°24'S., 179°20'E.

Glacier about 45 mi. long, originating in the Bush Mtns. near the edge of the polar plateau and flowing N. to the Ross Ice Shelf eastward of Den Hartog Peak. Discovered by the USAS on Flight C of February 29-March 1, 1940, and named by US-ACAN, on the recommendation of R. Adm. Byrd, for Adm. DeWitt C. Ramsey, USN, Vice Chief of Naval Operations during USN Op. Hjp., 1946-47.

Rancho Point 62°58'S., 60°30'W.

Conspicuous rock headland, 170 m., marking the E. extremity of Deception I., in the South Shetland Islands. It rises from the sea to become a large rock which, because of its shape, has received the name. The name was proposed by the commander of the Argentine ship *Granville* in the year 1947 through having observed, by chance, that the feature resembles a hut with a double-pitched roof.

Randall Ridge 71°44'S., 64°38'W.

An arc-shaped rock ridge at the N. side of the Guthridge Nunataks, in the Gutenko Mtns. of central Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN after Robert H. Randall (1890-1966), Assistant on Cartography with the U.S. Bureau of the Budget in the Executive Office of the President, with responsibility for coordinating the mapping activities of the Government, 1941-60. In 1954 he set up the Technical Advisory Committee on Antarctic Mapping that established a mapping program for Antarctica based on the best technical methods.

Randall Rocks 68°11'S., 67°17'W.

Group of rocks situated 0.5 mi. off the SW. corner of Millerand I. and trending in a NW.-SE. direction for 1 mi., lying in Marguerite Bay off the W. coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948-49 by the FIDS and named for Terence M. Randall, FIDS radio operator at Stonington I., 1947-49.

Random Hills 74°07'S., 164°25'E.

A group of rugged hills, bounded on the W. by Campbell Gl. and on the E. by Tinker Gl. and Wood Bay, centered about 15 mi. NNW. of Mt. Melbourne, in Victoria Land. Named by the Southern Party of the NZGSAE, 1966-67, because of the random orientation of the ridges which comprise the feature.

Ranfurly Point 84°50'S., 169°36'E.

A low rocky point marking the convergence of the Beardmore and Keltie Glaciers, at the northern extremity of Supporters Range. Named by D. B. Rainey, Cartographic Branch of the Department of Lands and Survey, N.Z., for Lord Ranfurly, Governor of N.Z., 1897-1904.

Rankine Rock 82°24'S., 50°35'W.

A rock lying 1 mi. N. of Cox Nunatak at the N. extremity of Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for David F. Rankine, Jr., photographer with USN Squadron VX-6 during Operation Deep Freeze 1964.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rankin Glacier 71°41'S., 62°15'W.

A glacier about 12 mi. long on the E. side of Palmer Land. It flows SE. and then E. along the S. side of Schirmacher Massif to join the Cline Glacier just inland from the head of Odom Inlet. Mapped by USGS in 1974. Named by US-ACAN for John S. Rankin, USARP biologist on the International Weddell Sea Oceanographic Expeditions, 1968 and 1969.

Ranney Nunatak 76°53'S., 143°55'W.

A nunatak in the SW. extremity of Gutenko Nunataks, in the Ford Ranges of Marie Byrd Land. First mapped by the USAS, 1939-41. Named by US-ACAN for Charles R. Ranney, ionospheric physicist at Byrd Station, 1969.

Ranvik 54°48'S., 36°15'W.

Cove 3.5 mi. SE. of Diaz Cove along the S. coast of South Georgia. Surveyed by the SGS in the period 1951-57. The name is well established in local use.

Ranvika 68°44'S., 90°30'W.

A cove indenting the E. coast of Peter I Island near the NE. corner of the island. Discovered in 1927 by a Norwegian expedition under Eyvind Tofte in the *Odd I*. They applied the name, perhaps after the estate of Lars Christensen, sponsor of the expedition, situated at the head of Ranvik, a bay in Norway.

Ranvik Bay 69°00'S., 77°40'E.

An open bay 15 mi. wide, lying southward of Rauer Islands in the southeast part of Prydz Bay. Discovered and charted in February 1935 by a Norwegian expedition led by Capt. Klarius Mikkelsen in the *Thorshavn*. Named after the estate of Lars Christensen, sponsor of the expedition, situated at the head of Ranvik, a bay in Norway.

Ranvikbreen: see Ranvik Glacier 69°10'S., 77°40'E.

Ranvik Glacier 69°10'S., 77°40'E.

A broad glacier flowing into the southern part of Ranvik Bay in the southeast part of Prydz Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37), and named Ranvikbreen (Ranvik Glacier) for its association with Ranvik Bay.

Ranvik Ice Tongue: see Ranvik Glacier 69°10'S., 77°40'E.

Ranvik Island 68°54'S., 77°50'E.

A rocky island, 1.5 mi. long, which is the largest island in the southern part of the Rauer Islands. It lies at the northern end of Ranvik Bay, about 3 mi. NW. of Browns Glacier. Mapped by Norwegian cartographers,

as being connected to the mainland, from air photos taken by the Lars Christensen Expedition (1936-37). They gave the name "Ranviktangen" (the Ranvik tongue) because of its association with Ranvik Bay. The US-ACAN has approved John H. Roscoe's 1952 recommendation that the Norwegian name be amended to Ranvik Island. Roscoe's examination of this area in air photos taken by USN Operation High-jump (1946-47) determined that the feature described is actually separated from the mainland.

Ranviktangen: see Ranvik Island 68°54'S., 77°50'E.

Rara, Punta: see Moody Point 63°18'S., 55°01'W.

Rare Range 74°24'S., 64°05'W.

A rugged mountain range between the Wetmore and Irvine Glaciers, in Palmer Land. Discovered and photographed from the air by the Ronne Antarctic Research Expedition, 1947-48. Named by US-ACAN (using the initials of the Ronne expedition) in recognition of the contributions made by this expedition to knowledge of Palmer Land and the Antarctic Peninsula area.

Rasmussen, Cape: see Rasmussen Island 65°15'S., 64°05'W.

Rasmussen Island 65°15'S., 64°05'W.

Small island in the N. part of Waddington Bay, on the W. coast of Graham Land. The N. entrance to Waddington Bay was named "Cap Rasmussen" by the BelgAE, 1897-99, under Gerlache, but air photos show no significant point there which can be reidentified without ambiguity. To preserve the original name in the vicinity, the UK-APC in 1959 applied the name Rasmussen to this island.

Rassa Point: see Rossa Point 65°57'S., 65°14'W.

Rastorfer Glacier 71°50'S., 167°06'E.

Glacier draining S. from the Admiralty Mtns. and entering upper Tucker Glacier just E. of Homerun Range. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for James R. Rastorfer, USARP biologist at McMurdo Station in 1967-68 and Palmer Station in 1968-69.

Rastorguev Glacier 70°57'S., 163°30'E.

Large tributary glacier which drains the E. slopes of the Explorers Range between Mounts Ford and Sturm and joins Lillie Glacier via Flensing Icefall. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Vladimir I. Rastorguev, Soviet IGY observer, a Weather Central meteorologist at Little America V in 1957.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rath, Mount 74°19'S., 62°30'W.

A mountain 6 mi. NNE. of Mt. Owen, in the Hutton Mtns., Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Arthur E. Rath, electronics technician at South Pole Station in 1964.

Rathbone Hills 71°39'S., 64°48'W.

A line of low hills or nunataks, 14 mi. long and trending E.-W., located 4 mi. N. of Guthridge Nunataks in the Gutenko Mountains of central Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Maj. David L. Rathbone, USMC, Commander of LC-130 aircraft in USN Squadron VXE-6 during Operation Deep Freeze, 1970 and 1971.

Ratliff, Mount 85°42'S., 137°00'W.

Mountain, 2,520 m., located N. of Watson Escarpment and 8 mi. NNE. of Mt. Doumani. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Charles E. Ratliff, aviation machinist mate with USN Squadron VX-6 in several Operation Deep Freeze deployments, 1963-67.

Räuberhöhle: see Røver Anchorage 54°27'S., 3°21'E.

Raudbergdalen: see Raudberg Valley 72°39'S., 3°26'W.

Raudberget 72°38'S., 3°30'W.

A prominent mountain just NE. of Hogskavlen Mtn. in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Raudberget (the red mountain).

Raudberg Pass 72°38'S., 3°22'W.

A pass between Kulen Mtn. and Raudberget in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named for its proximity to Raudberget.

Raudbergpasset: see Raudberg Pass 72°38'S., 3°22'W.

Raudberg Valley 72°39'S., 3°26'W.

The main ice-filled valley, about 20 mi. long, extending northeastward through the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named for its proximity to Raudberget.

Rauer Group: see Rauer Islands 68°51'S., 77°50'E.

Rauer Islands 68°51'S., 77°50'E.

A group of rocky coastal islands which lie between Sørsdal Glacier Tongue and Ranvik Bay, in the SE.

part of Prydz Bay. Discovered and roughly charted in February 1935 by a Norwegian expedition under Capt. Klarius Mikkelsen. He named them Rauer, probably after the island lying in Oslofjorden opposite Tønsberg, Norway.

Ravelin Ridge 61°11'S., 54°05'W.

A ridge which extends N.-S. almost the length of Clarence I., South Shetland Islands. UK-APC applied the name in 1971 following mapping by the Joint Services Exp., 1970-71. The feature resembles a fortification, hence the name ravelin.

Ravel Peak 69°45'S., 71°17'W.

Peak, 1,250 m., surmounting the S. part of Debussy Heights in the N. part of Alexander Island. The peak is markedly pyramid shaped when seen from the east. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Maurice Ravel (1875-1937), French composer.

Ravin Bay 66°32'S., 138°27'E.

Small bay between Cape Pépin and the point where Français Gl. discharges into the sea. Disc. in 1840 by a Fr. exp. under D'Urville and named by him for the aspect of the coast, "ravin" being French for ravine.

Ravins, Baie des: see Ravin Bay 66°32'S., 138°27'E.

Ravn Rock 63°00'S., 60°34'W.

Submerged rock lying in the center of Neptunes Bel-lows, the entrance to Port Foster, Deception I., in the South Shetland Islands. Charted by the FrAE under Charcot, 1908-10. Named for the whale catcher *Ravn*, based at Deception I. at that time.

Rawle Glacier 71°50'S., 164°40'E.

A tributary glacier in the Concord Mtns., flowing NW. between Leitch Massif and King Range into the Black Glacier. Named by the northern party of NZGSAE, 1963-64, for Russell Rawle, leader at Scott Base, 1964.

Rawson, Mount: see Rawson Plateau 85°52'S., 164°45'W.

Rawson Mountains 86°43'S., 154°40'W.

A crescent-shaped range of tabular, ice-covered mountains including Fuller Dome, Mt. Wyatt and Mt. Ver-lautz, standing SE. of Nilsen Plateau and extending SE. for 18 mi. to the W. side of Scott Glacier. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for Frederick H. Rawson, American banker and contributor to the Byrd Antarctic Expeditions of 1928-30 and 1933-35.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rawson Plateau 85°52'S., 164°45'W.

An ice-covered plateau, 15 mi. long and 3,400 m. high, rising between the heads of the Bowman, Moffett and Steagall Glaciers in the Queen Maud Mountains. Mapped by the ByrdAE, 1928-30, and by the USGS from surveys and USN air photos, 1960-64. Named for Kennett L. Rawson, a contributor to the ByrdAE, 1928-30, and a member of the ByrdAE, 1933-35.

Ray, Mount 85°07'S., 170°48'W.

A peak, 3,905 m., standing 1.5 mi. SE. of Mt. Fisher in the Prince Olav Mountains. Named by US-ACAN for Carleton Ray, USARP zoologist at McMurdo Station in the 1963-64, 1964-65, and 1965-66 summer seasons.

Raymond, Mount 85°53'S., 174°43'E.

A rock peak, 2,820 m., standing on the southernmost ridge of the Grosvenor Mtns., 2.5 mi. SE. of Mt. Cecily. Discovered by Shackleton of the BrAE (1907-9), who named this feature for his eldest son. The position agrees with that shown on Shackleton's map, but the peak does not lie in the Dominion Range as he thought, being separated from that range by Mill Glacier.

Raymond Fosdick Mountains: see Fosdick Mountains 76°32'S., 144°45'W.

Raymond Fosdick Range: see Fosdick Mountains 76°32'S., 144°45'W.

Rayner Glacier 67°40'S., 48°25'E.

Prominent glacier, 10 mi. wide, flowing N. to the coast of Enderby Land just W. of Condon Hills. Sighted in October 1956 by Squadron Leader D. Leckie during a flight in an ANARE Beaver aircraft. Named by ANCA for J. M. Rayner, Dir. of the Bureau of Mineral Resources in the Australian Dept. of National Development.

Rayner Peak 67°24'S., 55°56'E.

Prominent peak, 1,270 m., standing 35 mi. SW. of the head of Edward VIII Bay and 2 mi. W. of Robert Glacier. Disc. in February 1936 by DI personnel on the *William Scoresby*, and named for George W. Rayner, zoologist on the DI staff and leader of the expedition.

Rayner Point 60°39'S., 45°10'W.

Point marked by a rocky peak forming the N. side of the entrance to Gibbon Bay on the E. coast of Coronation I., in the South Orkney Islands. Charted in 1912-13 by Capt. Petter Sørille, a Norwegian whaler. Recharted in 1933 by DI personnel on the *Discovery II* and named for George W. Rayner, member of the zoological staff of the Discovery Committee.

Ray Nunatak 83°28'S., 51°58'W.

A nunatak, 1,630 m., located just N. of Beiszer Nunatak and 5 mi. SW. of Dyrdal Peak in southern Forrester Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for James A. Ray, utilities man at Ellsworth Station, winter 1957.

Razlom Point 70°00'S., 12°52'E.

An ice point at the W. edge of Lazarev Ice Shelf, about 2 mi. N. of Leningradskiy Island, Queen Maud Land. Mapped by the SovAE in 1959 and named Mys Razlom (breach point) because there is a large old break in the ice shelf nearby.

Razorback, Mount 76°50'S., 161°18'E.

The prominent mountain, just E. of Staten Island Heights, on the ridge dividing the NW. and SW. sources of the Benson Glacier in Victoria Land. The descriptive name was applied by the 1957 N.Z. Northern Survey Party of the CTAE, 1956-58.

Razorback Island: see Little Razorback Island 77°40'S., 166°31'E.

Razorback Island: see Big Razorback Island 77°41'S., 166°30'E.

Razor Point 54°04'S., 37°08'W.

Point lying SW. of Point Abrahamsen on the N. side of Prince Olav Hbr., South Georgia. The name appears on a 1938 British Admiralty chart.

Razumovskiy, Mount 71°29'S., 12°43'E.

A high peak, 2,285 m., on the S. part of Deildegasten Ridge in the Östliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet geologist N. K. Razumovskiy, 1893-1967.

Razumovskogo, Gora: see Razumovskiy, Mount 71°29'S., 12°43'E.

Rea, Mount 77°04'S., 145°30'W.

Prominent rock mountain with an imposing monolith on its W. side called The Billboard, standing between Arthur and Boyd Glaciers in the Ford Ranges, Marie Byrd Land. Discovered by the ByrdAE on the Eastern Flight of Dec. 5, 1929, and named by Byrd for Mr. and Mrs. Rea, of Pittsburgh, Pa., contributors to the expedition.

Reade Peak 65°06'S., 63°29'W.

Peak, 1,060 m., rising 1 mile S. of Sonia Pt. and Flandres Bay, on the W. coast of Graham Land.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Joseph B. Reade (1801-1870), English pioneer of photography, who obtained photographs on paper coated with silver nitrate, developed with gallic acid and fixed with hyposulphate of soda, in 1837.

Read Mountains 80°42'S., 24°45'W.

Group of rocky summits, the highest 1,830 m., lying E. of Glen Gl. in the south-central part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Prof. Herbert H. Read, Chairman of the Scientific Committee and member of the Committee of Management of the CTAE, 1955-58.

Real, Bahía: see Royal Bay 54°32'S., 36°00'W.

Rea Peak 62°01'S., 58°09'W.

Peak, 590 m., lying nearly 2 mi. NE. of Rose Peak and 1.5 mi. NW. of Mt. Hopeful in the central part of King George I., in the South Shetland Islands. Named by the UK-APC in 1960 for Henry Rea, Master of the Enderby Brothers' schooner *Hopeful*, which sailed from London in 1833 in company with the tender *Rose* to continue John Biscoe's Antarctic researches. The Antarctic voyage was abandoned after the *Rose* had been crushed in the pack ice in 60°17'S., 53°26'W., December 1833 or January 1834.

Rea Rocks 77°05'S., 145°10'W.

A group of rocks in the middle of Arthur Glacier, 6 mi. E. of Mount Rea, in the Ford Ranges of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for construction electrician Peter C. Rea, USN, of the Byrd Station, 1967.

Rebholz Nunatak 74°05'S., 100°13'W.

Isolated nunatak just N. of the Hudson Mtns., located 8 mi. NNW. of Teeters Nunatak. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-66. Named by US-ACAN for Maj. Edward Rebholz, operations officer of the U.S. Army Aviation Detachment which supported the Ellsworth Land Survey, 1968-69.

Rebuff Glacier 73°58'S., 163°12'E.

A tributary glacier descending from the Deep Freeze Range and entering Campbell Gl. 4 mi. SE. of the summit of Mt. Mankinen, in Victoria Land. Named by the northern party of NZGSAE, 1962-63, because the party was prevented from getting access to it.

Recely Bluff 73°10'S., 125°46'W.

A snow and rock bluff on the NE. slope of Mount Siple on Siple Island. The bluff is 7 mi. NE. of the summit of

the mountain. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959-65. Named by US-ACAN for Frank J. Recely, Jr., USARP ionospheric physicist at Byrd Station in 1965.

Recess Cove 64°30'S., 61°32'W.

Cove 2.5 mi. wide in the E. side of Charlotte Bay, along the W. coast of Graham Land. Surveyed by the FIDS from the *Norsel* in 1955. So named by the UK-APC in 1956 because this cove forms a recess in the side of Charlotte Bay.

Recess Nunatak 76°31'S., 144°17'W.

A small but conspicuous nunatak 1 mi. W. of Mt. Perkins, in the Fosdick Mtns. of the Ford Ranges, Marie Byrd Land. Mapped by the USAS (1939-41). Later mapped by USGS from surveys and U.S. Navy air photos (1959-65). So named by US-ACAN because the nunatak is recessed in the ice at the base due to windscooping.

Reckling Peak 76°16'S., 159°15'E.

An isolated peak, 2,010 m., which surmounts the central part of a ridge located at the icefalls at the head of Mawson Glacier. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for Lt. Cdr. Darold L. Reckling, pilot with U.S. Navy Squadron VX-6, 1961.

Reclus, Cape: see Reclus Peninsula 64°33'S., 61°47'W.

Recluse Nunatak 70°18'S., 70°32'W.

Isolated rock exposure on Handel Ice Piedmont, midway between Haydn Inlet and Colbert Mtns. in the W.-central part of Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. The name given by the UK-APC suggests the isolated position of the nunatak.

Reclus Peninsula 64°33'S., 61°47'W.

Peninsula 7 mi. long which borders the W. side of Charlotte Bay, on the W. coast of Graham Land. First charted in 1898 by the BelgAE under Gerlache, who named the N. extremity "Cap Reclus" for Elisée Reclus (1830-1905), French geographer and author. The UK-APC extended the name Reclus to the entire peninsula in 1960.

Recoil Glacier 73°46'S., 163°05'E.

A tributary glacier descending from the Deep Freeze Range, south of Mt. Pollock, to the Campbell Glacier, in Victoria Land. Named by the northern party of NZGSAE, 1962-63, because the geologist was said to have "recoiled in disgust" on finding little of geological interest there and not what he expected.

Recovery Bay: see Jacobsen Bight 54°25'S., 36°50'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Recovery Glacier 81°10'S., 28°00'W.

Glacier, at least 60 mi. long and 40 mi. wide at its mouth, flowing W. along the S. side of the Shackleton Range. First seen from the air and examined from the ground by the CTAE in 1957, and so named because of the recovery of the expedition's vehicles which repeatedly broke into bridged crevasses on this glacier during the early stages of the crossing of Antarctica.

Red Bay 68°18'S., 67°11'W.

Small, open bay lying close S. of the W. extremity of Red Rock Ridge, along the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. The bay was resurveyed in 1948-49 by the FIDS, and so named by them for its association with Red Rock Ridge.

Red Buttress Peak 76°49'S., 162°21'E.

A rock peak, 1,060 m., surmounting the bold rock mass between the lower Benson and Hunt Glaciers in Victoria Land. Its E. face is an immense cliff of red granite. Mapped and given this descriptive name by the 1957 N.Z. Northern Survey Party of the CTAE, 1956-58.

Redcastle Ridge 72°26'S., 169°57'E.

A castlelike ridge of red and black volcanic rocks between Arneb Gl. and the terminal face of Edisto Gl. at the head of Edisto Inlet. So named by the NZGSAE, 1957-58, because of its coloring and shape.

Redcliff Nunatak 77°02'S., 162°03'E.

Red granite nunatak, 630 m., rising about 4 mi. E. of Mt. Suess along the S. flank of Mackay Gl., in Victoria Land. Charted by the BrAE, 1910-13, and so named because of its color.

Redcliffs Nunakol: see Redcliff Nunatak 77°02'S., 162°03'E.

Reddick Nunatak 76°17'S., 144°01'W.

A nunatak in the E. part of the Phillips Mtns., 8 mi. ENE. of Mt. Carbone, in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Warren W. Reddick, Jr., construction electrician, USN, at Byrd Station in 1967.

Red Dike Bluff 78°48'S., 162°19'E.

A prominent bluff immediately S. of Trepidation Gl. on the E. side of the Skelton Glacier. The bluff is distinguished by a dike consisting of igneous rock against a black background of the intruded sediments. The descriptive name was given in 1957 by the N.Z. party of the CTAE, 1956-58.

Red Dyke Bluff: see Red Dike Bluff 78°48'S., 162°19'E.

Redfearn Island 68°37'S., 77°53'E.

A small island lying just W. of Warriner Island and 1 mi. off the W. end of Breidnes Peninsula, Vestfold Hills. First plotted as two small islands by Norwegian cartographers working from air photos taken by the Lars Christensen Exp., 1936-37. Replotted as a single island from ANARE air photos of 1957-58. Named by ANCA for H. T. Redfearn, diesel mechanic at Davis Station, 1961.

Redifer, Mount 85°48'S., 160°52'W.

A mountain, 2,050 m., standing 3 mi. S. of Mt. Ellsworth in the Queen Maud Mountains. Mapped by USGS from ground surveys and USN air photos, 1960-64. Named by US-ACAN for Howard D. Redifer, meteorology electronics technician at South Pole Station, 1959.

Red Island 52°58'S., 73°18'E.

Conspicuous red lava island, 95 m. high, which lies 0.5 mi. N. of Laurens Pen., Heard I., and to which it is tied by a low isthmus. The descriptive name was applied by American sealers at Heard I. in the period following their initiation of sealing there in 1855.

Red Island 63°44'S., 57°52'W.

Circular, flat-topped island, 1 mi. in diameter and 495 m. high, with reddish cliffs of volcanic rock, lying 3.5 mi. NW. of Cape Lachman, James Ross I., in Prince Gustav Channel. Disc. and named by the SwedAE under Nordenskjöld, 1901-4.

Redmond Bluff 71°08'S., 167°03'E.

An abrupt east-facing bluff (1,200 m.) standing 2.5 mi. E. of Mt. Dalmeny in the Anare Mountains. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for James R. Redmond, USARP biologist at McMurdo Station, 1967-68.

Redonda, Isla: see Owen Island 61°56'S., 58°26'W.

Redonda, Punta: see Pottinger Point 61°56'S., 58°24'W.

Redondo, Cabo: see Redondo Point 65°12'S., 64°06'W.

Redondo, Islote: see Puget Rock 63°29'S., 55°39'W.

Redondo Point 65°12'S., 64°06'W.

A small point just W. of Blanchard Ridge on the W. coast of Graham Land. The US-ACAN has approved Redondo (round) for this point on the basis of prior

GEOGRAPHIC NAMES OF THE ANTARCTIC

naming on an Argentine chart of 1957. The name "Moot Point" is used for this feature on later British maps.

Redpath Peaks 80°28'S., 81°18'W.

A cluster of low, snow-covered peaks lying 3 mi. SE. of Mt. Shattuck and the Independence Hills, at the S. extremity of the Heritage Range, Ellsworth Mountains. Named by US-ACAN for Bruce B. Redpath, USARP geophysicist on the South Pole-Queen Maud Land Traverse I, 1964-65.

Red Raider Rampart 85°09'S., 173°12'W.

A rugged ice and rock wall just east of the juncture of the Gatlin and McGregor Glaciers, in the Queen Maud Mountains. Named by the Texas Tech Shackleton Glacier Exp. (1964-65) for the student body of Texas Technological College, whose athletic representatives are known as the Red Raiders.

Red Ridge 77°06'S., 162°08'E.

A ridge just W. of Robson Gl. in the Gonville and Caius Range, in Victoria Land. The descriptive name was given by F. Debenham of the BrAE (1910-13) during his plane table survey in 1912.

Red Rock Ridge 68°18'S., 67°08'W.

Conspicuous reddish-colored promontory which rises to 690 m. and projects from the W. coast of Graham Land between Neny Fjord and Rymill Bay. Surveyed in 1936 by the BGLE under Rymill, who so named it because of its color. Further surveys in 1948 by the FIDS have identified this ridge as the feature first sighted in 1909 and named "Ile Pavie" or "Cap Pavie" by the FrAE under Charcot, but the name Red Rock Ridge is now too firmly established to alter. The name Pavie Ridge has been assigned to the prominent rocky ridge at 68°34'S., 66°59'W.

Red Spur 85°57'S., 126°44'W.

A narrow rock spur, 2 mi. long, descending from southern Wisconsin Plateau to Olentangy Glacier 1 mi. north of Tillite Spur. Mapped by USGS from surveys and USN air photos, 1960-64. The name was proposed by John H. Mercer, USARP geologist to this area in 1964-65, because the surface of a flat platform on this spur is weathered bright red.

Reece, Mount 63°50'S., 58°32'W.

Sharp, ice-free peak, 1,085 m., standing 4 mi. W. of Pitt Point. It is the highest point of a ridge forming the S. wall of Victory Gl. on the S. side of Trinity Peninsula. Charted in 1945 by the FIDS and named for Alan Reece, leader of the FIDS Deception I. base in 1945, and meteorologist and geologist at the Hope Bay base in 1946. Reece, a member of the NBSAE, 1949-52,

was killed in an airplane accident in the Canadian Arctic in 1960.

Reecedalen: see Reece Valley 72°41'S., 0°22'E.

Reece Pass 76°32'S., 144°32'W.

A north-south pass just E. of Mounts Colombo and Richardson, in the E. part of the Fosdick Mtns. in the Ford Ranges, Marie Byrd Land. Discovered on aerial flights made from West Base of the USAS (1939-41) and visited by a biological party in 1940. Named for J.A. Reece, radio operator at West Base.

Reece Valley 72°41'S., 0°22'E.

An ice-filled valley between Gavlen Ridge and Nupskåpa Peak, in the S. part of the Sverdrup Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Alan Reece, geologist with the NBSAE (1949-52) and earlier with the FIDS.

Reed, Mount 67°02'S., 51°38'E.

Mountain standing on the N. side of Beaver Gl., 2 mi. E. of Mt. Sones in the Tula Mountains. Plotted from air photos taken by ANARE in 1956. Named by ANCA in 1962 for J. E. Reed, a member of the crew of the *Discovery* during BANZARE, 1929-31.

Reed Nunataks 74°49'S., 161°58'E.

A cluster of nunataks that form a divide between the upper portions of the Reeves and Larsen Glaciers, 6 mi. W. of Hansen Nunatak, in Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1956-62. Named by US-ACAN for David Reed, USGS Topographic Engineer at McMurdo Station, 1964-65.

Reed Ridge 85°02'S., 91°40'W.

A flat-topped, snow-covered ridge extending NW. for 3 mi. from the W. part of the Ford Massif, Thiel Mountains. The ridge forms the W. wall of Compton Valley. Mapped by USGS from surveys and U.S. Navy air photos, 1959-61. Named by US-ACAN for Dale R. Reed, ionospheric scientist at Ellsworth Station in 1958 and Byrd Station in 1960.

Reedy Glacier 85°30'S., 134°00'W.

A major glacier, over 100 mi. long and from 6 to 12 mi. wide, descending from the polar plateau to the Ross Ice Shelf between the Michigan Plateau and Wisconsin Range, and marking the limits of the Queen Maud Mountains on the west and the Horlick Mountains on the east. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Rear Adm. James R. Reedy, USN, Commander, U.S. Na-

GEOGRAPHIC NAMES OF THE ANTARCTIC

val Support Force, Antarctica, from November 1962 until April 1965.

Reef Point 59°27'S., 27°13'W.

Point bounded by a small reef forming the W. end of Cook I. in the South Sandwich Islands. Charted and named in 1930 by DI personnel on the *Discovery II*.

Reek Point 56°16'S., 27°32'W.

A low-lying lava feature forming the N. point of Zavadovski I., South Sandwich Islands. The name given by UK-APC in 1971 refers to the volcanic fumes which are characteristic of this island.

Rees, Mount 76°40'S., 118°10'W.

Mountain located 7 mi. NW. of Mt. Steere in the N. end of Cray Mountains, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Manfred H. Rees, aurora scientist at Byrd Station, 1965-66 season.

Reeve Island 64°55'S., 63°58'W.

Island 1.5 mi. long, lying between Knight and Friar Islands in the Wauwermans Is., in the Wilhelm Archipelago. Shown on an Argentine Govt. chart of 1950. Named by the UK-APC in 1958 after one of the characters in Chaucer's *Canterbury Tales*.

Reeves, Mount 67°07'S., 67°58'W.

Mountain, 1,920 m., immediately NE. of Mt. Bouvier on the E. side of Adelaide Island. First sighted and roughly surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1948 by the FIDS and named by them for Edward A. Reeves, Map-curator and Instructor in Survey at the Royal Geographical Soc., 1900-33.

Reeves, Mount: see Reeves Bluffs 79°36'S., 158°40'E.

Reeves Bluffs 79°36'S., 158°40'E.

A line of east-facing rock bluffs, 8 mi. long, situated 15 mi. W. of Cape Murray in the Cook Mountains. Discovered by the BrNAE (1901-4) under Capt. Robert F. Scott, who gave the name "Mount Reeves," after Edward A. Reeves, Map Curator to the Royal Geographical Society, to a summit along this bluff. The bluff was mapped in detail by USGS from surveys and U.S. Navy aerial photography (1959-63). Since a prominent mountain does not rise from the bluffs, and because the name Mount Reeves is in use elsewhere in Antarctica, the US-ACAN (1965) recommended that the original name be amended and that the entire line of bluffs be designated as Reeves Bluffs.

Reeves Glacier 74°45'S., 162°15'E.

A broad glacier originating on the interior upland and descending between Eisenhower Range and Mt. Lar-

sen to merge with the Nansen Ice Sheet along the coast of Victoria Land. Discovered and named by the BrAE, 1907-9, under Shackleton. The NZ-APC reported that the glacier is probably named for William Pember Reeves, former New Zealand Liberal Cabinet Minister, and the Agent-General for New Zealand in London, 1896-1909.

Reeves Névé 74°25'S., 160°00'E.

An extensive névé lying westward of Eisenhower Range in Victoria Land. Reeves Glacier, which drains southeastward to the coast, has its source in this névé. Named by the NZ-APC in association with Reeves Glacier.

Reeves Peninsula 77°24'S., 152°20'W.

A snow-covered peninsula along the N. side of Edward VII Peninsula. It extends between the lower ends of the Dalton and Gerry Glaciers into southern Sulzberger Bay. This area was explored from the air and rudely mapped by the ByrdAE, 1928-30. The peninsula was mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN, at the suggestion of Adm. R.E. Byrd, for John M. Reeves (of Reeves Brothers, Inc.) who assisted the ByrdAE of 1928-30 and 1933-35 with contributions of sheepskin-lined coats, and by the development and donation of windproof material for cold weather clothing.

Reference Island: see Reference Islands 68°12'S., 67°10'W.

Reference Islands 68°12'S., 67°10'W.

Rocky islands 2 mi. WNW. of the W. tip of Neny I. and 1.5 mi. SE. of Millerand I., lying in Marguerite Bay off the W. coast of Graham Land. First roughly charted in 1936 by the BGLE under Rymill. The islands were surveyed by the FIDS in 1947, and so named by them because they served as a convenient reference point for survey work.

Reference Peak 67°15'S., 50°29'E.

Roughly conical peak, 1,030 m., with a steep face to the W. near its crest, lying 3 mi. S. of Amundsen Bay between Mounts Weller and Hollingsworth. Viewed from the N. it presents a sharp peak with smooth, clear-cut sides. Sighted in October 1956 by an ANARE party and so named because the peak was used as a reference point for magnetic observations at Observation Island.

Referring Peak 76°56'S., 161°51'E.

Conspicuous black peak over 1,200 m., standing on the N. side of Mackay Gl. about 1.5 mi. W. of the mouth of Cleveland Gl., in Victoria Land. Charted and named by the BrAE, 1910-13. The name suggests the

ANTARCTIC

by Norwegian cartographers from surveys photos by the NorAE (1956-60) and named gen (the calf).

Glacier 68°20'S., 66°43'W.
8 mi. long, which flows from the N. slopes of a northwestward along the NE. side of the ll Mtns. into Providence Cove, Neny Fjord, on coast of Graham Land. The lower reaches of ier were first roughly surveyed in 1936 by the nder Rymill. Resurveyed in 1948-49 by the ho so named it for its association with Romu- whose head lies near the head of this glacier.

Glacier: see Renegar Glacier 78°22'S., 'E.

l, Cape 65°01'S., 63°47'W.
orming the S. side of the entrance to Flandres id separating the Danco and Graham Coasts on . coast of Antarctic Peninsula. Disc. in 1898 by lgAE under Gerlache and named by him for sor A. Renard, a member of the *Belgica* Commis- nd of the Belgian Royal Academy.

rd Glacier 64°40'S., 61°38'W.
er flowing into the southernmost part of Char- Bay, on the W. coast of Graham Land. Charted e BelgAE under Gerlache, 1897-99. Named by UK-APC in 1960 for Charles Renard (1905), who, with A. C. Krebs, constructed and the first dirigible airship capable of steady flight r control, in 1884.

aud Glacier 67°43'S., 65°35'W.
eavily crevassed glacier flowing SE. to enter Selig- Inlet between Lewis Gl. and Choyce Pt., on the oast of Graham Land. The glacier was first photo- shed by the USAS, 1939-41. Named by UK-APC André Renaud, Swiss glaciologist and chairman of Swiss Glacier Commission, 1955-74.

naud Island 65°40'S., 66°00'W.
-covered island, 25 mi. long and from 4 to 10 mi. le, lying between the Pitt Is. and Rabot I. in the coe Islands. The island was first charted and named the FrAE, 1908-10, under Charcot.

ndezvous Bluff: see Discovery Bluff 77°01'S., 2°37'E.

endu, Mount 67°26'S., 67°04'W.
mountain between Reid Gl. and Heim Gl. on Ar- owsmith Pen. in Graham Land. Mapped by FIDS om surveys and air photos, 1948-59. Named by UK- PC for Louis Rendu (1789-1859), French Bishop

Reichelderfer, Cape 69°22'S., 62°43'W.
Rounded, mainly ice-covered headland 4 mi. E. of De- Busk Scarp, lying at the W. side of Stefansson Strait on the E. coast of Palmer Land. This cape was seen by Sir Hubert Wilkins who explored this coast on his aerial flight of Dec. 20, 1928. It was charted in 1940 by the USAS and erroneously called Cape Rymill at that time. Resighted in 1947 by the RARE under Ronne who named it for Francis W. Reichelderfer, Chief of the U.S. Weather Bureau.

Reid, Mount 83°03'S., 166°01'E.
A prominent, mainly ice-free mountain, 3,315 m., standing just E. of the head of Cleaves Gl. in the Hol- land Range, Discovered by the BrAE (1907-9) and named for Alfred Reid, manager of the expedition.

Reid Glacier 66°30'S., 98°40'E.
Steep glacier descending between Melba and Davis Peninsulas to the Shackleton Ice Shelf. Disc. in November 1912 by the Western Base Party of the AAE, 1911-14, and named for Sir George Reid, Australian High Commissioner in London in 1911.

Reid Glacier 67°29'S., 67°16'W.
Glacier, 1.5 mi. wide and 8 mi. long, which flows S. to enter Bigourdan Fjord opposite The Narrows, on the W. coast of Graham Land. First roughly charted by the BGLE, 1934-37, under Rymill. The lower reaches of the glacier were surveyed in 1948-49 by the FIDS, and named by them for Harry F. Reid (1859-1944), prof. of geology at Johns Hopkins Univ., Baltimore, noted for his studies of glacier flow and stratification in Alaska and the Alps.

Reidholmen: see Reid Island 60°41'S., 45°30'W.

Reid Island 60°41'S., 45°30'W.
Island at the E. side of the entrance to Iceberg Bay, along the S. coast of Coronation I. in the South Ork- ney Islands. The name "Reidholmen" appears in this location for a small group of islands on a chart drawn by Capt. Petter Sørille in 1912-13. Survey by the FIDS in 1948-49 determined that only a single island exists.

Reid Ridge 76°57'S., 160°23'E.
Narrow rock ridge at the W. side of the mouth of Cam- bridge Gl. in Victoria Land. Named by US-ACAN in 1964 for John R. Reid, Jr., glaciologist at Little Amer- ica V in 1959-60.

Reid Spur 84°46'S., 178°30'E.
A spur, 5 mi. long, in the Queen Maud Mtns., de- scending N. along the E. side of Ramsey Gl. from an

GEOGRAPHIC NAMES OF THE ANTARCTIC

and scientist, author of *Théorie des glaciers de la Savoie*, an important book on the mechanism of glacier flow.

Renegar Glacier 78°22'S., 163°08'E.

A steep glacier flowing SE. from Mt. Dromedary into Koettlitz Glacier. Mapped by USGS from ground surveys and U.S. Navy air photos, 1956-62. Named by US-ACAN for Lt. Garland Renegar, USN, R4D aircraft pilot at McMurdo Station, 1960.

Renier, Cap: see Renier Point 62°37'S., 59°48'W.

Renier Point 62°37'S., 59°48'W.

Narrow point forming the E. extremity of Livingston I., in the South Shetland Islands. The feature was known to sealers as Point Renier as early as 1821. The name Pin Point, given by DI personnel on the *Discovery II* in 1935, has been rejected in favor of the original name.

Renirie Rocks 71°20'S., 161°20'E.

An elliptical rock outcrop 1.5 mi. long at the W. side of the terminus of Gressitt Glacier, 10 mi. NW. of Morozumi Range. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Jack Renirie, USARP Public Information Officer at McMurdo Station in at least five austral summer seasons, 1962-63 through 1970-71.

Rennell Glacier 79°23'S., 84°12'W.

A glacier, 10 mi. long, in the Pioneer Heights, Heritage Range. It drains NW., to the E. of Inferno Ridge, to join Splettstoesser Glacier. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for K. P. Rennell, biologist with the party.

Renner Peak 70°21'S., 67°50'W.

The dominant peak on the small mountain mass between Chapman and Naess Glaciers on the west coast of Palmer Land. Named by UK-APC for Robert G. B. Renner, BAS geophysicist at Stonington Island, 1963-65.

Rennick Bay 70°06'S., 161°20'E.

An embayment of the coastline at the terminus of Rennick Glacier. It is bounded on the west and east by Belousov Point and Stuhlinger Ice Piedmont. The eastern part of the bay was discovered from the ship *Terra Nova*, of the BrAE (1910-13) under Scott. Named by the BrAE for Lt. Henry E. de P. Rennick, RN, an officer on the *Terra Nova*. The bay was photographed by USN Op. Hjp. (1947) and by the SovAE (1958).

Rennick Glacier 70°30'S., 160°45'E.

A broad glacier, nearly 200 miles long, which is one of the largest in Antarctica. It rises on the polar plateau

westward of Mesa Range and is 20 to 30 miles wide, narrowing to 10 miles near the coast. It takes its name from Rennick Bay where the glacier reaches the sea. The seaward part of the glacier was photographed by USN Operation Highjump, 1946-47. In early 1960, Lt. Cdr. Robert L. Dale, pilot of USN Squadron VX-6, evacuated the USARP Victoria Land Traverse from 72°38'S., 161°32'E., on this glacier, from where an aerial photographic reconnaissance was made to Rennick Bay on the coast.

Rennick Névé 73°10'S., 160°20'E.

The névé at the head of Rennick Glacier in Victoria Land. Named by the NZ-APC in about 1966 in association with Rennick Glacier.

Rennie, Mount 64°41'S., 63°35'W.

Snow-covered mountain, 1,555 m., forming the central part of the ridge which extends southwestward from Mt. Français, in the S. part of Anvers I. in the Palmer Archipelago. Roughly surveyed by the FIDS in 1944 and resurveyed by them in 1955. Named by the UK-APC for Alexander J. Rennie of FIDS, assistant surveyor at the Arthur Harbor station in 1955.

Renouard, Mount 67°00'S., 52°26'E.

Mountain 3 mi. S. of Mt. Keyser, in the E. part of the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for H. E. von Renouard, weather observer at Mawson Station in 1961.

Röpke, Gora: see Iskollen Hill 72°51'S., 4°09'W.

Rescapé Islands 66°49'S., 141°22'E.

A small group of rocky islands lying 0.5 mi. northwest of Cape Margerie along Adélie Coast. Surveyed by the FrAE (1949-51) under André Liotard, and named in remembrance of an incident of the disembarkation at nearby Port Martin station, when a ship's boat was carried away by the wind.

Rescate, Roca: see Rescue Rock 54°00'S., 37°14'W.

Rescue Nunatak 69°37'S., 157°27'E.

A nunatak 14 mi. SSE. of Mt. Martyn in southern Lazarev Mountains. The feature lies along the W. side of upper Matusевич Glacier. Plotted by ANARE from photos taken by USN Operation Highjump (1946-47) and ANARE (1959). Visited by NZGSAE (1963-64) who gave the name because of the rescue, in bitter conditions, of a sledge and dogs which had fallen into a nearby crevasse.

Rescue Rock 54°00'S., 37°14'W.

Submerged rock marked by breakers, 0.6 mi. NE. of Skua I. in the entrance to the Bay of Isles, South Geor-

GEOGRAPHIC NAMES OF THE ANTARCTIC

gia. Charted in 1930 by DI survey personnel. So named because a whale catcher passing near this rock sighted a flag on Skua I., eventually leading to the rescue of the survey party at Camp Bay where their vessel had run aground.

Resolution Point 59°26'S., 27°07'W.

Point on the NE. side of Cook I. in the South Sandwich Islands. The point was charted in 1930 by DI personnel on the *Discovery II* and named by them for H.M.S. *Resolution*, the ship from which Capt. James Cook disc. these islands in 1775.

Ressac Island 66°42'S., 141°14'E.

Small rocky island 1 mi. E. of Houle I. and 4 mi. NE. of Zélée Glacier Tongue. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE, 1949-51, and so named by them because the surf breaks over the island. "Ressac" is the French word for surf.

Restitution Point 54°04'S., 37°09'W.

Point marking the N. side of the entrance to South Bay in Prince Olav Hbr., on the N. coast of South Georgia. The name Factory Point, derived from the nearby whaling station (now no longer operating), was given for this feature by DI personnel in 1929. There is also a Factory Point at Leith Hbr., less than 20 mi. to the NW. Since Factory Point in Leith Hbr. is better known locally, it has been retained. To avoid confusion the name Factory Point is rejected for the feature now described, and a new name Restitution Point is approved. The S.S. *Restitution*, a floating factory ship, worked for many years at Prince Olav Hbr. before the shore station was built there.

Rethval Point 60°44'S., 45°36'W.

Ice-free point forming the S. side of the entrance to Paal Hbr. on the E. side of Signy I., in the South Orkney Islands. Surveyed in 1933 by DI personnel, and resurveyed in 1947 by the FIDS. Named by the UK-APC in 1954 for the Rethval Whaling Co. of Oslo, the first company to start whaling in the South Orkney Is. in 1911-12.

Retour Island 66°46'S., 141°34'E.

Rocky island 0.7 mi. long, the largest feature in the Curzon Is., lying 0.1 mi. N. of Cape Découverte. Charted in 1951 by the FrAE and so named by them to commemorate the return of French exploring parties to the vicinity.

Retreat, Point 76°55'S., 162°33'E.

A point at the E. extremity of the Kar Plateau, in Granite Harbor, Victoria Land. Named by the BrAE, 1910-13.

Retreat Hills 72°59'S., 165°12'E.

A group of hills at the S. side of the head of Astronaut Gl., along the S. margin of Evans Névé. So named by the Northern Party of NZGSAE, 1962-63, which had hoped to visit the hills, but was forced to beat a hasty retreat due to blizzards.

Retrospect Spur 84°09'S., 173°12'E.

A spur, 7 mi. long, descending NNW. from the base of Separation Range into the E. side of Hood Glacier. So named by the N.Z. Alpine Club Antarctic Exp. (1959-60) because they climbed the spur to obtain a panorama of Hood Gl., which they had just traversed.

Return Point 60°38'S., 46°01'W.

Rocky slope forming the SW. extremity of Coronation I., in the South Orkney Islands. Disc. on Dec. 7, 1821, by Capt. George Powell, British sealer in the sloop *Dove*, and Capt. Nathaniel Palmer, American sealer in the sloop *James Monroe*. Named by Powell who, after making a landing on this point of land, returned directly aboard ship after viewing the coast to the eastward.

Reu, Mount 71°09'S., 65°35'E.

A partly snow-covered mountain about 18 mi. E. of Mt. Hicks in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for R. N. Reu, radio officer at Wilkes Station in 1962.

Reusch Glacier 71°29'S., 169°29'E.

A very small glacier descending into Relay Bay immediately E. of Islands Point, along the N. coast of Victoria Land. First charted by BrAE, 1898-1900, under C. E. Borchgrevink, who named this feature for Prof. H. Reusch, then Pres. of the Norwegian Geographical Society.

Reush Glacier: see Reusch Glacier 71°29'S., 169°29'E.

Reuther Nunataks 79°10'S., 85°57'W.

A ridge-like line of nunataks 4 mi. long, located 3 mi. W. of Landmark Peak in the Founders Peaks, Heritage Range. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for Charles J. Reuther, who served that season as helicopter technical representative with the 62nd Transportation Detachment.

Revelle Bay: see Revelle Inlet 68°40'S., 63°26'W.

Revelle Inlet 68°40'S., 63°26'W.

Broad, ice-filled inlet which recedes W. some 15 mi. between Capes Agassiz and Keeler, along the E. coast of Palmer Land. The inlet lies in the area explored from the air by Sir Hubert Wilkins in 1928 and Lin-

GEOGRAPHIC NAMES OF THE ANTARCTIC

coln Ellsworth in 1935, but it was first charted by the USAS in 1940. It was resighted by the RARE, 1947-48, under Ronne, who named it for Roger Revelle, oceanographer at the Scripps Inst. for Oceanographic Research, who gave technical assistance during the fitting out of the Ronne expedition.

Revsnes Island 69°17'S., 39°37'E.

A distinctive forked island with two branches, lying just off Hamnenabben Head in the E. part of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Revsnes (fox's nose) because of its shape.

Rex, Mount 74°54'S., 75°57'W.

An isolated mountain (1,105 m.) which rises above the interior ice surface of Ellsworth Land about 55 mi. SSE. of FitzGerald Bluffs. Discovered and photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth (*Geographical Review*, July 1936, p. 459, Fig. 16). The feature was resighted by the RARE (1947-48) under Finn Ronne, who named it for Lt. Cdr. Daniel F. Rex, USN, of the Office of Naval Research, who made important contributions to the planning of the scientific research program and the equipping of the expedition.

Rey, Cabo: see King Point 63°09'S., 55°27'W.

Rey, Cape 66°36'S., 66°27'W.

Dark rocky cape between the SW. side of Darbel Bay and the NE. side of Lallemand Fjord, on the W. coast of Graham Land. Disc. by the FrAE, 1908-10, under Charcot, and named by him for Lt. Joseph J. Rey, French Navy, meteorologist of the FrAE under Charcot, 1903-5.

Reyes, Punta: see Jurva Point 65°50'S., 65°49'W.

Reyes, Punta: see Reyes Spit 62°29'S., 59°41'W.

Reyes Spit 62°29'S., 59°41'W.

A narrow shingle spit projecting westward into Discovery Bay from Guesalaga Peninsula, Greenwich Island, South Shetland Islands. The name derives from "Punta Reyes" which appears for a point at the base of the spit, but not for the spit itself, on a Chilean hydrographic chart of 1951. The recommended name, Reyes Spit, recognizes the practical continuity of the point with this shingle spit. Named by the 1947 Chilean Antarctic Expedition for Second Navigation Sergeant Camilo Reyes Ulloa, who had charge of the gyrocompass and other navigation instruments aboard the frigate *Iquique*.

Rey Jorge, Isla: see King George Island 62°00'S., 58°15'W.

Reynolds, Cape 75°25'S., 162°34'E.

A rocky cape marking the S. side of the terminus of David Glacier, on the coast of Victoria Land. Discovered by the BrAE, 1907-9, under Shackleton, who probably named this feature for Jeremiah (John) N. Reynolds, an American who long agitated for exploration of the Antarctic, and who was one of the principal promoters of the U.S. Exploring Exp., 1838-42.

Reynolds, Cape: see Reynolds, Mount 72°42'S., 61°16'W.

Reynolds, Mount 72°42'S., 61°16'W.

Snow-capped mountain, 1,130 m., marked by steep, rocky lower slopes, standing at the S. side of Violante Inlet, on the E. coast of Palmer Land. Disc. by members of the USAS in a flight from East Base on Dec. 30, 1940. Named by the US-SCAN for Jeremiah (John) N. Reynolds, longtime protagonist (1826-38) of American exploration and expansion in the Pacific and the Antarctic.

Reynolds Bench 70°35'S., 63°40'W.

A nearly flat bench, or mesa-like feature, 6 mi. long and 2 mi. wide, that has a smooth, snow-covered surface but has rock outcroppings along its steep sides. The feature stands at the N. side of the Kelley Massif, to which it appears to be joined, along the S. side of the upper Clifford Glacier in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Richard L. Reynolds, geologist with the USGS Lassiter Coast geologic and mapping party in 1970-71.

Reynolds Glacier 77°38'S., 145°55'W.

A glacier 5 mi. long, flowing eastward from the Haines Mtns. along the south side of Keyser Nunatak to enter the Hammond Glacier, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Donald K. Reynolds, ionospheric physicist at Byrd Station, 1967-68 season.

Reynolds Nunatak 85°33'S., 149°40'W.

Nunatak at the S. side of the terminus of Leverett Gl., 12 mi. N. of Mt. Herr. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Clifford E. Reynolds, electrician with the Byrd Station winter party in 1957.

Reynolds Peak 69°16'S., 157°01'E.

A prominent peak (785 m.) rising 6 mi. NW. of Eld Peak on the W. side of Matusевич Glacier. Two conical peaks were sighted in the area from the *Peacock* on Jan. 16, 1840 by Passed Midshipmen William Reynolds and Henry Eld of the USEE (1838-42). The northwestern peak was named for Reynolds by USEE.

GEOGRAPHIC NAMES OF THE ANTARCTIC

leader Lt. Charles Wilkes. In 1959 Phillip Law of ANARE made investigations of features in this area. Reference to Wilkes' narrative showed that the recorded descriptions of the peaks seen by Reynolds and Eld to be in accord with photographs of the peaks on the W. side of Matusевич Glacier. The peak described was selected by Law to commemorate Wilkes' naming.

Reynolds Ridge 75°40'S., 129°19'W.

Rock ridge 1.5 mi. long located 5 mi. NW. of Mt. Flint in the McCuddin Mtns., Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Warren Reynolds, U.S. Dept. of State, who assisted in work on the Antarctic Treaty of 1959.

Reynolds Strait 74°15'S., 132°10'W.

A strait between Forrester Island on the north and Shepard and Grant Islands along the edge of Getz Ice Shelf on the south. The discovery of Forrester Island from USS *Glacier* on Feb. 4, 1962 simultaneously established the existence of the strait, which was then sounded. The name was applied by US-ACAN for Ralph R. Reynolds (1938-73), Lt. Cdr., CEC, USN, who was Officer-in-Charge of the Navy Nuclear Power Unit at McMurdo Station in 1970.

Rhamnus, Mount 68°11'S., 66°50'W.

Mountain, 865 m., which lies 2 mi. NE. of Mt. Nemesis on the N. side of Neny Fjord, Graham Land. Seen from the W., it appears as a mainly snow-covered pyramid. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1947 by the FIDS who named the mountain for its association with Mt. Nemesis. According to the mythological story, the Greek goddess Nemesis had a celebrated sanctuary at Rhamnus in Attica.

Rhea Corner 71°53'S., 68°48'W.

A triangular area of exposed rock on the N. side of Saturn Glacier in southeastern Alexander Island. The feature is a promontory at the W. end of the massif that includes the Deimos, Pagoda and Phobos Ridges. A cliff on the N. face is about 500 m. high. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC in association with Saturn Glacier, Rhea being one of the satellites of Saturn.

Rhino Horn Rock: see Rhino Rock 69°34'S., 62°32'W.

Rhino Rock 69°34'S., 62°32'W.

Prominent black rock with steep sides rising to 700 m., standing 5 mi. SW. of Cape Rymill on the E. coast of Palmer Land. It was named Rhino Horn Rock for its suggestive appearance by members of the East Base of

the USAS who charted the area on land and from the air in 1940, but the name has been shortened to Rhino Rock.

Rhodes, Mount 66°49'S., 51°09'E.

Mountain between Mt. Hampson and Mt. Bond, in the N. part of the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for G. J. Rhodes, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Rhodes Bluff 79°50'S., 83°20'W.

A bare rock bluff 2 mi. NW. of Mt. Dolence, forming the NW. end of Enterprise Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Lt. (j.g.) Joseph J. Rhodes, (CEC) USN, in charge of the maintenance program at McMurdo Station, winter party 1966.

Rhodes Head 74°42'S., 163°03'E.

A prominent headland forming the extremity of McCarthy Ridge on the SE. side of Eisenhower Range, overlooking the Nansen Ice Sheet on the coast of Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Capt. James C. Rhodes, USMCR, an LC-130 aircraft commander with USN Squadron VX-6 for several seasons to 1967.

Rhodes Icefall 74°58'S., 136°25'W.

An icefall draining W. out of McDonald Heights through a breach in the middle of Peden Cliffs. The icefall nourishes the Garfield Gl. near the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for William L. Rhodes, ABH1, USN, Aviation Boatswain's Mate, crash crew leader at Williams Field, McMurdo Sound, during Operation Deep Freeze 1968, 1969 and 1970.

Rhodes Peak 83°20'S., 167°47'E.

A peak, 780 m., standing at the N. side of the mouth of Hoffman Gl., marking the seaward end of the ridge descending E. from Mt. Tripp, Holland Range. Named by US-ACAN for Lt. Cdr. A. G. Rhodes, RNZN, commanding officer of HMNZS *Pukaki*, ocean station ship on duty between New Zealand and McMurdo Sound in 1964 and 1965.

Rho Islands 64°17'S., 63°00'W.

Group of small islands and rocks which lie immediately N. of Lambda I. in the Melchior Is., Palmer Archipelago. The name, derived from the 17th letter of the Greek alphabet, appears to have been first used on

GEOGRAPHIC NAMES OF THE ANTARCTIC

a 1946 Argentine govt. chart following surveys of these islands by Arg. expeditions in 1942 and 1943.

Rhone Glacier 77°42'S., 162°14'E.

Glacier lying W. of Matterhorn Gl. and flowing S. toward the junction of Lake Bonney and Taylor Glacier in Victoria Land. Charted and named by the BrAE under Scott, 1910-13.

Rhyolite Islands 69°40'S., 68°35'W.

Group of islands and rocks which extend 4 mi. in an E.-W. direction, lying close off the W. coast of Palmer Land opposite the N. side of the mouth of Eureka Gl., in George VI Sound. Surveyed in 1948 by the FIDS and so named by them because the islands are largely composed of rhyolite.

Rice Bastion 64°27'S., 60°19'W.

A substantial mountain mass surmounted by a small crown of exposed rock which appears slightly higher than the plateau behind it, projecting from the edge of Detroit Plateau, Graham Land, 8 mi. SW. of Mt. Elliott. Mapped from surveys by FIDS (1960-61). Named by UK-APC for Lee Rice, FIDS surveyor at Hope Bay (1957-58), who worked in this area.

Rice Ridge 73°27'S., 93°50'W.

A low ridge with rocky exposures, 1 mi. long, which extends from the N. side of Anderson Dome in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. Named by US-ACAN for Lt. Cdr. Robert A. Rice, USN, Supply and Fiscal Officer of Mobile Construction Battalion One on USN Op. DFrz. 1962.

Rich, Mount 79°47'S., 158°48'E.

An isolated peak in the Brown Hills, 5 mi. NW. of Diamond Hill. Named by the VUWAE (1962-63) for Charles C. Rich, USARP geologist who served as deputy leader and geologist of the expedition.

Richard Black Coast: see Black Coast 71°45'S., 62°00'W.

Richard d'Abnour, Baie: see D'Abnour Bay 64°16'S., 63°14'W.

Richard Russell, Mount: see Russell, Mount 86°17'S., 149°08'W.

Richards Cove 62°35'S., 61°09'W.

Small cove lying 1 mi. E. of Essex Pt. on the N. coast of Livingston I., in the South Shetland Islands. The name Richards Island was given by James Weddell in 1820-23 to the island close north of this cove, probably for Captain Richards of the sealer *George* of Liverpool who visited the South Shetland Islands in 1820-21.

Since the name Window Island (q.v.) has priority, the name Richards has been transferred to this nearby cove.

Richards Inlet 83°20'S., 168°30'E.

A large ice-filled inlet at the mouth of Lennox-King Gl., opening to the Ross Ice Shelf just SE. of Lewis Ridge. Named by the NZGSAE (1959-60) for R. W. Richards, a member of the Ross Sea Party of Imperial Trans-Antarctic Exp. (1914-17), who assisted in laying depots as far south as Mt. Hope for Shackleton's proposed crossing of Antarctica.

Richards Island: see Window Island 62°34'S., 61°07'W.

Richards Nunatak 75°56'S., 159°45'E.

A large nunatak between McLea Nunatak and Pudding Butte in the Prince Albert Mtns., Victoria Land. Mapped and named by the Southern Party of NZGSAE, 1962-63, for David Richards, radio operator at Scott Base, who shared field party work and was responsible for the training of the base dog team in the absence of the base dog handler.

Richardson, Cape: see Bickerton, Cape 66°20'S., 136°56'E.

Richardson, Mount 76°34'S., 144°39'W.

Peak just W. of Reece Pass and 3 mi. S. of Mt. Colombo in the SE. part of the Fosdick Mtns., in the Ford Ranges of Marie Byrd Land. Discovered on aerial flights from West Base of the USAS (1939-41) and named for Harrison H. Richardson, meteorological observer with the biological party which visited this area in 1940.

Richardson Bluff 70°47'S., 166°20'E.

A steep rock bluff which rises on the E. side of Kirkby Gl. opposite Frecker Ridge, in the Anare Mtns., Victoria Land. Named by ANARE for Sgt. A. Richardson, RAAF, member of the Antarctic Flight which accompanied the ANARE (*Thala Dan*) cruise to this coast, 1962.

Richardson Glacier 70°28'S., 63°42'W.

The broad NW. tributary to the Clifford Glacier, entering it just SE. of Mikus Hill in Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN after Harriet Richardson, French zoologist, author of a number of reports on the Crustacea (Isopoda) collected by the French Antarctic Expeditions of 1903-5 and 1908-10.

Richardson Hill 79°48'S., 156°40'E.

An ice-free hill which rises above the ice of Island Arena on the N. side of the Darwin Mountains.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mapped and named by the VUWAE (1962-63), for Prof. L. R. Richardson of the Victoria University of Wellington, N.Z., an active supporter of the University's Antarctic expeditions.

Richardson Lakes 66°45'S., 50°38'E.

Small group of meltwater lakes at the foot of Mt. Riiser-Larsen on the NW. side, close E. of Amundsen Bay. Photographed in 1956 by ANARE aircraft and first visited in November 1958 by an ANARE party led by G. A. Knuckey. Named for Sgt. A. K. Richardson, RAAF, a member of the 1958 Antarctic Flight at Mawson Station.

Richardson Nunatak: see Richardson Hill 79°48'S., 156°40'E.

Richardson Nunatak 66°22'S., 64°56'W.

Nunatak in the southern part of Hugi Gl., in Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for E. C. Richardson (1871-1954), the "father of British skiing," one of the principal founders and first secretary of the Ski Club of Great Britain.

Richmond Peak 75°48'S., 115°49'W.

The central and culminating peak (3,595 m.) of the Toney Mountain massif in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-71. Named by US-ACAN for Addison E. Richmond, Jr., of the U.S. Dept. of State, Chairman of the Interagency Committee on Antarctica, 1971-72.

Richter Glacier 77°10'S., 155°25'W.

A low gradient coastal glacier located 10 mi. W. of Scott Nunataks on the N. side of Edward VII Peninsula. The feature saddles with the Butler Glacier and flows NW. to the sea where it forms a small tongue. The glacier and tongue are depicted on the map of the ByrdAE, 1928-30. The map indicates that the landing party from the *Kainan Maru* (Shirase) traversed up this glacier to the summit of Scott Nunataks in January 1912. The glacier was mapped in detail by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Gregory S. Richter, meteorologist and scientific leader of the Byrd Station winter party in 1968.

Richthofen Pass 66°01'S., 62°42'W.

Pass, 1 mi. wide, between Mt. Fritsche and the rock wall N. of McCarroll Peak, on the E. coast of Graham Land. Disc. and photographed in 1902 by the SwedAE under Nordenskjöld, who named it Richthofen Valley for Baron Ferdinand von Richthofen, German geographer and geologist. The feature was found to be a pass by the FIDS in 1955.

Richthofen Sund: see Richthofen Pass 66°01'S., 62°42'W.

Richthofen Tal: see Richthofen Pass 66°01'S., 62°42'W.

Richthofen Valley: see Richthofen Pass 66°01'S., 62°42'W.

Ricker Canyon 84°47'S., 115°18'W.

A steep-sided, ice-filled canyon that indents the N. escarpment of Buckeye Table between Darling Ridge and Schulthess Buttress, in the Ohio Range, Horlick Mountains. Named by US-ACAN for John F. Ricker, geologist with the Ohio State University expedition to the Horlick Mountains in 1961-62.

Ricker Dome 82°04'S., 162°43'E.

Snow-free summit, 1,720 m., standing 3 mi. E. of Smith Bluff in the Nash Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Karl E. Ricker, USARP biologist at McMurdo Sound, 1961.

Ricker Hills 75°41'S., 159°10'E.

A group of mainly ice-free hills, about 9 mi. long, lying just W. of Hollingsworth Gl. in the Prince Albert Mtns., Victoria Land. Mapped and named by the Southern Party of the NZGSAE, 1962-63, for J. F. Ricker, a geologist with the party.

Ricker Peak: see Ricker Hills 75°41'S., 159°10'E.

Rickmers Glacier 66°15'S., 64°55'W.

Glacier flowing into Hugi Gl. just S. of Caulfeild Gl., on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for W. Rickmer Rickmers, German pioneer exponent of skiing and joint author of the first English manual on skiing. He also improved the design of ice axes, introducing the characteristic shape still in use.

Ricky Glacier: see Blackwelder Glacier 77°56'S., 164°12'E.

Riddell Nunataks 69°54'S., 64°20'E.

Group of low exposed rock ridges, with snow and ice nearly extending to the summits, lying 5 mi. NW. of Anare Nunataks in Mac. Robertson Land. Discovered by an ANARE party led by R. G. Dovers in 1954. Named for Alfred Riddell, carpenter at Mawson Station in 1955.

Riddle Islands 65°39'S., 64°33'W.

Small group of islands lying off the SW. end of Chavez I., off the W. coast of Graham Land. First charted by

GEOGRAPHIC NAMES OF THE ANTARCTIC

the BGLE under Rymill, 1934-37. The name arose locally in August 1957 because these islands were difficult to find among the icebergs frozen in the surrounding sea ice.

Riddolls, Mount 72°48'S., 167°46'E.

A very prominent mountain (3,295 m.) situated directly at the head of Rudolph Glacier in the Victory Mtns. of Victoria Land. Named by the Mariner Glacier geology party of the NZGSAE, 1966-67, for B. W. Riddolls, assistant geologist with the party.

Ridge, The: see Jabet Peak 64°49'S., 63°28'W.

Ridge Island 67°42'S., 67°06'W.

A ridge-shaped island, 6 mi. long and 1.5 mi. wide, lying 3 mi. E. of Pourquoi Pas I. in the center of Bourgeois Fjord, off the W. coast of Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill.

Ridge Peak 63°30'S., 57°03'W.

Pyramidal rocky peak, 510 m., from which a prominent ridge extends eastward, standing 2.5 mi. SW. of Trepassey Bay between Cairn Hill and Lizard Hill on Tabarin Peninsula. This area was first explored by a party of the SwedAE, 1901-4. Ridge Peak was charted and named by the FIDS, 1946.

Ridgeway Glacier 73°24'S., 167°14'E.

A short glacier in the E. part of Mountaineer Range, draining SE. between Spatulate Ridge and Gauntlet Ridge into Lady Newnes Bay, Victoria Land. Named by NZ-APC in 1966 for Norman Ridgeway, senior scientist at Hallett Station, 1963-64.

Ridgway Glacier: see Ridgeway Glacier 73°24'S., 167°14'E.

Ridley Beach 71°18'S., 170°13'E.

A cusped beach feature forming a triangle about 1 mi. long on each side, lying 1 mi. S. of Cape Adare, on the W. side of Adare Peninsula in northern Victoria Land. This was the camp site of the BrAE, 1898-1900, under C.E. Borchgrevink. He gave the camp his mother's maiden name. The Northern Party, led by Campbell, of the BrAE, 1910-13, disembarked here in 1911, and they gave the name to the entire beach. The beach is the site of an Adélie penguin rookery.

Ridley Head: see Ridley Island 61°51'S., 58°03'W.

Ridley Island 61°51'S., 58°03'W.

Island lying 2 mi. N. of False Round Pt., King George I., in the South Shetland Islands. This island was known to both American and British sealers as early as 1822, and the name Ridley is well established in international usage.

Rifenburgh, Mount 82°57'S., 166°20'E.

Mountain, 2,690 m., standing 2 mi. E. of the head of Davidson Gl. in the Holland Range. Mapped by the USGS from tellurometer surveys (1961-62) and Navy air photos (1960). Named by US-ACAN for Capt. E. Rifenburgh, USN, Commanding Officer of the USS *Arneb* during USN Op. DFrz. 1963.

Rigby, Mount 85°33'S., 154°35'W.

Mountain, 950 m., standing 2 mi. NW. of Mt. Hastings, just W. of the mouth of Scott Gl., in the Karo Hills. First observed and roughly mapped by the ByrdAE, 1928-30. Named by US-ACAN for John F. Rigby, geologist at McMurdo Station, summer 1965-66.

Rigel Skerries 66°55'S., 57°18'E.

A chain of islands and rocks in the NW. part of the Øygarden Group, lying in the S. part of the entrance to Edward VIII Bay. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and called Utskjera (the outer skerries). The group was first visited by an ANARE party in 1954; these skerries were renamed by ANCA after the star Rigel which was used for an astrofix in the vicinity.

Riggold Knoll: see Ringgold Knoll 69°20'S., 157°39'E.

Rightangle Peak 73°31'S., 94°25'W.

A small rock peak between Snowplume Peak and Camelback Ridge, in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. So named by the party because the feature presented a right angle profile facing west when viewed from Camp Minnesota (from northward).

Right Whale Bay 54°00'S., 37°41'W.

Bay 1.5 mi. wide, entered between Craigie Pt. and Nameless Pt. along the N. coast of South Georgia. The name dates back to at least 1922 and is now well established. The right whale is a species of whale found in this area.

Right Whale Rocks 54°14'S., 36°24'W.

Group of rocks 0.25 mi. N. of Barff Pt., at the E. side of the entrance to Cumberland Bay, South Georgia. The name Merton Rocks was used for this feature on a chart of Cumberland Bay by personnel of H.M.S. *Sappho* in 1906, but the name Right Whale Rocks is retained because of wider and more recent acceptance.

Rigsby Islands 66°40'S., 67°37'W.

A small group of ice-capped islands lying off the NE. coast of Adelaide I., about 2 mi. S. of Sillard Islands. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for

GEOGRAPHIC NAMES OF THE ANTARCTIC

George P. Rigsby, American geologist who has specialized in the investigation of ice crystal structure and the plasticity of ice.

Riiser-Larsen, Mount 66°47'S., 50°40'E.

Prominent mountain, 870 m., standing at the NW. end of the Tula Mtns. on the E. side of Amundsen Bay. Named by the BANZARE under Mawson, in January 1930, for Capt. Hjalmar Riiser-Larsen, leader of a Nor. exp. in the *Norvegia* which also explored the area in that season.

Riiser-Larsen Ice Shelf 72°40'S., 16°00'W.

An ice shelf about 250 mi. long on the coast of Queen Maud Land, extending from Cape Norvegia in the north to Lyddan Island and Stancomb-Wills Glacier in the south. Parts of the ice shelf were sighted by Bruce in 1904, Shackleton in 1915, and Riiser-Larsen in 1930. Most of it was photographed from the air in 1951-52 by NBSAE and delineated from these photos. Additional delineation of the southern and landward margins of the feature was accomplished from air photos taken by USN Operation Deep Freeze from 1967 to 1969. The feature was named by Norway for Capt. Hjalmar Riiser-Larsen who explored the area from the *Norvegia*, including airplane flights from this vessel, in 1930.

Riiser-Larsenisen: see Riiser-Larsen Ice Shelf 72°40'S., 16°00'W.

Riiser-Larsen Peninsula 68°55'S., 34°00'E.

A large peninsula forming the western portal to Lüt-zow-Holm Bay and marking the separation of the Princess Ragnhild and Prince Harald Coasts. Named for Capt. Hjalmar Riiser-Larsen who discovered the peninsula in a flight from the *Norvegia* on Feb. 21, 1931.

Rikhtgofena, Gory: see Gruber Mountains 71°22'S., 13°25'E.

Riley, Mount 86°11'S., 147°37'W.

A mountain, 2,100 m., standing along the NE. side of Long Valley, just W. of California Plateau, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. (j.g.) Stephen G. Riley, photographic officer with USN Squadron VX-6 on Operation Deep Freeze 1966 and 1967.

Riley Glacier 70°03'S., 68°20'W.

Heavily crevassed glacier, 14 mi. long and 17 mi. wide, flowing westward from the W. side of Palmer Land into George VI Sound between the Traverse Mtns. and Mt. Dixey. First sighted and surveyed in 1936 by

the BGLE under Rymill. Resurveyed in 1949 by the FIDS and named for Quintin T. P. M. Riley, assistant meteorologist of the BGLE, 1934-37.

Rimebrekka Slope 72°08'S., 13°14'E.

A crevassed ice slope 4 mi. S. of Rimekalvane Nunataks in the Weyprecht Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Rimebrekka (the frost slope).

Rime Crests 60°38'S., 45°25'W.

Five crest-like summits surmounting the E. side of Sunshine Gl., Coronation I., in the South Orkney Islands. The name, originally applied to the highest peak by the FIDS following a survey of 1948-49, is descriptive of the feature's heavy cover of hoarfrost, or rime. A collective name for the summits was considered to be more useful.

Rimekalvane Nunataks 72°03'S., 13°38'E.

A group of nunataks 4 mi. E. of Dekefjellrantane Hills in the Weyprecht Mtns. of Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Rimekalvane (the frost calves).

Rime Peak: see Rime Crests 60°38'S., 45°25'W.

Rindebotnen Cirque 72°33'S., 3°20'W.

A cirque indenting the NE. wall of Borg Mtn., in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Rindebotnen (the mountain cirque).

Rindehallet Slope 72°25'S., 1°13'E.

An ice slope between Isingen Mtn. and Egil Peak in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Rindehallet (the mountain slope).

Rinehart Peak 70°38'S., 160°01'E.

A peak (1,710 m.) which rises from a ridge on the east-central slopes of Pomerantz Tableland, in the Usarp Mountains. The feature stands at the south side of the head of Helfferich Glacier. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960-62. Named by US-ACAN for Floyd J. Rinehart, USARP geophysicist at McMurdo Station, 1967-68.

Ringed Nunatak 85°13'S., 173°13'W.

A small but conspicuous nunatak located in the icefall at the head of Gatlin Gl., in the Cumulus Hills. So

GEOGRAPHIC NAMES OF THE ANTARCTIC

named by the Texas Tech Shackleton Glacier Exp. (1964-65) because a ring of moraine completely surrounds the nunatak.

Ringgold Knoll 69°20'S., 157°39'E.

A mountain 9 mi. S. of Archer Point on the E. side of Matusevich Glacier. On Jan. 16, 1840, Lieutenant-Commandant Cadwalader Ringgold on the *Porpoise*, one of the ships of the USEE (1838-42) under Wilkes, sighted a large dark mountain in this direction. It was named Ringgold's Knoll on the chart by Wilkes. In 1959 Phillip Law of ANARE made an investigation of features in the area. It was not possible to identify the feature sighted by Ringgold, but this mountain is in proper relationship to nearby Reynolds Peak and Eld Peak as indicated on Wilkes' chart. It was selected by Law of ANARE to perpetuate Wilkes' naming.

Ringöya: see Ring Rock 67°39'S., 62°43'E.

Ring Rock 67°39'S., 62°43'E.

Rock lying 2 mi. SE. of Nøst I. at the head of Holme Bay. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37, and named Ringöya (ring island). First visited in 1956 by an ANARE sledging party; they found that the term "rock" better describes this feature.

Rink Point 63°53'S., 58°11'W.

A rocky point on the NW. coast of James Ross I., 2 mi. E. of Carlson Island. The name arose because, during a visit by an FIDS party in August 1952, the point was surrounded by a large area of slippery, snow-free sea ice resembling a skating rink.

Rio Branco, Mount 65°25'S., 64°00'W.

Mountain, 975 m., standing 2.5 mi. E. of Cape Pérez on the W. coast of Graham Land. Disc. by the FrAE, 1908-10, and named by Charcot for Baron Rio Branco, at that time Minister of Foreign Affairs of Brazil.

Rio Branco, Sommet: see Rio Branco, Mount 65°25'S., 64°00'W.

Rip Point 62°15'S., 58°59'W.

Point on Nelson I. forming the S. side of the E. entrance to Fildes Strait, in the South Shetland Islands. The name appears on a British Admiralty chart showing the results of a survey by DI personnel on the *Discovery II* in 1935.

Rippon Glacier 66°40'S., 56°29'E.

Small glacier, close E. of Seaton Glacier, flowing southward into Edward VIII Ice Shelf. Mapped from aerial photos taken by ANARE in 1956, and named for Sgt. R. Rippon, RAAF, airframe fitter at Mawson in 1959.

Riquelme, Islotes: see Symington Islands 65°27'S., 64°58'W.

Risemedet Mountain 72°03'S., 3°10'E.

Large mountain, 2,705 m., marking the eastern end of the Gjelsvik Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Risemedet (the giant landmark).

Risen Peak 71°58'S., 3°18'E.

A peak 2 mi. N. of Medhovden Bluff in the Gjelsvik Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Risen (the giant).

Riser-Larsena, Shel'fovyi Lednik: see Riiser-Larsen Ice Shelf 72°40'S., 16°00'W.

Risk Rock 66°09'S., 65°48'W.

Isolated rock midway between Cape Evensen and Pesky Rocks, off the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. So named by the UK-APC in 1959 because the rock lies in the route of ships which have passed southward through the channel between Marie I. and the mainland.

Ristelen Spur 71°59'S., 5°37'E.

A rock spur about 5 mi. SE. of the summit of Breplogen Mtn., standing between the flow of Vestreskorve and Austreskorve Glaciers in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Ristelen (the plowshare).

Risting Glacier 54°46'S., 36°06'W.

Glacier, 4.5 mi. long, lying N. of Jenkins Gl. and flowing SE. into the head of Drygalski Fjord in the S. part of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Sigurd Risting (1870-1935), Norwegian whaling historian; secretary of Norsk Hvalfangerforening, 1918-35, and editor of *Norsk Hvalfangst-Tidende*, 1922-35. The GerAE under Filchner, 1911-12, named Drygalski Fjord and this glacier for Erich von Drygalski, leader of the GerAE, 1901-3, but the name for the glacier did not survive. A number of features in Antarctica, including a glacier, are named for Drygalski.

Ristkalvane Nunataks 71°41'S., 10°36'E.

A small group of nunataks forming the N. end of Shcherbakov Range, in the Orvin Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Ristkalvane (the ridge calves).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ritchie Point 70°25'S., 68°20'E.

A well defined point at the extremity of the large, flat rock feature extending northeastward from Amery Peaks in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for F. A. Ritchie, cook at Mawson Station in 1965.

Ritscherflya: see Ritscher Upland 73°00'S., 9°00'W.

Ritscher-Land: see Ritscher Upland 73°00'S., 9°00'W.

Ritscher Peak 71°24'S., 13°20'E.

A prominent peak (2,790 m.) standing 7 mi. WSW. of Mt. Mentzel in the Gruber Mtns. of Queen Maud Land. This peak was discovered and mapped by the German Antarctic Expedition of 1938-39 and was named for Capt. Alfred Ritscher, leader of the expedition.

Ritscher Upland 73°00'S., 9°00'W.

A large ice-covered upland of western Queen Maud Land, bounded by Kraul Mountains and Heimefront Range to the west and southwest, and by Borg Massif and Kirwan Escarpment to the east. Discovered by the GerAE, 1938-39, and named for Capt. Alfred Ritscher, leader of the expedition. Remapped from air photos taken by NBSAE in 1951-52.

Rivard Glacier 78°04'S., 163°55'E.

A glacier about 1 mi. long at the head of Marshall Valley in Victoria Land. The glacier was observed and mapped by Troy L. Péwé, glacial geologist with USN Op. DFrz., 1957-58. Named by Péwé for Norman Rivard who was his assistant on this expedition.

Rivas Peaks 83°35'S., 54°25'W.

A line of rock peaks that jut westward for 2 mi. from the south part of Torbert Escarpment in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Merced G. Rivas, radioman at Ellsworth Station, winter 1958.

Rivera, Isla: see Apéndice Island 64°11'S., 61°02'W.

Rivera Peaks 73°48'S., 62°50'W.

A wedge-shaped range of peaks, 14 mi. long, between Swann Gl. and Watson Peaks, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for James P. Rivera, electronics technician at South Pole Station in 1967.

Rivett, Mount 67°50'S., 66°14'E.

A bare rock mountain, the northeasternmost feature of the Gustav Bull Mountains in Mac. Robertson Land.

On February 13, 1931, the BANZARE (1929-31) under Douglas Mawson made a landing on nearby Scullin Monolith. They named this mountain after Sir David Rivett, Deputy Chairman and Chief Executive Officer of the Australian Council for Scientific and Industrial Research, 1927-45.

Roadend Nunatak 79°48'S., 158°02'E.

A conspicuous nunatak 4 mi. WNW. of Bastion Hill along the N. side of Darwin Glacier. So named by the VUWAE (1962-63) because of its use as a landmark for manhauling sledge journeys and aircraft flights which supported the expedition and landed there.

Roald Amundsen Sea: see Amundsen Sea 73°00'S., 112°00'W.

Roald Glacier 60°39'S., 45°13'W.

Glacier which flows from the vicinity of Mt. Noble and Mt. Sladen eastward into Gibbon Bay, on the E. coast of Coronation I. in the South Orkney Islands. Charted and named by the Norwegian whaling captain Petter Sørllle in the period 1912-15. Surveyed in 1948-49 by the FIDS.

Roaring Cliffs 86°23'S., 159°24'W.

The high and precipitous rock cliffs just northward of Kutschin Peak on the west side of Nilsen Plateau, Queen Maud Mountains. The name was proposed by William Long, geologist with a USARP field party that visited the area in the 1963-64 season. The name is descriptive of the sound made by the wind here; standing in the quiet, windless valley below, a roaring noise like an approaching train can be heard high up on the cliffs.

Roaring Ridge 86°14'S., 146°45'W.

A long and outstanding spur that descends from the Watson Escarpment 3.5 mi. NE. of Mt. Blackburn. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. So named by NZGSAE (1969-70) because two geologists worked and camped nearby, experiencing roaring gale force winds rushing down the steep escarpment.

Roaring Valley 78°16'S., 163°03'E.

A moraine-filled valley on the N. side of Mt. Dromedary, formerly occupied by the coalescing glaciers that descend NE. and N. from Mt. Kempe and Mt. Dromedary. The New Zealand VUWAE, 1960-61, which named this feature, experienced strong winds at most campsites in this area, but none of such violence and destructive force as those which struck their camp at the mouth of this valley, hence the name.

Robben Nunataks: see Seal Nunataks 65°03'S., 60°18'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Robbenspitze: see Seal Point 63°24'S., 56°59'W.

Robbery Beaches 62°37'S., 61°05'W.

Beaches extending along the N. side of Byers Pen., Livingston I., in the South Shetland Islands. The name Robbery Beach was used by James Weddell in 1820-23. It arose from the English robbery of sealskins collected by the American brig *Charity* (Capt. Charles H. Barnard) of New York in January 1821. There was fierce competition between British and American sealers in the area during the early 1820's.

Robb Glacier 82°38'S., 165°00'E.

A glacier about 40 mi. long, flowing from Clarkson Peak N. along the E. side of Softbed Ridges to the Ross Ice Shelf at Cape Goldie. Named by the expedition after Murray Robb, leader of the NZGSAE (1959-60), who traversed this glacier to reach Lowery Glacier.

Robbins Island 64°47'S., 64°27'W.

One of the southwestern Joubin Islands, off the southwest coast of Anvers Island. Named by US-ACAN for Stephen H. Robbins, Jr., Able Seaman in the R.V. *Hero* in her first voyage to Antarctica in 1968.

Robbins Nunatak 83°12'S., 57°05'W.

A conspicuous nunatak 8 mi. NE. of Mt. Gorecki in the Schmidt Hills portion of the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Edward J. Robbins, aerographer at Ellsworth Station, winter 1958.

Robert, Cape 66°23'S., 137°39'E.

Ice-covered point at the W. side of Marret Glacier. Disc. and named by the Fr. exp. under Dumont d'Urville in 1840. The name Robert is the first name of a member of the family of Dumont d'Urville. The point was roughly charted by the AAE under Mawson, 1911-14, and more recently delineated from air photos taken by USN Op. Hjp., 1946-47.

Robert English Coast: see English Coast 73°30'S., 73°00'W.

Robert Glacier 67°10'S., 56°18'E.

The eastern of two glaciers entering the southern part of Edward VIII Bay. Seen by Robert Dovers and G. Schwartz in 1954 while carrying out a sledge journey and survey of Edward VIII Bay. Named by ANCA for Dovers, who was surveyor and officer in charge at Mawson Station in 1954.

Robert Island 62°24'S., 59°30'W.

Island 11 mi. long and 8 mi. wide, lying between Nelson and Greenwich Islands in the South Shetland Islands. The name dates back to at least 1821 and is now established in international usage.

Robert Palmer Bay: see Palmer Inlet 71°15'S., 61°10'W.

Robert Point 62°28'S., 59°23'W.

Point marking the SE. tip of Robert I., in the South Shetland Islands. This point, which probably has been known to sealers and whalers in the area for over 100 years, takes its name from the island.

Roberts, Cape 77°02'S., 163°12'E.

Cape at the S. side of the entrance to Granite Harbor, on the coast of Victoria Land. Discovered by the South Magnetic Pole Party, led by David, of the BrAE (1907-9) and named for William C. Roberts, assistant zoologist and cook for the expedition.

Roberts, Cape: see Robert Point 62°28'S., 59°23'W.

Roberts, Mount 64°00'S., 58°49'W.

Dark, mostly ice-free rock peak with a flat, sloping top, 955 m., which is isolated from the Detroit Plateau to the W. and lies 3 mi. S. of Aitkenhead Gl. on the S. side of Trinity Peninsula. First charted by the FIDS, 1945, and named for D. W. Roberts, Manager of the Falkland Islands Co. in 1945, who was of assistance to the expedition.

Roberts Butte 72°39'S., 160°08'E.

A striking, flat-topped butte (2,830 m.) that is very prominent and can be seen from great distances, standing 2 mi. NW. of Miller Butte in the Outback Nunataks. Discovered by the U.S. Victoria Land Traverse Party, 1959-60. Louis J. Roberts, USGS surveyor with this party, proposed the name "Flattop Mountain," but to avoid duplication the US-ACAN named it for Roberts who was first to survey the feature.

Roberts Cirque 75°45'S., 115°49'W.

A cirque marked by a sheer rock cliff, located just W. of Zurn Peak along the central-north wall of Toney Mountain in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-71. Named by US-ACAN for John H. Roberts III, USN, Chief Commissaryman with the South Pole Station winter party, 1974.

Roberts Cliff 72°24'S., 170°05'E.

The third prominent rock bluff S. of Seabee Hook on the E. shore of Edisto Inlet. Named by the NZGSAE, 1957-58, for Charles L. Roberts, Jr., USARP meteorologist and scientific leader at Hallett Station in 1959.

Robert Scott, Mount 83°49'S., 172°48'E.

A small, flat, snow-covered mountain that rises over 1,000 m. and is situated immediately S. of Ebony

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ridge in the Commonwealth Range. Discovered by the BrAE (1907-9) under Ernest Shackleton, who named this feature for Capt. Robert F. Scott, RN. Shackleton had been a member of Scott's Southern Polar Party which reached 82°17'S. on the BrNAE (1901-4).

Robert Scott Glacier: see Scott Glacier 85°45'S., 153°00'W.

Roberts Ice Piedmont 69°00'S., 70°20'W.

Large ice piedmont, 20 mi. long in a N.-S. direction and 15 mi. wide, lying to the N. and NW. of Mt. Calais and occupying the NE. corner of Alexander Island. First seen from a distance and roughly surveyed by the FrAE, 1908-10, under Charcot. Phot. from the air by the BGLE on Aug. 15, 1936, and roughly mapped from these photos. Named by the UK-APC in 1955 for Brian B. Roberts, ornithologist of the BGLE, 1934-37, and later Sec. of the United Kingdom Antarctic Place-names Committee.

Roberts Inlet 79°15'S., 44°00'W.

An ice-filled inlet, the central of three inlets which indent the east side of Berkner Island. Discovered by U.S. ground and flying personnel at Ellsworth Station during the IGY (1957-58) under Capt. Finn Ronne, USNR. Named by Ronne for Capt. Elliott B. Roberts, USCGS (Ret.), formerly chief of the geophysical branch of the U.S. Coast and Geodetic Survey; Chairman, U.S. National Committee for the IGY Panel on Geomagnetism.

Roberts Island: see Robert Island 62°24'S., 59°30'W.

Roberts Knoll 71°27'S., 3°15'W.

A snow-covered coastal knoll with numerous rock outcrops at the E. side of the mouth of Schytt Gl. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named for Brian B. Roberts, Secretary of the United Kingdom Antarctic Place-names Committee.

Robertsollen: see Roberts Knoll 71°27'S., 3°15'W.

Roberts Massif 85°32'S., 177°05'W.

A remarkable snow-free massif at the head of Shackleton Glacier. It rises to over 2,700 m. and is about 60 square miles in area. Visited by the Southern Party of NZGSAE (1961-62), who named it for A. R. Roberts, leader at Scott Base for 1961-62.

Robertson, Cape 60°44'S., 44°48'W.

Cape which marks the W. side of the entrance to Jessie Bay, in the NW. part of Laurie I. in the South Orkney

Islands. It lies 1 mi. E. of Route Point at the N. end of Mackenzie Peninsula. On the map of Laurie I. by the ScotNAE under Bruce, 1902-4, the name Cape Robertson appears in the position of Route Point, previously named by Capt. George Powell and Capt. Nathaniel Palmer in 1821. The name Route Point is retained for the NW. end of Mackenzie Pen.; Cape Robertson is the NE. extremity. Named for Thomas Robertson, captain of the *Scotia*, exp. ship of the ScotNAE.

Robertson, Cape: see Robertson Point 54°06'S., 36°46'W.

Robertson, Mount 74°41'S., 64°14'W.

Mountain, 1,565 m., standing 20 mi. NW. of Mt. Austin and the head of Gardner Inlet, on the E. coast of Palmer Land. Disc. by the RARE, 1947-48, under Ronne, who named this feature for James B. Robertson, aviation mechanic with the expedition.

Robertson Bay 71°25'S., 170°00'E.

A large, roughly triangular bay that indents the N. coast of Victoria Land between Cape Barrow and Cape Adare. Discovered in 1841 by Capt. James Ross, RN, who named it for Dr. John Robertson, Surgeon on the *Terror*.

Robertson Channel 66°19'S., 110°29'E.

A body of water separating Mitchell Pen. from Pidgeon I. and Warrington I., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Richard A. Robertson, glaciologist and member of the Wilkes Station party of 1958.

Robertson Glacier 71°03'S., 165°23'E.

Tributary glacier that flows S. from Anare Mtns. and enters Ebbe Glacier E. of Springtail Bluff. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-63. Named by US-ACAN for John W. Robertson, photographer's mate with USN Squadron VX-6 at McMurdo Station, 1967-68 and 1968-69.

Robertson Island 65°10'S., 59°37'W.

Ice-covered island, 13 mi. long in a NW.-SE. direction and 6 mi. wide, lying at the E. end of the Seal Nunataks off the E. coast of Antarctic Peninsula. Capt. C.A. Larsen discovered the island from the *Jason* on Dec. 9, 1893. Larsen named it for William Robertson, co-owner of Woltereck and Robertson, the Hamburg firm that sent him to the Antarctic.

Robertson Islands 60°46'S., 45°09'W.

Group of islands extending 4 mi. southward of the SE. extremity of Coronation I., in the South Orkney Is-

GEOGRAPHIC NAMES OF THE ANTARCTIC

lands. Disc. and roughly charted by Capt. George Powell and Capt. Nathaniel Palmer in December 1821. Named by James Weddell in 1823.

Robertson Landing 66°23'S., 110°26'E.

A boat landing on the N. side of Ardery I., near the W. end of the island, in the Windmill Islands. A landing was first made here by Phillip Law and an ANARE party from the launch *MacPherson Robertson* on Jan. 9, 1961. Named after N. N. Robertson of Melbourne, donor of the launch.

Robertson Nunatak 71°54'S., 69°37'E.

A small nunatak 20 mi. NE. of Clemence Massif on the E. side of Lambert Glacier. Photographed by ANARE in 1950. Sighted and mapped by the ANARE Prince Charles Mtns. surveys of 1969 and 1971. Named by ANCA for M. J. Robertson, geophysicist at Mawson Station in 1970, who took part in the ANARE Prince Charles Mtns. survey in 1971.

Robertson Point 54°06'S., 36°46'W.

Point forming the E. side of the entrance to Fortuna Bay on the N. coast of South Georgia. Robertson Point is an established name dating back to at least 1920.

Robertson Ridge 77°24'S., 162°12'E.

A ridge circumscribing the NW. part of Clark Glacier in Victoria Land. Named by US-ACAN for James D. Robertson, USARP geophysicist at Byrd Station, 1970-71 season; he participated in the geophysical survey of the Ross Ice Shelf in the 1973-74 and 1974-75 seasons.

Robertsons Islands: see Robertson Islands 60°46'S., 45°09'W.

Roberts Point: see Robert Point 62°28'S., 59°23'W.

Roberts Ridge 86°23'S., 131°30'W.

A prominent ridge 5 mi. SW. of Cleveland Mesa, at the SE. end of Michigan Plateau. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Peter Roberts of the Division of International Scientific and Technical Affairs, Department of State.

Robillard Glacier 68°18'S., 65°35'W.

Narrow glacier flowing ENE. and entering the N. side of the head of Solberg Inlet, on the E. coast of Graham Land. Disc. by members of East Base of the USAS, 1939-41. It was photographed from the air in 1947 by the RARE, under Ronne, and charted in 1948 by the FIDS. Named by Ronne for Capt. George Robillard, USN, of the legal section of the Bureau of Ships, who assisted in gaining Congressional support which resulted in procuring the expedition ship.

Robilliard Glacier 70°13'S., 159°56'E.

A valley glacier, 17 mi. long, which flows northeastward through the Usarp Mountains. It rises southward of Mt. Simmonds and emerges from the mountains at Mt. Shields, where it joins Kooperatsiya Ice Piedmont. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Gordon Robilliard, USARP biologist at McMurdo Station in 1967-68 and 1968-69.

Robinheia: see Robin Heights 72°27'S., 0°38'E.

Robin Heights 72°27'S., 0°38'E.

A cluster of high rock summits between Hei Glacier and Kvitsvodene Valley in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Gordon de Q. Robin, third in command and a physicist with the NBSAE.

Robin Peak 60°41'S., 45°38'W.

Sharply defined rocky summit, 270 m., which is the northernmost peak on Signy I. in the South Orkney Islands. Named by the UK-APC in 1954 for Gordon de Quetteville Robin of the FIDS, leader at Signy I. base in 1947, who made the first detailed survey of the island.

Robinson, Cape 66°52'S., 63°43'W.

Cape marking the E. end of Cole Pen., between Cabinet and Mill Inlets on the E. coast of Graham Land. Sir Hubert Wilkins, while on his flight of Dec. 20, 1928 along this coast, named an island for W. S. Robinson of London and Australia, which he reported to lie in about 67°20'S., 61°40'W. Absence of photographs of this island by Wilkins has prevented its positive reidentification. For this reason, and for the sake of historical continuity, it is recommended that the E. end of the peninsula here described be given the name Cape Robinson. This cape was charted by the FIDS and photographed from the air by the RARE in 1947.

Robinson, Mount 71°50'S., 169°49'E.

A mountain (2,430 m.) at the head of DeAngelo Glacier in the Admiralty Mtns., Victoria Land. Discovered on Jan. 15, 1841, by Capt. James Ross, RN, who named the feature for Rev. Dr. Robinson of Armagh, one of the more active promoters of magnetic research in the Antarctic and a member of the committee of the British Association which advocated sending out this expedition.

Robinson Bluff 85°36'S., 159°47'W.

A bold rock bluff overlooking the W. side of lower Amundsen Gl., just N. of Whitney Gl., in the Queen

GEOGRAPHIC NAMES OF THE ANTARCTIC

charted a small inlet in this approximate position. The name was in use prior to 1930 and was probably applied by sealers and whalers working in the area.

Rocky Beach: see Gilchrist Beach 53°02'S., 73°36'E.

Rocky Point: see Bell Point 62°07'S., 58°53'W.

Rocky Point: see Carey Point 57°47'S., 26°32'W.

Rocky Point: see Chinstrap Point 57°07'S., 26°46'W.

Rocosa, Punta: see Hospital Point 62°32'S., 59°47'W.

Rodeada, Isla: see Beta Island 64°19'S., 63°00'W.

Roderick Valley 83°30'S., 57°30'W.

A large ice-filled valley trending in a north-south direction and separating Schmidt and Williams Hills from the main mass of Neptune Range, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Capt. David W. Roderick, USAF, pilot and second in command of the Electronic Test Unit in the Pensacola Mtns., 1957-58.

Rodger, Mount 79°42'S., 83°34'W.

A sharp peak, 1,410 m., at the NW. end of Collier Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Rodger A. Brown, meteorologist at Little America V Station in 1958.

Rodgers Head: see Rogers Head 53°00'S., 73°24'E.

Rodman Cove 61°07'S., 55°28'W.

A cove S. of Cape Lindsey on the W. coast of Elephant I., South Shetland Islands. Named for Benjamin Rodman of New Bedford, Mass., owner of whaling ships operating from that port in the 1820's and 1830's. The name was suggested by American geographer Lawrence Martin and has appeared in descriptions and charts of Elephant I. since about 1943.

Rodman Passage 65°52'S., 66°00'W.

Passage between the S. end of Renaud I. and Rabot I., in the Biscoe Islands. Charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1959

for Hugh Rodman of the U.S. Hydrographic Office, author in 1890 of *Reports of Ice and Ice Movements in the North Atlantic*, a pioneer work on the subject.

Rödön: see Red Island 63°44'S., 57°52'W.

Rodriguez, Isla: see Terminal Island 68°45'S., 70°35'W.

Roe, Mount 85°08'S., 169°36'W.

A flattish, largely ice-covered mountain overlooking the W. side of Liv Glacier. It stands 1 mi. NE. of Mt. Wells at the SE. end of Prince Olav Mountains. Named by US-ACAN for Lt. Donald W. Roe, Jr., of U.S. Navy Squadron VX-6, a member of the 1961 winter party at McMurdo Station and squadron safety officer in the 1962-63 season.

Roe Glacier 85°36'S., 151°26'W.

A tributary glacier, 10 mi. long, flowing NW. through the Tapley Mtns. to enter Scott Gl. just S. of Mt. Durham. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Derrell M. Roe, a member of summer parties at McMurdo Station in 1963-64 and 1964-65 and station engineer with the McMurdo winter party in 1966.

Roe Island 64°00'S., 60°50'W.

An island lying in the entrance of Curtiss Bay, about 2 mi. W. of Cape Andreas, Graham Land. Mapped from air photos taken by Hunting Aerosurveys (1955-57). Named by UK-APC for Sir Alliott Verdon-Roe, English pioneer aircraft designer and aviator since 1908; founder of A. V. Roe and Co., Ltd. (later Saunders-Roe Ltd.).

Roer, Mount 72°18'S., 0°21'E.

An isolated mountain, 2,085 m., standing 7 mi. W. of Fuglefjellet in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Nils Roer, surveyor with the NBSAE.

Roerkulten: see Roer, Mount 72°18'S., 0°21'E.

Rogers, Kap: see Rogers Head 53°00'S., 73°24'E.

Rogers, Mount 80°33'S., 29°26'W.

Mountain, 995 m., on the E. side of Blaiklock Gl. between Williams Ridge and Wedge Ridge in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Allan F. Rogers, medical officer and physiologist with the transpolar party of the CTAE in 1956-58.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rogers Glacier 69°59'S., 73°04'E.

A broad glacier entering the eastern side of Amery Ice Shelf close northward of McKaskle Hills. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946-47), and named by him for Lt. Cdr. William J. Rogers, Jr., USN, plane commander of one of the three air crews during Operation Highjump which took air photos of the coastal areas between 14° and 164° East longitude.

Rogers Head 53°00'S., 73°24'E.

A conspicuous headland marking the N. extremity of the peninsula between Atlas Cove and Corinthian Bay on the N. coast of Heard Island. Named for the Rogers family of New London, Conn., including Capt. Erasmus Darwin Rogers, who in 1855 made the first landing on Heard I. in the ship *Corinthian*, Capt. James H. Rogers, master of the brig *Zoe*, and Henry Rogers, first mate of the *Zoe*, who in 1856 was leader of the first party to winter on the island. The name appears on an early manuscript map compiled by American sealers.

Rogers Peak 79°21'S., 84°14'W.

A peak, 1,520 m., standing at the E. side of the terminus of Rennell Gl., in the Heritage Range. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for M. Alan Rogers, geologist to the Hart Hills and Whitmore Mountains areas, 1964-65.

Rogers Peaks 72°15'S., 24°31'E.

Small group of peaks standing just SW. of Dufek Mtn. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named for Lt. Cdr. William J. Rogers, Jr. USN, plane commander of one of the three aerial crews of USN Op. Hjp. which flew photographic flights in this and other coastal areas between 14° and 164° East.

Rogers Spur 74°30'S., 111°12'W.

A rocky, wedge-shaped spur located at the head of Brush Gl. on Bear Pen., in Marie Byrd Land. First mapped by USGS from air photos taken by USN Op. Hjp. in January 1947. Named by US-ACAN for James C. Rogers, electrical engineer at the Byrd (very low frequency) Sub-station, 1966.

Rogerstoppane: see Rogers Peaks 72°15'S., 24°31'E.

Roget, Cape 71°59'S., 170°37'E.

A steep rock cape at the S. tip of Adare Peninsula, marking the N. side of the entrance to Moubray Bay along the E. coast of Victoria Land. Discovered by Capt. James Ross, 1841, who named it for Peter Mark Roget, noted English lexicographer who was Secretary

of the Royal Society. The cape is the site of an Emperor penguin rookery.

Roget Rocks 64°20'S., 61°10'W.

A small group of rocks 4 mi. SW. of Spring Point in Hughes Bay, Graham Land. Surveyed by K. V. Blaiklock of FIDS from the *Norsel* in 1955. Named by UK-APC for Peter M. Roget, a member of the committee which planned the expedition of the *Chanticleer* (1828-31) and author in 1852 of *Thesaurus of English Words and Phrases Classified and Arranged so as to Facilitate the Expression of Ideas and Assist in Literary Composition*.

Rogged Bay 54°52'S., 36°07'W.

Small bay lying immediately N. of Cape Disappointment, the S. tip of South Georgia. The name Rogged Bay, which was probably used by early sealers, was recorded by Arnaldo Faustini on a 1906 map and applied to a wider but less distinctive embayment in this vicinity. Following its survey in 1951-52, the SGS reported that the small bay immediately N. of Cape Disappointment required a name. The existing name Rogged Bay was recommended, as limited to this small bay, by the UK-APC in 1954.

Rogstadbreen: see Rogstad Glacier 72°21'S., 1°19'E.

Rogstad Glacier 72°21'S., 1°19'E.

A glacier flowing NW. along the N. side of Isingen Mtn., in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Egil Rogstad, chief radio operator with the NBSAE.

Röhss Bay 64°12'S., 58°16'W.

Bay 11 mi. wide, between Capes Broms and Obelisk on the SW. side of James Ross Island. Disc. by the SwedAE, 1901-4, under Nordenskjöld, and named by him for August and Wilhelm Röhss, patrons of the expedition.

Roi Georges, Ile du: see King George Island 62°00'S., 58°15'W.

Roi Oscar, Terre du: see Oscar II Coast 65°45'S., 62°30'W.

Roja, Isla: see Red Island 63°44'S., 57°52'W.

Rojas Parker, Isla: see Vázquez Island 64°55'S., 63°25'W.

Rok-Bucht: see Rocky Bay 54°29'S., 36°40'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rokhlina, Skaly: see Rokhlin Nunataks 72°12'S., 14°28'E.

Rokhlin Nunataks 72°12'S., 14°28'E.

Four nunataks standing 6 mi. S. of Linnormen Hills at the S. extremity of the Payer Mountains, in Queen Maud Land. Discovered and first plotted from air photos by GerAE, 1938-39. Replotted from air photos by NorAE, 1958-59, and SovAE, 1960-61. Named in 1963 by the USSR for M. I. Rokhlin, a wintering over geologist who died in 1958.

Rokitansky, Mount: see Pico, Mount 64°10'S., 62°27'W.

Roland, Mount 86°29'S., 145°42'W.

A mountain, 2,210 m., directly N. of Mt. Mooney on the N. flank of Robison Gl., in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. (j.g.) Charles J. Roland, aircraft navigator with USN Squadron VX-6 on Operation Deep Freeze 1966 and 1967.

Roland Bay 65°04'S., 64°03'W.

Cove, the S. shore of which is Hervéou Pt., indenting the W. end of the peninsula that forms the W. extremity of Booth Island, in the Wilhelm Archipelago. First charted by the FrAE, 1903-5, and named by Charcot for F. Roland, a seaman on the ship *Français*.

Roland Bonaparte Point: see Bonaparte Point 64°47'S., 64°05'W.

Rolf Rock 54°22'S., 36°12'W.

Small isolated rock in Hound Bay, 1.5 mi. SSE. of Tijuca Pt., off the N. coast of South Georgia. Named by the UK-APC, following mapping by the SGS, 1951-52, after the *Rolf*, one of the vessels of the Compañía Argentina de Pesca which participated in establishing the first permanent whaling station at Gryt-viken, South Georgia, in 1904.

Rollet de l'Isle, Ile: see Rollet Island 65°02'S., 64°03'W.

Rollet Island 65°02'S., 64°03'W.

A small island 1 mi. N. of the NW. part of Booth Island in the Dannebrog Islands. Discovered by the FrAE, 1903-5, under J.B. Charcot, who named it "Ile Rollet de l'Isle" for Monsieur Rollet de l'Isle, French hydrographic surveyor. A shortened form of the original name has been adopted.

Romanes Beach 77°17'S., 166°22'E.

Beach on the N. shore of Wohlschlag Bay just S. of Harrison Bluff, on the W. side of Ross Island. Mapped

by a party of the NZGSAE, 1958-59, landed there by the USS *Arneb*. Named by the NZ-APC for W. Romanes, mountaineer assistant with the expedition.

Roman Figure Four Mountain: see Roman Four Promontory 68°13'S., 66°56'W.

Roman Four Promontory 68°13'S., 66°56'W.

Rocky promontory rising to 830 m., marking the N. side of the entrance to Neny Fjord on the W. coast of Graham Land. First charted by the BGLE, 1934-37, under Rymill. The name was given by members of East Base of the USAS, 1939-41, whose base was located on nearby Stonington I., and derives from snow-filled clefts along the face of the promontory giving the appearance of a Roman numeral IV.

Roman Four Rock: see Roman Four Promontory 68°13'S., 66°56'W.

Romeo Island 62°23'S., 59°55'W.

Island lying 3.5 mi. SW. of Table I., in the South Shetland Islands. Named by the UK-APC in 1961 after the British sealing vessel *Romeo*, probably from London, which visited the South Shetland Islands in 1821-22, and moored in nearby Clothier Hbr. in March 1822.

Romero, Cape: see Romerof Head 54°03'S., 37°52'W.

Romero, Isote: see Romero Rock 63°19'S., 57°57'W.

Romerof, Cape: see Romerof Head 54°03'S., 37°52'W.

Romeroff, Cape: see Romerof Head 54°03'S., 37°52'W.

Romerof Head 54°03'S., 37°52'W.

Prominent headland with steep rock cliffs, forming the W. side of the entrance to Schlieper Bay, on the S. coast and near the W. end of South Georgia. The name, which probably was given by early whalers, dates back to at least 1912.

Romero Rock 63°19'S., 57°57'W.

A rock lying 0.1 mi. W. of Saavedra Rock in the Du-roch Islands, Trinity Peninsula. The Chilean Antarctic Expedition of 1947-48, under the command of Navy Captain Ernesto González Navarrete, made a survey of this area and gave the name "Islote Astrónomo Romero" after Astronomer of the Chilean Army Guillermo Romero González who was a member of the expedition and did astronomical work in the Antarctic. Around 1951 the name "Islote Romero" began to be used to avoid the compound name. The present name, Romero Rock, has been in use since 1962.

Rømlingane Peaks 72°11'S., 1°08'E.

A chain of peaks extending from the W. side of Vende-holten Mtn., in the Sverdrup Mtns., Queen Maud

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Rømlingane (the fugitives).

Rømlingsletta Flat 72°16'S., 1°07'E.

An ice-covered, flattish area of about 40 square miles, lying northward of the foot of Isingen Mtn., in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Rømlingsletta (the fugitive's plain).

Romnaes, Mount 71°31'S., 24°00'E.

Prominent isolated mountain rising to 1,500 m., standing 22 mi. NW. of Brattnipane Peaks and the main group of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Expedition, 1936-37, and named for Nils Romnaes, aerial photographer with this expedition.

Romnaesfjellet: see Romnaes, Mount 71°31'S., 24°00'E.

Romulus Glacier 68°23'S., 66°55'W.

Glacier, 7 mi. long and 2 mi. wide, which flows from the N. slopes of Mt. Lupa westward to Rymill Bay between the Blackwall Mtns. and Black Thumb, on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948-49 by the FIDS, who so named it for its association with Remus Gl., whose head lies near the head of this glacier.

Ronald, Mount: see Ronald Hill 62°59'S., 60°35'W.

Ronald Hill 62°59'S., 60°35'W.

Rocky ice-free hill, 105 m., standing N. of Kroner Lake in Deception I., in the South Shetland Islands. Charted, photographed and named by Olaf Holtedahl of the Nor. exp., 1927-28, after the floating factory S.S. *Ronald*, which belonged to the Hektor Whaling Co. and was anchored at Deception I. in 1911-12 and many later seasons.

Ronald Ridge 79°37'S., 83°20'W.

A narrow ridge, 5 mi. long, located 1 mi. W. of Donald Ridge, which it resembles, in the Pioneer Heights, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Ronald C. Taylor, meteorologist at Little America V Station in 1957.

Ronald Rock 83°20'S., 49°25'W.

A prominent rock, 1,145 m., along the cliff next N. of Skidmore Cliff, located E. of Saratoga Table in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Ronald D. Brown, aviation structural mechanic at Ellsworth Station, winter 1957.

Ronca, Mount 82°38'S., 155°15'E.

Mountain over 2,200 m., surmounting the S. end of Quest Cliffs in the Geologists Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Luciano B. Ronca, USARP geologist at McMurdo Station, 1960-61.

Ronde Island 66°47'S., 141°15'E.

Small rocky island close to the NE. side of Zélée Glacier Tongue, 2.6 mi. WNW. of Rescapé Islands. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE, 1949-51, and so named by them because of its round shape.

Rongé Island 64°43'S., 62°41'W.

High, rugged island 5 mi. long, the largest island of the group which forms the W. side of Errera Chan., off the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, under Gerlache, who named it for Madame de Rongé, a contributor to the expedition.

Ronne, Mount 77°34'S., 146°10'W.

A prominent, flattish mountain which projects from the middle of the E. side of the Haines Mtns., in the Ford Ranges of Marie Byrd Land. The mountain was probably first observed on aerial flights by the ByrdAE (1928-30). Named by US-ACAN for Martin Ronne who was sailmaker, ski instructor, dog-driver and ice pilot with the ByrdAE (1928-30), and who had been a shipboard member of the *Fram* on Amundsen's expedition (1910-12).

Ronne Bay: see Ronne Entrance 72°30'S., 74°00'W.

Ronne Entrance 72°30'S., 74°00'W.

Broad SW. entrance of George VI Sound where it opens on Bellingshausen Sea at the SW. side of Alexander Island. Disc. on a sledge journey through the sound in December 1940 by Finn Ronne and Carl Eklund of the USAS, 1939-41, and named Ronne Bay. Since 1940, the head of the bay has receded eastward into George VI Sound, altering the relationships on which the name was based. The name was therefore changed to Ronne Entrance, in keeping with the physical characteristics of the feature. Named for the Ronne family, of which the father, Martin Ronne, was a member of the Nor. exp. under Amundsen, 1910-12, and the ByrdAE, 1928-30, and the son, Finn Ronne,

GEOGRAPHIC NAMES OF THE ANTARCTIC

was a member of the ByrdAE, 1933-35, and the USAS, 1939-41. Finn Ronne later served as leader of the RARE, 1947-48, and as military and scientific leader at Ellsworth Station during the IGY, 1957.

Ronne Ice Shelf 78°30'S., 61°00'W.

The larger and western of the two major ice shelves at the head of Weddell Sea. It is bounded on the west by the base of Antarctic Peninsula and Ellsworth Land, and on the east by Berkner Island. Cdr. Finn Ronne, USNR, leader of RARE (1947-48), discovered and photographed a strip along the entire northern portion of this ice shelf in two aircraft flights in November and December 1947. He named it "Lassiter Shelf Ice" and gave the name "Edith Ronne Land" to the land presumed to lie south of it. In 1957-58, the US-IGY party at Ellsworth Station, under now Captain Ronne, determined that the ice shelf was larger than previously charted, that it extends southward to pre-empt most of "Edith Ronne Land." Inasmuch as Capt. James Lassiter's name has been assigned to a coast of Palmer Land, the US-ACAN has approved the name Ronne Ice Shelf for this large ice shelf. The recommendation is on the basis of first sighting and exploration of the ice shelf by Ronne and parties under his leadership. Named for Edith Ronne, wife of Captain Ronne, who made important contributions to the planning, organization, and operation of RARE and who served as observer at the Stonington Island base while RARE members were in the field. (Filchner Ice Shelf lies between Berkner Island and Coats Land).

Röntgen Peak 64°02'S., 62°17'W.

Peak 1 mi. SE. of Cape Cockburn in the NE. part of Pasteur Pen., Brabant I., in the Palmer Archipelago. Shown on an Argentine Govt. chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Wilhelm K. von Röntgen (1845-1923), German physicist who discovered X-rays in 1895.

Rookery Bay 54°16'S., 36°20'W.

Small bay lying between Lucas and Rookery Points on the N. coast of South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Rookery Islands: see Haswell Islands 66°32'S., 93°00'E.

Rookery Islands 67°37'S., 62°31'E.

Group of small islands and rocks in the SW. part of Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and called Inner-skjera (the inner skerries). The islands were visited in 1954 and 1955 by ANARE and so renamed by them because an Adélie penguin rookery occupies the largest island in the group.

Rookery Point 54°15'S., 36°19'W.

Point forming the E. side of the entrance to Rookery Bay, on the N. coast of South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Rooseen, Chenal de: see Neumayer Channel 64°47'S., 63°30'W.

Rooseen Channel: see Neumayer Channel 64°47'S., 63°30'W.

Roosevelt Ice Dome: see Roosevelt Island 79°25'S., 162°00'W.

Roosevelt Island 79°25'S., 162°00'W.

An ice-covered island, about 80 mi. long in a NW.-SE. direction and 40 mi. wide, lying in the E. part of the Ross Ice Shelf. The N. extremity of the island is 3 mi. S. of the Bay of Whales. Its main topographic expression is a central ridge about 550 m. above sea level. Discovered by the ByrdAE in 1934, and named by R. Adm. Richard E. Byrd for Franklin D. Roosevelt, then President of the United States.

Roosevelt Sea: see Amundsen Sea 73°00'S., 112°00'W.

Roos Glacier 75°17'S., 110°57'W.

A steep glacier that drains the NW. slopes of Mt. Murphy in Marie Byrd Land. Named by US-ACAN for S. Edward Roos, oceanographer with the Byrd Antarctic Expeditions of 1928-30 and 1933-35.

Roots, Mount 54°28'S., 36°24'W.

Mainly snow-covered mountain in the Allardyce Range, South Georgia, standing near the head of Nordenskjöld Gl., 4 mi. ESE. of Mt. Paget. Its western peak rises to 2,280 m.; its eastern peak to 2,160 m. The mountain is a prominent feature and presumably was known to whalers and sealers in South Georgia at an early date. It was roughly surveyed in the period 1925-30 by DI personnel, and resurveyed by the SGS, 1951-52. Named by the UK-APC for James W. Roots, a member of the SGS, 1951-52.

Roots Heights 72°37'S., 0°27'E.

Ice-free heights between Reece Valley and Skarsdalen Valley in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Ernest F. Roots, chief geologist with the NBSAE.

Rootshorga: see Roots Heights 72°37'S., 0°27'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ropar, Mount 83°58'S., 160°29'E.

A mountain, 2,420 m., at the E. extremity of Canopy Cliffs in Queen Elizabeth Range. Named by US-ACAN for Nicholas J. Ropar, Jr., Weather Central meteorologist at Little America V, 1958.

Ropebrake Pass 84°45'S., 173°25'W.

A steep, narrow snow pass between the S. end of Gabbro Hills and Mt. Llano, permitting passage between the Barrett and Gough Glaciers. So named by the Southern Party of NZGSAE (1963-64) because of the large number of rope brakes used in its crossing.

Roper Point 76°19'S., 112°54'W.

A largely ice-covered point, but with some rock exposures, at the W. extremity of Mt. Takahe, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Nathaniel A. Roper, aurora researcher at Byrd Station in 1963.

Roquedal, Punta: see Chinstrap Point 57°07'S., 26°46'W.

Roquemaurel, Cape 63°33'S., 58°56'W.

Prominent rocky headland at the E. side of the entrance to Bone Bay, on the N. side of Trinity Peninsula. Disc. by a Fr. exp., 1837-40, under D'Urville, and named by him for Lt. Louis de Roquemaurel, second-in-command of the exp. ship *Astrolabe*.

Roquería, Bahía: see Rookery Bay 54°16'S., 36°20'W.

Rorqual, Mount 65°39'S., 62°20'W.

A peak between Starbuck and Stubb Glaciers, 5 mi. W. of Mt. Queequeg, on the E. side of Graham Land. The feature is rocky and precipitous, rises to 1,110 m. and is separated from Cachalot Peak by a narrow ridge. The name is one of a group in the area applied by UK-APC that reflects a whaling theme, the Rorquals being a species of baleen whales.

Rosa, Cape 54°11'S., 37°25'W.

Cape marking the S. side of the entrance to King Haakon Bay on the S. coast of South Georgia. The name first appears about 1920 on charts of South Georgia and has since become established by usage.

Rosa, Islot: see Rosa Rock 63°18'S., 57°54'W.

Rosamel Island 63°34'S., 56°17'W.

Circular island 1 mi. in diameter with precipitous cliffs of volcanic rock rising to a snow-covered peak 435 m. high, lying W. of Dundee I. in the S. entrance to Antarctic Sound. Disc. by the Fr. exp., 1837-40, under D'Urville, and named by him for V. Adm. Claude de

Rosamel, French Minister of Marine under whose orders the exp. sailed.

Rosa Rock 63°18'S., 57°54'W.

A small rock lying 0.1 mi. W. of Agurto Rock in the Duroch Islands, Trinity Peninsula. Named by the second Chilean Antarctic Expedition, 1948, for Rosa González de Claro, daughter of the President of Chile, Gabriel González Videla.

Roscoe Glacier 66°30'S., 95°20'E.

Channel glacier, 12 mi. long and 3 to 5 mi. wide, debouching from a small valley onto the W. portion of Shackleton Ice Shelf, midway between Cape Moyes and Junction Corner. Charted as a valley depression during a southern reconnaissance in March 1912 by F. Wild and other members of the Western Base Party of the AAE under Mawson. Delineated from aerial photographs taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for John H. Roscoe, geographer, author of *Antarctic Bibliography* (Washington, 1951), and scientific advisor to the director of United States Antarctic Programs. Roscoe served as photogrammetrist with the central task group of USN Op. Hjp., 1946-47, and with USN Op. Wml., 1947-48, and assisted the latter group in establishing astronomical control stations along Wilhelm II, Queen Mary, Knox and Budd Coasts.

Roscolyn Tor 76°42'S., 159°50'E.

A high sandstone feature about 1 mi. SW. of Warren Peak in the Allan Hills of Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who gave the name after a similar feature in Anglesey, Wales.

Rose: see Rose Rock 71°17'S., 170°13'E.

Rose, Mount 66°40'S., 140°01'E.

Rocky hill, 22 m., standing S. of Mt. Cervin on the E. side of Pétrel I. in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for a summit in the Alps, between Italy and Switzerland.

Rosenau Head 70°28'S., 162°46'E.

A steep, ice-covered coastal headland located on the E. side of Barber Glacier in the Bowers Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Darrell D. Rosenau, USN, electronics technician at the South Pole Station, 1965.

Rosenberg Glacier 75°44'S., 132°33'W.

A steep, heavily-crevassed glacier draining the W. slopes of the Ames Range between Mt. Kosciuszko and Mt. Boennighausen, in Marie Byrd Land. Mapped by

GEOGRAPHIC NAMES OF THE ANTARCTIC

USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Theodore J. Rosenberg, ionospheric physicist at Siple Station, 1970-71.

Rosenthal, Mount 80°03'S., 83°15'W.

A prominent mountain, 1,840 m., at the N. end of Liberty Hills, in the Heritage Range, Ellsworth Mountains. Named by US-ACAN for Lt. Cdr. Ronald Rosenthal, USN, navigator on LC-47 aircraft, who perished in a crash on the Ross Ice Shelf, Feb. 2, 1966.

Rosenthal Islands 64°36'S., 64°18'W.

Group of islands fringing the W. coast of Anvers I., 6 mi. N. of Cape Monaco, in the Palmer Archipelago. Disc. by the Ger. exp., 1873-74, under Dallmann, and named by him for Albert Rosenthal, Dir. of the Soc. for Polar Navigation, who, with the society, sponsored the expedition.

Rosenwald, Mount 85°04'S., 179°06'W.

A spectacular mountain (3,450 m.) which forms a distinctive landmark between the heads of Gallup and Baldwin Glaciers in the Queen Maud Mountains. The mountain is entirely snow covered on the SW. side but has nearly vertical exposed-rock cliffs on the NE. side. Discovered and photographed by R. Adm. Byrd on the South Pole Flight of November 1929. Named by Byrd for Julius Rosenwald of Chicago, a contributor to the ByrdAE of 1928-30 and 1933-35.

Rose Peak 62°02'S., 58°12'W.

Peak, 655 m., lying nearly 2 mi. SW. of Rea Peak and 3 mi. NE. of Ternyck Needle in the central part of King George I., in the South Shetland Islands. Named by the UK-APC in 1960 for the Enderby Brothers' cutter *Rose*, tender to the schooner *Hopeful*, which sailed from London in 1833. In December 1833 or January 1834 the *Rose* was crushed in the pack ice in 60°17'S., 53°26'W.; her crew was rescued by the *Hopeful*.

Rose Point 74°45'S., 136°45'W.

A rocky point 1 mi. E. of Cape Burks on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Stephen D. Rose, First Officer of the *Bear of Oakland* on the first voyage to Bay of Whales (1933); Master of the *Jacob Ruppert* on its second voyage to Bay of Whales (1935), during the ByrdAE, 1933-35.

Rose Rock 71°17'S., 170°13'E.

The southern of two rocks called The Sisters, off the N. extremity of Cape Adare. The Sisters were named by the BrAE, 1898-1900. Rose Rock was named by Campbell, leader of the Northern Party of the BrAE, 1910-13, at the suggestion of Levick, after a favorite

comic song which concerned two sisters named Rose and Gertrude.

Rosita Bay: see Rosita Harbor 54°01'S., 37°27'W.

Rosita Harbor 54°01'S., 37°27'W.

Small bay lying 1 mi. N. of Camp Bay in the W. side of the Bay of Isles, South Georgia. The names Rosita Harbor and Allardyce Harbor were given for this bay in the period 1905-12, and both have since appeared on maps for this feature. Following a survey of South Georgia in 1951-52, the SGS reported that the feature is known locally as Rosita Harbor, and this name is approved on that basis. The name Allardyce is rejected as applied to this feature; the main mountain range at South Georgia is already named for William L. Allardyce. Rosita Harbor is named after the *Rosita*, one of the whale catchers of Messrs. Salvesen and Co., which started operating with the company in 1905, and which anchored in this bay.

Ross, Cape 76°44'S., 163°01'E.

A granite headland 8 mi. N. of Cape Archer on the coast of Victoria Land. First charted by the BrAE (1907-9) which named this feature for Sir James Clark Ross, the discoverer of the Ross Sea and Victoria Land.

Ross, Mount: see Haddington, Mount 64°13'S., 57°38'W.

Rossa Point 65°57'S., 65°14'W.

Point 2 mi. NE. of Ferin Head on the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 for Anders Rossa, a Jokkmokk Lapp who, with Pava Tuorda, accompanied A. E. Nordenskiöld to Greenland in 1883 and first demonstrated the possibilities of skis for polar travel.

Ross Archipelago 77°30'S., 167°00'E.

A convenient name for that group of islands which, together with the ice shelf between them, forms the eastern and southern boundaries of McMurdo Sound. The most northerly is Beaufort I., then comes Ross I., the Dellbridge Is., and Black and White Islands. Debenham's classic report, *The Physiography of the Ross Archipelago*, 1923, described "Brown Island" (now Brown Peninsula) as a part of the group.

Ross Barrier: see Ross Ice Shelf 81°30'S., 175°00'W.

Rossel, Mount 72°36'S., 31°02'E.

Mountain, 2,250 m., standing 3 mi. SW. of Mt. Perov in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Mlle. Marie-Thérèse Rossel, a patron of the expedition.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rosser Ridge 82°46'S., 53°35'W.

A rock ridge, 4 mi. long, marking the N. limit of the Cordiner Peaks, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Earl W. Rosser, topographic engineer in the Pensacola Mountains, 1965-66.

Ross Glacier 54°33'S., 36°06'W.

Glacier 6 mi. long, flowing E. from the juncture of Allardyce and Salvesen Ranges to Little Moltke Hbr., Royal Bay, on the N. coast of South Georgia. First mapped by the German group of the International Polar Year Investigations, 1882-83, and named for Sir James Clark Ross.

Ross Ice Barrier: see Ross Ice Shelf 81°30'S., 175°00'W.

Ross Ice Shelf 81°30'S., 175°00'W.

A vast ice shelf, almost entirely afloat, occupying the entire southern part of the Ross Sea embayment and ending seaward in a cliffed ice front about 400 miles long and ranging from 15 to 50 meters high. Discovered on Jan. 28, 1841, by Capt. James Clark Ross, for whom it is named. Ross mapped the ice front eastward to 160°W.

Rossini Point 72°27'S., 72°39'W.

Snow-covered point on the S. coast of Alexander I., marking the SE. side of the entrance to the embayment occupied by the Bach Ice Shelf. First seen and roughly mapped by the USAS, 1939-41. Remapped in greater detail from air photos obtained by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Gioacchino Rossini (1792-1868), Italian composer.

Ross Island: see James Ross Island 64°10'S., 57°45'W.

Ross Island 77°30'S., 168°00'E.

An island lying on the E. side of McMurdo Sound and extending 43 mi. from Cape Bird on the N. to Cape Armitage on the S., and a like distance from Cape Royds on the W. to Cape Crozier on the east. This island is entirely volcanic, Mt. Erebus, 3,795 m., near the center, being an active volcano; and Mt. Terror, 3,230 m., about 20 mi. eastward, being an extinct volcano. Mt. Bird rises to 1,765 m. just S. of Cape Bird. This area was discovered by Sir James Clark Ross in 1841, but he thought it formed part of the mainland of Victoria Land. Determined to be an island and named by the BrNAE (1901-4) for Sir James Clark Ross.

Rossmann, Mount 79°47'S., 82°48'W.

A prominent wedge-shaped, ice-free mountain, 1,450 m., located at the N. end of the Enterprise Hills be-

tween Union and Henderson Glaciers, in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Rossmann W. Smith, ionospheric physicist at Eights Station in 1965.

Ross Pass 54°32'S., 36°15'W.

Narrow but well-defined pass between the SE. end of the Allardyce Range and the NW. end of the Salvesen Range in South Georgia. The pass is 610 m. high and provides a sledging route between Ross Gl. and Brøgger Glacier. It was first mapped in 1882-83 by the German group of the International Polar Year Investigations who referred to it as "Gletscher-Joch" (meaning glacier yoke). The name Ross Pass, which derives from association with nearby Ross Gl., was given by the SGS following their survey of 1951-52.

Ross Point 62°21'S., 59°08'W.

Point on the SW. side of Nelson I., 2 mi. SE. of Harmony Cove, in the South Shetland Islands. The point was charted by DI personnel on the *Discovery II* in 1935.

Ross Sea 75°00'S., 175°00'W.

A large embayment of the Pacific Ocean, extending deeply into Antarctica between Cape Adare on the west and Cape Colbeck on the east. The sea is named for Capt. James Clark Ross who discovered it in 1841.

Ross Shelf Ice: see Ross Ice Shelf 81°30'S., 175°00'W.

Rostand Island 66°40'S., 140°01'E.

Rocky island 0.2 mi. long, 0.1 mi. SE. of Pétrel I. in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for Jean Rostand, noted Fr. biologist.

Rotch Dome 62°38'S., 60°53'W.

Undulating snow dome lying immediately E. of Byers Pen., Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 for William Rotch (1734-1828), and his brother, Francis Rotch, American whaling merchants of Nantucket and New Bedford, pioneers of the southern whale fishery, whose vessels also inaugurated the Canton fur trade for sealers.

Rotch Ice Dome: see Rotch Dome 62°38'S., 60°53'W.

Rote Insel: see Red Island 63°44'S., 57°52'W.

Roth, Mount 84°35'S., 172°22'W.

A rock peak (870 m.) located 3 mi. E. of Mt. Justman in the NE. corner of Gabbro Hills, near the edge of the Ross Ice Shelf. Discovered and photographed by the ByrdAE (1928-30) and named for Benjamin Roth,

GEOGRAPHIC NAMES OF THE ANTARCTIC

mechanic and U.S. Army representative on that expedition.

Rothera Point 67°34'S., 68°08'W.

Point at the E. side of the entrance to Ryder Bay, on the SE. coast of Adelaide Island. Charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1960 for John M. Rothera, FIDS surveyor at the Horseshoe Island station in 1957 and at Detaille Island in 1958.

Rothschild, Cape: see Rothschild Island 69°25'S., 72°30'W.

Rothschild, Mount: see Rothschild Island 69°25'S., 72°30'W.

Rothschild Island 69°25'S., 72°30'W.

Island 17 mi. long, mainly ice covered but surmounted by several prominent peaks, 3 mi. W. of the N. end of Alexander I. in the N. entrance to Wilkins Sound. Disc. from a distance by the FrAE, 1908-10, and named by Charcot, apparently for Baron Édouard-Alphonse de Rothschild (1868-1949), head of the French branch of the Rothschild family and president of the Rothschild Brothers bank. In subsequent exploration by the BGLE, 1934-37, the feature was believed to be a mountain connected to Alexander I., but its insularity was reaffirmed by the USAS, 1939-41, who phot. and roughly mapped it from the air. Mapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960.

Rotoiti, Mount 82°48'S., 162°14'E.

A peak, 2,900 m., standing 1 mi. NE. of Mt. Pukaki in the Frigate Range. Named by the northern party of the NZGSAE (1961-62) for the N.Z. frigate, *Rotoiti*.

Rotolante, Mount 83°36'S., 168°25'E.

A mountain, 2,460 m., standing 6 mi. NW. of Mt. Fox in Queen Alexandra Range. Named by US-ACAN for Ralph A. Rotolante, USARP meteorologist at McMurdo Station, 1962.

Rotschild, Ile de: see Splitwind Island 65°02'S., 63°56'W.

Rotz Glacier 69°17'S., 65°43'W.

A tributary glacier 9 mi. long and 2 mi. wide. It flows W. from Wakefield Highland, central Antarctic Peninsula, into Airy Gl. at a point due S. of Mt. Timoshenes. Photographed by RARE on Nov. 27, 1947 (Trimetrogon air photography). Surveyed by FIDS in Dec. 1958 and Nov. 1960. Named by UK-APC after Jean Rotz, 16th century French chartmaker and writer on the principles of navigation, who designed an

elaborate magnetic compass and became hydrographer to King Henry VIII in 1542.

Rouch Point 65°10'S., 64°11'W.

Point forming the NW. end of Petermann I., in the Wilhelm Archipelago. Charted by the FrAE, 1908-10, and named by Charcot for Jules Rouch, sub-lieutenant of the *Pourquoi-Pas?*, who was responsible for the study of meteorology, atmospheric electricity and oceanography on the expedition.

Rouen, Massif: see Rouen Mountains 69°13'S., 70°50'W.

Rouen Mountains 69°13'S., 70°50'W.

Prominent mountain range, 2,750 m., extending 30 mi. NW.-SE. between Mt. Bayonne and Mt. Cupola in N. Alexander Island. First mapped by the FrAE, 1908-10, under Charcot and named by him for the French city. Charcot indicated a break in these mountains S. of Mt. Paris, but air photos taken by the RARE, 1947-48, as interpreted by Searle of the FIDS indicate that the mountains are continuous SE. to Mt. Cupola.

Rouge, Massif: see Rouge, Mount 65°37'S., 63°42'W.

Rouge, Mount 65°37'S., 63°42'W.

A prominent mountain between Funk and Cadman Glaciers at the head of Beascochea Bay, on the W. side of Graham Land. Discovered and named Massif Rouge (red mountain) by the FrAE, 1908-10, led by Charcot.

Rouge Island: see Rongé Island 64°43'S., 62°41'W.

Rougier Hill 85°10'S., 174°30'W.

An ice-free hill just E. of LaPrade Valley in the N. part of the Cumulus Hills, overlooking the S. side of McGregor Glacier. Named by the Texas Tech Shackleton Gl. Exp. (1964-65) for Michael Rougier, staff photographer with *Life Magazine*, who was seriously injured while climbing this hill with the expedition.

Roullin Point 65°07'S., 64°01'W.

Point marking the S. tip of Booth I., in the Wilhelm Archipelago. Probably first seen by the Ger. exp. under Dallmann, 1873-74. Charted by the FrAE, 1903-5 under Charcot, and named by him for Captain Roullin, French Navy.

Round Bay: see Rund Bay 67°02'S., 57°15'E.

Roundel Dome 65°38'S., 63°15'W.

A mainly snow-covered dome, with a small circular rock exposure at the summit, rising to 1,770 m. on the

GEOGRAPHIC NAMES OF THE ANTARCTIC

E. side of Bruce Plateau, between the heads of Crane and Flask Glaciers. The feature is a useful landmark along a proven E.-W. route from Larsen Ice Shelf across Bruce Plateau, Graham Land. The name, applied by UK-APC, is descriptive of the circular area of dark colored rock surrounded by the smooth snow-covered lower slopes of the dome, resembling the type of aircraft marking known as a roundel.

Round Hill 53°04'S., 73°38'E.

An ice-free, rounded hill (380 m.) rising southward of Fairchild Beach and between Compton Gl. and Brown Gl., on the NE. side of Heard Island. The feature is roughly mapped on the 1874 chart by the *Challenger* expedition. It was surveyed and given this descriptive name by ANARE in 1948.

Round Island 65°54'S., 65°33'W.

Island 0.5 mi. long, lying 1 mi. W. of Hummock I. and 7 mi. NW. of Ferin Head, off the W. coast of Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill.

Round Island: see Davey Point 61°58'S., 58°34'W.

Round Mountain 77°41'S., 161°06'E.

Mountain, 2,410 m., overlooking the N. side of Taylor Gl. at the E. side of the Inland Forts, in Victoria Land. So named by Scott of the BrNAE (1901-4) because of its outline.

Round Point 61°56'S., 58°28'W.

Point 12 mi. W. of False Round Pt. on the N. coast of King George I., in the South Shetland Islands. The descriptive name dates back to at least 1822 and is established in international usage.

Rouse, Cape 67°45'S., 67°09'E.

Ice-covered cape 8 mi. E. of Murray Monolith on the coast of Mac. Robertson Land. Disc. on Feb. 12, 1931 by the BANZARE under Mawson, and named for Edgar J. Rouse of Sydney, who assisted the exp. with photographic equipment.

Rouse Islands 67°35'S., 62°57'E.

Small group of islands in the E. part of Holme Bay, fringing the coast of Mac. Robertson Land close S. of Welch Island. Discovered on Feb. 13, 1931, by the BANZARE under Mawson, who named them for E. J. Rouse of Sydney, who assisted the exp. with photographic equipment.

Rouse Rocks: see Rouse Islands 67°35'S., 62°57'E.

Route Point 60°44'S., 44°49'W.

Rocky point marking the NW. extremity of Laurie I., in the South Orkney Islands. Disc. and named by

Capt. George Powell and Capt. Nathaniel Palmer during their joint cruise in December 1821.

Roux, Cape 64°01'S., 62°28'W.

Cape marking the NW. extremity of Pasteur Pen., northern Brabant I., in the Palmer Archipelago. Disc. by the FrAE, 1903-5, and named by Charcot for Emile Roux, noted French physician and bacteriologist, then Dir. of the Pasteur Inst., Paris.

Roux Island 66°54'S., 66°57'W.

Island 2 mi. long, lying 0.5 mi. N. of Arrowsmith Pen. at the W. side of the entrance to Lallemand Fjord, off the W. coast of Graham Land. Disc. by the FrAE under Charcot, 1908-10, who named it for Jules Charles-Roux.

Røver Anchorage 54°27'S., 3°21'E.

An open anchorage along the SW. coast of Bouvetøya, approximately midway between Norvegia Point and Lars Island. The anchorage was used in December 1927 by the *Norvegia*, the vessel of the Norwegian expedition under Capt. Harald Horntvedt. They named it "Røverhullet," a name suggesting a place where only pirates would feel at home!

Røverhullet: see Røver Anchorage 54°27'S., 3°21'E.

Rowe Island: see Row Island 66°31'S., 162°38'E.

Rowe Point 62°35'S., 60°54'W.

Point lying in Barclay Bay, 8 mi. SSW. of Cape Shirreff on the N. coast of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1961 for Captain Rowe, Master of the British sealing vessel *Grace* from Plymouth, who visited the South Shetland Islands in 1821-22.

Rowett Island 61°17'S., 55°13'W.

Rocky island 0.5 mi. long, lying immediately off Cape Lookout, Elephant I., in the South Shetland Islands. The island was known to both American and British sealers as early as 1822. It was named by members of a Br. exp. under Shackleton, 1921-22, for John Q. Rowett, chief patron of the expedition.

Row Island 66°31'S., 162°38'E.

A small island, less than 1 mi. in diameter, which lies just off the SE. end of Young Island in the Balleny Islands. John Balleny assigned the name in 1839 to an island which he reported to be 10 mi. N. of Young I., naming it for J. Row, one of the merchants who united with Charles Enderby in sending out the expedition. Since the island reported by Balleny could not be found by other explorers in the vicinity, the name was assigned to this island discovered by the British ship *Discovery II* in 1936.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rowland Glacier 82°46'S., 163°10'E.

Glacier on the N. side of the Frigate Range, flowing E. into Lowery Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Robert W. Rowland, USARP glaciologist at South Pole Station, 1962-63 and 1963-64.

Rowles Glacier 71°17'S., 167°39'E.

Tributary glacier over 20 mi. long, flowing NW. along the E. side of Dunedin Range, Admiralty Mtns., to enter Dennistoun Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for D. S. Rowles of the New Zealand Dept. of Scientific and Industrial Research, a member of the Hallett Station party, 1964.

Rowley Corridor 71°25'S., 67°15'W.

A north-south pass in the Batterbee Mtns. that extends from Ryder Gl. to Conchie Gl. and separates Mt. Ness and Mt. Bagshawe from the peaks along the western edge of Palmer Land and George VI Sound. Named by UK-APC for David N. Rowley, senior pilot with the BAS, 1969-74.

Rowley Massif 71°35'S., 61°55'W.

A prominent mountain massif between the Haley and Cline Glaciers. It surmounts the N. side of the head of Odom Inlet on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for geologist Peter D. Rowley of the USGS, a member of the USGS geologic and mapping party to the Lassiter Coast, 1970-71, and leader of the USGS party to the area, 1972-73.

Roy, Mount 72°31'S., 166°15'E.

A mountain, 2,850 m., standing 6 mi. SSW. of Mt. Aorangi of the Millen Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Robert R. Roy, cook at Hallett Station in 1957.

Royal, Cape: see Harcourt, Cape 54°29'S., 35°58'W.

Royal Bay 54°32'S., 36°00'W.

Bay, 4 mi. wide and indenting 5 mi., entered between Capes Charlotte and Harcourt along the N. coast of South Georgia. Disc. and named by a Br. exp. under Cook in 1775. Surveyed by the German group of the International Polar Year Investigations under Schrader which was based on the N. shore of the bay in 1882-83.

Royalist, Mount 71°47'S., 168°30'E.

A prominent mountain (3,640 m.) standing 2 mi. W. of Mt. Adam in the Admiralty Mtns., Victoria Land. Named by the NZGSAE, 1957-58, for its impressive

appearance and also for the New Zealand cruiser HMNZS *Royalist*. Several adjacent peaks are named for New Zealand ships.

Royal Pass: see Ross Pass 54°32'S., 36°15'W.

Royal Society Range 78°10'S., 162°40'E.

A majestic range of mountains rising to 4,025 m. along the W. shore of McMurdo Sound between the Koettlitz, Skelton and Ferrar Glaciers. The range was probably first seen by Ross in 1841. It was explored by the BrNAE (1901-4) under Scott, who named the range after the Royal Society and applied names of its members to many of its peaks. The Royal Society provided financial support to BrNAE and its members had assisted on the committee which organized the expedition.

Royds, Cape 77°33'S., 166°09'E.

Dark rock cape forming the W. extremity of Ross Island, facing on McMurdo Sound. Discovered by the BrNAE (1901-4) and named for Lt. Charles W. R. Royds, RN, who acted as meteorologist for the expedition. Royds rose to become an Admiral and was later Commissioner of the Metropolitan Police, London. This cape was the site of the expedition camp of the BrAE, 1907-9.

Røysane Rocks 72°19'S., 23°17'E.

A group of rocks 4 mi. SE. of Mt. Nils Larsen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Røysane (the pile of stones).

Rozier Glacier 64°45'S., 62°13'W.

Glacier flowing into Wilhelmina Bay N. of Sophie Cliff, on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Jean-François Pilâtre de Rozier (1756-1785), French technician who made the first human balloon ascent and (with the Marquis d'Arlande) the first balloon voyage, in 1783.

Rozo Point 65°03'S., 64°03'W.

Point marking the NW. end of Cholet I., which lies close N. of the NW. part of Booth I. in the Wilhelm Archipelago. Disc. by the FrAE, 1903-5, and named by Charcot for M. Rozo, the cook on the ship *Français*.

Rubeli Bluff 70°26'S., 72°27'E.

A bluff on the N. end of the Reinbolt Hills, at the E. margin of Amery Ice Shelf. A survey station was established on the feature during the ANARE tellurometer traverse from Larsemann Hills in 1968. Named by ANCA for M. N. Rubeli, surveyor at Mawson Station, who was in charge of the traverse.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rubey Glacier 75°11'S., 137°07'W.

Broad, heavily crevassed glacier flowing N. to coalesce with the W. side of Hull Gl. eastward of Mt. Giles, near the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Capt. Ervin B. Rubey, USN, Commander of Antarctic Support Activities at McMurdo Station, summer 1969-70.

Rubin, Mount 73°25'S., 65°40'E.

A large, gently domed mountain, with a long tail of moraine trending E., standing 16 mi. WNW. of Cumpston Massif in the Prince Charles Mountains. Photographed from the air by ANARE, 1956-58. Named by ANCA for American meteorologist Morton J. Rubin, U.S. Exchange Scientist to the Soviet Mirnyy Station during 1958; member of the U.S. Advisory Committee on Antarctic Names, 1973-74.

Rubin de la Borbolla, Mount 75°02'S., 135°03'W.

An ice-covered mountain (1,090 m.) in the SE. extremity of McDonald Heights, overlooking Johnson Gl. from the W. in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for George S. Rubin de la Borbolla, meteorologist at Plateau Station, 1968.

Rubner Peak 66°44'S., 65°51'W.

The highest point on the sharp ridge separating McCance and Widdowson Glaciers, just S. of Darbel Bay on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57. Named by the UK-APC in 1960 for Max Rubner (1854-1932), German physiologist who made outstanding researches on human calorie requirements and the calorie value of foods.

Ruby Peak 54°12'S., 36°40'W.

Peak rising on the E. side of Olsen Valley to the SW. of Jason Peak, South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Rücker, Mount 78°11'S., 162°32'E.

Mountain, 3,815 m., immediately S. of Johns Hopkins Ridge in the Royal Society Range of Victoria Land. Discovered by the BrNAE (1901-4) which named it for Sir Arthur Rücker, Honorary Secretary of the Royal Society.

Rücker Ridge 78°12'S., 162°50'E.

A high spur descending E. from pointed Mt. Rücker in Royal Society Range and forming the divide between Radian and Walcott Glaciers. Named after Mt. Rücker by the New Zealand VUWAE, 1960-61.

Rucker Spur 77°31'S., 146°30'W.

A rock spur between Alexander Peak and Mt. Ronne, on the E. side of the Haines Mtns. in Marie Byrd

Land. Mapped by the USAS (1939-41). Named by US-ACAN for Joseph T. Rucker, photographer with the ByrdAE (1928-30).

Rudder Point 56°40'S., 28°08'W.

The high, rocky SE. point of Leskov I., South Sandwich Islands. The name, applied by UK-APC in 1971, refers to the resemblance of the feature to a large rudder in contradistinction to Bowsprit Point at the other end of the island.

Rude Spur 77°27'S., 160°49'E.

A rock spur 2 mi. NW. of Mt. Circe that descends from the plateau of Victoria Land toward Balham Lake and Balham Valley. Named by US-ACAN after USARP oceanographer Jeffrey D. Rude who drowned in McMurdo Sound, Oct. 12, 1975, when the tracked vehicle he was driving broke through bay ice and sank in the vicinity of Erebus Glacier Tongue and Turtle Rock.

Rudmose Brown Peak 66°22'S., 51°04'E.

Peak 7 mi. S. of the coast and 8 mi. SW. of Mt. Hurley. Disc. in January 1930 by the BANZARE, 1929-31, under Mawson, who named this feature for Dr. R. N. Rudmose Brown, naturalist of the ScotNAE, 1902-4, member of the Scott Polar Research Committee, 1939-41, and author of numerous books and articles on Antarctica.

Rudmose Rocks 60°42'S., 44°35'W.

Group of rocks 0.3 mi. NNW. of Cape Geddes, off the N. coast of Laurie I. in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named them for R. N. Rudmose Brown, naturalist of the expedition.

Rudolph Glacier 64°54'S., 62°26'W.

Glacier flowing into Andvord Bay S. of Moser Gl., on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Paul Rudolph, German mathematical optician who designed the first anastigmatic camera lens, introduced by Zeiss in 1889, and the "Tessar" lens, introduced by Zeiss in 1902.

Rudolph Glacier 72°32'S., 167°53'E.

A tributary glacier which flows N. to enter Trafalgar Gl. opposite the mouth of Hearfield Gl., in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Emanuel D. Rudolph, project leader for lichenology, who made studies in the Hallett Station area three summer seasons, 1961-64.

Rue, Mount de la: see Aubert de la Rue, Mount 53°01'S., 73°22'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ruegg, Mount 71°51'S., 170°11'E.

The culminating peak (1,870 m.) on the divide between DeAngelo Gl. and Moubray Gl. in the Admiralty Mtns., Victoria Land. Named by the NZ-APC for Capt. H. Ruegg, nautical advisor to the Marine Department of New Zealand, a visitor to the Ross Sea area in 1956.

Rugate Ridge 65°01'S., 61°56'W.

A high, east-trending ridge between Green and Evans Glaciers on the E. side of Graham Land. Surveyed by FIDS in 1955. So named by UK-APC because many small ridges and spurs make up the feature ("rugate" means "ridgy").

Rugged Harbor: see New Plymouth 62°37'S., 61°12'W.

Rugged Island 62°38'S., 61°15'W.

Island 3 mi. long and 1 mi. wide, lying W. of Livingston I., in the South Shetland Islands. This island was known to both American and British sealers as early as 1820, and the name has been well established in international usage for over 100 years.

Rugged Peaks: see Ragged Peaks 66°59'S., 51°00'E.

Rugged Rocks 62°37'S., 59°48'W.

Small group of rocks at the W. side of the S. entrance to McFarlane Strait, lying just N. of Renier Pt., Livingston I., in the South Shetland Islands. These rocks were known to early sealers in the area and appear on Powell's map of 1822. They were recharted in 1935 by DI personnel on the *Discovery II* and given this descriptive name.

Rugg Peak 66°19'S., 65°23'W.

Peak at the E. side of Widmark Ice Piedmont southward of Crookes Peak, on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Andrew Rugg-Gunn, English ophthalmic surgeon, who in 1934 brought together the relevant data on radiation and protective glasses to improve the design of snow goggles.

Rugosas, Rocas: see Rugged Rocks 62°37'S., 59°48'W.

Ruhnke, Mount 72°05'S., 3°38'E.

A peak (2,535 m.) in the NW. part of Festninga Mtn. in the Mühlig-Hofmann Mtns. of Queen Maud Land. The name "Ruhnke-Berg" was applied in the general area by the GerAE under Ritscher, 1938-39, for Herbert Ruhnke, radio operator on the flying boat *Passat* used by this expedition. The correlation of the name with this feature may be arbitrary but is recommended

for the sake of international uniformity and historical continuity.

Ruiz, Isla: see Patella Island 63°08'S., 55°29'W.

Ruker, Mount 73°40'S., 64°30'E.

A large, dark mountain just SW. of Mt. Rubin in the southern Prince Charles Mountains. Plotted from air photos taken by ANARE in 1956. Named by ANCA for R. A. Ruker, geologist at Mawson Station, 1960.

Rukhin, Mount 71°35'S., 15°07'E.

A small mountain, 1,740 m., standing 9 mi. SW. of Ekho Mountain in the Lomonosov Mountains, Queen Maud Land. Plotted from air photos by NorAE, 1958-59, and SovAE, 1960-61. Named by USSR in 1963 for L. B. Rukhin, Prof. at Leningrad State Univ., who died in 1959.

Rukhina, Gora: see Rukhin, Mount 71°35'S., 15°07'E.

Rullman Peak 79°13'S., 84°32'W.

A peak, 1,910 m., located just S. of Grimes Gl. in the Anderson Massif, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Chief Equipment Operator Gerald D. Rullman, USN, direct supervisor of the crew that first pierced the Ross Ice Shelf at 160 feet during USN Op. DFrz. 1966. The drilling was accomplished near the Dailey Islands.

Rumbler Rock 64°47'S., 64°13'W.

Rock lying 3.5 mi. W. of Bonaparte Pt., off the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit in 1956-57. So named by the UK-APC because with the prevailing heavy SW. swell, the noise of seas breaking over the rock may be heard well clear of the danger.

Rumbolds Point 54°52'S., 36°00'W.

Point which marks the E. side of the entrance to Doubtful Bay at the SE. end of South Georgia. The name appears on a chart based upon surveys of this area in 1930 by DI personnel, but may reflect an earlier naming.

Rumdoodle Peak 67°46'S., 62°50'E.

Prominent peak 1 mi. SW. of Painted Peak in the North Masson Range, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. The name is associated with "Rumdoodle Air Strip," which the peak overlooks. Rumdoodle was the name of a fictional mountain in a novel *Ascent of Rumdoodle* by W. E. Bowman, and since 1960 has been used locally by Mawson Station personnel for the air strip.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Rummage, Mount 80°29'S., 156°12'E.

A conical, bare rock mountain, 1,510 m., at the W. side of Ramseier Glacier. It is the westernmost mountain along the N. wall of Byrd Glacier. Named by US-ACAN for Chief Laurence A. Rummage, QMCM, USN, who took part in Christchurch transport and schedule operations for USN Op. DFrz., 1965.

Rumpa Island 69°08'S., 39°26'E.

An island in the E. part of Lützow-Holm Bay, 5 mi. NW. of Langhovde-kita Point. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Rumpa (the rump).

Runaway Hills 73°19'S., 163°33'E.

A cluster of hills forming the NW. extremity of Arrowhead Range in the Southern Cross Mtns., Victoria Land. So named by the southern party of NZGSAE, 1966-67, because both of their motor toboggans went out of control here, when going down hill.

Runaway Island 68°12'S., 67°07'W.

Rocky island 0.7 mi. W. of the W. tip of Neny I. and 0.2 mi. NW. of Surf Rock, lying in Marguerite Bay off the W. coast of Graham Land. The island was roughly charted in 1936 by the BGLE, and was surveyed in 1947 by the FIDS. So named by FIDS because a runaway dog team left this island and returned to base.

Runciman Rock 65°15'S., 64°17'W.

Rock marked by breakers, lying 0.1 mi. E. of Black I. at the SE. approach to Black Island Chan. in the Argentine Islands. Charted in 1935 by the BGLE under Rymill, who named it for Philip Runciman, Chairman of the Board of Directors of Whites Southhampton Yachtbuilding and Engineering Company Limited, where the ship *Penola* was refitted before sailing south in 1934.

Runcumilla, Isla: see Weertman Island 66°58'S., 67°44'W.

Rund Bay 67°02'S., 57°15'E.

Small bay indenting the S. shore of Edward VIII Bay immediately E. of Kvarsnes Foreland. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37, who named it Rundvika (round bay).

Rundle Peaks 80°44'S., 157°12'E.

A cluster of mainly ice-covered peaks at the S. side of Byrd Glacier, just E. of Sefton Glacier. Named by US-ACAN for Arthur S. Rundle, a member of the USARP parties which made glaciological and geophysical studies on the Ross Ice Shelf, 1961-62 and 1962-63.

Rundneset: see Green Point 67°19'S., 59°30'E.

Rundöy: see Trevillian Island 67°38'S., 62°42'E.

Rundvåg Bay 69°50'S., 39°04'E.

A rounded embayment, the S. part of which is occupied by a glacier tongue, indenting the SE. shore of Lützow-Holm Bay just W. of Rundvågs Hills. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Rundvåg (round bay).

Rundvågs Head 69°53'S., 39°00'E.

A rock headland rising to 160 m. at the SW. margin of Rundvåg Bay, on the SE. coast of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Rundvågshetta (the round bay cap) for its proximity to Rundvåg Bay.

Rundvågshetta: see Rundvågs Head 69°53'S., 39°00'E.

Rundvågs Hills 69°50'S., 39°09'E.

Bare rock hills that rise just E. of Rundvåg Bay on the SE. shore of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Rundvågskollane (the round bay hills) for their proximity to Rundvåg Bay.

Rundvågskollane: see Rundvågs Hills 69°50'S., 39°09'E.

Runnelstone Rock 65°47'S., 65°20'W.

Rock lying at the SW. end of Grandidier Chan., 3 mi. NW. of Larrouy I. and 16 mi. WSW. of Cape Garcia, Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill.

Runyon Rock 76°56'S., 116°33'W.

A prominent rock along the northern side of Boyd Ridge, in the Crary Mountains, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1959-66. Named by US-ACAN for William E. Runyon, USN, construction electrician at the South Pole Station in 1969 and 1974.

Ruotolo Peak 86°04'S., 148°06'W.

A peak, 2,490 m., surmounting the N. side of Griffith Gl., close W. of the California Plateau and Watson Escarpment. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Cdr. Anthony P. Ruotolo, aircraft pilot with USN Squadron VX-6 on Operation Deep Freeze 1966 and 1967.

Ruppert Coast 75°45'S., 141°00'W.

That portion of the coast of Marie Byrd Land between Brennan Point and Cape Burks. Named by R. Adm.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Byrd for Col. Jacob Ruppert of New York, a supporter of the ByrdAE (1933-35) that made the first aerial reconnaissance flight along this coast. The USGS completely mapped the coast from ground surveys and U.S. Navy air photos, 1959-65.

Rusanov, Mount 71°32'S., 19°38'E.

An isolated mountain lying N. of the Russkiye Mtns., about 35 mi. NE. of Zhelannaya Mtn., in Queen Maud Land. Mapped by Norsk Polarinstitut from air photos by NorAE, 1958-59. Also mapped in 1959 by the SovAE, and named for Russian geologist and polar explorer V. A. Rusanov.

Rusanova, Gora: see Rusanov, Mount 71°32'S., 19°38'E.

Ruseski Buttress 85°29'S., 124°23'W.

A projecting buttress rock or spur, forming the S. portal to Perkins Canyon along the N. side of the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1959-60. Named by US-ACAN for Lt. Peter P. Ruseski (MC) USN, of the Byrd Station winter party, 1958.

Rush Glacier 64°23'S., 62°37'W.

Glacier 4 mi. long in southern Brabant I., flowing W. from the Solvay Mtns. into Dallmann Bay between Fleming and Humann Points, in the Palmer Archipelago. Shown on an Argentine Govt. chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Benjamin Rush (1745-1813), first great American physician and philanthropist, author of works on insanity and fevers, and one of the signers of the Declaration of Independence.

Russell, Cape 74°54'S., 163°54'E.

A rock cape in Terra Nova Bay along the coast of Victoria Land, forming the S. extremity of the Northern Foothills. Named by US-ACAN for Lt. Cdr. R. E. Russell, USN, officer in charge of the helicopter unit aboard the icebreaker *Glacier* in this area during USN Op. DFrz., 1958-59.

Russell, Mount 86°17'S., 149°08'W.

A mountain, 2,280 m., standing on the E. flank of Scott Gl. just S. of the mouth of Howe Gl., in the Queen Maud Mountains. Discovered in December 1934 by the geological party of the ByrdAE, 1933-35, and named for Richard S. Russell, Jr., one of the members of that party, and his father, Richard S. Russell, Sr., a supporter of the Byrd Antarctic expeditions.

Russell Bay 73°27'S., 123°54'W.

A rather open bay in southwestern Amundsen Sea, extending along the N. sides of Siple Island, Getz Ice

Shelf and Carney Island, from Pranke Island to Cape Gates. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Adm. James S. Russell, USN, Vice Chief of Naval Operations during the post 1957-58 IGY period.

Russell Bluff 82°21'S., 161°06'E.

An ice-free bluff at the E. side of the mouth of Errant Gl., at the juncture with Nimrod Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for John Russell, USARP traverse specialist at McMurdo Sound, 1959.

Russell East Glacier 63°44'S., 58°20'W.

Glacier, 6 mi. long and 3 mi. wide, which lies at the N. end of Detroit Plateau and flows from Mt. Canicula eastward into Prince Gustav Channel on the S. side of Trinity Peninsula. This glacier together with Russell West Glacier, which flows westward into Bone Bay on the N. side of Trinity Pen., form a through glacier across the N. part of Antarctic Peninsula. It was first surveyed in 1946 by the FIDS. Named by the UK-APC for V. I. Russell, surveyor and leader of the FIDS base at Hope Bay in 1946.

Russell Nunatak 67°47'S., 63°19'E.

Solitary rounded nunatak 10 mi. E. of the Masson Range and 7 mi. SE. of Mt. Henderson. Disc. in December 1954 by an ANARE party led by R. Dovers and named by ANCA for John Russell, engineer at Mawson Station, 1954.

Russell Owen, Mount: see Owen Peak 71°53'S., 63°08'W.

Russell Peak: see Brown Peak 67°25'S., 164°35'E.

Russell West Glacier 63°40'S., 58°50'W.

Glacier, 11 mi. long and 4 mi. wide, which lies immediately N. of Detroit Plateau and flows from Mt. Canicula westward into Bone Bay on the N. side of Trinity Peninsula. This glacier together with Russell East Glacier, which flows eastward into Prince Gustav Channel on the S. side of Trinity Pen., form a through glacier across the N. part of Antarctic Peninsula. It was first surveyed in 1946 by the FIDS. Named by the UK-APC for V. I. Russell, surveyor and leader of the FIDS base at Hope Bay in 1946.

Russet Pikes 67°49'S., 67°08'W.

Peaks just E. of the mouth of Gaul Cove on Horseshoe Island. Surveyed by FIDS in 1955-57. The name is descriptive; reddish-brown color is visible on the feature most of the year, the slopes being too steep to retain snow cover for any length of time.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Russian Gap 69°11'S., 71°13'W.

Gap extending in a N.-S. direction between the Havre Mtns. and Rouen Mtns., in the N. part of Alexander Island. The N. coast of Alexander I. was first sketched from a great distance in 1821 by the Russ. exp. under Bellingshausen and this gap apparently represented by one of two open spaces between three high features. The gap was mapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for the Russian group which observed this area in 1821.

Ruskiye Mountains 72°10'S., 18°00'E.

A widely-scattered group of mountains and nunataks between the Hoel Mtns. and Sør Rondane Mtns. in Queen Maud Land. The group was mapped from air photos taken by NorAE Dec. 1958-Jan. 1959. The group was observed the same season by the SovAE, apparently after the landing at Lazarev Station in March 1959, and named Gory Ruskiye (Russian Mountains).

Rustad Bay 54°30'S., 37°05'W.

Small bay indenting the SW. side of Annenkov I., off the S. coast of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Ditlef Rustad, biologist of the Nor. exp. under Horn-vedt, 1927-28, during which he visited and made collections on Annenkov Island.

Rustad Hill: see Rustad Knoll 54°28'S., 3°23'E.

Rustad Knoll 54°28'S., 3°23'E.

A rounded, snow-topped elevation (365 m.) which surmounts the S. shore of Bouvetøya immediately E. of Cato Point. First charted in 1898 by a German expedition under Karl Chun. The knoll was recharted in December 1927 by the *Norvegia* expedition under Capt. Harald Horntvedt. They named it for Ditlef Rustad who was in charge of the biological research of the expedition.

Rustadkollen: see Rustad Knoll 54°28'S., 3°23'E.

Rust Bluff 82°56'S., 157°42'E.

A small bluff or promontory on the E. side of Miller Range, overlooking Marsh Glacier 5 mi. S. of Corner Nunatak. Named by US-ACAN for Izak C. Rust, Prof. of Geology, Univ. of Port Elizabeth, South Africa. Rust was international exchange scientist with the Ohio State Univ. Geological Exp., 1969-70, and with John Gunner collected geological samples at this bluff.

Rusty, Cape: see Howard, Cape 71°25'S., 61°08'W.

Rusty Bluff 60°44'S., 45°37'W.

Prominent cliffs rising to a rounded summit, 225 m., on the W. side of Paal Hbr. on Signy I., in the South Orkney Islands. Surveyed in 1947 by the FIDS. The name, given by FIDS, was suggested by the color of the bluff and by a rusty iron post found on the summit.

Rutford Glacier: see Rutford Ice Stream 79°00'S., 81°00'W.

Rutford Ice Stream 79°00'S., 81°00'W.

A major ice stream, about 180 mi. long and over 15 mi. wide, which drains southeastward between the Ellsworth Mountains and Fletcher Ice Rise into the southwest part of Ronne Ice Shelf. Named by US-ACAN for geologist Robert H. Rutford, a member of several USARP expeditions to Antarctica; leader of the University of Minnesota Ellsworth Mountains Party, 1963-64. Rutford served as Director of the Division of Polar Programs, National Science Foundation, 1975-77.

Rutgers Glacier 78°14'S., 161°55'E.

A steep glacier in the Royal Society Range, descending SW. from Johns Hopkins Ridge and Mt. Rücker to enter the Skelton Glacier. Mapped by the USGS from ground surveys and Navy air photos. Named by US-ACAN after Rutgers University, New Brunswick, New Jersey, which has sent researchers to Antarctica, and in association with Johns Hopkins Ridge and Carleton Glacier.

Ruth, Cape: see Ruth Ridge 64°39'S., 60°48'W.

Ruth, Mount 86°18'S., 151°45'W.

A ridge-shaped mountain, 2,170 m., standing 3 mi. W. of Mt. Gardiner, at the SE. side of the lower reaches of Bartlett Gl., in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named at that time by R. Adm. Byrd for Mrs. Ruth Black, deceased wife of Richard B. Black, exp. member who assisted with seismic, survey, and radio operations in the vicinity of Little America II.

Ruth Black, Mount: see Ruth, Mount 86°18'S., 151°45'W.

Ruth Bugge Islands: see Bugge Islands 69°12'S., 68°25'W.

Ruth Gade, Mount 85°37'S., 164°40'W.

A pyramidal mountain, 3,515 m., standing 3 mi. NE. of Mt. Wedel-Jarlsberg in the Quarles Range, Queen Maud Mountains. Discovered in November 1911 by Capt. Roald Amundsen, and named by him for one of

GEOGRAPHIC NAMES OF THE ANTARCTIC

the daughters of the Norwegian minister to Brazil, a strong supporter of Amundsen.

Ruth Ridge 64°39'S., 60°48'W.

Black, rocky ridge 1.5 mi. long in a N.-S. direction, terminating at its S. end in a small peak. The ridge forms the S. end of Detroit Plateau and marks a change in the direction of the plateau escarpment along the E. coast of Graham Land where it turns W. to form the N. wall of Drygalski Glacier. Dr. Otto Nordenskjöld, leader of the SwedAE, 1901-4, gave the name Cape Ruth, in honor of his sister, to what appeared to be a cape at the N. side of Drygalski Glacier. The feature was determined to be a ridge in 1947 by the FIDS.

Ruth Siple, Mount: see Siple, Mount 73°15'S., 126°06'W.

Ruthven Bluff 82°34'S., 42°54'W.

Large rock bluff 1 mi. S. of Sosa Bluff in the Schneider Hills portion of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Richard W. Ruthven, USGS surveyor who visited the bluff in the 1965-66 season.

Rutkowski Glacier 85°11'S., 166°21'E.

A glacier which drains the northern part of the Dominion Range icecap eastward of Mt. Mills. It descends northeastward into Meyer Desert where it terminates without reaching Beardmore Glacier. Named by US-ACAN for Richard L. Rutkowski, USARP meteorologist at the South Pole Station, 1962.

Ruvungane Peaks 72°54'S., 3°28'W.

A group of small peaks just N. of Ryvingen Peak in the S. part of the Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Ruvungane.

Ruy, Isla: see Guido Island 64°55'S., 63°50'W.

Ryan Glacier 54°03'S., 37°36'W.

Glacier 2 mi. long, flowing W. to the head of Ice Fjord, South Georgia. The GerAE, 1911-12, named this glacier for Dr. Albrecht Penck, though an incorrect spelling "Penk" appeared on published maps. A number of significant Antarctic features, including a glacier, are named for Albrecht Penck. To avoid confusion of these names the UK-APC recommended in 1957 that this feature be renamed. Ryan Glacier is named for Alfredo R. L. Ryan, Pres. since 1946 of the Compañía Argentina de Pesca which operated the whaling station at Grytviken.

Ryan Peak 67°52'S., 67°12'W.

A peak 1 mi. E. of Penitent Peak on Horseshoe Island. Surveyed by FIDS in 1955-57. Named for Francis B. Ryan of FIDS, meteorologist at Horseshoe I. in 1956, who broke a leg in a climbing accident on this peak.

Ryan Reef 54°26'S., 36°07'W.

Isolated reef lying off the N. coast of South Georgia, 0.5 mi. N. of the E. entrance point of Doris Bay. The reef appears on a chart based upon surveys by DI personnel in the period 1925-31, but it may have been charted earlier. It was named by the UK-APC, following a survey by the SGS, 1951-52, for Alfredo R. L. Ryan, Pres. of the Compañía Argentina de Pesca which operated the whaling station at Grytviken, South Georgia.

Rybiy Khvost, Zaliv: see Paz Cove 66°14'S., 100°47'E.

Rydberg Peninsula 73°10'S., 79°45'W.

A broad ice-covered peninsula, 30 mi. long, between Fladerer Bay and Carroll Inlet, Ellsworth Land. Mapped by USGS from surveys and U.S. Navy air photos, 1961-66. Named by US-ACAN for Capt. Sven Rydberg, commander of USNS *Ellanin* on Antarctic cruises, February 1962 to June 1963.

Ryder, Mount 66°57'S., 52°15'E.

Mountain between Harvey Nunataks and Mt. Keyser, in the E. part of the Tula Mtns. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for B. P. Ryder, radio officer at Mawson Station in 1961.

Ryder Bay 67°34'S., 68°20'W.

Bay 6 mi. wide at its mouth and indenting 4 mi., lying 5 mi. E. of Mt. Gaudry on the SE. coast of Adelaide Island. The Léonie Is. lie across the mouth of this bay. Disc. and first surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1936 by the BGLE under Rymill, and in 1948 by the FIDS. The bay is named for Lisle C. D. Ryder, second mate on the *Penola* during the BGLE, 1934-37.

Ryder Glacier 71°07'S., 67°20'W.

Gently sloping glacier, 13 mi. long and wide, flowing W. from the Dyer Plateau of Palmer Land into George VI Sound to the S. of Gurney Point. First surveyed in 1936 by the BGLE under Rymill. Named by the UK-APC in 1954 for Capt. Robert E. D. Ryder, RN, who as Lieutenant, was commander of the *Penola* during the BGLE, 1934-37.

Ryge Rocks 63°40'S., 60°00'W.

Group of rocks lying E. of Oluf Rocks, in the Palmer Archipelago. Photographed by the FIDASE in

GEOGRAPHIC NAMES OF THE ANTARCTIC

1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for J. C. Ryge, Danish master of the freighter *Oluf Sven*, chartered by the FIDASE, 1955-57.

Rymill, Cape: see Reichelderfer, Cape 69°22'S., 62°43'W.

Rymill, Cape 69°30'S., 62°25'W.

A steep, metamorphic rock cliff standing opposite the central part of Hearst I. and jutting out from the ice-cap along the E. coast of Palmer Land. Named for John Rymill by members of the East Base of the USAS who charted this coast by land and from the air in 1940. Rymill was the leader of the BGLE, and in 1936 sledged eastward across Antarctic Peninsula to 69°45'S., 63°28'W.

Rymill, Mount 73°03'S., 65°50'E.

A fairly massive mountain with an undulating surface marked by extensive formation of stone polygons, standing 6 mi. W. of Mt. Stinear in the Prince Charles Mountains. Photographed from the air by ANARE, 1956-58. Named by ANCA for John R. Rymill, leader of the British Graham Land Exp., 1934-37.

Rymill Bay 68°24'S., 67°05'W.

Bay, 9 mi. wide at its mouth and indenting 5 mi., entered between Red Rock Ridge and Bertrand Ice Piedmont along the W. coast of Graham Land. Probably first seen from a distance by the FrAE under Charcot in 1909. The bay was first surveyed in 1936 by the BGLE, and was resurveyed in 1948 by the FIDS. The name, proposed by members of the BGLE, is for John R. Rymill, Australian leader of the BGLE, 1934-37.

Rymill's Col: see Safety Col 68°20'S., 66°57'W.

Ryrie Rock 67°03'S., 61°27'E.

An isolated rock off the coast, 11 mi. NE. of Kidson Island and 26 mi. NE. of Byrd Head. Disc. in February 1931 by the BANZARE under Mawson, who named it for the Australian High Commissioner in London at the time.

Ryrieskjeret: see Ryrie Rock 67°03'S., 61°27'E.

Ryswyck Island: see Fournier Island 64°33'S., 62°49'W.

Ryswyck Point 64°34'S., 62°50'W.

Point marking the E. extremity of Anvers I., in the Palmer Archipelago. Disc. and named by the BelgAE, 1897-99, under Gerlache.

Ryūgū, Cape 67°58'S., 44°02'E.

Rocky cape 7 mi. NE. of Rakuda Rock on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Ryūgū-misaki (cape of the dragon's palace).

Ryvingen Peak 72°55'S., 3°29'W.

A rock peak 3 mi. WSW. of Bråpiggen Peak, on the S. side of Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Ryvingen.

R4D Nunatak 72°44'S., 162°21'E.

A nunatak lying 2 mi. SE. of Burkett Nunatak, at the SE. end of Monument Nunataks. Named by the Northern Party of NZGSAE, 1962-63, after the R4D "Dakota" aircraft used by the U.S. Navy to transport the Northern Party to this area, and to resupply and return the party to Scott Base.

Saavedra, Isote: see Saavedra Rock 63°19'S., 57°56'W.

Saavedra Rock 63°19'S., 57°56'W.

The largest of several rocks at the SW. corner of González Anchorage, in the Duroch Islands. Named by the fifth Chilean Antarctic Expedition, 1950-51, for Lt. Col. Eduardo Saavedra R., chief army delegate aboard the ship *Lautaro*.

Sabatier, Mount 54°49'S., 36°08'W.

Mountain 1,145 m., standing close N. of Mt. Senderens and 1 mi. NE. of Paradise Beach in the S. part of South Georgia. The feature appears on charts dating back to the 1930's. It was surveyed by the SGS in the period 1951-57, and named by the UK-APC for Prof. Paul Sabatier (1854-1941), French chemist, whose work with Jean-Baptiste Senderens led to the introduction in about 1907 of the hydrogenation process for hardening whale oil.

Sabine, Mount 71°55'S., 169°33'E.

Prominent, relatively snow-free mountain rising to 3,720 m. between the heads of Murray Gl. and Burnette Gl. in the Admiralty Mountains. Discovered on Jan. 15, 1841 by Capt. James Ross, RN, who named this feature for Lt. Col. Edward Sabine of the Royal Artillery, Foreign Secretary of the Royal Society, one of the most active supporters of the expedition.

Sabine Glacier 63°55'S., 59°47'W.

A glacier terminating at the sea between Wennersgaard Point and Cape Kater on the northwest coast of Graham Land. Capt. Henry Foster gave the name "Cape Sabine" in 1829 to a feature lying southeast of Cape Kater but it has not been possible to identify that cape. This toponym preserves the early use of Sabine in this area. Sir Edward Sabine (1788-1883), English astronomer and geodesist, was a member of the committee which planned the 1829 voyage of Foster in the *Chanticleer*.

Sable Pinnacles: see Noire Rock 64°40'S., 62°35'W.

Sabrina Coast 67°20'S., 119°00'E.

That portion of the coast of Wilkes Land, Antarctica, lying between Cape Waldron, in 115°33'E., and Cape Southard, in 122°05'E. John Balleny has long been credited with having seen land in March 1839 in about 117°E. The USEE under Lt. Charles Wilkes approached this coast in February 1840 and indicated its general configuration as shown in part by "Totten High Land" on his 1840 chart. In 1931 the BANZARE under Douglas Mawson saw what appeared to be land in this longitude about one degree farther south than that reported by Balleny and Wilkes. In recognition of Balleny's effort, Mawson re-

tained the name of the cutter *Sabrina*, one of Balleny's ships which was lost in a storm in 95°E. in the latter part of March 1839.

Sabrina Island 66°57'S., 163°17'E.

The largest of three small islets lying 1 mi. southward of Buckle Island in the Balleny Islands. Named after the cutter *Sabrina*, commanded by H. Freeman, which sailed with John Balleny's schooner the *Eliza Scott*, in 1839, when the Balleny Islands were discovered.

Sabrina Land: see Sabrina Coast 67°20'S., 119°00'E.

Sachsebåene: see Sachse Rocks 54°24'S., 3°25'E.

Sachse Rocks 54°24'S., 3°25'E.

A group of submerged rocks which lie close to the northern coast of Bouvetøya and approximately 0.2 mi. SE. of Cape Valdivia. The rocks were charted and named by the Norwegian expedition, 1927-28, under Capt. Harald Horntvedt. Named for Walter Sachse, navigation officer on the German vessel, the *Valdivia*, which made a running survey of Bouvetøya in 1898 and accurately fixed the position of the island for the first time.

Sack Island 66°26'S., 110°25'E.

A rocky island, 0.4 mi. long, lying 0.2 mi. E. of the S. end of Holl I., in the Windmill Islands. First mapped from aerial photographs taken by USN Op. Hjp. in February 1947. Named by the US-ACAN for Norman F. Sack who served as photographer's mate with the central task force of USN Op. Hjp., 1946-47, and assisted USN Op. Wml. parties in obtaining photographic coverage of this area in January 1948.

Sack Rock: see Sack Island 66°26'S., 110°25'E.

Sacramento Bay: see Sacramento Bight 54°29'S., 36°01'W.

Sacramento Bight 54°29'S., 36°01'W.

An open bight, 2.5 mi. wide, between Calf Head and Cape Harcourt on the N. coast of South Georgia. The name "Penguin-Bay" was given by the German group of the International Polar Year Investigations, 1882-83, to a small bay within the bight now described. The SGS, 1951-52, reported that a name is not necessary for this bay, and that the bight, which is known to whalers and sealers as Sacramento Bay, does require a name. In order to indicate the correct nature of the feature, and at the same time to conform to local usage, the name Sacramento Bight is approved.

Saddle Bluff 56°42'S., 27°09'W.

Point 1.3 mi. NW. of Irving Pt. on the NE. side of Visokoi I. in the South Sandwich Islands. Named by

GEOGRAPHIC NAMES OF THE ANTARCTIC

DI personnel on the *Discovery II* following their survey in 1930.

Saddle Island: see Brutus Island 54°04'S., 37°09'W.

Saddle Island 60°38'S., 44°50'W.

Island nearly 2 mi. long, consisting of twin summits which are almost separated by a narrow channel strewn with boulders, lying 5.5 mi. N. of the W. end of Laurie I. in the South Orkney Islands. Disc. and charted in 1823 by British sealer James Weddell, and so named by him because of its peculiar shape.

Saddle Peak 70°40'S., 164°40'E.

Twin peaks (960 m.) with a distinct saddle between them, located 3 mi. NW. of Mt. Kostka in western Anare Mountains. Given this descriptive name by ANARE (*Thala Dan*), 1962, which explored this area.

Saddle Point 53°01'S., 73°29'E.

A rock point separating Corinthian Bay and Mechanics Bay on the N. coast of Heard Island. The name was applied by American sealers at Heard I. following their initiation of sealing there in 1855.

Saddlestone, The 63°26'S., 57°02'W.

Small nunatak, 380 m., standing between Mt. Carrel and The Pyramid, in the northern part of Tabarin Peninsula. It rises 45 m. above the ice sheet at the head of Kenney Glacier. Surveyed in 1955 by FIDS, who applied the descriptive name; saddlestone is an architectural term for the stone at apex of a pediment or gable.

Sadler Point 64°42'S., 62°04'W.

Point within Wilhelmina Bay, lying 2.5 mi. E. of Garnerin Pt. on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for James Sadler (1751-1828), Oxford confectioner, the first English aeronaut, who ascended in a montgolfier balloon on Oct. 4, 1784.

Sadles Point: see Saddle Point 53°01'S., 73°29'E.

Saens Peña, Cape: see Sáenz, Cape 67°33'S., 67°39'W.

Saens Valiente, Mount: see Valiente Peak 65°27'S., 63°43'W.

Saens Valiente, Sommet: see Valiente Peak 65°27'S., 63°43'W.

Saens Valiente Peak: see Valiente Peak 65°27'S., 63°43'W.

Sáenz, Cape 67°33'S., 67°39'W.

Cape between Laubeuf and Bigourdan Fjords, forming the S. extremity of Arrowsmith Pen. on the W. coast of

Graham Land. Disc. by the FrAE under Charcot, 1908-10, and named by him for Dr. Roque Sáenz Peña, Pres. of the Argentine Republic, 1910-13.

Sáenz Peña, Cape: see Sáenz, Cape 67°33'S., 67°39'W.

Saenz Valiente Peak: see Valiente Peak 65°27'S., 63°43'W.

Saetet Cirque 72°01'S., 2°42'E.

A large cirque in the N. side of Jutulsessen Mtn., in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Saetet (the seat).

Saether Crags 71°52'S., 8°54'E.

High rock crags just south of Steinskaret Gap in the Kurze Mtns. of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named for Håkon Saether, medical officer with NorAE (1956-57).

Saetherrindane: see Saether Crags 71°52'S., 8°54'E.

Safety Col 68°20'S., 66°57'W.

Snow-covered col, 185 m. high, between Red Rock Ridge and the Blackwall Mtns., on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948-49 by the FIDS, and so named by them because the col affords a safe sledging route between Neny Fjord and Rymill Bay when there is open water off the W. end of Red Rock Ridge.

Safety Island 67°31'S., 63°54'E.

Small coastal island 3 mi. E. of Cape Daly. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37. First visited in 1954 by an ANARE party led by R. G. Dovers, and so named because it was the nearest safe camp site to Scullin Monolith.

Safety Spur 85°19'S., 168°00'E.

A small rock spur from the Dominion Range, extending SE. from a broad isolated prominence between the mouth of Vandament Gl. and the W. side of Mill Glacier. So named by the Southern Party of the NZGSAE (1961-62) because it was at this landfall that the party arrived after their first crossing of Mill Gl. in November 1961.

Saffery Islands 66°04'S., 65°49'W.

Group of islands extending W. from Black Head, off the W. coast of Graham Land. Charted by the BGLE

GEOGRAPHIC NAMES OF THE ANTARCTIC

under Rymill, 1934-37. Named by the UK-APC for J. H. Saffery, Deputy Leader and Flying Manager of the FIDASE which photographed part of the area in 1955-57.

Sagbladet Ridge 71°47'S., 5°51'E.

A rock ridge at the E. side of the mouth of Austreskorve Glacier, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by NorAE (1956-60) and named Sagbladet (the saw blade).

Sage Nunataks 84°33'S., 173°00'W.

Two ice-free nunataks, 1 mi. apart, located at the edge of the Ross Ice Shelf, just N. of Mt. Justman and the Gabbro Hills. Named by US-ACAN for Richard H. Sage, builder, USN, a member of the winter party at Byrd Station in 1959 and the South Pole Station in 1964.

Sail Rock 52°54'S., 73°34'E.

A rock lying 1 mi. NW. of Shag Island and 7 mi. N. of Heard Island. This rock, though positioned several miles too far westward, appears to have been first shown on an 1860 sketch map compiled by Capt. H.C. Chester, American sealer operating in the area during this period. It was more accurately charted and named on an 1874 chart by the *Challenger* expedition.

Sail Rock 63°02'S., 60°57'W.

Insular rock, 30 m. high, lying 7 mi. SW. of Deception I., in the South Shetland Islands. This name, which dates back to at least 1822, was probably given by sealers. From a distance, the rock is reported to resemble a ship under sail, but at close range it is more like a house with a gable roof.

Sail Rocks: see Sail Rock 63°02'S., 60°57'W.

Sails, Bay of 77°21'S., 163°34'E.

A shallow indentation of the coast of Victoria Land between Spike Cape and Gneiss Point. The name was suggested by the Western Geological Party of the BrAE (1910-13), which while sledging across the ice at the mouth of the bay erected makeshift sails on their man-drawn sledge, thereby increasing the speed.

Saint Andrews Bay 54°26'S., 36°11'W.

A bight 2 mi. wide, indenting the N. coast of South Georgia immediately S. of Mt. Skittle. Probably first sighted by the Br. exp. under Cook which explored the N. coast of South Georgia in 1775. The name dates back to at least 1920 and is now well established. On charts where abbreviations are used, the name may be abbreviated to St. Andrews Bay.

Saint George Peak 69°06'S., 72°03'W.

Peak in the W. part of the Havre Mtns., 1,500 m., situated 3 mi. NE. of Cape Vostok on Alexander Island. In 1821 the Russ. exp. under Bellingshausen sighted a very high mountain in this area to which they gave the name "Gora Svyatogo Georgiya Pobedonostsa" (Mountain of Saint George the Victor). Though the position reported by them for this mountain would place it in the sea, it has been assumed that the peak described here is the same feature. It was first mapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. The translated form of the name suggested by the UK-APC has been approved.

Saint Johns Range 77°17'S., 162°00'E.

Crescent-shaped mountain range about 20 mi. long, in Victoria Land. It is bounded on the N. by the Cotton, Miller and Debenham Glaciers, and on the S. by Victoria Valley and the Victoria Upper and Victoria Lower Glaciers. Named by the N. Z. Northern Survey Party of the CTAE, 1956-58, which surveyed peaks in the range in 1957. Named for St. Johns College at Cambridge, England, with which several members of the BrAE (1910-13) were associated during the writing of their scientific reports, and in association with the adjacent Gonville and Caius Range.

Saint Lauxanne, Bahía: see Lauzanne Cove 65°05'S., 63°23'W.

Saint Lauzanne, Baie: see Lauzanne Cove 65°05'S., 63°23'W.

Saint Martha Cove 63°56'S., 57°50'W.

A small, almost landlocked cove on the NW. side of Croft Bay, close S. of Andreassen Point, James Ross Island. Named on an Argentine map of 1959, presumably after Saint Martha, sister of Mary and Lazarus.

Saint Michael, Mount 67°10'S., 58°21'E.

Prominent rocky point at the W. side of the entrance to Bell Bay in Enderby Land. Discovered in February 1936 by DI personnel on the *William Scoresby*, and probably named by them for its resemblance to Le Mont-Saint-Michel on the French coast.

Saint Pauls Mountain 77°39'S., 161°13'E.

A high, steeply-cliffed mountain 2 mi. NE. of Round Mountain on the N. side of Taylor Glacier. It is joined to Round Mountain by a high ridge. Named by the BrNAE, 1901-4.

Saint Rita Point 64°15'S., 57°16'W.

A point terminating in a steep rock outcrop immediately N. of the mouth of Gourdon Glacier, on the E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

coast of James Ross Island. The name "Cabo Santa Rita" appears on a 1959 Argentine map. Saint Rita (1381-1457), an Italian, was canonized in 1900 and is well known throughout the Spanish-speaking world as the saint of desperate causes.

Sakazuki Rock 68°42'S., 40°31'E.

A small and featureless rock which lies just east of the Tama Point rock outcrop on the coast of Queen Maud Land. Mapped from surveys and air photos by the JARE, 1957-62. The name "Sakazuki-iwa" (wine cup rock) was applied by JARE Headquarters in 1962.

Sakellari Peninsula 67°10'S., 49°15'E.

Large ice-covered peninsula immediately W. of Amundsen Bay in Enderby Land. This region was photographed by ANARE in 1956-57 and by the Soviet exp. in the *Lena* in 1957. Named by the Soviet exp. for N. A. Sakellari, Soviet scientist and navigator.

Salamander Point 59°25'S., 27°05'W.

The northern point of Bellingshausen I., South Sandwich Islands. This feature was named North Point during the survey of the island from RRS *Discovery II* in 1930, but the name was changed by UK-APC in 1971 to avoid duplication. The new name is in association with nearby Basilisk Peak; Salamander is an animal mythically supposed to live in fire.

Salamander Range 72°06'S., 164°08'E.

A distinctive linear range between the Canham and Black Glaciers, in the Freyberg Mountains. Named by the Northern Party of NZGSAE, 1963-64, from the nickname given to Lord Freyberg by Sir Winston Churchill, for the lizard that is untouched by fire.

Salbreen: see Sal Glacier 72°03'S., 25°31'E.

Salen Mountain 72°05'S., 25°27'E.

Mountain, 2,950 m., between Komsa Mtn. and Sal Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Salen (the saddle) because of its shape.

Sal Glacier 72°03'S., 25°31'E.

Glacier, 7 mi. long, flowing N. between Salen Mtn. and Mt. Bergersen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Salbreen (the saddle glacier), probably for its association with Salen Mountain (q.v.).

Saliente, Roca: see Salient Rock 62°22'S., 59°20'W.

Salient Glacier 78°06'S., 163°05'E.

A glacier on the E. side of the Royal Society Range, draining NE. into the head of the Blue Gl. from the

slopes of Salient Peak. Surveyed in 1957 by the N.Z. Blue Glacier Party of the CTAE (1956-58). Named after Salient Peak.

Salient Peak 78°09'S., 162°45'E.

A buttressed peak of the Royal Society Range between Mounts Rücker and Hooker. A ridge descends eastward from it and forms the watershed between tributaries of the Blue Glacier on the north and Walcott Glacier on the south. So named by the N.Z. Blue Glacier Party of the CTAE (1956-58) because it forms a salient of the Royal Society Range, where the summit turns SW. toward Mounts Rücker and Huggins.

Salient Rock 62°22'S., 59°20'W.

The outermost of numerous rocks fringing the NE. end of Robert I. and extending into Nelson Strait, in the South Shetland Islands. The name "Roca Saliente" appears on a Chilean Govt. chart of 1951 and is probably descriptive.

Salisbury, Mount 85°38'S., 153°37'W.

An ice-free mountain, 970 m., standing at the W. side of the lower Scott Gl. at the S. end of the Karo Hills. First seen and roughly mapped by the ByrdAE, 1928-30. Named by US-ACAN for James B. Salisbury who made cosmic radiation studies at McMurdo Station in 1965.

Salisbury Plain 54°03'S., 37°21'W.

A small plain lying between the mouths of Grace and Lucas Glaciers on the N. coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Salknappen Peak 72°19'S., 1°02'E.

A subsidiary peak on the N. side of Isingen Mtn., in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Salknappen (the saddle button).

Sallee Snowfield 82°37'S., 50°20'W.

A large snowfield between Dufek Massif and northern Forrester Range in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Lt. Cdr. Ralph W. Sallee, Asst. Meteorological Officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, in 1967 and 1968.

Sally Cove 67°48'S., 67°17'W.

Cove indenting the NW. shore of Horseshoe I., off Graham Land. So named by UK-APC because the cove was used by all sledging parties leaving the nearby FIDS station for the north.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sally Rocks 62°42'S., 60°26'W.

Group of rocks lying in South Bay just N. of Miers Bluff, Livingston I., in the South Shetland Islands. The name Sallys Cove was applied to a feature shown lying southward of Johnsons Dock by James Weddell in 1820-23. There is no true cove in this area, but these rocks may have formed one arm of what appeared to him to be a cove. The name Sally Rocks was given by the UK-APC in 1961 in order to preserve Weddell's name in the vicinity.

Salmon Bay 77°56'S., 164°33'E.

Bay just N. of Cape Chocolate along the coast of Victoria Land. The bay was originally named Davis Bay in association with Davis Glacier (now Salmon Glacier) by the BrAE, 1910-13. The glacier was subsequently renamed Salmon Glacier by the N. Z. Northern Survey Party of the CTAE (1956-58) to avoid confusion with a second Davis Glacier in Victoria Land. In order to preserve the original association, the name of this bay was also changed.

Salmon Cliff 72°22'S., 170°06'E.

The second prominent rock cliff S. of Seabee Hook on the W. side of Hallett Peninsula. Named by the NZGSAE, 1957-58, for K. J. Salmon, physicist and scientific leader at Hallett Station in 1958.

Salmon Cove 67°06'S., 66°28'W.

A cove 4 mi. SE. of McCall Point on the E. side of Lallemand Fjord, Graham Land. Mapped by FIDS from surveys and air photos, 1956-59. Named by UK-APC for Eric M. P. Salmon, assistant FIDS meteorologist who spent several seasons in Antarctica, 1950-56, and visited this cove in 1956.

Salmon Creek: see Salmon Stream 77°56'S., 164°30'E.

Salmon Glacier 77°58'S., 164°05'E.

Small glacier lying 5 mi. WSW. of Cape Chocolate and immediately S. of Salmon Hill in Victoria Land. It appears on the charts of the BrAE (1910-13) as Davis Glacier, a name given to another feature in Victoria Land. To avoid the confusion of having identical names for nearby features, this glacier was renamed after nearby Salmon Hill by the N. Z. Northern Survey Party of the CTAE, 1956-58.

Salmon Hill 77°57'S., 164°09'E.

Hill between Salmon and Blackwelder Glaciers in Victoria Land. So named by F. Debenham of the BrAE (1910-13) because of its sandy pink color due to a pink limestone.

Salmon Island 66°01'S., 65°28'W.

The westernmost of the Fish Is., lying off the W. coast of Graham Land. Charted by the BGLE under Ry-

mill, 1934-37. So named by the UK-APC in 1959 because it is one of the Fish Islands.

Salmon Stream 77°56'S., 164°30'E.

A small meltwater stream about 6 mi. long, draining from the Salmon Glacier and flowing into Salmon Bay on the coast of Victoria Land. Originally named Davis Creek by the BrAE, 1910-13. Renamed for its association with Salmon Glacier by the NZ-APC in 1960.

Salomon Glacier 54°47'S., 35°54'W.

Glacier flowing S. into Hamilton Bay, at the E. end of South Georgia. Named by the GerAE under Filchner, 1911-12.

Salpêtrière Bay 65°04'S., 64°02'W.

Bay 1 mi. wide, between Hervéou Pt. and Poste Pt. along the W. side of Booth I., in the Wilhelm Archipelago. First charted by the FrAE under Dr. Jean B. Charcot, 1903-5, and named by him after the Hôpital de la Salpêtrière, a Paris hospital where his father, Dr. Jean Martin Charcot, founded a clinic for the treatment of nervous diseases.

Saltonstall, Mount 86°53'S., 154°18'W.

A tabular mountain, 2,975 m., standing 1 mi. S. of Mt. Innes-Taylor at the S. side of Poulter Gl., in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for John Saltonstall, contributor to the expedition.

Saluta Rocks 54°03'S., 37°57'W.

Group of rocks 1 mi. E. of Laurie Pt., lying off the S. coast and near the W. end of South Georgia. The name Mutt and Jeff was probably given by Lt. Cdr. J. M. Chaplin of the *Discovery* during his survey of the Undine Hbr. area in 1926. The SGS, 1955-56, reported that the name is misleading; there are not two rocks as implied, but a group. The rocks were renamed by the UK-APC for the *Saluta*, a transport of the South Georgia Whaling Co. for many years.

Salvador Nunatak 72°34'S., 163°20'E.

A nunatak 2 mi. N. of Schumann Nunatak, in the SW. part of Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Anthony Salvador, ionospheric physics researcher at McMurdo Station in 1967.

Salvesen Bay: see Salvesen Cove 64°24'S., 61°20'W.

Salvesen Cove 64°24'S., 61°20'W.

Cove forming the S. extremity of Hughes Bay, along the W. coast of Graham Land. The cove was partially outlined on the charts of the BelgAE under Gerlache,

GEOGRAPHIC NAMES OF THE ANTARCTIC

1897-99. Probably named by whalers operating in this vicinity after Salvesen and Company, whalers of Leith, Scotland.

Salvesen Range 54°40'S., 36°07'W.

Rocky mountain range, 18 mi. long and rising to 2,330 m., which extends from Ross Pass in a SE. direction to the SE. end of South Georgia. The range is roughly delineated on several early charts of South Georgia. It was surveyed by the SGS, 1951-52, and named for Sir Harold Salvesen, a director of Messrs. Chr. Salvesen and Co., Leith, who gave great assistance to the SGS, 1951-52 and 1953-54.

Salveson Cove: see Salvesen Cove 64°24'S., 61°20'W.

Samoylovicha, Gora: see Samoylovich Nunatak 71°48'S., 4°55'E.

Samoylovich Nunatak 71°48'S., 4°55'E.

A nunatak near the N. end of the Hamarskaftet Nunataks, in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norsk Polarinstitut from surveys and air photos by NorAE, 1956-60. Also mapped by SovAE in 1961 and named for R. L. Samoylovich, a polar explorer.

Sample Nunataks 70°53'S., 159°52'E.

A cluster of nunataks located at the convergence point of the Lovejoy and Harlin Glaciers, in the Usarp Mountains. Named by US-ACAN for Gerald M. Sample, USN, radio operator on R4D aircraft, 1961-62, and again in 1962-63 in support of the USGS Topo East-West party, including the survey of these nunataks.

Samsel, Mount 70°24'S., 63°15'W.

A mountain along the N. side of Clifford Glacier, just W. of the juncture of the Kubitza Glacier, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Gene L. Samsel, USARP biologist at Palmer Station in the 1969-70 and 1970-71 seasons.

Samuel Islands 54°11'S., 37°37'W.

Group of small islands and rocks lying close to the S. coast of South Georgia, 1 mi. WSW. of Nilse Hullet and 2 mi. ESE. of Klutschak Point. Surveyed by the SGS in the period 1951-57. Named by the UK-APC after the catcher *Don Samuel*, built in 1925 and later owned by the Compañía Argentina de Pesca, Gryt-viken, which sank in the vicinity of these islands in 1951.

Samuel Nunataks 79°38'S., 82°30'W.

A chain of about seven nunataks at the SE. end of the Nimbus Hills, in the Heritage Range. Mapped by

USGS from surveys and USN air photos 1961-66. Named by US-ACAN for Samuel L. Wilson, meteorological electronics technician at Little America V Station in 1957.

Samuel Peak 62°33'S., 60°07'W.

Peak rising westward of Edinburgh Hill in the NE. part of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 after the American ship *Samuel* (Capt. Robert Inott) from Nantucket, which visited the South Shetland Islands in 1820-21.

San Andrés, Bahía: see Saint Andrews Bay 54°26'S., 36°11'W.

Sanaviron, Peninsula: see Coughtrey Peninsula 64°54'S., 62°53'W.

Sanctuary Cliffs 64°27'S., 57°12'W.

Rock cliffs at the N. edge of the ice cap which covers the central part of Snow Hill Island, James Ross Island group. First seen and surveyed by the SwedAE, 1901-4, under Nordenskjöld. They gave the name "Mittelnunatak," presumably because of their position near the middle of the north coast of the island. Following survey by FIDS in 1952, it was reported that the term "cliffs" is more suitable than "nunatak" for this feature. Since the word "Middle" has been accepted in several other Antarctic names, the UK-APC recommended an entirely new and more distinctive name be approved. Sanctuary Cliffs is descriptive of the aspect of these cliffs which face into the sun and provide shelter from the prevailing southwesterly winds.

Sanctuary Islands 65°37'S., 64°35'W.

Group of small islands lying just off the W. side of Chavez I., 0.5 mi. SW. of Link Stack, off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because these islands provided sheltered camping sites for FIDS sledging parties from the Prospect Point station in 1957, and there are several small boat anchorages which were used by the British Naval Hydrographic Survey Unit's motor-launch in 1957-58.

Sanctuary Pinnacle: see Spire, The 68°18'S., 66°53'W.

Sandbakken Moraine 71°34'S., 12°08'E.

An area of moraine located 2 mi. NW. of Gråhorna Peaks, on the W. side of Westliche Petermann Range, Wohlthat Mountains. First plotted from air photos by GerAE, 1938-39. Mapped from air photos and surveys by NorAE, 1956-60, and named Sandbakken (the sand slope).

Sand Bay: see Sandebugten 54°18'S., 36°22'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sandbotnen Cirque 71°44'S., 12°01'E.

A cirque or small valley, the floor of which is covered by moraine, indenting the W. side of Zwiesel Mtn. in the Pieck Range, Wohlthat Mountains. First plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Sandbotnen (the sand cirque).

Sandebugten 54°18'S., 36°22'W.

Cove in Cumberland East Bay at the W. end of Reindeer Valley, South Georgia. The name appears on a 1929 British Admiralty chart but probably was applied earlier by Norwegian whalers operating from South Georgia.

Sandefjord 54°21'S., 36°58'W.

Cove close W. of Newark Bay along the S. coast of South Georgia. The name is well established in local use.

Sandeffjord: see Sandefjord Bay 60°37'S., 46°03'W.

Sandefjord Bay 60°37'S., 46°03'W.

Narrow body of water, 2 mi. long, extending in a NE.-SW. direction between the W. end of Coronation I. and Monroe I., in the South Orkney Islands. The N. entrance is narrow and has Spine I. in the middle. Disc. and roughly charted by Capt. George Powell and Capt. Nathaniel Palmer during their joint cruise in December 1821. The name Sandefjord, presumably for Sandefjord, Norway, center of the Norwegian whaling industry, appears to have been first used on a 1912 chart by Petter Sørille, Norwegian whaling captain. The feature was surveyed by DI personnel in 1933.

Sandeffjord Bay: see Sandefjord Cove 68°47'S., 90°42'W.

Sandeffjord Bay: see Sandefjord Ice Bay 69°40'S., 74°25'E.

Sandeffjordbukta: see Sandefjord Ice Bay 69°40'S., 74°25'E.

Sandefjord Cove 68°47'S., 90°42'W.

A cove between Cape Ingrid and the terminus of Tofte Glacier on the west side of Peter I Island. A Norwegian expedition under Eyvind Tofte circumnavigated Peter I Island in the *Odd I* in 1927. In February 1929 the *Norvegia* under Nils Larsen carried out a series of investigations all around the island, landing on February 2 to hoist the Norwegian flag. Named for Sandefjord, Norway, center of the Norwegian whaling industry.

Sandefjord Ice Bay 69°40'S., 74°25'E.

A bay about 25 mi. wide which forms the head of Prydz Bay. The feature is bounded on the west by Amery Ice Shelf, on the east by Publications Ice Shelf, and on the south by the mainland. Discovered in February 1935 by Capt. Klarius Mikkelsen in the Norwegian whaling ship *Thorshavn* sent out by Lars Christensen. They gave the name Sandefjordbukta after the town of Sandefjord, center of the Norwegian whaling industry. The term "ice bay" is applied to this feature because of its formation in ice, and to eliminate duplication of the name Sandefjord Bay.

Sandeffjord Peak: see Sandefjord Peaks 60°37'S., 45°59'W.

Sandefjord Peaks 60°37'S., 45°59'W.

Three conical peaks, the highest 635 m., marking the SW. end of Pomona Plateau at the W. end of Coronation I., in the South Orkney Islands. The southernmost of these peaks was named Sandefjord Peak after nearby Sandefjord Bay by DI personnel in 1933. The collective name, Sandefjord Peaks, was recommended by the UK-APC following a survey of the peaks by the FIDS in 1950.

Sandegga Ridge 71°54'S., 9°43'E.

Ridge extending S. for 5 mi. from Sandhø Heights in the Conrad Mtns. of the Orvin Mtns., Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Sandegga (the sand ridge).

Sandeggtind Peak 71°52'S., 9°45'E.

Peak, 3,055 m., standing 1 mi. S. of Sandhø Heights on Sandegga Ridge in the Conrad Mtns., Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Sandeggtind (sand ridge peak).

Sandeidet Moraine 71°39'S., 12°15'E.

A moraine covering the surface between Gråkammen Ridge and a small rock spur just NW., in Westliche Petermann Range, Wohlthat Mountains. First plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Sandeidet (the sand isthmus).

Sandell, Mount: see Wood, Mount 74°51'S., 64°07'W.

Sanderclock Nunataks 68°32'S., 52°04'E.

An isolated group of nunataks about 45 mi. ESE. of the Nye Mountains in Enderly Land. Discovered and visited in Dec. 1959 by an ANARE airborne survey

GEOGRAPHIC NAMES OF THE ANTARCTIC

party. Named by ANCA for Squadron Leader J.C. Sandercock, RAAF, officer commanding the Antarctic Flight at Mawson Station, 1959.

Sanders, Mount: see Saunders, Mount 85°21'S., 165°26'E.

Sandford Cliffs 83°54'S., 159°17'E.

Distinctive, mainly ice-free cliffs constituting the western limits of Peletier Plateau in Queen Elizabeth Range. Named by the N.Z. Southern Party of the CTAE (1956-58) for N. Sandford, IGY scientist at Scott Base in 1957.

Sandford Glacier 66°40'S., 129°50'E.

A channel glacier flowing to the E. side of Porpoise Bay, about 25 mi. SSW. of Cape Morse. Delineated from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for Joseph P. Sandford, Passed Midshipman on the brig *Porpoise* of the USEE (1838-42) under Wilkes.

Sandhøhallet Glacier 71°52'S., 9°50'E.

Small glacier flowing SE. from the S. slopes of Sandhø Heights in the Conrad Mtns., Queen Maud Land. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Sandhøhallet (the sand heights slope).

Sandhø Heights 71°50'S., 9°47'E.

Bare rock heights forming the summit area in the central Conrad Mtns., in Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Sandhø (sand heights).

Sandhøkalvane Nunataks 71°46'S., 9°55'E.

A group of nunataks located 4 mi. NE. of Sandhø Heights, lying between Conrad Mtns. and Mt. Dallmann in Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by the NorAE, 1956-60, and named Sandhøkalvane (the sand heights calves).

Sandilands Nunatak 70°32'S., 67°27'E.

A small, solitary nunatak about 3 mi. N. of Mt. Seaton. It lies in the middle of and near the northern end of Nemesis Glacier in the Prince Charles Mountains. Sighted in December 1956 by an ANARE sledging party led by P. W. Crohn. Named by ANCA for A. H. Sandilands, radio operator at Mawson Station in 1957.

Sandneset Point 71°39'S., 9°33'E.

The northern point of Furdesanden Moraine in the Conrad Mtns. of the Orvin Mtns., Queen Maud Land. Disc. and photographed by the GerAE,

1938-39. Mapped by Norway from surveys and air photos by NorAE, 1956-60, and named Sandneset (the sand point).

Sandneskalven Nunatak 71°40'S., 9°53'E.

An isolated nunatak located 6 mi. E. of Sandneset Point in the Conrad Mtns. in Queen Maud Land. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Sandneskalven (the sand point calf).

Sandnesstaven Peak 71°41'S., 9°39'E.

A peak, 2,030 m., at the N. end of the Conrad Mtns. in the Orvin Mtns. of Queen Maud Land. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Sandnesstaven (the sand point staff).

Sandow, Mount 67°22'S., 100°24'E.

A nunatak overlooking the Denman Gl. about 11 mi. SW. of Mt. Amundsen. Discovered by the Western Base Party of the AAE (1911-14) under Mawson. Named by Mawson for Eugene Sandow of London, a patron of the expedition.

Sandseten Mountain 71°33'S., 12°09'E.

A flattish mountain 1 mi. S. of Krakken Mtn. and just SW. of Gneysovaya Peak in Westliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Sandseten (the sand seat).

Sandved, Mount 82°41'S., 161°06'E.

Mountain, 2,440 m., standing 2 mi. N. of Mt. Dougherty in the N. part of the Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Kurt G. Sandved, Information Officer at the Office of Antarctic Programs, National Science Foundation.

Sandwich Bay: see Iris Bay 54°42'S., 35°56'W.

Sandwich Bluff 63°50'S., 57°30'W.

Flat-topped mountain, 610 m., broken sharply at its W. side by a steep dark bluff, standing slightly W. of center on Vega Island in the James Ross Island group. Disc. by the SwedAE under Nordenskjöld, 1901-4. Charted in 1945 by the FIDS, and so named because a horizontal snow-holding band of rock breaks the western cliff giving it the appearance of a sandwich when viewed from the north.

Sandwich Group: see South Sandwich Islands 57°45'S., 26°30'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sandwich Islands: see South Sandwich Islands 57°45'S., 26°30'W.

Sandwich Land: see South Sandwich Islands 57°45'S., 26°30'W.

Sandy Beach: see Blacksand Beach 77°33'S., 166°08'E.

Sandy Glacier 77°29'S., 161°57'E.

A very small glacier (600 m. long and 75 m. wide) located 0.6 mi. east of Mt. Orestes in the Olympus Range of Victoria Land. The glacier was studied and named by Wakefield Dort, USARP geologist with the University of Kansas Expedition (1965-66), who reported that it is composed throughout of interbedded ice and sand layers.

San Martín, Tierra de: see Antarctic Peninsula 69°30'S., 65°00'W.

San Martín Glacier 82°24'S., 42°14'W.

A broad glacier flowing westward and bisecting the Argentina Range, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for the Argentine ice-breaker *General San Martín*, which brought the first party to General Belgrano Station on the Filchner Ice Shelf in 1954-55 and made numerous relief and resupply voyages to the area.

San Pedro, Isla: see South Georgia 54°15'S., 36°45'W.

San Rafael Nunatak: see Ferrara, Mount 82°15'S., 41°25'W.

Santa Cruz Point 62°31'S., 59°33'W.

Bluff forming the E. end of Greenwich I., in the South Shetland Islands. The name appears on an Argentine Govt. chart of 1949 and is probably for the *Santa Cruz*, an Argentine vessel that visited the South Shetland Is. in 1948.

Santa Fe Hill: see Spann, Mount 82°03'S., 41°21'W.

Santa Marta, Bahía: see Duperré Bay 64°27'S., 62°41'W.

Santa Marta, Caleta: see Saint Martha Cove 63°56'S., 57°50'W.

Santa Rock 57°02'S., 26°48'W.

Rock, 35 m. high, lying 1.5 mi. NNW. of Vindication I. in the South Sandwich Islands. Charted and named in 1930 by DI personnel on the *Discovery II*.

Santa Teresita Range: see Dufek Massif 82°36'S., 52°30'W.

San Telmo Island 62°28'S., 60°49'W.

Island forming the W. side of Shirreff Cove on the N. coast of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 after the Spanish vessel *San Telmo*, which left Cadiz with the *Alexandro*, *Prueba* and *Primeroso-Mariana* on a voyage to Lima, Peru, in May 1819. Very severe weather was encountered in Drake Passage and the *San Telmo*, dismasted and rudderless, was taken in tow by the *Primeroso-Mariana* in about 61°S., 60°W., but hawser after hawser parted and she was ultimately left to her fate in about 62°S. Some of her spars and her anchor-stock were found by sealers on nearby Half Moon Beach in about 1821.

Santos Peak 64°25'S., 61°32'W.

Peak lying S. of Murray I., on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Alberto Santos-Dumont (1873-1932), Brazilian inventor resident in France, who designed and flew 14 small airships and accomplished the first official powered flight in Europe in 1906.

Sapper Hill 81°24'S., 160°38'E.

An ice-covered hill 2 mi. NE. of Hermitage Peak, in the northern part of Surveyors Range. Named by the NZGSAE (1960-61), in association with nearby Mt. Ubique, for the Royal Engineers.

Sappho Huk: see Sappho Point 54°14'S., 36°28'W.

Sappho Point 54°14'S., 36°28'W.

Point which marks the W. side of the entrance to Cumberland East Bay, on the N. coast of South Georgia. Probably first sighted by the Br. exp. under Cook which explored the N. coast of South Georgia in 1775. Named for H.M.S. *Sappho*, British ship used in charting portions of Cumberland Bay in 1906.

Sapp Rocks 82°30'S., 51°48'W.

Two exposed rocks lying 2 mi. N. of Alley Spur along the N. side of Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Clifton E. Sapp, hospital corpsman with the South Pole winter party, 1965.

Saratoga Table 83°20'S., 50°30'W.

A high, flat, snow-covered plateau, 8 mi. long and 6 mi. wide, standing just S. of Kent Gap and Lexington Table in southern Forrestal Range, Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 on a transcontinental nonstop flight by personnel of U.S. Navy Operation Deep Freeze I from McMurdo Sound to the vicinity of Weddell Sea and return.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Named by the US-ACAN for the U.S.S. *Saratoga* of 1926, one of the first large aircraft carriers of the U.S. Navy.

Sarcophagus Point 57°04'S., 26°43'W.

A point at the SE. side of Sea Serpent Cove on the W. coast of Candlemas I., South Sandwich Islands. The point, with a spine of lava cliffs, almost cuts off Medusa Pool from the sea. It was referred to as "The Sarcophagus" on a sketch-survey of Sea Serpent Cove made by a boat party from RRS *Discovery II* in 1930.

Sarg-Berg: see Coffin Top 54°30'S., 36°06'W.

Sargent Glacier 85°23'S., 163°50'W.

A steep-walled tributary glacier, flowing SE. from the Herbert Range to enter Axel Heiberg Gl. just SE. of Bell Peak. Probably first seen by Roald Amundsen's polar party in 1911, the glacier was mapped by the ByrdAE, 1928-30. Named by US-ACAN for Howard H. Sargent III who made ionospheric studies at the South Pole Station in 1964.

Sarkofagen Mountain 72°10'S., 16°45'E.

A somewhat isolated mountain about 11 mi. S. of Mt. Yakovlev in the Russkiye Mtns., Queen Maud Land. Mapped by Norsk Polarinstitut from air photos taken by NorAE, 1958-59, and named Sarkofagen (the sarcophagus).

Sarnoff Mountains 77°10'S., 145°00'W.

A range of mountains, 25 mi. long and 4 to 8 mi. wide, separating the west-flowing Boyd and Arthur Glaciers in the Ford Ranges of Marie Byrd Land. The west end of the range was discovered and roughly plotted from photos taken by ByrdAE (1928-30) on the flight of Dec. 5, 1929. The range was mapped in greater detail by the ByrdAE (1933-35) and USAS (1939-41), all expeditions led by R. Adm. R. E. Byrd. Named for David Sarnoff, President of RCA (Radio Corporation of America), who provided radio equipment for receiving and transmitting that was used in the field and at Little America by the ByrdAE (1933-35).

Sartorius Island: see Greenwich Island 62°31'S., 59°47'W.

Sartorius Point 62°34'S., 59°39'W.

Point lying nearly 2 mi. E. of Ephraim Bluff on the S. coast of Greenwich I., in the South Shetland Islands. The name Point Hardy was used for this feature by sealers in the area as early as 1820. This name, however, was later incorrectly applied to Fort Point lying to the east. In order to avoid further confusion and also duplication with Hardy Point in the South Sandwich Islands, the name was rejected by the UK-APC in

1961 and a new name substituted. Sartorius Point derives from Sartorius Island, the name used for Greenwich I. by James Weddell in 1820-23. Weddell served under Admiral Sir George R. Sartorius (1790-1885) on HMS *Avon* in 1813-14.

Sastrugi, Cape 74°37'S., 163°41'E.

A sharply projecting point on the W. side of Deep Freeze Range, standing 1.5 mi. NW. of Snowy Point and overlooking the N. portion of Nansen Ice Sheet, in Victoria Land. First explored by the Northern Party of the BrAE, 1910-13, and so named by them because of large and extensive sastrugi that impeded the travel of this party in approaching the point.

Såta Nunatak 69°46'S., 37°17'E.

A nunatak 0.5 mi. N. of Kista Nunatak, standing at the E. side of Fletta Bay along the SW. shore of Lüt-zow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Såta (the haystack).

Satellite, The 67°51'S., 61°07'E.

Small rock peak rising to 1,100 m., protruding slightly above the ice sheet 3 mi. SW. of Pearce Peak and 8 mi. E. of Baillieu Peak. Disc. and named in February 1931 by the BANZARE under Mawson. The approximate position of this peak was verified in aerial photographs taken by the USN Op. Hjp. on Feb. 26, 1947.

Satellite Snowfield 71°28'S., 69°45'W.

A snowfield at the SE. side of the Walton Mtns. in south-central Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. The name applied by UK-APC is for the satellites of the planets, a theme used in naming several features in this area.

Saturn Glacier 72°00'S., 68°35'W.

Glacier in SE. Alexander I., 15 mi. long and 6 mi. wide, flowing SE. into the ice shelf of George VI Sound N. of Corner Cliffs. The coast in this vicinity was first seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. The glacier was surveyed in 1949 by the FIDS and named by the UK-APC for the planet Saturn.

Saunders, Cape 54°07'S., 36°38'W.

Cape forming the W. side of the entrance to Stromness Bay on the N. coast of South Georgia. Disc. in 1775 by a Br. exp. under Cook and named for his close friend Sir Charles Saunders, First Lord of the Admiralty.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Saunders, Mount: see Saunders Mountain 76°53'S., 145°42'W.

Saunders, Mount 85°21'S., 165°26'E.

A mountain, 2,895 m., forming a part of the W. escarpment of the Dominion Range, 4.5 mi. NNW. of Mt. Nimrod. Discovered by the BrAE (1907-9) and named for Edward Saunders, secretary to Shackleton, who assisted in preparing the narrative of the expedition.

Saunders Bluff 72°45'S., 160°44'E.

A small, isolated bluff standing 9 mi. ESE. of Miller Butte in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Jeffrey J. Saunders, biolab technician at McMurdo Station, 1965-66.

Saunders Coast 77°45'S., 150°00'W.

That portion of the coast of Marie Byrd Land between Cape Colbeck and Brennan Point. This coast was explored from the air on Dec. 5, 1929 by the ByrdAE (1928-30) and was first mapped from aerial photographs obtained on that flight by Capt. Harold E. Saunders, USN, for whom the coast is named. The USGS completely mapped the coast from ground surveys and U.S. Navy air photos, 1959-65.

Saunders Hill 66°19'S., 110°32'E.

A rounded, rocky hill which projects into the SE. part of O'Brien Bay, just E. of the Windmill Islands. First mapped from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for William Y. Saunders, biologist at Wilkes Station in 1961.

Saunders Island 57°47'S., 26°27'W.

An arc-shaped island 5.5 mi. long, lying between Candlemas Is. and Montagu I. in the South Sandwich Islands. Disc. in 1775 by Captain James Cook, RN, who named it for Sir Charles Saunders, First Lord of the Admiralty. Charted in greater detail by Bellingshausen in 1819 and in 1930 by DI personnel on the *Discovery II*.

Saunders Mountain 76°53'S., 145°42'W.

A prominent, rugged mass of peaks (975 m.) standing between the mouths of Crevasse Valley Gl. and Arthur Gl. in the Ford Ranges of Marie Byrd Land. Discovered by the ByrdAE on an aerial flight of Dec. 5, 1929. Named by R. Adm. Byrd for Capt. Harold E. Saunders, USN, chief cartographer of the ByrdAE of 1928-30 and 1933-35, who drew the first maps of this area from aerial photographs obtained by the Byrd expeditions. Saunders was a longtime member of the U.S. Advisory Committee on Antarctic Names and served as its chairman, 1948-61.

Saunders Point 60°42'S., 45°19'W.

The southern extremity of the small island lying between Amphibolite Point and Tophet Bastion, off the S. coast of Coronation Island in the South Orkney Islands. Charted by DI personnel from the *Discovery II* in 1933. Named for A. Saunders who was aboard *Discovery II* and photographed the South Orkney Islands.

Saunders Rock 85°25'S., 127°02'W.

A rock 3 mi. NW. of Feeley Peak, between Davisville and Quonset Glaciers on the N. side of Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for John T. Saunders, electronics technician, Byrd Station winter party, 1960.

Savage Glacier 72°25'S., 96°05'W.

Glacier at the E. end of Thurston I., lying S. of Tierney Pen. and flowing E. to Seraph Bay. Disc. on helicopter flights from the USS *Glacier* and *Burton Island* by personnel of the USN Bellingshausen Sea Exp. in February 1960. Named by US-ACAN for Lt. John Savage, USN, Dental Officer aboard the *Glacier*, who assisted in establishing geodetic control points in the area.

Savage Inlet: see Savage Glacier 72°25'S., 96°05'W.

Savage Nunatak 86°27'S., 124°58'W.

A nunatak located 7 mi. SE. of Hatcher Bluffs, along the E. margin of upper Reedy Glacier. Mapped by the USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Henry C. Savage, builder at Byrd Station in 1962.

Savin Nunatak 73°52'S., 68°02'W.

An isolated nunatak 30 mi. SW. of Mt. Vang, rising above the ice plateau at the base of Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Samuel M. Savin, glaciologist at Byrd Station, summer 1965-66.

Savoia Peak 64°51'S., 63°26'W.

Peak, 1,415 m., at the NE. end of Sierra DuFief, a mountain range in the SW. part of Wiencke I., in the Palmer Archipelago. Disc. by the BelgAE under Gerlache, in 1898, and scaled by members of the FrAE under Charcot, 1903-5. Named by Charcot for Luigi di Savoia, Duke of the Abruzzi.

Saw, Mount 68°11'S., 56°44'E.

An isolated mountain about 17 mi. SSE. of Mt. Cook of the Leckie Range. Plotted from ANARE air photos. Named by ANCA for B. Saw, helicopter pilot with the 1965 ANARE (*Nella Dan*), led by Phillip Law.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sawert Rocks 67°31'S., 62°50'E.

Group of rocks 2.5 mi. ENE. of Azimuth I. in the NE. part of Holme Bay, Mac. Robertson Land. Plotted from photos taken from ANARE aircraft in 1958. Named by ANCA for A. Sawert, radio officer at Mawson Station in 1959.

Saw Rock 57°03'S., 26°47'W.

Rock, 25 m. high, lying 0.4 mi. N. of Crosscut Pt., the N. extremity of Vindication I., in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and named by them, probably for association with Crosscut Point.

Sawtooth: see Armadillo Hill 68°07'S., 66°22'W.

Sawyer Island 65°26'S., 65°32'W.

Island 2 mi. long lying N. of Pickwick I., Pitt Is., in the Biscoe Islands. Shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 after Robert Sawyer, one of the central characters in Charles Dickens' *Pickwick Papers*.

Sawyer Nunatak 75°44'S., 161°50'E.

A small but distinctive nunatak standing 3 mi. SE. of Mt. Stephens in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Joseph O. Sawyer, satellite geodesist with the McMurdo Station winter party, 1966.

Saxton Ridge 70°37'S., 66°52'E.

A mountain ridge just S. of Thomson Massif in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956. Named by ANCA for R. A. Saxton, officer in charge at Wilkes Station in 1963.

Saxum Nunatak 63°10'S., 56°02'W.

Isolated nunatak, 430 m., standing 6 mi. N. of Mt. Tholus on the N. side of Joinville Island. It is dome-shaped when seen from the south, but has a conspicuous rock wall on its northern side. Surveyed by the FIDS in 1954. The name is descriptive of the feature as seen from the north, "saxum" being Latin for wall.

Sayce Glacier 65°05'S., 62°59'W.

Glacier flowing into Flandres Bay immediately N. of Pelletan Pt., on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for B. J. Sayce (1839-1895), English photographer who, with W. B. Bolton, invented the collodion emulsion process of dry-plate photography, which displaced wet collodion in 1864.

Sayen Rocks 73°40'S., 94°37'W.

Two small rock exposures, visible from northward, situated near the crest of the ice-covered heights between Miller Crag and Sutley Peak, in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. Named by US-ACAN for L. D. Sayen, photographer of USN Squadron VX-6, who took part in photographing the Jones Mountains in January 1961.

Sbrosovoye Lake 70°45'S., 11°35'E.

A small lake 1 mi. SW. of Tyuleniy Point in the Schirmacher Hills, Queen Maud Land. Mapped by the SovAE in 1961 and named Ozero Sbrosovoye (fault lake).

Scaife Mountains 75°06'S., 65°08'W.

A group of mountains rising W. of Prehn Peninsula and between the Ketchum and Ueda Glaciers, at the base of Antarctic Peninsula. Disc. by the RARE under Ronne, 1947-48, who named these mountains for Alan M. Scaife of Pittsburgh, a contributor to the expedition.

Scallop Hill 78°12'S., 166°44'E.

A volcanic dome rising to 225 m. directly behind Cape Spirit on Black I., in the Ross Archipelago. Named by the NZGSAE (1958-59) after a fossiliferous conglomerate on top of the hill which contains a Chlamid lamellibranch commonly called scallops.

Scallop Ridge 85°26'S., 139°00'W.

An undulating ridge, 3 mi. long, forming the SW. portion of the Berry Peaks. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN. The name is descriptive of the curving outline of the ridge.

Scanlan Peak 71°05'S., 65°23'E.

The southernmost of a group of three peaks about 5 mi. SE. of Husky Massif in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for A. M. Scanlan, cook at Davis Station in 1961.

Scarab Peak 73°21'S., 163°01'E.

A prominent peak, 3,160 m., located 2 mi. NE. of Mt. Frustum in the SE. end of Tobin Mesa, the Mesa Range, Victoria Land. Named by the northern party of the NZGSAE, 1962-63, for its resemblance to a scarab beetle.

Scar Bluffs 68°48'S., 153°32'E.

Three black, rectangular, steep-sided rock outcrops 27 mi. S. of Cape Hudson, Mawson Peninsula. Photographed by USN Operation Highjump, 1946-47, the

GEOGRAPHIC NAMES OF THE ANTARCTIC

Soviet Antarctic Expedition, 1958, and ANARE, 1959. Named by ANCA after the Special Committee on Antarctic Research (SCAR) of the International Council of Scientific Unions.

Scarborough Castle 62°28'S., 60°48'W.

A large flat-topped rock with perpendicular sides standing S. of Cape Shirreff on the N. coast of Livingston I., in the South Shetland Islands. The name was used by British sealer Robert Fildes in 1820-22.

Scarborough Castle, Roca: see Fortín Rock 62°29'S., 60°44'W.

Scar Hills 63°25'S., 57°01'W.

Small ridge of hills, with numerous glacial striae, extending from the head of Hope Bay 1 mi. NE. along the SE. shore, at the NE. end of Antarctic Peninsula. Disc. and named "Schrammenhügel" by a party under J. Gunnar Andersson of the SwedAE, 1901-4. An English translation of the name has been approved.

Scar Inlet 65°56'S., 61°52'W.

An area of the Larsen Ice Shelf immediately NW. of Jason Peninsula. It is bounded by Tashtego Point and Chapman Point. Discovered in 1902 by Otto Norden-skjöld, leader of the Swedish Antarctic Expedition, 1901-4, who gave the name "Scott Bay". That name has not survived in usage, perhaps due to the large number of features already named after Capt. Robert F. Scott. The present name was given by UK-APC (1963) after the Scientific Committee on Antarctic Research of the International Council of Scientific Unions, in recognition of the role of this organization in furthering scientific research in the Antarctic.

Scarlatti Peak 71°16'S., 70°26'W.

Conspicuous pyramidal peak, 750 m., 8 mi. NW. of Holst Peak and 12 mi. E. of Walton Mtns. in the central part of Alexander Island. First mapped from air photos obtained by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Alesandro Scarlatti (1660-1725), Italian composer.

Scarlet Hill 53°06'S., 73°40'E.

Ice-free, rounded hill, 410 m., overlooking Skua Beach on the E. side of Heard Island. This feature appears to have been roughly charted on an 1874 chart by a Br. exp. under Nares in the *Challenger*. It was surveyed and named by the ANARE in 1948.

Scarlett Point 58°28'S., 26°20'W.

Point forming the W. side of Phyllis Bay at the S. end of Montagu I., in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and named for E. W. A. Scarlett, accountant on the staff of the Discovery Committee.

Scend Rocks 64°48'S., 64°15'W.

Small group of rocks lying 1.5 mi. SW. of Rumbler Rock and 2.5 mi. WNW. of Outcast Is., off the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit in 1956-57, and named by the UK-APC in 1958. Scend is a nautical term describing the horizontal forward and backward flow of sea water breaking over a shallow obstruction, caused by the incoming ocean swell.

Schaefer, Mount 71°22'S., 166°23'E.

Mountain (1,825 m.) which marks the W. extremity of Robinson Heights in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy photography, 1960-63. Named by US-ACAN for Paul W. Schaefer, USARP biologist at McMurdo Station, 1966-67.

Schaefer Islands 73°40'S., 103°24'W.

A small group of islands lying close to the NW. end of Canisteo Pen. and 2 mi. SW. of Lindsey Islands. Mapped from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for William A. Schaefer, geologist on the Ellsworth Land Survey, 1968-69.

Schanz Glacier 79°45'S., 83°40'W.

A glacier 8 mi. long in the Heritage Range, draining S. between Soholt Peaks and Collier Hills to enter Union Glacier. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Lt. Cdr. Thomas L. Schanz, supply officer with USN Squadron VX-6 during Deep Freeze, 1965.

Scharon Bluff 70°58'S., 167°24'E.

A steep rock bluff (1,000 m.) on the S. side of Tapsell Foreland, Victoria Land. The bluff surmounts the N. side of Barnett Gl., 9 mi. W. of Cape Moore. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for LeRoy H. Scharon, U.S. Exchange Scientist (geophysics) at Molo-dezhnaya station, winter 1968.

Scheimpflug Nunatak 64°48'S., 62°36'W.

Nunatak in the mouth of Deville Gl. on Arctowski Peninsula, on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Theodor Scheimpflug (1865-1911), Austrian pioneer of aerophotogrammetry.

Scherger, Mount 73°13'S., 62°55'E.

A peak just W. of Mt. McCauley in the southern Prince Charles Mountains. Mapped from air photos and surveys, 1956-57, by ANARE. Named by ANCA for Air Marshal Sir Frederick Scherger, Chief of the Air Staff in Australia, 1957-61.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Scheuren Stream 77°24'S., 163°39'E.

A meltwater stream 1 mi. west of Gneiss Point on the coast of Victoria Land. It issues from the front of Wilson Piedmont Glacier and drains northward to the Bay of Sails. The stream was studied by Robert L. Nichols, geologist for Metcalf and Eddy, Engineers, Boston, Massachusetts, which made engineering studies here under contract to the U.S. Navy in 1957-58 season. Named by Nichols for John J. Scheuren, Jr., chief of Metcalf and Eddy's field party.

Schevill, Mount 85°07'S., 167°12'W.

A conspicuous mountain, 1,995 m., overlooking the head of Somero Glacier, about 5 mi. SE. of Mt. Johnstone, in the Queen Maud Mountains. Named by US-ACAN for William E. Schevill, USARP biologist at McMurdo Station, 1964-65.

Schicht, Mount 71°26'S., 13°08'E.

A prominent mountain with several summits, rising 4 mi. WSW. of Ritscher Peak in the Gruber Mtns. of Queen Maud Land. The feature was discovered by the GerAE under Ritscher, 1938-39, and named Schicht-Berge (stratum mountains) because of its appearance.

Schimansky, Mount 70°50'S., 63°49'W.

A ridge-like mountain 6 mi. NW. of Heintz Peak of the Welch Mountains, in Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for Lt. Cdr. John A. Schimansky, USN, Commander of LC-130 aircraft of Squadron VXE-6 on many aerial photographic and ice-sensing missions over the Antarctic continent during Operation Deep Freeze, 1970 and 1971.

Schirmacher Hills 70°45'S., 11°40'E.

A line of low coastal hills, 11 mi. long, with numerous meltwater ponds, standing 40 mi. N. of the Humboldt Mtns. along the coast of Queen Maud Land. Discovered by GerAE under Ritscher, 1938-39, and named for Richardheinrich Schirmacher, pilot of the *Boreas*, one of the expedition seaplanes.

Schirmacher Massif 71°37'S., 62°20'W.

An island-like mountain massif in the E. part of Palmer Land. The feature is surrounded by the flow of the Rankin and Cline Glaciers, 3 mi. W. of Rowley Massif. Mapped by USGS in 1974. Named by US-ACAN for Eberhard G. Schirmacher, topographic engineer, leader of the USGS topographic party on two expeditions to the Lassiter Coast, 1969-70 and 1970-71. He was USGS party leader to Pine Island Bay, 1974-75.

Schirmacheroasen: see Schirmacher Hills 70°45'S., 11°40'E.

Schirmacher Ponds 70°45'S., 11°40'E.

A group of meltwater ponds scattered among the Schirmacher Hills, lying 40 mi. N. of the Humboldt Mtns., along the coast of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Richardheinrich Schirmacher, pilot of the *Boreas*, one of the expedition seaplanes.

Schirmacher-Seengruppe: see Schirmacher Ponds 70°45'S., 11°40'E.

Schirmacher-Seenplatte: see Schirmacher Hills 70°45'S., 11°40'E.

Schist Peak 77°19'S., 162°00'E.

Peak, 1,650 m., surmounting the divide between the Willis and Packard Glaciers in the Saint Johns Range of Victoria Land. Named by the VUWAE (1959-60) for the rock type of which it is composed.

Schist Point 60°43'S., 45°14'W.

Conspicuous point at the W. side of Divide Peaks on the S. coast of Coronation I., in the South Orkney Islands. First surveyed by DI personnel in 1933. The name, applied by the FIDS following their survey of 1948-49, marks the eastern limit at sea level of the metamorphic rocks in this part of Coronation Island.

Schlatter Glacier 77°41'S., 161°27'E.

Glacier descending from the Asgard Range toward Lake House in Pearse Valley, Victoria Land. Named by US-ACAN for Roberto P. Schlatter, Chilean biologist who worked in the USARP bird-banding program relative to the Adélie penguin and the south polar skua, at Cape Crozier in the 1969-70 and 1970-71 seasons.

Schleiper Bay: see Schlieper Bay 54°02'S., 37°50'W.

Schlieper Bay 54°02'S., 37°50'W.

Bay 1 mi. wide, entered between Romerof Head and Weddell Pt. along the S. coast of South Georgia. Schlieper Bay was named between 1905-12 after the director of the Compañía Argentina de Pesca.

Schloredt Nunatak 75°03'S., 134°15'W.

A nunatak 1 mi. S. of Bleclic Peaks, at the S. extremity of the Perry Range in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Jerry L. Schloredt, Chief Construction Electrician, USN, who served as Nuclear Power Plant Operator with the Naval Nuclear Power Unit at McMurdo Station, 1966, 1967 and 1969.

Schlossbach, Cape 75°08'S., 63°06'W.

Cape forming the E. end of Prehn Peninsula, located between Gardner and Hansen Inlets on the E. side of

GEOGRAPHIC NAMES OF THE ANTARCTIC

the base of Antarctic Peninsula. Disc. by the RARE under Ronne, 1947-48, who named it for Cdr. Isaac Schlossbach, USN (Ret.), second-in-command of the exp. and commander of the ship *Port of Beaumont, Texas*.

Schlossbach, Mount 78°03'S., 154°48'W.

A peak just SE. of Mt. Nilsen in the S. group of the Rockefeller Mtns. on Edward VII Peninsula. Discovered by the ByrdAE on a flight of Jan. 27, 1929, and named for Cdr. Isaac Schlossbach, USN, a member of the ByrdAE (1933-35) and member of the USAS party which occupied the Rockefeller Mtns. seismic station during November-December 1940.

Schmehl Peak 69°34'S., 158°45'E.

A rock peak (750 m.) at the N. end of the ridge overlooking the junction of the Walsh Gl. with the Tomilin Gl., in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. (j.g.) Peter W. Schmehl, USNR, Navigator in LC-130F Hercules aircraft during Operation Deep Freeze 1968.

Schmid, Mount 77°58'S., 85°40'W.

A mountain (2,430 m.) on the S. side of Embree Gl., rising 5 mi. E. of Mt. Goldthwait in the Sentinel Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Capt. Ernest A. Schmid, USAF, who participated in the establishment of the IGY South Pole Station during the 1956-57 season.

Schmidt Glacier 53°03'S., 73°24'E.

A glacier, 0.7 mi. long, flowing W. from Baudissin Gl. between Mt. Drygalski and North West Cornice, on the W. side of Heard Island. The feature was roughly charted in 1902 by the GerAE under Drygalski. He named it for Dr. J. Schmidt of the Royal Prussian Ministry, who assisted in obtaining government support for the expedition.

Schmidt Glacier 79°15'S., 83°42'W.

A glacier, 20 mi. long, in the Pioneer Heights of the Heritage Range, Ellsworth Mountains. The glacier originates near Hall Peak and drains N. along the W. side of Thompson Escarpment and Gross Hills to coalesce with the lower part of Spletstoesser Gl., N. of Mt. Virginia. Named by the Univ. of Minnesota Ellsworth Mountains Party, 1961-62, for Paul G. Schmidt, geologist with the party.

Schmidt Hills 83°14'S., 57°48'W.

A group of rock hills, 15 mi. long, lying N. of Childs Gl. and W. of Roderick Valley in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN

for Dwight L. Schmidt, USGS geologist to the Pensacola Mountains in 1962-63, 1963-64 and 1965-66.

Schmidt Nunataks 69°53'S., 158°56'E.

A cluster of nunataks 11 mi. SE. of Governor Mtn. in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for James L. Schmidt, AE2, USN, Aviation Electrician's Mate of Squadron VX-6 and a member of the winter-over party at McMurdo Station, 1967.

Schmidt Peak 86°15'S., 144°50'W.

A peak along the S. side of California Plateau, marking the end of a narrow ridge 3 mi. NE. of Parker Bluff, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Dennis C. Schmidt, photographer with USN Squadron VX-6 on Operation Deep Freeze 1963, 1964 and 1967.

Schmidt Peninsula 63°19'S., 57°54'W.

A small peninsula connected by a low isthmus to Cape Legoupil, Trinity Peninsula. Named by the Chilean Antarctic Expedition of 1947-48 for Capt. Hugo Schmidt Prado, Chilean Army, the first commander of Base Bernardo O'Higgins established in 1948 on this peninsula.

Schmitter Peak 71°16'S., 66°21'E.

A small mountain peak about 3 mi. SW. of Mt. Woinarski in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for U. Schmitter, cook at Davis Station in 1964.

Schmitt Mesa 74°56'S., 64°05'W.

A prominent, mainly ice-covered mesa, 15 mi. long and 5 mi. wide, forming the southern rampart of Latady Mtns. at the base of Antarctic Peninsula. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Waldo L. Schmitt, marine biologist, Honorary Research Associate of the Smithsonian Institution. Schmitt was aboard *Fleurus* at Deception Island in 1927. He participated in the *Staten Island* cruise to Marguerite Bay and Weddell Sea in the 1962-63 season.

Schneider Glacier 79°29'S., 84°17'W.

A glacier in the Heritage Range, 15 mi. long, draining N. between the Dunbar and Inferno Ridges and coalescing with Balish Gl. before entering the Spletstoesser Glacier. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Cdr. Arthur F. Schneider, Maintenance Officer of USN Squadron VX-6 during Deep Freeze 1965, and Commanding Officer in 1968.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Schneider Hills 82°36'S., 42°45'W.

A group of hills lying S. of San Martín Glacier and forming the S. half of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Otto Schneider, chief scientist of the Instituto Antártico Argentino in this period.

Schneider Rock 74°07'S., 114°51'W.

A rock 3 mi. N. of Siglin Rocks, protruding through the ice on the W. side of Martin Peninsula in Marie Byrd Land. First photographed from the air by USN Op. Hjp. in January 1947. Named by US-ACAN for Lt. R. P. Schneider, USN, maintenance coordinator at the Williams Field air strip, McMurdo Sound, during Deep Freeze 1966.

Schobert Nunatak 85°31'S., 162°14'W.

A nunatak overlooking the terminus of Bowman Gl., standing 4 mi. E. of Mt. Dean, at the NE. end of Quarles Range, Queen Maud Mountains. First mapped by the ByrdAE, 1928-30. Named by US-ACAN for William J. Schobert, aviation electrician and maintenance shop supervisor with USN Squadron VX-6 for several Deep Freeze operations, 1964-67 period.

Schoeck Peak 79°53'S., 82°51'W.

A peak, 1,810 m., standing directly at the head of Henderson Gl. in the Enterprise Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Peter A. Schoeck, auroral scientist at Little America V Station in 1957.

Schofield Peak 72°36'S., 166°18'E.

A peak 1 mi. SE. of Mt. McCarthy, at the head of Webb Névé. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Edmund A. Schofield, biologist at Hallett Station, summer 1963-64, and McMurdo Station, 1967-68.

Schokalsky, Détroit: see Schokalsky Bay 69°15'S., 69°55'W.

Schokalsky Bay 69°15'S., 69°55'W.

Bay, 9 mi. wide at its entrance and indenting 6 mi., between Mt. Calais and Cape Brown along the E. coast of Alexander Island. Hampton Gl. discharges tremendous amounts of ice into the head of Schokalsky Bay at a steep gradient causing the ice there to be extremely broken and irregular, and discourages use of this bay and glacier as an inland sledging route onto NE. Alexander Island. First sighted from a distance in 1909 and roughly charted by the FrAE under Charcot who, thinking it to be a strait, gave the name "Détroit

Schokalsky" after Yuliy M. Shokal'skiy, Russian geographer, meteorologist and oceanographer. Charcot followed the spelling Schokalsky used by the man himself when writing in Roman script. The coast in this vicinity was phot. from the air and this bay roughly charted in 1937 by the BGLE, but Charcot's "Détroit Schokalsky" was not identified. Surveys by FIDS in 1948 identified this bay as the feature originally named by Charcot.

Scholander Island 66°22'S., 66°58'W.

An island 1.5 mi. E. of Watkins I., Biscoe Islands. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Per F. Scholander, American physiologist who has investigated many aspects of polar physiology.

Schollaert Channel 64°30'S., 62°50'W.

Channel between Anvers I. on the SW. and Brabant I. on the NE., connecting Dallmann Bay and Gerlache Strait, in the Palmer Archipelago. Disc. in 1898 by the BelgAE under Gerlache, who named it for François Schollaert (1851-1917), Belgian statesman.

Schoofs Nunatak 73°18'S., 64°04'W.

An isolated nunatak 20 mi. WNW. of Mt. Barkow, rising above the featureless ice plateau westward of the heads of Meinardus and Haines Glaciers, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Gerald J. Schoofs, radioscience researcher at Byrd Station, summer 1965-66.

Schopf, Mount 84°48'S., 113°25'W.

An elongated, mesa-like, mainly ice-covered mountain (2,990 m.), located just E. of Buckeye Table in the Ohio Range. Surveyed by the USARP Horlick Mountains Traverse party in Dec. 1958. Named by US-ACAN for James M. Schopf, geologist, Coal and Geology Laboratory, USGS, Columbus, Ohio, who greatly assisted the field geologist by analyzing coal and related rock specimens from this mountain. Schopf was a member of the Horlick Mountains Party in the 1961-62 season.

Schott Inlet 72°10'S., 60°52'W.

Small ice-filled inlet indenting the E. side of Merz Pen. close S. of Cape Darlington, along the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by the USAS. Charted in 1947 by a joint party consisting of members of the RARE under Ronne and the FIDS. Named by the FIDS for Gerhard Schott, internationally known German oceanographer.

Schrader Glacier 54°07'S., 37°39'W.

Small glacier which flows to the head of Wilson Hbr. on the S. coast of South Georgia. Charted by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

GerAE under Filchner, 1911-12, and named for Dr. K. Schrader, leader of the German group of the International Polar Year Investigations based at Royal Bay in 1882-83.

Schrammenhügel: see Scar Hills 63°25'S., 57°01'W.

Schroeder Hill 85°23'S., 175°12'W.

A rock prominence, 2,680 m., standing 3.5 mi. SE. of Ellis Bluff in the Cumulus Hills. Named by US-ACAN for Henry B. Schroeder, USARP meteorologist at South Pole Station, winter 1964, who was field assistant at Byrd Station, 1964-65.

Schroeder Peak 82°15'S., 158°37'E.

Peak, 2,230 m., standing 3 mi. NW. of Mt. Kopere in the Cobham Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for James E. Schroeder, USARP glaciologist at Little America V, 1959-60.

Schroeder Spur 71°38'S., 160°30'E.

A large mountain spur lying S. of Edwards Gl. and the parallel Thompson Spur, at the S. end of Daniels Range, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lauren A. Schroeder, USARP biologist at McMurdo Station, 1967-68.

Schubert Inlet 70°52'S., 70°55'W.

Ice-filled inlet, 14 mi. long and 5 mi. wide, indenting the W. coast of Alexander I. between the Colbert and Walton Mountains. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Franz Schubert (1797-1828), Austrian composer.

Schule Island 65°46'S., 65°33'W.

Small island lying 4 mi. E. of Laktionov I., off the E. side of Renaud I. in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for John J. Schule, Jr., American oceanographer who organized the sea ice service of the U.S. Hydrographic Office in 1950.

Schulte Hills 73°35'S., 163°50'E.

A small group of low hills lying 5 mi. SSW. of Stewart Heights in the Southern Cross Mtns., Victoria Land. Named by the southern party of NZGSAE, 1966-67, for Frank Schulte, geologist with this party.

Schulthess Buttress 84°47'S., 115°00'W.

A broad ice-capped bluff between Ricker and Higgins Canyons on the N. side of Buckeye Table, Ohio Range. The feature has steep ice and rock cliffs and is

prominent when viewed from northward. Surveyed in Dec. 1958 by the USARP Horlick Mountains Traverse party. Named by US-ACAN for Emil Schult-hess, Swiss photographer who accompanied the party during part of the traverse. He subsequently published an excellent photographic portrait of the continent in his book *Antarctica*, 1960.

Schultz Glacier 77°19'S., 162°20'E.

A glacier flowing E. between Pond Peak and Purgatory Peak to join Victoria Lower Glacier. Named by US-ACAN for Lt. Robert L. Schultz, USN, Officer-in-Charge of the Naval Support Force winter-over detachment at McMurdo Station in 1975.

Schulze Cove: see Bolsón Cove 65°09'S., 63°05'W.

Schulz Point 66°17'S., 110°29'E.

The western point of Shirley Island in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Construction Mechanic Richard L. Schulz, USN, a member of the Wilkes Station party of 1958.

Schumacher, Mount 71°55'S., 2°58'W.

Mountain, 1,230 m., standing 6 mi. SW. of Nils Jørgen Peaks on the W. side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Nils Jørgen Schumacher, senior meteorologist with the NBSAE.

Schumann, Mount 71°35'S., 73°38'W.

Snow-covered mountain, 500 m., lying immediately S. of the head of Brahms Inlet on Beethoven Pen. in the SW. part of Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Robert Schumann (1810-1856), German composer.

Schumann Nunatak 72°35'S., 163°18'E.

A nunatak 2 mi. S. of Salvador Nunatak, at the SW. end of Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Edward A. Schumann, cosmic ray researcher at McMurdo Station in 1967.

Schüssel Cirque 71°34'S., 11°33'E.

A large west-facing cirque containing Schüssel Moraine, in the north-central part of the Humboldt Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, who referred to it as "In der Schüssel" (in the bowl) and "Grosse Brei-Schüssel" (great mash bowl). The US-ACAN has recommended a shorter form of the original names and has added the appropriate generic term.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Schüssel Moraine 71°34'S., 11°32'E.

A large morainal deposit occupying Schüssel Cirque in the north-central Humboldt Mtns. of Queen Maud Land. Discovered and first plotted by the GerAE, 1938-39, who named the cirque. The moraine was named in association with Schüssel Cirque by the Soviet expedition which obtained air photos of the feature in 1961.

Schutz, Mount 69°46'S., 159°16'E.

A mountain (1,260 m.) rising at the E. side of the head of Noll Gl. in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Cdr. Albert C. Schutz, Jr., USN, Aircraft Commander in LC-117D and Copilot in LC-130F aircraft during Operation Deep Freeze 1967 and 1968.

Schwartz Peak 74°10'S., 76°15'W.

A rock peak 15 mi. ESE. of FitzGerald Bluffs in Ellsworth Land. The peak is one in a chain of small summits lying southeastward of the bluffs and is the dominant feature near the center of the group. It was discovered and photographed on Nov. 23, 1935 by Lincoln Ellsworth. Mapped by USGS from surveys and U.S. Navy air photos, 1961-66. Named by US-ACAN for Bruce L. Schwartz, USGS Topographic Engineer in Antarctica, 1967-68.

Schwartz Range 67°08'S., 55°38'E.

Range of mountains trending in a NE.-SW. direction, standing 17 mi. SW. of Edward VIII Bay. Disc. in November 1954 by R. Dovers and Georges Schwartz during an ANARE sledging journey to Edward VIII Bay. Named by ANCA for Schwartz, who was French Observer with ANARE at Mawson Station in 1954.

Schwarze Hörner: see Svathorna Peaks 71°35'S., 12°37'E.

Schwarze Insel: see Black Island 78°12'S., 166°25'E.

Schweitzer Glacier 77°50'S., 34°40'W.

A glacier which drains west along the north side of Littlewood Nunataks into Vahsel Bay. The Lerchenfeld Glacier, trending west-northwestward, coalesces with the lower portion of this glacier. Discovered by the German Antarctic Expedition, 1911-12, under Wilhelm Filchner. He named it for Major Schweitzer, first president of the German Antarctic Expedition Society.

Schwob Peak 75°53'S., 128°39'W.

A peak (2,715 m.) 1.5 mi. S. of Mt. Petras in the McCuddin Mtns., Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos,

1959-65. Named by US-ACAN for Capt. William S. Schwob, USCG, Commanding Officer of USCGC *Southwind* during Operation Deep Freeze 1972.

Schytt Glacier 71°35'S., 3°40'W.

A broad glacier about 60 mi. long, flowing northward between Giaever and Ahlmann Ridges in Queen Maud Land to the Jelbart Ice Shelf. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named for Stig V. Schytt, second in command and glaciologist of NBSAE.

Scoble Glacier 67°23'S., 60°27'E.

Glacier 4 mi. W. of Campbell Head in Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Breoddane (the glacier points). Renamed by ANCA for Charles H. Scoble, diesel engineer at Macquarie Island station, who drowned in July 1948.

Scoresby, Cape 66°34'S., 162°45'E.

A high bluff marking the N. end of Borradaile Island in the Balleny Islands. Charted by personnel on the RRS *Discovery II* who made running surveys of the northern portion of the Balleny Islands, 1936-38. Named after the *William Scoresby*, a companion research ship of *Discovery II* in carrying out oceanographic work in Antarctic waters at that time.

Scoresby Bay: see William Scoresby Bay 67°24'S., 59°34'E.

Scoresby Point 54°50'S., 36°00'W.

Point forming the S. side of the entrance to Williams Cove, Larsen Hbr., at the SE. end of South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Scorpio Peaks 70°31'S., 67°26'W.

A conspicuous massif with two high conical peaks dominating its western end and with a ridge of lower peaks extending eastward. The feature separates Meiklejohn Glacier and Millett Glacier on the west edge of Palmer Land. Named by UK-APC after the constellation of Scorpio.

Scotia Bay 60°46'S., 44°40'W.

Bay 2.5 mi. wide, lying immediately E. of Mossman Pen. on the S. side of Laurie I., in the South Orkney Islands. Disc. and roughly charted in the course of the joint cruise by Capt. George Powell and Capt. Nathaniel Palmer in 1821. Surveyed in 1903 by the ScotNAE under Bruce. He named it for the exp. ship *Scotia*.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Scotia Sea 57°30'S., 40°00'W.

A sea bounded by Shag Rocks, South Georgia, South Sandwich Islands, South Orkney Islands and the South Shetland Islands; it merges at about 55°W. with Drake Passage. Named in about 1932 after the *Scotia*, the expedition ship used in these waters by the ScotNAE (1902-4) under William S. Bruce.

Scott, Cape 71°07'S., 168°05'E.

A cape at the W. side of the terminus of Dennistoun Gl. on the N. coast of Victoria Land. Discovered by Capt. James Ross, 1841, who named it for Peter A. Scott, Mate on the *Terror*.

Scott, Ensenada: see Barber Cove 54°00'S., 37°39'W.

Scott, Massif: see Scott, Mount 65°09'S., 64°03'W.

Scott, Mount 65°09'S., 64°03'W.

Horseshoe-shaped massif, 880 m., open to the SW. with its convex side fronting on Girard Bay and its NW. side on Lemaire Chan., on the W. coast of Graham Land. Disc. by the BelgAE, 1897-99. Named by Dr. Jean B. Charcot, leader of the FrAE, 1908-10, for Capt. Robert F. Scott, leader of the BrNAE, 1901-4.

Scott, Mount: see Robert Scott, Mount 83°49'S., 172°48'E.

Scott Bay: see Barber Cove 54°00'S., 37°39'W.

Scott Bay: see Scar Inlet 65°56'S., 61°52'W.

Scott Coast 76°30'S., 162°30'E.

That portion of the coast of Victoria Land between Cape Washington and Minna Bluff. Named by NZ-APC in 1961 after Capt. Robert Falcon Scott, RN, leader of the BrNAE (1901-04) and the BrAE (1910-13), who lost his life on the return journey from the South Pole. Much of the exploration of this coastline was accomplished by Scott and his colleagues, and many of the names in the region were bestowed by him.

Scott Cone 66°55'S., 163°15'E.

A conical hill about 2 mi. NNE. of Cape McNab on the S. end of Buckle Island, in the Balleny Islands. Located adjacent to Eliza Cone, the two features appear to have been named after John Balleny's schooner, the *Eliza Scott*, in which he discovered the Balleny Islands in Feb. 1839.

Scott Glacier 66°30'S., 100°20'E.

Glacier, 7 mi. wide and over 20 mi. long, flowing NNW. to the coast between Cape Hoadley and Grace Rocks. Discovered by the Western Base Party of the

AAE (1911-14) under Mawson and named for Capt. Robert F. Scott, RN.

Scott Glacier 85°45'S., 153°00'W.

A major glacier, 120 mi. long, originating on the polar plateau in the vicinity of D'Angelo Bluff and Mt. Howe, and descending between Nilsen Plateau and the mountains of the Watson Escarpment to enter Ross Ice Shelf just W. of Tapley Mountains. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould. Named by US-ACAN for Capt. Robert F. Scott, RN, leader of the BrNAE, 1901-4, and BrAE, 1910-13, who lost his life in March 1912 on the return journey from the South Pole, which he had reached on Jan. 18, 1912.

Scott Icefalls 85°32'S., 170°15'E.

Extensive icefalls near the head of Mill Gl., between Otway Massif and the S. part of Dominion Range. Named by the NZGSAE (1961-62) for Capt. Robert F. Scott.

Scott Island 67°24'S., 179°55'W.

An island, 0.25 mi. long and half as wide, lying 315 mi. northeastward of Cape Adare, the northeastern extremity of Victoria Land. Discovered in December 1902 by Lt. William Colbeck, RNR, commander of the *Morning*, relief ship for Capt. Robert F. Scott's expedition. Named by Colbeck for Captain Scott.

Scott Keltie, Cape: see Keltie Head 63°47'S., 57°41'W.

Scott Keltie Glacier 71°32'S., 169°49'E.

A very small glacier discharging into Robertson Bay between Penelope Pt. and Egeberg Gl., on the N. coast of Victoria Land. First charted by the BrAE, 1898-1900, under C. E. Borchgrevink. He named it for Sir John Scott Keltie, Secretary of the Royal Geographical Society.

Scott Mountains 67°30'S., 50°30'E.

A large number of isolated peaks lying S. of Amundsen Bay in Enderby Land. Disc. on Jan. 13, 1930 by BANZARE under Sir Douglas Mawson. He named the feature Scott Range after Capt. Robert F. Scott, RN. The term mountains is considered more appropriate because of the isolation of its individual features.

Scott Nunataks 77°14'S., 154°12'W.

Conspicuous twin elevations which form the N. end of the Alexandra Mtns. on Edward VII Peninsula. Discovered in 1902 by the BrNAE under Capt. Robert F. Scott, RN. Named after Scott by Lt. K. Prestrud, leader of the Eastern Sledge Party of Amundsen's Norwegian exp., who ascended the features while exploring Edward VII Pen. in 1911.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Scott Peninsula 74°22'S., 117°58'W.

An ice-covered peninsula, 17 mi. long, extending from the coast of Marie Byrd Land into the Getz Ice Shelf toward the W. end of Wright Island. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Lt. Col. Thomas Scott, USA, who assisted with the early establishment of USN Op. DFrz. finances and liaison during the IGY.

Scott Range: see Scott Mountains 67°30'S., 50°30'E.

Scree Gap 54°01'S., 37°48'W.

Gap between Schlieper Bay and Church Bay, near the W. end of South Georgia. The name is descriptive and was given by the UK-APC following surveys by the SGS in the period 1951-57.

Scree Cove 67°34'S., 67°08'W.

A cove on the SW. side of Blaiklock I. in Graham Land. Mapped by FIDS from surveys and air photos, 1948-59, and named for the very prominent scree or talus slopes along the southern shore of the cove.

Screen Islands 65°01'S., 63°43'W.

Group of islands extending NW. from Aguda Pt. for 1.5 mi. across the entrance to Hidden Bay, off the W. coast of Graham Land. First charted by the BelgAE under Gerlache, 1897-99. So named by the UK-APC in 1958 because they form a screen across the entrance to Hidden Bay.

Scree Peak 63°38'S., 57°27'W.

Conspicuous, flat-topped peak with talus-covered slopes, 560 m., standing at the NE. end of Eagle I. in Prince Gustav Chan., off the S. coast of Trinity Peninsula. Disc. by the FIDS and so named following their 1945 survey. The name is descriptive of the slopes of the peak.

Scripps Heights 69°08'S., 63°40'W.

Rugged heights which are largely ice covered, surmounting the peninsula between Casey and Lurabee Glaciers on the E. coast of Palmer Land. Deeply scarred by glaciers, the heights terminate on the E. in Cape Walcott. Disc. by Sir Hubert Wilkins in his pioneer flight on Dec. 20, 1928. Thinking the feature to be a large island lying between two great transverse channels which completely severed Antarctic Pen., he named it Scripps Island for William Scripps of Detroit, Michigan. Correlation of aerial photographs taken by Lincoln Ellsworth in 1935 and preliminary reports of the findings of the BGLE under Rymill, 1934-37, led W. L. G. Joerg to interpret this to be a peninsula. In published reports, members of the BGLE have concurred in this interpretation which was also borne out

by the results of subsequent flights and a sledge trip from East Base by members of the USAS in 1940.

Scripps Island: see Scripps Heights 69°08'S., 63°40'W.

Scripps Peninsula: see Scripps Heights 69°08'S., 63°40'W.

Scripps Ridge: see Scripps Heights 69°08'S., 63°40'W.

Scrivener Glacier 76°57'S., 161°37'E.

Small tributary glacier flowing SE. to the N. side of Mackay Gl., immediately W. of Mt. Allan Thomson in Victoria Land. Charted and named by the BrAE, 1910-13.

Scrymgeour, Cape 63°35'S., 56°26'W.

High, conspicuous cliffs of red-colored volcanic rock, forming the E. end of Andersson Island in Antarctic Sound, off the NE. tip of Antarctic Peninsula. The cape was named by Thomas Robertson, captain of the *Active* of Dundee, Scotland, in 1893. It was re-identified and charted by the FIDS in 1947.

Scudder Mountain 86°07'S., 149°36'W.

Mountain, 2,280 m., between Organ Pipe Peaks and Mt. McKercher on the E. side of Scott Gl. in the Queen Maud Mountains. The name appears in Paul Siple's 1938 botany report on the ByrdAE, 1933-35, based on exploration of this vicinity by the expedition's geological party led by Quin Blackburn.

Scudder Peak 75°53'S., 115°12'W.

Small rock peak just SW. of Spitz Ridge on the S. side of Toney Mountain, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Brent E. Scudder, meteorologist at Byrd Station in 1966.

Scud Rock 63°23'S., 55°01'W.

Isolated rock lying 4 mi. S. of Moody Pt., the E. extremity of Joinville Island. Roughly surveyed by the FIDS in 1953. So named by the UK-APC because scud (low, fast moving cloud) is characteristic of this area.

Scullin Monolith 67°47'S., 66°42'E.

Crescent-shaped rock fronting the sea 4 mi. W. of Torlyn Mtn. in Mac. Robertson Land. Early in January 1930 the BANZARE under Mawson made an aerial flight from the ship *Discovery* and reported a mountainous shoreline in this area. Mawson landed on the rock on Feb. 13, 1931 and named it for James Henry Scullin, Prime Minister of Australia, 1929-31. The rock was charted in January-February 1931 from Norwegian whale catchers exploring along this coast, and

GEOGRAPHIC NAMES OF THE ANTARCTIC

named "Mount Klarius Mikkelsen" for Capt. Klarius Mikkelsen, master of the whale catcher *Torlyn*. Mikkelsen Peak is hereby retained as the name of the highest peak of this feature.

Sculpture Mountain 72°51'S., 162°05'E.

A large dissected mountain between the Monument Nunataks and Sheehan Mesa. Named by the Northern Party of NZGSAE, 1962-63, due to the cusped embayment which has been sculptured into the feature.

Sculpture Tableland: see Sculpture Mountain 72°51'S., 162°05'E.

Scylla Glacier 70°20'S., 67°00'E.

A large glacier draining eastward between the Athos and Porthos Ranges of the Prince Charles Mountains. Disc. in December 1956 by ANARE southern party led by W. G. Bewsher. It was named after Homer's Scylla because of the difficulty in traversing the region due to the glacier.

Scythian Nunatak 76°44'S., 159°47'E.

An isolated ridge about 1 mi. SE. of Trudge Valley in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964). They found the feature to be continually shrouded in drifting snow and named it after the land of the scythians which, according to the Romans, had this peculiarity in common.

Seabee Heights 85°13'S., 171°15'W.

Rugged snow-covered heights rising to 3,400 m. in the Queen Maud Mountains. The heights are about 15 mi. long and 5 mi. wide and are bounded by the flow of the DeGanahl, LaVergne and Liv Glaciers. Named by US-ACAN for the USN Construction Battalions (Seabees) which have played a significant role in the building of U.S. Antarctic stations.

Seabee Hook 72°19'S., 170°13'E.

Low, recurved spit composed of coarse volcanic ash which projects about 0.5 mi. W. from the high rocky ridge forming Cape Hallett, along the coast of Victoria Land. Surveyed in January 1956 by members of USN Op. DFrz. I aboard the icebreaker U.S.S. *Edisto*. Named by the US-ACAN for the Seabee unit aboard the *Edisto* which investigated and surveyed this area for possible use as a base site for International Geophysical Year operations. Seabee is a phonetic spelling for "construction battalion" and now refers to individual or collective members of naval construction engineer units.

Seafarer Glacier 72°54'S., 166°34'E.

A tributary glacier draining southward from Webb Névé, between the Lawrence Peaks and Malta Pla-

teau, to enter Mariner Glacier, in Victoria Land. So named by the Mariner Glacier party of NZGSAE, 1966-67, in association with the name Mariner.

Seagull Rock 54°11'S., 36°42'W.

Rock awash, lying W. of Kanin Pt. in Husvik Hbr., South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Seal Bay 71°45'S., 12°45'W.

A bay which indents the northeastern end of Riiser-Larsen Ice Shelf just southward of Cape Norvegia, on the coast of Queen Maud Land. Discovered in 1930 by Capt. Hjalmar Riiser-Larsen and so named by him because of the abundance of seals in the bay.

Sea Leopard Fjord 54°04'S., 37°15'W.

Bay 1 mi. wide between Bellingshausen and Luck Points in the SE. part of the Bay of Isles, South Georgia. Charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, who gave this name because he observed sea leopards there.

Sea Leopard Patch 62°05'S., 58°24'W.

Shoal near the center of Visca Anchorage, Admiralty Bay, in the South Shetland Islands. Charted and probably named by DI personnel on the *Discovery* who took soundings in Visca Anchorage during 1927.

Sealer Cove: see Diaz Cove 54°45'S., 36°18'W.

Sealers Passage 61°02'S., 55°23'W.

A marine channel between Elephant Island and Seal Islands, South Shetland Islands. Named by UK-APC in 1971, the passage is a short cut around the N. coast of Elephant Island used by sealers in the 1820's.

Seal Glacier 79°53'S., 81°50'W.

A small glacier draining E., located just N. of Parrish Peak in the Enterprise Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for radioman G.L. Seal, USN, who up to Op. DFrz. 1966 had contributed to efficient communications during four austral summer seasons.

Seal Islands 60°58'S., 55°24'W.

Group of small islands and rocks lying from 3 to 6 mi. NW. of Elephant I. in the South Shetland Islands. The group takes its name from the largest island, which Capt. William Smith named Seal Island in 1820 because of the number of seals caught there.

Seal Islands: see Seal Nunataks 65°03'S., 60°18'W.

Seal Nunataks 65°03'S., 60°18'W.

Chain of nunataks trending WNW. from Robertson I. and protruding above Larsen Ice Shelf, off the E. coast

GEOGRAPHIC NAMES OF THE ANTARCTIC

of Antarctic Peninsula. Disc. and named Seal Islands in December 1893 by a Nor. whaling exp. under C. A. Larsen, who also named several individual features in the group. They were surveyed in 1902 by the SwedAE under Nordenskjöld, who determined them to be nunataks, and by the FIDS in 1947.

Seal Point 63°24'S., 56°59'W.

Point which extends N. from the SE. shore of Hope Bay between Eagle Cove and Hut Cove, at the NE. end of Antarctic Peninsula. Disc. by a party under J. Gunnar Andersson of the SwedAE, 1901-4, and so named because the party relieved their shortage of food and fuel by killing a seal on this point.

Seal Point 71°22'S., 170°14'E.

A steep rock point 3.5 mi. S. of Ridley Beach on the W. side of Adare Peninsula, northern Victoria Land. Charted and named in 1911 by the Northern Party, led by Campbell, of the BrAE, 1910-13.

Seal Rocks: see Seal Islands 60°58'S., 55°24'W.

Seal Rocks 66°15'S., 162°16'E.

Rocks (15 m. high) on which the sea breaks, extending 3 mi. NNW. of Cape Ellsworth, the N. extremity of Young Island, in the Balleny Islands.

Seaplane Point 64°03'S., 60°46'W.

A point at the S. side of Curtiss Bay on the W. coast of Graham Land. Mapped from air photos taken by Hunting Aerosurveys (1955-57). Named by UK-APC in association with Curtiss Bay; Glenn Curtiss, after whom the bay is named, pioneered seaplanes from 1911 onward.

Seaquist Peak 79°45'S., 81°20'W.

A peak, 800 m., surmounting the NW. end of the Meyer Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Larry R. Seaquist, USARP meteorologist at Ellsworth Station, 1961.

Searle, Mount 67°49'S., 67°15'W.

Peak between Sally and Gaul Coves on Horseshoe Island. Named for Derek J. H. Searle of FIDS, surveyor at Horseshoe I. in 1955 and 1956, who surveyed this feature.

Sea Serpent Cove 57°02'S., 26°42'W.

Small cove 1 mi. SE. of Vulcan Pt. on the W. side of Candlemas I., in the South Sandwich Islands. Charted and named in 1930 by DI personnel on the *Discovery II*.

Seaton, Mount 70°36'S., 67°27'E.

A prominent domed peak, one of the Amery Peaks, situated about 3 mi. S. of Sandilands Nunatak in the

Prince Charles Mountains. Plotted by ANARE southern party led by W. G. Bewsher in January 1957, and named for Pilot Officer John Seaton, RAAF pilot with the Antarctic Flight at Mawson Station in 1956.

Seaton Glacier 66°43'S., 56°26'E.

Glacier 17 mi. long, flowing SE. into Edward VIII Ice Shelf at the NW. part of Edward VIII Bay. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37. Remapped, 1954-58, by ANARE and named by ANCA in 1958 for Flight Lt. John Seaton, RAAF, pilot with ANARE at Mawson in 1956.

Seaver, Canal: see George VI Sound 71°00'S., 68°00'W.

Seavers Nunataks 73°10'S., 61°58'E.

Two nunataks 16 mi. W. of Mt. Scherger, near the head of Fisher Glacier in the Prince Charles Mtns., Mac. Robertson Land. Mapped from ANARE air photos and surveys, 1958 and 1960-61. Named by ANCA for J.A. Seavers, assistant cook at Mawson Station, a member of the ANARE field party in this area in 1961.

Seavers Ridge 67°03'S., 52°51'E.

Rock ridge 14 mi. ESE. of Mt. Renouard in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for J. A. Seavers, assistant cook at Mawson Station in 1961.

Seaward Rock 54°00'S., 37°19'W.

Rock close NE. of Mollyhawk I., being the northern and most seaward rock in a group of islands which occupies the central part of the Bay of Isles, South Georgia. First charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. Probably named by DI personnel who surveyed the Bay of Isles in 1929-30.

Seay Nunatak 84°03'S., 54°38'W.

A nunatak standing 3 mi. S. of Hill Nunatak at the SE. extremity of the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for William K. Seay, utilities man at Ellsworth Station, winter 1958.

Seay Peak 79°05'S., 157°30'E.

Pointed ice-free peak, 1,805 m., the northeasternmost summit in the Finger Ridges, Cook Mountains. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959-63. Named by US-ACAN for Benny F. Seay, a member of the U.S. Army aviation support unit for Topo North and Topo South (1961-62) which conducted the tellurometer surveys.

GEOGRAPHIC NAMES OF THE ANTARCTIC

ist Peak 75°23'S., 111°02'W.

Peak (1,350 m.) on the SW. spur of the Mt. Murphy Range, in Marie Byrd Land. Mapped by USGS from US Navy and U.S. Navy air photos, 1959-66. Named by USCGC for Frank S. Sechrist, U.S. Exchange Scientist at the Soviet Molodezhnaya station in 1975.

ded Rocks 67°32'S., 59°20'E.

prominently banded rock outcrops between Enderby and Cosgrove Gl., standing 6 mi. SSW. of Enderby Peak, Enderby Land. Mapped from ANARE air photos and air photos, 1954-66, and so named because the rocks are situated in a hollow.

nd Crater 77°49'S., 166°40'E.

Crater on Arrival Heights, situated 0.6 mi. NE. of Arrival Crater on Hut Point Peninsula, Ross Island. Discovered by F. Debenham in 1912 on his local survey of Hut Point Peninsula during the BrAE, 1910-13.

nd Facet 77°11'S., 162°18'E.

ice-free bluff standing just W. of First Facet, Enderby features together forming the N. wall of Debenham Gl. in Victoria Land. Charted and described by the BrAE under Scott, 1910-13.

nd Milestone 54°06'S., 36°44'W.

marked by breakers, 1.7 mi. ENE. of Robertson Point off the N. coast of South Georgia. Charted and named by DI personnel during the period 1927-30.

st Lake 71°50'S., 68°21'W.

altwater lake 2 mi. W. of Ares Cliff, in eastern Enderby Island. The lake is situated in a NW.-facing cirque and is fed from an area of stagnant ice. It lies 1 m. above the E. edge of Mars Gl. and is visible from the cirque or from the air. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. The name by UK-APC refers to the secluded location of the lake.

ion Peak 73°14'S., 161°55'E.

small, but prominent sandstone knob at the N. end of the Lichen Hills, Victoria Land. It provided for the geologist one of the few sections seen in sedimentary rock. Mapped and named by the northern party of the BrSAE, 1962-63.

urity Bay 64°51'S., 63°37'W.

lying between Homeward and Gauthier Points on the N. side of Doumer I., in the Palmer Archipelago. First charted by the FrAE under Charcot, 1903-5. So named by the UK-APC in 1958 because the bay gives adequate shelter to small craft against both the SW.

gales which create a heavy sea in the southern entrance to Neumayer Channel and the strong northeasterly winds which funnel down the channel; it was used for this purpose several times by the British Naval Hydrographic Survey Unit in 1956-57.

Seddon, Mount 73°06'S., 65°00'E.

A mountain with two peaks separated by an ice-filled saddle, standing 20 mi. W. of Mt. Stinear on the N. side of Fisher Gl., in the Prince Charles Mountains. Discovered from ANARE aircraft in 1957. Named by ANCA for Norman R. Seddon, Managing Director of B.P. Australia Ltd. since 1957, in recognition of the assistance given to ANARE by the company.

Sedgwick Glacier 69°51'S., 69°22'W.

Glacier on the E. coast of Alexander I., 7 mi. long and 2 mi. wide, which flows E. from the foot of Mt. Stephenson into George VI Sound immediately N. of Mt. King. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS and named by them for Adam Sedgwick, English geologist and prof. of geology at Cambridge Univ., 1818-73.

Sedov, Cape 69°22'S., 14°05'E.

The ice cape which forms the NW. extremity of Lazarev Ice Shelf along the coast of Queen Maud Land. First photographed from the air and mapped by the GerAE, 1938-39. Remapped by the SovAE in 1959 and named for Russian polar explorer G. Ya. Sedov.

Sedova, Mys: see Sedov, Cape 69°22'S., 14°05'E.

Seebeck, Mount 85°44'S., 150°46'W.

A mountain standing directly at the head of Roe Gl. in the Tapley Mtns., Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Richard L. Seebeck, station engineer at McMurdo Station, winter party, 1962.

Seedsman, Mount 70°09'S., 65°26'E.

A mountain about 8 mi. E. of Mt. Dovers in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for D. L. Seedsman, electronics engineer at Mawson Station in 1964.

Seekopf, Mount 71°17'S., 13°42'E.

A peak (1,300 m.) surmounting the E. side of Lake Ober-See in the Gruber Mtns. of Queen Maud Land. Discovered and given the descriptive name Seekopf (lake peak) by the GerAE, 1938-39, under Ritscher.

Seeleoparden Fjord: see Sea Leopard Fjord 54°04'S., 37°15'W.

Seelig, Mount 82°28'S., 103°54'W.

The largest and highest (3,020 m.) mountain in the Whitmore Mountains, standing at the NE. end of the group. Surveyed on Jan. 2, 1959 by William H. Chap-

GEOGRAPHIC NAMES OF THE ANTARCTIC

man of USGS, a member of the Horlick Mountains Traverse, 1958-59. Named by Chapman for Walter R. Seelig, Division of Polar Programs, National Science Foundation, who has been closely associated with Antarctic mapping and research since 1957 and has made numerous trips to the continent; a member of the U.S. Advisory Committee on Antarctic Names (1973-).

See Nunatak 68°19'S., 59°09'E.

The northernmost of the group of peaks forming the eastern part of the Hansen Mountains. Plotted from ANARE air photos. Named by ANCA for R. See, chief helicopter mechanic with the 1965 ANARE (*Nella Dan*), led by Phillip Law.

Sefton Glacier 80°45'S., 156°52'E.

Glacier about 10 mi. long, flowing into the S. side of Byrd Glacier just W. of Rundle Peaks. Named by the US-ACAN for Ronald Sefton, ionospheric physicist, a member of the Byrd Station winter parties of 1962 and 1964.

Segel-Fels: see Sail Rock 52°54'S., 73°34'E.

Segers, Mount 78°25'S., 85°21'W.

A peak (2,460 m.) on the ridge at the E. side of the head of Crosswell Gl., 7 mi. E. of Mt. Tyree, in the central part of the Sentinel Range, Ellsworth Mountains. Discovered by USN Squadron VX-6 on photographic flights of Dec. 14-15, 1959, and mapped by USGS from these photos. Named by US-ACAN for Chester W. Segers, a Navy cook and a member of the first wintering party at the South Pole Station during the IGY in 1957.

Segundo Mojón: see Second Milestone 54°06'S., 36°44'W.

Seilkopffjella: see Seilkopf Peaks 72°41'S., 4°00'W.

Seilkopf Peaks 72°41'S., 4°00'W.

A group of mainly ice-free peaks and ridges between Portalen Pass and Nålegga Ridge in the Borg Massif, Queen Maud Land. The feature was photographed from the air by the GerAE (1938-39) and named for Heinrich Seilkopf, head of the marine aerology section of the Deutsche Seewarte (German Hydrographic Office) in Hamburg. Although rudely mapped by GerAE, the Seilkopf Peaks are clearly shown and identified in air photos published by the expedition. The peaks were mapped in detail by the NBSAE (1949-52).

Seitz, Mount 71°43'S., 166°05'E.

One in the series of peaks (2,130 m.) that rise between Mirabito Range and Homerun Range in northern

Victoria Land. This peak is 4 mi. SE. of Mt. Armagost and 9 mi. NW. of Boss Peak. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Thomas E. Seitz, Chief Construction Mechanic, USN, of the McMurdo Station party, 1967.

Selborn, Cape: see Selborne, Cape 80°23'S., 160°45'E.

Selborne, Cape 80°23'S., 160°45'E.

A high snow-covered cape at the S. side of Barne Inlet, the terminus of Byrd Glacier at the W. side of the Ross Ice Shelf. Discovered by the BrNAE (1901-4) and named for William Waldegrave Palmer Selborne, Second Earl of Selborne, who entered the Cabinet as First Lord of the Admiralty in 1900.

Selbourne, Cape: see Selborne, Cape 80°23'S., 160°45'E.

Selbukta: see Seal Bay 71°45'S., 12°45'W.

Seligman Inlet 67°50'S., 65°30'W.

Broad inlet which recedes inland for 6 mi. between Choyce Point and Cape Freeman on the E. coast of Graham Land. The inlet was photographed from the air by the USAS in 1940. It was charted by the FIDS in 1947 and named for Gerald Seligman, founder and president of the British Glaciological Society.

Seller Glacier 69°19'S., 66°24'W.

A well-defined glacier, 20 mi. long and 4 mi. wide, flowing westward into Forster Ice Piedmont, western Antarctic Peninsula, just N. of Flinders Peak. Roughly surveyed by BGLE, 1936-37, and resurveyed by FIDS in Dec. 1958. Named by UK-APC for John Seller (ca. 1658-1698), English hydrographer and compass maker who published the first sailing directions for England, 1671; his *Practical Navigation* (1672) gave the first description of the variation of the compass, with rules for its determination.

Sellery, Mount 84°58'S., 172°45'W.

A prominent peak (3,895 m.) between Mounts Oliver and Smithson in the Prince Olav Mountains. Discovered and photographed by R. Adm. Byrd on the Baselaying Flight of Nov. 18, 1929, and surveyed by A. P. Crary in 1957-58. Named by Crary for Harry Sellery of the U.S. National Bureau of Standards, who was Antarctic Project Leader for ionosphere studies, 1957-60.

Sel Öene: see Seal Nunataks 65°03'S., 60°18'W.

Selwick Cove: see Lagarrigue Cove 64°39'S., 62°34'W.

Selwood, Mount 66°54'S., 51°30'E.

Mountain 5 mi. NE. of Pythagoras Peak, in the Tula Mtns. in Enderby Land. Plotted from air photos taken

GEOGRAPHIC NAMES OF THE ANTARCTIC

from ANARE aircraft in 1956. Named by ANCA for C.H.V. Selwood, a member of the crew of the *Discovery* during the BANZARE, 1929-31.

Semerka, Bukhta: see Adams Fjord 66°50'S., 50°30'E.

Semla Reef 54°15'S., 37°25'W.

Reef, 1 mi. long, at the S. side of the entrance to Queen Maud Bay on the S. side of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for the ex-catcher *Semla* which has been used for many years by the South Georgia Whaling Co., Leith Hbr., as a service boat.

Semper Shaftus: see Pagano Nunatak 83°41'S., 87°40'W.

Semprebon, Mount 82°04'S., 88°01'W.

A prominent, partly snow-free peak rising 1 mi. NE. of Mt. Barsoum in Martin Hills. The peak was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958, and named for Louis C. Semprebon, ionospheric physicist and assistant scientific leader at Ellsworth Station in 1958.

Semyorka, Bukhta: see Adams Fjord 66°50'S., 50°30'E.

Send, Mount 70°02'S., 159°49'E.

A mountain (1,180 m.) on the N. flank of Pryor Glacier, 10 mi. E. of Basilica Peak, in southern Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Raymond F. Send, USARP geophysicist at McMurdo Station, 1967-68.

Senderens, Mount 54°50'S., 36°07'W.

Mountain, 1,315 m., standing close S. of Mt. Sabatier and 1 mi. N. of Rogged Bay at the S. end of South Georgia. The feature appears on charts dating back to the 1930's. It was surveyed by the SGS in the period 1951-57, and named by the UK-APC for Jean-Baptiste Senderens (1856-1937), French chemist, whose work with Paul Sabatier led to the introduction in about 1907 of the hydrogenation process for hardening whale oil.

Sengekoven Cirque 71°53'S., 5°26'E.

A cirque indenting the N. side of Brepløgen Mtn. immediately E. of Høgsenga Crags, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Sengekoven (the bed closet).

Senia Point 80°31'S., 160°58'E.

An ice-covered point 9 mi. S. of Cape Selborne, marking the N. side of the entrance to Couzens Bay on the

W. side of Ross Ice Shelf. Named by US-ACAN for B. Senia, master of the cargo vessels USNS *Mizar* during Op. DFrz. 1962 and USNS *Mirfak* during Op. DFrz. 1963.

Sennet Glacier 80°12'S., 158°42'E.

A precipitous glacier between Yancey and Merrick Glaciers in the Britannia Range, flowing southward from Mt. Aldrich to the Byrd Glacier. Named by US-ACAN, in association with Byrd Glacier, for the USS *Sennet*, submarine (Central Group of Task Force 68) of USN Op. Hjp., 1946-47, led by Admiral Byrd.

Sentinal, The: see Sentinel, The 52°59'S., 73°19'E.

Sentinel: see Sutton Crag 54°23'S., 36°29'W.

Sentinel, The 52°59'S., 73°19'E.

A rocky hill (420 m.) standing 0.8 mi. NE. of Anzac Peak on Laurens Peninsula, Heard Island. Surveyed in 1948 by ANARE and so named by them because this isolated hill lies in front (north) of the main backbone of Laurens Peninsula and commands the approach to Atlas Cove.

Sentinel Islands 66°47'S., 141°42'E.

Small group of rocky islands lying immediately off the coastal ice cliffs 2 mi. E. of the Curzon Islands. Phot. from the air by USN Op. Hjp., 1946-47. Charted and named by the FrAE under Liotard, 1949-51. So named because these islands mark the easternmost rock outcrops, as yet known, along Adélie Coast.

Sentinelles, Iles: see Sentinel Islands 66°47'S., 141°42'E.

Sentinel Mountains: see Sentinel Range 78°10'S., 85°30'W.

Sentinel Nunatak 64°46'S., 60°44'W.

High, black, pyramid-shaped nunatak at the mouth of Drygalski Gl., on the E. coast of Graham Land. Charted by the FIDS in 1947 and so named because of its commanding position at the mouth of Drygalski Glacier.

Sentinel Peak: see Sutton Crag 54°23'S., 36°29'W.

Sentinel Peak 77°47'S., 162°23'E.

A conspicuous, pointed peak over 2,000 m., standing at the N. side of Ferrar Gl. and forming the highest point in the south-central part of the Kukri Hills, in Victoria Land. Disc. and named by the BrNAE, 1901-4, under Scott.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sentinel Range 78°10'S., 85°30'W.

A major mountain range situated northward of Minnesota Glacier and forming the northern half of the Ellsworth Mountains. The range trends NNW.-SSE. for about 115 mi. and is 15 to 30 mi. wide. Many peaks rise over 4,000 m. and Vinson Massif (5,140 m.) in the southern part of the range is the highest elevation on the continent. The range was first sighted and photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth who in naming it recognised its prominent position as a landmark on an otherwise featureless ice surface. The range was first visited and partially surveyed in January 1958 by the Marie Byrd Land Traverse party, led by Charles R. Bentley. The entire range was mapped by USGS from aerial photography taken by U.S. Navy, 1958-61.

Sentinels, The 54°16'S., 36°16'W.

Small group of rocks lying in the entrance to Godthul, a bay along the N. coast of South Georgia. Rocks in this approximate position have been indicated on charts since about 1912, but they were first accurately charted by personnel on the *Norvegia*, 1927-28. The name appears to have been applied by DI personnel who recharted this area in 1929.

Sentry Rocks 70°45'S., 167°24'E.

Two high, rugged rocks lying just off Cape Dayman along the N. coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. The US-ACAN applied this descriptive name which is suggestive of the position and appearance of the feature.

Separation, Mount 53°05'S., 73°33'E.

Rocky peak, 1,480 m., standing 1 mi. NE. of Campbell Peak on the NE. flank of Big Ben, the dominating mountain on Heard Island. Surveyed in 1948 by the ANARE and probably so named by them because this feature lies somewhat apart from the main cluster of peaks near the summit of Big Ben.

Separation Range 84°05'S., 174°00'E.

The Commonwealth Range branches at about 84°20'S. and forms two chains of mountains separated by Hood Glacier. The Separation Range, about 30 mi. long, is the eastern branch and terminates to the north at Ross Ice Shelf. Named by the N.Z. Alpine Club Antarctic Exp., 1959-60.

Sequence Hills 73°03'S., 161°15'E.

Escarpment-like hills on the W. margin of the upper Rennick Gl., about 7 mi. NW. of Caudal Hills, Victoria Land. They provided the only good geological sequence in the area. Mapped and named by the northern party of NZGSAE, 1962-63.

Seraph Bay 72°28'S., 95°12'W.

An open bay about 15 mi. wide, formed at the SE. end of Thurston Island. It is bounded by Cape Annawan on the NW., Abbot Ice Shelf on the SW. and Dustin Island on the SE. Discovered by members of the USAS in flights from the ship *Bear* in February 1940. The bay was more accurately delineated by the USN Bellingshausen Sea Exp. in February 1960. Named by US-SCAN for the brig *Seraph* of Stonington, Conn., which in 1830, under Capt. Benjamin Pendleton, sailed westward from the South Shetland Is., reaching as far as 101°W., south of 60°S.

Serba Peak 69°37'S., 159°03'E.

A prominent rock peak (830 m.) that surmounts the ridge along the N. side of Fergusson Gl., in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Edward W. Serba, USN, Navigator in LC-130F Hercules aircraft during Operation Deep Freeze 1967 and 1968.

Sergeya Kameneva, Zaliv: see Kamenev Bight 69°55'S., 9°30'E.

Serkammen, Gora: see South Masson Range 67°53'S., 62°47'E.

Serlin Spur 75°04'S., 134°42'W.

A narrow, mostly snow-covered spur 4 mi. S. of Bowyer Butte in Marie Byrd Land. The spur extends eastward from the divide between Johnson and Venzke Glaciers and intrudes into the upper part of the latter glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Ronald C. Serlin, ionospheric physicist at Siple Station, 1969-70.

Serpan Peak 83°34'S., 54°50'W.

A small peak, 1,445 m., surmounting Washington Escarpment just W. of Rivas Peaks in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Robert D. Serpan, aerologist with the Neptune Range field party, 1963-64.

Serpiente, Ensenada de la: see Sea Serpent Cove 57°02'S., 26°42'W.

Serrano, Isla: see Lavoisier Island 66°12'S., 66°44'W.

Serrated Island: see Sierra Island 62°24'S., 59°48'W.

Serrat Glacier 70°24'S., 161°04'E.

A glacier, 10 mi. long, flowing N. through the middle of Kavrayskiy Hills into the W. side of Rennick Glacier. Mapped by USGS from surveys and U.S. Navy

GEOGRAPHIC NAMES OF THE ANTARCTIC

aerial photographs, 1960-62. Named by US-ACAN for Javier Serrat of the University of Chile, who worked (electrical engineering) at the USARP McMurdo Station, 1967-68.

Sértinnane, Gory: see Sørtindane Peaks 68°08'S., 62°24'E.

Services Glacier: see Sultan Glacier 61°08'S., 55°21'W.

Setenuten Peak 72°03'S., 4°45'E.

A rock peak, 2,745 m., standing 1 mi. S. of Petrellfjellet in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Setenuten (the seat peak) because of its shape.

Seue Peaks 67°19'S., 66°55'W.

Peaks standing between Bentley Crag and Mt. Rendu on Arrowsmith Pen. in Graham Land. Mapped by FIDS from surveys and air photos, 1956-59. Named by UK-APC for Christian Martini de Seue, Norwegian surveyor and glaciologist who made pioneer measurements of glacier flow in Norway in about 1870.

Seven, Peak 69°41'S., 64°42'E.

A peak 5 mi. WNW. of Summers Peak in the Stinear Nunataks in Mac. Robertson Land. Discovered by an ANARE southern party (1954) led by R. G. Dovers. It was the farthest south reached by them. The name was given as a code name in the field and has since been used by later parties.

Seven Bay: see Adams Fjord 66°50'S., 50°30'E.

Seven Buttresses 63°36'S., 57°10'W.

Series of seven rock buttresses, 150 m. high, which are separated by narrow icefalls and extend for 4 mi. along the W. side of Tabarin Pen., the E. extremity of Trinity Peninsula. Probably first sighted by a party under J. Gunnar Andersson of the SwedAE, 1901-4. The Seven Buttresses were surveyed and named by the FIDS, 1946.

Severnny, Ostrov: see Foster Island 66°04'S., 100°16'E.

Severtsev, Mount 71°43'S., 12°37'E.

Peak, 2,540 m., standing 2 mi. NE. of Pinegin Peak in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Russian geographer N. A. Severtsev (1827-85).

Severtseva, Gora: see Severtsev, Mount 71°43'S., 12°37'E.

Seward Mountains 72°26'S., 66°15'W.

Isolated mountains, 1,525 m., standing 10 mi. ESE. of Buttress Nunataks and a like distance E. of George VI Sound on the W. coast of Palmer Land. Disc. in 1936 by the BGLE under Rymill. Named by Rymill for Sir Albert Charles Seward, Prof. of Botany at Cambridge, 1906-36.

Sewing-Machine Needles 62°58'S., 60°30'W.

Three prominent rock needles, the highest 45 m., lying close SE. of Rancho Pt., Deception I., in the South Shetland Islands. The name Sewing-Machine Rock was given by whalers for what was originally a conspicuous natural arch. Needles is now considered the more suitable descriptive term; an earthquake tremor in 1924 caused the arch to collapse.

Seymour, Cape: see Seymour Island 64°17'S., 56°45'W.

Seymour Island 64°17'S., 56°45'W.

Island 10 mi. long and 5 mi. wide at its greatest breadth, lying 1 mi. NE. of Snow Hill I. at the S. margin of Erebus and Terror Gulf. The NE. end of this feature was sighted by a Br. exp. under Ross, Jan. 6, 1843, and named Cape Seymour after R. Adm. George Francis Seymour. Its insular nature was determined by Capt. C. A. Larsen in 1892-93 and the name Seymour has since been extended to the entire island.

Sfinksen: see Sphinx Mountain 71°27'S., 11°58'E.

Sfinksen Nunatak 72°18'S., 3°47'W.

A nunatak about 1 mi. S. of Pyramiden Nunatak, at the SW. end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Sfinksen (the sphinx).

Sfinksskollen: see Sphinxkopf Peak 71°25'S., 11°57'E.

Shabica Glacier 70°21'S., 62°45'W.

A northern tributary glacier to the Clifford Glacier, joining it near its terminus just E. of Mt. Tenniel, in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Stephen V. Shabica, USARP biologist and Station Scientific Leader at Palmer Station in 1970.

Shackleton, Mount 65°13'S., 63°56'W.

Mountain, 1,465 m., with perpendicular cliffs facing W., standing 2.5 mi. E. of Chaigneau Peak between Leay and Wiggins Glaciers, on the W. side of Graham Land. Disc. by the FrAE, 1908-10, under Charcot and named by him for Sir Ernest Shackleton.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Shackleton Barrieren: see Shackleton Ice Shelf 66°00'W., 100°00'E.

Shackleton Coast 82°00'S., 162°00'E.

That portion of the coast along the W. side of the Ross Ice Shelf between Cape Selborne and Airdrop Peak at the E. side of Beardmore Glacier. Named by NZ-APC in 1961 after Sir Ernest Shackleton. He accompanied Scott on the southern journey during the BrNAE (1901-4) and subsequently led three Antarctic expeditions. On the BrAE (1907-9), Shackleton discovered the area beyond Shackleton Inlet to the Beardmore Glacier, and was the first to find a practicable route to the South Pole. Lack of food stopped him 97 miles from his goal.

Shackleton Gap 54°08'S., 37°12'W.

Low, ice-covered gap between King Haakon Bay and Possession Bay, South Georgia. The name Shackletons Pass, for Sir Ernest Shackleton, was used on a map in his book *South*, published in 1920. The feature marks a portion of the route across South Georgia used by the Shackleton party in 1916. The form approved was recommended by the UK-APC in 1957.

Shackleton Glacier 84°35'S., 176°20'W.

A major glacier, over 60 mi. long and from 5 to 10 mi. wide, descending from the polar plateau from the vicinity of Roberts Massif and flowing N. through the Queen Maud Mountains to enter the Ross Ice Shelf between Mt. Speed and Waldron Spurs. Discovered by the USAS (1939-41) and named by US-SCAN for Sir Ernest H. Shackleton, British Antarctic explorer.

Shackleton Harbour: see Duperré Bay 64°27'S., 62°41'W.

Shackleton Icefalls 85°08'S., 164°00'E.

Extensive icefalls of the upper Beardmore Gl., southward of Mt. Darwin and Mt. Mills. Named by the BrAE (1910-13) for Sir Ernest Shackleton, leader of the BrAE (1907-9), who first penetrated this region.

Shackleton Ice Shelf 66°00'S., 100°00'E.

An extensive ice shelf fronting the coast of Antarctica for about 240 mi. (95°E. to 105°E.), projecting seaward about 90 mi. in the W. portion and 40 mi. in the east. The existence of this ice shelf was first made known by the USEE under Wilkes who mapped a portion of it from the *Vincennes* in February 1840. It was explored by the AAE under Mawson (1911-14) who named it for Sir Ernest Shackleton. The extent of the ice shelf was mapped in greater detail in 1955, using aerial photography obtained by USN Op. Hjp., 1946-47. Further mapping by the Soviet Exp. of 1956 showed the portion eastward of Scott Gl. to be a part of this ice shelf.

Shackleton Inlet 82°19'S., 164°00'E.

A reentrant, about 10 mi. wide, between Cape Wilson and Cape Lyttelton. It is occupied by the terminus of Nimrod Glacier descending at a low gradient from the bordering highlands to the Ross Ice Shelf. Discovered by Capt. Robert F. Scott, RN, in December 1902, while on his attempted trip to the South Pole. He was accompanied on this trip by Dr. Edward A. Wilson and Lt. (later Sir) Ernest H. Shackleton, RNR, for whom this inlet was named.

Shackleton Mountains: see Shackleton Range 80°40'S., 26°00'W.

Shackleton Peak: see Shackleton, Mount 65°13'S., 63°56'W.

Shackleton Range 80°40'S., 26°00'W.

Range of mountains rising to 2,010 m., extending in an E.-W. direction for about 85 mi. between Slessor and Recovery Glaciers. First seen from the air by the CTAE in 1956. The central and west parts of the range were surveyed from the ground in 1957. Named for Sir Ernest Shackleton (1874-1922), leader of a Br. exp., 1914-16, the unsuccessful forerunner of the CTAE.

Shackleton Shelf: see Shackleton Ice Shelf 66°00'S., 100°00'E.

Shackleton Shelf Ice: see Shackleton Ice Shelf 66°00'S., 100°00'E.

Shackletons Pass: see Shackleton Gap 54°08'S., 37°12'W.

Shadow, Mount 71°56'S., 167°31'E.

A small peak in the Admiralty Mtns. that rises above and close W. of Shadow Bluff at the junction of the Tucker and Leander Glaciers. Climbed by the geological team of the NZGSAE, 1957-58, in January 1958, and named from association with Shadow Bluff and nearby Mount Midnight.

Shadow Bluff 71°57'S., 167°38'E.

A rock bluff just W. of McGregor Range, at the junction of the Tucker and Leander Glaciers. It is a landmark when sledging on the Tucker Glacier, and is nearly always in shadow, hence the name. Named by the NZGSAE, 1957-58.

Shafer Peak 74°01'S., 162°36'E.

A prominent peak, 3,600 m., standing 3 mi. S. of Mt. Hewson in the Deep Freeze Range, Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Lt. Cdr. Willard

GEOGRAPHIC NAMES OF THE ANTARCTIC

G. Shafer, (CEC) USN, officer in charge of the nuclear power plant at McMurdo Station, winter party 1965.

Shag Felsen: see Shag Rocks 53°33'S., 42°02'W.

Shag Island 52°55'S., 73°35'E.

An island 0.5 mi. long, the central and largest of a group of three islands and rocks that lie 6 mi. N. of Heard Island. This feature appears to have been known to American sealers as Shag Rock, as shown by Capt. H. C. Chester's 1860 sketch map of the Heard Island area. The name Shag Island as applied on an 1874 chart by the *Challenger* expedition has become established in international usage.

Shagnasty Island 60°44'S., 45°38'W.

Small, rocky ice-free island lying 0.3 mi. W. of Lenton Pt. in the N. part of Clowes Bay, close off the S. coast of Signy I. in the South Orkney Islands. Roughly charted in 1933 by DI personnel, and surveyed in 1947 by the FIDS. The name, applied by FIDS, arose from the unpleasant state of the island due to its occupation by a large colony of blue-eyed shags (*Phalacrocorax atriceps*).

Shag Point 54°02'S., 37°27'W.

Point between Camp Bay and Sunset Fjord in the Bay of Isles, on the N. coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Shag Rock: see Shag Island 52°55'S., 73°35'E.

Shag Rock 66°00'S., 65°38'W.

Rock 0.1 mi. E. of Cliff I. and 8 mi. W. of Prospect Pt., off the W. coast of Graham Land. Charted and named by the BGLE, 1934-37, under Rymill.

Shag Rocks 53°33'S., 42°02'W.

Group of four insular rocks, 75 m. high, lying some 115 mi. WNW. of South Georgia. Shag Rocks, probably so named because shags and other sea birds frequent them, were known to sealers prior to 1823 and are now considered to be identical with the "Aurora Islands" reported in this vicinity by the ship *Aurora* in 1762. They were charted by DI personnel on the *William Scoresby* in 1927.

Shag Skjoerne: see Shag Rocks 53°33'S., 42°02'W.

Shallop Cove 54°14'S., 37°20'W.

Cove forming the head of Queen Maud Bay on the S. side of South Georgia. Surveyed by the SGS in the period 1951-57, and so named because the remains of a shallop were found here by the SGS in 1956.

Shallow Bay 67°48'S., 67°28'E.

Bay 5 mi. wide, formed by a recession of limited extent in the ice cliffs just W. of Point Williams, on the coast of Mac. Robertson Land. Disc. on Feb. 12, 1931, by the BANZARE under Mawson, who so named it because it formed only a shallow indentation in the coast line.

Shambles Glacier 67°20'S., 68°13'W.

Steep glacier 4 mi. long and 6 mi. wide, with very prominent hummocks and crevasses, flowing E. between Mt. Bouvier and Mt. Mangin into Stonehouse Bay on the E. side of Adelaide Island. The lower reaches of the glacier were first sighted and surveyed in 1909 by the FrAE under Charcot, and resurveyed in 1948 by the FIDS. The upper reaches were mapped from air photos taken by the RARE, 1947-48, and by the FIDASE, 1956-57. So named by the FIDS because of the very broken nature of the glacier's surface.

Shamrock Hill 56°42'S., 27°05'W.

A prominent volcanic cone located NW. of Irving Pt. in the E. part of Visokoi I., South Sandwich Islands. So named by the survey party from HMS *Protector* because they occupied this feature as a survey station on St. Patrick's Day, Mar. 17, 1964.

Shangri-la 78°03'S., 163°42'E.

A small, secluded valley area completely isolated by mountain peaks, located immediately S. of Joyce Glacier and Péwé Peak. The valley reminded personnel of the VUWAE (1960-61), who applied the name, of James Hilton's Shangri-la in *Lost Horizon*.

Shanklin Glacier 84°37'S., 176°40'E.

A glacier in the Hughes Range, flowing SE. from Mt. Waterman to enter Muck Gl. at a point 5 mi. W. of Ramsey Glacier. Named by US-ACAN for CWO David M. Shanklin, USA, of the U.S. Army Aviation Detachment which supported the Texas Tech Shackleton Glacier Exp., 1964-65.

Shannon Point 54°52'S., 35°58'W.

Point marking the SW. side of the entrance to Esbensen Bay at the SE. end of South Georgia. Charted in 1930 by DI personnel on the *William Scoresby* and named for Lt. Cdr. R. L. V. Shannon, RN, captain of the ship at the time of the survey.

Shanty Point 66°25'S., 65°38'W.

Small point within Darbel Bay, lying close W. of the mouth of Cardell Gl. on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57, and mapped from these photos by the FIDS. So named by the UK-APC because, when seen from a distance, a large rectangular boulder on the point has the appearance of a small hut with a crooked chimney.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Shapeless Mountain 77°26'S., 160°24'E.

Massive mountain, 2,740 m., standing W. of the head of Balham Valley in Victoria Land. Named in 1957 by the N.Z. Northern Survey Party of the CTAE (1956-58) as being descriptive of its appearance from almost every direction.

Shapley Ridge 86°18'S., 129°10'W.

A prominent ridge overlooking Reedy Glacier; it extends E. from Cleveland Mesa and marks the E. extremity of the Watson Escarpment. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Alan H. Shapley, Vice-Chairman of the U.S. National Committee for the IGY.

Sharbonneau, Cape 70°50'S., 61°27'W.

Rounded, snow-covered headland forming the S. side of the entrance to Lehrke Inlet, on the E. coast of Palmer Land. Members of the East Base of the USAS explored this coast in 1940. They charted this feature as an island which they named for Charles W. Sharbonneau, carpenter at East Base. It was determined to be a cape of Palmer Land in 1947 by a joint sledge party consisting of members of the RARE and the FIDS.

Sharbonneau Island: see Sharbonneau, Cape 70°50'S., 61°27'W.

Shark Island: see Håkollen Island 67°00'S., 57°15'E.

Shark Peak 68°03'S., 62°41'E.

An isolated nunatak 3.5 mi. SSW. of Van Hulssen Nunatak in the Framnes Mtns. of Mac. Robertson Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Hånuten (the shark peak). The translated form of the name recommended by ANCA has been adopted.

Sharks Tooth 76°02'S., 159°38'E.

A small steep-sided, tooth-like rock lying W. of Beckett Nunatak at the N. side of the upper Mawson Glacier in Victoria Land. Mapped and named by the Southern Party of the NZGSAE, 1962-63.

Sharp, Mount 77°53'S., 86°10'W.

Mountain over 3,000 m., standing 2 mi. SE. of Mt. Barden in the N. part of the Sentinel Range. Mapped by the Marie Byrd Land Traverse party, 1957-58, who named the mountain for Prof. Robert P. Sharp, member of the Technical Panel on Glaciology, U.S. National Committee for the IGY.

Sharp Glacier 67°20'S., 66°27'W.

A glacier flowing N. to the head of Lallemand Fjord, close E. of the Boyle Mtns., in Graham Land. Mapped

by FIDS from surveys and air photos, 1948-59. Named by UK-APC for Robert P. Sharp, American geologist who has undertaken numerous studies on glaciers and their flow.

Sharp Peak 62°32'S., 60°04'W.

Sharp peak, 425 m., situated in the NE. part of Livingston I., 2 mi. NW. of Edinburgh Hill, in the South Shetland Islands. The name was applied by DI personnel on the *Discovery II* who charted the peak in 1935.

Sharp Peak 66°02'S., 65°18'W.

Peak, 475 m., standing 2 mi. SE. of Prospect Pt., on the W. coast of Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill. The name is descriptive.

Shatskiy Hill 72°02'S., 13°21'E.

Hill, 2,705 m., in the Dekefjellrantane Hills of the Weyprecht Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for N. S. Shatskiy, Soviet geologist.

Shatskogo, Gora: see Shatskiy Hill 72°02'S., 13°21'E.

Shattuck, Mount 80°26'S., 81°28'W.

A peak, 1,430 m., located at the S. end of Independence Hills, about 3 mi. NW. of Redpath Peaks, in the Heritage Range. Named by US-ACAN for aviation machinist Wayne M. Shattuck, USN, air crewman on LC-47 aircraft, who perished in a crash on the Ross Ice Shelf, Feb. 2, 1966.

Shaula Island 66°58'S., 57°21'E.

Island 3 mi. long and rising to 150 m., lying 1 mi. E. of Achnar I. in the Øygarden Group. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and called Söröya (the south island). The group was first visited by an ANARE party in 1954; the island was renamed by ANARE after the star Shaula which was used for an astrofix in the vicinity.

Shaw, Mount 69°57'S., 64°33'E.

The highest peak (2,035 m.) of the Anare Nunataks in Mac. Robertson Land. First visited in November 1955 by an ANARE party led by J. M. Béchervaise. Named by ANCA for P. J. R. Shaw, meteorologist at Mawson Station in 1955.

Shaw Glacier: see Kichenside Glacier 67°46'S., 47°36'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Shaw Islands 67°33'S., 47°44'E.

A group of four islands lying 2 mi. N. of the central part of McKinnon I., off the coast of Enderby Land. Plotted from ANARE air photos taken in 1956. Named by ANCA for John E. Shaw, physicist at Mawson Station in 1957.

Shaw Massif 72°01'S., 66°51'E.

A fairly flat-topped rock massif (1,355 m.) on the W. margin of Lambert Glacier. It stands 12 mi. S. of Mt. Willing in the Prince Charles Mountains. Sighted in November 1956 from an ANARE aircraft. Named by ANCA for Bernard Shaw, radio supervisor at Mawson Station in 1957.

Shcherbakova, Khrebet: see Shcherbakov Range 71°51'S., 10°32'E.

Shcherbakov Range 71°51'S., 10°32'E.

A mountain range trending N.-S. for 20 mi., standing immediately E. of Mt. Dallmann where it marks the E. extremity of the Orvin Mountains, in Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1963 for Soviet scientist D. I. Shcherbakov.

Shear, Mount 78°20'S., 86°08'W.

A mountain over 4,000 m., standing 4 mi. NW. of Mt. Tyree in the Sentinel Range, Ellsworth Mountains. Disc. by the Marie Byrd Land Traverse Party (1957-58) led by C. R. Bentley, and named for James A. Shear, scientific leader at Hallett Station during the IGY in 1957.

Shearer Stack 61°55'S., 58°05'W.

Rock stack lying 1.5 mi. SW. of False Round Pt., off the N. coast of King George I. in the South Shetland Islands. Named by the UK-APC in 1960 for the American sealing vessel *Charles Shearer* from Nantucket, which visited the South Shetland Is. in 1874-75. In 1877 the ship again sailed for the islands and disappeared without a trace.

Sheathbill Bay 53°59'S., 37°26'W.

A small bay just N. of Rosita Harbor (the features being separated by a small peninsula) along the N. coast of South Georgia. So named by UK-APC because the bay is frequented by sheathbills (*Chionis alba*).

Sheehan Glacier 70°56'S., 162°24'E.

A steep and extremely broken glacier draining from the vicinity of Miller Peak in the Explorers Range, Bowers Mtns., and entering the Rennick Glacier just S. of Alvarez Glacier. Named by the northern party of

NZGSAE, 1963-64, for Maurice Sheehan, mountaineer who wintered at Scott Base, 1963, and was a field party assistant with the expedition.

Sheehan Islands 67°22'S., 59°46'E.

Group of small islands lying at the SE. side of Islay in the William Scoresby Archipelago. Discovered on Feb. 18, 1931, by the BANZARE under Mawson. He named one of the group Sheehan Nunatak after H. H. Sheehan, Asst. Sec. to the Treasury, who was Sec. of the Australian Antarctic Committee of BANZARE. BANZARE erroneously charted Sheehan Nunatak as lying behind the coastline. The insularity of the group was determined by DI personnel on the *William Scoresby* on Feb. 27, 1936. The islands were more fully mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp. in January and February 1937.

Sheehan Mesa 73°01'S., 162°18'E.

A prominent mesa standing 10 mi. WNW. of Pain Mesa in the NW. part of Mesa Range, Victoria Land. Named by the northern party of NZGSAE, 1962-63, for Maurice Sheehan, field assistant with this party.

Sheehan Nunatak: see Sheehan Islands 67°22'S., 59°46'E.

Sheehan Tableland: see Sheehan Mesa 73°01'S., 162°18'E.

Sheelagh Islands 66°32'S., 50°12'E.

Group of small islands lying 3 mi. S. of Cape Kolosov, near the mouth of Amundsen Bay in Enderby Land. They were possibly the site of the landing from an aircraft by Riiser-Larsen on Dec. 22, 1929. An ANARE party landed on them on Feb. 14, 1958. Named by ANCA for the wife of R. H. J. Thompson, Administrative Officer of the Antarctic Division and second-in-command of the expedition.

Sheep Point 54°04'S., 37°08'W.

Point along the S. side of Cook Bay, marking the S. side of the entrance to Prince Olav Hbr., on the N. coast of South Georgia. The name appears on a chart based upon a 1929 survey of Prince Olav Hbr. by DI personnel, but may reflect an earlier naming.

Sheets Peak 85°28'S., 125°52'W.

A peak over 1,800 m., standing 1 mi. NW. of Koopman Peak on the N. side of Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Joseph D. Sheets, journalist on USN Op. DFrz. 1965, 1966 and 1967.

Sheffield, Cape 62°37'S., 61°19'W.

Cape forming the NW. extremity of Rugged I., in the South Shetland Islands. Named for James P. Sheffield,

GEOGRAPHIC NAMES OF THE ANTARCTIC

Master of the brig *Hersilia* of Stonington, Connecticut, in 1819-20 and 1820-21, the first American sealer known to have visited the South Shetland Islands. In 1819-20 he took 8,868 sealskins from headquarters at Rugged Island.

Sheffield, Mount 80°10'S., 25°42'W.

Rocky mountain, 915 m., at the junction of Gordon and Slessor Glaciers on the N. side of the Shackleton Range. First mapped in 1957 by the CTAE and named for Alfred H. Sheffield, Chairman of the radio communications working group for the IGY, who was of great assistance in this field to the CTAE, 1955-58.

Sheila Cove 60°45'S., 44°46'W.

Cove in the SW. part of Jessie Bay on the N. coast of Laurie I., in the South Orkney Islands. Surveyed and named by the ScotNAE, 1902-4, for Sheila Bruce, daughter of William S. Bruce, leader of the expedition.

Shelby, Mount 68°09'S., 65°50'W.

Mountain, 1,520 m., standing between Daspit Gl. and Bills Gulch at the head of Trail Inlet, on the E. coast of Graham Land. Disc. by members of East Base of the USAS, 1939-41. It was photographed from the air in 1947 by the RARE under Ronne, and charted in 1948 by the FIDS. Named by Ronne for Marjorie Shelby, who contributed her services as typist and editor in drafting the RARE prospectus and assisted in general exp. work prior to departure.

Shelby Glacier: see Gould Glacier 66°47'S., 64°39'W.

Shell Glacier 77°16'S., 166°25'E.

A western lobe of the Mt. Bird icecap. It descends steeply in the valley N. of Trachyte Hill and Harrison Bluff in the center of the ice-free area on the lower western slopes of Mt. Bird, Ross Island. Mapped and so named by the NZGSAE, 1958-59, because of the marine shell content of the moraines.

Shelter Cove 63°41'S., 57°57'W.

A small coastal indentation on the N. shore of Prince Gustav Channel, between Chapel Hill and Church Point, Trinity Peninsula. The name, given by UK-APC, is descriptive of the only part of this coast which is sufficiently sheltered from the prevailing SW. winds to afford a reliable camp site.

Shelter Islands 65°15'S., 64°17'W.

Group of small islands lying 0.3 mi. W. of Winter I. in the Argentine Is., Wilhelm Archipelago. Charted and named by the BGLE, 1934-37, under Rymill.

Shelton, Mount 71°41'S., 166°48'E.

A mountain (2,485 m.) located just W. of the upper part of Rastorfer Glacier in the east-central portion of

the Homerun Range, Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for John E. Shelton, USARP meteorologist at Hallett Station, 1964-65.

Shelton Head 72°28'S., 97°25'W.

A headland marked by exposed rock, located 12 mi. W. of Long Glacier on the S. coast of Thurston Island. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for John A. Shelton, meteorologist at Byrd Station, 1963-64.

Shelton Nunataks 75°43'S., 70°35'W.

Two isolated nunataks located 10 mi. SE. of Thomas Mtns., in eastern Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Willard S. Shelton, electrician at Eights Station in 1964.

Shenk Peak 85°11'S., 174°45'W.

A sharp peak 2,540 m., standing just SE. of Mt. Kenyon, between Gillespie Gl. and LaPrade Valley in the Cumulus Hills. Named by the Texas Tech Shackleton Glacier Exp. (1964-65) for John C. Shenk, graduate student at Texas Technological College and a member of the expedition.

Shennan, Mount 70°14'S., 65°33'E.

A mountain 4 mi. W. of Farley Massif in the Athos Range, Prince Charles Mountains. Plotted from ANARE air photos. Named for K. J. Shennan, assistant diesel mechanic at Mawson Station in 1963.

Shepard Cliff 74°08'S., 161°09'E.

An isolated cliff, 4 mi. long, at the NE. margin of the Reeves Nêvé, in Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1956-62. Named by US-ACAN for Danny L. Shepard, USN, construction electrician at South Pole Station in 1966.

Shepard Island 74°25'S., 132°30'W.

An island about 11 mi. long, lying 6 mi. W. of Grant I. off the coast of Marie Byrd Land. The island is ice capped except at its northern, seaward side, and is almost wholly embedded in the Getz Ice Shelf. Discovered by the USAS (1939-41) and named for John Shepard, Jr., a contributor to the expedition.

Shepherd Dome 74°52'S., 99°33'W.

A low dome-shaped mountain at the N. side of Pine Island Glacier, standing 4 mi. SW. of Mt. Manthe in the S. part of the Hudson Mountains. Mapped from air photos made by USN Op. Hjp., 1946-47. Named by US-ACAN for Donald C. Shepherd, ionospheric physicist at Byrd Station, 1967.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sheppard Nunatak 63°22'S., 56°59'W.

Conical nunatak 60 m. high which stands close N. of Sheppard Pt., the N. side of the entrance to Hope Bay, at the NE. end of Antarctic Peninsula. This area was first explored by a party of the SwedAE, 1901-4. The nunatak was charted in 1945 by the FIDS, and named by them for its association with Sheppard Point.

Sheppard Point 63°22'S., 56°58'W.

Point marking the N. side of the entrance to Hope Bay, at the NE. end of Antarctic Peninsula. Disc. by a party under J. Gunnar Andersson of the SwedAE, 1901-4, who wintered at Hope Bay in 1903. Named by the FIDS for R. Sheppard, Master of the *Eagle* who, in February 1945, landed the party which established a FIDS scientific station at Hope Bay.

Sheppard Rocks 75°37'S., 158°38'E.

A group of rocks lying 4 mi. NW. of Ricker Hills, in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Paul D. Sheppard, store-keeper with the South Pole Station winter party in 1966.

Sheriff, Cape: see Shirreff, Cape 62°27'S., 60°47'W.

Sherlac Point 64°44'S., 62°40'W.

Point at the SE. end of Rongé I., off the W. coast of Graham Land. First charted and named "Cap Charles" by the BelgAE under Gerlache, 1897-99. To avoid confusion with Charles Point in Hughes Bay, an anagram of the name was adopted by the UK-APC in 1960.

Sherman Island 72°38'S., 100°00'W.

An ice-covered island about 32 mi. long and 10 mi. wide, lying S. of Thurston I. in the middle of Peacock Sound. The feature rises above Abbot Ice Shelf which occupies the sound. Delineated from aerial photographs taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Adm. Forrest Sherman, USN, Chief of Naval Operations, 1949-51, when preparations were being made for U.S. Naval support during the forthcoming IGY operations.

Sherratt Bay 62°02'S., 57°50'W.

Bay between Cape Melville and Penguin I. on the S. side of King George I., in the South Shetland Islands. The existence of the bay was known and roughly charted by sealers working in the area in the early 1820's. It was named by the UK-APC in 1960 for Richard Sherratt, Master of the *Lady Trowbridge* from Liverpool which was wrecked off Cape Melville on December 25, 1820. Sherratt occupied his time until rescued making an inaccurate but historically interesting map of the South Shetland Islands.

Sherrell Point 63°18'S., 58°41'W.

A point at the S. end of Astrolabe I., off Trinity Peninsula. Named for Frederick W. Sherrell, surveyor and geologist in this area with the FIDASE, 1955-56.

Sherwin Peak 82°37'S., 161°48'E.

Peak, 2,290 m., surmounting the E. side of Otago Glacier 5 mi. SE. of Mt. Chivers, in the N. part of Queen Elizabeth Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for James S. Sherwin, ionospheric scientist at Little America V, 1958.

Shetland du Sud, Iles: see South Shetland Islands 62°00'S., 58°00'W.

Shetland Islands: see South Shetland Islands 62°00'S., 58°00'W.

Shewry Peak 64°45'S., 63°38'W.

Peak, 1,065 m., marking the end of the rock ridge which extends northward from Mt. William in the S. part of Anvers I., in the Palmer Archipelago. Surveyed from the E. by the FIDS in 1944, and resurveyed and photographed in 1955. Named by the UK-APC for Arthur L. Shewry of FIDS, general assistant at the Arthur Harbor station in 1955.

Shibuya Peak 75°10'S., 133°35'W.

A rocky summit (840 m.) on the E. side of Berry Glacier, 4 mi. SE. of Demas Range, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Franklin T. Shibuya, USARP meteorologist at Byrd Station, 1962.

Shideler, Mount 77°55'S., 154°51'W.

Peak 1 mi. SE. of Mt. Fitzsimmons in the N. group of the Rockefeller Mtns. on Edward VII Peninsula. Discovered on Jan. 27, 1929, by members of the ByrdAE on an exploratory flight over this area. The name appears to have been applied by the USAS (1939-41).

Shield Island: see Shield Nunatak 74°33'S., 164°30'E.

Shield Nunatak 74°33'S., 164°30'E.

A prominent nunatak standing at the E. side of the terminus of Campbell Glacier on the N. shore of Terra Nova Bay, Victoria Land. This feature, a multiple volcanic cone, was so named by the NZGSAE, 1965-66, because it looks like an old Viking shield.

Shields, Mount 70°11'S., 159°56'E.

A mountain (1,170 m.) at the junction of the Pryor and Robilliard Glaciers, at the N. end of the Usarp Mountains. Named by US-ACAN for Staff Sgt. James

GEOGRAPHIC NAMES OF THE ANTARCTIC

K. Shields, USMC, assigned to USN Squadron VX-6 in Antarctica, 1962-63 and 1963-64. During 1962, Shields served as navigator on aircraft in support of the USGS Topo West survey of this area.

Shimizu Ice Stream 85°11'S., 124°00'W.

An ice stream in the Horlick Mtns., draining WNW. from the area between Wisconsin Range and Long Hills to enter the S. flank of Horlick Ice Stream. Mapped by USGS from surveys and USN air photos, 1959-64. Named by US-ACAN for Hiromu Shimizu, glaciologist, Byrd Station winter party, 1961.

Shimizu Nunatak: see Anderson Nunataks 75°06'S., 68°18'W.

Shimmering Icefield 76°39'S., 159°44'E.

An icefield between the Shipton and Tilman Ridges in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who gave the name because of its frequently nacreous luster when viewed against the sun.

Shingle Cove 60°39'S., 45°34'W.

Small sheltered cove in the NW. corner of Iceberg Bay on the S. coast of Coronation I., in the South Orkney Islands. First surveyed by DI personnel in 1933. The name, applied by the FIDS following their survey of 1948-49, arose from the fine shingle on the landing beach on the S. shore of the cove.

Shinn, Mount 78°27'S., 85°46'W.

A mountain over 4,800 m., standing 4 mi. SE. of Mt. Tyree in the Sentinel Range, Ellsworth Mountains. Discovered on IGY reconnaissance flights in January 1958, and named by US-ACAN for Lt. Cdr. Conrad S. (Gus) Shinn, USN, pilot on some of these flights. Shinn was pilot of the Navy R4D aircraft carrying Admiral Dufek which, on Oct. 31, 1956, made the first plane landing at the geographic South Pole.

Shinnan Glacier 67°55'S., 44°38'E.

A glacier which flows NW. to the coast just E. of Shinnan Rocks and marks the division between Queen Maud Land and Enderby Land. Mapped from surveys and air photos by JARE, 1957-62, and named Shinnan-hyōga (new south glacier).

Shinnan Rocks 67°57'S., 44°33'E.

A substantial area of exposed coastal rocks at the W. side of Shinnan Gl. in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Shinnan-iwa (new south rocks).

Shinobi Rock 68°03'S., 43°44'E.

A small rock exposure on the coast between Kabuto Rock and Rakuda Rock in Queen Maud Land.

Mapped from surveys and air photos by JARE, 1957-62, and named Shinobi-iwa (hidden rock).

Ship Cone 76°40'S., 159°35'E.

A conical peak 1 mi. south of Townrow Peak on the Tilman Ridge in Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition, 1964, who gave the name after a similarly shaped peak in the Hokonui Hills, New Zealand.

Shipley Glacier 71°26'S., 169°12'E.

A glacier, 25 mi. long, in the north-central Admiralty Mountains. The glacier drains the northern slopes of Mt. Adam and flows along the E. wall of DuBridge Range to Pressure Bay on the N. coast of Victoria Land. Some of the glacier bypasses Pressure Bay and reaches the sea W. of Flat Island. The seaward end of the glacier was first mapped by the Northern Party, led by Victor Campbell, of the BrAE, 1910-13. Named by Campbell for Sir Arthur Shipley, master of Christ's College, Cambridge, England, at the suggestion of Priestley. The entire glacier was mapped by USGS, 1960-63.

Ship Nunatak 71°04'S., 159°50'E.

A very striking nunatak which rises above the ice near the center of the upper portion of Harlin Glacier, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. A descriptive name applied by US-ACAN because of the appearance of the feature, resembling that of a ship at sea.

Shipton Ridge 76°40'S., 159°51'E.

The main ridge forming the northeastern arm of the Allan Hills in Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition, 1964. They named it after Eric Shipton, Himalayan mountaineer, because of his association with Prof. N. E. Odell, for whom the adjacent Odell Glacier is named.

Shirase Coast 78°30'S., 156°00'W.

The northern portion of the relatively ill-defined coast along the E. side of the Ross Ice Shelf, lying between the N. end of Siple Coast (about 83°30'S., 155°00'W.) and Cape Colbeck. Named by NZ-APC in 1961 after Lieutenant C. Shirase, leader of the Japanese expedition whose ship *Kainan Maru* sailed near this coast in Jan. 1912. Landings were made at Kainan Bay and at the Bay of Whales, the origin of a 160-mile journey southeastward on the Ross Ice Shelf. From 76°56'S., 155°55'W. (off Edward VII Peninsula), another party landed for a sledge trip to the edge of the Alexandra Mountains.

Shirase Glacier 70°05'S., 38°45'E.

A large glacier entering Havsbøt, the bay that forms the head of Lützow-Holm Bay. The area occupied by

GEOGRAPHIC NAMES OF THE ANTARCTIC

this feature was first mapped as a bay and named Instefjorden (the innermost fjord) by the Lars Christensen Exp., 1936-37. Surveys by JARE, 1957-62, revealed the large glacier in this position which they named for Lt. Choku Shirase, leader of the Japanese Antarctic Exp. of 1911-12.

Shireff, Cap: see Shirreff, Cape 62°27'S., 60°47'W.

Shireff's Cove: see Emerald Cove 61°55'S., 57°46'W.

Shirley, Mount 75°39'S., 142°03'W.

An ice-covered mountain whose E. face is marked by a prominent cirque, surmounting the W. side of the mouth of Land Glacier in Marie Byrd Land. Discovered by the USAS (1939-41) and named for Charles C. Shirley, chief photographer at the USAS West Base.

Shirley Island 66°17'S., 110°30'E.

Rocky island 1 mi. long, lying 0.1 mi. NW. of the W. end of Bailey Peninsula, in the Windmill Islands. First mapped from aerial photographs taken by USN Op. Hjp. in February 1947. Named by the US-ACAN for Q. Shirley, chief photographer's mate on USN Op. Hjp. photographic flights in this area and other coastal areas between 14° and 164°, East longitude.

Shirreff, Cape 62°27'S., 60°47'W.

Prominent cape at the N. end of the rocky peninsula which separates Hero and Barclay Bays on the N. coast of Livingston I., in the South Shetland Islands. Named by Edward Bransfield in 1820 for Capt. William H. Shirreff, at that time the British commanding officer in the Pacific.

Shirreff Cove 62°28'S., 60°48'W.

Small cove or anchorage, situated immediately SW. of Cape Shirreff along the N. side of Livingston I., in the South Shetland Islands. Edward Bransfield, Master, RN, named a cove in this vicinity for Capt. William H. Shirreff, British commanding officer in the Pacific in 1820. Present application of the name is based upon the location shown on Capt. George Powell's map, published by Laurie in 1822.

Shirreff's Cove: see Shirreff Cove 62°28'S., 60°48'W.

Shirshov, Mount 66°51'S., 51°37'E.

A small mountain lying 3 mi. NE. of Mt. Selwood in the Tula Mtns., Enderby Land. The mountain was visited by geologists of the SovAE, 1961-62, which named it for P. P. Shirshov, Soviet polar explorer.

Shishkoff's Island: see Clarence Island 61°12'S., 54°05'W.

Shiver Point 65°03'S., 61°22'W.

Point, surmounted by a peak 670 m. high, 8 mi. W. of Cape Fairweather on the E. coast of Graham Land. Charted during 1947 by the FIDS and named by the UK-APC in 1950. The name is suggestive of the cold.

Shmidt, Cape: see Shmidt Point 66°55'S., 67°02'W.

Shmidt Point 66°55'S., 67°02'W.

Point marking the N. extremity of Arrowsmith Pen., which separates Hanusse Bay and Lallemand Fjord on the W. coast of Graham Land. First seen and roughly surveyed in 1909 by the FrAE under Charcot. It was sketched from the air in 1937 by the BGLE under Rymill. Named in 1954 by the UK-APC for Prof. Otto Yu. Shmidt, Dir. of the Arctic Inst. at Leningrad, 1930-32, Head of the Chief Administration of the Northern Sea Route, 1932-39, and leader of many Arctic expeditions.

Shmidt Subglacial Basin 72°00'S., 106°00'E.

A large subglacial basin situated southward of Knox Coast in East Antarctica. Named by the Soviet Antarctic Expedition, 1957, after Soviet academician, Prof. Otto Yu. Shmidt (1891-1956).

Shneyder, Gory: see Heksegryta Peaks 73°31'S., 3°48'W.

Shockey Peak 77°36'S., 86°47'W.

Peak, 2,010 m., rising 2 mi. SE. of Allen Peak near the N. extremity of the main ridge of the Sentinel Range. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Charles C. Shockey of the Branch of Special Maps, U.S. Geological Survey, which prepared the 1962 map of this range.

Shockley Bluff 73°22'S., 164°56'E.

A very steep bluff forming the S. end of Deception Plateau, overlooking the point where Pilot Gl. joins the larger Aviator Gl., in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Cdr. William E. Shockley, USN, officer in charge of the Squadron VX-6 winter detachment at McMurdo Station, 1966.

Shoemaker Nunatak 75°33'S., 140°05'W.

A nunatak immediately west of Billey Bluff at the southwest end of the Ickes Mountains, coastal Marie Byrd Land. The nunatak was photographed from aircraft of the USAS, 1939-41, and was mapped by the USGS from surveys and U.S. Navy aerial photography, 1959-65. Named by US-ACAN for John L. Shoemaker, aerographer, USN, weather observer at Brockton Station on the Ross Ice Shelf during two summer seasons, 1968-69 and 1969-70.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Shoemaker Glacier 73°47'S., 164°45'E.

A tributary glacier in the Southern Cross Mtns., flowing E. along the S. side of Daley Hills to Aviator Gl., in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Brian H. Shoemaker, USN, helicopter pilot with Squadron VX-6 at McMurdo Station, 1967.

Shoemaker Peak 79°51'S., 82°19'W.

A peak on the E. side of Ahrnsbrak Gl., 3 mi. ESE. of Sutton Peak in the Enterprise Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Dawaine A. Shoemaker, meteorologist at Little America V Station in 1958.

Shoemaker Point 54°01'S., 38°02'W.

Point 0.5 mi. E. of Jordan Cove on the S. side of Bird I., South Georgia. Surveyed by the SGS in the period 1951-57 and named by the UK-APC in 1963. "Shoemaker" is an old sailors' name for the Cape hen (*Procellaria aequinoctialis*), a bird which breeds on Bird Island.

Shoesmith Glacier 67°51'S., 67°12'W.

The largest glacier on Horseshoe Island, flowing westward into both Lystad Bay and Gaul Cove. Named by UK-APC in 1958 in association with Horseshoe Island.

Shokalski, Détroit: see Schokalsky Bay 69°15'S., 69°55'W.

Shomo Rock 75°35'S., 159°09'E.

A nunatak lying between the Ricker Hills and Pape Rock in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Barry C. Shomo, equipment operator with the South Pole Station winter party of 1966.

Short, Mount 72°50'S., 162°13'E.

A mountain, 2,110 m., standing 1 mi. E. of Sculpture Mountain, in the upper Rennick Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Cdr. John S. Short, USN, LC-130F aircraft commander in Operation Deep Freeze 1967 and 1968.

Shortcut Col 64°16'S., 59°13'W.

A wide col rising to over 460 m. immediately S. of Mt. Hornsby, Trinity Peninsula. Mapped from surveys by FIDS (1960-61). So named by UK-APC because this col provides a useful shortcut, avoiding the long detour through Longing Gap.

Shortcut Island 64°47'S., 64°07'W.

Crescent-shaped island 0.4 mi. long, with three prominent indentations of the N. shore, lying 0.7 mi. SSE. of Gamage Point and Palmer Station along the SW. coast of Anvers Island. The suggestive name was given by Palmer Station personnel. The narrow, deep channel separating this island from Anvers Island is a shortcut from the station to the Biscoe Bay area by water.

Short Island 63°57'S., 60°24'W.

Island lying 2.5 mi. SW. of Cape Page, close off the W. coast of Graham Land. Shown on an Argentine Govt. chart of 1952. Named by the UK-APC in 1960 for Short Brothers, the British firm started by Eustace and Horace Short, who in 1909 received an order from the Wright brothers to build six aircraft, and thus earned the title of "the first manufacturers of aircraft in the world."

Shostakovich Peninsula 72°11'S., 71°20'W.

An ice-covered peninsula lying north of Stravinsky Inlet and extending into Bach Ice Shelf in southern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC after Dmitri Shostakovich, Russian composer.

Shoulder Mountain 76°37'S., 162°08'E.

A prominent, triangular rock buttress over 1,000 m., on the N. side of the lower Fry Gl. and close S. of Mt. Creak in Victoria Land. Mapped and given this descriptive name by the 1957 N.Z. Northern Survey Party of the CTAE, 1956-58.

Shōwa Flat 69°01'S., 39°34'E.

A small flattish area along the NW. shore of Lake Ō-ike in the E. part of Ongul Island. Mapped from surveys and air photos by JARE, 1957-62, and named Shōwa-taira (Emperor Hirohito's era flat), presumably in association with Shōwa Station, the scientific station established by JARE on nearby East Ongul Island.

Showers, Mount 71°45'S., 61°28'W.

A mountain rising above the Condor Peninsula, 13 mi. SW. of Cape MacDonald, on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for William Showers, USARP biologist at Palmer Station in 1975.

Shpis, Pik: see Huldreslotted Mountain 72°58'S., 3°48'W.

Shrader, Glacier: see Schrader Glacier 54°07'S., 37°39'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Shrove Point 57°04'S., 26°39'W.

The SE. point of Candlemas I. in the South Sandwich Islands. So named by DI personnel on the *Discovery II* because they charted it on Shrove Tuesday, March 4, 1930.

Shuberta, Gory: see Høgfonna Mountain 72°45'S., 3°33'W.

Shull Rocks 66°27'S., 66°40'W.

A chain of low snow-covered rocks and one small island, lying in Crystal Sound about 10 mi. NW. of Cape Rey, Graham Land. Mapped from surveys by FIDS (1958-59). Named by UK-APC for Clifford G. Shull, American physicist who used neutron diffraction to determine the position of the hydrogen atoms in ice.

Shul'ts, Gory: see Annandags Peaks 72°32'S., 6°18'W.

Shults Peninsula 78°52'S., 162°39'E.

A bold, mainly ice-covered peninsula, 10 mi. long and 5 mi. wide, at the E. side of the mouth of Skelton Gl. in Victoria Land. Mapped by the USGS from ground surveys and Navy air photos. Named by US-ACAN for Capt. Roy G. Shults, USN, Chief of Staff to the Commander, U.S. Naval Support Force, Antarctica, 1962 and 1963.

Shultz Peak 76°10'S., 160°51'E.

A sharp peak 7 mi. S. of Mt. Armytage, where it overlooks the N. flank of Mawson Glacier. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for Lt. Willard E. Shultz, USN, supply officer at McMurdo Station, 1962.

Shumskiy Cove 67°04'S., 67°21'W.

A cove in southern Hanusse Bay indenting the NW. side of Arrowsmith Pen. in Graham Land. Mapped by FIDS from surveys and air photos, 1956-59. Named by UK-APC for Petr A. Shumskiy, Russian glaciologist, author in 1955 of an important publication on the petrology of ice.

Shurley Ridge 84°54'S., 65°23'W.

A partly snow-covered ridge projecting from the SW. side of Mackin Table, 6 mi. SE. of Snake Ridge, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Jay T. Shurley, biologist at South Pole Station, summer 1966-67.

Shute, Mount 71°50'S., 165°47'E.

A mountain (2,070 m.) standing 14 mi. SE. of Austin Peak in Mirabito Range. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by

US-ACAN for Larry R. Shute, USARP meteorologist at Hallett Station, 1963-64.

Shvede, Gora: see Snøskalkhausen Peak 72°02'S., 13°12'E.

Shyussel', Morena: see Schüssel Moraine 71°34'S., 11°32'E.

Sibbald, Cape 73°54'S., 165°23'E.

A cliffed cape at the SW. margin of Lady Newnes Bay on the coast of Victoria Land. It marks the SW. extremity of the Mountaineer Range at the terminus of Aviator Glacier. Sighted in February 1841 by Sir James Clark Ross and named by him for Lt. (later Cdr.) John Sibbald of the *Erebus*.

Sibelius Glacier 69°55'S., 70°05'W.

Glacier, 12 mi. long and 6 mi. wide, flowing S. into Mozart Ice Piedmont 10 mi. SW. of Mt. Stephenson in the N. part of Alexander Island. First seen from the air by the BGLE in 1937. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Jean Sibelius (1865-1957), Finnish composer.

Sibiryakov, Mount 67°56'S., 49°35'E.

An isolated mountain about 16 mi. S. of Mt. Humble of the Raggatt Mtns., in Enderby Land. Rock outcrops here were investigated by the SovAE, 1961-62, who named the feature for the Soviet icebreaker *Sibiryakov*.

Sickle Mountain 68°53'S., 66°47'W.

Mountain, 1,250 m., standing on the S. side of Clarke Gl. and 14 mi. E. of Cape Berteaux, on the W. coast of Graham Land. So named by Finn Ronne of the East Base of the USAS, 1939-41, because its peculiar shape was suggestive of that of a sickle.

Sickle Nunatak 71°32'S., 161°57'E.

A nunatak at the N. side of the entrance to Jupiter Valley, on the E. side of the Morozumi Range. So named by members of the NZGSAE, 1967-68, because of its shape.

Sidders, Islotes: see Pi Islands 64°20'S., 62°53'W.

Siddons Point 62°33'S., 60°26'W.

Point projecting into the middle of the head of Hero Bay on the N. coast of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 for Capt. Richard Siddons, Master of the Australian sealer *Lynx* of Sydney, who visited the South Shetland Islands in 1820-21 and 1821-22.

Sidley, Mount 77°02'S., 126°06'W.

A massive, mainly snow-covered mountain (4,285 m.) which is the highest and most imposing of the five ex-

GEOGRAPHIC NAMES OF THE ANTARCTIC

tinct volcanic mountains that comprise the Executive Committee Range of Marie Byrd Land. The feature is marked by a spectacular caldera on the southern side and stands NE. of Mt. Waesche in the southern part of the range. Discovered by R. Adm. Richard E. Byrd on an airplane flight, Nov. 18, 1934, and named by him for Mrs. Mabelle E. Sidley, the daughter of William Horlick, manufacturer, who was a contributor to the Byrd Antarctic Expedition, 1933-35.

Sidney Herbert Sound: see Herbert Sound 63°55'S., 57°40'W.

Siefker Ridge 79°09'S., 85°19'W.

A rugged ridge 6 mi. long, extending NW. from the W. part of Anderson Massif in the Heritage Range. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for electronics technician Dennis R. Siefker, USN, who was in charge of the automatic weather station at the party's camp at Camp Hills.

Siege Dome 84°16'S., 172°22'E.

A small, ice-covered prominence standing to the S. of the head of Hood Gl., close SE. of Mt. Patrick in the Commonwealth Range. Named by the N.Z. Alpine Club Antarctic Exp. (1959-60) because while attempting to establish a survey station here, they met with an eight day snow storm.

Siegfried Peak 77°34'S., 161°46'E.

Peak that forms a saddle with Siegmund Peak immediately southward, standing at the east side of the entrance to Odin Valley in the Asgard Range. The peak is one in a group of features in the area named mainly from Norse mythology by NZ-APC. Siegfried was the hero of various German legends, particularly of the Nibelungenlied.

Siegmund Peak 77°35'S., 161°46'E.

The peak forms a saddle with Siegfried Peak just northward, located at the east side of the entrance to Odin Valley in Asgard Range, Victoria Land. The name was applied by NZ-APC after Siegmund, the father of the German legend hero Siegfried in *Der Ring des Nibelungen*.

Siemiakowski Glacier 75°54'S., 144°12'W.

A glacier about 25 mi. long, flowing NW. to Nickerson Ice Shelf on the coast of Marie Byrd Land. Mapped from surveys by the USGS and U.S. Navy air photos (1959-65). Named by US-ACAN for Edmond R. Siemiakowski, auroral physicist at Byrd Station, 1964.

Sierra, Roca: see Saw Rock 57°03'S., 26°47'W.

Sierra Island 62°24'S., 59°48'W.

A narrow island which is marked by a series of small elevations throughout its length, lying 0.5 mi. NW. of Dee Island in the South Shetland Islands. Named by the 5th Chilean Ant. Exp., 1950-51, after Sgt. Victor Sierra, sick-bay attendant of the patrol ship *Lientur* on the expedition.

Siffrey, Cape: see Prime Head 63°13'S., 57°17'W.

Siffrey Point 63°13'S., 57°12'W.

A low exposed rocky point projecting from the N. coast of Trinity Peninsula, 6 mi. NW. of Cape Dubouzet. The feature is a re-identification of "Cap Siffrey," named by D'Urville in 1838.

Sigaren Islands 69°10'S., 39°28'E.

Two islands lying in the E. part of Lützow-Holm Bay, 3.5 mi. W. of Langhovde-kita Point. The islands were mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Sigaren (the cigar) because of their shape.

Sighing Peak 67°24'S., 67°59'W.

Prominent, isolated, rocky peak, 640 m., at the S. side of the entrance to Stonehouse Bay on the E. side of Adelaide Island. First sighted and surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1948 by the FIDS and so named by them because of the persistent sighing of wind from the summit of this peak, even when apparently calm at sea level.

Siglin Rocks 74°10'S., 114°54'W.

A rather isolated cluster of rock outcrops lying midway between Schneider Rock and Binder Rocks on the W. side of Martin Peninsula, Marie Byrd Land. First photographed from the air by USN Op. Hjp. in January 1947. Named by US-ACAN for Chief Warrant Officer D. F. Siglin, USN, maintenance coordinator at the Williams Field air strip, McMurdo Sound, during Deep Freeze 1967.

Sigma Islands 64°16'S., 62°55'W.

Group of small islands and rocks which lie 3 mi. N. of Eta I. and mark the N. limit of the Melchior Is., in the Palmer Archipelago. The name, derived from the 18th letter of the Greek alphabet, appears to have been first used on a 1946 Argentine govt. chart following surveys of these islands by Arg. expeditions in 1942 and 1943.

Signy Island 60°43'S., 45°38'W.

Island 4 mi. long and less than 3 mi. wide, lying close S. of the middle of Coronation I., in the South Orkney Islands. Unnamed, the appearance of the island was roughly plotted on James Weddell's chart of 1825. Capt. Petter Sørllø, in the Norwegian whale-catcher

GEOGRAPHIC NAMES OF THE ANTARCTIC

Palmer, made a running survey of the island in the 1912-13 season. Named after Captain Sørille's wife, Mrs. Signy Sørille. The island was surveyed in 1933 by DI personnel on the *Discovery II* and by the FIDS in the period 1947-50.

Sigurd Knolls 71°21'S., 7°38'E.

Isolated rock knolls at the N. end of Otter Plain, about 20 mi. NW. of Drygalski Mtns. in Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named for Sigurd Helle, geodesist and leader of NorAE (1956-60).

Sigurdsvodene: see Sigurd Knolls 71°21'S., 7°38'E.

Sigynbreen: see Sigyn Glacier 71°52'S., 8°36'E.

Sigyn Glacier 71°52'S., 8°36'E.

A broad glacier flowing N. between the Drygalski Mtns. and the Kurze Mtns. in Queen Maud Land. Mapped and named from surveys and air photos by NorAE (1956-60).

Sikorski Glacier 71°44'S., 98°30'W.

Small glacier in the NE. part of Noville Pen., Thurston Island. It flows NE. to Bellingshausen Sea between Mounts Palmer and Feury. First roughly delineated from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Stephen Sikorski, electronics technician on the USS *Glacier*, who assisted in setting up an automatic weather station on Thurston Island during the USN Bellingshausen Sea Exp. in February 1960.

Sikorsky Glacier 64°12'S., 60°53'W.

Glacier flowing into Hughes Bay N. of Charles Pt., on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Igor Sikorsky, American (Russian born) aircraft designer, who has pioneered helicopters since 1909.

Silk Glacier 81°09'S., 158°55'E.

A glacier, 10 mi. long, draining the E. slopes of the Churchill Mtns. between Mt. Frost and Mt. Zinkovich to enter Nursery Glacier. Named by US-ACAN for Cdr. P. R. H. Silk, RNZN, commanding officer of HMNZS *Endeavour II* in Antarctic waters, 1963-64.

Sillard Islands 66°37'S., 67°35'W.

Group of small ice-covered islands lying close to Cape Mascart, the NE. extremity of Adelaide Island. Disc. by the FrAE, 1908-10, under Charcot, and named for Director Sillard of the French Montevideo Co., Montevideo, Uruguay, whose company made repairs on Charcot's ship, the *Pourquoi-Pas?*.

Silva Ridge 72°59'S., 162°17'E.

A ridge leading to the top of Sheehan Mesa, on the NE. side. Large silicified tree stumps in place of growth were found halfway up this ridge, hence named Silva by the Northern Party of NZGSAE, 1962-63.

Silver Ridge 82°16'S., 161°40'E.

A long snow-covered ridge lying west of the mouth of Algie Glacier, being a prominent landmark on the north side of Nimrod Glacier. So named by the southern party of the NZGSAE (1960-61) because of the absence of rock on this steep-sided feature.

Silveyra, Islas: see Omicron Islands 64°21'S., 62°55'W.

Silvia, Islote: see Silvia Rock 63°18'S., 57°54'W.

Silvia Rock 63°18'S., 57°54'W.

A rock lying in the Duroch Islands just SE. of Agurto Rock and 0.3 mi. N. of Cape Legoupil, Trinity Peninsula. Named by the Chilean Antarctic Expedition, 1948, for a daughter of Gabriel González Videla, President of Chile.

Simensen Peak 71°55'S., 25°31'E.

Peak, 2,215 m., standing on the N. side of Glitrefonna Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named for Erik Simensen, photographic expert with the Lars Christensen Exp. to this area, 1936-37.

Simensentoppen: see Simensen Peak 71°55'S., 25°31'E.

Simler Snowfield 66°03'S., 65°05'W.

Snowfield lying NE. of Holtedahl Bay, on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Josias Simler (1530-1576), who wrote the first reasonable advice on precautions for travel on glaciers, in 1574.

Simmers Peaks 66°06'S., 52°48'E.

Group of three peaks, the highest 840 m., rising above the icecap 13 mi. SE. of Cape Close and 11 mi. N. of Mt. Codrington. Disc. by the BANZARE under Mawson in 1930 and named for R. G. Simmers, meteorologist of the expedition.

Simmonds, Mount 70°20'S., 159°33'E.

A mountain (1,885 m.) standing higher and next westward of Mt. Theaker along the north side of Robilliard Glacier, in the Usarp Mountains. Surveyed in 1962-63

GEOGRAPHIC NAMES OF THE ANTARCTIC

by USGS and in 1963-64 by NZGSAE. Named by NZ-APC for G.A.E. Simmonds, New Zealand cartographer engaged in preparing final drawings of Antarctic maps, 1961-67.

Simmonds Peak 85°58'S., 158°32'W.

A prominent rock peak, 1,940 m., standing 4 mi. S. of Mt. Dort on the E. side of Amundsen Gl., in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Willard I. Simmonds, biologist, McMurdo Station winter party, 1964.

Simmons, Mount 80°22'S., 81°45'W.

A mountain, 1,590 m., forming the N. end of the Independence Hills, in the Heritage Range. Named by US-ACAN for aviation electronics technician Richard S. Simmons, USN, air crewman on LC-47 aircraft, who perished in a crash on the Ross Ice Shelf, Feb. 2, 1966.

Simmons Glacier 75°00'S., 113°36'W.

Glacier draining northward between Mt. Isherwood and Mt. Strange in the east part of the Kohler Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Harry S. Simmons, assistant to the USARP Representative in Christchurch, New Zealand, for four seasons, 1969-70 through 1972-73. His duties took him to Antarctica in 1971 and 1973.

Simon Ridge 71°03'S., 65°30'E.

An arc-shaped rock ridge about 8 mi. SE. of Husky Massif in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for M. J. Simon, radio officer at Wilkes Station in 1962.

Simplicity Hill 85°06'S., 174°38'W.

A small ice-free hill rising 1 mi. W. of Crilly Hill, at the N. side of McGregor Gl., in the Queen Maud Mountains. So named by the Texas Tech Shackleton Gl. Exp. (1964-65) because of the ease with which they were able to approach the feature, and because of the relative simplicity of its geologic nature.

Simpson, Cape 67°28'S., 61°08'E.

A high rocky bluff at the N. end of Ufs I., forming the E. side of the entrance to Howard Bay. Disc. in February 1931 by the BANZARE under Mawson. He named it for F. Simpson of Adelaide, a patron of the expedition.

Simpson, Ile: see Simpson Rocks 61°58'S., 57°23'W.

Simpson, Mount: see Simpson Peak 67°43'S., 50°07'E.

Simpson, Mount 72°06'S., 100°45'W.

A peak of the Walker Mtns., rising just W. of the head of Hale Gl. on Thurston Island. First mapped from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Lt. B. L. Simpson, Jr., of USN Squadron VX-6, pilot of the P2V Neptune airplane which took additional air photos of the area in January 1960.

Simpson Crag 74°24'S., 162°45'E.

A series of rugged crags descending SE. from Mt. Baxter of the Eisenhower Range and forming the S. wall of O'Kane Glacier, in Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Lt. Cdr. William A. Simpson, Jr., USN, aircraft commander with Squadron VX-6 during USN Op. DFrz. 1967.

Simpson Glacier 71°17'S., 168°38'E.

A glacier, 6 mi. long, in the Admiralty Mountains. It flows northward to the coast between Nelson Cliff and Mt. Cherry-Garrard where it forms the Simpson Glacier Tongue. The latter feature was named by the BrAE, 1910-13, after Sir George Simpson, meteorologist of the expedition. The glacier described was mapped by USGS, 1960-63, and was so named by US-ACAN because (with Fendley Glacier to the east) it nourishes the Simpson Glacier Tongue.

Simpson Glacier Tongue 71°15'S., 168°45'E.

A small floating glacier tongue nourished by Simpson Gl. and Fendley Gl. as it extends into the sea between Nelson Cliff and Atkinson Cliffs, along the N. coast of Victoria Land. Charted by the Northern Party, led by Campbell, of the BrAE, 1910-13. Named for Dr. (later Sir) George C. Simpson, meteorologist of the expedition.

Simpson Head 73°21'S., 60°59'W.

Conspicuous promontory rising to 1,065 meters. It projects S. into the N. side of New Bedford Inlet 4 mi. NW. of Cape Kidson, on the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by members of the USAS. During 1947 it was photographed from the air by members of the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Sir George C. Simpson.

Simpson Nunatak 63°58'S., 58°54'W.

A nunatak, 1,165 m., rising 2.5 mi. NW. of Mt. Roberts, on the S. margin of Aitkenhead Gl., Trinity Peninsula. Named by UK-APC for Hugh W. Simpson of FIDS, a member of the Detroit Plateau reconnaissance party from Hope Bay in 1957.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Simpson Peak 67°43'S., 50°07'E.

Peak, 1,720 m., just E. of Mt. George in the SW. end of the Scott Mountains. Disc. in January 1930 by the BANZARE under D. Mawson. He named it for Sir George C. Simpson. The position of the feature was fixed by J. C. Armstrong of ANARE in 1959.

Simpson Ridge 68°06'S., 62°23'E.

An isolated, sharp, serrated ridge situated 1 mi. S. of Mt. Twintop in the Framnes Mountains, Mac. Robertson Land. Mapped from ANARE surveys, 1954-62. Named by ANCA for C. R. Simpson, electronics engineer at Mawson Station in 1967.

Simpson Rocks 61°58'S., 57°23'W.

A group consisting of a rock, 10 m. high, surrounded by sunken rocks, lying 5 mi. NE. of Cape Melville, King George I., in the South Shetland Islands. The name "Simpsons Is." appears on a chart of 1825 by British sealer James Weddell, but the term rocks is considered more descriptive than islands.

Simpsons Islands: see Simpson Rocks 61°58'S., 57°23'W.

Simsarian, Mount 86°06'S., 132°50'W.

A large mountain projecting from the E. side of Michigan Plateau just S. of the head of Gardiner Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for James Simsarian, Chief, Division of International Scientific and Technical Affairs, Department of State.

Sims Island 73°21'S., 78°19'W.

A small but conspicuous island between Rydberg Peninsula and Case Island in the southern part of Carroll Inlet, off the coast of Ellsworth Land. Discovered by pilot Ashley Snow of USAS (1939-41) on an aircraft flight, Dec. 22, 1940. Named for Lt. (j.g.) L.S. Sims, USMC, surgeon on the expedition.

Sinbad Rock 62°10'S., 59°02'W.

Low rock lying 1.25 mi. WNW. of Square End I., off the W. end of King George I., in the South Shetland Islands. The rock was charted in 1935 by DI personnel on the *Discovery II*, but the name appears to be first used on a 1948 Admiralty chart based upon this survey.

Sinclair Island 64°55'S., 63°53'W.

Island over 1 mi. long, lying 1.5 mi. NE. of Reeve I. in the Wauwermans Is., in the Wilhelm Archipelago. First mapped by the Argentines in 1950. The toponym replaces the provisional name "Alberto" and was approved by the Geographic Coordinating Committee (Argentina) in 1956. It memorializes Argentine naval

hero Captain Enrique Sinclair (1805-1904). Born in New York, U.S.A., he emigrated while very young to the Río de la Plata, joined the Argentine navy and fought at the side of Admiral Brown in the war with Brazil.

Single Island 69°48'S., 68°36'E.

A high ice-covered island on the W. side of the Amery Ice Shelf, about 14 mi. S. of Landon Promontory. First plotted by ANARE from air photos taken in 1956, but incorrectly shown as a promontory. Later mapped by ANARE as an island. Named by ANCA for M. Single, senior diesel mechanic at Mawson Station in 1962, a member of the ANARE field party which visited the area in December 1962.

Single Promontory: see Single Island 69°48'S., 68°36'E.

Singleton Nunatak 71°15'S., 61°36'W.

A nunatak located directly W. of the head of Kauffman Glacier on the E. side of Palmer Land. Named by UK-APC after David G. Singleton, BAS geologist who worked in the general vicinity of this feature.

Sinha, Mount 75°04'S., 136°09'W.

A mountain (990 m.) at the SE extremity of Erickson Bluffs in the S. part of McDonald Heights. It overlooks lower Kirkpatrick Gl. from the north in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for A.A. Sinha, member of the biological party that made population studies of seals, whales and birds in the pack ice of the Bellingshausen and Amundsen Seas using USCGC *Southwind* and its two helicopters, 1971-72.

Siniff Bay 74°40'S., 135°50'W.

A bay 13 mi. wide between Verleger Pt. and Melville Pt., along the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Donald B. Siniff, leader of a USARP party that studied population dynamics and behavior of Weddell seals in the McMurdo Sound area, 1971-72. He also worked in the McMurdo Station area the three preceding austral summers and participated in the International Weddell Sea Oceanographic Expedition, 1967-68.

Sinker Rock 64°49'S., 63°30'W.

Rock off the N. tip of Goudier I., near the center of the harbor of Port Lockroy, in the Palmer Archipelago. Rocks were charted in this position by the FrAE, 1903-5, under Charcot. So named by the FIDS in 1944 because a sinker was laid near this rock for a boat mooring.

Sinnan Glacier: see Shinnan Glacier 67°55'S., 44°38'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sinnan Rocks: see Shinnan Rocks 67°57'S., 44°33'E.

Sin Nombre, Bahía: see Security Bay 64°51'S., 63°37'W.

Sin Nombre, Punta: see Nameless Point 53°59'S., 37°41'W.

Sinobi Rock: see Shinobi Rock 68°03'S., 43°44'E.

Siple, Mount 73°15'S., 126°06'W.

A massive, conical, snow-covered mountain, 3,110 m. It surmounts the NW. part of Siple Island which is separated from the coast of Marie Byrd Land by the Getz Ice Shelf. Discovered in December 1940 by members of the USAS in a flight from West Base. Dr. Paul A. Siple, for whom the mountain is named, served on the ByrdAE, 1928-30 and 1933-35, and was in command of the West Base of the USAS, 1939-41. He was navigator on all major exploratory flights from the base, including that on which Mount Siple was first sighted.

Siple Coast 82°00'S., 155°00'W.

The middle portion of the relatively ill-defined coast along the E. side of the Ross Ice Shelf between the N. end of Gould Coast (83°30'S., 153°00'W.) and the S. end of Shirase Coast (80°10'S., 151°00'W.). Named by NZ-APC in 1961 for Paul A. Siple, noted American scientist-explorer who accompanied R. Adm. Richard E. Byrd on all his Antarctic expeditions. He was in charge of the West Base of the USAS, 1939-41, which was established at the Bay of Whales, and was the first Scientific Leader at Amundsen-Scott South Pole Station during the IGY, 1957.

Siple Island 73°39'S., 125°00'W.

A massive, snow-covered island, 70 mi. long, lying E. of Wrigley Gulf along Getz Ice Shelf, Marie Byrd Land. Named by US-ACAN in 1967 in association with Mt. Siple, named for Dr. Paul A. Siple, which dominates the NW. part of the island. Though observed by earlier U.S. expeditions, the feature was first indicated as an island on USGS maps compiled from ground surveys and U.S. Navy air photos, 1959-65.

Siren Bay 71°22'S., 169°15'E.

A small bay formed by the configuration of the ice at the terminus of Shipley Gl. and the NW. side of Flat Island along the N. coast of Victoria Land. Charted by the Northern Party, led by Campbell, of the BrAE, 1910-13, and so named by them because they heard a noise like a ship's siren while mapping this area.

Siren Rock 74°33'S., 98°24'W.

A fairly isolated rock lying 12 mi. E. of Mt. Moses, in the E. part of the Hudson Mountains. Mapped by

USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Jan C. Siren, radio scientist at Byrd Station, 1967.

Sir George Newnes Glacier: see Newnes Glacier 71°41'S., 170°14'E.

Sirius, Mount 84°08'S., 163°15'E.

A peak, 2,300 m., surmounting a prominent, wedge-shaped, ice-free spur between Walcott Névé and Bowden Névé, 3.5 mi. N. of Bauhs Nunatak. Named by the NZGSAE (1961-62) for the star Sirius which was used in fixing the baseline in the area.

Sirius Cliffs 70°33'S., 66°53'W.

A conspicuous isolated nunatak with steep rock cliffs all along its N. face, located between Mt. Lepus and Procyon Peaks on the S. side of Millett Gl., in Palmer Land. Named by UK-APC after the star Sirius in the constellation of Canis Major.

Sirius Islands 66°57'S., 57°27'E.

A chain of islands in the N. part of the Øygarden Group. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and called Nordøyane (the north islands). The group was first visited by an ANARE party in 1954; this chain was renamed by ANCA after the star Sirius which was used for an astrofix in the vicinity.

Sirius Knoll 63°43'S., 58°36'W.

Conspicuous ice-covered knoll, 1,010 m., marking the NE. end of Detroit Plateau in the central part of Trinity Peninsula. Charted in 1946 by the FIDS and named after Sirius, the dog star.

Sir John Murray Glacier: see Murray Glacier 71°39'S., 170°00'E.

Sirohi Point 83°57'S., 170°06'E.

A rock point at the N. side of the terminus of Alice Gl., where the latter enters Beardmore Glacier. Named by US-ACAN for Girraj S. Sirohi, USARP biologist at McMurdo Station, 1960-61.

Sisco Mesa 85°50'S., 127°48'W.

An ice-capped mesa with steep rock walls whose summit area is 2 mi. long and wide and rises to 3,350 m. It stands just N. of Haworth Mesa between the heads of Norfolk and Olentangy Glaciers in the Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Joseph J. Sisco, Asst. Sec. of State for International Organization Affairs, Chairman of the Antarctic Policy Group in 1966.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sistefjell Mountain 73°23'S., 0°44'W.

A bluff-like mountain situated 10 mi. SE. of Neumayer Cliffs, at the NE. end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Sistefjell (the last mountain).

Sistenup Peak 73°17'S., 0°44'W.

A low peak at the NE. end of the Kirwan Escarpment, about 5 mi. N. of Sistefjell Mtn., in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Sistenup (last peak).

Sisterabben Hill 73°21'S., 0°44'W.

A hill about 2 mi. N. of Sistefjell Mtn., at the NE. end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Sisterabben (the last hill).

Sisters, The: see Søstre Islands 69°33'S., 75°30'E.

Sisters, The 71°17'S., 170°13'E.

Two stacks or pillar-like rocks standing together just N. of Cape Adare at the NE. extremity of Victoria Land. First charted and named The Sisters by the BrAE, 1898-1900, under C.E. Borchgrevink. The northern pillar was later named Gertrude Rock, and the southern one Rose Rock, by the Northern Party of BrAE, 1910-13.

Sisters' Rocks: see Sisters, The 71°17'S., 170°13'E.

Sitka Bay 53°59'S., 37°24'W.

Small bay 1 mi. W. of Cape Buller, along the N. coast of South Georgia. The names Sitka Bay and Buller Bay have both appeared for this feature on maps for many years. Following a survey of South Georgia in 1951-52, the SGS reported that this feature is known locally as Sitka Bay, and the name is approved on that basis.

Sjiktberga: see Schicht, Mount 71°26'S., 13°08'E.

Sjøbotnen Cirque 71°22'S., 13°25'E.

The prominent cirque in the N. face of the main massif of the Gruber Mtns., situated immediately E. of Mt. Zimmermann, in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Sjøbotnen (the lake cirque) because the inner part of the feature is occupied by a sizable lake.

Sjögren Fiord: see Sjögren Glacier 64°14'S., 59°00'W.

Sjögren Glacier 64°14'S., 59°00'W.

Glacier 15 mi. long in the S. part of Trinity Pen., flowing SE. from Detroit Plateau to the S. side of Mt. Wild where it enters Prince Gustav Channel. Disc. in 1903 by the SwedAE under Nordenskjöld. He named it Hj. Sjögren Fiord after a patron of the expedition. The true nature of the feature was determined by the FIDS in 1945.

Sjögren Glacier Tongue 64°14'S., 58°38'W.

A tongue of ice between 5 and 7 miles wide, extending 15 miles from Sjögren Glacier across Prince Gustav Channel toward Persson Island. Mapped from surveys by FIDS (1960-61). The glacier tongue is an extension of the flow of Sjögren Glacier from which it takes its name.

Sjöhausen: see Seekopf, Mount 71°17'S., 13°42'E.

Sjøneset Spur 71°17'S., 13°35'E.

A prominent rock spur from the Gruber Mtns., extending N. along the E. side of Anuchin Glacier to Lake Ober-See, in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Sjøneset (the lake ness).

Skaar Ridge 84°49'S., 163°15'E.

A ridge on the SE. side of Mt. Augusta in Queen Alexandra Range. It trends SE. for 2 mi. to Beardmore Glacier. This area was first sighted by Shackleton's Southern Journey Party in 1908. The ridge is the site of the only known (1971) Permian peat deposit of Gondwanaland, discovered here by James M. Schopf of the Ohio State Univ. Geological Exp., 1969-70. Named for Lt. Gerhard E. Skaar, USN, who piloted the helicopter that took Schopf to the locality and subsequent discovery.

Skagen: see Saint Michael, Mount 67°10'S., 58°21'E.

Skålebreen 72°06'S., 3°52'E.

A glacier flowing N. between Festninga Mtn. and Mt. Hochlin in the Mühlig-Hofmann Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skålebreen.

Skålebrehalsen Terrace 72°16'S., 4°10'E.

A high ice-covered terrace at the S. side of Skålebreen, in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skålebrehalsen.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Skalistyy, Poluostrov: see Countess Peninsula 66°09'S., 101°14'E.

Skallen Glacier 69°40'S., 39°33'E.

A glacier flowing to Lützow-Holm Bay to the E. of Skallen Hills. Mapped from surveys and air photos by JARE, 1957-62, and named for its proximity to Skallen Hills.

Skallen Hills 69°39'S., 39°25'E.

An area of bare rock coastal hills which project into eastern Lützow-Holm Bay between Skallevika and Skallen Glacier. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Skallen (the skull), a name presumably suggested by the outline of the feature on the Nor. map.

Skallevika 69°41'S., 39°23'E.

A small bay just W. of Skallen Hills along the SE. shore of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Skallevika (the skull bay) in association with nearby Skallen Hills.

Skallevikhalsen Hills 69°41'S., 39°18'E.

A line of bare rock hills that fringe the SE. shore of Lützow-Holm Bay for 4 mi. just W. of Skallevika. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Skallevikhalsen (the skull bay neck) in association with nearby Skallevika.

Skallevik Point 69°41'S., 39°15'E.

A point marking the NW. end of Skallevikhalsen Hills along the SE. shore of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Skalleviksodden (the skull bay point) in association with nearby Skallevika.

Skalleviksodden: see Skallevik Point 69°41'S., 39°15'E.

Skappelnabben Spur 73°43'S., 4°33'W.

A spur at the E. side of Urffjeldokka Valley, in the SW. part of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Skappelnabben.

Skaret Pass 72°32'S., 0°23'E.

Mountain pass at the E. side of Skarsnuten Peak in the Roots Heights, Sverdrup Mtns., in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from

surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Skaret (the gap).

Skarsbrotet Glacier 71°50'S., 11°45'E.

A cirque-type glacier draining the E. slopes of Skarshaugane Peaks, in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by the NorAE, 1956-60, and named Skarsbrotet.

Skarsdalen Valley 72°33'S., 0°30'E.

An ice-filled valley between Roots Heights and Hamrane Heights in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Skarsdalen (the gap valley).

Skarshaugane Peaks 71°49'S., 11°37'E.

A group of peaks including Mt. Skarshovden that extend S. for 3 mi. from Hovdeskar Gap, in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Skarshaugane (the gap peaks).

Skarshovden, Mount 71°47'S., 11°38'E.

A rounded mountain, 2,830 m., surmounting the W. side of Hovdeskar Gap in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Skarshovden (the gap mountain).

Skarskvervet Glacier 71°45'S., 11°30'E.

Small cirque-type glacier at the E. side of Botnfjellet Mtn. in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Skarskvervet.

Skarsnuten Peak 72°32'S., 0°22'E.

Peak in the N. part of Roots Heights, Sverdrup Mtns., in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Skarsnuten (the gap peak).

Skarvhalsen Saddle 73°20'S., 1°39'W.

An ice saddle just S. of Neumayer Cliffs, between Peter Glacier and Swithinbank Slope, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air pho-

GEOGRAPHIC NAMES OF THE ANTARCTIC

tos by the Nor. exp. (1958-59) and named Skarvhal-
sen (the barren mountain neck).

Skarvsnes Foreland 69°28'S., 39°39'E.

An extensive foreland surmounted by bare rock peaks and indented by several coves, protruding into the E. part of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Skarvsnes (barren mountain headland).

Skavlhø Mountain 72°02'S., 14°30'E.

A mountain, 2,610 m., standing N. of Ormeryggen in the Payer Mtns. of Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skavlhø (snow-drift heights).

Skavlrime Ridge 71°58'S., 13°32'E.

A largely snow-covered ridge, about 3 mi. long and surmounted in the N. part by Vyatskaya Peak, located 1.5 mi. E. of Dekefjellet Mtn. in the Weyprecht Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Skavlrime.

Skavlsletta Flat 73°26'S., 3°42'W.

A small ice-covered area lying between Svartbandufsa Bluff and Tverregga Spur in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Skavlsletta (the snowdrift plain).

Skavlsletta Flat: see Skavlsletta Flat 73°26'S., 3°42'W.

Skeen Rocks 67°47'S., 68°54'W.

Two rocks lying S. of Avian I., off the S. end of Adelaide Island. Named by the UK-APC for Lt. Michael G. C. Skeen, RN, officer in charge of the helicopter flight, HMS *Protector*, used by the RN Hydrographic Survey Unit in charting this area in 1961-63.

Skeidsberget Hill 72°06'S., 11°25'E.

A hill about 2 mi. NW. of the summit of Skeidshovden Mtn. in the Wohlthat Mtns. of Queen Maud Land. First photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skeidsberget.

Skeidshornet Peak 71°50'S., 12°01'E.

Peak, 2,725 m., standing 5 mi. WSW. of Mt. Valikhonov in the Pieck Range of the Petermann Ranges, in Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Skeidshornet.

Skeidshovden Mountain 72°08'S., 11°31'E.

A mountain rising to 2,730 m. at the SW. end of the Wohlthat Mtns. in Queen Maud Land. First photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skeidshovden.

Skeidskar Gap 71°46'S., 11°33'E.

A narrow gap in the ridge along the SE. side of Skarskervet Glacier, in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Skeidskar.

Skeidskneet, Mount 71°53'S., 11°57'E.

Mountain, 2,600 m., surmounting the E. side of the head of Humboldt Graben at the SW. extremity of the Petermann Ranges, Wohlthat Mtns., in Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Skeidskneet.

Skeidsnutane Peaks 71°53'S., 11°35'E.

A group of peaks that extend S. for about 6 mi. from Skarshaugane Peaks, in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Skeidsnutane.

Skelly Peak 79°23'S., 85°19'W.

A peak (1,450 m.) on the end of a spur, marking the NE. limit of Watlack Hills in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961-66. Named by US-ACAN for Donald J. Skelly, hospital corpsman, USN, chief petty officer in charge of Palmer Station in 1966.

Skelton Glacier 78°35'S., 161°30'E.

Large glacier flowing from the polar plateau into Ross Ice Shelf at Skelton Inlet. Named after Skelton Inlet by the N.Z. party of the CTAE, 1956-58. The glacier was chosen in 1957 as the N.Z. party's route from the Ross Ice Shelf to the polar plateau.

Skelton Icefalls 78°14'S., 158°19'E.

Prominent icefalls extending in an arc some 15 mi. from Portal Mtn. to the N. end of Warren Range, in Victoria Land. Named by US-ACAN in 1964 in association with Skelton Nève and Skelton Glacier.

Skelton Inlet 78°54'S., 162°15'E.

An ice-filled inlet at the terminus of Skelton Glacier, along the western edge of Ross Ice Shelf. The feature is about 10 mi. wide at the entry points between Cape Timberlake and Fishtail Point. Discovered by the BrNAE, 1901-4, which named this feature for Lt.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Reginald W. Skelton, RN, chief engineer of the expedition ship *Discovery*.

Skelton Névé 78°20'S., 160°00'E.

The immense névé of the Skelton Glacier, lying on the W. side of the Royal Society Range. Almost circular in outline, it is about 40 miles in diameter and has an area of about 1,300 square miles. Surveyed by New Zealand parties of the CTAE (1956-58), who named it for its relationship to the Skelton Glacier.

Skep Point 64°03'S., 57°18'W.

A high ice-free point 5 mi. WNW. of Ula Point on the NE. coast of James Ross Island. Surveyed by FIDS first in 1945, then again in 1953. The UK-APC name is descriptive; when viewed from seaward the feature resembles a skep type beehive.

Skerry Este: see East Skerry 54°15'S., 36°18'W.

Skew Peak 77°13'S., 160°42'E.

Mountain, 2,535 m., just W. of the head of Frazier Gl., in the Clare Range of Victoria Land. So named in 1957 by the Northern Survey Party of the CTAE (1956-58) because the summit is notably asymmetrical from all directions.

Skidmore, Mount 80°18'S., 28°56'W.

A mountain (865 m.) on the E. side of the mouth of Stratton Gl. in the Shackleton Range. First mapped in 1957 by the CTAE; photographed in 1967 by U.S. Navy (trimetrogon aerial photography). Named by UK-APC for Michael J. Skidmore, BAS geologist at the Brunt Ice Shelf, 1966-69, who worked in the Shackleton Range, 1968-69.

Skidmore Cliff 83°24'S., 49°30'W.

An irregular east-facing cliff, 4 mi. long, located at the extremity of a spur trending eastward from Saratoga Table, in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Donald D. Skidmore, ionospheric scientist at Ellsworth Station, winter 1957.

Skigarden Ridge 71°54'S., 4°32'E.

A ridge with several conspicuous peaks, about 2 mi. NE. of Mt. Grytøyr in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Skigarden (the rail fence).

Ski-Hi Nunataks: see Sky-Hi Nunataks 74°52'S., 71°30'W.

Skilift Col 86°11'S., 148°36'W.

A col in the mountain wall between the Griffith and Howe Glaciers, on the W. side of Watson Escarpment.

The col is 2 mi. NE. of Mt. Meeks and provides a shortcut to field parties. So named by NZGSAE, 1969-70, because some members of the party used a motor toboggan here in a similar way to a ski-lift.

Skilling Island 60°47'S., 45°09'W.

Small island immediately N. of Atriceps I. in the Robertson Is. group of the South Orkney Islands. Although roughly charted at a much earlier date, the island was first surveyed in 1933 by DI personnel. Named by the UK-APC for Charles J. Skilling (1931-52) of the FIDS, general assistant at Signy I., 1949, and member of the sledge party which visited the Robertson Is. in 1949. Skilling died aboard the *John Biscoe* on April 17, 1952.

Skilly Peak 64°59'S., 61°16'W.

A conspicuous rock peak 4 mi. NE. of Shiver Point on the E. coast of Graham Land. Surveyed by FIDS in 1947 and 1955. "Skilly" means a thin soup; the name arose because the 1955 FIDS party was short of rations, and pemmican and porridge were very thin.

Skimten Hill 72°13'S., 0°17'E.

Small rock hill 5 mi. N. of Mt. Roer in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Skimten (the glimpse), presumably because only a small portion of the hill can be seen protruding through the ice sheet.

Skinner, Mount 84°46'S., 171°10'W.

A flattish, mainly ice-free mesa, 3 mi. long and 2 mi. wide. It rises to 1,060 m. immediately S. of Bravo Hills, between Gough and Le Couteur Glaciers, near the edge of the Ross Ice Shelf. Surveyed by the U.S. Ross Ice Shelf Traverse Party (1957-58) under A. P. Crary, and named for Bernard W. Skinner, aviation and tractor mechanic with the ByrdAE (1933-35).

Skinner Glacier 70°14'S., 68°00'W.

A glacier on the W. edge of Palmer Land, flowing SSW. between Mt. Dixey and Mt. Flower to enter George VI Sound just E. of Carse Point. Named by UK-APC after Alexander C. Skinner, BAS geologist at Fossil Bluff and Stonington Island stations, 1968-70.

Skinner Peak 84°46'S., 112°53'W.

A mainly snow-covered peak, over 2,600 m., on the spur that descends NE. from Mt. Schopf in Ohio Range, Horlick Mountains. Named by US-ACAN for Courtney J. Skinner, geological assistant and camp manager with the Ohio State Univ. expedition to the Horlick Mountains in 1961-62. Skinner visited Antarctica with USARP every summer season from 1961-62 to 1966-67.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Skinner Ridge 74°24'S., 161°45'E.

A ridge, 12 mi. long, that descends southwestward from the western side of Eisenhower Range in Victoria Land. Mounts Fenton and Mackintosh are astride the northern part of this ridge. The feature was visited by the Southern Party of the NZGSAE (1962-63), who named it for D.N.B. Skinner, geologist with the expedition.

Skinner Saddle 80°58'S., 159°25'E.

A high, broad, snow-covered saddle between the northern part of Darley Hills and that portion of Churchill Mtns. eastward of Mt. Durnford. Mapped by the Northern Party of NZGSAE (1960-61) and named for D. N. Skinner, geologist with the party.

Skittle, Mount 54°24'S., 36°11'W.

Prominent rocky mountain, 480 m., forming the N. limit of Saint Andrews Bay on the N. coast of South Georgia. The name "Kegel-Berg" (Skittle Mountain) was given for this feature by the German group of the International Polar Year Investigations, 1882-83. During the SGS, 1951-52, the mountain was identified and located. An English form of the name, Mount Skittle, was recommended by the UK-APC in 1954.

Skjegget Peak 69°26'S., 39°37'E.

A peak, 360 m., which surmounts the NW. extremity of Skarvsnes Foreland on the E. side of Lützw-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Skjegget (the barb).

Sknappsskjar Rocks: see Skrap Skerries 54°15'S., 36°19'W.

Skoddemedet Peak 72°50'S., 3°51'W.

A rock peak about 5 mi. SW. of Høgfonna Mt., in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Skoddemedet (the fog landmark).

Skollsberg, Cap: see Skottsberg Point 63°55'S., 60°49'W.

Skomaker Hullet: see Cobblers Cove 54°16'S., 36°18'W.

Skontorp Cove 64°54'S., 62°52'W.

Cove in Paradise Hbr., lying 2 mi. SE. of Bryde I. along the W. coast of Graham Land. Named for Edvard Skontorp, an outstanding Norwegian whale gunner, who commanded a whaler for Salvesen and Co. of Leith, Scotland.

Skontorp Rock 54°30'S., 36°43'W.

Rock lying 1 mi. W. of the N. part of Rocky Bay, off the S. coast of South Georgia. Positioned by the SGS in the period 1951-57. Named by the UK-APC for Edvard Skontorp, a gunner of Tønsberg Hvalfangeri, Husvik, 1920-26.

Skontrop Cove: see Skontorp Cove 64°54'S., 62°52'W.

Skorefjell 66°27'S., 53°57'E.

Mountain, 1,520 m., standing 9 mi. NE. of Stor Hånakken Mtn. in the Napier Mtns. in Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Skorefjell.

Skorvebradden 72°07'S., 5°33'E.

A heavily crevassed ice slope extending about 13 miles ESE. from Hamarskorvene Bluff, in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skorvebradden.

Skorvehallet Slope 71°59'S., 9°12'E.

A snow-covered slope with numerous rock outcrops, lying just W. of the Gagarin Mtns. in the Orvin Mtns., Queen Maud Land. Mapped by Nor. cartographers from air photos and surveys by NorAE, 1956-60, and named Skorvehallet.

Skorvehalsen Saddle 72°04'S., 6°11'E.

An ice saddle immediately S. of Huldreskorvene Peaks in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skorvehalsen.

Skorvetangen Spur 72°03'S., 5°20'E.

A rock spur 2 mi. SE. of Hamarskorvene Bluff in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Skorvetangen.

Skottsberg, Cape: see Skottsberg Point 63°55'S., 60°49'W.

Skottsberg Point 63°55'S., 60°49'W.

Point forming the S. end of Trinity I., in the Palmer Archipelago. First charted by the SwedAE, 1901-4, and named by Nordenskjöld for Carl Skottsberg, botanist of the expedition.

Skotvika: see Stack Bay 67°03'S., 58°04'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Skrabskjaer Rocks: see Skrap Skerries 54°15'S., 36°19'W.

Skrap Skerries 54°15'S., 36°19'W.

Two small groups of islands and rocks lying midway between Cape George and Barff Pt., close off the N. coast of South Georgia. The present name, which dates back to about 1930, derives from the Norwegian term "skrapskjaer" or "skrapskjar" formerly used for these islands.

Skrapskjar: see Skrap Skerries 54°15'S., 36°19'W.

Skredbotnen Cirque 71°59'S., 4°27'E.

A cirque indenting the W. side of Mt. Grytøyr in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Skredbotnen (the avalanche cirque).

Skruestikka Nunatak 72°11'S., 14°27'E.

A nunatak just eastward of Filspønen Nunatak at the south end of the Payer Mountains, in Queen Maud Land. Mapped by Norwegian cartographers from air photos taken by the NorAE (1956-60) and named Skruvestikka (the screwdriver).

Skua Beach 53°05'S., 73°41'E.

Sandy beach lying at the base of Scarlet Hill on the E. side of Heard Island. The name "Launches Beach" appears to have had some usage by American sealers as shown by an unpublished sealer's map of "Hurds Island" of the 1860-70 period. The name Skua Beach was given by ANARE during its 1948 survey of the island and is now established in usage.

Skua Creek 65°15'S., 64°16'W.

Narrow channel between Skua I. and Winter I. in the Argentine Is., Wilhelm Archipelago. Charted and named Skua Inlet in 1935 by the BGLE under Rymill, but in recent years the name Skua Creek has overtaken the earlier name in usage.

Skua Glacier 82°55'S., 157°40'E.

A small southern tributary of Astro Glacier in the Miller Range. Mapped by the northern party of the NZGSAE (1961-62) and so named because of the skuas seen at its lower part in December 1961.

Skua Gull Peak 76°51'S., 145°25'W.

Peak with a small lake enclosed near the summit, standing 2 mi. NE. of Saunders Mtn. and 0.5 mi. S. of Mt. Stancliff in the Ford Ranges, Marie Byrd Land. Discovered in November 1934 by a sledging party of the ByrdAE (1933-35) and so named because of the skua gull rookery found there.

Skua Inlet: see Skua Creek 65°15'S., 64°16'W.

Skua Island 54°01'S., 37°15'W.

Island immediately NE. of Prion I. in the entrance to the Bay of Isles, South Georgia. Charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. Surveyed in 1929-30 by DI personnel and named in association with Albatross I., Prion I. and other natural history names given in the Bay of Isles by Murphy in 1912-13.

Skua Island 65°15'S., 64°16'W.

Roughly triangular island 0.7 mi. long, lying between Black I. to the SW. and Winter I. and Galindez I. to the N. and NE., in the Argentine Is., Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill.

Skua Lake 77°38'S., 166°25'E.

A small lake close NW. of Island Lake at Cape Evans, Ross Island. Named by the BrAE (1910-13) because of the nearby skua rookery.

Skua Point 54°15'S., 36°18'W.

Point lying between Rookery Pt. and Long Pt. on the E. side of Barff Pen., South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Skuary: see Evans, Cape 77°38'S., 166°24'E.

Skuggekammen Ridge 71°23'S., 13°40'E.

A jagged rock ridge extending southeastward from Mt. Mentzel, in the Gruber Mtns. of the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Skuggekammen (the shade ridge).

Sky-Hi Nunataks 74°52'S., 71°30'W.

A nunatak group extending over 8 mi., located 10 mi. NE. of Merrick Mtns. in Ellsworth Land. The nunataks were first seen and photographed from the air by RARE, 1947-48. The name derives from the USARP project Sky-Hi, in which Camp Sky-Hi (later designated Eights Station) was set up in Ellsworth Land in November 1961 as a conjugate point station to carry on simultaneous measurements of the earth's magnetic field and of the ionosphere. Sky-Hi's conjugate point in the Northern Hemisphere is located in the Parc National des Laurentides, in Canada.

Sky Rock 53°59'S., 37°30'W.

Small rock, 3 m. high, marking the southern extent of the Welcome Is. off the N. coast of South Georgia. Charted and named by DI personnel in 1930.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Skytrain Ice Rise 79°40'S., 78°30'W.

A large, flattish, peninsula-like ice rise of about 50 mi. extent, extending from the vicinity of Meyer Hills in the Heritage Range eastward into the Ronne Ice Shelf. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN after the LC-47 Douglas Skytrain airplane (also called R4D and Dakota), used extensively in the supply and placement of U.S. field personnel in Antarctica beginning with USN Op. Hjp., 1946-47, and continuing into the late 1960's.

Slabotnen Cirque 71°46'S., 10°27'E.

A cirque formed between the E. slopes of Mt. Dallmann and the Shcherbakov Range, in the Orvin Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Slabotnen (the sloping cirque).

Sladen, Mount 60°41'S., 45°17'W.

Conspicuous pyramid-shaped mountain, 890 m., standing 1.5 mi. NE. of Saunders Pt. in eastern Coronation I., in the South Orkney Islands. Surveyed by the FIDS in 1948-49. Named by the UK-APC for Dr. William J. L. Sladen of the FIDS, medical officer and biologist at Hope Bay in 1948, and at Signy I. in 1950. During the 1960's and 1970's, Dr. Sladen was chief USARP investigator concerned with studies of penguins at Cape Crozier, Ross Island.

Slagle Ridge 71°55'S., 169°50'E.

A high and massive snow-covered ridge between Slone Gl. and Burnette Gl. in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Capt. Thomas D. Slagle, USN, Chief Medical Officer at Little America V in 1958.

Slalåma Slope 72°31'S., 3°25'W.

A steep ice slope on the NE. side of Borg Mtn., in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Slalåma (the slalom).

Slater Rocks 75°05'S., 113°53'W.

A cluster of rock outcrops or low rock hills 4 mi. N. of Leister Peak in the Kohler Range, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-71. Named by US-ACAN for Robert T. Slater, E02, USN, Equipment Operator at the South Pole Station, 1974.

Slava Bay: see Slava Ice Shelf 68°49'S., 154°44'E.

Slava Ice Shelf 68°49'S., 154°44'E.

An ice shelf along the coast of Antarctica between Mawson Peninsula and Cape Andreyev. The feature was photographed from the air by USN Op. Hjp. in 1947. The area was photographed in 1958 by the SovAE which applied the name "Zaliv Slava" to the wide open bay that fronts this ice shelf. This name decision is in accord with the recommendation by ANCA that the name would be appropriately applied to the ice shelf. Named after the Soviet whaling flotilla *Slava*.

Sledgers Glacier 71°26'S., 162°48'E.

A long tributary glacier in the Bowers Mountains, draining NW. from Husky Pass and along the N. flank of Lanterman Range to enter Rennick Gl. between Carnes Crag and Mt. Gow. Named by the northern party of NZGSAE, 1963-64, in appreciation of all Antarctic sledging men and the difficult areas they have covered on foot. This glacier was traveled in arduous conditions by the NZGSAE party.

Sledgers Icefall 71°28'S., 163°12'E.

A heavily crevassed icefall midway up the Sledgers Glacier in the Bowers Mountains; its location is just N. of the tip of Reilly Ridge. Named by the NZGSAE, 1967-68, in conjunction with Sledgers Glacier and as a locality worth distinguishing in connection with the use of sledges.

Sledging Col 85°51'S., 154°48'W.

A col between Mt. Griffith and a very low peak on its NE. side, in the Hays Mountains. The col provides a sledging route from Scott Gl. to the head of Koerwitz Gl. and thence northward. So named by members of NZGSAE who used this route in 1969-70 when the W. side of the lower reaches of Scott Gl. were found to be impassable.

Sleipnir Glacier 66°29'S., 63°59'W.

Glacier 10 mi. long, flowing into the W. side of Cabinet Inlet between Balder and Spur Points, on the E. coast of Graham Land. Charted in 1947 by the FIDS, who named it after the horse of the mythological Norse god Odin. It was photographed from the air during 1947 by the RARE under Ronne.

Slessor Glacier 79°50'S., 28°30'W.

Glacier at least 75 mi. long and 50 mi. wide, flowing W. into the Filchner Ice Shelf to the N. of the Shackleton Range. First seen from the air and mapped by the CTAE in 1956. Named by the CTAE for Marshal of the RAF Sir John Slessor, chairman of the expedition committee.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Slessor Peak 66°31'S., 64°58'W.

A mainly ice-covered peak, 2,370 m., standing at the SW. end of Bruce Plateau in Graham Land, close NW. of Gould Glacier. It rises about 300 m. above the general level of the plateau ice sheet and has a steep rock face on its N. side. First surveyed in 1946-47 by a FIDS sledge party led by Robert S. Slessor, FIDS medical officer at Stonington I., for whom the peak is named.

Slettefjellet 71°45'S., 6°55'E.

A peak 1 mi. N. of Gessner Peak at the NE. end of the Mühlig-Hofmann Mtns., Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Slettefjellet (the smooth peak).

Sletten, Mount 85°47'S., 153°30'W.

A conspicuous rock peak surmounting Taylor Ridge on the W. side of Scott Gl., 4 mi. NE. of Mt. Pulitzer. Discovered and roughly mapped by the ByrdAE, 1928-30. Named by US-ACAN for Robert S. Sletten who made studies in satellite geodesy at McMurdo Station in 1965.

Slettjell 72°08'S., 3°19'W.

A low, flattish mountain about 1 mi. W. of Aurhø Peak, on the Ahlmann Ridge of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Slettjell (level mountain).

Slettjellklumpen Spur 72°08'S., 3°18'W.

A rock spur forming the N. end of Slettjell, on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52), and named Slettjellklumpen (the level mountain lump) in association with Slettjell.

Slettjellnutane Peaks 72°05'S., 3°18'W.

Two small rock peaks about 2 mi. N. of Slettjell on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52), and named Slettjellnutane (the level mountain peaks) because of their proximity to Slettjell.

Sletton, Mount: see Sletten, Mount 85°47'S., 153°30'W.

Slichter Foreland 74°08'S., 113°50'W.

A high ice-covered peninsula, 15 mi. long and 10 mi. wide, forming the northeastern arm of the Martin Peninsula on the coast of Marie Byrd Land. First mapped from aerial photographs taken by USN Op-

eration Highjump in January 1947. Named by US-ACAN for Louis B. Slichter, Professor Emeritus of Physics, University of California, Los Angeles, who has been involved with planning scientific programs for the South Pole Station, and who has trained a number of geophysicists who have gone to Antarctica to implement those programs.

Slithallet Slope 72°03'S., 2°57'E.

An ice slope between Jutulsessen Mtn. and Risemedet Mtn. in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Slithallet (the drudgery slope).

Sloket Glacier 71°59'S., 4°54'E.

A glacier flowing N. between Slokstallen Mtn. and Petrellfjellet in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Sloket (the millrace).

Sloknuten Peak 72°02'S., 4°52'E.

A peak, 2,765 m., rising just SW. of Slokstallen Mtn. in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Sloknuten (the millrace peak).

Slokstallen Mountain 72°00'S., 4°55'E.

A mountain 1 mi. E. of Petrellfjellet in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Slokstallen (the millrace barn).

Sloman Glacier 67°41'S., 68°33'W.

Glacier flowing between Mt. Liotard and Mt. Ditte to the SE. coast of Adelaide Island. Named by the UK-APC in 1963 for William O. Sloman, British Antarctic Survey Personnel Officer for a number of years beginning in 1956.

Slone Glacier 71°56'S., 170°03'E.

A glacier descending along the N. side of Slagle Ridge in the Admiralty Mtns. to enter the W. side of Moubray Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Airman Kelly Slone, USAF, who perished in the crash of a C-154 Globemaster aircraft in this vicinity in 1958.

Sløret Rocks 73°43'S., 4°17'W.

A small group of rocks high along the ice slope of Kirwan Escarpment, about 5 mi. S. of Enden Point, in

GEOGRAPHIC NAMES OF THE ANTARCTIC

Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Sløret (the veil).

Slosarczyk Bai: see Doubtful Bay 54°52'S., 36°01'W.

Slosarczyk Harbour: see Doubtful Bay 54°52'S., 36°01'W.

Slosarczyk Bay: see Doubtful Bay 54°52'S., 36°01'W.

Slossarczyk Bay: see Doubtful Bay 54°52'S., 36°01'W.

Slossarczyk Crag 54°51'S., 35°59'W.

Mountain crag, 805 m., between Doubtful Bay and Esbensen Bay at the SE. end of South Georgia. Surveyed by the SGS in the period 1951-57. Named by the UK-APC for Third Officer Walter Slossarczyk, communications officer on the *Deutschland* during the GerAE under Filchner until his death in South Georgia on Nov. 26, 1911. Filchner had named the present Doubtful Bay for Slossarczyk, but the earlier naming did not survive.

Slot, The 82°40'S., 155°05'E.

Small swift glacier descending from the polar plateau between Mt. Ronca and Mt. Summerson in the Geologists Range. Seen by the northern party of the NZGSAE (1961-62) and so named because of its narrowness and crevassed nature.

Slozhnaya, Gora: see Klevekampen Mountain 71°58'S., 7°41'E.

Slumkey Island 65°30'S., 65°28'W.

Largest island of the group lying E. of Tupman I., Pitt Is., in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 after the Honorable Samuel Slumkey, a character in Charles Dickens' *Pickwick Papers*.

Slusher Nunatak 74°27'S., 99°06'W.

A nunatak lying 5 mi. N. of Mt. Moses in the Hudson Mountains. Mapped from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Harold E. Slusher, meteorologist at Byrd Station, 1967.

Smaaland Bay: see Smaaland Cove 54°52'S., 36°03'W.

Smaaland Cove 54°52'S., 36°03'W.

Cove lying 1 mi. W. of Doubtful Bay along the SE. coast of South Georgia. The name Doubtful Bay was given to this feature during the survey by DI personnel in 1927, with the name Smaaland Bay appearing on

their chart for a bay 1 mi. to the east. The SGS, 1951-52, reported that both names are well established locally, but that they are always used in the reverse positions shown on the DI chart. In order to conform to local usage and provide the most suitable descriptive term, the name Smaaland Cove is approved for the feature now described. The name Doubtful Bay (q.v.) has been approved for the bay to the east.

Småhausane Nunataks 71°33'S., 25°18'E.

Small nunataks, 1,180 m., standing between Mt. Fjeldland and Nordtoppen Nunatak on the N. side of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Småhausane (the small crags) by the Norwegians.

Småknoltane Peaks 72°07'S., 8°03'E.

A chain of peaks 4 mi. long, rising on the E. side of the mouth of Snuggerud Gl. in the Filchner Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Småknoltane (the small knolls).

Småkovane Cirques 71°54'S., 5°32'E.

Two cirques, separated by a narrow ridge, indenting the NE. side of Breplogen Mtn. in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Småkovane (the small closets).

Smalegga Ridge 72°01'S., 24°04'E.

Ridge, 4 mi. long, extending N. from Mt. Walnum to the W. of Gillock Gl., in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Smalegga (the narrow ridge).

Smalegga Spur 71°55'S., 10°37'E.

A small rock spur 3 mi. SSE. of Mørkenatten Peak, Shcherbakov Range, in the Orvin Mtns. of Queen Maud Land. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Smalegga (the narrow ridge).

Small, Mount 70°30'S., 64°42'E.

A partly snow-covered peak standing 2 mi. SW. of Crohn Massif in the Porthos Range, Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1956-65. Named by ANCA for G. R. Small, geophysicist at Wilkes Station, 1964.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Small Bay 54°07'S., 36°47'W.

Small bay at the E. side of Fortuna Bay, on the N. coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Small Island 64°00'S., 61°27'W.

Island 1 mi. long, lying 3 mi. S. of Intercurrence I. in the Christiania Is., in the NE. part of the Palmer Archipelago. Though the origin of this name is unknown, it has appeared on maps for over 100 years and its usage has been established internationally.

Small Razorback Island: see Little Razorback Island 77°40'S., 166°31'E.

Small Rock 60°43'S., 45°36'W.

Small rock 0.2 mi. N. of Berntsen Pt., lying in the entrance to Borge Bay on the E. side of Signy I., in the South Orkney Islands. The name appears on a chart by DI personnel on the *Discovery II* who charted Borge Bay in 1933.

Smart, Mount 75°16'S., 70°14'W.

A mountain 4 mi. SW. of Mt. Ballard, in the SW. part of the Sweeney Mtns., Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Robert G. Smart, cook at Eights Station in 1965.

Småsponen Nunatak 72°00'S., 3°55'E.

A nunatak just NW. of Storsponen Nunatak, at the N. side of Mt. Hochlin in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Småsponen (the little chip).

Småtind Peak 72°33'S., 2°57'W.

A small peak close SE. of Fasettfjellet, near the E. end of Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Småtind (small peak).

Smedland Bay: see Doubtful Bay 54°52'S., 36°01'W.

Smethurst, Mount 66°50'S., 52°36'E.

A prominent mountain 3 mi. NW. of Mt. Torckler and 29 mi. SW. of Stor Hånakken Mtn. in Enderby Land. Plotted from air photos taken by ANARE aircraft in 1957. Named by ANCA for N. R. Smethurst, officer-in-charge at Wilkes Station in 1961.

Smiggers Island 65°27'S., 65°21'W.

Island lying 1 mi. SE. of Weller I., Pitt Is., in the Biscoe Islands. Photographed by Hunting Aerosurveys

Ltd. in 1956, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 after Joseph Smiggers, Esquire, Perpetual Vice President of the Pickwick Club in Charles Dickens' *Pickwick Papers*.

Smillie Peak 54°17'S., 36°57'W.

Rock peak, 1,765 m., standing 1 mi. E. of Mt. Corneliusen in the W. extremity of the Allardye Range of South Georgia. Surveyed by the SGS, 1951-52, and named by the UK-APC for Gordon Smillie, SGS surveyor.

Smirnov Peak 71°43'S., 10°38'E.

A sharp peak, 2,105 m., standing 2.5 mi. S. of Ristkavane Nunataks in northern Shcherbakov Range, Orvin Mtns., in Queen Maud Land. Plotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Aleksandr A. Smirnov, member of the SovAE, 1960-61.

Smith, Cape 62°52'S., 62°19'W.

Cape forming the N. end of Smith I., in the South Shetland Islands. The discovery of the South Shetland Is. was first reported in 1819 by Capt. William Smith, for whom the cape is named.

Smith, Cape: see Irwyn, Cape 84°41'S., 170°05'W.

Smith, Mount 76°03'S., 161°42'E.

Peak over 1,400 m., standing N. of Mawson Gl. and 7 mi. NNW. of Mt. Murray in Victoria Land. Discovered by the BrNAE (1901-4) which probably named this peak for W. E. Smith, Chief Naval Constructor, who prepared the plans and supervised construction of the expedition ship *Discovery*.

Smith Bay: see Smith Inlet 70°25'S., 62°00'W.

Smith Bluff 82°05'S., 162°20'E.

A steep rounded bluff on the W. side of Nash Range to the W. of Ricker Dome, overlooking Algie Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for H. T. U. Smith, USARP geologist at McMurdo Station, 1963-64.

Smith Bluffs 72°32'S., 94°56'W.

A line of ice-covered bluffs with many rock exposures, marking the N. side of Dustin Island and the S. limit of Seraph Bay. Disc. in helicopter flights from the USS *Burton Island* and *Glacier* of the USN Bellingshausen Sea Exp., February 1960, and named for Philip M. Smith of the National Science Foundation, USARP Representative on this expedition.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Smith Glacier 75°03'S., 111°12'W.

A low gradient glacier, over 100 mi. long, draining from Toney Mtn. in an ENE. direction to Amundsen Sea. A northern distributary, Kohler Gl., drains to Dotson Ice Shelf but the main flow passes to the sea between Bear Peninsula and Mt. Murphy. Mapped by USGS from ground surveys and USN air photos, 1959-65. Named by US-ACAN for Philip M. Smith, Deputy Director, Office of Polar Programs, National Science Foundation, who in the period 1956-71 participated in a large number of expeditions to Antarctica in field and supervisory capacities.

Smith Heights 79°52'S., 157°07'E.

The highest part of the jumble of peaks between Kennett Ridge and Junction Spur in the eastern part of the Darwin Mountains. Mapped by the VUWAE, 1962-63, and named for G. J. Smith, a member of the expedition.

Smith Inlet, 70°25'S., 62°00'W.

Ice-filled inlet receding 15 mi. in a westerly direction between Cape Boggs and Cape Collier, along the E. coast of Palmer Land. The inlet was disc. and charted in 1940 by the USAS, but it was later erroneously shown on charts as "Stefansson Inlet." During 1947 the inlet was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for R. Adm. Edward H. Smith, USCG, noted Arctic oceanographer and explorer, leader of the *Marion* expedition to Labrador Sea and Baffin Bay in 1928, and later Dir. of the Woods Hole Oceanographic Institute.

Smith Inlet 70°59'S., 167°52'E.

Bay, 4 mi. wide, partially filled with the ice tongue of Barnett Glacier. Located between Cape Moore and Cape Oakeley along the coast of N. Victoria Land. Discovered by Capt. James C. Ross, 1841, who named it for Alexander J. Smith, mate on the *Erebus*.

Smith Island 63°00'S., 62°30'W.

Island 18 mi. long and 5 mi. wide, lying 45 mi. W. of Deception I. in the South Shetland Islands. The discovery of the South Shetland Is. was first reported in 1819 by Capt. William Smith, for whom the island is named. This island was known to both American and British sealers as early as 1820, and the name Smith has been well established in international usage for over 100 years.

Smith Islands 66°18'S., 110°27'E.

Two islands lying close to Tracy Point, the W. extremity of Beall Island, in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and

Op. Wml. in 1947 and 1948. Named by the US-ACAN for Aerographer's Mate Roger E. Smith, USN, a member of the Wilkes Station party of 1958.

Smith Knob 85°25'S., 87°15'W.

A partly snow-covered rock peak, or knob, standing 1 mi. SSE. of Mendenhall Peak in the E. part of the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains, 1960-61. Named for George Otis Smith, fourth director of the U.S. Geological Survey, 1907-30.

Smith Lake 66°07'S., 101°17'E.

Lake, 1 mi. long, in the Bunger Hills, occupying the E. half of the peninsula between Booth and Countess Peninsulas. First mapped from air photos taken by USN Op. Hjp., 1946-47. The name "Smith Ridge" was given to the peninsula in 1956 by US-ACAN but was later dropped. The lake has instead been named for Kenneth R. Smith, air crewman on the USN Op. Hjp. seaplane commanded by D. E. Bunger which landed in the area and obtained air and ground photos in February 1947.

Smith Mountains: see Smith, Mount 76°03'S., 161°42'E.

Smith Nunatak 70°13'S., 64°35'E.

A nunatak just SE. of Mt. Starlight in the Athos Range, Prince Charles Mountains. The nunatak is marked by a moraine which extends 2 mi. N. from it. Plotted from ANARE air photos of 1965. Named by ANCA for J. C. Smith, diesel mechanic at Wilkes Station in 1960.

Smith Peak 72°05'S., 99°28'W.

A prominent peak of the Walker Mtns., rising SE. of the head of Potaka Inlet and 6 mi. ENE. of Mt. Hubbard, on Thurston Island. Delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Dean C. Smith, aviation pilot of the ByrdAE in 1928-30.

Smith Peaks 67°57'S., 62°29'E.

Group of peaks standing close S. of Mt. Hordern in the David Range of the Framnes Mountains. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37. Remapped by ANARE, 1957-60, and named by ANCA for F. A. Smith, diesel mechanic at Mawson Station, 1957.

Smith Peninsula 74°25'S., 61°15'W.

Ice-covered, "dog-legged" peninsula 25 mi. long and 10 mi. wide, extending in an easterly direction be-

GEOGRAPHIC NAMES OF THE ANTARCTIC

tween Keller and Nantucket Inlets on the E. coast of Palmer Land. The peninsula was photographed from the air in December 1940 by members of the USAS, and in 1947 by members of the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for Walter Smith, ship's mate, navigator, and trail man with Ronne's expedition.

Smith Point 64°49'S., 63°29'W.

Small point 150 yards NE. of Besnard Pt. on the SE. side of the harbor of Port Lockroy, Wiencke I., in the Palmer Archipelago. Disc. by the FrAE, 1903-5, under Charcot. The name appears on a chart based upon a 1927 survey by DI personnel on the *Discovery*, but may reflect an earlier naming.

Smith Ridge 70°02'S., 72°50'E.

A prominent ridge in the Mistichelli Hills, at the E. margin of the Amery Ice Shelf. The ridge was occupied as a survey station by ANARE in 1968. Named by ANCA for R. S. Smith, geophysicist at Mawson Station in 1968, who assisted in the survey.

Smith Ridge 79°07'S., 86°32'W.

A ridge 4 mi. long, lying 1 mi. W. of Frazier Ridge in the Founders Peaks, Heritage Range. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for Carl W. Smith who served that season as helicopter engine technical representative with the 62nd Transportation Detachment.

Smith Rocks 67°31'S., 63°01'E.

Group of rocks lying 0.5 mi. NE. of Canopus Is. in the E. part of Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Spjøtøyholmane. Renamed by ANCA for Capt. V. Smith, RAASC, dukw driver who took part in ANARE changeover operations at Davis and Mawson stations in 1958-59 and 1959-60.

Smiths Bench 72°10'S., 163°08'E.

A distinctive bench-like elevation 5 mi. NW. of Mt. Baldwin, in the Freyberg Mountains. Named by US-ACAN for William M. Smith, psychologist, a member of the USARP Victoria Land Traverse Party which surveyed this area in 1959-60.

Smiths Cape: see Smith, Cape 62°52'S., 62°19'W.

Smiths Island: see Livingston Island 62°36'S., 60°30'W.

Smith's Island: see Smith Island 63°00'S., 62°30'W.

Smith's Isle: see Smith Island 63°00'S., 62°30'W.

Smithson, Mount 84°59'S., 172°10'W.

A mountain over 3,000 m. along the N. escarpment of the Prince Olav Mtns., standing 3 mi. E. of Mt. Sellery between the heads of Krout and Harwell Glaciers. Named by US-ACAN for James Smithson, English philanthropist. In 1835, his property came into the possession of the United States Government, having been bequeathed by him for the purpose of founding an institution at Washington, D.C., to be called the Smithsonian Institution for the increase and diffusion of knowledge among men.

Smithson Glacier 71°15'S., 163°52'E.

A tributary glacier in the Bowers Mountains. It drains the slopes near Mt. Verhage and flows N. along the W. side of Posey Range to enter Graveson Glacier adjacent to Mt. Draeger. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Scott B. Smithson, geologist at McMurdo Station, 1967-68.

Smoky Wall 54°35'S., 36°11'W.

Prominent mountain block, 1,840 m., in the NW. part of the Salvesen Range of South Georgia. The name "Wetterwand" (weather wall) was given to this mountain by the German group of the International Polar Year Investigations, 1882-83, but the name did not become established. The feature was surveyed by the SGS, 1951-52, who reported that when viewed from the NE., its summit is level and regular and has the appearance of a wall. The descriptive name Smoky Wall was recommended by the UK-APC in 1954.

Smolenskaya Mountain 71°52'S., 12°21'E.

Small mountain, 2,890 m., standing 2.5 mi. ESE. of Mt. Neustruyev in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for the Soviet city of Smolensk.

Smolensk Island: see Livingston Island 62°36'S., 60°30'W.

Smooth Island 65°13'S., 64°16'W.

The northeasternmost of the Forge Is., Argentine Is., in the Wilhelm Archipelago. The name, given by the UK-APC in 1961, is descriptive of the smooth, ice-free surface of this island, which is a useful navigational mark for vessels approaching Bloor Passage from the north.

Smoot Rock 75°15'S., 135°24'W.

An isolated rock lying eastward of the head of Hull Glacier, about 7 mi. ESE. of Mt. Steinfeld, in Marie

GEOGRAPHIC NAMES OF THE ANTARCTIC

Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-69. Named by US-ACAN for Henry T. Smoot, meteorologist at Byrd Station, 1969-70.

Smørstabben Nunatak 71°30'S., 10°52'E.

An isolated nunatak lying 10 mi. W. of Eckhørner Peaks of the Humboldt Mtns., in Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Smørstabben (the churnstaff).

Smyley Island 72°55'S., 78°00'E.

An ice-covered island, 38 mi. long and from 8 to 21 mi. wide, lying at the S. side of Ronne Entrance and just NE. of Rydberg Peninsula, Ellsworth Land. The feature is almost wholly surrounded by an ice shelf, which gives an erroneous impression that the island is joined to Ellsworth Land. This larger composite feature was observed from aircraft by members of the USAS, 1939-41, who gave the name "Cape Smyley" to the projecting ice shelf at the NW. extremity. The US-ACAN has withdrawn that name on the basis of the 1968 USGS map of the area and has approved the name Smyley Island for the island described. Named after Capt. William H. Smyley, American master of the sealing vessel *Ohio* during 1841-42. Capt. Smyley, in Feb. 1842, recovered the self-recording thermometer left at Pendulum Cove, Deception Island, by Capt. Henry Foster of the *Chanticleer*, in 1829. The minimum reading was reported to be -5°F.

Smyth, Cape 67°37'S., 164°40'E.

The southern extremity of Sturge Island in the Balleny Islands. In 1841, Capt. James C. Ross, viewing Sturge Island from a considerable distance, thought it a group of three islands. He named the southernmost "Smyth Island" for his friend Capt. William Henry Smyth, RN, Pres. of the Royal Astronomical Society. Ross' error was discovered in 1904 by Capt. Robert F. Scott, who applied the name to the southernmost point on Sturge Island.

Smyth, Ile: Smith Island 63°00'S., 62°30'W.

Smyth Inlet: see Smith Inlet 70°59'S., 167°52'E.

Snag Rocks 65°08'S., 64°27'W.

A cluster of rocks lying mid-channel in French Passage between Roca Islands and Myriad Islands, in Wilhelm Archipelago. Photographed from the helicopter of HMS *Protector* in March 1958. So named by UK-APC because the feature presents a hazard or obstacle to navigation.

Snake Ridge 84°49'S., 66°30'W.

A serpentine ridge, 4 mi. long, adjoining the NW. extremity of Mackin Table in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. The descriptive name was proposed by Dwight L. Schmidt, USGS geologist to these mountains, 1962-66.

Snakeskin Glacier 84°57'S., 170°40'E.

A tributary glacier, 15 mi. long, flowing NW. to enter Keltie Glacier at the E. side of Supporters Range. Named by NZGSAE (1961-62) as being descriptive of the ice and snow patterns observed on the glacier's surface.

Snarbynuten: see Snarby Peak 72°02'S., 1°37'E.

Snarby Peak 72°02'S., 1°37'E.

An isolated peak 6 mi. NE. of Brattskarvet Mtn., at the NE. end of the Sverdrup Mtns., in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for John Snarby, cook with the NBSAE.

Sneddon Nunataks 77°17'S., 153°46'W.

A group of coastal nunataks on the N. side of Edward VII Peninsula which overlooks the Swinburne Ice Shelf and Sulzberger Bay. They stand 11 mi. ESE. of Scott Nunataks in the N. part of Alexandra Mountains. The nunataks appear on the map of the ByrdAE, 1928-30. Named by US-ACAN for Donald L. Sneddon, USN, electronics technician with the Byrd Station winter party in 1967.

Snedeker Glacier 66°28'S., 106°48'E.

A channel glacier flowing to the Antarctic coast 9 mi. W. of Merritt Island. Mapped (1955) by G. D. Blodgett from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for Robert H. Snedeker, photo interpreter with USN Operation Windmill (1947-48), who assisted in establishing astronomical control stations along the coast from Wilhelm II Coast to Budd Coast.

Snick Pass 70°41'S., 69°25'W.

Narrow pass between the Douglas and LeMay Ranges, leading from Grotto Gl. to Purcell Snowfield in central Alexander Island. First mapped from air photos obtained by the RARE, 1947-48, by Searle of the FIDS in 1960. The name given by the UK-APC is descriptive, a snick being a small cut or incision.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Snipe Peak 60°45'S., 45°41'W.

Peak, 225 m., which is the main peak on Moe I., situated close SW. of Signy I. in the South Orkney Islands. Surveyed in 1933 by DI personnel. The name, proposed by G. Robin of FIDS following his survey in 1947, commemorates the first visit to Signy Island, in February 1948, of HMS *Snipe* (Commander J.G. Forbes, RN).

Snøbjørga Bluff 72°05'S., 4°39'E.

A rock and ice bluff at the E. side of the head of Stuttgart Gl., in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Snøbjørga (the snow mountain).

Snodgrass Island 65°26'S., 65°29'W.

Island 2.5 mi. long lying NE. of Pickwick I., Pitt Is., in the Biscoe Islands. Shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 after Augustus Snodgrass, a member of the Pickwick Club in Charles Dickens' *Pickwick Papers*.

Snøhetta Dome 72°11'S., 2°48'W.

A dome-shaped elevation which is snow covered except for a few rock exposures, situated 3 mi. E. of Hornet Peak in the Ahlmann Ridge of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Snøhetta (the snow cap).

Snøkallen Hill 71°42'S., 1°32'W.

A hill 3 mi. SSE. of Snøkjerringa Hill, on the E. side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Snøkallen (the snow man).

Snøkjerringa Hill 71°39'S., 1°35'W.

A hill 3 mi. NNW. of Snøkallen Hill, on the E. side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Snøkjerringa (the snow woman).

Snønutane Peaks 72°05'S., 4°48'E.

A group of rock peaks rising above the elevated snow surface just E. of Snøbjørga Bluff, in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Snønutane (the snow peaks).

Snønutryggen 72°14'S., 5°20'E.

A broad, ice-covered ridge rising SE. of Snønutane Peaks in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Snønutryggen (the snow peak ridge).

Snøskallekgega Ridge 71°59'S., 13°13'E.

A largely snow-covered ridge, about 3 mi. long and surmounted at the N. end by Kazanskaya Mtn., located 2 mi. W. of Dekefjellet Mtn. in the Weyprecht Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Snøskallekgega.

Snøskalkhausen Peak 72°02'S., 13°12'E.

Peak 2,650 m., marking the SW. end of the Weyprecht Mtns. in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Snøskalkhausen.

Snøtoa Terrace 71°57'S., 4°35'E.

A flattish, ice-covered terrace on the NE. side of Mt. Grytøyr in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Snøtoa (the snow patch).

Snow Hill: see Snow Hills 60°42'S., 45°38'W.

Snow Hill Island 64°28'S., 57°12'W.

An almost completely snowcapped island, 20 mi. long and 6 mi. wide, lying SE. of James Ross I., from which it is separated by Admiralty Sound. It was disc. on Jan. 6, 1843 by a Br. exp. under Ross who, uncertain of its connection with the mainland, named it Snow Hill because its snow cover stood out in contrast to the bare ground of nearby Seymour Island. Its insular character was determined in 1902 by the SwedAE under Nordenskjöld.

Snow Hills 60°42'S., 45°38'W.

Two snow-covered hills, one 240 m., the other 265 m. and 0.25 mi. to the west. Located 0.2 mi. west of Cemetery Bay in the east-central part of Signy Island. The lower, eastern hill was charted and named "Snow Hill" by DI personnel on the *Discovery II* in 1933. In local usage the name Snow Hills has become established for both hills.

Snow Island 62°47'S., 61°23'W.

A completely ice-covered island, 10 mi. long and 5 mi. wide, lying 4 mi. SW. of Livingston I. in the South

GEOGRAPHIC NAMES OF THE ANTARCTIC

Shetland Islands. This island was known to both American and British sealers as early as 1820, and the name has been well established in international usage for over 100 years.

Snow Nunataks 73°35'S., 77°15'W.

A line of four widely separated nunataks on the coast of Ellsworth Land. The peaks lie southward of Case Island and trend east-west for 20 miles. The nunataks were discovered by the USAS (1939-41) and named for Ashley C. Snow, aviation pilot on the expedition.

Snow Peak 54°00'S., 37°55'W.

Conspicuous snow-covered peak, 860 m., standing 2 mi. E. of Cape Pride on the N. coast of South Georgia. Charted and named by DI personnel in the period 1926-27.

Snowplume Peak 73°32'S., 94°27'W.

A small pyramidal peak along the N. front of the Jones Mountains, located 0.75 mi. WSW. of Rightangle Peak and 2 mi. WSW. of Pillsbury Tower. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. So named by the party because a continual plume of wind-blown snow trails off the peak whenever the wind blows.

Snowshoe Glacier 68°19'S., 66°35'W.

A glacier 8 mi. long flowing W. from a col in the SW. flank of Neny Glacier into Neny Fjord, western Graham Land. Roughly surveyed from the ground (1936) and photographed from the air (1937) by BGLE. Surveyed by FIDS in 1949. The name was suggested by K.S.P. Butler of the FIDS in 1948 because the shape of the glacier with its narrow head and wide mouth resembles a snowshoe.

Snowshoe Pass 83°03'S., 157°36'E.

A snow saddle 4 mi. NE. of Aurora Heights, between Argosy and Skua Glaciers in the Miller Range. Discovered and named by the northern party of NZGSAE (1961-62), who found the deep soft snow here made snowshoeing the best method of travel.

Snowy Point 74°37'S., 163°45'E.

A gently sloping point marking the north side of the western portal of Browning Pass in Deep Freeze Range, Victoria Land. First explored and given this descriptive name by the Northern Party of the BrAE, 1910-13.

Snubbin Island 65°29'S., 65°50'W.

Island lying 2 mi. W. of Pickwick I. at the western end of the Pitt Is., in the Biscoe Islands. Shown on an Ar-

gentine Govt. chart of 1957. Named by the UK-APC in 1959 after Mr. Serjeant Snubbin, a barrister in Charles Dickens' *Pickwick Papers*.

Snug Cove 65°30'S., 64°26'W.

Small cove along the E. side of the second largest island in the Lippmann Is., off the W. coast of Graham Land. So named by the UK-APC in 1959 because the cove is a good enclosed anchorage for small boats. It was first used by the British Naval Hydrographic Survey Unit's motor-launch in 1957-58.

Snuggerudbreen: see Snuggerud Glacier 72°07'S., 7°52'E.

Snuggerud Glacier 72°07'S., 7°52'E.

Glacier flowing NNE. between Klevekåpa Mtn. and Småknoltane Peaks in the Filchner Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named for J. Snuggerud, radio mechanic with NorAE (1956-58).

Snyder Peak 73°31'S., 93°56'W.

A low ice-covered peak lying 1 mi. SW. of Anderson Dome in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. Named by US-ACAN for David Snyder, aviation electronics technician with USN Squadron VX-6, crew member on pioneer flights of LC-47 Dakota aircraft from Byrd Station to the Eights Coast area in November 1961.

Snyder Peninsula 71°25'S., 61°26'W.

A high, ice-covered peninsula on the S. side of Lamplugh Inlet terminating in Cape Howard, on the E. coast of Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for R. Adm. Joseph E. Snyder, Jr., USN, Antarctic Project Officer for the Assistant Secretary of the Navy for Research and Development, 1967-69.

Snyder Rocks 66°34'S., 107°46'E.

A small group of rocks on the coast about 3 mi. W. of the terminus of Underwood Glacier. First mapped from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for Mark G. Snyder, who assisted USN Operation Windmill (1947-48) parties in establishing astronomical control stations along Wilhelm II, Knox and Budd Coasts.

Sobenes, Bahía: see Malmgren Bay 65°45'S., 66°07'W.

Sobral, Cape 64°33'S., 59°34'W.

High, mainly snow-covered elevation which surmounts the S. end of Sobral Peninsula, on the E. coast of Gra-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ham Land. Disc. by the SwedAE, 1901-4, under Nordenskjöld, who named it for Lt. José M. Sobral of the Argentine Navy, asst. physicist and meteorologist with the expedition.

Sobral, Isla: see Omega Island 64°20'S., 62°56'W.

Sobral Peninsula 64°30'S., 59°40'W.

A high and mainly ice-covered peninsula in northern Graham Land. The feature is 11 mi. long and 5 mi. wide and projects southward into the northern part of Larsen Ice Shelf west of Larsen Inlet. The name was applied by UK-APC (1963) and derives from Cape Sobral at the south end of this peninsula.

Socks Glacier 83°42'S., 170°05'E.

A small glacier descending the E. slopes of Queen Alexandra Range just N. of Owen Hills to enter the W. side of Beardmore Glacier. Discovered by the BrAE (1907-9) and named for one of the ponies taken with the South Pole Party. Socks, the last pony to survive the journey, fell into a crevasse on Dec. 7, 1908, on Beardmore Gl. near Socks Glacier.

Softbed Nunataks: see Softbed Ridges 83°03'S., 163°45'E.

Softbed Ridges 83°03'S., 163°45'E.

A series of parallel rock ridges interspaced by small snow-covered valleys, the whole trending N.-S. for about 15 mi. and forming a portion of the divide between Lowery and Robb Glaciers. The name was applied in about 1960 by New Zealand parties working in the area.

Sögen Island 65°04'S., 64°02'W.

Island forming the E. side of François Cove, lying in the SW. extremity of Port Charcot, which indents the N. part of Booth I., in the Wilhelm Archipelago. Disc. by the FrAE, 1903-5, under Charcot, and named for one of the dogs which died and was buried here. The name has been approved because of its long use.

Sohm Glacier 66°07'S., 64°49'W.

Glacier flowing into Bilgeri Gl. on the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 for Victor Sohm, Austrian skiing exponent who invented a special type of ski skins and ski wax.

Soholt Peaks 79°43'S., 84°12'W.

A group of rugged, ice-free peaks rising between Gifford Peaks and Drake Icefall in the Heritage Range, Ellsworth Mountains. Named by the Univ. of Minnesota Ellsworth Mountains Party, 1962-63, for Donald E. Soholt, geologist with that party.

Sökkhornet: see Graben Horn 71°48'S., 12°02'E.

Solberg Inlet 68°19'S., 65°15'W.

Ice-filled inlet 5 to 10 mi. wide, which recedes W. 14 mi. between Rock Pile Peaks and Joerg Pen., on the E. coast of Graham Land. Disc. by members of the USAS in 1940. It was resighted in 1947 by the RARE under Ronne, who named it for R. Adm. Thorvald A. Solberg, USN, Chief of Naval Research, who was of assistance to the expedition.

Sölch Glacier 67°04'S., 66°23'W.

A glacier flowing W. to Salmon Cove, on the E. side of Lallemand Fjord in Graham Land. Mapped from air photos taken by FIDASE, 1956-57. Named by UK-APC for Johann Sölch (1883-1951), Austrian glacial geologist and glaciologist.

Soldat Island 68°31'S., 78°11'E.

An elongated rocky island, 2.5 mi. long, lying S. of Partizan Island in the S. part of the entrance to Langnes Fjord, Vestfold Hills. This feature was photographed by the Lars Christensen Exp. (1936-37), but was plotted on the subsequent maps as a peninsula. It was first shown to be an island by John Roscoe's 1952 study of aerial photographs of the area taken by USN Operation Highjump (1946-47). The area was photographed by ANARE (1954-58) and the SovAE (1956), the latter applying the name Ostrov Soldat (soldier island).

Solem Ridge 71°12'S., 63°15'W.

A mostly snow-covered, arc-shaped ridge, 4 mi. long, located 10 mi. NNE. of Mt. Jackson in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Lynn D. Solem, USN, Medical Officer at the South Pole Station, 1972.

Soler, Islotes: see Rho Islands 64°17'S., 63°00'W.

Solhøgdene Heights 71°22'S., 13°42'E.

The heights 1 mi. E. of Mt. Mentzel, overlooking the N. side of Asimutbreen Gl. in the eastern Gruber Mtns. of the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Solhøgdene (the sun heights).

Solitaria, Roca: see Lone Rock 62°21'S., 58°50'W.

Solitario, Islote: see Ponton Island 65°06'S., 63°05'W.

Solitario Island 67°52'S., 68°26'W.

Small island lying 3 mi. S. of the Guébriant Is., off the S. end of Adelaide Island. The name appears on an

GEOGRAPHIC NAMES OF THE ANTARCTIC

Argentine Govt. chart of 1957 and is descriptive of the island's position; *solitario* is a Spanish word meaning solitary.

Solitary Island: see Uksen Island 67°21'S., 60°09'E.

Solitary Nunatak 67°28'S., 58°46'E.

A small isolated nunatak 14 mi. SE. of Svart Peak in Enderby Land. Mapped from ANARE surveys and air photos, 1954-66, and so named because of its isolated position.

Solitary Peak 83°14'S., 161°40'E.

A peak (2,810 m.) located 4.5 mi. SE. of Mt. Rabot in Queen Elizabeth Range. An important geologic section was measured on the feature by the Ohio State Univ. Geological Party, 1967-68, which suggested the name because of the peak's relative isolation.

Solitary Rocks 77°47'S., 161°12'E.

Mass of rocks immediately NW. of Cavendish Icefalls on the N. side of the major bend in Taylor Gl. in Victoria Land. The descriptive name was given by the BrNAE, 1901-4.

Sollas Glacier 77°43'S., 162°36'E.

Glacier between Marr and Hughes Glaciers, flowing from the Kukri Hills toward the E. end of Lake Bonney in Taylor Valley, Victoria Land. Charted and named by the BrAE under Scott, 1910-13, for William J. Sollas, Prof. of Geology at Oxford.

Solo Nunatak 72°50'S., 163°35'E.

An isolated nunatak lying 6 mi. NW. of Intention Nunataks, at the SW. side of Evans Névé. The name alludes to the isolation of the feature and was given by the Northern Party of NZGSAE, 1962-63.

Solov'yev, Mount 71°41'S., 12°19'E.

Peak, 2,715 m., on the southern part of Gråkammen Ridge in the Westliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet cartographer M. D. Solov'yev.

Solov'yeva, Gora: see Solov'yev, Mount 71°41'S., 12°19'E.

Solstreif Island 64°33'S., 62°00'W.

The southernmost of the small group of islands at the E. side of Foyen Hbr. in Wilhelmina Bay, off the W. coast of Graham Land. The feature was so named by

whalers operating in the area because the Norwegian whaling vessel *Solstreif* was moored to it during 1921-22, and probably in other seasons also.

Solus, Mount 68°50'S., 65°33'W.

A conspicuous, isolated mountain (1,290 m.) in the center and near the mouth of Weyerhaeuser Gl., in southern Graham Land. It has steep rock sides meeting in a sharp summit ridge. Photographed from the air by FIDS in Aug. 1947, and by RARE (Trimetrogon photography) in Dec. 1947. Surveyed by FIDS in Dec. 1958. The UK-APC name is descriptive of the isolated position of the feature.

Solus Island: see Solitario Island 67°52'S., 68°26'W.

Solvay, Mount 72°34'S., 31°23'E.

Mountain, 2,560 m., close N. of Mt. Gillet in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for Ernest John Solvay, a patron of the expedition.

Solvay Mountains 64°25'S., 62°32'W.

Mountains, probably over 1,500 m., extending in an ENE.-WSW. direction in the S. part of Brabant I., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache, and named by him for Ernest Solvay, a supporter of the expedition. The name originally extended along the entire E. coast of the island, but has been limited to the prominent mountains in the S. as there is no well-defined group of mountains farther north.

Solvay, Monts: see Solvay Mountains 64°25'S., 62°32'W.

Sombre Lake 60°41'S., 45°37'W.

The northernmost lake in Paternoster Valley in northern Signy Island. So named by UK-APC because of the sombre setting of the lake and the proximity of Stygian Cove.

Sombre Point 57°45'S., 26°25'W.

The northeast point of Saunders I., South Sandwich Islands. The name applied by UK-APC in 1971 refers to the dark and dull aspect of the basaltic rock and ash in this vicinity.

Somero Glacier 85°00'S., 167°12'W.

A tributary glacier 7 mi. long, flowing NW. from Mt. Fairweather to enter Liv Glacier just S. of the W. end of the Duncan Mountains. Named by US-ACAN for George N. Somero, USARP biologist at McMurdo Station, 1963-64, and winter 1965.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Somers Glacier 65°22'S., 63°31'W.

Glacier flowing NW. into Trooz Gl., on the W. coast of Graham Land. First charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 for Henri Somers, chief engineer of the BelgAE's ship *Belgica*, which explored in the area in 1897-99.

Somerville Island 65°22'S., 64°19'W.

Small island 4 mi. SW. of Berthelot Is. and 2.5 mi. NW. of Darboux I., in the Wilhelm Archipelago. Disc. by the FrAE, 1908-10, under Charcot, and named by him for Crichton Somerville, a resident of Kristiania (Oslo), Norway, who selected and supervised the making of much of the polar clothing and equipment used by the expedition.

Somigliana Glacier 67°00'S., 67°09'W.

A glacier flowing N. to Langmuir Cove on the N. part of Arrowsmith Pen. in Graham Land. Mapped by FIDS from surveys and air photos, 1956-59. Named by UK-APC for Carlo Somigliana, Italian mathematician and physicist who originated a viscous theory of glacier flow, in 1921.

Sones, Mount 67°02'S., 51°30'E.

Mountain standing on the N. side of Beaver Gl., 2 mi. W. of Mt. Reed in the Tula Mountains. Plotted from air photos taken by ANARE in 1956. Named by ANCA in 1962 for F. Sones, a member of the crew of the *Discovery* during BANZARE, 1929-31.

Sonia Point 65°04'S., 63°29'W.

Point lying 6 miles W. of Rahir Pt. on the S. side of Flandres Bay, on the W. coast of Graham Land. First charted by the FrAE under Charcot, 1903-5, and named for Madame Sonia Bunau-Varilla.

Sonntag Nunatak 84°53'S., 86°42'W.

A solitary nunatak located 20 mi. ENE. of Hamilton Cliff, Ford Massif, of the Thiel Mountains. The nunatak was observed on Dec. 13, 1959 by Edward Thiel and Campbell Craddock in the course of a USARP airlifted geophysical traverse along the 88th meridian West. The name was proposed by Thiel and Craddock for Wayne Sonntag, Operations Director at the Geophysical Institute, Univ. of Wisconsin, 1959-61, logistics officer for the airlifted traverse.

Soond, Mount 75°00'S., 134°13'W.

A peak 1 mi. N. of Bleclie Peaks in the Perry Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Robert T. Soond, geomagnetist/seismologist at Plateau Station, 1968.

Sooty Cove 54°01'S., 38°02'W.

A small cove just N. of Shoemaker Pt. along the S. side of Bird Island, South Georgia. The name, applied by UK-APC, derives from the Light-mantled Sooty Albatross (*Phoebastria palpebrata*) which breeds on the island.

Sooty Rock 65°14'S., 65°09'W.

A rock midway between Lumus Rock and Betbeder Is. in Wilhelm Archipelago. Disc. and named "Black Reef" by the BGLE, 1934-37. Resighted from HMS *Endurance* in February 1969 and described as a rock about 20 m. high. The synonym Sooty was recommended by UK-APC to avoid duplication of the name Black Rock.

Sophie Cliff 64°44'S., 62°15'W.

Conspicuous granite cliff at the E. side of the entrance to Piccard Cove, Wilhelmina Bay, on the W. coast of Graham Land. First charted and named by the BelgAE under Gerlache in 1898.

Sophie Rocks: see Sophie Cliff 64°44'S., 62°15'W.

Søråsen Ridge 71°25'S., 10°00'W.

A broad snow covered ridge that separates the Quar and Ekström Ice Shelves, on the coast of Queen Maud Land. The feature was first mapped and named Søråsen (the south ridge) by the NBSAE, 1949-52.

Sørensen Nunataks 71°41'S., 7°57'E.

A group of about 15 nunataks extending over about 6 miles, forming the NW. part of the Drygalski Mtns. in Queen Maud Land. First plotted from air photos by the GerAE (1938-39). Mapped from surveys and air photos by NorAE (1956-60) and named for Stein Sørensen, a radio operator with NorAE (1956-58).

Sorensen Peak 71°43'S., 167°48'E.

A peak (2,640 m.) which rises between the base of Lyttelton Range and Church Ridge in the Admiralty Mountains. It surmounts the divide between the Denistoun and Leander Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Douglas J. Sorensen, field assistant at McMurdo Station, 1965-66.

Sörensenskjera: see Sørensen Nunataks 71°41'S., 7°57'E.

Söre Petermannkjeda: see Südliche Petermann Range 71°46'S., 12°20'E.

Sorge Island 67°11'S., 67°43'W.

Island lying just S. of The Gullet in Barlas Channel, close E. of Adelaide Island. Mapped by FIDS from

GEOGRAPHIC NAMES OF THE ANTARCTIC

surveys and air photos, 1948-59. Named by UK-APC for Ernst F. W. Sorge, German glaciologist who made the first seismic soundings of the Greenland ice sheet, 1929-31, and developed a theory of the densification of firn.

Sørhaugen Hill 71°48'S., 25°37'E.

The southernmost hill in the group at the E. side of Kamp Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Sørhaugen (the south hill) by the Norwegians.

Sørhausane Peaks 72°47'S., 0°15'E.

A small cluster of peaks 2 mi. S. of Nupskåpa Peak, at the S. end of the Sverdrup Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Sørhausane (the south peaks).

Sørhjelmén Peak 71°48'S., 26°28'E.

Peak, 2,030 m., standing at the head of Hette Gl., at the S. end of the group of peaks just E. of the mouth of Byrdreen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Sørhjelmén (the south helmet) by the Norwegians because of its position in the group.

Sørhortane 72°02'S., 12°35'E.

A group of rock crags along the NE. edge of Horteriset Dome, southward of Petermann Ranges in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Sørhortane.

Sörkammen: see South Masson Range 67°53'S., 62°47'E.

Sörkammen Crest: see South Masson Range 67°53'S., 62°47'E.

Sörkollen: see Onley Hill 67°43'S., 63°03'E.

Sörling Valley 54°22'S., 36°18'W.

Ice-free valley between Cumberland East Bay and Hound Bay on the N. side of South Georgia. Surveyed by the SGS in the period 1951-57. Named by the UK-APC for Erik Sörling of the Riksmuseum, Stockholm, who made zoological collections in South Georgia in 1904-5.

Sörlle, Cape 60°46'S., 44°59'W.

Rocky bluff marking the S. end of Fredriksen I. in the South Orkney Islands. Disc. and first charted in 1821 by Capt. George Powell and Capt. Nathaniel Palmer. Recharted in 1933 by DI personnel on the *Discovery II* and named for Capt. Petter Sörlle, Norwegian whaler who made a running survey of the South Orkney Is. in 1912-13.

Sörlle Buttress 54°17'S., 36°50'W.

Mountain rising above 1,370 m., between Mt. Spaa-man and Three Brothers in the Allardyce Range of South Georgia. Surveyed by the SGS in the period 1951-57. Named by the UK-APC for Petter Sörlle (1884-1922), Norwegian whaling captain and inventor who, in 1922, took out a patent for his whale slip-way. Sörlle was the first manager of the United Whalers station at Stromness.

Sörlle Rocks 60°37'S., 46°15'W.

Group of rocks, the highest 20 m. high, lying 7 mi. W. of Moreton Pt., the W. extremity of Coronation I. in the South Orkney Islands. Named Tre Sten (three stones) on Capt. Petter Sörlle's chart resulting from his 1912-13 survey. Renamed for Sörlle by DI personnel on the *Discovery II* following their survey in 1933.

Sorna Bluff 83°18'S., 50°40'W.

A prominent rock bluff on the N. side of Saratoga Table, overlooking the head of May Valley in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Lt. Cdr. Ronald E. Sorna, USN, pilot on photographic flights in the Pensacola Mountains.

Sörn and Bernt 53°59'S., 37°55'W.

Two conspicuous rocks lying close off the N. coast of South Georgia, 2 mi. NE. of Cape Pride. The name appears on a chart based upon surveys by DI personnel in the period 1926-30. Named for Sören Berntsen and Herman Berntsen, managers of Tønsberg Hval-fangeri at Husvik.

Sörnuten: see Fischer Nunatak 67°44'S., 63°03'E.

Söröya: see Shaula Island 66°58'S., 57°21'E.

Sorpresa, Grupo: see Sorpresa Rock 67°51'S., 69°34'W.

Sorpresa, Islote: see Brewster Island 64°43'S., 62°34'W.

Sorpresa, Roca: see Sorpresa Rock 67°51'S., 69°34'W.

Sorpresa Rock 67°51'S., 69°34'W.

An exposed rock lying SW. of Cavalier Rock, off the S. end of Adelaide Island. The name appears on a Chil-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ean Govt. chart of 1947. Sorpresa is a Spanish word meaning surprise.

Sør Rondane Mountains 72°00'S., 25°00'E.

Group of mountains about 100 mi. long with main peaks rising to 3,400 m., between the Queen Fabiola Mtns. and Wohlthat Mtns. in Queen Maud Land. Discovered and photographed from the air by members of the Lars Christensen Exp. on Feb. 6, 1937, and named after Rondane, a mountain massif in southern Norway. The mountains were mapped in greater detail in 1957 by Norwegian cartographers working with air photos taken by USN Op. Hjp., 1946-47.

Sorrowness Bay: see Stromness Bay 54°09'S., 36°38'W.

Sørsdal Glacier 68°41'S., 78°15'E.

A heavily crevassed glacier, 15 mi. long, flowing westward along the south side of Krok Fjord and the Vestfold Hills and terminating in a prominent glacier tongue at Prydz Bay. Discovered in Feb. 1935 by a Norwegian expedition in the *Thorshavn* under Capt. Klarius Mikkelsen, and named by him for Lief Sørsdal, a Norwegian dentist and a member of the party from *Thorshavn* that landed at the northern end of the Vestfold Hills.

Sørsdal Glacier Tongue 68°42'S., 78°00'E.

The prominent seaward extension of Sørsdal Glacier into Prydz Bay. Discovered by Capt. Klarius Mikkelsen in 1935 and named in association with Sørsdal Glacier.

Sørskedet Valley 72°03'S., 11°30'E.

An ice-filled valley lying N. of Skeidshovden Mtn. near the SW. end of the Wohlthat Mtns. in Queen Maud Land. First photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Sørskedet.

Sørtindane Peaks 68°08'S., 62°24'E.

A group of peaks just S. of Mt. Twintop at the S. end of the David Range, Framnes Mountains. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37) and named Sørtindane (the southern peaks).

Sosa Bluff 82°32'S., 42°53'W.

A rock bluff 1 mi. S. of Lisignoli Bluff in the Schneider Hills portion of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Lt. O. R. Sosa, Argentine officer in charge of General Belgrano Station, winter 1966.

Søstre Islands 69°33'S., 75°30'E.

A group of small islands and rocks that rise above the northern part of Publications Ice Shelf at the head of Prydz Bay. Discovered and charted in February 1935 by Capt. Klarius Mikkelsen in the Norwegian whaling ship *Thorshavn* sent out by Lars Christensen. They gave the name Søstrene after the islands by that name lying in the entrance to Oslofjorden, Norway.

Söstvene Islands: see Søstre Islands 69°33'S., 75°30'E.

Soto Glacier 71°31'S., 61°46'W.

A glacier about 12 mi. long, draining SE. along the SW. side of Strømme Ridge and discharging into Odom Inlet, on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Luis R. Soto, Argentine oceanographer on the International Weddell Sea Oceanographic Expeditions, 1968 and 1970.

Sotomayor, Islote: see Sotomayor Island 63°20'S., 57°55'W.

Sotomayor Island 63°20'S., 57°55'W.

An island lying just S. of the entrance to Unwin Cove, Trinity Peninsula. Named by the Chilean Antarctic Expedition of 1950-51 for Second Lt. Victor Sotomayor L., cargo officer of the ship *Lientur* during the expedition.

Soucek, Mount 66°49'S., 50°58'E.

Mountain standing between Mt. Hardy and Peacock Ridge in the NW. part of the Tula Mtns., in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for Dr. Z. Soucek, medical officer at Wilkes Station in 1960.

Soucek Ravine 66°23'S., 110°27'E.

A ravine, 5 yards wide and 100 yards long, west of Penney Ravine, Ardery Island, in the Windmill Islands. Discovered in 1960 by a biological field party from Wilkes Station. Named by ANCA for Dr. Z. Soucek, medical officer at Wilkes in 1960 and 1962.

Souchez Glacier 86°17'S., 154°00'W.

A tributary glacier about 17 mi. long, flowing from Mt. Crockett S. along the E. side of Faulkner Escarpment and then turning SE. to parallel the SW. side of Hays Mountains. It joins Bartlett Gl. just S. of Mt. Dietz, in the Queen Maud Mountains. Named by US-ACAN for Roland A. Souchez, involved in geological studies at McMurdo Station during the season of 1965-66.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sound, The 64°19'S., 62°58'W.

A passage, 3 mi. long and 0.5 mi. wide, which extends in a N.-S. direction, separating the Melchior Is. into West Melchior Islands and East Melchior Islands, in the Palmer Archipelago. First roughly charted by the FrAE under Charcot, 1903-5. Probably named by DI personnel who roughly surveyed the feature in 1927. Resurveyed by Argentine expeditions in 1942, 1943 and 1948.

Sourabaya, Mount 59°03'S., 26°36'W.

A mountain (915 m.) 1 mi. NW. of Mt. Darnley, Bristol Island, in the South Sandwich Islands. Named by UK-APC in 1971. The name refers to the whaling factory ship *Sourabaya*, from which an eruption of the island was witnessed in 1935.

Sourrieu, Ile: see Lambda Island 64°18'S., 63°00'W.

South America Glacier 77°49'S., 161°47'E.

Small glacier near the SW. corner of the Kukri Hills in Victoria Land. The ice hangs down a cliff 2,000 m. high, and takes a form similar to the continent for which it is named. Named by the Western Journey Party, led by Taylor, of the BrAE, 1910-13.

Southard, Cape 66°32'S., 122°05'E.

An ice-covered cape separating the Banzare and Sabrina Coasts of Wilkes Land. Delineated from air photos taken by USN Operation Highjump, 1946-47, and named by the US-ACAN for Samuel Lewis Southard, Secretary of the Navy under President John Quincy Adams. While serving as Senator from New Jersey, Southard was instrumental in initiating interest in a government scientific expedition and gaining congressional authorization of the U.S. Exploring Expedition, 1838-42, under Charles Wilkes.

Southard, Mount 72°11'S., 159°56'E.

A lone mountain (2,400 m.) standing 5 mi. NW. of Welcome Mountain in the NW. extremity of the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Rupert B. Southard, Chief, Office of International Activities, USGS, with responsibility for USGS field parties working in Antarctica; later Chief of the Topographic Division of USGS.

South Arm: see Ferrar Glacier 77°46'S., 163°00'E.

South Barrier 53°09'S., 73°35'E.

A rocky ridge descending southward from Budd Peak along the east margin of Fiftyone Glacier and terminating at Lambeth Bluff in southern Heard Island. The descriptive name was applied by ANARE in 1948.

South Bay: see Miles Bay 54°04'S., 37°39'W.

South Bay: see Cumberland East Bay 54°17'S., 36°26'W.

South Bay 62°40'S., 60°28'W.

Bay 6 mi. long, lying NW. of False Bay on the S. side of Livingston I., in the South Shetland Islands. This bay was known to both American and British sealers as early as 1820, and the name has been well established in international usage for over 100 years.

South Bay 77°38'S., 166°25'E.

A small bay on the south side of Cape Evans, Ross Island. Named by members of the BrAE, 1910-13.

South Bay 54°04'S., 37°09'W.

Cove forming the S. head of Prince Olav Hbr., along the N. coast of South Georgia. Probably named by DI personnel who charted Prince Olav Hbr. in 1929.

South Beaches 62°40'S., 61°04'W.

The beaches along the S. side of Byers Pen., Livingston I., in the South Shetland Islands. The descriptive name was used by Capt. George Powell on his chart of 1822.

South Cape 60°48'S., 45°09'W.

Cape marking the S. extremity of the Robertson Is., lying S. of the E. end of Coronation I. in the South Orkney Islands. Named by Capt. George Powell and Capt. Nathaniel Palmer, who disc. the South Orkney Is. while on a joint cruise in December 1821.

South Crest: see South Masson Range 67°53'S., 62°47'E.

South Eastern Mountains: see Grove Mountains 72°45'S., 75°00'E.

South East Point 62°59'S., 60°31'W.

Point 1 mi. ENE. of Fildes Pt., marking the southeastern point of Deception I., in the South Shetland Islands. The point was charted by a Br. exp., 1828-31, under Foster. The name was proposed in 1949 by the Hydrographic Dept., Admiralty, following a survey of the island by Lt. Cdr. D. N. Penfold, RN, in 1948-49.

Southern, Mount 74°12'S., 76°28'W.

A small mountain, or nunatak, located 1.5 mi. NE. of Mt. Harry and 14 mi. SE. of FitzGerald Bluffs, in Ellsworth Land. Discovered and photographed by Lincoln Ellsworth on Nov. 23, 1935. Mapped by USGS from surveys and U.S. Navy air photos, 1961-66. Named by US-ACAN for Merle E. Southern, USGS Topographic Engineer in Antarctica, 1967-68.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Southern Cross Mountains 73°40'S., 164°00'E.

The name applied to the group of ranges lying between the Mariner and Priestley Glaciers in Victoria Land. Seaward parts of this area were first viewed by Ross in 1841 and subsequently by expeditions led by Borchgrevink, Scott, Shackleton and Byrd. The precise mapping of its overall features was accomplished from U.S. Navy air photographs and surveys by New Zealand and American parties in the 1950's and 1960's. Named by the northern party of NZGSAE, 1965-66.

Southern Escarpments: see Sør Rondane Mountains 72°00'S., 25°00'E.

Southern Foothills: see Inexpressible Island 74°54'S., 163°39'E.

Southern Nunataks: see Stinear Nunataks 69°42'S., 64°40'E.

Southern Thule 59°26'S., 27°12'W.

Group of islands consisting of Thule, Cook, and Bellingshausen Islands, at the S. end of the South Sandwich Islands. Southern Thule was named by Capt. James Cook who disc. and roughly outlined its northern portions in 1775. Adm. Thaddeus Bellingshausen's report, published about 1831, stating that Southern Thule consists of one high rock and three small islands was confirmed in a survey by DI personnel on the *Discovery II* in 1930.

Southern Thule Group: see Southern Thule 59°26'S., 27°12'W.

Southern Thule Island: see Thule Island 59°27'S., 27°19'W.

South Foreland: see Melville, Cape 62°02'S., 57°37'W.

South Fork 77°34'S., 161°15'E.

The southern arm of Wright Valley in Victoria Land. The feature is separated from the North Fork by the Dais. Named by the VUWAE, 1958-59.

South Georgia 54°15'S., 36°45'W.

An island about 105 mi. long and 20 mi. wide, with steep glaciated mountains and deeply indented coasts. It is generally accepted that South Georgia may have been sighted by Antonio de la Roche sailing an English merchant vessel in 1675, and from the Spanish ship *Leon* in 1756. The island was explored and roughly charted in January 1775 by Capt. James Cook in the *Resolution* and named after King George III of Great Britain. The S. coast was first explored and

charted by Capt. Thaddeus Bellingshausen in 1819. Substantial additional mapping was accomplished by sealers, whalers and private expeditions. The coastal areas were roughly surveyed by DI personnel in the period 1926-30. The SGS continued the surveys, including inland areas, 1951-57.

South Georgia Island: see South Georgia 54°15'S., 36°45'W.

South Island 53°03'S., 72°36'E.

A rock lying 0.1 mi. SE. of McDonald I., marking the southernmost feature in the McDonald Islands. Surveyed and given this descriptive name by the ANARE in 1948.

South Island: see Wyatt Island 67°20'S., 67°40'W.

South Masson Range 67°53'S., 62°47'E.

The Masson Range is divided into three parts of which this segment is the southern, rising to 1,070 m. and extending 2 mi. in a NE.-SW. arc. The Masson Range was disc. and named by BANZARE, 1929-31, under Mawson. This southern range was mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Sørkammen (the south comb or crest). The approved name, suggested by ANCA in 1960, more clearly identifies the feature as a part of Masson Range.

South Orkney Islands 60°35'S., 45°30'W.

A group of two larger and several smaller mountainous, barren islands covered with ice and snow and surrounded by many rocks, lying NE. of the Antarctic Pen. between 60°20'S. and 60°50'S., and 44°20'W. and 46°45'W. Disc. on the occasion of the joint cruise by Capt. George Powell, a British sealer in the sloop *Dove*, and Capt. Nathaniel Palmer, an American sealer in the sloop *James Monroe*, in December 1821. The islands were named Powell's Group on Powell's chart, published in England, Nov. 1, 1822. They were explored and roughly recharted by Capt. James Weddell, British sealer, in 1823. Weddell's chart carried the name South Orkney Islands, which became accepted internationally. Subsequent charts of the group were published by the Fr. exp. under D'Urville, 1837-40, and by the Norwegian whaling captain Petter Sørille, 1912-13. A running survey of the islands was completed in 1933 by DI personnel on the *Discovery II*. Further surveys were made by the FIDS in the period 1947-50.

South Orkneys: see South Orkney Islands 60°35'S., 45°30'W.

South Point: see South Cape 60°48'S., 45°09'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

South Point 60°45'S., 45°42'W.

Point marking the south end of Moe I. in the South Orkney Islands. Named by DI personnel on the *Discovery II* who charted the South Orkney Is. in 1933.

South Point 63°01'S., 60°37'W.

Point 1.75 mi. SW. of Entrance Pt., marking the southernmost point of Deception I., in the South Shetland Islands. The point was charted by a Br. exp., 1828-31, under Foster. The name was proposed in 1949 by the Hydrographic Dept., Admiralty, following a survey of the island by Lt. Cdr. D. N. Penfold, RN, in 1948-49.

South Sandwich Group: see South Sandwich Islands 57°45'S., 26°30'W.

South Sandwich Islands 57°45'S., 26°30'W.

A chain of N.-S. trending volcanic islands lying northward of Weddell Sea and extending 190 mi. from Zavodovski I. on the N. to Southern Thule on the south. Disc. and roughly charted in 1775 by Capt. James Cook who gave the name "Sandwich Land" for the fourth Earl of Sandwich, then First Lord of the Admiralty. Cook concluded he had charted a group of islands or a point of a continent. The islands were more accurately charted by Adm. Thaddeus Bellingshausen in 1819. The Traversay Islands, three islands forming the N. end of the chain, were not seen by Cook but were disc. and first mapped by Bellingshausen. The South Sandwich Islands were surveyed by DI personnel on the *Discovery II* in 1930.

South Shetland Islands 62°00'S., 58°00'W.

A group of more than twenty islands and islets lying northward of Antarctic Peninsula and extending about 280 mi. from Smith Island and Snow Island in the WSW. to Elephant Island and Clarence Island in the ENE. The islands were sighted by Capt. William Smith of the brig *Williams* in February 1819 while cruising close to the northern edge of the islands. The name "New South Britain" was used briefly, but was soon changed to South Shetland Islands. The name is now established international usage.

South Shetlands: see South Shetland Islands 62°00'S., 58°00'W.

South Spit 62°14'S., 58°48'W.

Rocky spit forming the S. side of the entrance to Marian Cove, King George I., in the South Shetland Islands. The descriptive name appears on a British Admiralty chart showing the results of a survey by DI personnel on the *Discovery II* in 1935.

South Stream 77°27'S., 163°44'E.

A meltwater stream 2 mi. southwest of Marble Point on the coast of Victoria Land. It issues from the front of Wilson Piedmont Glacier and flows southeastward to Bernacchi Bay. The stream was studied by Robert L. Nichols, geologist for Metcalf and Eddy, Engineers, Boston, Massachusetts, which made engineering studies here under contract to the U.S. Navy in the 1957-58 season. So named by Nichols because the stream was located south of the U.S. Navy installations in the Marble Point area.

South Thor Island: see Thor Island 64°33'S., 62°00'W.

Southtrap Rock 62°59'S., 56°38'W.

An isolated rock lying W. of Cape Juncal, D'Urville I., in the Joinville Island group. So named by the UK-APC in 1963 because the rock is the southernmost of two groups of features which should be avoided by vessels entering Antarctic Sound from the north.

South Victoria Land: see Victoria Land 74°15'S., 163°00'E.

South West Bay 53°03'S., 73°22'E.

An open bay indenting the W. side of Heard I. immediately N. of Cape Gazert. The bay was roughly charted on an 1860 sketch map compiled by Capt. H. C. Chester, an American sealer. The name "S.W. Bay" appears on an 1882 chart compiled by Ens. Washington I. Chambers aboard the USS *Marion* at Heard I. in January 1882. The bay name appears to have developed from an American sealer name, "Southwest Beach," in use about 1860 for the pebble beach at the N. end of this bay.

Southwest Beach Point: see Spit Point 53°07'S., 73°51'E.

South West Point 54°30'S., 37°06'W.

The SW. point of Annenkov I., off the south-central coast of South Georgia. Annenkov I. was disc. by Capt. James Cook in 1775, and resighted by Adm. Thaddeus Bellingshausen in 1819. The point appears to be first named on a chart based upon DI surveys undertaken in the period 1926-30.

Southwick, Mount 78°46'S., 84°55'W.

A mountain (3,280 m.) near the S. end of the Sentinel Range of the Ellsworth Mtns., located 9 mi. SSE. of Mt. Craddock. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Tech. Sgt. Thomas E. Southwick, USMC, navigator on a Navy R4D reconnaissance flight to these mountains on Jan. 28, 1958.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Southwind Passage 65°18'S., 65°20'W.

A navigable passage between Betbeder Islands and Dickens Rocks, located at the north extremity of the Biscoe Islands. Named by Capt. S.R. Dolber, USCG, commander of the USCGC *Southwind* in her navigation through this passage in the 1967-68 season.

Sowle Nunatak 83°03'S., 66°05'W.

One of the Rambo Nunataks, lying 5.5 mi. SE. of Wagner Nunatak on the W. side of Foundation Ice Stream, in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Melvin L. Sowle, construction mechanic at Plateau Station, winter 1967.

Soyat, Mount 85°52'S., 130°46'W.

A prominent mountain, 2,150 m., in western Wisconsin Range, rising on the E. side of Reedy Glacier just N. of the junction of Norfolk Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Cdr. David Soyat, USN, air operations officer with Squadron VX-6 at McMurdo Station, winter 1962.

Søyla Peak 72°42'S., 3°51'W.

Small peak just N. of Domen Butte in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Söyla (the pillar).

Soza, Mount 71°10'S., 162°34'E.

A massive mountain (2,190 m.) in the Bowers Mtns. that comprises the E. wall of the Rennick Glacier between the entry points of the tributary Alt and Carryer Glaciers. Named by US-ACAN for Ezekiel R. Soza, USGS topographic engineer, a member of USGS Topo North-South, 1961-62, and Topo East-West, 1962-63. The work of the latter expedition included the Bowers Mtns. area.

Spaaman: see Spaaman, Mount 54°16'S., 36°52'W.

Spaaman, Mount 54°16'S., 36°52'W.

Mountain, 1,940 m., standing 1 mi. W. of Sørle Butress in the W. part of the Allardyce Range of South Georgia. The name "Spaaman" is well established in local use. No precise translation is possible; it means roughly a weather prophet or a fortuneteller. The name arose because the emergence of this mountain from its usual heavy cloud cover is said locally to be a sign of good weather.

Spaatz Island 73°12'S., 75°00'W.

A high ice-covered island, 50 mi. long and 25 mi. wide, lying close to the coast of Ellsworth Land, 30 mi. E. of

Smyley Island. The N. side of the island forms a portion of the S. margin of Ronne Entrance; the remainder of the island is surrounded by the ice shelves of Stange Sound and George VI Sound. Finn Ronne and Carl Eklund of the USAS (1939-41) sledged along the N. side of this feature in Dec. 1940. It was photographed from the air and first mapped as an island by the RARE (1947-48) under Finn Ronne. Named by Ronne for Gen. Carl Spaatz, Chief of Staff, USAAF, who gave assistance in providing an airplane for use of RARE.

Spallanzani Point 64°08'S., 61°59'W.

Point forming the N. side of the entrance to Hill Bay and the E. tip of Brabant I., in the Palmer Archipelago. Probably first seen by the BelgAE, 1897-99, under Gerlache. Mapped in 1959 from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC for Lazzaro Spallanzani (1729-1799), Italian physiologist who first interpreted the process of digestion in 1780.

Spanley Rocks 82°58'S., 54°40'W.

A group of about six rocks standing 10 mi. SW. of Cordiner Peaks, marking the northern extremity of Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for John A. Spanley, Jr., cook at South Pole Station, winter 1965.

Spann, Mount 82°03'S., 41°21'W.

A mountain, 925 m., marking the N. extremity of the Panzarini Hills and the Argentina Range, at the NE. end of the Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 in the course of a USN transcontinental nonstop plane flight from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for Staff Sgt. Robert C. Spann, USMC, navigator of the P2V-2N Neptune aircraft during this flight.

Spano Island 66°24'S., 110°36'E.

Small rocky island 0.5 mi. N. of the W. end of Herring I., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Angelo F. Spano, meteorologist and member of the Wilkes Station party of 1960.

Sparkes Bay 66°22'S., 110°32'E.

Bay, 1 mi. wide and indenting 2.5 mi., between Mitchell Pen. on the N. and Robinson Ridge and Odber I. on the S., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in

GEOGRAPHIC NAMES OF THE ANTARCTIC

1947 and 1948. Named by the US-ACAN for Lt. Robert S. Sparkes, USN, military leader at Wilkes Station in 1958.

Spark Point: see Canto Point 62°27'S., 59°44'W.

Spartan Glacier 71°03'S., 68°20'W.

A short valley glacier between Callisto Cliffs and Tombaugh Cliffs on the E. side of Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC after the British dog team known as "The Spartans," used in ascending the glacier, 1969.

Spatulate Ridge 73°28'S., 167°13'E.

An ice-covered ridge in the Mountaineer Range which extends SE. between Suter Gl. and Ridgeway Gl. to the coast of Victoria Land. The name is descriptive of the shape and was applied in 1966 by the NZ-APC.

Spatz, Mount 72°41'S., 160°33'E.

A mountain, 2,270 m., standing 10 mi. WSW. of Mt. Weihaupt in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Richard Spatz, station engineer at McMurdo Station, 1968.

Spaulding Rocks 77°00'S., 143°16'W.

A somewhat isolated group of rocks lying 11 mi. NE. of Mt. Warner in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Howard R. Spaulding, USN, builder at Byrd Station in 1966.

Spaull Point 60°44'S., 45°41'W.

The northern point of Moe Island in the South Orkney Islands. Named by UK-APC after Vaughan W. Spaull, BAS biologist on Signy Island, 1969.

Spayd Island 70°33'S., 72°07'E.

An ice-covered island with prominent rock exposures 2 mi. long, lying at the SE. side of Gillock Island on the E. margin of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from aerial photographs taken by USN Operation Highjump, 1946-47, and named by him for A.W. Spayd, air crewman on Operation Highjump photographic flights in this and other coastal areas between 14° and 164° East longitude.

Spayd Outlier: see Spayd Island 70°33'S., 72°07'E.

Spear Glacier 75°55'S., 68°15'W.

A glacier between the Hauberg Mtns. and Peterson Hills, in eastern Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Milton B. Spear, construction electrician at Eights Station in 1965.

Spear Nunatak 86°32'S., 124°06'W.

A nunatak lying 3 mi. S. of Strickland Nunatak; apparently being the farthest S. outcrop along the E. side of the head of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Milton B. Spear, construction electrician, a member of the wintering party at Byrd Station in 1962.

Spear Spur 82°38'S., 52°22'W.

A rock spur 3 mi. E. of Clinton Spur on the S. side of Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Albert Spear, builder, Ellsworth Station winter party, 1957.

Specimen Nunatak 67°59'S., 66°46'W.

A small but distinctive rock pinnacle that rises above the ice of Swithinbank Glacier about 4 mi. S. of the glacier terminus, in Graham Land. The feature was visited on Feb. 9, 1941 by Herbert G. Dorsey and Joseph D. Healy of the USAS, 1939-41, who gave the name because the pinnacle was a good example of a nunatak projecting above a broad ice field.

Spectator Nunatak 70°37'S., 159°29'E.

An isolated, mainly ice-covered nunatak consisting of hornblende, standing 4 mi. W. of the Pomerantz Tableland, Usarp Mountains. The feature was used as a survey station by the NZGSAE (1963-64), who gave the name because of its aspect.

Speed, Mount 84°30'S., 176°50'W.

A roughly circular, mound-shaped mountain with several low summits at the edge of Ross Ice Shelf, standing at the W. side of the mouth of Shackleton Glacier. Discovered by the USAS (1939-41), and surveyed by A. P. Crary, leader of the U.S. Ross Ice Shelf Traverse (1957-58). Named by Crary for Lt. Harvey G. Speed, USN, Squadron VX-6, who wintered at Little America V in 1957.

Speerschneider Point 65°45'S., 66°10'W.

Point forming the W. side of the entrance to Malmgren Bay on the W. side of Renaud I., in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for

GEOGRAPHIC NAMES OF THE ANTARCTIC

C. I. H. Speerschneder, Danish meteorologist, who was editor of the annual reports on the state of the sea ice in the Arctic issued by Dansk Meteorologisk Institut, 1910-34.

Spellers Cove: see Spiller Cove 62°30'S., 60°43'W.

Spence Harbor 60°41'S., 45°09'W.

Small bay 1 mi. S. of The Turret, along the E. coast of Coronation I., in the South Orkney Islands. Disc. in December 1821 by Capt. George Powell, a British sealer in the sloop *Dove*, who named the bay, and Capt. Nathaniel Palmer, an American sealer in the sloop *James Monroe*.

Spenceley Glacier 54°35'S., 36°19'W.

Glacier 6 mi. long, flowing NW. along the SW. flank of Salvesen Range to Brøgger Gl., in the S. part of South Georgia. Surveyed by the SGS in the period 1951-57, and named for George Spenceley, photographer and mountaineer on the SGS, 1955-56.

Spencer, Cape 68°24'S., 147°29'E.

An ice-covered point marking on the east the seaward end of the depression occupied by the Ninnis Glacier. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Sir Baldwin Spencer, Director of the National Museum, Melbourne, in 1911.

Spencer, Mount 77°17'S., 143°20'W.

Peak 1 mi. S. of Mt. Darling in the Allegheny Mtns. of the Ford Ranges, Marie Byrd Land. Discovered on aerial flights from West Base of the USAS (1939-41) and named for Herbert R. Spencer of Erie, Pa., the Sea Scout commander of Paul Siple, leader of the West Base party of that expedition.

Spencer Bluff: see Santa Cruz Point 62°31'S., 59°33'W.

Spencer Island 77°09'S., 148°04'W.

A small ice-covered island in Marshall Archipelago, lying 2 mi. off the NE. part of Steventon Island within Sulzberger Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lt. Michael P. Spencer, USNR, navigator in LC-130F Hercules aircraft during Operation Deep Freeze 1968.

Spencer Nunatak 85°21'S., 122°11'W.

A prominent nunatak 9 mi. ENE. of Mt. LeSchack, lying between Wisconsin Range and Long Hills in the Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1959-60. Named by US-ACAN for Donald J. Spencer, atmospheric noise scientist, Byrd Station winter party, 1958.

Spencer Peak 54°15'S., 36°29'W.

Peak, 440 m., rising SW. of Sappho Pt., Cumberland Bay, on the N. coast of South Georgia. The name appears to be first used on a 1906 British Admiralty chart and is probably for Lt. P. Spencer, who surveyed in Cumberland Bay from HMS *Sappho* in 1906.

Spencer-Smith, Cape 78°00'S., 167°27'E.

The northernmost cape of White I., in the Ross Archipelago. Named by the NZGSAE (1958-59) for the Rev. Arnold P. Spencer-Smith, chaplain with the Ross Sea Party of the Imperial Trans-Antarctic Exp. (1914-17), who died on March 9, 1916, on the return journey after laying the depots to Mt. Hope for Shackleton's party. He had suffered from scurvy and had been carried for 40 days on a sledge by his companions prior to his death.

Spencers Straits: see English Strait 62°27'S., 59°38'W.

Spencers Straits: see Lewthwaite Strait 60°42'S., 45°07'W.

Spence's Harbour: see Spence Harbor 60°41'S., 45°09'W.

Sperm Bluff 77°05'S., 161°36'E.

A prominent dark bluff, 3 mi. long and over 1,000 m. high, forming the NE. extremity of Clare Range, in Victoria Land. Charted and named by the BrAE, 1910-13. When viewed from the E., the N. face of the bluff suggests the blunt head of a sperm whale.

Sperring Point 67°24'S., 59°31'E.

Rocky point about midway along the W. side of William Scoresby Bay. Disc. and named by DI personnel on the *William Scoresby* in February 1936.

Spert Island 63°51'S., 60°57'W.

Island lying off the W. extremity of Trinity I., in the Palmer Archipelago. Charted by the SwedAE under Nordenskjöld, 1901-4. Named by the UK-APC in 1960 for Sir Thomas Spert, Controller of the King's Ships in the time of Henry VIII, founder and first Master of the Mariners of England, which later became the Corporation of Trinity House.

Speyer, Mount 78°52'S., 160°42'E.

A mountain, 2,430 m., standing directly at the head of Kehle Glacier in the Worcester Range. Discovered by the BrNAE (1901-4) and named for Sir Edgar Speyer, a contributor to the expedition.

Sphagnum Valley 54°16'S., 36°35'W.

Valley sloping NW. from Echo Pass to Cumberland West Bay, South Georgia. First charted by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

SwedAE under Nordenskjöld, 1901-4. Surveyed by the SGS in the period 1951-57 and named by the UK-APC after *Sphagnum*, the bog moss which occurs in this valley.

Sphinx: see Beehive Hill 68°16'S., 66°10'W.

Sphinx, Mount 72°21'S., 31°15'E.

Mountain rising to 2,200 m., the culminating peak of the Prince de Ligne Mtns., standing 9 mi. N. of the Belgica Mountains. Disc. by BelgAE, 1957-58, under G. de Gerlache, who named it for its characteristic form resembling a sphinx.

Sphinx Hill 62°11'S., 58°27'W.

Conspicuous, isolated black hill, 145 m., standing 1.5 mi. NNW. of Demay Pt. on King George I., South Shetland Islands. First charted by the FrAE under Charcot, 1908-10. The descriptive name was given by the UK-APC following a survey by Lt. Cdr. F. W. Hunt, RN, in 1951-52.

Sphinx Island 65°54'S., 64°53'W.

Island 2 mi. long and 1 mi. wide, having a bare rocky summit with vertical faces on all four sides, lying in the entrance to Barilari Bay along the W. coast of Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill.

Sphinxkopf Peak 71°25'S., 11°57'E.

The peak (1,630 m.) at the northern end of Sphinx Mountain, in the northern Wohlthat Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, who named it Sphinxkopf (sphinx head) because of its appearance.

Sphinx Mountain 71°27'S., 11°58'E.

A linear mountain, 1,850 m., trending in a N.-S. direction for 6 mi., standing 5 mi. E. of Nordwestliche Insel Mtns. in the Wohlthat Mtns. of Queen Maud Land. This mountain was disc. by the GerAE, 1938-39, who gave the name Sphinx to its northern peak. The name was extended to this mountain by NorAE, 1956-60, and the Soviet Antarctic Exp., 1960-61, who referred to it as Sfinksen (the sphinx) and Gora Sfinks (sphinx mountain), respectively. The recommended spelling has been chosen to agree with the original German form.

Sphinx Peak 72°17'S., 165°36'E.

A prominent peak on the polar plateau, located W. of Millen Range and 1 mi. S. of Pyramid Peak. Named in association with Pyramid Peak by the Northern Party of NZFMCAE, 1962-63.

Sphinx Rock 60°37'S., 46°05'W.

Rock which lies immediately off the SW. end of Monroe I. in the South Orkney Islands. Charted and named by DI personnel on the *Discovery II* in 1933.

Sphinx Rock 71°27'S., 169°30'E.

A high rock (or island) lying in front of Islands Pt. in the W. part of Robertson Bay, in Victoria Land. Charted by the Northern Party, led by Campbell, of BrAE, 1910-13, who named it for its shape.

Spieden, Cape 66°25'S., 126°44'E.

A cape along the western shore of Porpoise Bay, about 17 mi. SE. of Cape Goodenough. Delineated from aerial photographs taken by USN Operation Highjump (1946-47), and named by US-ACAN after William Spieden, Purser on the sloop *Peacock* during the USEE (1838-42) under Lt. Charles Wilkes.

Spiers Nunatak 85°20'S., 125°36'W.

An isolated nunatak lying 8 mi. WNW. of Mt. Brecher on the N. side of Quonset Gl., in the Wisconsin Range, Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Raymond R. Spiers, cook with the Byrd Station winter party, 1959.

Spießbåene: see Spiess Rocks 54°25'S., 3°29'E.

Spieß Reef: see Spiess Rocks 54°25'S., 3°29'E.

Spiess Rocks 54°25'S., 3°29'E.

A group of submerged rocks which extend up to 0.4 mi. NE. of Cape Lollo, Bouvetøya. First charted in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Named by the Norwegians for Capt. Fritz A. Spiess, leader of the German expedition which visited Bouvetøya in the *Meteor* in 1926.

Spigot Peak 64°38'S., 62°34'W.

Conspicuous black peak 285 m., marking the S. side of the entrance to Orne Harbor on the W. coast of Graham Land. Shown on an Argentine Govt. chart of 1950. The name, given by the UK-APC in 1956, is descriptive of the appearance of the feature; a spigot is a wooden peg.

Spike, The 54°01'S., 37°19'W.

Rock lying between Mollyhawk and Crescent Islands in the Bay of Isles, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Spike Cape 77°18'S., 163°34'E.

A bare rocky point from which the Wilson Piedmont Glacier has receded, lying 4 mi. S. of Dunlop I. on the coast of Victoria Land. First mapped by the BrAE, 1910-13. The name was suggested by Seaman Forde, and adopted by Taylor, for its likeness to Spike Island at Plymouth, England.

Spilite Arch 54°30'S., 37°02'W.

A sea-worn arch formed by a pillar of rock 30 m. high joined to the coastal cliffs by a spilite sill. The arch is located on the N. side of the E. tip of Annenkov Island, South Georgia. Named by the UK-APC.

Spiller Cove 62°30'S., 60°43'W.

Small cove lying immediately W. of Black Pt. along the N. coast of Livingston I., in the South Shetland Islands. The name Spillers Cove was mentioned by Robert Fildes in 1821. It is probably for Captain Spiller of the *Indian* of Liverpool, who visited the South Shetland Islands in 1820-21 and brought back some of the crew of the wrecked *Cora* (Captain Fildes) from Desolation Island.

Spincloud Heights 67°50'S., 67°09'W.

Heights bordering the N. side of Shoesmith Gl. on Horseshoe Island. Surveyed by FIDS in 1955-57, and so named because clouds of spindrift blowing off the heights give warning of approaching storms.

Spindrift Col 60°41'S., 45°37'W.

A col between hills in north-central Signy Island, situated about 1,000 yards southeast of Spindrift Rocks. Named by UK-APC in association with Spindrift Rocks.

Spindrift Rocks 60°42'S., 45°40'W.

Group of ice-free rocks, 15 m. high, lying 0.75 mi. SW. of North Pt. and close to the W. coast of Signy I., in the South Orkney Islands. Surveyed and named in 1947 by the FIDS. The name is descriptive of the spindrift, or sea spray, which forms over these rocks during westerly gales.

Spine Island 60°36'S., 46°02'W.

Narrow island composed of several aligned rock segments, lying between the W. end of Coronation I. and Monroe I. in the South Orkney Islands. Disc. by Capt. George Powell and Capt. Nathaniel Palmer on the occasion of their joint cruise in 1821. So named because of its appearance by DI personnel on the *Discovery II* who surveyed the island in 1933.

Spire, The 68°18'S., 66°53'W.

Isolated rock pinnacle at the NW. end of the Black-wall Mtns. on the S. side of Nený Fjord, Graham

Land. Probably first seen by BGLE sledging parties in 1936-37, though not specifically mapped. First climbed on Jan. 17, 1948 by members of FIDS and RARE. The name was first used in 1949 by William Latady, aerial photographer with RARE.

Spire, The 78°09'S., 161°37'E.

A prominent rock spire, over 2,600 m., surmounting the W. extremity of Rampart Ridge, in Victoria Land. Surveyed and descriptively named in 1957 by the N.Z. party of the CTAE, 1956-58.

Spiret Peak 72°31'S., 3°38'W.

A rock peak in the NW. part of Borg Mtn., in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Spiret (the spire).

Spirit, Cape 78°12'S., 166°45'E.

The easternmost point of Black I., in the Ross Archipelago. Visited by the NZGSAE (1958-59) and so named by them because of the almost constant and spirited winds blowing through the strait between Black and White Islands.

Spiro Hill 62°16'S., 59°00'W.

Hill, 120 m., lying at the head of Edgell Bay, Nelson I., in the South Shetland Islands. The present toponym replaces the provisional name "Sudeste" and was approved by the Geographic Coordinating Committee of Argentina in 1956. It memorializes the mariner of Greek origin, Spiro, who was in the squadron of Admiral Brown and died valiantly by exploding the ship's magazine before its surrender to the enemy.

Spirit Rock 65°13'S., 64°20'W.

A rock awash in the navigable passage between The Barchans and Anagram Is., in the Argentine Islands. The descriptive name was recommended by UK-APC in 1971. "Spirit" means to cause to splash.

Spit, The 61°29'S., 55°30'W.

A shingle and boulder isthmus or spit, some 50 to 80 meters long and 1 meter above the level of high tide, in the east part of Gibbs Island, South Shetland Islands. This feature connects the narrow eastern part of Gibbs Island (the part sometimes referred to as "Narrow Island") with the rest of the island. Presumably named during *Discovery II* surveys in these islands in 1933-35 and 1935-37.

Spit Bay 53°06'S., 73°45'E.

An open bight formed by the NE. coastline of Heard I. and Spit Point, the E. extremity of the island. The

GEOGRAPHIC NAMES OF THE ANTARCTIC

name derives from the conspicuous spit which forms the S. and E. shore of the bight, and may have been given by American sealers at Heard I. in the period following their initiation of sealing there in 1855. The name appears on a chart by the British *Challenger* expedition which visited the island in 1874 and utilized many names then in use by the sealers.

Spit Point 53°07'S., 73°51'E.

The E. tip of a conspicuous spit about 5 mi. long, marking the E. extremity of Heard Island. The feature was charted by early American sealers at Heard Island in the years following initiation of sealing operations there in 1855. The descriptive name was apparently given some years later and is now established in usage.

Spit Point: see Demon Point 57°03'S., 26°40'W.

Spit Point 62°32'S., 59°48'W.

Narrow gravel spit forming the S. side of the entrance to Yankee Hbr., Greenwich I., in the South Shetland Islands. The point was known to early sealers in the area and roughly charted on Powell's map of 1822. It was recharted by DI personnel on the *Discovery II* in 1935 and given this descriptive name.

Spitz Ridge 75°49'S., 114°52'W.

A prominent, mainly ice-covered ridge E. of Cox Bluff, forming the E. end of Toney Mountain, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Armand Lawrence Spitz, ionospheric physicist, who wintered at Byrd Station in 1966 and worked additional summer seasons at Byrd and Hallett Stations.

Spivey, Mount 69°31'S., 69°50'W.

Flat-topped, mainly ice-covered mountain, 2,135 m., standing on the W. side of Toynbee Gl. and 9 mi. S. of Mt. Nicholas, in the N. part of the Douglas Range of Alexander Island. First phot. from the air in 1937 by the BGLE under Rymill. Surveyed from the ground in 1948 by the FIDS and named for Robert E. Spivey, general assistant at Stonington I., who took part in the FIDS sledge journey to George VI Sound in 1949.

Spjotøy: see Canopus Island 67°32'S., 62°59'E.

Spjotøyholmane: see Smith Rocks 67°31'S., 63°01'E.

Spjotøyskjera: see Wiltshire Rocks 67°30'S., 63°07'E.

Splettstoesser Glacier 79°12'S., 84°09'W.

A glacier, 35 mi. long, draining from the plateau just S. of Founders Escarpment and flowing ENE. through the Heritage Range to the S. of Founders Peaks and

Anderson Massif to enter the Minnesota Glacier. Named by the Univ. of Minnesota Ellsworth Mountains Party which explored the area in 1961-62 for John F. Splettstoesser, geologist with that party.

Splinten Peak 72°41'S., 3°59'W.

One of the Seilkopf Peaks, standing just N. of Pillarøygen in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Splinten (the splinter).

Splinter Crag 57°05'S., 26°48'W.

A wedge-shaped mass of rock, truncated by sheer cliffs on the N. and W. and falling more gradually to the S., forming the N. peak of Vindication I., South Sandwich Islands. The name applied by UK-APC in 1971 derives from the pinnacled topography of the vicinity.

Split Rock 64°47'S., 64°03'W.

A distinctive oval-shaped rock, cleanly split in a north-south direction to the water line, lying 0.1 mi. NW. of Janus Island, off the SW. coast of Anvers Island. The descriptive name was given by Palmer Station personnel in 1972.

Splitwind Island 65°02'S., 63°56'W.

Island 0.25 mi. long, lying off the N. end of Booth I., in the Wilhelm Archipelago. Charted by the FrAE, 1903-5, and named by Charcot for Alphonse de Rothschild. To avoid confusion with Rothschild Island near Alexander Island, the UK-APC in 1959 recommended that the name be changed to Splitwind Island. Owing to some physical peculiarity, the wind south of this island is often very different from that north of it.

Spohn, Mount 85°28'S., 171°59'E.

A prominent peak rising from Otway Massif, being the highest summit (3,240 m.) on the ridge bordering the W. side of Burgess Glacier. Named by US-ACAN for Harry R. Spohn, USARP meteorologist at South Pole Station, 1963.

Sponholz Peak 80°08'S., 83°00'W.

A sharp peak, 1,730 m., standing 2.5 mi. S. of Moulder Peak in Liberty Hills, Heritage Range. Named by US-ACAN for Martin P. Sponholz, USARP meteorologist, member of the winter party at Plateau Station in 1966.

Sponskafet Spur 71°39'S., 11°12'E.

A spur extending W. from The Altar, in the Humboldt Mtns. of Queen Maud Land. Disc. and mapped from air photos by the GerAE, 1938-39. Remapped by Norway from air photos and surveys by NorAE, 1956-60, and named Sponskafet (the wooden spoon handle).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sponsors Peak 77°18'S., 161°24'E.

Mountain, over 1,600 m., at the W. side of the mouth of Victoria Upper Gl., in Victoria Land. Named by the VUWAE (1958-59) after sponsors who materially assisted the expedition.

Spooner Bay 67°36'S., 46°15'E.

Bay 6 mi. wide on the coast of Enderby Land, lying 12 mi. E. of Freeth Bay in Alasheyev Bight. Plotted from air photos taken by ANARE in 1956. First visited by the ANARE (*Thala Dan*) under D. F. Styles in February 1961 and named for Sen. W. H. Spooner, then Australian Minister of National Development.

Sporli, Mount 79°33'S., 83°36'W.

A prominent mountain, 2,255 m., standing at the E. side of the head of Driscoll Gl. in the Pioneer Heights, Heritage Range. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for Bernhard N. Sporli, geologist with the party.

Spøta Spur 72°03'S., 4°03'E.

A spur extending from the north-central part of Mt. Hochlin, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Spøta (the knitting needle).

Spouter Peak 65°49'S., 62°23'W.

Conspicuous rock peak, 615 m., standing 4.5 mi. SSW. of Daggoo Peak at the S. side of the mouth of Flask Gl., on the E. coast of Graham Land. Surveyed and partially photographed by the FIDS in 1947. Named by the UK-APC in 1956 after the Spouter Inn, New Bedford, where Herman Melville's story *Moby-Dick* opens.

Spraglegga Ridge 71°55'S., 14°45'E.

A ridge that is partly rock and partly covered by snow, surmounted by Stenka Mtn., standing 4.5 mi. SE. of Kvaeefjellet Mtn. in the Payer Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Spraglegga.

Sprekkefjellet 71°42'S., 5°37'E.

An isolated hill bearing the appearance of two low rock summits separated by a snow col, located 5 mi. N. of the mouth of Austreskorve Glacier and the main mass of the Mühlig-Hofmann Mtns., in Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Sprekkefjellet (the split hill).

Sprightly Island 64°17'S., 61°04'W.

An island 1 mi. NW. of Spring Point in Hughes Bay, Graham Land. First roughly surveyed by the BelgAE (1897-99). Named by UK-APC after the British sealer *Sprightly*, Captain Hughes, which visited this vicinity in 1824-25.

Spring, Cape: see Spring Point 64°18'S., 61°03'W.

Springer Peak 79°24'S., 84°53'W.

A rock peak (1,460 m.) surmounting the N. extremity of Webers Peaks in the Heritage Range, Ellsworth Mountains. Mapped by USGS from ground surveys and USN air photos, 1961-66. Named by US-ACAN for Michael J. Springer, photographer on USN flights over Marie Byrd Land and Ellsworth Land in the 1965-66 season.

Spring Point 64°18'S., 61°03'W.

Point forming the S. side of the entrance to Brialmont Cove, on the W. coast of Graham Land. Disc. in 1898 by the BelgAE under Gerlache. He named it for Prof. W. Spring of the Univ. of Liège, a member of the *Belgica* Commission.

Springtail Bluff 71°02'S., 165°12'E.

The steep, south-facing bluff that borders the eastern half of Mt. Hemphill, in the Anare Mountains. So named by the northern party of NZGSAE, 1963-64, for the find of small insects (*Collembola*) in this location.

Springtail Point 77°10'S., 160°42'E.

A rock point 3 mi. N. of Skew Peak in the Clare Range, Victoria Land. So named by Heinz Janetschek, biologist at McMurdo Station (1961-62), because of a find of springtail insects at this location.

Spume Island 64°48'S., 64°07'W.

Small, low, rocky island lying 1.5 mi. SW. of Bonaparte Pt., off the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit, 1956-57. So named by the UK-APC because heavy seas break over the island in a gale; spume is blown spray.

Spur Point 66°36'S., 63°48'W.

Point at the E. end of a black, rocky spur which extends SE. between Anderson Glacier and Sleipnir Glacier to the W. side of Cabinet Inlet, on the E. coast of Graham Land. This descriptive name was given by the FIDS following their survey in 1947. The feature was photographed from the air during 1947 by the RARE under Ronne.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sputnik Islands 70°22'S., 163°22'E.

Two ice-covered islands, one much larger than the other, located between Capes Cheetham and Williams in the entrance to Ob' Bay. Photographed by the SovAE, 1958, and named after the first Soviet artificial earth satellite.

Square Bay 67°51'S., 67°00'W.

Bay, roughly square in outline and 10 mi. wide, indenting the W. coast of Graham Land between Nicholl Head and Camp Point. Most of the entrance to the bay is occupied by Horseshoe I., which limits access to a narrow southern strait opening onto Marguerite Bay and a narrower northwestern strait opening onto the mouth of Bourgeois Fjord. Mapped and named by the BGLE, 1934-37, under Rymill.

Square End Island 62°10'S., 58°59'W.

Small island 3 mi. NNE. of the W. tip of King George I., in the South Shetland Islands. The descriptive name appears to have been applied by DI personnel on the *Discovery II* who charted the island in 1935.

Square Rock 54°00'S., 38°01'W.

Rock lying 0.3 mi. W. of Cape Alexandra, at the W. end of South Georgia. The name appears to be first used on a 1938 British Admiralty chart.

Squire Island 64°55'S., 63°54'W.

Small island lying immediately NE. of Friar I. in the Wauwermans Is., in the Wilhelm Archipelago. Shown on an Argentine Govt. chart of 1950. Named by the UK-APC in 1958 after one of the characters in Chaucer's *Canterbury Tales*.

Squire Point 54°04'S., 37°08'W.

Point lying at the N. side of the entrance to East Bay, in Prince Olav Hbr., South Georgia. The name appears on a 1938 British Admiralty chart.

Squires Glacier 73°58'S., 62°35'W.

A tributary glacier between the Playfair and Hutton Mountains, flowing ENE. to Swann Gl., in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Peter L. Squires, glaciologist at Byrd Station, summer 1965-66.

Squires Peak 73°56'S., 62°39'W.

A peak marking the eastern extremity of the Playfair Mtns., in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Donald F. Squires, biologist, member of the Palmer Station-Eastwind Expedition, summer 1965-66.

Staack Nunatak 74°16'S., 72°49'W.

A nunatak lying 1 mi. W. of Horner Nunatak, being one of several scattered and somewhat isolated nunataks located 40 mi. N. of the Merrick Mtns., in eastern Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Karl J. Staack, meteorologist at Byrd Station, summer 1965-66.

Stabben: see Stump Mountain 67°29'S., 60°56'E.

Stabben Mountain 71°57'S., 2°52'E.

A prominent mountain immediately N. of Mayr Ridge in the N. part of the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Stabben (the stump).

Staccato Peaks 71°47'S., 70°39'W.

Series of rock peaks extending 11 mi. in a N.-S. direction, rising from the snowfields 20 mi. S. of the Walton Mtns. in the S. part of Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and mapped from photos taken on that flight by W. L. G. Joerg. Remapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. The name, given by the UK-APC, refers to the precipitous and abrupt way in which the peaks rise from the surrounding snowfields and is associated with other muscial names in the vicinity.

Stack Bay 67°03'S., 58°04'E.

A small bay between West Stack and the mouth of Hoseason Gl. in Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936-37) and called "Skotvika" because of the proximity to West Stack, named by personnel of RRS *William Scoresby* in 1936. The name for the bay has been approved in a translated form to agree with West Stack.

Stackpole Rocks 62°41'S., 60°58'W.

Group of rocks lying off the SE. part of Byers Pen., Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 for Edouard A. Stackpole, Curator of the Marine Historical Association, Mystic, Connecticut, historian of early American whaling and sealing in the South Shetland Islands.

Stacy, Banco: see Stanley Patch 62°59'S., 60°38'W.

Stadium, The 61°07'S., 54°42'W.

A cirque with mountains on three sides but open on the E., located 1 mi. N. of Walker Pt., Elephant I.,

GEOGRAPHIC NAMES OF THE ANTARCTIC

South Shetland Islands. The floor of this feature is occupied by a glacier. Mapped by the U.K. Joint Services Exp., 1970-71. UK-APC applied the descriptive name for this bowl-shaped feature.

Stadler, Mount 66°55'S., 53°14'E.

Mountain 2.5 mi. SE. of Mt. Cordwell and 23 mi. SSW. of Stor Hånakken Mtn. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for S. Stadler, weather observer at Wilkes Station in 1961.

Staeffler Ridge 77°20'S., 162°48'E.

A long ridge W. of Hanson Ridge, separating Victoria Lower Gl. from Greenwood Valley in Victoria Land. Named by the US-ACAN in 1964 for George R. Staeffler, topographic engineer with the U.S. Geological Survey, who worked in the McMurdo Sound area during 1960-61.

Stafford Glacier 72°30'S., 168°15'E.

A glacier 5 mi. E. of Rudolph Gl., flowing N. into Trafalgar Gl. in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Sgt. Billy D. Stafford, USA, in charge of the enlisted detachment of the helicopter group which supported the USGS Topo North-South survey of the area in 1961-62.

Stahlman, Mount 85°41'S., 151°36'W.

A mountain over 1,000 m., rising at the E. flank of Scott Gl. between Mt. Wallace and Mt. Hamilton, at the W. end of the Tapley Mtns. in the Queen Maud Mountains. First observed in December 1929 by the ByrdAE geological party under Laurence Gould. Visited in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for James G. Stahlman, newspaper publisher of Nashville, Tenn., a supporter of the expedition.

Staircase Glacier 72°16'S., 168°43'E.

A glacier about 8 mi. long, descending SW. between Mt. Francis and Mt. Titus into Tucker Glacier, in the Admiralty Mountains. So named by the NZGSAE, 1957-58, for its proximity to the "Staircase" survey station, the latter so designated because a long line of steps were cut in the ice in climbing to it.

Stair Hill 66°10'S., 65°14'W.

Hill at the S. side of the head of Holtedahl Bay, on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Ralph Stair of the U.S. National Bureau of Stan-

dards, whose work on the transmissive properties of tinted glass has contributed to the design of satisfactory snow goggles.

Staley, Mount 72°20'S., 164°41'E.

A mountain, 2,560 m., at the S. end of Salamander Range, Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for James T. Staley, biologist at Hallett Station, summer 1962-63.

Stalker, Mount 70°09'S., 65°37'E.

A mountain in the northern part of the Athos Range, Prince Charles Mtns., about 5 mi. NW. of Farley Massif. Plotted from ANARE air photos. Named for J. F. Stalker, weather observer at Mawson Station in 1964.

Stålstuten Ridge 72°04'S., 4°10'E.

A high ridge extending from the NE. side of Mt. Hochlin, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Stålstuten (the bulldozer).

Stammen Peak 72°16'S., 3°26'W.

A peak 1 mi. N. of Babordsranten Ridge, near the SW. end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Stammen (the prow).

Stamper Peak 71°41'S., 169°19'E.

A peak (2,180 m.) 10 mi. ENE. of Mt. Gilruth in the Admiralty Mountains. It rises from the south-central part of the ridge separating Dugdale and Ommanney Glaciers. Mapped by the USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Wilburn E. Stamper, RM2, USN, radioman at McMurdo Station, 1967.

Stancliff, Mount 76°50'S., 145°24'W.

Peak 3 mi. NE. of Saunders Mtn. on the S. side of Crevasse Valley Gl., in the Ford Ranges of Marie Byrd Land. Discovered by a sledging party of the ByrdAE in November 1934, and named for Olin D. Stancliff, a member of that party.

Stancliffe, Mount: see Stancliff, Mount 76°50'S., 145°24'W.

Stancomb-Wills Glacier 75°18'S., 19°00'W.

A large glacier that debouches into eastern Weddell Sea southward of Lyddan Island where it forms the extensive Stancomb-Wills Glacier Tongue. The glacier

GEOGRAPHIC NAMES OF THE ANTARCTIC

was discovered in the course of the U.S. Navy LC-130 plane flight over the coast, Nov. 5, 1967, and was plotted by USGS from photographs obtained at that time. The name was applied by US-ACAN in 1969, in association with the "Stancomb-Wills Promontory" (now Stancomb-Wills Glacier Tongue), the seaward edge of which was discovered and named by Shackleton in January 1915.

Stancomb-Wills Glacier Tongue 75°00'S., 22°00'W.

A very extensive glacier tongue, the seaward projection of the Stancomb-Wills Glacier into eastern Weddell Sea. The cliffed front of this feature was discovered in January 1915 by a British expedition led by Shackleton. He named it "Stancomb-Wills Promontory" after Dame Janet Stancomb-Wills, one of the principal donors of the expedition. In 1969, US-ACAN amended the name to Stancomb-Wills Glacier Tongue. This followed the U.S. Navy LC-130 aircraft flight over the area, Nov. 5, 1967, on which the glacier was discovered and the relationship with the glacier tongue was first observed.

Stancomb-Wills Ice Tongue: see Stancomb-Wills Glacier Tongue 75°00'S., 22°00'W.

Stancomb-Wills Promontory: see Stancomb-Wills Glacier Tongue 75°00'S., 22°00'W.

Standifer Bluff 72°32'S., 95°00'W.

Conspicuous rock bluff, a component of the Smith Bluffs which form the NW. coast of Dustin Island, standing 10 mi. WSW. of the N. tip of the island. The bluff was photographed from helicopters of the USS *Burton Island* and *Glacier* in the USN Bellingshausen Sea Exp., February 1960. Named by US-ACAN for J. N. Standifer, USGS photographic specialist in Antarctica in the 1967-68 season.

St. Andrew Bay: see Saint Andrews Bay 54°26'S., 36°11'W.

Stranding Inlet 66°00'S., 61°03'W.

The easternmost of three inlets on the N. coast of Jason Pen., Graham Land. It is 9 mi. long and is filled with ice shelf. Surveyed by the FIDS in 1953. Named in 1956 by the FIDS for Anthony J. Stranding, geologist at Hope Bay in 1953 and 1954, who visited Jason Pen. with the survey party.

Stanford Nunatak 76°51'S., 143°18'W.

A small, somewhat isolated nunatak located 3.5 mi. NE. of Mt. Morgan in the eastern part of the Gutenko Nunataks, Marie Byrd Land. Mapped by USGS from

surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Thomas H. Stanford, ionospheric physicist at Byrd Station, 1970.

Stanford Plateau 85°57'S., 140°00'W.

An icecapped plateau, over 3,000 m. high and 15 mi. wide, between the heads of Leverett and Kansas Glaciers. The plateau unites with the interior ice sheet to the S., but terminates to the N. in the Watson Escarpment. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Stanford University which has sent a number of researchers to study Antarctica.

Stange Sound 73°10'S., 76°40'W.

A sound about 60 mi. long and 25 mi. wide along the coast of Ellsworth Land. An ice shelf occupies the sound, which is bounded on the west by Smyley and Case Islands, on the south by the mainland, on the east by Spaatz Island and on the north by open water in Ronne Entrance. Photographed from the air and roughly plotted by the RARE (1947-48) under Finn Ronne. Named for Henry Stange of New York, a contributor to RARE who gave much time to assisting in preparations for the expedition.

Stanley, Mount 84°09'S., 165°29'E.

A peak, 3,220 m., standing NE. of the head of Wyckoff Gl. near the western limits of Grindley Plateau, Queen Alexandra Range. Named by the BrAE (1907-9) for the eldest brother of Dr. E. S. Marshall, a member of the expedition. This identification is the NZGSAE (1961-62) interpretation of the original positioning by the BrAE (1907-9).

Stanley Island 66°32'S., 63°40'W.

Island 2 mi. long and 520 m. high, lying 4 mi. NE. of Spur Pt. in the W. part of Cabinet Inlet, off the E. coast of Graham Land. Charted by the FIDS in 1947 and named for Rt. Hon. Oliver F. G. Stanley, M.P., Sec. of State for the British Colonies, who played an important part in establishing the survey. This island was photographed from the air during 1947 by the RARE under Ronne.

Stanley Kemp Peak: see Kemp Peak 67°26'S., 59°24'E.

Stanley Patch 62°59'S., 60°38'W.

Shoal lying in Port Foster, 2 mi. WNW. of Fildes Pt., Deception I., in the South Shetland Islands. Named after Stanley, Falkland Islands, by Lt. Cdr. D. N. Penfold, RN, following his survey in 1948-49.

Stansfield, Mount 66°41'S., 52°51'E.

Mountain 2.5 mi. SE. of Mt. Berrigan and 20 mi. WSW. of Stor Hånakken Mtn. in Enderby Land. Plot-

GEOGRAPHIC NAMES OF THE ANTARCTIC

ted from air photos taken from ANARE aircraft in 1957. Named by ANCA for P. B. Stansfield, supervising radio technician at Wilkes Station in 1961.

Stanton Group 67°32'S., 61°38'E.

Group of small rocky islands close to the coast at the E. side of Utstikkar Bay, 4 mi. NE. of Falla Bluff. Disc. in February 1931 by the BANZARE under Mawson. He named it for A. M. Stanton, first officer of the *Discovery*, 1930-31.

Stanwix Peak 70°43'S., 162°39'E.

A distinctive peak (2,240 m.) which surmounts the S. side of the head of Astapenko Gl. in the Bowers Mountains. The peak was used as a reference object by surveyor S. Kirkby, with the ANARE (*Thala Dan*), 1962. Named by ANARE for Capt. John Stanwix, helicopter pilot with the expedition.

Stanwix Ridge 69°20'S., 158°20'E.

A broad, partly ice-covered coastal ridge or promontory in the Wilson Hills. It extends to the SW. part of Davies Bay immediately W. of McLeod Glacier. Photographed from aircraft of USN Operation Highjump, 1946-47. First visited in March 1961 by an airborne field party from ANARE (*Magga Dan*, 1961) led by Phillip Law. Named for Capt. John Stanwix, helicopter pilot with the expedition.

Starbuck Crater 76°01'S., 133°11'W.

A small snow-filled crater at the base of the W. slope of the Mt. Bursey massif, in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for James E. Starbuck of Bartol Research Foundation, who studied cosmic rays at the South Pole Station in 1970.

Starbuck Glacier 65°38'S., 62°09'W.

Glacier 15 mi. long, flowing E. and entering Scar Inlet immediately N. of Mt. Queequeg, on the E. coast of Graham Land. Surveyed and partially photographed by the FIDS in 1947. The entire glacier was photographed by the FIDASE in 1955-56, and mapped from these photos by the FIDS in 1957. Named by the UK-APC after the first mate on the *Pequod* in Herman Melville's *Moby-Dick*.

Starbuck Peak 54°44'S., 36°12'W.

Peak, 1,435 m., standing between the heads of Risting Gl. and Harmer Gl. in the S. part of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Alexander Starbuck, American whaling historian; author of *History of the American Whaling Fishery From Its Earliest Inception to the Year 1876*.

Starcliffe, Mount: see Stancliff, Mount 76°50'S., 145°24'W.

Starfish Cove 60°42'S., 45°37'W.

Small cove close N. of Balin Pt. on the E. side of Signy I. in the South Orkney Islands. Roughly surveyed in 1933 by DI personnel. So named by the FIDS, following their survey of 1947, because of the large number of starfish in the bottom fauna.

Stark Point 64°02'S., 57°44'W.

A rocky point on the E. side of Croft Bay, northern James Ross Island. It is formed by almost vertical cliffs which rise from the sea to 285 meters. Surveyed by FIDS in Aug. 1953. The descriptive name was applied by UK-APC.

Stark Rock 65°15'S., 64°33'W.

Conspicuous rock lying 2 mi. south of Crulls Islands, in the Wilhelm Archipelago. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. The name, given by the UK-APC in 1959, is descriptive.

Starlight, Mount 70°12'S., 64°30'E.

An extensive ridge of exposed brown rock with steep sides but no sharp peaks, standing at the W. end of the Athos Range in the Prince Charles Mountains. Sighted in November 1955 by an ANARE party led by J. M. Béchervaise. Named to commemorate the so-called Operation Starlight during which depots were laid for further work and mapping and geological investigations accomplished.

Starr Lake 77°50'S., 166°40'E.

A small meltwater lake which is a source of water for McMurdo Station on Ross Island. The lake is situated in the area of constant snow cover on Hut Point Peninsula, approximately 0.5 mi. N. of the station and midway between First Crater and Crater Hill. The name Starr Lake came into general use at McMurdo Station for this feature in the early 1970's. It is named after James W. Starr, steelworker, USN, who was closely associated with the development of the lake as a source of station water.

Starr Nunatak 75°54'S., 162°35'E.

A conspicuous nunatak marking the N. side of the mouth of Harbord Gl., on the coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1957-62. Named by US-ACAN for James W. Starr, USN, steelworker at McMurdo Station, 1966 and 1967 summer seasons.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Starr Peninsula 71°56'S., 99°46'W.

An ice-covered peninsula about 10 mi. long, between Wagoner and Potaka Inlets on the N. side of Thurston Island. Delineated from aerial photographs taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Robert B. Starr, oceanographer aboard the USS *Glacier* in this area during the USN Bellingshausen Sea Exp. in February 1960.

Starshot Glacier 81°20'S., 160°20'E.

A glacier 50 mi. long, flowing from the polar plateau eastward through the Churchill Mtns., then N. along the W. side of Surveyors Range, entering the Ross Ice Shelf S. of Cape Parr. So named by the NZGSAE (1960-61) because the area was surveyed with the use of star observations.

Start, Punta: see Essex Point 62°35'S., 61°12'W.

Start, The: see Start Point 62°35'S., 61°13'W.

Start Point 62°35'S., 61°13'W.

Point marking the NW. end of Livingston I., in the South Shetland Islands. Disc. by Edward Bransfield in January 1820, and so named by him because of its resemblance to a point on the S. coast of England by the same name and because it was the place where his operations began.

Staten Island Heights 76°49'S., 160°57'E.

A predominantly flat, ice-covered upland between the Greenville and Alatna Valleys in the Convoy Range of Victoria Land. Mapped by USGS from ground surveys and Navy air photos. Named by US-ACAN in 1964 for the USS *Staten Island*, an icebreaker in the American convoy to McMurdo Sound in several seasons beginning in 1956-57.

Station Nunatak 64°23'S., 57°03'W.

Isolated ice-free nunatak near the N. coast of Snow Hill I. in the James Ross I. group. It rises to 150 m. and stands 4.5 mi. SW. of the E. end of the island. First surveyed in 1902 by the SwedAE under Nordenskjöld, who so named it because of its proximity to the expedition's winter station.

Stations Nunatak: see Station Nunatak 64°23'S., 57°03'W.

Station Tarn 68°35'S., 77°58'E.

A small fresh-water pond near the W. end of Breidnes Pen., Vestfold Hills, immediately N. of Heidemann Bay. So named by the first ANARE party at Davis Station because of its proximity.

Statler Hills 69°55'S., 73°11'E.

A group of low rocky hills just N. of Rogers Glacier on the E. margin of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946-47), and named by him for L.R. Statler, air crewman on Operation Highjump photographic flights over this and other coastal areas between 14° and 164° East longitude.

Stauffer Bluff 76°10'S., 111°46'W.

A rocky bluff at the northeast extremity of Mount Takahé in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy tricamera aerial photos, 1959-66. Named by US-ACAN for Bernhard Stauffer (Univ. of Bern, Switzerland), USARP glaciologist at Byrd Station, 1968-69 and 1969-70.

Stauren Peak 71°51'S., 6°36'E.

A peak on Staurneset Spur, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Stauren (the pole).

Staurneset Spur 71°50'S., 6°33'E.

A rock spur extending NW. from Jökulkyrkja Mtn. in the Mühlig-Hofmann Mtns., Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Staurneset (the pole point).

Stäven: see Stammen Peak 72°16'S., 3°26'W.

Stayaway Skerries 64°45'S., 64°18'W.

Group of rocks and low-lying reefs awash, lying 1.5 mi. S. of Cape Monaco, off the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit in 1956-57. So named by the UK-APC as a caution to mariners; the group has patches of shoal water extending for some distance from it and should be given a wide berth.

Steagall Glacier 85°38'S., 161°54'W.

A tributary glacier, 15 mi. long, draining the E. slopes of Rawson Plateau between Mt. Alice Gade and Mt. Deardorff and flowing N. to enter Bowman Gl., in the Queen Maud Mountains. First mapped by the ByrdAE, 1928-30. Named by US-ACAN for Jack Steagall, meteorologist, South Pole Station winter party, 1961.

Stedet Island 67°33'S., 61°27'E.

A small island lying at the head of Utstikkar Bay, just N. of Falla Bluff, Mac. Robertson Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Stedet (the place).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Steele, Mount 69°50'S., 159°40'E.

A mountain, 1,050 m., situated 4.5 mi. ENE. of Stevenson Bluff on the divide between Suvorov Glacier and Manna Glacier, in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Carlett D. Steele, Chief Aviation Machinist's Mate of Squadron VX-6. Steele participated in several Deep Freeze operations between 1957 and 1968 as helicopter crewmember and maintenance supervisor.

Steele Island 71°00'S., 60°40'W.

A snow-covered island, 12 mi. long from east to west and 10 mi. wide, rising above the Larsen Ice Shelf off the E. coast of Palmer Land, 12 mi. SE. of Cape Sharbonneau. The steeply-sloping sides of the island are crevassed, but no rock is exposed. Disc. by members of East Base of the USAS in 1940. Named for Clarence E. Steele, tractor driver for the East Base.

Steel Peak 70°54'S., 63°27'W.

A high peak 1.5 mi. N. of Mt. Nordhill in the east ridge of the Welch Mtns. of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Capt. Henry E. Steel, USCG, Commanding Officer of USCGC *Edisto* during Operation Deep Freeze, 1969 and 1970, and Commander of the Antarctic Peninsula Ship Group, 1969.

Steepholm 60°47'S., 45°09'W.

The southernmost island in the northern group of the Robertson Is. in the South Orkney Islands. It lies close N. of Skilling I. and forms the N. side of the navigable channel through the Robertson Islands. The Robertson Is. were disc. by Capt. George Powell and Capt. Nathaniel Palmer in December 1821. The northern group, except Matthews I. which was thought to be part of Coronation I., was named "Bratholm" by Petter Sørllø in 1912-13. The name was later corrected to the plural form, "Brattholmene" (steep islands), by Sørllø. Subsequently "Bratholm" was restricted by others to the one island described. The name Steepholm, derived from the forms used by Sørllø but restricted to the one island, was recommended by the UK-APC following surveys by the FIDS in 1948-49.

Steeple, The 63°26'S., 57°03'W.

Rocky ridge, 465 m., forming the NW. arm of horse-shoe-shaped Mt. Carrel. It rises on the E. side of Depot Gl., 1.5 mi. S. of the head of Hope Bay, at the NE. end of Antarctic Peninsula. Disc. by the SwedAE, 1901-4, under Nordenskjöld. The descriptive name was applied by the FIDS, 1945.

Steeple Peaks 71°38'S., 67°03'W.

A line of five distinct peaks, the northeasternmost being Mt. Ward, located on the western edge of Palmer Land, south of Conchie Glacier. So named by UK-APC because of a number of steeple-like features visible among the peaks.

Steeple Point 71°43'S., 67°19'W.

A low ice-covered point on the W. coast of Palmer Land, approximately 2 mi. W. of Sandau Nunatak of the Steeple Peaks. The point was named by UK-APC in association with the Steeple Peaks.

Steeple Rock: see Sail Rock 63°02'S., 60°57'W.

Steep Point 54°06'S., 37°06'W.

Point lying NE. of Brown Pt. on the E. side of Possession Bay, South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Steere, Mount 76°44'S., 117°49'W.

Prominent mountain (3,500 m.) standing 4 mi. NNW. of Mt. Frakes in the Cray Mountains of Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for William C. Steere, biologist at McMurdo Station, 1964-65 season.

Steershead Crevasses 81°10'S., 164°00'W.

A large and distinctive area of crevasses 70 miles south of Roosevelt Island in the east part of Ross Ice Shelf. The outline of the crevasses resembles an immense steer's head. This is a unique landmark on the direct line of flight between McMurdo Station and Byrd Station, and U.S. Navy pilots regularly observed the "steer's head" as a means of verifying their navigation. This was noted by Kenneth Bertrand and Fred Alberts during a November 1962 flight from McMurdo to Byrd. On their recommendation, the name Steershead Crevasses was approved by the U.S. Advisory Committee on Antarctic Names.

Stefan Ice Piedmont 66°40'S., 66°30'W.

A small ice piedmont overlying the coast between Cape Rey and Holdfast Point, Graham Land. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Josef Stefan (1835-1893), Austrian physicist who in 1889 pioneered the theory of heat flow in a freezing ice layer and first used it to calculate rates of sea ice growth in the Arctic.

Stefansson Bay 67°20'S., 59°08'E.

Bay indenting the coast for 10 mi. between Law Promontory and Fold Island. Mawson of the BANZARE

GEOGRAPHIC NAMES OF THE ANTARCTIC

applied the name to a sweep of the coast W. of Cape Wilkins which he observed on about Feb. 18, 1931. Exploration by DI personnel on the *William Scoresby*, 1936, and the Lars Christensen exp., 1936-37, defined this section of the coast more accurately. Named for Vilhjalmur Stefansson, Arctic explorer.

Stefansson Inlet: see Smith Inlet 70°25'S., 62°00'W.

Stefansson Sound: see Stefansson Strait 69°26'S., 62°25'W.

Stefansson Strait 69°26'S., 62°25'W.

An ice-filled strait 35 mi. long and 3 to 10 mi. wide, between the E. coast of Palmer Land and Hearst Island. This strait was first sighted by Sir Hubert Wilkins at the S. end of his flight of Dec. 20, 1928, and was named by him for Vilhjalmur Stefansson. He believed it to be a strait cutting off what is now known to be Antarctic Peninsula from the main land mass of Antarctica. The true orientation of the strait was determined by members of the USAS who charted this coast by land and from the air in 1940.

Steinane: see Stein Islands 69°39'S., 75°47'E.

Steinbotnen Cirque 71°18'S., 13°21'E.

A cirque in the W. wall of Steinmulen Shoulder, in the Gruber Mtns. of the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Steinbotnen (the stone cirque).

Steinemann Island 66°52'S., 67°55'W.

An island off the NE. coast of Adelaide I., about 10 mi. SW. of Mt. Vélain. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for Samuel Steinemann, Swiss physicist who has made laboratory investigations on the flow of single and polycrystalline ice.

Steinen: see Bypass Nunatak 68°01'S., 62°28'E.

Steinfeld, Mount 75°12'S., 135°51'W.

Mountain (685 m.) at the W. end of an ice-covered ridge that overlooks the confluence of Hull Glacier and Kirkpatrick Glacier, near the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Edward F. Steinfeld, Jr., USARP meteorologist at Byrd Station, 1962.

Steinfla Nunatak 72°12'S., 14°23'E.

The westernmost of a small group of nunataks which mark the SW. extremity of the Payer Mtns. in Queen

Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Steinfla (the stone file).

Steinheil Point 64°51'S., 62°41'W.

Point 5 mi. SE. of Duthiers Pt. on the W. side of Andvord Bay, on the W. coast of Graham Land. First roughly charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Adolf Steinheil (1832-1893), German mathematical optician who designed and introduced an improved aplanatic camera lens in 1866 and, independently, the telephoto lens in 1891.

Stein Islands 69°39'S., 75°47'E.

Two rock islands in the E. part of Publications Ice Shelf, about 8 mi. SE. of the Søstrene Islands. Mapped from air photos by the Lars Christensen Exp. (1936) and named Steinane (the stones).

Steinkumpen: see Stein Nunataks 71°36'S., 1°15'W.

Steinmulen Shoulder 71°18'S., 13°25'E.

A rock shoulder extending N. from Mt. Zimmermann in the Gruber Mtns. of the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Steinmulen (the stone snout).

Steinnes 69°22'S., 76°34'E.

A rock point on the SE. shore of Prydz Bay, about 4 mi. ENE. of Larsemann Hills. First mapped from air photographs by the Lars Christensen Exp. (1936) and named Steinnes (stone point).

Stein Nunatak 71°42'S., 7°58'E.

The largest of the Sørensen Nunataks, in the Drygalski Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named for Stein Sørensen, radio operator with NorAE (1956-58).

Stein Nunataks 71°36'S., 1°15'W.

A group of nunataks about 15 mi. E. of Witte Peaks on the NE. part of Ahlmann Ridge, in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Willy Stein, boatswain of the expedition. Surveyed by NBSAE, 1949-52.

Steinskaregga Ridge 71°49'S., 8°54'E.

A bare rock ridge just N. of Steinskaret Gap in the Kurze Mountains of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named Steinskaregga (the stone gap ridge).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Steinskaret Gap 71°51'S., 8°57'E.

An ice-filled gap in the central Kurze Mountains, just S. of Steinskaregga Ridge. Mapped from surveys and air photos by NorAE (1956-60) and named Steinskaret (the stone gap).

Steinsteinen: see Stein Nunatak 71°42'S., 7°58'E.

Stejneger Peak 54°00'S., 38°04'W.

Conspicuous rocky peak, 190 m., at the head of Evermann Cove on Bird I., South Georgia. Surveyed by the South Georgia Biological Exp., 1958-59. Named by the UK-APC in 1960 for Leonhard Stejneger (1851-1943), American zoologist who made important investigations of fur seals and birds in the islands of the Bering Sea at the end of the 19th century; member of the Joint British-American Commission for Fur Seal Investigation in the Bering Sea, 1896.

Stella Creek 65°15'S., 64°16'W.

Narrow winding passage extending from Thumb Rock to the SE. end of Winter I. and lying between Winter I. and Galindez I. in the Argentine Is., Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill. The expedition motor boat was named the *Stella*.

Stella Inlet: see Stella Creek 65°15'S., 64°16'W.

Stellar Crests 71°05'S., 69°15'W.

Four prominent snow-covered peaks, 2,000 m., surmounting LeMay Range W. of the N. part of Planet Heights in central Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for their proximity to features named for planets and their satellites.

Stench Point 56°18'S., 27°36'W.

Conspicuous point forming the W. extremity of Zavodovski I., South Sandwich Islands. The feature was named West Bluff in 1930 by DI personnel on the *Discovery II*, but the name has been changed to avoid duplication. The new name applied by UK-APC in 1971 refers to the evil-smelling volcanic fumes emitted in this vicinity.

Stene Point 60°39'S., 45°42'W.

Point lying 1.5 mi. W. of Cape Vik on the S. coast of Coronation I., in the South Orkney Islands. Surveyed by DI personnel in 1933, and resurveyed by the FIDS in 1948-49. Named by the UK-APC for K. O. Stene, captain of the floating factory *Normanna* which operated in the South Orkney Is. in 1912-13.

Stenhouse Bluff 62°04'S., 58°24'W.

Southern face of a rocky knoll at the head of Visca Anchorage, Admiralty Bay, on King George I. in the South Shetland Islands. First charted by the FrAE, 1908-10, under Charcot. Named for Cdr. J. R. Stenhouse, RNR, captain of the *Discovery* in these waters in 1927.

Stenhouse Glacier 62°04'S., 58°25'W.

Small glacier flowing into the head of Visca Anchorage immediately W. of Stenhouse Bluff, on King George I. in the South Shetland Islands. Charted but not named by the FrAE, 1908-10, under Charcot. The name West Stenhouse Glacier arose locally for this feature in 1958 from association with Stenhouse Bluff, but the shortened form recommended by UK-APC in 1960 has been adopted.

Stenhouse Nunatak: see Pratt, Mount 85°24'S., 176°41'E.

Stenhouse Peak 54°15'S., 36°33'W.

Peak, 525 m., standing 1 mi. W. of Maiviken, Cumberland Bay, on the N. coast of South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Stenka Mountain 71°55'S., 14°46'E.

Mountain, 2,350 m., forming the central part of Spraglegga Ridge in the Payer Mtns. of Queen Maud Land. Disc. and plotted from air photos by the GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Gora Stenka (little wall mountain) by the USSR in 1963.

Stepaside Spur 78°18'S., 161°25'E.

Prominent spur, 1,750 m. high, at the E. side of Upper Staircase and the Skelton Gl., in Victoria Land. Surveyed and named in 1957 by the N.Z. party of the CTAE, 1956-58.

Stephen, Mount 75°42'S., 161°43'E.

A mountain, 810 m., standing 6 mi. E. of Mt. Howard in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Ronald R. Stephen, meteorologist with the South Pole Station winter party, 1966.

Stephen Austin, Mount: see Austin, Mount 74°53'S., 63°10'W.

Stephen Island 75°50'S., 146°54'W.

An ice-covered island about 4 mi. long lying at the W. side of Nickerson Ice Shelf, off the coast of Marie Byrd

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. Mapped from surveys by the USGS and U.S. Navy air photos (1959-65). Named by US-ACAN for Alexander Stephen (1795-1875), Scottish shipbuilder of Alexander Stephen and Sons, whose firm built the *Terra Nova* (1884), the *Nimrod* (1866) and the *Bear* (1874), used respectively by Captain Robert Scott, Sir Ernest Shackleton and Admiral Richard Byrd in their expeditions to the Antarctic.

Stephens, Mount 83°23'S., 51°27'W.

A prominent mountain, 2,065 m., surmounting the W. extremity of Saratoga Table in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Lt. Cdr. H. E. Stephens, USN, leader of the unit from Mobile Construction Battalion One which constructed Ellsworth Station in January-February, 1957.

Stephenson, Mount 69°49'S., 69°43'W.

Highest mountain in the Douglas Range, 2,985 m., standing at the heads of Toynbee and Sedgwick Glaciers 8 mi. W. of George VI Sound, on the E. side of Alexander Island. Probably first seen in 1909 by the FrAE under Charcot, but not recognized as part of the Douglas Range. First surveyed in 1936 by Stephenson, Fleming, and Bertram of the BGLE under Rymill. The E. side of the mountain was resurveyed in 1948 by the FIDS who named the feature for Alfred Stephenson, surveyor and leader of the BGLE party to George VI Sound in 1936.

Stephenson Bastion 80°46'S., 27°12'W.

A mountain massif with steep rock cliffs on its S. side, rising to 1,850 m. in the south-central part of Shackleton Range. First mapped in 1957 by the CTAE; photographed by U.S. Navy aircraft in 1967. Named by UK-APC for Philip J. Stephenson, Australian geologist with the transpolar party of the CTAE in 1956-58.

Stephenson Glacier 53°06'S., 73°42'E.

A glacier close W. of Dovers Moraine on the E. side of Heard Island. Surveyed by ANARE in 1948. Named by ANCA for P. J. Stephenson, ANARE geologist on Heard I. in 1963.

Stephenson Nunatak 72°11'S., 69°05'W.

Prominent, pyramid-shaped rock nunatak, 640 m., which rises 300 m. above the surrounding ice at the NW. side of Kirwan Inlet in the SE. part of Alexander Island. Disc. and roughly surveyed in 1940-41 by Ronne and Eklund of the USAS. Resurveyed in 1949 by the FIDS and named by the UK-APC for Alfred Stephenson, surveyor with the BGLE, who led a sledge party S. into George VI Sound to about 72° S. in 1936.

Stephenton Island: see Steventon Island 77°15'S., 148°15'W.

Stepping Stones 64°47'S., 64°00'W.

Three prominent rocks lying 0.5 mi. N. of Limitrophe Island, off the SW. coast of Anvers Island. The rocks form one of a series of small boat refuges for parties working between nearby Palmer Station and Biscoe Bay, and therefore form "stepping stones" for coastal trips. Named by Palmer Station personnel in 1972.

Stepup Col 63°34'S., 57°51'W.

A snow-covered N.-S. running col linking Broad Valley and Cugnot Ice Piedmont, at the E. end of Louis Philippe Plateau, Trinity Peninsula. The name given by UK-APC is descriptive, as 100 feet in height is gained when the col is traversed in a northerly direction.

Sterna Island 65°23'S., 64°14'W.

Small island lying 0.7 mi. N. of Darboux I., off the W. coast of Graham Land. First charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because a large number of terns (*Sterna vittata*) breed here.

Sterneck, Cape 64°04'S., 61°02'W.

A bold, black cliff on a projecting point of land forming the N. side of the entrance to Hughes Bay, on the W. coast of Antarctic Peninsula. In 1898, the BelgAE under Lt. Adrien de Gerlache explored this area and named this cape for the German geophysicist whose apparatus was used on the expedition.

Sterneck Island: see Apéndice Island 64°11'S., 61°02'W.

Sterrett Islands 73°48'S., 103°23'W.

A small group of islands in Amundsen Sea, lying 5 mi. NW. of Edwards Is. and 5 mi. W. of Canisteo Peninsula. Plotted from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for James M. Sterrett, biologist with the ByrdAE in 1933-35.

Steuri Glacier 76°23'S., 112°24'W.

A glacier descending the southern slopes of Mt. Takahe in Marie Byrd Land. The feature is 3.5 mi. west of Möll Spur. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959-66. Named by US-ACAN for Heinrich Steuri (Univ. of Bern, Switzerland), USARP glaciologist at Byrd Station, 1968-69.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Stevenson Bluff 69°51'S., 159°28'E.

A bluff 4 mi. NW. of Mt. Ellery in Wilson Hills. The bluff forms a portion of the divide between the Manna and Suvorov Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for William P. Stevenson, Aviation Machinist's Mate of USN Squadron VX-6, a helicopter crewmember at McMurdo Station during 1968.

Stevenson Cove 66°15'S., 110°37'E.

A cove on the N. side of Clark Peninsula, about 2 mi. ENE. of Wilkes Station. This region was photographed from the air by USN Op. Hjp. (1946-47), ANARE (1956) and the Soviet exp. (1956). The cove was included in a 1957 ground survey by C. R. Eklund. He named it for Andrew Stevenson, economic advisor to the U.S. House of Representatives Committee on Interstate and Foreign Commerce, author of a report for the Committee on the IGY in the Arctic and Antarctic.

Stevenson Glacier 70°06'S., 72°48'E.

A glacier flowing NW. into the eastern side of the Amery Ice Shelf, just north of Branstetter Rocks. Delineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump (1946-47), and named by him for Lt. James C. Stevenson, co-pilot on Operation Highjump photographic flights in the area.

Stevenson Island 67°26'S., 61°11'E.

Small island 120 m. high, lying at the E. side of Colbeck Arch., 2 mi. NE. of Cape Simpson. Disc. in February 1931 by the BANZARE under Mawson. He named it for Capt. J. B. Stevenson, RN, a member of the Australian *Aurora* Committee, 1916-17.

Stevenson Peak 72°25'S., 168°17'E.

A peak, 1,780 m., standing 5 mi. WNW. of Bypass Hill in the Cartographers Range, Victory Mountains, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Robert G. Stevenson, geologist at McMurdo Station, 1967-68.

Stevens Rock 67°37'S., 64°42'E.

A small, lone bare rock 1.5 mi. E. of Strahan Gl. and 1 mi. off the coast. Disc. in February 1931 by the BANZARE under Mawson, who named it for Cdr. C. W. Stevens, Hydrographic Dept., Royal Australian Navy.

Stevensskjeret: see Stevens Rock 67°37'S., 64°42'E.

Steventon Island 77°15'S., 148°15'W.

A broad ice-covered island about 24 mi. long, lying W. of Court Ridge in the Sulzberger Ice Shelf. Mapped

from surveys by the USGS and U.S. Navy air photos (1959-65). Named by US-ACAN for Richard F. Steventon, USN, Petty Officer in charge of Eights Station, 1963.

Stever Ridge 72°51'S., 168°02'E.

Irregular ridge stretching SE. from Mt. Riddolls to the confluence of Behr Gl. and Borchgrevink Gl. in the Victory Mtns. of Victoria Land. Named by US-ACAN for H. Guyford Stever, Director of the National Science Foundation, 1972-74, which has overall administrative responsibility for the U.S. Antarctic Research Program. He traveled and worked in Antarctica on two occasions, 1973 and 1975.

Stewart Buttress 79°07'S., 28°30'W.

A rock bluff (1,005 m.) 2 mi. S. of Marø Cliffs in the Theron Mountains. First mapped by CTAE (1956-57) and named for Reginald H.A. Stewart, meteorologist with the advance party of the CTAE in 1955-56.

Stewart Glacier 77°29'S., 151°25'W.

A glacier on the N. side of Edward VII Peninsula, flowing NE. along the E. side of Howard Heights into Sulzberger Ice Shelf. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lt. Cdr. Wayne B. Stewart, USN, co-pilot in LC-130F Hercules aircraft during Operation Deep Freeze 1968.

Stewart Heights 73°29'S., 163°58'E.

Small, partly snow-covered heights which rise to 2,760 m., situated just S. of Arrowhead Range and between the upper forks of Cosmonaut Gl. in the Southern Cross Mtns., Victoria Land. Named by the southern party of NZGSAE, 1966-67, for Ian Stewart, field assistant with this party.

Stewart Hills 84°12'S., 86°00'W.

Several small nunataks and snow hills rising above an otherwise featureless terrain, 50 mi. NE. of Ford Massif, Thiel Mountains. Observed by the USARP Horlick Mountains Traverse, 1958-59, and by Edward Thiel and Campbell Craddock in the course of an air-lifted geophysical traverse, Dec. 13, 1959. The name was proposed by Thiel and Craddock for Prof. Duncan Stewart, geologist, Carleton College, Minnesota, whose writing and interpretation of Antarctic rock samples have contributed to knowledge of the continent.

Stewart Stacks 62°38'S., 61°12'W.

Two prominent sea stacks on the S. side of New Plymouth between Astor and Rugged Islands, in the South Shetland Islands. The name "Monuments" was ap-

GEOGRAPHIC NAMES OF THE ANTARCTIC

plied by Robert Fildes in 1820-22, but has been rejected in order to avoid duplication with other existing Monument names. Stewart Stacks, given by the UK-APC in 1958, is for Hampton Stewart of the American sealer *Jane Maria* from New York who, according to the *New-York Gazette and General Advertiser* of May 16, 1821, made one of the first charts (now lost) of the South Shetland Islands in 1820-21.

Stewart Strait 54°00'S., 38°06'W.

Strait 2 mi. wide between Bird I. and the Willis Is., off the W. end of South Georgia. The strait was navigated by Capt. James Cook in 1775, but the name seems to have been applied by DI personnel in the period 1926-30.

St. George Bay: see Hound Bay 54°22'S., 36°13'W.

St. Georges, Baie: see King George Bay 62°06'S., 58°05'W.

St. George's Bay: see King George Bay 62°06'S., 58°05'W.

Stibbs Bay: see Utstikkar Bay 67°33'S., 61°28'E.

Stich Peak 85°57'S., 132°01'W.

A peak, 2,305 m., on the W. side of Reedy Gl., standing between May Peak and Chapin Peak in the Quartz Hills. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Cdr. John D. Stich, USN, pilot at McMurdo Station during 1962-63 and 1963-64.

Stierer, Mount 75°06'S., 162°09'E.

A mountain (1,080 m.) rising 1.5 mi. NNE. of Mt. Bellingshausen in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1957-62. Named by US-ACAN after Byron A. Stierer, Airman First Class, USAF, a member of the McMurdo Station wintering party, 1962.

Stigant Point 62°02'S., 58°45'W.

Conspicuous point, 65 m. high, lying 6 mi. SW. of Davey Pt. on the N. coast of King George I., in the South Shetland Islands. Charted and named in 1935 by DI personnel on the *Discovery II*, probably for G. B. Stigant, long-time member of the Hydrographic Department of the Admiralty.

Stignabben: see Stig Nunatak 73°20'S., 3°14'W.

Stig Nunatak 73°20'S., 3°14'W.

A nunatak about 3 mi. NE. of Mt. Hallgren in the Kirwan Escarpment, Queen Maud Land. Mapped by

Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59). Named for Stig E. Hallgren, photographer with NBSAE.

Stillwell Hills 67°26'S., 59°28'E.

A group of rocky hills composed of banded gneisses and including Kemp Peak and Lealand Bluff, extending along the SW. side of William Scoresby Bay. This area was explored by DI personnel on the *William Scoresby* in Feb. 1936, and by the Lars Christensen Exp., 1936-37, the latter group taking air photos used to map these hills for the first time. Geologic investigation of the area was made by ANARE in 1961. Named by ANCA for Dr. F. L. Stillwell, geologist with AAE, 1911-14, who derived a theory of metamorphic differentiation from banded gneisses of the same type on George V Coast.

Stillwell Island 66°55'S., 143°48'E.

A small, steep rocky island, 0.25 mi. in diameter, which is the largest member of the Way Archipelago. It lies at the W. side of the entrance to Watt Bay, 1.5 mi. NE. of Garnet Point. Discovered by the AAE (1911-14) under Douglas Mawson. He named it for Frank L. Stillwell, geologist with the expedition whose detailed survey included this coastal area.

Stina Rock 54°00'S., 37°58'W.

Conical rock, 35 m. high, lying off Cape Pride in the E. side of the entrance to Elsehul, off the N. coast of South Georgia. The name Pillar Rock was probably given by Lt. Cdr. J. M. Chaplin, RN, during his survey of Elsehul in 1930, but this same name is more frequently used for a feature 1.5 mi. away in Bird Sound than it is for this rock. Pillar Rock has therefore been rejected for the feature now described and a new name substituted; Stina Rock, proposed by the UK-APC in 1957, is for the buoy-boat (ex-catcher) *Stina*, owned by the South Georgia Whaling Co., Leith Harbor.

Stinear, Mount 73°04'S., 66°24'E.

A prominent rock peak on a large massif rising to 1,950 m., standing just E. of Mt. Rymill at the junction of Fisher and Lambert Glaciers in the Prince Charles Mountains. Mapped from air photos taken by the RAAF Antarctic Flight in 1956. First visited in October 1957 by an ANARE party led by Bruce H. Stinear, geologist at Mawson Station, for whom it is named.

Stinear Island 67°35'S., 62°50'E.

One of the Flat Is., lying 0.2 mi. N. of Béchervaise I. in Holme Bay, Mac. Robertson Land. It is one of several

GEOGRAPHIC NAMES OF THE ANTARCTIC

islands plotted as a part of "Flatøy" (flat island) by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Found to be a separate island by ANARE in 1954 and named for B. H. Stinear, geologist at Mawson Station in 1954, 1957 and 1959.

Stinear Lake 68°34'S., 78°08'E.

A salt-water lake, 1.5 mi. long and 0.25 mi. wide, lying immediately E. of Lake Dingle on Breidnes Peninsula, Vestfold Hills. Mapped from air photos taken by USN Op. Hjp., 1946-47. First visited by an ANARE in 1955. Named by ANCA for Bruce H. Stinear, geologist at Davis and Mawson Stations for several seasons in the period 1954-59.

Stinear Nunataks 69°42'S., 64°40'E.

A group of dark brown nunataks about 16 mi. N. of Anare Nunataks in Mac. Robertson Land. Visited by an ANARE southern party (1954) led by R. G. Dovers. He named the group for B. H. Stinear, geologist at Mawson Station in 1954.

Stinker Point 61°13'S., 55°23'W.

Point 4 mi. S. of Table Bay on the W. coast of Elephant I., South Shetland Islands. Mapped by the U.K. Joint Services Exp. to Elephant I., 1970-71, and named after the Giant Petrel (*Macronectes giganteus*) which breeds there; "Stinker" being a sailors' name for that bird.

Stipple Rocks 68°06'S., 67°22'W.

Compact group of more than twenty rocks, lying 3 mi. NW. of Millerand I. in Marguerite Bay, off the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill, and resurveyed in 1949 by the FIDS. The name, applied by FIDS, is descriptive of the representation on a map of the numerous rocks in this group.

Stirling, Mount 71°33'S., 164°07'E.

A mountain (2,260 m.) in the Bowers Mtns., located 5 mi. SW. of Mt. Freed where the feature forms part of the E. wall of Leap Year Glacier. Named by the NZGSAE to this area, 1967-68, for I. Stirling, Canterbury Univ. zoologist at Scott Base in that season.

St. Louis, Mount 67°09'S., 67°30'W.

A mountain (1,280 m.) which is mainly ice covered and forms a prominent landmark immediately E. of The Gullet, on the W. coast of Graham Land. First sighted and roughly charted in 1909 by the FrAE under J.B. Charcot. Surveyed in 1948 by the FIDS who named it for Canadian pilot Peter B. St. Louis. He flew from the Argentine Is. to Stonington I. in January and February 1950 to relieve the FIDS base.

St. Marie Peak 71°56'S., 171°05'E.

A small peak (100 m.) at the N. end of Foy Island, in the Possession Islands. Mapped by USGS from surveys and U.S. Navy air photos, 1958-63. Named by US-ACAN for Lt. Cdr. John W. St. Marie, USN, co-pilot on the Squadron VX-6 flight of Jan. 18, 1958, at which time the Possession Islands and this feature were photographed.

Stocking Glacier 77°42'S., 161°50'E.

Steep alpine glacier just E. of Catspaw Glacier, flowing S. toward Taylor Gl. in Victoria Land. So named by Taylor of the BrAE (1910-13) for its appearance as seen from above.

Stockton Peak 71°08'S., 62°10'W.

A sharp, mostly ice-covered peak along the S. side of the upper part of Murrish Gl., 6 mi. WNW. of Cat Ridge, in Palmer Land. Named by US-ACAN for William L. Stockton, USARP biologist at Palmer Station in 1972.

Stoker Island 62°24'S., 59°51'W.

Island located 1.3 mi. WSW. of Emeline Island, South Shetland Islands. This island is occupied by a Chinstrap Penguin rookery. The name applied by UK-APC acknowledges the work of Donald N. Tait, stoker of the survey motor boat *Nimrod*, of the RN Hydrographic Survey Unit in these islands, 1967.

Stokes Hill 64°52'S., 63°32'W.

Small but prominent rocky peak, 270 m., lying 1 mi. SE. of Doumer Hill on Doumer I., in the Palmer Archipelago. First charted by the FrAE under Charcot, 1903-5. Surveyed by the British Naval Hydrographic Survey Unit in 1956-57. So named by the UK-APC because the hill was first climbed by the engineer of the Unit's motor-launch; stokes is naval slang for a seaman who works in the engineroom.

Stolze Peak 64°43'S., 62°26'W.

Peak on Arctowski Peninsula near the head of Beaupré Cove, on the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Franz Stolze, German scientist who in 1881 suggested improvements in methods of air photography and, in 1892, first established the principle of the "floating mark" used in stereophotogrammetry, later developed by Pulfrich.

Stonehocker Point 66°15'S., 110°31'E.

Rocky point on which Wilkes Station is built, forming the W. extremity of Clark Peninsula. First mapped from air photos taken by USN Op. Hjp., 1946-47.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wilkes Station was established in 1957 and occupied by a U.S. party under C. R. Eklund. Named by Eklund for Garth H. Stonehocker, ionospheric scientist with the US-IGY wintering party of 1957 at Wilkes Station.

Stonehouse, Mount 84°24'S., 164°24'E.

A peak, 2,900 m., standing 3.5 mi. SW. of Mt. Falla in Queen Alexandra Range. Named by the NZGSAE (1961-62) for Bernard Stonehouse who has made studies of Antarctic penguins and seals.

Stonehouse Bay 67°21'S., 68°05'W.

Bay 5 mi. wide, indenting the E. coast of Adelaide I. between Hunt Peak and Sighing Peak. First sighted and surveyed in 1909 by the FrAE under Charcot. Named for Bernard Stonehouse of FIDS, meteorologist in 1947 and 1948 and biologist in 1949 at Stonington Island; leader of the FIDS sledge party which resurveyed the bay in 1948.

Stoneley Point 63°52'S., 58°07'W.

A rocky point on the NW. coast of James Ross I., 4 mi. W. of Brandy Bay. Named by UK-APC for Robert Stoneley, FIDS geologist at Hope Bay in 1952.

Stone Point 63°24'S., 56°56'W.

Point with a small islet lying off it, marking the south side of the entrance to Hope Bay, at the NE. end of Antarctic Peninsula. Named by the UK-APC for H. W. Stone, First Mate on the *Trepassey*, 1946-47, following a survey by Lt. Cdr. F. W. Hunt, RN, in 1952.

Stonethrow Ridge 62°58'S., 60°44'W.

Snow-covered ridge rising W. of Primero de Mayo Bay, Deception I., in the South Shetland Islands. The name arose following survey by the FIDS in January 1954 because of the large number of rocks and stones at the base of the steep E. face which have been thrown off the ridge.

Stoney Beach: see Gilchrist Beach 53°02'S., 73°36'E.

Stonington Island 68°11'S., 67°00'W.

Rocky island lying 1 mi. NE. of Neny I. in the E. part of Marguerite Bay, off the W. coast of Graham Land. This island, 0.4 mi. long from NW. to SE. and 0.2 mi. wide, is connected by a drifted snow slope to Northeast Glacier on the mainland. It was chosen as the site for the East Base of the USAS, 1939-41, and named after Stonington, Connecticut, home port of the sloop *Hero* in which Capt. Nathaniel B. Palmer sighted the Antarctic continent in 1820.

Stopes Point 76°36'S., 159°35'E.

The northernmost point on Tilman Ridge, the northwestern arm of the Allan Hills, in Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition, 1964, and named after Marie Stopes, authority on Carboniferous palaeobotany, and hence associated with the geology of the area.

Stopford, Cape: see Stopford Peak 63°46'S., 61°38'W.

Stopford Peak 63°46'S., 61°38'W.

Peak, 495 m., on the E. side of Hoseason I., in the Palmer Archipelago. First roughly charted and named "Cape Stopford" by Henry Foster in 1829 for Adm. Sir Robert Stopford (1768-1847), Commander-in-Chief at Portsmouth, 1827-30, where Foster's ship, the *Chanticleer*, fitted out for the voyage. The most prominent feature on the E. side of Hoseason I. is this peak which rises steeply from a straight piece of coast.

Storegutt, Mount 66°53'S., 55°27'E.

Mountain, 1,465 m., standing 28 mi. W. of Edward VIII Bay and 10 mi. S. of Jennings Bluff. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and named Storegutt (big boy).

Storeidet Col 71°41'S., 11°31'E.

A prominent col situated 3.5 mi. W. of Eidshaugane Peaks in the central Humboldt Mtns., Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Storeidet (the great isthmus).

Store Kari Rock 54°24'S., 3°26'E.

An insular rock 3 m. high off the northern side of Bouvetøya. It lies 0.8 mi. east of Cape Valdivia. Charted from the ship *Norvegia* in December 1927 by a Norwegian expedition under Capt. Harald Horntvedt. Named by Horntvedt in association with Lille Kari Rock which lies 1 mi. eastward.

Store Point 68°12'S., 67°02'W.

Northernmost point of Neny I., lying in Marguerite Bay off the W. coast of Graham Land. Surveyed in 1947 by the FIDS, who so named it because FIDS maintained an emergency food store on this point.

Storer, Mount 66°53'S., 51°00'E.

A jagged peak in the Tula Mtns., 4 mi. ENE. of Mt. Harvey. Sighted from Observation I. in October 1956 by an ANARE party led by P. W. Crohn. Named by ANCA for William Storer, radio operator at Mawson Station in 1954.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Storer Reef 54°22'S., 37°04'W.

An isolated reef lying 3 mi. SE. of Aspasia Pt. and 1.5 mi. off the S. coast of South Georgia. Named by the UK-APC following mapping by the SGS, 1951-52, for Capt. Nathaniel Storer of New Haven, Conn., who in 1801 built a small schooner on the coast of Patagonia, sailed her to South Georgia, and spent two seasons taking 45,000 fur seal skins.

Store Svarthorn Peak 71°35'S., 12°33'E.

A very prominent black peak (2,490 m.) rising abruptly at the SW. extremity of Mittlere Petermann Range, in the Wohlthat Mtns. of Queen Maud Land. Discovered and given the descriptive name "Grosses Schwarz-Horn" (great black peak) by the GerAE under Ritscher, 1938-39. The peak was remapped by the Norwegian Antarctic Expedition, 1956-60, who used the form Store Svarthorn. The Norwegian spelling has been recommended by US-ACAN to agree with associated features in the area having this name.

Stor Hånakken Mountain 66°32'S., 53°38'E.

Prominent mountain, 1,970 m., standing in the central part of the Napier Mtns. in Enderby Land. The mountain was mapped by Norwegian cartographers from aerial photographs taken in January-February 1937 by the Lars Christensen exp., and named by them Stor Hånakken (the great shark's neck, or nape). It was visited in 1960 by an ANARE party led by S. L. Kirby.

Storjoen Peak 72°07'S., 0°12'W.

A peak 4 mi. NW. of Tvora in the Sverdrup Mtns., Queen Maud Land. Plotted from air photos by the GerAE (1938-39). Remapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Storjoen (the skua).

Storkletten Peak 72°03'S., 3°25'W.

An ice-free mountain 1 mi. S. of Flårjuven Bluff, on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Storkletten (the big, steep mountain).

Storknolten Peak 72°11'S., 8°03'E.

A peak about 1 mi. W. of Müller Crest at the S. end of the Filchner Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Storknolten (the big knoll).

Storkvaeven Cirque 72°42'S., 0°09'E.

A cirque on the NW. side of Nupskåpa Peak, near the S. end of the Sverdrup Mtns. in Queen Maud Land.

Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Storkvaeven.

Storkvammen Cirque 71°44'S., 11°44'E.

A cirque between Eidsgavlen and Kvamsgavlen Cliffs on the E. side of the Humboldt Mtns., in Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped and named Storkvammen by Norway from air photos and surveys by the NorAE, 1956-60.

Storkvarvet Mountain 71°45'S., 6°54'E.

A mountain that is round in plan and has several radial spurs, standing N. of Habermehl Peak at the NE. end of the Mühlig-Hofmann Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Plotted from surveys and air photos by the NorAE (1956-60) and named Storkvarvet (the big round of logs).

Storkvarvsteinen Peak 71°36'S., 7°04'E.

An isolated rock peak 8 mi. NE. of Storkvarvet Mtn. and the main group of the Mühlig-Hofmann Mountains. Plotted from surveys and air photos by the NorAE (1956-60) and named Storkvarvsteinen (the big round of logs rock).

Storm Peak 84°35'S., 164°00'E.

A flat-topped peak, 3,280 m., standing 3.5 mi. N. of Blizzard Peak in the Marshall Mtns., Queen Alexandra Range. So named by the NZGSAE (1961-62) because of the stormy conditions experienced in the area.

Storm Peaks: see Storm Peak 84°35'S., 164°00'E.

Stornes Peninsula 69°26'S., 76°05'E.

A rocky, jagged peninsula about 3 mi. long, projecting into Prydz Bay just W. of Larsemann Hills. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Stornes (big promontory, or ness).

Stornupen Peak 72°10'S., 2°22'E.

Peak, 2,275 m., in the S. part of Nupskammen Ridge, in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Stornupen (the big mountain peak).

Stornuten: see Maines, Mount 66°39'S., 53°54'E.

Storsåtklubben Ridge 71°25'S., 12°25'E.

A ridge 3 mi. long, located 5 mi. NE. of Mt. Hansen in the Mittlere Petermann Range, Wohlthat Mtns.,

GEOGRAPHIC NAMES OF THE ANTARCTIC

Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Storsåtklubben (the large haystack mallet).

Storsponen Nunatak 72°00'S., 3°56'E.

A nunatak on the W. side of Hoggstabben Butte, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Storsponen (the big chip).

Stout Spur 84°52'S., 63°43'W.

A knife-like rock spur descending from the N. edge of Mackin Table, 3 mi. E. of Mt. Campleman, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Dennis K. Stout, radioman at Palmer Station, winter 1967.

Strachan Hill: see Spiro Hill 62°16'S., 59°00'W.

Strachans Island: see Nelson Island 62°18'S., 59°03'W.

Straggle Islands: see Llanquihue Islands 65°53'S., 65°06'W.

Strahan Glacier 67°38'S., 64°37'E.

Glacier flowing N. into the sea 1.5 mi. W. of Stevens Rock, midway between Cape Daly and Cape Fletcher. Disc. in February 1931 by the BANZARE under Mawson. He named it for F. Strahan, Assistant Secretary, Prime Minister's Department (Australia), 1921-35.

Stranded Moraines: see Strand Moraines, The 77°45'S., 164°31'E.

Strand Moraines, The 77°45'S., 164°31'E.

An ancient lateral moraine of the Koettlitz Glacier, deposited at the outer edge of Bowers Piedmont Glacier on the W. shore of McMurdo Sound, in Victoria Land. Discovered by the BrNAE (1901-4) and first called "The Eskers." The feature was renamed by Scott in keeping with its true nature.

Strandnebbba 69°57'S., 38°49'E.

Low, bare rock hills that lie 1 mi. SW. of Vesleknausen Rock and extend along the S. shore of Lützow-Holm Bay for 1.5 miles. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Strandnebbba (the shore beak).

Strandrud Mountain 71°52'S., 25°36'E.

Mountain, 2,070 m., rising above the glacial ice at the SE. side of Austkampane Hills in the Sør Rondane

Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named for one of the mechanics on the Lars Christensen Exp. to this area, 1936-37.

Strandtmann, Mount 72°07'S., 163°05'E.

A mountain 3 mi. N. of Smiths Bench, in Freyberg Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Russell W. Strandtmann, biologist at McMurdo Station, summers 1966-67 and 1967-68.

Strange, Mount 74°58'S., 113°30'W.

A partly ice-free mountain 4 mi. ENE. of Mt. Isherwood, standing at the E. side of Simmons Glacier in the Kohler Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Joe F. Strange, USGS topographic engineer, member of the Marie Byrd Land Survey Party, 1966-67.

Strange Glacier 74°50'S., 63°40'W.

A glacier in the Latady Mtns., draining SE. along the S. side of Crain Ridge to enter Gardner Inlet between Schmitt Mesa and Mt. Austin, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Donald L. Strange, hospital corpsman at South Pole Station in 1964.

Stranger Point 62°16'S., 58°37'W.

Point forming the southernmost tip of King George I. in the South Shetland Islands. Named by the UK-APC in 1960 for the sealer *Stranger* (Capt. Joseph Adams) from Boston, Massachusetts, which visited the South Shetland Is. in 1820-21 in company with the *O'Cain*, operating from nearby Potter Cove.

Strathcona, Mount 67°22'S., 99°11'E.

Mountain, 1,380 m., rising above the continental ice on the W. side of Denman Gl., 11 mi. S. of Mt. Barr Smith. Disc. by the AAE under Mawson, 1911-14, and named by him for Lord Strathcona, High Commissioner for Canada in 1911, a patron of the expedition.

Strath Point 64°32'S., 62°36'W.

Low ice-covered point forming the S. end of Brabant I., in the Palmer Archipelago. Roughly charted by the BelgAE under Gerlache, 1897-99. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. The name is descriptive; "strath" means a stretch of flat land by the sea or a broad river valley.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Stratton Glacier 80°22'S., 29°00'W.

A glacier 20 mi. long, flowing N. from Pointer Nunatak and then NW. to the N. of Mt. Weston, in the Shackleton Range. First mapped in 1957 by the CTAE and named for David G. Stratton, surveyor and deputy leader of the transpolar party of the CTAE in 1956-58.

Stratton Inlet 66°18'S., 61°25'W.

Extensive ice-filled inlet, 12 mi. wide, entered eastward of Veier Head on the S. side of Jason Pen. in Graham Land. Surveyed by the FIDS in 1953. Named in 1956 by the FIDS for David G. Stratton, surveyor at Hope Bay in 1952 and 1953, who made the first detailed survey of Jason Pen. in May-June 1953.

Straumsida Bluff 71°44'S., 1°15'W.

An ice-covered bluff about 25 mi. long, rising as part of the E. slope of Ahlmann Ridge and overlooking the terminus of Jutulstraumen Gl., in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Straumsida (the stream side).

Straumsnutane: see Stein Nunataks 71°36'S., 1°15'W.

Straumsvola Mountain 72°07'S., 0°20'W.

A prominent mountain 6 mi. N. of Jutulrøra Mtn. in the NW. part of the Sverdrup Mtns., overlooking the E. side of Jutulstraumen Gl. in Queen Maud Land. Plotted from air photos by the GerAE (1938-39). Re-mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Straumsvola (the stream mountain).

Strauss, Mount 71°32'S., 73°11'W.

Snow-covered mountain, 250 m., with a steep scarp on the S. side, 4 mi. E. of the head of Brahms Inlet in the SW. part of Alexander Island. A number of mountains in this general vicinity appear on the maps of the RARE, 1947-48. This mountain, apparently one of these, was mapped from RARE air photos by Searle of the FIDS in 1960. Named by the UK-APC for Johann Strauss (1804-1849) and Richard Strauss (1864-1949), German composers.

Strauss Glacier 77°20'S., 139°40'W.

A glacier, 40 mi. long, flowing between the Ickes Mountains and Coulter Heights to enter the sea at the E. side of Land Bay, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. The naming was proposed to US-ACAN by Adm. Richard E. Byrd. Named for Lewis Strauss,

Chairman of the Atomic Energy Commission, 1953-58, longtime friend and advisor to Adm. Byrd who recommended that the Antarctic be used to demonstrate peaceful employment of atomic energy.

Stravinsky Inlet 72°20'S., 71°30'W.

An ice-covered inlet between Shostakovich Peninsula and Monteverdi Peninsula in southern Alexander Island. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC after Igor F. Stravinsky (1882-1971), Russian-born composer who became a French citizen, ultimately a citizen of the United States.

Strawberry Cirque 83°20'S., 157°36'E.

A semi-circular glacial cirque, 1 mi. wide, at the S. end of Macdonald Bluffs in Miller Range. It indents the cliffs at the N. side of the terminus of Argo Glacier where the latter enters Marsh Glacier. So named by the Ohio State Univ. Geological Party, 1967-68, because the granite cliffs of the cirque have a bright pink to red color in certain lighting.

Strawn Pass 75°06'S., 135°16'W.

A broad pass on the S. side of McDonald Heights that connects the heads of Kirkpatrick Gl. and Johnson Gl., in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-69. Named by US-ACAN for Lawrence W. Strawn, glaciologist at Byrd Station, 1967-68.

Stray Islands 65°10'S., 64°14'W.

Scattered but distinct group of islands lying 2 mi. W. of Petermann I., in the Wilhelm Archipelago. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57 and from the helicopter of H.M.S. *Protector* in March 1958. So named by the UK-APC because the group is scattered.

Streitenberger Cliff 85°03'S., 92°07'W.

An abrupt rock and ice cliff 1.3 mi. W. of Reed Ridge, along the NW. margin of the Ford Massif in the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the Thiel Mountains party which surveyed the area in 1960-61. Named for Staff Sgt. Fred W. Streitenberger, USMC, navigator of the Squadron VX-6 plane crew that flew the USGS party into the Thiel Mountains, and also to several other mountain ranges during the summer of 1960-61.

Strengen Valley 72°00'S., 3°28'W.

An ice-filled valley, about 4 mi. long, between Flårjuvnutane Peaks and Flårjuven Bluff on the W. side of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Strengen (the string).

Streten, Cape 66°49'S., 49°15'E.

An ice cape at the NE. tip of Sakellari Pen., forming the W. side of the entrance to Amundsen Bay. Plotted from air photos taken by ANARE in November 1956. Named by ANCA for N. A. Streten, meteorologist at Mawson Station in 1960.

Streton, Cape: see Streten, Cape 66°49'S., 49°15'E.

Striated Nunatak 67°21'S., 56°13'E.

A low, rounded nunatak of banded gneiss 6 mi. ENE. of Rayner Peak, on the E. side of Robert Gl., Enderby Land. Mapped from ANARE surveys and air photos, 1954-66, and so named because the surface of the nunatak displays a remarkable development of striations, grooves, and polishing caused by ice movement across its surface.

Strickland Nunatak 86°29'S., 124°12'W.

A large nunatak between Savage Nunatak and Spear Nunatak at the head of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Ernest E. Strickland, utilitiesman at Byrd Station in 1962.

Stridbukken Mountain 72°48'S., 3°13'W.

A blufflike mountain about 1 mi. SW. of Møteplassen Peak, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Stridbukken (the hardhead).

Strider Rock 78°02'S., 155°26'W.

A rock 1 mi. NW. of Mt. Nilsen in the Rockefeller Mtns. of Edward VII Peninsula. Discovered by the ByrdAE in 1929. Named by US-ACAN for John P. Strider, Aviation Machinist's Mate, USN, plane captain on the ski-equipped R4D carrying R. Adm. George Dufek that was the first aircraft to land at the geographic South Pole, on Oct. 31, 1956.

Stringfellow Glacier 64°10'S., 60°18'W.

A glacier just W. of Henson Gl., flowing N. from the Detroit Plateau of Graham Land into Wright Ice Piedmont. Mapped from air photos by Hunting Aero-surveys (1955-57). Named by UK-APC for John Stringfellow (1799-1883), English designer of the first powered model airplane to make a flight, in 1848.

Striped Hill 63°40'S., 57°53'W.

Small ice-free hill, 90 m., standing near the S. shore of Trinity Pen., 1 mi. ENE. of Church Point. Charted and named by the FIDS, 1946. The descriptive name is derived from the stratifications on a small cliff on the seaward side of the hill.

Stroiteley Islands 66°33'S., 92°58'E.

A chain of about four small islands in the southern part of the Haswell Islands. They are aligned north-south and lie close to the mainland, 1 mi. W. of Mabus Point. Plotted by G.D. Blodgett (1955) from aerial photos taken by USN Operation Highjump (1946-47). Photographed by the Soviet Ant. Exp. (1956) and shown on their chart as Ostrova Stroiteley (builders' islands).

Strom Glacier 85°10'S., 164°30'W.

A steep valley glacier flowing NE. from the N. side of Mt. Fridtjof Nansen to the head of the Ross Ice Shelf, flanked on the NW. by the Duncan Mtns. and on the SE. by the Herbert Range. The glacier derives its name from "Strom Camp" near its foot, occupied during December 1929 by the ByrdAE geological party under Gould. Strom Camp was named by that party for Sverre Strom, first mate of the ship *City of New York*, who remained ashore as a member of the winter party and headed the snowmobile party which hauled supplies in support of the two field parties.

Strømme Ridge 71°27'S., 61°42'W.

A broad ice-covered ridge, 15 mi. long, trending NW.-SE. between the Muus and Soto Glaciers. The ridge terminates at the N. side of Odom Inlet on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Jan A. Strømme, Norwegian oceanographer from the Univ. of Bergen, a member of the International Weddell Sea Oceanographic Expeditions, 1968 and 1969.

Stromnes Bay: see Stromness Bay 54°09'S., 36°38'W.

Strømmes Bucht: see Stromness Bay 54°09'S., 36°38'W.

Stromness Bay 54°09'S., 36°38'W.

Bay 3 mi. wide, entered between Cape Saunders and Busen Pt. on the N. coast of South Georgia. Probably first seen in 1775 by Capt. James Cook. Named in about 1912, presumably by Norwegian whalers who frequented its harbors.

Stromness Harbor 54°09'S., 36°41'W.

The central of three harbors in the W. side of Stromness Bay, South Georgia. The name Fridtjof Nansen or

GEOGRAPHIC NAMES OF THE ANTARCTIC

Nansen appeared for this harbor on some early charts, but since about 1920 the name Stromness has been consistently used.

Strong, Mount 70°35'S., 62°45'W.

A ridge-like mountain about 5 mi. E. of the Eland Mtns., in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Frank E. Strong, USARP biologist at Palmer Station in 1971-72.

Strong Peak 79°56'S., 82°18'W.

A small sharp peak at the end of a ridge in the Enterprise Hills, standing 3 mi. WSW. of Parrish Peak and overlooking the head of Horseshoe Valley, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Jack E. Strong, USARP biologist at Palmer Station in 1965.

Stroschein, Mount 84°25'S., 63°35'W.

Mountain, 1,020 m., standing 2 mi. SW. of Weber Ridge in the Anderson Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Leander A. Stroschein, meteorologist at Plateau Station, 1965-66 and 1966-67.

Strover Peak 69°43'S., 74°07'E.

A low rock peak along the coast of Antarctica, standing 6 mi. WNW. of Mt. Caroline Mikkelsen. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named "Svartmulen" (the black snout). Renamed by ANCA for W.G.H. Strover, radio supervisor at Davis Station in 1963 and a member of the ANARE party that surveyed this feature. Acceptance of Strover Peak curtails the repetitive use of "Svart" (black) in Antarctic names.

Struwe, Gora: see Gårekneet Ridge 72°04'S., 14°48'E.

Strybing, Mount 78°41'S., 85°04'W.

A mountain (3,200 m.) standing 3 mi. SE. of Mt. Craddock in the S. part of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for M/Sgt. Henry Strybing, USMC, navigator on reconnaissance flights of R4D aircraft to this region in the 1957-58 season.

Stuart, Mount 72°33'S., 162°15'E.

A mountain, 1,995 m., standing 5 mi. N. of Mt. VX-6, in the Monument Nunataks. Named by US-ACAN for A. W. Stuart, glaciologist and member of the USARP Victoria Land Traverse Party which surveyed this area in 1959-60.

Stuart Doyle Point: see Doyle Point 65°53'S., 54°52'E.

Stuart Point 66°28'S., 125°10'E.

An ice-covered point at the east side of the entrance to Maury Bay. Delineated from aerial photographs taken by USN Operation Highjump (1946-47), and named by the US-ACAN after Frederick D. Stuart, captain's clerk on the sloop *Peacock* of the USEE under Wilkes (1838-42), who assisted Wilkes with correction of the survey data obtained by the expedition.

Stubberud, Mount 86°07'S., 158°45'W.

A mountain, 2,970 m., standing 2 mi. SE. of Beck Peak on a ridge from the N. side of Nilsen Plateau, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Jørgen Stubberud, carpenter on the ship *Fram* and member of the land party at Framheim on Amundsen's exp. of 1910-12. This naming preserves the spirit of Amundsen's 1911 commemoration of "Mt. J. Stubberud," a name applied for an unidentifiable mountain in the general area.

Stubb Glacier 65°41'S., 62°10'W.

Glacier 11 mi. long, flowing E. into Scar Inlet between Mt. Queequeg and Tashtego Pt., on the E. coast of Graham Land. The lower reaches of this glacier were surveyed and photographed by the FIDS in 1947, and the upper reaches were surveyed in 1955. Named by the UK-APC in 1956 after the second mate on the *Pequod* in Herman Melville's *Moby-Dick*.

Stubbs Pass 68°11'S., 65°12'W.

A N.-S. pass through the middle of Joerg Peninsula on the E. side of Graham Land. The pass was photographed from aircraft by the USAS, 1939-41, and the RARE, 1947-48. It was traveled by R.L. Freeman of FIDS in 1947-48. Named by UK-APC for Guy M. Stubbs, BAS geologist at Stonington Island, 1963-65.

Stuhlinger Ice Piedmont 70°22'S., 162°30'E.

A coastal ice piedmont, about 10 mi. long and wide, located immediately N. of Bowers Mtns. and between the lower ends of Gannutz and Barber Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN in 1968 for Ernst Stuhlinger, National Aeronautics and Space Administration, a member of the U.S. National Science Foundation's Advisory Panel for Antarctic Programs.

Stump Mountain 67°29'S., 60°56'E.

Rock peak over 310 m. high, about 2 mi. SW. of Bryd Head, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Chris-

GEOGRAPHIC NAMES OF THE ANTARCTIC

tensen Exp., 1936-37, and named Stabben (the stump). The translated form of the name recommended by ANCA has been approved.

Stump Rock 62°05'S., 58°08'W.

Rock lying close offshore in the W. portion of King George Bay, 0.5 mi. NW. of Martello Tower, in the South Shetland Islands. Charted and named during 1937 by DI personnel on the *Discovery II*.

Sture-Khonakken, gora: see Stor Hånakken Mountain 66°32'S., 53°38'E.

Sturge Island 67°28'S., 164°38'E.

An island about 20 mi. long and 4 mi. wide which is the largest and southernmost of the Balleny Islands. Discovered in Feb. 1839 by John Balleny, captain of the schooner *Eliza Scott*, who named it for T. Sturge, one of the merchants who united with Charles Enderby in sending out the expedition.

Sturm, Mount 71°03'S., 162°58'E.

A peak, 2,320 m., standing directly at the head of Rastorguev Gl. in the Explorers Range, Bowers Mountains. Named by the northern party of the NZGSAE, 1963-64, for Arnold Sturm, senior geologist with the expedition.

Sturm Cove: see Mascías Cove 64°54'S., 63°01'W.

Stuttflogbreen: see Stuttflog Glacier 71°56'S., 4°45'E.

Stuttfloget Cliff 72°03'S., 4°30'E.

A steep rock cliff forming the SW. end of Mt. Grytøyr in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Stuttfloget (the short rock wall).

Stuttflog Glacier 71°56'S., 4°45'E.

A glacier flowing N. between Mt. Grytøyr and Petrellfjellet in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Stuttflogbreen (short rock wall glacier).

Styggebrekka Crevasses 71°58'S., 5°44'E.

A crevasse field near the center of Austreskorve Glacier, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Plotted from surveys and air photos by NorAE (1956-60) and named Styggebrekka (the dangerous slope).

Styggebrekkufsa Bluff 71°55'S., 5°53'E.

A bluff overlooking the east-central part of Austreskorve Gl. in the Mühlig-Hofmann Mtns. of Queen

Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named Styggebrekkufsa (the dangerous-slope bluff).

Stygian Cove 60°42'S., 45°37'W.

Cove lying immediately W. of Berry Head in the N. part of Signy I., in the South Orkney Islands. On its W. side steep rock cliffs rise to Robin Peak. Roughly surveyed in 1912-13 by Petter Sørille, Norwegian whaling captain, and again in 1933 by DI personnel. Resurveyed and named in 1947 by the FIDS. The name arose from the fact that this cove is so overshadowed by the cliffs of Robin Peak that a sense of stygian gloom is felt.

Styles Bluff 66°41'S., 57°18'E.

Light-colored rock bluff at the SE. side of Edward VIII Plateau, rising out of the sea 1 mi. N. of Cape Gotley. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37. First visited in February 1960 by an ANARE party led by D. F. Styles, Asst. Dir., Antarctic Div., Melbourne, for whom this feature was named.

Styles Strait 66°51'S., 48°35'E.

Strait, 15 mi. long and 6 to 9 mi. wide, separating White I. from Sakellari Peninsula. Plotted from air photos taken by ANARE in November 1956. Visited in February 1960 and February 1961 by the ANARE (*Thala Dan*) led by D. F. Styles, Asst. Dir., Antarctic Division, Melbourne, for whom it was named.

Styrbordsknattane Peaks 72°13'S., 3°26'W.

A cluster of small peaks just N. of Kjølrabbane Hills, near the SW. end of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Styrbordsknattane (the starboard peaks).

Styx Glacier 74°02'S., 163°51'E.

A tributary glacier in the Southern Cross Mtns., flowing SE. to enter Campbell Gl. between Wood Ridge and Pinckard Table, in Victoria Land. Observed by the Northern Party of the NZGSAE, 1965-66, which named it after the mythical river Styx.

Suarez, Mount 86°27'S., 145°42'W.

A mountain, 2,360 m., standing just E. of Mt. Noville on the divide between Van Reeth and Robison Glaciers, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. (j.g.) Ralph Suarez, aircraft navigator of USN Squadron VX-6 on Operation Deep Freeze 1965, 1966 and 1967.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Suárez Glacier 64°56'S., 62°56'W.

A glacier flowing into the small cove between Skontorp Cove and Sturm Cove on the W. coast of Graham Land. First mapped by Scottish geologist David Ferguson in 1913-14. Remapped by the 5th Chilean Antarctic Exp. (1950-51) and named for Lt. Cdr. Francisco Suárez V., Operations Officer on the transport ship *Angamos*.

Suarez Nunatak 82°12'S., 41°47'W.

A nunatak, 830 m., standing 5 mi. NW. of Mt. Ferrara in the Panzarini Hills portion of the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Capt. Jorge Suarez, Argentine officer in charge at Ellsworth Station, 1959-61.

Subof Rubianes, Islotes: see Pi Islands 64°20'S., 62°53'W.

Succession Cliffs 71°11'S., 68°16'W.

A line of steep cliffs 1.5 mi. long on the E. coast of Alexander I., facing E. onto George VI Sound immediately S. of the mouth of Pluto Glacier. Probably first seen by Lincoln Ellsworth who phot. segments of the coast in this vicinity on Nov. 23, 1935. First roughly surveyed from the ground in 1936 by the BGLE and resurveyed in 1948 by the FIDS. So named by FIDS because a geologic succession, or depositional sequence, is revealed by the accessible rock exposures of the cliffs.

Suchland Islands 74°06'S., 102°32'W.

A group of about 8 small islands lying just inside the central part of the mouth of Cranton Bay. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Everett B. Suchland, Jr., USN, radioman at Byrd Station, 1967.

Sucia Island 64°58'S., 63°36'W.

Small, almost entirely snow-covered island in Flandres Bay, lying immediately N. of Ménier I. off the W. coast of Graham Land. The name Sucia (foul) appears on an Argentine Govt. chart of 1952. The toponym reflects the characteristics of the waters surrounding the island with many low-lying dangers to navigation.

Sud, Monte: see Stopford Peak 63°46'S., 61°38'W.

Sudan Beach 54°19'S., 36°27'W.

Small shingle beach 700 yards S. of Dartmouth Pt., on the E. side of Moraine Fjord, South Georgia. This vicinity was roughly surveyed by the SwedAE, 1901-4, under Nordenskjöld. The beach was sketch surveyed and named by the FIDS in 1951. The name is one in

a group in the vicinity of Dartmouth Pt. derived from the chemical stains used in preparation for histological examination of biological material collected there by FIDS.

Südanntillen See: see Scotia Sea 57°30'S., 40°00'W.

Sudare Rock 69°42'S., 39°12'E.

A coastal rock on the SE. shore of Lützow-Holm Bay, 1 mi. W. of Skallevikhalsen Hills. Mapped from air photos taken by the Lars Christensen Exp., 1936-37. Surveyed by JARE, 1957-62, and named Sudare-iwa (bamboo blinds rock).

Sudeste, Punta: see South East Point 62°59'S., 60°31'W.

Süd-Georgien: see South Georgia 54°15'S., 36°45'W.

Südliche Petermann Range 71°46'S., 12°20'E.

One of the Petermann Ranges, trending NE.-SW. for 22 mi. from Svarthausane Crags to Gneiskopf Peak, in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39, which gave directional names to the eastern, middle and western units of the Petermann Ranges. This range was named Söre Petermannkjeda by NorAE, 1956-60, because of its southern position in association with other units in the Petermann Ranges. A German form of this name has been recommended by US-ACAN to agree with spellings adopted for the aforementioned ranges.

Süd-Orkney Inseln: see South Orkney Islands 60°35'S., 45°30'W.

Süd-Sandwich Inseln: see South Sandwich Islands 57°45'S., 26°30'W.

Süd-Shetland Inseln: see South Shetland Islands 62°00'S., 58°00'W.

Süd Vorland: see Melville, Cape 62°02'S., 57°37'W.

Suess, Mount 77°02'S., 161°42'E.

A conspicuous mountain (1,190 m.) surmounting the S. part of Gondola Ridge, near the S. side of Mackay Gl. in Victoria Land. Discovered by the BrAE (1907-9) and named for Eduard Suess, Austrian geologist and paleontologist.

Suess Glacier 77°38'S., 162°40'E.

Glacier between Canada and Lacroix Glaciers, flowing S. into Taylor Valley in Victoria Land. Charted and

GEOGRAPHIC NAMES OF THE ANTARCTIC

named by the BrAE under Scott, 1910-13, for Prof. Eduard Suess, noted Austrian geologist and paleontologist.

Suffield Point 62°12'S., 58°55'W.

Conspicuous point 1.5 mi. SW. of Collins Hbr. on the S. side of King George I., in the South Shetland Islands. The name appears to have been applied by DI personnel on the *Discovery II* who charted the point in 1935.

Sugarloaf Island: see Vaughan Island 54°00'S., 38°11'W.

Sugarloaf Island 61°11'S., 54°00'W.

Small island which lies close to the E. side of Clarence I., midway between Cape Lloyd and Cape Bowles, in the South Shetland Islands. The name was in use by American and British sealers as early as 1822 and is now well established.

Sugarloaf Peak: see Sugartop, Mount 54°22'S., 36°38'W.

Sugartop, Mount 54°22'S., 36°38'W.

Prominent, partly snow-covered mountain, 2,325 m., standing 5 mi. NW. of Mt. Paget in the Allardyce Range of South Georgia. The name Sugarloaf Peak has appeared on maps for this feature for many years, but the SGS, following a survey of South Georgia in 1951-52, reported that the name Mount Sugartop is well established locally for this mountain. This latter name is approved on the basis of local usage.

Suggs, Mount 75°16'S., 72°13'W.

A mountain with a bare rock northern face, standing 2 mi. S. of Mt. Goodman in the Behrendt Mtns., Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Henry E. Suggs, equipment operator of USN Mobile Construction Battalion One, who participated in the deployment to new Byrd Station, summer 1961-62.

Suggs Peak 75°05'S., 113°06'W.

A small ice-covered peak 6 mi. SSW. of Mt. Wilbanks in the Kohler Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for James D. Suggs, USARP geologist with the Marie Byrd Land Survey Party, 1966-67.

Sukkertopp Bay: see Jacobsen Bight 54°25'S., 36°50'W.

Sukkertoppen: see Sugartop, Mount 54°22'S., 36°38'W.

Sukkertoppen: see Zuckerhut, Mount 71°25'S., 13°27'E.

Sukkertoppen: see Istind Peak 72°06'S., 2°23'W.

Sullivan, Mount 69°39'S., 63°49'W.

Mountain, 2,070 m., standing 12 mi. E. of the N. part of the Eternity Range, in Palmer Land. This feature lies in the area explored from the air by Sir Hubert Wilkins in 1928 and Lincoln Ellsworth in 1935, but it was first charted by the BGLE in 1936-37. It was photographed from the air in 1940 by the USAS and in 1947 by the RARE under Ronne. Named by Ronne for Col. H. R. Sullivan of the Office of Research and Development of the then USAAF, which furnished equipment for the expedition.

Sullivan Glacier 69°42'S., 70°45'W.

West-flowing glacier, 6 mi. long and 3 mi. wide, immediately S. of Elgar Uplands in the N. part of Alexander Island. First seen from a distance by the BGLE during a flight in 1937 and roughly mapped. Remapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Sir Arthur Sullivan (1842-1900), English composer.

Sullivan Inlet: see Mill Inlet 67°00'S., 64°20'W.

Sullivan Nunatak 82°31'S., 156°35'E.

Long, narrow nunatak 2 mi. E. of the S. end of Wellman Cliffs in the Geologists Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by the US-ACAN for James G. Sullivan, USARP geologist at McMurdo Station, winter 1961 and the 1961-62 summer season.

Sullivan Nunataks 70°52'S., 65°33'E.

Three nunataks lying about 2 mi. NE. of Mt. Bewsher in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos. Named by ANCA for R. N. Sullivan, radio operator at Wilkes Station in 1968, who died on a field trip on July 22, 1968.

Sullivan Peaks 84°50'S., 63°05'W.

Two sharp peaks, over 1,400 m., on a spur descending from Pierce Peak on the N. side of Mackin Table, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Lt. Ronald C. Sullivan, (MC) USN, officer in charge of South Pole Station, winter 1967.

Sullivan Ridge 84°47'S., 177°05'E.

A massive ridge, 15 mi. long, displaying a steep, irregular E. slope overlooking Ramsey Gl. and a low

GEOGRAPHIC NAMES OF THE ANTARCTIC

gradient, ice-covered W. slope overlooking Muck Glacier. The ridge extends generally N. from Husky Heights and terminates at the confluence of Muck and Ramsey Glaciers. Discovered and photographed by USN Op. Hjp. (1946-47) and named by US-ACAN for Walter A. Sullivan of the *New York Times* staff, who has written extensively on Antarctic research and exploration.

Sulphur Point 56°42'S., 27°16'W.

Prominent bluff 1.5 mi. N. of Wordie Pt. on the W. side of Visokoi I. in the South Sandwich Islands. It was named West Bluff because of its position by DI personnel following their survey in 1930, but the name has been changed to avoid duplication with West Bluff on nearby Zavodovski Island. Sulphur Point was recommended in 1953 by the UK-APC. The ground here is reddish in color with patches and streaks of sulphur, and strong sulphurous fumes have been noted by all visitors to this island.

Sultan Glacier 61°08'S., 55°21'W.

Glacier flowing SW. into Table Bay, Elephant I., South Shetland Islands. Named by UK-APC after HMS *Sultan*, a shore-based RN Engineering school which provided the refuge hut for the U.K. Joint Services Exp. to Elephant I., 1970-71.

Sultan's Head: see Sultans Head Rock 77°43'S., 167°12'E.

Sultan's Head Cliffs: see Sultans Head Rock 77°43'S., 167°12'E.

Sultans Head Rock 77°43'S., 167°12'E.

A rock spur along the E. flank of Hut Point Peninsula, 7.5 mi. SW. of the Vee Cliffs, on the S. side of Ross Island. The name was first used by the BrNAE under Scott, 1901-4, in describing rocks collected there by Thomas V. Hodgson of the expedition.

Sulzberger Bay 77°00'S., 152°00'W.

A bay indenting the front of the Sulzberger Ice Shelf between Fisher I. and Vollmer I., along the coast of Marie Byrd Land. Discovered by the ByrdAE on Dec. 5, 1929, and named by Byrd for Arthur H. Sulzberger, publisher of the *New York Times*, a supporter of the ByrdAE (1928-30) and (1933-35).

Sulzberger Embayment: see Sulzberger Bay 77°00'S., 152°00'W.

Sulzberger Ice Shelf 77°00'S., 148°00'W.

An ice shelf about 85 mi. long and 50 mi. wide bordering the coast of Marie Byrd Land between Edward

VII Peninsula and Guest Peninsula. The ice shelf was observed and roughly mapped by the ByrdAE (1928-30), which applied the name Sulzberger Bay to the open water indenting this feature. The US-ACAN extended the name Sulzberger to the adjacent ice shelf.

Summers Glacier 72°13'S., 167°28'E.

A tributary glacier that drains the vicinity W. of Latino Peak and flows S. to enter Pearl Harbor Glacier, in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for James L. Summers, USN, chief utilitiesman at McMurdo Station, 1967.

Summerson, Mount 82°43'S., 155°05'E.

Mountain, 2,310 m., surmounting the N. end of Endurance Cliffs in the Geologists Range. Mapped by USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Charles H. Summerson, USARP geologist to the Mt. Weaver area, 1962-63.

Summers Peak 69°42'S., 64°53'E.

The highest peak (2,225 m.) of the Stinear Nunataks in Mac. Robertson Land. Discovered by an ANARE southern party (1954) led by R. G. Dovers, who named it for Dr. R. O. Summers, medical officer at Mawson Station in 1954.

Summit Pass 63°27'S., 57°02'W.

A col 345 m. high between Passes Peak and Summit Ridge, situated 2.5 mi. S. of the head of Hope Bay and 3.5 mi. NE. of Duse Bay, at the NE. end of Antarctic Peninsula. This area was first explored by the SwedAE, 1901-4. Summit Pass was first charted and named by the FIDS, 1945. It is the highest point on the sledge route between Hope Bay and Duse Bay.

Summit Ridge 63°27'S., 57°02'W.

Ridge, 380 m., with a steep ice slope on the N. side and a rock cliff on the S. side. It extends eastward from Passes Peak for 0.5 mi. and is located 2 mi. S. of the head of Hope Bay at the NE. end of Antarctic Peninsula. This area was first explored by the SwedAE, 1901-4. Summit Ridge was first charted and named by the FIDS, 1945. The feature takes its name from nearby Summit Pass.

Sumner, Mount 74°30'S., 63°45'W.

A mountain at the SE. end of the Rare Range, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Joseph W. Sumner, utilitiesman at South Pole Station in 1964.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Sumner Glacier 68°53'S., 65°40'W.

A short, broad tributary glacier that flows NE. into the lower reaches of Weyerhaeuser Gl., close W. of Mt. Solus, in southern Graham Land. Sketched from the air by D.P. Mason of FIDS in Aug. 1947. The lower reaches only were surveyed from the ground by FIDS in Dec. 1958. Named by UK-APC after Thomas H. Sumner (1807-76), American sailor who, in 1837, introduced the position line method of navigation, since developed into standard practice at sea and in the air.

Sumrall Peak 82°48'S., 53°33'W.

Peak, 1,130 m., standing 1 mi. S. of Rosser Ridge in the Cordiner Peaks, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Ens. William H. Sumrall, USNR, airplane pilot, Ellsworth Station winter party, 1957.

Sunday Island 66°28'S., 66°27'W.

An island close N. of Rambler I. in the Bragg Islands. First mapped and named by Cdr. W. M. Carey, RN, of the *Discovery II* (1930-31). It was reidentified and surveyed by FIDS in 1958.

Sundbeck, Mount 86°10'S., 158°28'W.

A peak, 3,030 m., standing 4 mi. SE. of Mt. Stubberud on a ridge from the N. side of Nilsen Plateau, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Knut Sundbeck, engineer of the ship *Fram* on Amundsen's Nor. exp. of 1910-12. This naming preserves the spirit of Amundsen's 1911 commemoration of "Mt. K. Sundbeck," a name applied for an unidentifiable mountain in the general area.

Sundberg, Mount 70°34'S., 66°48'E.

A pyramidal peak surmounting the central part of Thomson Massif in the Aramis Range, Prince Charles Mountains. First visited in December 1956 by the ANARE southern party led by W. G. Bewsher. Named by ANCA for Sgt. G. Sundberg, engine fitter with the RAAF Antarctic Flight at Mawson Station in 1956.

Sundholmen: see Hum Island 67°21'S., 59°38'E.

Sunfix Glacier 69°16'S., 64°30'W.

A tributary glacier, 15 mi. long and 2 mi. wide, draining ENE. between Grimley and Lurabee Glaciers into Casey Glacier, in northern Palmer Land. Photographed from the air by RARE on Dec. 22, 1947. Surveyed by FIDS in Nov. 1960. The name derives from the important sun fix for latitude which was observed by FIDS at the head of this glacier, an area where cloud seldom allows such observation.

Sungold Hill 64°23'S., 57°52'W.

A prominent round hill (860 m.) with distinctive convex slopes, 2 mi. inland between Cape Foster and Jefford Pt. on the S. coast of James Ross Island. Named by UK-APC following FIDS surveys, 1958-61. The name records the characteristic color of the exposed rock cliffs.

Sunken Rock 53°01'S., 73°34'E.

A sunken rock lying 0.2 mi. NNE. of Morgan I., close off the N. side of Heard Island. Surveyed and named by the ANARE in 1948.

Sunk Lake 77°34'S., 166°13'E.

A small lake lying between Deep Lake and the coast at Cape Royds, Ross Island. The descriptive name appears on the maps by the BrAE (1910-13), but it may have been given earlier by the BrAE (1907-9). The surface of the ice comprising the lake is 18 feet below sea level.

Sunny Ridge 87°00'S., 154°26'W.

A partly snow-free ridge that trends southward for 1 mi. from the western extremity of Mt. Weaver. It stands at the W. side of and near the head of Scott Glacier. The ridge was scaled by the Ohio State University geological party in November 1962. So named by party leader George Doumani because of very sunny conditions during the climb.

Sunset Fjord 54°03'S., 37°27'W.

Bay 1 mi. wide in the SW. corner of the Bay of Isles, South Georgia. Charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*, and so named by him because from his anchorage in the Bay of Isles the sun appeared to set directly behind this feature.

Sunset Peak: see Brooker, Mount 54°30'S., 36°14'W.

Sunshine Glacier 60°38'S., 45°30'W.

Glacier, 3 mi. long and 2 mi. wide, flowing S. into Iceberg Bay on the S. coast of Coronation I., in the South Orkney Islands. It is the largest glacier on the S. side of Coronation I. and terminates in ice cliffs up to 60 m. high. Surveyed in 1948-49 by the FIDS and so named by them because, when all else was in shadow, small gaps in the clouds above frequently allowed patches of sunshine to appear on the surface of this glacier.

Supernal, Mount 73°04'S., 165°42'E.

A large double summit mountain (3,655 m.) surmounting the SE. corner of Hercules Nêvé and the heads of the Gair and Meander Glaciers, in Victoria

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. The feature has at times been mistaken for Mt. Murchison. Named by the northern party of NZGSAE, 1962-63, because of its prominent and lofty appearance.

Supporters Range 85°04'S., 169°30'E.

A rugged range of mountains, 25 mi. long, bordering the E. side of Mill Gl., from Keltie Gl. in the north to Mill Stream Gl. in the south. So named by the NZGSAE (1961-62) because several peaks of the range are named after supporters of Shackleton's expedition, the BrAE (1907-9).

Support Force Glacier 82°45'S., 46°30'W.

A major glacier in the Pensacola Mountains, draining northward between the Forrestal Range and Argentina Range to Ronne Ice Shelf. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for the U.S. Naval Support Force, Antarctica, which provided logistical support for the U.S. Antarctic Research Program during this period.

Supporting Party Mountain 85°27'S., 147°33'W.

A mountain, 560 m., standing 3 mi. E. of Mt. Fridovich in the Harold Byrd Mountains. Discovered in December 1929 by members of the ByrdAE Geological Sledging Party under Laurence Gould. Named by them in appreciation of the splendid cooperative work of their Supporting Party. The mountain was climbed by members of Gould's party who took panoramic photographs from the summit.

Sur, Bahía: see Miles Bay 54°04'S., 37°39'W.

Sur, Brazo: see Argentino Channel 64°54'S., 63°01'W.

Sur, Islote: see Mite Skerry 67°52'S., 67°19'W.

Sur, Monte: see Vesalius, Mount 64°04'S., 61°59'W.

Sur, Monte: see Stopford Peak 63°46'S., 61°38'W.

Sur, Punta: see South Point 63°01'S., 60°37'W.

Sur Este, Punta: see South East Point 62°59'S., 60°31'W.

Surf Rock 68°12'S., 67°06'W.

Low rock 0.5 mi. W. of the W. tip of Neny I. and 0.2 mi. SE. of Runaway I., lying in Marguerite Bay off the W. coast of Graham Land. First roughly charted in 1936 by the BGLE under Rymill. It was surveyed in 1947 by the FIDS who so named it because of the noise of the surf breaking.

Surgeon Island 70°40'S., 166°59'E.

The largest of the Lyall Islands, lying 4 mi. ESE. of Cape Hooker off the N. coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. The toponym conforms to other names in the island group which, along with Cape Hooker, have been named after surgeons who have worked in Antarctica. Named by the US-ACAN.

Surge Rocks 64°47'S., 64°04'W.

A group of five rocks, two always exposed, lying 0.1 mi. SW. of Eichorst Island and 0.6 mi. SSE. of Bonaparte Point, Anvers Island. The name was suggested by Palmer Station personnel in 1972. Ocean swells working on the shoal surrounding these rocks, cause breaking and a "surge" of the water level in any weather condition.

Suribachi, Mount 69°29'S., 39°38'E.

A conical hill in the south-central portion of Skarvsnes Foreland on the coast of Queen Maud Land. Mapped from surveys and air photos by the JARE, 1957-62. The name Suribachi-yama (Suribati Yama), meaning "conical mountain," was given by JARE Headquarters in 1973.

Suribati, Mount: see Suribachi, Mount 69°29'S., 39°38'E.

Surko Stream 77°25'S., 163°44'E.

A meltwater stream 1 mi. south of Gneiss Point on the coast of Victoria Land. It issues from the front of Wilson Piedmont Glacier and flows eastward to Arnold Cove. The stream was studied by Robert L. Nichols, geologist for Metcalf and Eddy, Engineers, Boston, Massachusetts, which made engineering studies here under contract to the U.S. Navy in the 1957-58 season. Named by Nichols for Lt. Alexander Surko, USN, second-in-command of the Navy party that worked on the aircraft landing strip close north of this stream.

Surprise, Cape 84°31'S., 174°25'W.

A cape marking the northern end of Longhorn Spurs, between Massam and Barrett Glaciers, at the edge of the Ross Ice Shelf. It is composed of rocks of the Beacon and Ferrar groups. So named by the Southern Party of NZGSAE (1963-64) because this is the first place where rocks of these groups have been found on the coast, surprising the geologists.

Surprise Island: see Sorpresa Rock 67°51'S., 69°34'W.

Surprise Spur 86°34'S., 147°50'W.

A prominent spur, the northernmost of three spurs on the SW. side of Ackerman Ridge in the La Gorce

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mountains. First mapped by USGS from surveys and U.S. Navy air photos, 1960-64. So named by NZGSAE (1969-70) because, in the middle of an extensive region of purely basement rocks, slightly altered sedimentary rocks which seem to belong to the much younger Beacon series appear on this spur.

Survey Isthmus 54°02'S., 37°58'W.

A narrow isthmus about 39 m. high separating Elsehul and Undine Harbor near the W. end of South Georgia. The name appears to first be used on a 1931 British Admiralty chart.

Surveyors Range 81°37'S., 160°15'E.

A mountain range 30 mi. long, extending N. along the E. side of Starshot Gl. from the Thompson Mtn. area to the glacier's terminus at the Ross Ice Shelf. Named by the NZGSAE (1960-61) for the early pioneering surveyors of New Zealand and present day equivalents in Great Britain who contributed to work carried out in this area by Capt. P. J. Hunt, Royal Engineers.

Susa Point 54°17'S., 36°30'W.

Low rocky point marking the seaward end of a small E.-W. ridge separating two tussock-covered flats, lying 0.25 mi. S. of the entrance to King Edward Cove in Cumberland East Bay, South Georgia. Roughly surveyed by the SwedAE, 1901-4, under Nordenskjöld. Named by the FIDS following their sketch survey in 1951. The name is one of a group in the vicinity of Discovery Pt. derived from the chemical fixatives used there in biological work by the FIDS.

Suslova, Ledolom: see Hovdebrekka Slope 72°03'S., 11°48'E.

Suspiros, Bahía: see Suspiros Bay 63°19'S., 56°28'W.

Suspiros Bay 63°19'S., 56°28'W.

A small bay indenting the W. end of Joinville I. just S. of Madder Cliffs. The name was proposed by Captain Emilio L. Díaz, commander of the Argentine Antarctic task force (1951-52). The toponym alludes to the difficulties encountered in surrounding the bay.

Suter Glacier 73°31'S., 167°10'E.

Short glacier in the Mountaineer Range, Victoria Land, draining SE. into Lady Newnes Bay just S. of Spatulate Ridge. Named by NZ-APC in 1966 for Douglas Suter, senior New Zealand scientist at Hallett Station, 1962-63.

Suter Island 68°36'S., 77°54'E.

A small island off the Vestfold Hills, lying 0.5 mi. SW. of the S. entrance point to Heidemann Bay. Mapped

by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for W. Suter, cook at Davis Station in 1960.

Sutherland Peak 77°38'S., 161°03'E.

One of the peaks of the Inland Forts, standing 2 mi. NNW. of Round Mountain in the Asgard Range of Victoria Land. Named by US-ACAN for Cdr. William P. Sutherland, USN, Officer-in-Charge of the Naval Support Force winter-over detachment at McMurdo Station in 1974.

Sutley Peak 73°39'S., 94°32'W.

Rock peak (1,400 m.) located just N. of Wright Peak and 3 mi. ENE. of Miller Crag in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. Named by US-ACAN for Lt. Cdr. Robert M. Sutley, USN, Executive Officer of Mobile Construction Battalion One on USN Op. DFrz. 1962.

Sutton Crag 54°23'S., 36°29'W.

Crag, 1,490 m., standing N. of and connected by a long ridge to the W. peak of Mt. Paget in the Allardyce Range of South Georgia. Charted and unofficially named Sentinel or Sentinel Peak by the British South Georgia Exp., 1954-55. To avoid duplication with other "sentinel" names, the UK-APC in 1957 named this feature for George A. Sutton, leader of the expedition, who reached the summit in 1954.

Sutton Peak 79°49'S., 82°34'W.

A sharp peak, 1,410 m., on the ridge separating Henderson and Ahrensbrak Glaciers in the Enterprise Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Walter C. Sutton, meteorologist at Little America V Station during 1957.

Suture Bench 73°31'S., 162°57'E.

A bench-like elevation at the SE. end of Gair Mesa that overlooks the head of Campbell Gl., in Victoria Land. Named by the northern party of NZGSAE, 1962-63, because of a dog fight here in which one dog was so badly torn that its wounds required "sutures."

Suvorov Glacier 69°56'S., 160°00'E.

A glacier, 5 mi. wide, flowing E. from the Wilson Hills and discharging into the sea S. of Northrup Head and Belousov Point. Mapped by the SovAE, 1958, and named after V.S. Suvorov, Soviet mechanic who perished in the Arctic.

Suydam, Mount 84°32'S., 65°27'W.

Mountain, 1,020 m., standing 3 mi. W. of Clark Ridge in Anderson Hills in northern Patuxent Range, Pensa-

GEOGRAPHIC NAMES OF THE ANTARCTIC

cola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for E. Lynn Suydam, biologist at Palmer Station, winter 1967.

Svarthandufsa Bluff 73°29'S., 3°48'W.

A bluff at the SW. side of Tverregg Glacier in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Svarthandufsa (the black band bluff).

Svarthamaren Mountain 71°54'S., 5°10'E.

A prominent ice-free mountain at the E. side of the mouth of Vestreskorve Gl. in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Svarthamaren (the black hammer).

Svarthausane Crags 71°40'S., 12°40'E.

A group of crags surmounted by Zhil'naya Mtn., forming the NE. end of Südliche Petermann Range in the Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Svarthausane (the black crags).

Svarthausen Nunatak 69°49'S., 74°30'E.

A jagged, dark rock nunatak with a small outlier to the SW., lying on the W. side of Polar Times Glacier, about 4 mi. SSE. of Mt. Caroline Mikkelsen. Mapped from air photographs by the Lars Christensen Exp., 1936-37, and named Svarthausen (the black crag).

Svarthorna Peaks 71°35'S., 12°37'E.

A series of five or more peaks on the curving ridge that forms the S. end of Mittlere Petermann Range, in the Wohlthat Mtns. of Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, who gave the descriptive name "Schwarze Hörner" (black peaks). The peaks were remapped by the Norwegian Antarctic Expedition, 1956-60, who used the spelling Svarthorna. The Norwegian spelling has been recommended by US-ACAN to agree with associated features in the area having this name.

Svarthornbotnen Cirque 71°35'S., 12°36'E.

A large cirque just NE. of Store Svarthorn Peak in the Mittlere Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted by NorAE, 1956-60, and named Svarthornbotnen (the black peak cirque).

Svarthornkammen Ridge 71°31'S., 12°31'E.

A high rock ridge extending N. for 5 mi. from Svarthorna Peaks in the Mittlere Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Svarthornkammen (the black peak ridge).

Svarthovden: see Falla Bluff 67°34'S., 61°29'E.

Svart Mountain: see Svart Peak 67°16'S., 58°28'E.

Svartmulen: see Strover Peak 69°43'S., 74°07'E.

Svartnupen Peak 71°55'S., 8°53'E.

A peak on the S. side of Håkon Col in the Kurze Mountains of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named Svartnupen (the black peak).

Svart Öya: see Black Island 78°12'S., 166°25'E.

Svart Peak 67°16'S., 58°28'E.

A rock peak, 210 m., lying a short distance inland from the coast on the SW. side of Law Promontory. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp. in January-February 1937, and named Svartfjell because of its black appearance.

Svartpiggen: see Tschuffert Peak 67°28'S., 60°54'E.

Svarttindane Peaks 71°39'S., 12°30'E.

A cluster of sharp peaks including Vesëlaya Mtn., located 2 mi. S. of Store Svarthorn Peak in Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Svarttindane (the black peaks).

Svaton Peaks 82°35'S., 161°00'E.

A cluster of rugged peaks at the N. end of the Queen Elizabeth Range, surmounting the area between the mouths of the Heilman and Otago Glaciers. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Ernest M. Svaton, USARP ionospheric physicist at McMurdo Station, winter 1963 and 1964.

Sveabreen: see Svea Glacier 72°08'S., 1°53'E.

Svea Glacier 72°08'S., 1°53'E.

A broad glacier flowing N. between the Sverdrup and Gjelsvik Mountains in Queen Maud Land. Photo-

GEOGRAPHIC NAMES OF THE ANTARCTIC

graphed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Sveabreen (the glacier of the Swedes).

Svelget 73°55'S., 5°22'W.

A cirque between Tunga Spur and Uven Spur in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Svelget (the throat).

Svellnuten Peak 72°40'S., 3°09'W.

A low peak at the E. side of Jøkulskarvet Ridge, in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52), and named Svellnuten (the ice-sheet peak) in association with the nearby slope, Breidssellet.

Svend Foyen Coast: see Foyen Coast 66°40'S., 64°20'W.

Svend Foyen Harbor: see Foyen Harbor 64°33'S., 62°01'W.

Svend Foyen Island: see Foyen Island 71°56'S., 171°04'E.

Svendsen Glacier 70°21'S., 160°00'E.

A meandering glacier, 13 mi. long, in the Usarp Mountains. It flows northeastward from Mt. Marzolf and emerges between McCain Bluff and Lenfant Bluff onto an ice piedmont just west of the terminus of Rennick Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Kendall L. Svendsen, USARP geomagnetist at McMurdo Station, 1967-68.

Svenner Islands 69°02'S., 76°50'E.

A small group of islands and rocks lying 14 mi. SW. of Rauer Islands in the SE. part of Prydz Bay. Discovered in February 1935 by a Norwegian expedition led by Capt. Klarius Mikkelsen. He charted the two main islands in the group and applied the name Svenner after the islands of that name near Sandefjord, Norway. The group was plotted in greater detail from air photos taken by the Lars Christensen Expedition, 1936-37.

Sven Rock 63°44'S., 60°11'W.

Rock lying S. of Oluf Rocks in Gilbert Strait, in the Palmer Archipelago. Photographed by the FIDASE in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 after the Danish

freighter *Oluf Sven* (Capt. J. C. Ryge) which transported the FIDASE to Deception I. in 1955 and 1956, and was used during the two summers as a mobile base for operations by ground survey parties.

Svensson Ridge 70°11'S., 64°29'E.

A rock ridge 1 mi. NW. of Mt. Starlight in the Athos Range, Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1955-65. Named by ANCA for A. Svensson, weather observer at Davis Station, 1964.

Sverdrup Mountains 72°20'S., 1°00'E.

A group of mountains about 50 mi. long, standing just W. of the Gjelsvik Mtns. in Queen Maud Land. The mountains were first photographed from the air and roughly plotted by the GerAE (1938-39). They were mapped in detail by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for H. U. Sverdrup, Chairman of the Norwegian Committee for the NBSAE.

Sverreborga: see Sverre Peak 71°43'S., 9°39'E.

Sverre Hassel, Mount: see Hassel, Mount 86°28'S., 164°28'W.

Sverre Peak 71°43'S., 9°39'E.

A small peak 0.5 mi. off the N. end of Pettersen Ridge in the Conrad Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by the NorAE, 1956-60, and named for Sverre Pettersen, steward with NorAE, 1957-58.

Svip Rock: see Svip Rocks 62°35'S., 61°38'W.

Svip Rocks 62°35'S., 61°38'W.

Group of submerged rocks reported to lie 9 mi. WNW. of Rugged I., in the South Shetland Islands. The name seems first to appear on the charts of the FrAE, 1908-10, under Charcot. It probably derives from the *Svip*, a whale catcher operating in the area at that time.

Svyatogo Georgiya Pobedonostsa, Gora: see Saint George Peak 69°06'S., 72°03'W.

SW, Morro: see Spiro Hill 62°16'S., 59°00'W.

Swadener, Mount 77°16'S., 153°45'W.

A peak in the Sneddon Nunataks, in the N. portion of the Alexandra Mtns. of Edward VII Peninsula. Mapped by USGS from surveys and U.S. Navy air

GEOGRAPHIC NAMES OF THE ANTARCTIC

photos, 1959-66. Named by US-ACAN for Lt. John R. Swadener, USN, navigator of the ski-equipped R4D in which R. Adm. George Dufek made the first aircraft landing at the geographic South Pole, on Oct. 31, 1956.

Swain Group: see Swain Islands 66°13'S., 110°37'E.

Swain Islands 66°13'S., 110°37'E.

A group of small islands and rocks about 2 mi. in extent, lying 0.5 mi. N. of Clark Peninsula at the NE. end of the Windmill Islands. Delineated from aerial photographs taken by USN Op. Hjp. in February 1947. Named by the US-ACAN for K.C. Swain who served as air crewman with the central task group of USN Op. Hjp., 1946-47, and also with USN. Op. Wml. which obtained aerial and ground photographic coverage of the Windmill Is. in January 1948.

Swan, Mount 76°58'S., 143°45'W.

A mountain 4 mi. S. of Gutenko Nunataks in the Ford Ranges, Marie Byrd Land. Discovered and mapped by the USAS (1939-41). Named by US-ACAN for Paul Swan, airplane pilot with the ByrdAE (1933-35).

Swan Glacier: see Swann Glacier 73°53'S., 61°48'W.

Swann Glacier 73°53'S., 61°48'W.

Broad glacier of undetermined length flowing E. into Wright Inlet to the N. of Mt. Tricorn, on the E. coast of Palmer Land. The glacier was disc. and photographed from the air in December 1940 by members of East Base of the USAS. During 1947 it was photographed from the air by members of the RARE, under Ronne, who in conjunction with the FIDS charted it from the ground. Named by Ronne for W. F. G. Swann, Dir. of the Barthol Research Foundation of Franklin Inst. at Swarthmore, Pa., a contributor to the expedition.

Swan Point 66°22'S., 110°30'E.

The westernmost point of Odberet I., in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Aerographer's Mate John R. Swan, USN, a member of the Wilkes Station party of 1958.

Swan Rock 64°58'S., 63°18'W.

Low rock lying 1.5 mi. SW. of Cape Willems, off the W. coast of Graham Land. The rock appears on an Argentine Govt. chart of 1950. Named by the UK-APC in 1960 for Sir Joseph Swan (1828-1914), English manufacturer who invented the carbon process for photographic printing in 1866 and pioneered gelatin dry plates for instantaneous photography, 1879-81.

Swanson Glacier 71°30'S., 160°24'E.

A glacier, 9 mi. long, draining the E. slopes of Daniels Range northward of Thompson Spur, in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Charles D. Swanson, USARP biologist at McMurdo Station, 1967-68.

Swanson Mountains 77°00'S., 145°00'W.

A mountain range 8 mi. long, standing 6 mi. SE. of Saunders Mtn. in the Ford Ranges, Marie Byrd Land. Discovered on aerial flights by the ByrdAE in 1934 and named for the Hon. Claude A. Swanson, Sec. of the Navy, 1933-39.

Swarm Peak 76°29'S., 146°20'W.

A rock peak (610 m.) which is the easternmost of the Birchall Peaks, in the Ford Ranges, Marie Byrd Land. Photographed from the air and roughly plotted by the ByrdAE, 1928-30, but mapped definitively by the USAS, 1939-41. Named by US-ACAN for H. Myron Swarm, USARP ionospheric physicist at Byrd Station in the 1966-67 season.

Swarsen Nunatak 71°25'S., 63°39'W.

A conspicuous nunatak, largely snow covered, located 5 mi. SW. of Mt. Jackson in Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Lt. Cdr. Ronald J. Swarsen, USNR, Medical Officer at Byrd Station, 1971, and at the South Pole Station, 1973.

Swartley, Mount 77°15'S., 143°12'W.

Peak 1 mi. E. of Mt. Darling in the Allegheny Mtns. of the Ford Ranges, Marie Byrd Land. Discovered on aerial flights from West Base of the USAS (1939-41) and named for Prof. Stanley Swartley of Allegheny College, Pennsylvania.

Swartz Nunataks 78°39'S., 160°00'E.

Two prominent nunataks, 1,565 m., protruding through the ice midway between the N. part of Worcester Range and Tate Peak. Named by US-ACAN in 1964 for Lt. Philip K. Swartz, Jr., MC, USN, officer in charge of the South Pole Station in 1961.

Swash Reef 67°34'S., 67°33'W.

A reef in the entrance of Bigourdan Fjord, close N. of Pourquoi Pas I., in Graham Land. Mapped by FIDS from surveys and air photos, 1956-59, and so named because most of the reef is awash.

Sweatt, Mount 85°47'S., 129°39'W.

A mountain, 2,540 m., standing 6.5 mi. NE. of Mt. Soyat on the ridge between Hueneme and Norfolk

GEOGRAPHIC NAMES OF THE ANTARCTIC

Glaciers, in the Wisconsin Range. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Earl E. Sweatt, construction electrician, Byrd Station winter party, 1961.

Sweeney Mountains 75°06'S., 69°15'W.

A group of mountains of moderate height and about 40 mi. extent, located 30 mi. N. of the Hauberg Mtns. in eastern Ellsworth Land. Disc. by the RARE, 1947-48, under Ronne, who named these mountains for Mrs. Edward C. Sweeney, a contributor to the expedition.

Swell Point 59°27'S., 27°06'W.

Small, narrow point 1.2 mi. S. of Resolution Pt., on the E. side and near the SE. extremity of Cook I. in the South Sandwich Islands. Charted and named by DI personnel on the *Discovery II* in 1930.

Swift Balch, Mount: see Balch, Mount 65°16'S., 63°59'W.

Swift Balch, Sommet: see Balch, Mount 65°16'S., 63°59'W.

Swift Glacier 64°22'S., 57°46'W.

A steep glacier about 2 mi. long, close W. of Jefford Pt., James Ross Island. Named by UK-APC following FIDS surveys, 1958-61. The name is descriptive, this being one of the most active glaciers on the island.

Swift Peak 66°19'S., 63°08'W.

A peak that is the highest point of an undulating, mainly snow-covered range of hills rising to about 1,000 m. Located at the N. end of Churchill Pen. on the E. coast of Graham Land. Charted by the FIDS and photographed from the air by the RARE in 1947. Named by UK-APC after Jonathan Swift (1667-1745), English author of *Gulliver's Travels*, a novel from which several nearby features are named.

Swinburne Ice Shelf 77°10'S., 153°55'W.

An ice shelf just N. of Edward VII Pen. and the Alexandra Mtns. in the S. part of Sulzberger Bay. The ice shelf is 20 mi. long and 5 mi. wide and extends from Fisher Island to White Islands. It was photographed from aircraft and mapped by the ByrdAE, 1928-30. Named by US-ACAN for Capt. H. W. Swinburne, Jr., Deputy Commander and Chief of Staff, U. S. Naval Support Force, Antarctica, during Deep Freeze 1970 and 1971.

Swine Hill 71°24'S., 67°33'W.

The southernmost of two rugged, rocky knolls, 550 m., standing 10 mi. WNW. of the summit of Mt. Bag-

shawe on the W. coast of Palmer Land and overlooking Gadarene Lake and George VI Sound. The feature was first seen and photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, and was mapped from these photographs by W. L. G. Joerg. It was roughly surveyed in 1936 by the BGLE under Rymill, and resurveyed in 1948 by the FIDS who erected a cairn on the summit. Named by FIDS for its association with Gadarene Lake (q.v.) and the incident of the Gadarene swine.

Swinford, Mount 77°16'S., 161°54'E.

A peak 2.75 mi. WNW. of Mt. Harker in Saint Johns Range, Victoria Land. Named by US-ACAN for Lt. Cdr. Harold D. Swinford, USN (CEC), who served with the Navy Nuclear Power Unit at McMurdo Station, wintering over there in 1963 and 1968.

Swinford Glacier: see Berwick Glacier 84°36'S., 165°45'E.

Swinford Glacier 84°45'S., 164°10'E.

A tributary glacier, 6 mi. long, flowing SE. between Mt. Holloway and Marshall Mtns. to enter Beardmore Glacier. Discovered by the BrAE (1907-9) and named by Shackleton for his eldest son, Raymond Swinford. The map of the BrAE (1910-13) and some subsequent maps transpose the positions of Swinford Glacier and Berwick Glacier. The latter lies 12 mi. northeastward. The original application (BrAE, 1907-9) of Berwick Glacier is the one recommended.

Swinhoe Peak 54°20'S., 36°32'W.

Peak, 845 m., standing between Hamberg Gl. and Hestesletten on the N. side of South Georgia. The peak was mapped by the SwedAE, 1901-4, under Norden-skjöld. It was surveyed by the SGS in the period 1951-57. Named by the UK-APC for Ernest Swinhoe, Manager of the South Georgia Exploration Co., who visited South Georgia in 1905 to prospect for minerals and to consider the establishment of an experimental sheep ranch.

Swithinbank Glacier 67°56'S., 66°46'W.

A glacier flowing N. to the SE. corner of Square Bay, in Graham Land. Mapped by FIDS from surveys and air photos, 1946-59. Named by UK-APC for Charles W. Swithinbank, British glaciologist, a participant in several British, New Zealand and American expeditions to Antarctica, 1949-62.

Swithinbankhallet: see Swithinbank Slope 73°28'S., 2°12'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Swithinbank Moraine 85°00'S., 177°05'W.

A spectacular medial moraine in the Shackleton Glacier. It trends northward from Matador Mountain. Named by the Southern Party of the NZGSAE (1961-62) for Charles W. Swithinbank, a member of the University of Michigan glaciological and survey parties to the major glaciers feeding the Ross Ice Shelf in 1960-61 and 1961-62.

Swithinbank Range 81°42'S., 159°00'E.

A small range from the Churchill Mtns., extending eastward between Donnally and Ahern Glaciers to the W. side of Starshot Glacier. Named by the NZGSAE (1959-60) for Charles Swithinbank, glaciologist that season at Little America V.

Swithinbank Slope 73°28'S., 2°12'W.

A semi-circular ice slope, about 25 mi. long, between Mt. Hallgren and Newmayer Cliffs in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for Charles Swithinbank, glaciologist with NBSAE.

Swope Glacier 77°20'S., 145°50'W.

A glacier which drains westward from the Ford Ranges, between Mounts Woodward and West, into Sulzberger Ice Shelf. Features in these ranges were discovered and successively mapped by the ByrdAE (1928-30) and (1933-35) and by the USAS (1939-41), all led by R. Adm. R.E. Byrd. The glacier is named for Gerard Swope, President of General Electric Corp., who contributed various types of electrical equipment to the ByrdAE (1933-35).

S.W. Point: see South West Point 54°30'S., 37°06'W.

Sydney Cove 52°58'S., 73°18'E.

An open cove indenting the N. side of Laurens Peninsula, Heard Island, immediately SE. of Red Island. The cove was frequented by early sealers, as shown by the name "Shanghai Beach" along the W. side of the cove appearing on an 1860 sketch map compiled by Capt. H.C. Chester, American sealer operating in the area during this period. Surveyed in 1948 by the ANARE and named by them after the city of Sydney, Australia.

Sydney Herbert Sound: see Herbert Sound 63°55'S., 57°40'W.

Sydshetland: see South Shetland Islands 62°00'S., 58°00'W.

Sykes Glacier 77°35'S., 161°32'E.

A north-flowing glacier located just east of Plane Table in the Asgard Range, Victoria Land. Named by NZ-APC for N.Z. film director Jeremy Sykes who perished in a helicopter accident at nearby Mt. McLennan, Nov. 19, 1969.

Sylwester Glacier 84°14'S., 159°48'E.

A glacier, 5 mi. long, flowing N. between Jacobs Nunatak and MacAlpine Hills into Law Glacier. Named by US-ACAN for David W. Sylwester, USARP aurora scientist at South Pole Station, winter 1961, and Byrd Station, summer, 1961-62.

Symington Islands 65°27'S., 64°58'W.

Group of small islands lying 13 mi. WNW. of Lahille I., in the Biscoe Islands. Charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 for J. D. L. Symington, senior air photographer of the FIDASE in this area in 1956-57.

Syningen Nunatak 68°20'S., 59°09'E.

A nunatak 1 mi. S. of See Nunatak in the eastern part of the Hansen Mountains. Mapped and named by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37.

Syowa Flat: see Shōwa Flat 69°01'S., 39°34'E.

Syren Bay: see Siren Bay 71°22'S., 169°15'E.

Syrezol Rocks 62°11'S., 58°17'W.

Small group of rocks lying 1 mi. W. of Martins Head at the E. side of the entrance to Admiralty Bay, King George I., in the South Shetland Islands. In 1908-10, the FrAE under Charcot assigned the name "Cap Syrezol" to a feature between what is now Martins Head and Chabrier Rock. Since there is no distinctive point or cape in this position, the name has been applied to these rocks in order to preserve Charcot's naming in the area in which it was originally given.

Syrstad Rock 75°58'S., 133°02'W.

A rock outcrop below and 1 mi. N. of Koerner Bluff on the NW. slopes of Mt. Bursey, in the Flood Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Erik Syrstad, ionospheric physicist at South Pole Station, 1970.

Systerflesene Islands 69°17'S., 39°25'E.

Three small islands in a group lying 5 mi. W. of Hamnenabben Head in the E. part of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Systerflesene (the sister islets).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Szabo Bluff 86°29'S., 144°48'W.

A bluff standing just N. of Price Bluff on the divide between Van Reeth and Robison Glaciers, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Alex J. Szabo, aircraft pilot of USN Squadron VX-6 during Operation Deep Freeze 1966 and 1967.

Szanto Spur 73°43'S., 161°18'E.

A noteworthy rock spur jutting from the N. wall into Priestley Glacier, Victoria Land, at the head of the glacier. Mapped by USGS from surveys and U.S.

Navy air photos, 1960-64. Named by US-ACAN for Otto R. Szanto, USN, radio man who served in Antarctic support activities for 4 seasons at McMurdo Station in the 1960's.

Szielasko Ice Cap 54°19'S., 36°18'W.

Ice cap 2 mi. long, occupying the highland close S. of Godthul on the N. side of South Georgia. Surveyed by the SGS in the period 1951-57. Named by the UK-APC for August E. A. Szielasko, medical officer on the *Fridtjof Nansen* which was wrecked off South Georgia in 1906. He published geographical and ornithological notes about the island.

T

Tabarin Peninsula 63°32'S., 57°00'W.

Peninsula 15 mi. long and 5 to 12 mi. wide, lying S. of the trough between Hope Bay and Duse Bay and forming the E. extremity of Trinity Peninsula. Disc. and charted by the SwedAE, 1901-4, under Norden-skjöld. It was mapped in 1946 by the FIDS and named after Operation Tabarin, the naval code name for the FIDS from 1943 to 1945.

Table Bay 61°09'S., 55°24'W.

The largest bay on the W. coast of Elephant I., South Shetland Islands. The name was applied by early sealers and dates back to at least 1822.

Table Bay 84°47'S., 163°30'E.

A small glacier between Mt. Augusta and Mt. Hollo-way in the S. part of Queen Alexandra Range, draining eastward into Beardmore Gl. at Lizard Point. Evidently named by the Southern Polar Party of the BrAE (1910-13) because of its appearance. The term "Bay" is obviously a misnomer, but it has been retained because of uniform usage for over fifty years.

Table Island 62°21'S., 59°49'W.

Conspicuous flat-topped island 2.5 mi. NW. of the W. tip of Robert I., in the South Shetland Islands. The name, which is descriptive, dates back to at least 1822 and is now established in international usage.

Table Mountain: see Two Step Cliffs 71°54'S., 68°13'W.

Table Mountain: see Tabular Mountain 77°51'S., 160°13'E.

Table Mountain 77°57'S., 162°00'E.

A large flat mountain rising to over 2,000 m. immediately S. of the junction of the Emmanuel and Ferrar Glaciers in Victoria Land. Discovered and given this descriptive name by the BrNAE (1901-4) under Scott.

Table Nunatak 68°30'S., 62°57'W.

Flat-topped, rectangular nunatak lying 0.5 mi. E. of Cape Agassiz on the E. coast of Palmer Land. This is probably the feature first seen in 1940 by members of the USAS and described as a snow-covered island close E. of Cape Agassiz. The nunatak was again sighted by Lt. Charles J. Adams, of the then USAAF, pilot with the RARE on a flight in September 1947. The name is descriptive.

Taborovskiy Peak 71°48'S., 11°35'E.

The highest peak, 2,895 m., in the Skarshaugane Peaks of the Betekhtin Range, Humboldt Mtns., in

Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet meteorologist N. L. Taborovskiy.

Taborovskogo, Gora: see Taborovskiy Peak 71°48'S., 11°35'E.

Tabor Spur 85°15'S., 90°14'W.

A narrow, jagged spur jutting out from the front of the Bermel Escarpment between Taylor Outlier and Elliott Nunatak, in the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960-61. Named for Rowland Tabor, USGS geologist with the 1961-62 Thiel Mountains party.

Tabular Mountain 77°51'S., 160°13'E.

Broad, flat-topped mountain, 2,700 m., about 6 mi. N. of Mt. Feather, on the S. side of Taylor Gl. in Victoria Land. Descriptively named by the BrNAE, 1901-4.

Tachimachi Point 69°00'S., 39°37'E.

A low, snow-covered point which marks the NE. extremity of East Ongul Island in northeastern Lützow-Holm Bay. Mapped from surveys and air photos by JARE, 1957-62. The name Tachimachi-misaki (Tatimati Point), meaning "stand and wait point," was given by JARE Headquarters in 1972.

Tadpole Island 65°56'S., 65°19'W.

Island just N. of Ferin Head, off the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. The name, given by the UK-APC in 1959, is descriptive of the island's shape when seen from the air.

Taggen Nunatak 72°10'S., 21°48'E.

Nunatak between Borchgrevinkisen and Kreitzerisen in the western part of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Taggen (the prong).

Tailend Nunatak 78°49'S., 27°25'W.

Nunatak, 535 m., at the N. end of the Theron Mountains. First mapped in 1956-57 by the CTAE and so named because it was the last rock feature at the NE. end of the Theron Mtns. seen either from the ground or from the air by members of the CTAE during their survey in 1956-57.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Tail Island 63°40'S., 57°37'W.

Circular island 1.25 mi. in diameter and 130 m. high, lying midway between Egg I. and Eagle I. in the NE. part of Prince Gustav Channel. Islands in this area were first seen by a party under J. Gunnar Andersson of the SwedAE, 1901-4. Tail Island was charted by the FIDS in 1945, and so named by them because of its relative position to Eagle and Beak Islands.

Tait Glacier 64°22'S., 58°02'W.

Glacier about 4 mi. long on the SW. coast of James Ross Island, flowing SW. into Carlsson Bay. Probably first seen by Dr. Otto Nordenskjöld in 1903. Surveyed by FIDS in 1945. Named by UK-APC for Murdo F. Tait, FIDS meteorological observer at Hope Bay in 1952 and 1953.

Takahe, Mount 76°17'S., 112°05'W.

A large, isolated snow-covered mountain (an extinct volcano) standing 40 mi. SE. of Toney Mountain in Marie Byrd Land. It is roughly circular, 18 mi. across, and rises to 3,400 meters. This mountain was probably among those viewed from a distance by Adm. Byrd and other members of the USAS in plane flights from the ship *Bear* on Feb. 24 and 25, 1940. It was visited in December 1957 by members of the Marie Byrd Land Traverse Party, 1957-58, who applied the name. "Takahe," the Maori name for a flightless, almost extinct New Zealand bird, is the nickname of the U.S. Navy LC-47 aircraft whose crew resupplied the traverse party near this mountain and assisted by providing aerial reconnaissance to locate passable routes.

Takaki Promontory 65°33'S., 64°14'W.

Promontory at the NE. side of Leroux Bay, on the W. coast of Graham Land. First seen and roughly charted by the FrAE, 1903-5, under Charcot. Named by the UK-APC in 1959 for Baron Kanshiro Takaki, Director-General of the Medical Dept. of the Imperial Japanese Navy, the first man to prevent beriberi empirically by dietary additions, in 1882.

Takrouna Bluff 71°59'S., 163°23'E.

A small but prominent bluff on the E. side of Alamein Range in the Freyberg Mountains, overlooking Canham Glacier from a position 6 mi. WSW. of Galatos Peak. Named by the northern party of NZGSAE, 1963-64, after Takrouna, a similar feature in Tunisia associated with Lord Freyberg and the Second New Zealand Expeditionary Force during World War II.

Talbot Glacier 65°12'S., 63°14'W.

Glacier flowing into Étienne Fjord, Flandres Bay, on the W. coast of Graham Land. First charted by the

BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for William H. F. Talbot (1800-1877), English inventor of the first practical photographic process on paper, perfected and called calotype in 1839-41.

Talbott Point 66°15'S., 67°10'W.

The northern point of DuBois I., Biscoe Islands. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for John H. Talbott, American physiologist who has specialized in the reactions of the human body to climatic environments.

Talutis Inlet 77°15'S., 81°30'W.

An ice-filled inlet in the western side of Fowler Ice Rise. The inlet opens onto Carlson Inlet just south of Kealey Ice Rise. Mapped by USGS from imagery provided by NASA Earth Resources Technology Satellite (ERTS-1), 1973-74. Named by US-ACAN for Lt. William R. Talutis, USN, Officer-in-Charge of the South Pole Station, 1972.

Tama, Cape: see Tama Point 68°43'S., 40°26'E.

Tama Glacier 68°47'S., 40°22'E.

A glacier flowing to the sea between Tensoku Rock and Manjū Rock on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Tama-hyōga (ball glacier).

Tama Point 68°43'S., 40°26'E.

A point 3 mi. NE. of Tama Gl. on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Tama-misaki (ball point).

Tambovskaya Peak 71°41'S., 12°20'E.

The central peak, 2,750 m., of Gråkammen Ridge in the Westliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for the Soviet city of Tambov.

Tammann Peaks 66°57'S., 66°21'W.

Peaks standing 4 mi. SE. of Orford Cliff and a like distance E. of Lallemand Fjord, in Graham Land. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Gustav H.J.A. Tammann, German physical chemist who (1900-1935) made important studies of the physical properties of ice.

Tangekilen Bay 69°58'S., 26°20'E.

An indentation of the ice shelf northward of the Sør Rondane Mtns. and 42 mi. ENE. of Breid Bay, along

GEOGRAPHIC NAMES OF THE ANTARCTIC

the coast of Queen Maud Land. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Tangekilen (the tongue bay) after the large ice tongue just eastward.

Tangent Island: see Prevot Island 64°53'S., 63°58'W.

Tange Promontory 67°27'S., 46°45'E.

An ice-covered peninsula just W. of Casey Bay on the coast of Enderby Land. Plotted from air photographs taken from an ANARE aircraft in November 1956. Mapped by the SovAE in February 1957. Named by ANCA for Sir Arthur Tange, Sec. of the Australian Dept. of External Affairs, 1954-65.

Tanglefoot Peak 67°21'S., 67°33'W.

Prominent rocky peak, 670 m., standing 2.5 mi. E. of Wyatt I. on the W. coast of Graham Land. Probably first sighted by members of the FrAE under Charcot who roughly charted this area in 1909. Surveyed in 1948 by the FIDS and given this descriptive name because the peak is associated (joined by a spur) with a very rugged and broken ridge which extends SE. and S. from it.

Tangskjera: see Tongue Rock 67°33'S., 62°00'E.

Tankobu Peak 69°24'S., 39°48'E.

A bare rock peak, 155 m., marking the N. end of the Byvågåsane Peaks on the E. shore of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Surveyed by JARE, 1957-62, and named Tankobu-san (craggy peak).

Tanna Peak 72°20'S., 1°20'E.

A peak at the E. side of the mouth of Rogstad Gl. in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tanna (the tooth).

Tannaron, Cap: see Thanaron Point 63°30'S., 58°40'W.

Tanngarden Peaks 72°02'S., 23°17'E.

Row of peaks, 2,350 m., just N. of Viking Heights and Mt. Widerøe in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Tanngarden (the row of teeth).

Tantalus Bluffs 84°55'S., 168°25'W.

High rock bluffs forming the NE. shoulder of Mt. Ferguson, overlooking the W. side of the terminus of Liv Glacier near its entry into Ross Ice Shelf. So named by the Southern Party of NZGSAE (1963-64) because the bluffs appeared to be of geologic interest, but could not be reached. In attempting to penetrate the crevasse field NE. of the bluffs one of the geologists was injured in a crevasse accident.

Tantalus Peak 73°53'S., 161°21'E.

The highest peak (2,220 m.) along the S. wall at the head of Priestley Glacier, Victoria Land. So named by the southern party of NZGSAE, 1962-63, because an attempt to establish a station there proved abortive due to steep ice. (Tantalus, son of Zeus, was punished for transgressions by "standing in water that ebbed when he would drink".)

Tapley Mountains 85°45'S., 149°00'W.

A range of mountains fronting on the E. side of Scott Gl., extending eastward for 35 mi. between Leverett and Albanus Glaciers in the Queen Maud Mountains. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named by Byrd for the Hon. Harold L. Tapley of Dunedin, New Zealand, agent for the ByrdAE of 1928-30 and 1933-35.

Tapsell Foreland 70°52'S., 167°20'E.

A broad, mostly snow-covered foreland jutting into the sea between Yule Bay and Smith Inlet, northern Victoria Land. Much of the central portion of this feature rises above 800 m. The name Tapsell, applied by NZ-APC in 1969, is the surname of the Master of the barque *Brisk*, one of the whaling vessels based on Enderby Settlement at Port Ross, Auckland Islands, 1849-52. In an exploratory voyage in Feb. 1850, Tapsell sailed S. to the Belleny Is. and then W. along the parallel of 67°S. as far as 143°E. Despite the high latitude, no land was sighted.

Tarachine, Lake 69°01'S., 39°35'E.

A small lake between Lake Kamome and Lake Minami in the S. part of East Ongul Island. Surveyed and named by JARE in 1957.

Tarakanov Ridge 82°19'S., 159°24'E.

A prominent ridge from the Cobham Range, between the Gray Glacier and Prince Philip Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Gennady Tarakanov, Soviet exchange scientist, meteorologist at McMurdo Station, 1963.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Tararua, Mount 72°08'S., 166°14'E.

A prominent peak, 2,550 m., standing 3 mi. NE. of Head Peak, Victory Mtns., at the head of Pearl Harbor Glacier. Climbed on Jan. 3, 1963 by the Southern Party of NZFMCAE, 1962-63, who named it after their parent mountain club, the Tararua Tramping Club, Wellington, New Zealand.

Taratine, Lake: see Tarachine, Lake 69°01'S., 39°35'E.

Tar buck Crag 68°35'S., 78°12'E.

One of a group of three high points about 0.75 mi. SW. of Club Lake in the Vestfold Hills. The feature is 140 m. high and has steep sides to the south and east. The feature was the terminal tellurometer station of the 1969 ANARE Prince Charles Mtns. survey. Named by ANCA for J. Tar buck, cook at Wilkes Station in 1965, cook at Davis Station in 1969, and expedition assistant with ANARE at Wilkes in 1967.

Target Hill 66°00'S., 62°57'W.

A prominent hill which rises 1,010 m. above the level of Larsen Ice Shelf. It stands 6 mi. W. of Mt. Fritsche on the S. flank of Leppard Glacier in eastern Graham Land. The hill was the most westerly point reached by the FIDS survey party in 1955; it was visible to the party as a target upon which to steer from the summit of Richthofen Pass.

Tårnet Pinnacle 72°01'S., 25°34'E.

A prominent rock pinnacle on the NW. side of Mt. Bergersen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Tårnet (the tower).

Tarr, Mount 70°25'S., 65°46'E.

A mountain 1.5 mi. ESE. of Mt. Creighton in the Por thos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for F. Tarr, aircraft engineer with the ANARE Prince Charles Mountains survey party in 1969.

Tartar Island 61°56'S., 58°29'W.

Island 0.3 mi. long lying 0.5 mi. NW. of Round Pt., off the N. coast of King George I. in the South Shetland Islands. Named by the UK-APC in 1960 for the sealing vessel *Tartar* (Capt. Pottinger) from London, which visited the South Shetland Is. in 1821-22.

Tasch Peak 76°40'S., 118°03'W.

A rocky peak in the SE. portion of Mount Rees, in the Cray Mountains of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy tricamera aerial

photographs, 1959-66. Named by US-ACAN for Paul Tasch, USARP geologist in the Sentinel Range and Ohio Range, summer 1966-67, and Coalsack Bluff, 1969-70.

Tashtego Point 65°44'S., 62°09'W.

Rocky point marking the E. end of the ridge at the S. side of Stubb Gl., on the E. coast of Graham Land. Surveyed and photographed by the FIDS in 1947. Named by the UK-APC after Stubb's harpooner on the *Pequod* in Herman Melville's *Moby Dick*.

Tate Glacier 85°54'S., 160°50'W.

A tributary glacier on the S. side of Thomas Spur, flowing E. and merging with Moffett Gl. just E. of the spur where the two glaciers enter the larger Amundsen Gl., in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Robert Tate, geomagnetist-seismologist with the South Pole Station winter party, 1964.

Tate Peak 78°38'S., 159°31'E.

Sharp peak, 1,885 m., standing 2 mi. E. of Escalade Peak at the S. side of Skelton Névé. Named by US-ACAN in 1964 for Lt. T. N. Tate, USN, public works officer at McMurdo Station, 1963.

Tate Rocks 72°40'S., 74°33'E.

Three small nunataks lying 7 mi. NNW. of Mason Peaks in the Grove Mountains. Mapped from air photos, 1956-60, by ANARE. Named by ANCA for K. A. Tate, radio officer at Mawson Station, 1962.

Tatimati Point: see Tachimachi Point 69°00'S., 39°37'E.

Tau Islands 64°18'S., 62°55'W.

Small group of islands and rocks which lie immediately off the NE. extremity of Eta I. in the Melchior Is., Palmer Archipelago. The name, derived from the 19th letter of the Greek alphabet, appears to have been first used on a 1946 Argentine govt. chart following surveys of the islands by Arg. expeditions in 1942 and 1943.

Taurus Nunataks 70°52'S., 66°23'W.

A line of three nunataks running E.-W., with only the outer two of any prominence, located 23 mi. ENE. of Gurney Point in Palmer Land. Named by UK-APC after the constellation of Taurus.

Tawny Gap 54°01'S., 37°36'W.

Low pass extending across South Georgia from the head of Ice Fjord to a cove just S. of Wales Head. The

name was given by the UK-APC following survey by the SGS in the period 1951-57 and is descriptive of the colorful vegetation in this small gap.

Tay, Firth of 63°22'S., 55°45'W.

Sound, 12 mi. long and 6 mi. wide, extending in a NW.-SE. direction between the NE. side of Dundee I. and the E. portion of Joinville Island. It merges to the NW. with Active Sound with which it completes the separation of Dundee and Joinville Islands. Disc. in 1892-93 by Capt. Thomas Robertson of the Dundee whaling expedition and named by him after the Firth of Tay of Scotland.

Tay Head 63°21'S., 55°34'W.

Rocky headland 6 mi. E. of Mt. Alexander, extending into the Firth of Tay on the S. coast of Joinville Island. The name, given by the UK-APC in 1963, is derived from the Firth of Tay.

Taylor, Mount 63°26'S., 57°08'W.

Large, flat-topped mountain, 1,000 m., having steep cliffs on the NE. side, standing 2.5 mi. WSW. of the head of Hope Bay at the NE. end of Antarctic Peninsula. Disc. by the SwedAE, 1901-4, under Norden-skjöld. The mountain was charted by the FIDS in 1946 and named in 1948 by the UK-APC for Capt. A. Taylor, commander of the FIDS and leader of its base at Hope Bay in 1945.

Taylor Buttresses 70°08'S., 67°23'W.

An oval shaped, whale-backed hill with its smooth contours broken at the northern end by three rock buttresses which are conspicuous from the north, located near the heads of Riley Gl. and Chapman Gl. in western Palmer Land. Named by UK-APC for Brian J. Taylor, BAS geologist at Fossil Bluff station, 1961-63.

Taylor Glacier 67°27'S., 60°50'E.

Glacier 1.5 mi. wide, lying E. of Hayes Peak and flowing N. into the sea just E. of Cape Bruce. Disc. in February 1931 by the BANZARE under Mawson. He named it for geologist Griffith Taylor.

Taylor Glacier 77°44'S., 162°10'E.

Glacier about 35 mi. long, flowing from the plateau of Victoria Land into the W. end of Taylor Valley, N. of the Kukri Hills. Discovered by the BrNAE (1901-4) and at that time thought to be a part of Ferrar Glacier. The Western Journey Party of the BrAE (1910-13) determined that the upper and lower portions of what was then known as Ferrar Glacier are apposed, i.e., joined in Siamese-twin fashion N. of Knobhead. With this discovery Scott named the upper portion for Griffith Taylor, geologist and leader of the Western Journey Party.

Taylor Glacier Dry Valley: see Taylor Valley 77°37'S., 163°00'E.

Taylor Hills 82°38'S., 163°50'E.

A line of ice-covered hills bordering the E. side of Lowery Glacier between Oliver Glacier and Robb Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Lawrence D. Taylor, USARP glaciologist at South Pole Station, 1963-64.

Taylor Islands 66°10'S., 100°17'E.

Group of rocky islands and rocks lying at the W. side of Edisto Ice Tongue and marking the W. end of the Highjump Archipelago. Delineated from aerial photographs taken by USN Op. Hjp., 1946-47, and named for Richard Spence Taylor, who served as surveyor with the USN Op. Wml. parties which established astronomical control stations from Wilhelm II Coast to Budd Coast in January-February 1948.

Taylor Nunatak 84°54'S., 176°00'W.

A large nunatak at the E. side of Shackleton Gl., just S. of the terminus of Dick Gl., in the Queen Maud Mountains. Named by the Southern Party of NZGSAE (1961-62) for Thomas E. Taylor, topographic surveyor, USGS, who worked near the mouth of Shackleton Gl. in the summers of 1960-61 and 1961-62, and in the Pensacola Mtns., 1962-63.

Taylor Nunataks 63°15'S., 55°33'W.

Two isolated nunataks, 650 m. and 660 m., joined by a narrow ridge, lying SE. of Mt. Quilmes in the eastern half of Joinville Island. Surveyed by the FIDS in 1953. Named by the UK-APC for Robert J. F. Taylor of FIDS, dog-physiologist at Hope Bay in 1954 and 1955, who accompanied the FIDS survey party to Joinville I. in 1953-54.

Taylor Outlier 85°13'S., 90°19'W.

A relatively isolated rock lying just in front of the W. end of the Bermel Escarpment and about 1.5 mi. E. of the lower part of Counts Icefall, in the Thiel Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1959-61. Named by US-ACAN for Alfred R. Taylor, USGS geologist, a member of the USARP Victoria Land Traverse, 1959-60.

Taylor Peak 72°12'S., 168°39'E.

The main peak (2,550 m.) of the heights separating Helman and Tyler Glaciers in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for C. B. Taylor, aurora scientist, New Zealand scientific leader at Hallett Station, 1962.

Telen Hill 69°38'S., 39°42'E.

A bare rock hill along the coast between Skallen Gl. and Telen Gl., on the E. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Telen (the frozen crust).

Teller Peak 85°57'S., 135°28'W.

A peak, 3,550 m., marking the NE. extremity of Michigan Plateau and the Watson Escarpment, Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-63. Named by US-ACAN for James T. Teller, geologist with the Ohio State Univ. party to the Horlick Mtns. in 1964-65.

Tel'mana, Gory: see Thälmann Mountains 72°00'S., 4°45'E.

Telmo Island: see San Telmo Island 62°28'S., 60°49'W.

Teltet Nunatak 71°59'S., 23°43'E.

Prominent nunatak 2 mi. N. of Vengen Spur in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Teltet (the tent).

Temmondai Rock 68°25'S., 41°41'E.

A rock exposure on the coast at the E. side of the terminus of Higashi-naga-iwa Glacier in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Temmondai-iwa (astronomical observatory rock).

Temnikow Nunataks 70°37'S., 64°10'W.

A rather scattered group of low rock outcroppings over an area of about 6 mi., located at the E. margin of Dyer Plateau and 5 mi. W. of Kelley Massif in Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for Nicolas Temnikow, USARP biologist at Palmer Station in 1974.

Tempest Peak 84°31'S., 164°11'E.

A sharp ice-covered peak (3,410 m.) with a subordinate summit (3,345 m.) just southward, standing 3 mi. NNE. of Storm Peak in the Marshall Mtns., Queen Alexandra Range. So named by the NZGSAE (1961-62) because of the stormy conditions experienced in the area.

Tempest Peaks: see Tempest Peak 84°31'S., 164°11'E.

Temple Glacier 64°00'S., 60°01'W.

Glacier flowing into the S. side of Lanchester Bay on the W. coast of Graham Land. Photographed by

Hunting Aerosurveys Ltd. in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Félix Du Temple (1823-1890), French naval officer who in 1857 designed the first powered model airplane to rise unaided, fly freely and land safely.

Tempyō, Mount 69°31'S., 39°43'E.

A rocky hill (260 m.) that rises from the southern extremity of Skarvsnes Foreland on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62. The name "Tempyō-zan" (Tenpyō Zan), apparently descriptive of the feature, was given by JARE Headquarters in 1973.

Tenaza Peak 71°05'S., 167°24'E.

A peak (1,345 m.) located 2.5 mi. E. of Mt. Pechell in the west-central part of Hedgpeth Heights, Anare Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Richard R. Tenaza, USARP biologist at Hallett Station, 1967-68.

Teniente, Monte: see Stokes Hill 64°52'S., 63°32'W.

Temmondai Rock: see Temmondai Rock 68°25'S., 41°41'E.

Tennant, Mount 64°41'S., 62°41'W.

Conspicuous peak, 690 m., situated at the N. end of Rongé I., off the W. coast of Graham Land. Disc. by the BelgAE under Gerlache, who charted Rongé I. in

GEOGRAPHIC NAMES OF THE ANTARCTIC

1898. Named by members of H.M.S. *Snipe*, following an Antarctic cruise in January 1948, for V. Adm. Sir William Tennant, then Commander-in-Chief of the America and West Indies Station.

Tennant, Mount: see Tennant Peak 78°09'S., 155°18'W.

Tennant Peak 78°09'S., 155°18'W.

Peak 1 mi. S. of Gould Peak in the S. group of the Rockefeller Mtns. on Edward VII Peninsula. Discovered by the ByrdAE (1928-30) and named by Byrd for George W. Tennant, cook on the expedition.

Tennent, Mount 85°22'S., 166°45'E.

A rocky peak, 2,895 m., in the Dominion Range, 2 mi. S. of Vandament Glacier. Named by the NZGSAE (1961-62) for W. B. Tennent, Minister in Charge of Scientific and Industrial Research, New Zealand.

Tenney, Mount 74°49'S., 65°19'W.

A mountain located W. of Latady Mtns., 9 mi. NW. of Mt. Hyatt, at the base of Antarctic Peninsula. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Philip J. Tenney, traverse engineer on the South Pole-Queen Maud Land Traverse III, summer 1967-68.

Tenniel, Mount 70°20'S., 62°48'W.

Mountain, 1,625 m., standing 7 mi. WNW. of the mouth of Clifford Gl. on the E. coast of Palmer Land. Disc. in 1936 by a BGLE sledge party under Rymill. During 1947 it was photographed from the air by the RARE under Ronne, who in conjunction with the FIDS charted it from the ground. Named in 1952 by Sir Miles Clifford, Gov. of the Falkland Islands, for his great-uncle Sir John Tenniel, 1820-1914, noted English illustrating artist, humorist, and political cartoonist.

Tennyson, Cape 77°22'S., 168°18'E.

Rock cape on the N. coast of Ross Island, about 25 mi. SE. of Cape Bird. Discovered in February 1900 by the BrAE (1898-1900) under C. E. Borchgrevink, and named by him for English poet Alfred Tennyson.

Tenorio, Isote: see Tenorio Rock 62°28'S., 59°44'W.

Tenorio Rock 62°28'S., 59°44'W.

A rock 0.4 mi. offshore in western Discovery Bay, Greenwich I., South Shetland Islands. The name derives from the forms "Isote Tenorio" and "Isote Avia-dor Tenorio" used on Chilean hydrographic charts of the 1950's. Humbert Tenorio I. was second pilot of the Sikorsky helicopter employed by the Chilean Antarctic Exp. of 1947.

Tempyō, Mount: see Tempyō, Mount 69°31'S., 39°43'E.

Tensoku Rock 68°48'S., 40°11'E.

An exposed rock lying on the coast, midway between Flattunga and Tama Glacier in Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Tensoku-iwa (observation rock) because the feature served as a point of observation for the JARE survey party.

Tentacle Ridge 79°37'S., 157°15'E.

A long partially ice-free ridge lying S. of Mt. Longhurst, extending from the mouth of McCleary Glacier SE. along the N. side of Darwin Glacier. The descriptive name was given by the Darwin Glacier Party of the CTAE (1956-58).

Tenterhooks Crevasses 71°40'S., 162°30'E.

A large system of crevasses in the Rennick Glacier between the Morozumi and Lanterman Ranges. The southern part of these crevasses (near Onlooker Nunatak) was traversed with great difficulty by members of the Northern Party of the NZGSAE, 1963-64, who gave the name.

Tent Island 77°41'S., 166°23'E.

The largest of the Dellbridge Islands, about 1 mi. long and 135 m. high, lying S. of Cape Evans, Ross I., in McMurdo Sound. Discovered by the BrNAE (1901-4), which so named this island for its tentlike appearance.

Tent Nunatak 67°36'S., 65°21'W.

Conspicuous pyramidal nunatak marking the S. limit of Whirlwind Inlet on the east coast of Graham Land. First seen and photographed from the air by the USAS, in 1940, and described as a "distinctive tent-shaped rock nunatak." It was charted by the FIDS in 1947.

Tent Rock 75°42'S., 158°34'E.

A small nunatak shaped like a ridge tent, lying 1 mi. SW. of Thomas Rock and 7 mi. W. of Ricker Hills in the Prince Albert Mtns., Victoria Land. Mapped and descriptively named by the Southern Party of NZGSAE, 1962-63.

Teodoro, Roca: see Theodor Rock 54°36'S., 37°01'W.

Teöya: see Te Islands 69°03'S., 39°34'E.

Terletskiy Peak 71°49'S., 10°31'E.

Peak, 2,505 m., rising 1.7 mi. NW. of Chervov Peak in the Shcherbakov Range, Orvin Mtns., in Queen

GEOGRAPHIC NAMES OF THE ANTARCTIC

Maud Land. Disc. and roughly plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet hydrographer N. A. Terletskiy (1910-1954).

Terletskogo, Gora: see Terletskiy Peak 71°49'S., 10°31'E.

Terminal Island 68°45'S., 70°35'W.

A low snow-covered island 0.5 mi. off the N. tip of Alexander Island. Mapped by FIDS in 1960 from trimetrogon air photography taken by RARE, 1947-48. The UK-APC name is descriptive of its position relative to Alexander Island.

Terminal Peak 75°53'S., 158°24'E.

A small peak, 1,920 m., standing 1 mi. N. of Griffin Nunatak in the Prince Albert Mtns., Victoria Land. So named by the Southern Party of NZGSAE, 1962-63, because it marked the western extent of their journey.

Termination Barriere Eis: see Shackleton Ice Shelf 66°00'S., 100°00'E.

Terminus Mountain 78°08'S., 163°36'E.

Mountain over 800 m., standing immediately S. of Adams Gl. on the E. side of the Royal Society Range in Victoria Land. It was climbed on Mar. 1, 1911 by Taylor and the Western Journey Party of the BrAE, 1910-13. So named by Taylor because it was the furthest point they ascended in this area.

Terminus Nunatak 69°52'S., 68°20'W.

Conspicuous nunatak, 670 m., standing between Eureka and Riley Glaciers and 0.5 mi. inland from George VI Sound, on the W. coast of Palmer Land. This nunatak was first photographed from the air on Nov. 23, 1935 by Lincoln Ellsworth, and was mapped from these photographs by W. L. G. Joerg. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS, and so named by them because the nunatak marks the end of the sledge route from the Wordie Ice Shelf, down Eureka Gl., to George VI Sound.

Tern Cove 60°42'S., 45°37'W.

Small cove, the entrance to which is blocked by submerged rocks, lying immediately SE. of Berry Head in the N. part of Signy I., in the South Orkney Islands. The cove contains three small islands, and an area near the head dries at low water. Roughly charted in 1933 by DI personnel. Named by the FIDS, following their survey of 1947, for the colony of terns (*Sterna vitata*) on the southernmost island in the cove.

Terningen Peak 72°11'S., 2°45'E.

A small rock peak, 2,680 m., marking the summit of Terningskarvet Mountain in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Terningen (the die).

Terningskarvet Mountain 72°11'S., 2°46'E.

Large complex mountain just E. of Mayr Ridge, forming the SE. portion of the Gjelsvik Mtns. in Queen Maud Land. Mapped by Nor. cartographers from surveys and air photos by NBSAE (1949-52) and by NorAE (1958-59) and named Terningskarvet (the die mountain).

Tern Island 54°03'S., 37°20'W.

Small, tussock-covered island lying 1 mi. S. of Albatross I. and 0.6 mi. E. of Dot I. in the S. part of the Bay of Isles, South Georgia. First charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. Surveyed in 1929-30 by DI personnel, who named it in association with Albatross I., Prion I. and other natural history names given in the Bay of Isles by Murphy in 1912-13.

Tern Nunatak 62°06'S., 58°20'W.

Nunatak lying just E. of Lussich Cove, Admiralty Bay, on King George I. in the South Shetland Islands. Charted but not named by the FrAE, 1908-10, under Charcot. The name Tern Nunatak became established in local use at the FIDS Admiralty Bay station in about 1949.

Ternyck Needle 62°05'S., 58°16'W.

Conspicuous nunatak, 365 m., standing 1.5 mi. E. of the head of Martel Inlet at the base of the small peninsula separating Admiralty and King George Bays, on King George I. in the South Shetland Islands. Charted in December 1909 by the FrAE under Charcot, who presumably applied the name.

Terrace Island: see Dunlop Island 77°14'S., 163°30'E.

Terrace Lake 77°34'S., 166°13'E.

A descriptive name for a small, elongate lake which lies in a valley with moraine from the Barne Glacier, about 0.5 mi. E. of Cape Barne on Ross Island. The name appears on the maps of the BrAE (1910-13), but may have been applied earlier by the BrAE (1907-9).

Terrace Ridge 84°49'S., 113°45'W.

A mostly ice-free ridge, or spur, descending NW. from the summit area at the S. end of Mt. Schopf in the Ohio Range, Horlick Mountains. Resistant sandstone

GEOGRAPHIC NAMES OF THE ANTARCTIC

strata predominate in the lower half of the slope of the ridge, forming a series of partly ice-covered terraces separated by scarps. The descriptive name was suggested by geologists of the Ohio State Univ. expedition who worked in these mountains in the 1960-61 and 1961-62 seasons.

Terra Cotta Mountain 77°54'S., 161°15'E.

Mountain between Windy Gully and Knobhead, on the S. side of Taylor Gl. in Victoria Land. The descriptive name was applied by the BrNAE, 1901-4.

Terra Cotta Mountains: see Terra Cotta Mountain 77°54'S., 161°15'E.

Terra Firma Islands 68°42'S., 67°32'W.

Small group of islands lying 8 mi. N. of Cape Bertheaux, off the W. coast of Graham Land. Disc. and named on June 18, 1936 by the BGLE under Rymill.

Terra Firma II Island: see Twig Rock 68°42'S., 67°32'W.

Terra-Nova, Glacier: see Astrolabe Glacier 66°45'S., 139°55'E.

Terra Nova, Mount 77°31'S., 167°57'E.

Snow-covered mountain, 2,130 m., between Mt. Erebus and Mt. Terror on Ross Island. First mapped by the BrNAE, 1901-4, and named for the *Terra Nova*, relief ship for this expedition and the BrAE, 1910-13.

Terra Nova Bay 74°50'S., 164°30'E.

A bay, often ice free, about 40 mi. long, lying between Cape Washington and Drygalski Ice Tongue along the coast of Victoria Land. Discovered by the BrNAE under Scott, 1901-4, and named by him after the *Terra Nova*, one of the relief ships for the expedition.

Terra Nova Islands 66°53'S., 157°57'E.

Two small islands lying off the Antarctic coast about 14 mi. N. of Williamson Head. Sighted from the *Magga Dan*, Mar. 8, 1961, by ANARE under Phillip Law. Named by ANCA after the expedition ship of the BrAE, 1910-13, the *Terra Nova*, from which Lt. H.L.L. Pennell, RN, discovered and charted coastal points in the vicinity.

Terrapin Hill 63°58'S., 57°32'W.

Rounded, reddish-colored hill, 545 m. high, standing at the S. end of The Naze, a peninsula of northern James Ross I., close S. of Trinity Peninsula. This area was first explored by the SwedAE, 1901-4, under Nordenskjöld. Terrapin Hill was first charted by the FIDS, 1945, who in 1948 applied this name which is descriptive of its shape.

Terrazas, Mount 74°52'S., 63°51'W.

A prominent ridgelike mountain 10 mi. W. of Mt. Austin in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Rudolph D. Terrazas, builder at South Pole Station in 1967.

Terror, Mount 77°31'S., 168°32'E.

An extinct volcano about 3,230 m. high on Ross Island, about 20 miles eastward of Mount Erebus. Named in 1841 by Sir James Clark Ross for his second ship, the *Terror*.

Terror Glacier 77°37'S., 168°03'E.

Large glacier between Mt. Terra Nova and Mt. Terror on Ross I., flowing S. into Windless Bight. So named by A. J. Heine of the NZGSAE, 1962-63, because of its association with Mt. Terror.

Terror Point 77°41'S., 168°13'E.

A point below Mount Terror. It marks the E. limit of Fog Bay, 4 mi. WNW. of Cape MacKay, Ross Island. The name was first used by members of the BrNAE, 1901-4, and was apparently applied in association with Mount Terror which overlooks this point from northeastward.

Tertene Nunataks 72°16'S., 21°57'E.

Several small nunataks on the W. side of Kreitzerisen, near the W. end of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Tertene (the tarts).

Terwileger, Mount 75°13'S., 64°44'W.

A mountain on the N. side of Ueda Gl., standing at the SE. extremity of the Scaife Mtns., near the base of Antarctic Peninsula. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Stephen E. Terwileger, hospital corpsman at South Pole Station in 1967.

Tester Nunatak 70°58'S., 71°29'E.

The southernmost of a group of three nunataks in the northern part of the Manning Nunataks, in the east part of Amery Ice Shelf. The nunataks were photographed by USN Op. Hjp. (1946-47) and ANARE (1957). They were visited by the SovAE in 1965 and by ANARE in 1969. Named by ANCA for J. Tester, aircraft engineer with the ANARE Prince Charles Mtns. survey party in 1969.

Tethys Nunataks 72°10'S., 68°59'W.

Group of about five rock nunataks, 2 mi. NE. of Stephenson Nunatak in the SE. corner of Alexander Is-

GEOGRAPHIC NAMES OF THE ANTARCTIC

land. Presumably first seen by Ronne and Eklund of the USAS who sledged through George VI Sound in 1940-41. Surveyed in 1949 by the FIDS and named by the UK-APC for association with nearby Saturn Glacier, Tethys being one of the satellites of Saturn.

Tetrad Islands 63°55'S., 60°44'W.

Group of small islands lying SE. of Borge Pt., Trinity I., in the Palmer Archipelago. Shown on an Argentine Govt. chart of 1952. The name given by the UK-APC in 1960 is descriptive; there are four islands in the group.

Teufelsinsel: see Devil Island 63°48'S., 57°17'W.

Teyssier Island 67°36'S., 62°54'E.

Island at the S. end of the Jocelyn Is. in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for P. Teyssier, cook at nearby Mawson Station in 1959.

Thala Hills 67°39'S., 45°58'E.

Low, rounded coastal hills between Freeth and Spooner Bays in Enderby Land. The hills were plotted from air photos taken by ANCA in 1956. Named by ANCA for the ship *Thala Dan* in which ANARE visited the hills in February 1961.

Thala Island 70°37'S., 166°05'E.

The southern of two small, rocky islands lying just off the NW. edge of Davis Ice Piedmont, along the N. coast of Victoria Land. Named by ANARE after M.V. *Thala Dan*, one of two expedition ships used by ANARE in 1962 to explore this area.

Thala Rock 68°33'S., 77°52'E.

An isolated, submerged rock lying off the Vestfold Hills, about 0.3 mi. from the western point of Turner Island, bearing 250°. The depth of water over the rock probably does not exceed 1 fathom. The rock was struck by the *Thala Dan* on Jan. 16, 1959, when approaching Davis Anchorage with the ANARE relief expedition. Named after the *Thala Dan*.

Thälmann Mountains 72°00'S., 4°45'E.

A group of mountains in the Mühlig-Hofmann Mountains between Flogeken Glacier and Vestreskorve Glacier, in Queen Maud Land. Mapped by Norsk Polar-institut from surveys and air photos by NorAE, 1956-60. Also mapped by SovAE in 1961 and named for Ernst Thälmann, German Communist leader in the 1920's.

Thanaron Hill: see Hanson Hill 63°35'S., 58°49'W.

Thanaron Point 63°30'S., 58°40'W.

A small point 8 mi. E. of Cape Roquemaurel, Trinity Peninsula. Named in 1838 by the Fr. exp. under D'Urville for Charles Thanaron of the *Zélée*.

Thanksgiving Point 84°56'S., 177°00'W.

A conspicuous rock nunatak at the W. side of Shackleton Gl., just N. of the mouth of Mincey Gl., in the Queen Maud Mountains. So named by the Texas Tech Shackleton Glacier Party (1962-63) because they reached this point on Thanksgiving Day, 1962.

Theaker, Mount 70°18'S., 159°38'E.

A mountain (1,685 m.) along the N. wall of Robilliard Glacier, 3 mi. NE. of Mt. Simmonds in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960-62. Named by US-ACAN for Paul R. Theaker, USARP biologist at McMurdo Station, 1967-68.

Themis Nunatak 71°37'S., 69°06'W.

A very large, flat-topped nunatak lying 6 mi. WSW. of Mt. Umbriel in southern Alexander Island. Mapped from trimetrogon air photography taken by RARE, 1947-48, and from survey by FIDS, 1948-50. Named by UK-APC in association with nearby Saturn Glacier, Themis being one of the satellites of Saturn.

Theodolite Hill 63°29'S., 57°35'W.

Hill, 680 m., with a small rock outcrop at its summit, standing at the SE. corner of a plateau-type mountain 5 mi. W. of the NW. end of Duse Bay, in the NE. part of Trinity Peninsula. Disc. by the FIDS, 1946, and so named during their survey of the area because it served as an important theodolite station.

Theodore, Mount 64°58'S., 62°36'W.

A mountain 4 mi. SE. of Mt. Inverleith on the S. side of Bagshawe Gl., near the W. coast of Graham Land. Named by Scottish geologist David Ferguson who made a geological reconnaissance in this vicinity from the whale catcher *Hanka* in 1913.

Theodor Rock 54°36'S., 37°01'W.

Rock approximately midway between Annenkov I. and Pickersgill Is., off the S. coast of South Georgia. Charted by DI personnel in 1930 and named for Theodor Hansen, gunner on the *Southern Pride*, Norwegian whale catcher used in the survey.

Thern Promontory 74°33'S., 162°06'E.

A high, ice-covered promontory, 2,220 m., forming a westward projection at the S. end of Eisenhower Range, about 7 mi. W. of Mt. Nansen, in Victoria

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. Named by US-ACAN for Michael G. Thern, station engineer at McMurdo Station with the 1965-66 summer party and the 1967 winter party.

Theron Mountains 79°05'S., 28°15'W.

Mountains, extending in a NE.-SW. direction for 28 mi. and rising to 1,175 m., on the E. side of the Filchner Ice Shelf. First seen from the air in 1956 by the CTAE and named for the *Theron*, the ship of the CTAE in 1955-56.

Theseus, Mount 77°27'S., 162°16'E.

Prominent peak, 1,830 m., just S. of Clark Gl. in the Olympus Range of Victoria Land. Named by the VUWAE (1958-59) after a figure of Greek mythology.

Theta Islands 64°19'S., 63°01'W.

Several small islands and rocks which lie close W. of Kappa I. at the W. extremity of the Melchior Is., Palmer Archipelago. The islands were roughly charted by DI personnel in 1927. The name, derived from the eighth letter of the Greek alphabet, appears to have been first used on a 1946 Argentine govt. chart following surveys of the Melchior Is. by Arg. expeditions in 1942 and 1943.

Thiébault Island 65°11'S., 64°11'W.

Small island which lies next W. of Charlat I. in the small group off the S. end of Petermann I., in the Wilhelm Archipelago. Disc. by the FrAE, 1908-10, and named by Charcot for Monsieur Thiébault, then French Minister to Argentina.

Thiel Mountains 85°15'S., 91°00'W.

Isolated, mainly snow-capped mountains, 45 mi. long, located roughly between the Horlick Mtns. and the Pensacola Mtns. and extending from Moulton Escarpment on the west to Nolan Pillar on the east. Major components include Ford Massif (2,810 m.), Bermel Escarpment and a group of eastern peaks near Nolan Pillar. Observed and first positioned by the USARP Horlick Mountains Traverse Party, 1958-59. Surveyed by the USGS Thiel Mountains parties of 1960-61 and 1961-62. Named by US-ACAN after Edward C. Thiel, traverse seismologist at Ellsworth Station and the Pensacola Mtns. in 1957. In December 1959, he made airlifted geophysical observations along the 88th meridian West, including work near these mountains. Thiel perished with four others in the crash of a P2V Neptune aircraft soon after take-off from Wilkes Station, Nov. 9, 1961.

Thil Island 70°08'S., 72°39'E.

A small rocky island lying 1 mi. NE. of Jennings Promontory in the eastern part of the Amery Ice Shelf. De-

lineated in 1952 by John H. Roscoe from air photos taken by USN Operation Highjump, 1946-47. Named by Roscoe for R.B. Thil, air crewman on Operation Highjump photographic flights over this area.

Thimble Peak 63°27'S., 57°06'W.

Truncated cone, 485 m., consisting of rock and ice, standing at the E. side of Mondor Gl. and 2 mi. NE. of Duse Bay at the NE. end of Antarctic Peninsula. First charted by the FIDS, 1946. The descriptive name was given by the UK-APC in 1948.

Thode Island 77°02'S., 148°03'W.

A small ice-covered island in Sulzberger Ice Shelf, located 1 mi. NW. of Benton I. and 5 mi. E. of Przybyszewski I. in Marshall Archipelago. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for George C. Thode, meteorologist at Byrd Station in 1968.

Tholus, Mount 63°16'S., 56°04'W.

The highest mountain, 825 m., in the ridge extending SW. from Postern Gap in the central part of Joinville Island. Surveyed by the FIDS in 1953-54 and named by the UK-APC in 1956. The name is descriptive, tholus being a circular, domed structure.

Thomas, Lake 77°24'S., 162°15'E.

A meltwater lake that is circumscribed on the NW. and NE. sides by Robertson Ridge and Clark Glacier, in Victoria Land. Named by US-ACAN for Robert H. Thomas who participated in USARP studies of the surface glaciology of the Ross Ice Shelf in the 1973-74 and 1974-75 seasons.

Thomas, Mount 71°01'S., 64°36'E.

A mainly snow-covered mountain about 7 mi. N. of Mt. Hicks in the Prince Charles Mountains. It has a domed appearance, with a ridge easterly to a small peak. Plotted from ANARE air photos taken in 1960. Named for I. N. Thomas, radio officer at Wilkes Station in 1963.

Thomas, Point 62°10'S., 58°30'W.

Point marking the S. side of the entrance to Ezcurra Inlet in Admiralty Bay, on King George I. in the South Shetland Islands. Charted by the FrAE, 1908-10, under Charcot, and named by him for a member of the expedition.

Thomas Glacier 78°40'S., 84°00'W.

A roughly Z-shaped glacier which drains the SE. slopes of Vinson Massif and flows for 17 mi. through the S. part of the Sentinel Range, Ellsworth Mtns., leaving the range S. of Johnson Spur. Discovered by

GEOGRAPHIC NAMES OF THE ANTARCTIC

USN Squadron VX-6 on photographic flights of Dec. 14-15, 1959, and mapped by USGS from the photos. Named by US-ACAN for R. Adm. Charles W. Thomas, USCG, veteran of Antarctic expeditions in the 1950's.

Thomas Hills 84°21'S., 65°12'W.

A linear group of hills, 17 mi. long, between Foundation Ice Stream and MacNamara Gl. at the N. end of Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN at the suggestion of Capt. Finn Ronne, USNR, leader at Ellsworth Station, 1957. Charles S. Thomas was Secretary of the Navy, 1954-57, during the first few years of USN Deep Freeze operations.

Thomas Island 66°07'S., 100°57'E.

Large island in Highjump Arch., 6 mi. long and from 1 to 3 mi. wide, lying near the center of the main cluster of islands off the N. flank of the Bunger Hills. Mapped from air photos taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for Lt. (j.g.) Randolph G. Thomas, USN, hydrographic officer with USN Op. Wml., 1947-48, who served as surveyor with the astronomical control parties.

Thomas Mountains 75°33'S., 70°57'W.

A separate cluster of rocky mountains, about 5 mi. long, standing 15 mi. NE. of Mt. Horne in eastern Ellsworth Land. Disc. by the RARE, 1947-48, under Ronne, who named these mountains for noted author and radio commentator Lowell Thomas, a supporter of the expedition.

Thomas Nunatak 78°58'S., 87°28'W.

The northern of two nunataks which stand close together about 17 mi. W. of the Camp Hills, in the Ellsworth Mountains. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for Hollie Thomas, helicopter crew chief with the 62nd Transportation Corps Detachment, who assisted the party.

Thomas Nunataks 70°32'S., 65°11'E.

A group of three nunataks lying 2 mi. SW. of Mt. Mervyn in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for I. L. Thomas, physicist at Mawson Station in 1967.

Thomas Peak 72°46'S., 166°43'E.

A peak (2,040 m.) at the W. side of Malta Plateau, situated on the ridge between Wilhelm and Olson Glaciers in the Victory Mtns., Victoria Land. Mapped by

USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Francis J. Thomas, biologist at McMurdo Station, 1962-63 and 1964-65.

Thomas Rock 75°42'S., 158°36'E.

A small nunatak lying 1 mi. NE. of Tent Rock and 6 mi. W. of Ricker Hills in the Prince Albert Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Kenneth E. Thomas, radioman with the winter party at South Pole Station, 1966.

Thomas Spur 85°53'S., 161°40'W.

A prominent spur extending eastward from Rawson Plateau between Moffett and Tate Glaciers, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Harry F. Thomas, meteorologist, South Pole Station winter party, 1960.

Thomas Watson Escarpment: see Watson Escarpment 86°00'S., 145°00'W.

Thompson, Mount 70°40'S., 62°21'W.

Mountain, 1,690 m., standing NW. of Lehrke Inlet and surmounting the central part of the base of Eielson Pen., on the E. coast of Palmer Land. Disc. by the RARE, 1947-48, under Ronne, who named this feature for Andrew A. Thompson, geophysicist with the expedition.

Thompson, Mount: see Thompson Mountain 81°50'S., 159°48'E.

Thompson Escarpment 79°27'S., 83°30'W.

A steep east-facing escarpment, 8 mi. long, located at the head of Flanagan Gl. in the Pioneer Heights, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Cdr. Robert C. Thompson, Operations Officer of USN Squadron VX-6 during Deep Freeze 1965.

Thompson Glacier 66°45'S., 123°39'E.

A channel glacier draining northward to the head of Paulding Bay. Delineated by G.D. Blodgett (1955) from aerial photographs taken by Operation Highjump (1946-47). Named by US-ACAN after Egbert Thompson, Midshipman on the sloop *Peacock* during the USEE (1838-42) under Lt. Charles Wilkes.

Thompson Island 66°00'S., 110°07'E.

The largest and northeasternmost of the Balaena Islands, situated about 0.5 mi. from the coast of Antarctica and 15 mi. NE. of the Windmill Islands. The is-

GEOGRAPHIC NAMES OF THE ANTARCTIC

land consists of two rocky knolls separated by a low saddle of snow (it may actually be two islands connected by ice). This feature was first photographed from aircraft of USN Operation Highjump in February 1947, and was mapped from that photography by Gardner Blodgett in 1955. It was visited by a party of the ANARE on Jan. 19, 1956, and named for Richard Thompson, Administrative Officer, Antarctic Division, Melbourne, who was second-in-command for several years of ANARE relief expeditions to Heard I., Macquarie I. and Mawson Station.

Thompson Mountain 81°50'S., 159°48'E.

A mountain, 2,350 m., standing 5 mi. S. of Mt. McKerrow in the SW. part of Surveyors Range. Named by the NZGSAE (1960-61) for Edgar H. Thompson, Professor of Surveying and Photogrammetry at the University College of London, England.

Thompson Nunataks 79°27'S., 85°49'W.

Three evenly-spaced nunataks which lie 4 mi. S. of Navigator Peak and surmount the central part of White Escarpment in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Russel W. Thompson, USARP meteorologist at Wilkes Station, 1963.

Thompson Peak 69°25'S., 157°40'E.

A peak (980 m.) 5 mi. S. of Ringgold Knoll in the NW. end of Wilson Hills. Plotted by ANARE from aerial photographs taken by USN Operation Highjump (1946-47) and ANARE (1959). Named by ANCA for R.H.J. Thompson, Administrative Officer of the Antarctic Division, Melbourne, second-in-command of several ANARE expeditions to the Antarctic.

Thompson Peaks 84°26'S., 166°30'E.

Two peaks on the divide between upper Moody Gl. and Bingley Gl. in the Queen Alexandra Range. Named by US-ACAN for Douglas C. Thompson, USARP cosmic rays scientist at McMurdo Station, 1963; South Pole Station, 1965.

Thompson Peninsula 64°28'S., 63°08'W.

Peninsula 3 mi. long forming the N. side of the entrance to Fournier Bay, on Anvers I. in the Palmer Archipelago. Surveyed by the FIDS in 1955-57, and named by the UK-APC for John W. Thompson of FIDS, general assistant and mountaineer at Arthur Hbr. in 1956 and leader at that station in 1957.

Thompson Point: see Thomson Point 60°43'S., 44°38'W.

Thompson Point 70°18'S., 161°04'E.

A point of land which descends northeastward from Kavrayskiy Hills into the west part of the terminus of Rennick Glacier. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1960-62. Named by US-ACAN for Max C. Thompson, USARP biologist at McMurdo Station, 1966-67.

Thompson Ridge 76°27'S., 146°05'W.

A rock ridge, 2 mi. long and trending N.-S. on the S. shore of Block Bay, 3.5 mi. NW. of Mt. Iphigene, in Marie Byrd Land. The feature was photographed and mapped by the USAS, 1939-41, led by Byrd. The naming was proposed by Admiral Byrd for Gershom J. Thompson, eminent doctor and professor at the Mayo Clinic, who advised on medical questions relating to the Byrd Antarctic Expeditions, 1928-30 and 1933-35, and made financial contributions to them.

Thompson Spur 71°33'S., 160°23'E.

A large, rugged mountain spur that descends eastward from Daniels Range between the Swanson Gl. and Edwards Gl., in the Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for David H. Thompson, USARP biologist at Hallett Station, 1965-66 and 1967-68.

Thomsen Islands 65°47'S., 66°16'W.

Group of small islands lying 2 mi. SW. of Speerschneider Pt., off the W. side of Renaud I. in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Helge Thomsen, Danish meteorologist, who, for a number of years beginning in 1946, was responsible for editing Dansk Meteorologisk Institut's annual reports on the state of the sea ice in the Arctic.

Thomson, Baie: see Thomson Cove 65°06'S., 63°14'W.

Thomson, Punta: see Rahir Point 65°04'S., 63°14'W.

Thomson Cove 65°06'S., 63°14'W.

Cove 1 mi. wide, lying just N. of Étienne Fjord in Flandres Bay, along the W. coast of Graham Land. First charted and named "Baie Thomson" by the FrAE under Charcot, 1903-5, for Gaston-Arnold-Marie Thomson (1848-1932), French politician who was Minister of the Navy in 1905.

Thomson Head 67°35'S., 66°46'W.

Steep, rocky headland rising to 915 m. at the E. side of Bourgeois Fjord, between Perutz and Bader Glaciers on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in

GEOGRAPHIC NAMES OF THE ANTARCTIC

1948-49 by the FIDS and named for William H. Thomson, FIDS air pilot at Stonington I. in 1947.

Thomson Massif 70°35'S., 66°48'E.

A rock massif in the Aramis Range, Prince Charles Mountains, from which rise Mt. Sundberg and Mt. McGregor. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for R. B. Thomson, officer in charge at Wilkes Station in 1962.

Thomson Peak 71°59'S., 166°07'E.

A peak (2,350 m.) situated 11 mi. SE. of Mt. Shute at the extreme S. limit of Mirabito Range. Named by the northern party of NZGSAE, 1963-64, for Robert B. Thomson of New Zealand, scientific leader at Hallett Station, 1960; officer-in-charge at Wilkes Station, 1962; deputy leader at Scott base, 1963-64.

Thomson Point 60°43'S., 44°38'W.

Point on the E. side of Pirie Pen., 1.7 mi. SE. of Cape Mabel, on the N. coast of Laurie I. in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for J. A. (later Sir Arthur) Thomson, Regius Prof. of Natural History, Univ. of Aberdeen, Scotland.

Thomson Rock 71°27'S., 66°56'W.

A rock nunatak along the E. margin of Batterbee Mtns., 3 mi. E. of Mt. Bagshawe in Palmer Land. Named by UK-APC for Michael R. A. Thomson, BAS geologist at Fossil Bluff and Stonington Island stations, 1963-66.

Thor, Mount 77°35'S., 160°41'E.

Prominent peak, about 2,000 m., standing S. of the Labyrinth in the Asgard Range of Victoria Land. Named by the VUWAE (1958-59) for one of the Norse gods.

Thorarinsson, Mount 67°15'S., 64°59'W.

A peak at the S. side of the terminus of Hess Glacier on the E. coast of Graham Land. The feature forms a point on the rocky spur that descends from the plateau, and is one of the most distinctive features along the coast as viewed from the Larsen Ice Shelf. This coastal area was photographed by several American expeditions: USAS, 1939-41; RARE, 1947-48; U.S. Navy photos, 1968. Mapped by FIDS, 1947-48. Named by UK-APC for Sigurdur Thorarinsson, Icelandic glaciologist.

Thorfinn Islands 67°21'S., 60°54'E.

Group of small islands lying about 5 mi. off the coast of Mac. Robertson Land between Campbell Head and Cape Simpson. Mapped by Norwegian cartographers

from air photos taken by the Lars Christensen Exp., 1936-37, and named by them, apparently after the Norwegian whale catcher *Thorfinn*.

Thorgaut Island 67°27'S., 63°33'E.

The largest island in the NE. part of the Robinson Group, lying 7 mi. NW. of Cape Daly. This island and those near it were sighted in 1931 by the crew of the Norwegian whale catcher *Thorgaut* and the BANZARE under Mawson, who applied the names Thorgaut and Robinson, respectively, for the group. Having approved Robinson as the group name, Thorgaut I. has been approved for the most conspicuous of its features.

Thorgaut Islands: see Robinson Group 67°27'S., 63°27'E.

Thor Island 64°33'S., 62°00'W.

The largest of a group of small islands lying at the E. side of Foyn Hbr. in Wilhelmina Bay, off the W. coast of Graham Land. The island was named South Thor Island by whalers in 1921-22 because the whaling factory *Thor I* was moored to it during that season (the island to the NE. was called North Thor Island). In 1960 the UK-APC limited the name Thor to the island actually used by the ship; the other island was left unnamed.

Thorne, Mount 85°41'S., 158°40'W.

A prominent peak, 1,465 m., rising on the E. flank of Amundsen Glacier, 6 mi. NW. of Mt. Goodale, in the Hays Mtns. of the Queen Maud Mountains. Discovered in December 1929 by the ByrdAE geological party under Laurence Gould, and named for George A. Thorne, topographer and dog driver with that party.

Thorne Glacier: see Scott Glacier 85°45'S., 153°00'W.

Thorne Point 66°57'S., 67°12'W.

A point at the W. side of Langmuir Cove, marking the NW. extremity of Arrowsmith Peninsula, Graham Land. Mapped in 1960 from surveys by FIDS. Named for John Thorne, FIDS meteorologist at Dettale I. in 1956 and 1957.

Thornton, Mount 73°34'S., 77°07'W.

A mountain between Mt. McCann and Mt. Benkert in the east-central part of the Snow Nunataks, Ellsworth Land. Discovered and photographed by the USAS, 1939-41. Named by US-ACAN for Capt. Richard Thornton, commander of USNS *Eltanin* on Antarctic cruises, 1967-68.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Thorold Nielsen, Mount: see Nilsen Plateau 86°20'S., 158°00'W.

Thorold Nilsen, Mount: see Nilsen Plateau 86°20'S., 158°00'W.

Thorp Ridges 66°34'S., 52°51'E.

Three almost parallel ridges standing 18 mi. W. of Stor Hånakken Mtn. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for A. Thorp, electrical fitter at Wilkes Station in 1961.

Thorvald Nilsen Mountains: see Nilsen Plateau 86°20'S., 158°00'W.

Thorvold Nilsen, Mount: see Nilsen Plateau 86°20'S., 158°00'W.

Thousand Icebergs, Bay of the: see Duse Bay 63°32'S., 57°15'W.

Three Brothers 54°16'S., 36°48'W.

Three mountain peaks aligned in a N.-S. direction, situated 4 mi. W. of the head of Cumberland West Bay in the central part of South Georgia. The origin of the name which dates back to the 1930's is not certain.

Three Brothers Hill 62°15'S., 58°41'W.

Conspicuous hill, 210 m., which is the remnant neck of an extinct volcano situated at the E. side of Potter Cove, King George I., in the South Shetland Islands. The name was used by Scottish geologist David Ferguson in a 1921 report based upon his investigations of King George I. in 1913-14, but may reflect an earlier naming by whalers. The name may be suggestive of the appearance of the feature which consists of two higher summits and one which is lower.

Three Lakes Valley 60°42'S., 45°37'W.

Low valley containing three freshwater lakes, extending from the vicinity of Elephant Flats northward to Stygian Cove on Signy I., in the South Orkney Islands. Surveyed and given this descriptive name by the FIDS in 1947.

Three Little Pigs 65°14'S., 64°17'W.

Three small islands 0.3 mi. NW. of Winter I. in the Argentine Is., Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill.

Three Nunataks 80°04'S., 154°50'E.

Three nunataks, largely ice covered, lying 2 mi. SW. of Haven Mtn. at the NW. edge of the Britannia Range. Named by the Darwin Glacier Party of the CTAE, 1956-58.

Three Point Island: see Jomfruene 54°04'S., 38°03'W.

Three Pup Island: see Pup Rock 68°22'S., 67°03'W.

Three Sails 80°27'S., 80°42'W.

Three small isolated nunataks in a row, located 6 mi. E. of Redpath Peaks at the S. extremity of the Heritage Range, Ellsworth Mountains. The descriptive name was applied by the Univ. of Minnesota Geological Party to the area, 1963-64.

Three Sister Cones: see Three Sisters Cones 77°34'S., 166°58'E.

Three Sisters Cones 77°34'S., 166°58'E.

Three aligned cones at an elevation of about 1,800 m. on the SW. slopes of Mt. Erebus on Ross Island. Named by members of the BrAE, 1910-13, under Scott.

Three Sisters Point 62°04'S., 57°53'W.

Point marked by three conspicuous boulders, forming the W. side of the entrance to Sherratt Bay on the S. coast of King George I., in the South Shetland Islands. Charted and named during 1937 by DI personnel on the *Discovery II*.

Three Slice Island: see Three Slice Nunatak 68°02'S., 64°57'W.

Three Slice Nunatak 68°02'S., 64°57'W.

Conspicuous nunatak rising to 500 m., surmounting the low, ice-covered NE. extremity of Joerg Pen. on the E. coast of Graham Land. This distinctive landmark, in the form of a serrated ridge 1.5 mi. long, is snow covered, except for the three almost vertical rock faces which suggest its name. Disc. and named by members of East Base of the USAS who surveyed this area on land and from the air in 1940.

Threshold Nunatak 83°46'S., 166°06'E.

An isolated nunatak located at the mouth of Tillite Glacier, 5 mi. NE. of Portal Rock, in Queen Alexandra Range. The name was suggested by John Gunner of the Ohio State Univ. Geological Exp., 1969-70, who was landed by helicopter to collect a rock sample here. The name is in association with Portal Rock and also reflects the location at the mouth of Tillite Glacier.

Thrinaxodon Col 85°12'S., 174°19'W.

A rock col 2 mi. SE. of Rougier Hill. The col is along the ridge that trends southward from Rougier Hill in the Cumulus Hills, Queen Maud Mountains. The name was proposed to US-ACAN in 1971 by geologist

GEOGRAPHIC NAMES OF THE ANTARCTIC

David H. Elliot of the Ohio State Univ. Institute of Polar Studies. The col is a very important fossil (vertebrate) locality at which several specimens of the mammal-like reptile *Thrinaxodon* were found.

Thule Island 59°27'S., 27°19'W.

Westernmost island of Southern Thule, a group of three small islands at the S. end of the South Sandwich Islands. Southern Thule was disc. and named by Capt. James Cook in 1775. Thule Island was named by Adm. Thaddeus Bellingshausen who made an accurate sketch of these islands in 1820.

Thule Islands 60°42'S., 45°37'W.

Group of small islands and rocks lying 0.25 mi. SW. of Balin Pt. in the NW. part of Borge Bay, Signy I., in the South Orkney Islands. The name Thule Rocks was used as early as 1916, and appears to refer at least in part to this group. The *Thule*, one of the first floating factories to flense whales at sea, belonged to the Thule Whaling Co. of Oslo. It operated in the South Orkney Is. in 1912-13 and 1913-14 and anchored on the E. side of Signy I. during January 1913. The altered form of the name was recommended by the UK-APC following a survey by the FIDS in 1947.

Thule Rock: see Thule Islands 60°42'S., 45°37'W.

Thule Rocks: see Thule Islands 60°42'S., 45°37'W.

Thulla Point 60°43'S., 45°40'W.

Ice-free point lying 1 mi. NE. of Jebesen Pt. on the W. coast of Signy I., in the South Orkney Islands. Roughly surveyed in 1933 by DI personnel, and surveyed in 1947 by the FIDS. Named by the UK-APC in 1954 for the Norwegian steamship *Thulla*, which searched for suitable anchorages for whale factory ships in the South Orkney Is. in 1911-12.

Thumb: see Little Thumb 68°19'S., 66°53'W.

Thumb, The: see Little Thumb 68°19'S., 66°53'W.

Thumb Islet: see Thumb Rock 65°15'S., 64°16'W.

Thumb Point 75°58'S., 160°28'E.

A rock spur extending from the NW. side of The Mitten, a butte in the Prince Albert Mtns., Victoria Land. Named by the Southern Party of NZGSAE, 1962-63, because the feature resembles the thumb on a mitten.

Thumb Rock 65°15'S., 64°16'W.

Rock lying between Winter I. and the NW. end of Galindez I. in the Argentine Is., Wilhelm Archipelago. Charted and named in 1935 by the BGLE under Rymill.

Thunder Glacier 64°50'S., 63°24'W.

A through glacier, 4 mi. long, which extends in an E.-W. direction across Wiencke I. between Sierra Dufief and the Wall Range, in the Palmer Archipelago. Probably known since the discovery of Wiencke I. by the BelgAE in 1898. Charted in 1944 by the FIDS, and so named by them because a survey party was nearly overwhelmed there by an avalanche.

Thundergut, Mount 77°39'S., 161°24'E.

A rock peak 3 mi. NE. of St. Pauls Mtn. in the Asgard Range, Victoria Land. The descriptive name was given by NZ-APC; when viewed from the east, the peak presents a very steep domed face with a vertical gut subject to rockfall.

Thurman, Mount 84°42'S., 170°51'W.

The highest summit (780 m.) in Bravo Hills along the edge of Ross Ice Shelf, located between the mouths of Gough and Le Couteur Glaciers. Named by US-ACAN for Cdr. Robert K. Thurman, USN, Assistant Chief of Staff for Operations, U.S. Naval Support Force, Antarctica, 1963.

Thurston, Mount: see Johansen Peak 86°43'S., 148°11'W.

Thurston Glacier 73°18'S., 125°18'W.

A glacier about 15 mi. long which drains the southeast slopes of Mount Siple on Siple Island. The glacier trends eastward and then east-northeastward to reach the north shore of the island. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959-65. Named by US-ACAN for Thomas R. Thurston, USARP meteorologist at Byrd Station in 1965.

Thurston Island 72°06'S., 99°00'W.

A largely ice-covered, glacially dissected island, 135 mi. long and 55 mi. wide, lying between Amundsen and Bellingshausen Seas off the NW. end of Ellsworth Land. The island is separated from the mainland by Peacock Sound, which is occupied by the W. portion of Abbot Ice Shelf. Disc. by R. Adm. Byrd and members of the USAS in a flight from the *Bear*, Feb. 27, 1940. Named by Byrd for W. Harris Thurston, New York textile manufacturer, designer of the windproof "Byrd Cloth" and contributor to the expedition. Originally charted as a peninsula, the feature was found to be an island by the USN Bellingshausen Sea Exp. in February 1960.

Thurston Peninsula: see Thurston Island 72°06'S., 99°00'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Thwaites Glacier 75°30'S., 106°45'W.

A broad glacier flowing into Amundsen Sea about 30 mi. E. of Mt. Murphy, Marie Byrd Land. Though imperfectly delineated, the glacier has tremendous flow and in January 1966 had formed a large floating glacier tongue (40 mi. long) and an extensive grounded iceberg tongue (70 mi. long). Together, these features extend into Amundsen Sea more than 100 mi. and inhibit E.-W. navigation by ships. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN in association with Thwaites Glacier Tongue.

Thwaites Glacier Tongue 75°00'S., 106°50'W.

A glacier tongue, about 20 mi. wide and 40 mi. long, which is the seaward extension of Thwaites Glacier into the Amundsen Sea. It enters the sea about 30 mi. E. of Mt. Murphy in Marie Byrd Land. Delineated from aerial photographs taken by USN Op. Hjp. in January 1947. Named by US-ACAN for Fredrik T. Thwaites, glacial geologist, geomorphologist and professor emeritus at the Univ. of Wisconsin.

Thwaites Iceberg Tongue 74°00'S., 108°30'W.

A very large and rather compact iceberg tongue which is aground and lies in the Amundsen Sea, about 20 mi. NE. of Bear Peninsula, Marie Byrd Land. The feature is about 70 mi. long and 20 mi. wide and in January 1966 its S. end was only 3 mi. N. of Thwaites Glacier Tongue, from whence it had broken off. Delineated by USGS from aerial photographs taken by USN Op. Hjp., 1946-47, and USN Op. DFrz., 1959-66. Named by US-ACAN in association with Thwaites Glacier and Thwaites Glacier Tongue.

Thyer Glacier 67°43'S., 48°45'E.

Tributary glacier, flowing NW. along the S. side of the Raggatt Mtns. to enter the Rayner Glacier. Mapped from ANARE air photos taken by the RAAF flight in 1956. Named by ANCA for R. F. Thyer, Chief Geophysicist, Bureau of Mineral Resources, Australian Dept. of National Development.

Tiber Rocks 68°23'S., 67°00'W.

Group of rocks lying near the head of Rymill Bay, close W. of the mouth of Romulus Gl. and 3 mi. NW. of the highest summit of Black Thumb, off the W. coast of Graham Land. First seen and roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948-49 by the FIDS, and so named by them because of the association of these rocks with nearby Romulus and Remus Glaciers.

Tickell Head 60°32'S., 45°48'W.

Headland forming the E. side of Bridger Bay on the N. coast of Coronation I., in the South Orkney Islands.

First seen in December 1821 in the course of the joint cruise by Capt. Nathaniel Palmer, American sealer, and Capt. George Powell, British sealer. Surveyed by the FIDS in 1956-58 and named by the UK-APC in 1959 for William L. N. Tickell, FIDS meteorologist at Signy Island in 1955 and leader at that station in 1956.

Tickle Channel 67°06'S., 67°43'W.

Narrow channel in the S. part of Hanusse Bay, from 1 to 3 mi. wide and 5 mi. long, extending northward from The Gullet and separating Hansen I. from the E. extremity of Adelaide Island. First seen from the air by the BGLE on a flight in February 1936. Surveyed from the ground in 1948 by the FIDS, who applied this descriptive name. In Newfoundland and Labrador a tickle is a narrow water passage as between two islands.

Tidd, Mount 81°17'S., 85°13'W.

A prominent rock peak which is the highest summit in Pirrit Hills. The peak was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 10, 1958. Named by US-ACAN for Lt. Paul Tidd, USN, Officer-in-Charge of Ellsworth Station in 1958.

Tierney Peninsula 72°20'S., 95°45'W.

An ice-covered peninsula about 14 mi. long, between Savage Glacier and Morgan Inlet in the E. end of Thurston Island. Disc. on helicopter flights from the USS *Burton Island* and *Glacier* of the USN Bellingshausen Sea Exp. in February 1960. Named by US-ACAN for J. Q. Tierney, oceanographer aboard the *Burton Island* on this expedition.

Tierra Firme, Islas: see Terra Firma Islands 68°42'S., 67°32'W.

Tiger Island 76°47'S., 162°28'E.

An island 4 mi. N. of Lion Island on the N. side of Granite Harbor, Victoria Land. The N.Z. Northern Survey Party of the CTAE (1956-58) established a survey station on its highest point in October 1957. They named it in analogy with nearby Lion Island.

Tiger Peak 70°52'S., 165°58'E.

Peak, 1,490 m., standing above the cirque wall near the head of Ludvig Gl. in the central Anare Mountains. The feature is distinguished by stripes of different colored rock; hence the name, applied by the ANARE (*Thala Dan*), 1962, which explored this area.

Tiger Rocks 53°59'S., 38°16'W.

Two rocks, the higher of which rises 23 m. above sea level, located 1.5 mi. W. of Main Island in the Willis

GEOGRAPHIC NAMES OF THE ANTARCTIC

Islands, South Georgia. The descriptive name was applied during the surveys from HMS *Owen* in 1960-61.

Tighe Rock 74°26'S., 100°04'W.

A rock outcropping along the coastal slope at the W. margin of the Hudson Mountains, located 15 mi. NW. of Mt. Moses. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Robert F. Tighe, electrical engineer at Byrd Station, 1964-65.

Tijuca Point 54°20'S., 36°13'W.

Prominent rock point forming the NW. side of the entrance to Hound Bay on the N. coast of South Georgia. The name Penguin Point was probably applied to this feature by DI personnel who made a running survey of this coast in 1930. Following the SGS, 1951-52, it was recommended that this name be altered to avoid confusion with the many other "Penguin" names. The name Tijuca Point was given by the UK-APC for the *Tijuca*, a three-masted barque built at Nantes in 1866. From 1908 onwards, she was used as a transport vessel by the Compañía Argentina de Pesca, plying between Buenos Aires and the whaling station at Grytviken. She foundered in 1946.

Tillberg Islands: see Tillberg Peak 64°46'S., 60°54'W.

Tilbrook Point 59°26'S., 27°15'W.

Conspicuous cliffs forming the NW. point of Cook I., South Sandwich Islands. Named by UK-APC for Peter J. Tilbrook, zoologist of the survey of the South Sandwich Islands from HMS *Protector* in 1964.

Tillberg Islands: see Tillberg Peak 64°46'S., 60°54'W.

Tillberg Nunataks: see Tillberg Peak 64°46'S., 60°54'W.

Tillberg Peak 64°46'S., 60°54'W.

A largely ice-free peak, 610 m., on the ridge running E. from Foster Plateau toward Sentinel Nunatak, on the E. coast of Graham Land. The name Tillberg was given to a group of four rocky outcrops in this area but, since they are not conspicuous topographically, the UK-APC in 1963 recommended that the name be transferred to this more useful landmark. Named by Dr. Otto Nordenskjöld after Judge Knut Tillberg, contributor to the SwedAE, 1901-4.

Tillet Islands: see Tillett Islands 67°11'S., 59°27'E.

Tillet Isles: see Tillett Islands 67°11'S., 59°27'E.

Tilletöyane: see Tillett Islands 67°11'S., 59°27'E.

Tillett Islands 67°11'S., 59°27'E.

Group of small, somewhat dispersed islands, the largest rising 70 m. above the sea, lying 5 mi. NE. of Cape Wilkins. Disc. and named in February 1936 by DI personnel on the *William Scoresby*.

Tilley, Mount 69°45'S., 69°29'W.

Flat-topped, ice-capped mountain, 1,900 m., 7 mi. S. of Mt. Tyrrell and 3 mi. inland from George VI Sound in the E. part of Alexander Island. Despite its height, it is best described as a foothill of the Douglas Range, from which it is separated by Toyne Glacier. First phot. from the air in 1936 by the BGLE. Surveyed in 1948 by the FIDS and named by them for Cecil E. Tilley, prof. of mineralogy and petrology at Cambridge University.

Tilley Bay 67°24'S., 60°04'E.

Bay just E. of Tilley Nunatak on the coast of Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Nabbvika (peg bay). Renamed by ANCA because of its proximity to Tilley Nunatak.

Tilley Nunatak 67°24'S., 60°03'E.

Bold, rocky outcrop 5 mi. S. of Hobbs Is., projecting from the coastal ice cliffs eastward of William Scoresby Bay. Disc. in February 1936 by DI personnel on the *William Scoresby* and named by them for Prof. C. E. Tilley, who studied the rock specimens brought back by the expedition.

Tillite Glacier 83°51'S., 166°00'E.

A tributary glacier flowing NW. from Pagoda Peak in Queen Alexandra Range to join Lennox-King Gl. N. of Fairchild Peak. So named by NZGSAE (1961-62) because it contains outcrops of ancient moraine (tillite), indicative of glacial action in remote Paleozoic times.

Tillite Spur 85°59'S., 126°36'W.

A narrow, steep-cliffed rock spur, 3 mi. long, descending from southern Wisconsin Plateau between Red Spur and Polygon Spur and terminating at the E. side of Olentangy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. The name was proposed by John H. Mercer, USARP geologist to this area in 1964-65, because tillite extends the length of the spur above its granitic cliffs.

Tilman Ridge 76°40'S., 159°35'E.

A ridge forming the northwestern arm of the Allan Hills, in Victoria Land. Reconnoitered by the NZARP

GEOGRAPHIC NAMES OF THE ANTARCTIC

Allan Hills Expedition (1964) who gave the name after W.H. Tilman, a mountaineering associate of Shipton and Odell, after whom the nearby Shipton Ridge and Odell Glacier are named.

Tilt Rock 70°27'S., 68°44'W.

Isolated rock peak, 670 m., situated 2 mi. inland from the ice shelf of George VI Sound and 2 mi. NE. of Block Mtn. in eastern Alexander Island. First phot. from the air on Nov. 23, 1935, by Lincoln Ellsworth and later mapped from these photos by W. L. G. Joerg. Roughly surveyed from the ground in 1936 by the BGLE and resurveyed in 1948-49 by the FIDS. So named by FIDS because of its tilted appearance.

Timberlake, Cape 78°58'S., 161°37'E.

Bold cape at the W. side of the mouth of Skelton Glacier. Named by US-ACAN in 1964 for Lt. Cdr. Lewis G. Timberlake, USN, public works officer at McMurdo Station, 1962.

Timber Peak 74°10'S., 162°23'E.

The high peak (3,070 m.) above Priestley Glacier, on the south side. The peak is 2 mi. WNW. of the summit of Mount New Zealand in the Eisenhower Range, Victoria Land. The Southern Party of the NZGSAE (1962-63) gave this name because petrified sections of tree branches were found in sandstone deposits at this point.

Timblón, Cape 62°42'S., 61°19'W.

Conspicuous rocky cape forming the N. extremity of Snow I. in the South Shetland Islands. The cape is probably named for Carlos Timblón, Master of the Argentine sealer *San Juan Nepomuceno* which was the first vessel known to have taken fur seals in the South Shetland Islands, in 1819-20.

Timosthenes, Mount 69°08'S., 65°57'W.

A prominent peak between the head of Harriot Gl. and the N. side of Airy Gl., 3 mi. NW. of Peregrinus Peak, in central Antarctic Peninsula. Photographed from the air by USAS, Sep. 28, 1940, and by RARE, Nov. 27, 1947. Surveyed by FIDS in Dec. 1958. Named by UK-APC after Aristotle Timosthenes of Rhodes, chief pilot of King Ptolemy II (285-246 B.C.), who wrote sailing directions and devised the windrose of 8 or 12 winds, later developed into the points of the compass.

Tindal Bluff 67°04'S., 64°52'W.

A rocky headland rising to 800 m. between the terminus of Fricker Gl. and Monnier Pt. on the E. coast of Graham Land. This coastal area was photographed by several American expeditions: USAS, 1939-41;

RARE, 1947-48; U.S. Navy photos, 1968. Mapped by FIDS, 1947-48. Named by UK-APC for Ronald Tindal, General Assistant with the BAS Larsen Ice Shelf party in 1963-64.

Tindegga Ridge 72°31'S., 2°54'W.

A rock ridge immediately SW. of Ytstenut Peak, at the NE. end of the Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tindegga (the summit ridge).

Tindeklypa 72°05'S., 2°22'W.

A double summit separated by a deep ravine. The feature is located 1 mi. N. of Istind Peak, on the E. side of Ahlmann Ridge in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tindeklypa (the summit ravine).

Tingey Rocks 69°57'S., 67°52'E.

Two small rock features located SW. of Single I. on the W. edge of the Amery Ice Shelf. Discovered by the ANARE Prince Charles Mtns. survey party in 1971. Named by ANCA for R.J. Tingey, geologist with the party.

Tinglof Peninsula 71°59'S., 100°24'W.

An ice-covered peninsula, 10 mi. long, between Henry and Wagoner Inlets on the N. side of Thurston Island. Delineated from aerial photographs taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Ivor Tinglof, tractor mechanic of the ByrdAE in 1933-35, who built at Little America the first heavy cargo sleds for use in the Antarctic.

Tinker Glacier 74°00'S., 164°50'E.

A glacier, 25 mi. long, draining the central part of the Southern Cross Mtns. and flowing SE. into Wood Bay, on the coast of Victoria Land. Named by the Northern Party of the NZGSAE, 1962-63, for Lt. Col. Ron Tinker, leader at Scott Base during that season.

Tinker Glacier Tongue 74°06'S., 165°02'E.

The seaward extension of the Tinker Glacier, projecting into the NW. corner of Wood Bay on the coast of Victoria Land. The name was suggested by US-ACAN in association with Tinker Glacier.

Tinsel Dome 63°44'S., 58°55'W.

Small ice-covered hill, 700 m., standing between Aureole Hills and Bone Bay on Trinity Peninsula. Charted in 1948 by the FIDS who gave this descriptive name.

GEOGRAPHIC NAMES OF THE ANTARCTIC

the Mühlig-Hofmann Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named for J. Tønnesen, meteorologist with NorAE (1956-58).

Tønsberg Cove 60°32'S., 45°55'W.

Cove 1 mi. SE. of Penguin Pt. on the N. coast of Coronation I., in the South Orkney Islands. Charted in 1912-13 by Petter Sørille, Norwegian whaling captain. Probably named for the Tønsberg Hvalfangeri, of Tønsberg, Norway, a company which operated a permanent whaling base in the South Orkney Is. in the period 1920-30.

Tønsberg Fiord: see Tønsberg Cove 60°32'S., 45°55'W.

Tønsberg Fjord: see Tønsberg Cove 60°32'S., 45°55'W.

Tønsberg Point 54°10'S., 36°39'W.

The E. extremity of a low rocky peninsula which projects into Stromness Bay, South Georgia, separating Stromness Hbr. on the N. from Husvik Hbr. on the south. The name was in use as early as 1912 and derives from the Tønsberg Hvalfangeri, Norwegian whaling company with works at Husvik Harbor.

Toogood, Mount 71°37'S., 160°14'E.

A mountain (2,100 m.) at the S. side of the head of Edwards Glacier in the Daniels Range, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for David J. Toogood, USARP geologist at McMurdo Station, 1967-68 and 1968-69.

Tooth Hill: see Tooth Peak 72°47'S., 162°03'E.

Tooth Peak 72°47'S., 162°03'E.

A small sharp peak on the N. end of Sculpture Mountain in the upper Rennick Glacier. Named for its tooth-like shape by the Northern Party of NZGSAE, 1962-63.

Tooth Rock 62°52'S., 61°24'W.

Prominent jagged rock, 85 m. high, lying S. of Cape Conway, Snow I., in the South Shetland Islands. This descriptive name was given by Lt. Cdr. F. W. Hunt, RN, following his survey in 1951-52.

Tophet Bastion 60°42'S., 45°17'W.

Conspicuous ice-capped rock wall, 1 mi. long, with an apron of talus. It stands 1 mi. E. of Saunders Pt. on the S. coast of Coronation I. in the South Orkney Islands. Roughly surveyed in 1933 by DI personnel. The name, which is biblical, was applied by the FIDS following their survey of 1948-49.

Topografov Island 68°30'S., 78°11'E.

An island just N. of Partizan Island in the N. part of the entrance to Langnes Fjord, Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37). Subsequently photographed by USN Operation Highjump (1946-47), ANARE (1954-58) and the Soviet Ant. Exp. (1956). The latter named it Ostrov Topografov (topographers' island).

Topping Cone 77°29'S., 169°16'E.

An exposed volcanic cone near Cape Crozier, located 1.75 mi. NW. of the summit of The Knoll in eastern Ross Island. Named by NZ-APC for W.W. Topping, geologist with VUWAE which examined the cone in the 1969-70 season.

Torbert, Mount 83°30'S., 54°25'W.

A prominent, pyramidal rock peak, 1,675 m., midway along Torbert Escarpment in the Neptune Range, Pensacola Mountains. Discovered and photographed on Jan. 13, 1956 on the transcontinental nonstop plane flight by personnel of USN Operation Deep Freeze I from McMurdo Sound to Weddell Sea and return. Named by US-ACAN for Lt. Cdr. John H. Torbert, USN, pilot of the P2V-2N Neptune aircraft making this flight.

Torbert Escarpment 83°29'S., 54°08'W.

An escarpment, 15 mi. long, marking the W. margin of Median Snowfield in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN after Mt. Torbert, the salient feature along its edge.

Torbjørn Rocks 71°53'S., 6°21'E.

A group of rocks lying in the mouth of Lunde Glacier in the Mühlig-Hofmann Mtns., Queen Maud Land. Plotted from surveys and air photos by the NorAE (1956-60) and named for Torbjørn Lunde, glaciologist with NorAE (1956-58).

Torbjörnskjær: see Torbjørn Rocks 71°53'S., 6°21'E.

Torckler, Mount 66°52'S., 52°44'E.

Mountain 3 mi. SE. of Mt. Smethurst and 28 mi. SW. of Stor Hånakken Mtn. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1957. Named by ANCA for R. M. Torckler, radio officer at Wilkes Station in 1961.

Torckler Island: see Ranvik Island 68°54'S., 77°50'E.

Torckler Rocks 68°35'S., 77°56'E.

Three small islands lying at the N. side of the entrance to Heidemann Bay, Vestfold Hills. Mapped by Nor-

GEOGRAPHIC NAMES OF THE ANTARCTIC

wegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Remapped from ANARE air photos and named for R. M. Torckler, radio officer at Davis Station in 1959.

Torgersen Island 64°46'S., 64°05'W.

Small rocky island lying just E. of Litchfield I. in the entrance to Arthur Hbr., off the SW. coast of Anvers I. in the Palmer Archipelago. Surveyed by the FIDS in 1955. Named by the UK-APC for Torstein Torgersen, first mate of the *Norsel* in 1954-55. Torgersen was the first to enter Arthur Harbor in late February 1955, preceding the *Norsel* in one of the ship's boats and making soundings.

Torgny Peak 71°51'S., 8°06'E.

A bare rock peak 2 mi. W. of Fenriskjefte Mtn. in the Drygalski Mtns. of Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped from surveys and air photos by NorAE (1956-60) and named for Torgny Vinje, meteorologist with NorAE (1956-60).

Torgnyskeret: see Torgny Peak 71°51'S., 8°06'E.

Torii Glacier 71°19'S., 35°38'E.

A glacier flowing NW. between Mt. Goossens and Mt. Fukushima in the Queen Fabiola Mountains. Discovered on Oct. 7, 1960 by the BelgAE, under Guido Derom, who named it for Tetsuya Torii, leader of the Japanese party that visited this area in November 1960.

Torinosu Cove 69°29'S., 39°34'E.

A narrow cove in the eastern part of Lützow-Holm Bay. It indents the W. side of Skarvsnes Foreland 1.5 mi. W. of Mount Suribachi, on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62. The name "Torinosu-wan" (bird's nest cove) was given by JARE Headquarters in 1973.

Torlyn Mountain 67°47'S., 66°55'E.

An elongated mountain, of which Murray Monolith is the detached front, standing 4 mi. E. of Scullin Monolith on the coast of Mac. Robertson Land. In January and February 1931 several Norwegian whale catchers explored along this coast, making sketches of the land from their vessels. They named the mountain for their whale catcher, the *Torlyn*, from whose deck it was seen in February, although the coast was sketched as early as January 19 from the *Bouvet II*, another Norwegian whaler. The BANZARE under Mawson made an airplane flight over this area in January 1930, returning for further exploration in February 1931. They named the mountain Murray Monolith, which name is hereby retained only for the detached front.

Tornquist Bay 54°04'S., 36°59'W.

Small bay between Cape Constance and Antarctic Pt. along the N. coast of South Georgia. Charted in 1929-30 by DI personnel, who called it Windy Cove, because of strong gusts of wind experienced there, but the name Windy Hole was subsequently used on charts for the bay. Following a survey of South Georgia in 1951-52, the SGS reported that this feature is known to the whalers and sealers as Tornquist Bay, because the wreck of the *Ernesto Tornquist*, transport vessel which ran aground on Cape Constance on Oct. 16, 1950, lies near its W. shore. This latter name is approved on the basis of local usage; the name Windy Hole is never used locally. The name Windy Cove, originally applied to this bay, has been transferred in local usage to the bay immediately SE. of Antarctic Pt. and it has since become established there.

Toro, Bajo: see Reyes Spit 62°29'S., 59°41'W.

Toro, Punta: see Toro Point 63°19'S., 57°54'W.

Toro Point 63°19'S., 57°54'W.

A point which forms the S. extremity of Schmidt Peninsula and the N. side of the entrance to Unwin Cove, Trinity Peninsula. Named by the fifth Chilean Antarctic Expedition (1950-51) after Carlos Toro Mazote G. who, as an aviation lieutenant in 1947, was one of the men chosen to occupy the General Bernardo O'Higgins station nearby. He was also a member of the fifth Chilean expedition aboard the ship *Lientur*.

Tor Point 54°12'S., 36°34'W.

Point forming the E. side of the entrance to Jason Hbr. in Cumberland West Bay, South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Torre, Isla: see Cecilia Island 62°25'S., 59°43'W.

Torre, Isla: see Tower Island 63°33'S., 59°51'W.

Torre Martello, Roca: see Martello Tower 62°06'S., 58°08'W.

Torson, Cape 66°40'S., 90°36'E.

A point at the E. side of Posadowsky Bay on the coast of Antarctica. First mapped from air photos taken by USN Op. Hjp., 1946-47. Remapped by the Soviet exp., 1956, who named it after Lt. K. P. Torson, of the ship *Vostok* in the Bellingshausen exp., 1819-21.

Torsona, Mys: see Torson, Cape 66°40'S., 90°36'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Tortoise Hill 64°22'S., 57°30'W.

A hill more than 500 m. high, 3 mi. W. of The Watchtower at the SE. corner of James Ross Island. Named by UK-APC following FIDS surveys, 1958-61. The feature is similar geologically and in appearance to Terrapin Hill in the NE. portion of the island; hence the application of a related name.

Tortuga, Islotes: see Saffery Islands 66°04'S., 65°49'W.

Tortula Cove 54°14'S., 36°30'W.

Cove close S. of Mai Pt., on the E. side of Maiviken in Cumberland Bay, South Georgia. Roughly surveyed by the SwedAE, 1901-4, under Nordenskjöld. Resurveyed in 1929 by DI personnel, and in 1951 by the FIDS. Named by the UK-APC after the moss (genus *Tortula*) which grows in this vicinity.

Toth, Mount 86°22'S., 155°15'W.

The easternmost peak, 2,410 m., on the small ice-covered ridge 5 mi. E. of Mt. Kendrick, in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Cdr. Arpad J. Toth, USNR, operations officer in charge of Williams Field, McMurdo Sound, 1962-64.

Toth Nunataks 73°33'S., 64°45'W.

A small group of isolated nunataks located 17 mi. NNW. of Mt. Coman in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Stephen R. Toth, glaciologist at Byrd Station, summer 1965-66.

Tot Island 65°31'S., 64°20'W.

Small island lying just N. of the NE. end of Lahille I., off the W. coast of Graham Land. First charted by the BGLE under Rymill, 1934-37. So named by the UK-APC in 1959 because the island is very small.

Tottan Hills 75°02'S., 12°25'W.

A group of rocky hills 20 mi. in extent, forming the southwestern portion of Heimefront Range in Queen Maud Land. The hills were observed and photographed by the Norwegian-British-Swedish Antarctic Expedition in the course of air reconnaissance from Maudheim in January 1952. Named after the supply ship *Tottan*, used to establish and resupply the British Royal Society IGY station on the Brunt Ice Shelf, 1955-58. During the 1957-58 season, *Tottan* also unloaded supplies at Norway station on Princess Martha Coast.

Totten Glacier 67°00'S., 116°20'E.

A massive glacier about 40 mi. long and 20 mi. wide. It drains northeastward from the continental ice but

turns northwestward at the coast where it terminates in a prominent tongue close east of Cape Waldron. Delineated from aerial photographs taken by USN Operation Highjump (1946-47). Named by US-ACAN for George M. Totten, Passed Midshipman on the *Vincennes* of the USEE (1838-42), who assisted Lt. Charles Wilkes with correction of the survey data obtained by the expedition.

Totten Glacier Tongue 66°35'S., 116°05'E.

A prominent glacier tongue extending seaward from Totten Glacier. Delineated from air photos taken by USN Operation Highjump (1946-47) and named by US-ACAN in association with Totten Glacier.

Totten High Land: see Sabrina Coast 67°20'S., 119°00'E.

Tottsuki Point 68°55'S., 39°50'E.

A small rock point lying 3 mi. SW. of Flattunga on the coast of Queen Maud Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Surveyed by JARE, 1957-62, and named Tottsuki-misaki (first point).

Tottuki Point: see Tottsuki Point 68°55'S., 39°50'E.

Touchdown Glacier 79°48'S., 158°10'E.

A tributary of Darwin Gl., flowing S. between Road-end Nunatak and the Brown Hills. Mapped by the VUWAE (1962-63) and so named because the glacier was used as a landing site for aircraft supporting the expedition.

Touchdown Hills 78°07'S., 35°00'W.

Group of snow-covered hills extending S. from Vahsel Bay on the E. side of the Filchner Ice Shelf. So named by the CTAE in 1957 because one of the exp. members, while piloting a plane fitted with skis, mistook these hills for clouds and hit them, bounding upwards undamaged.

Tour de Pise 66°40'S., 140°01'E.

Isolated rock dome, 27 m., which protrudes through the ice in NW. Rostand I. in the Géologie Archipelago. Charted in 1951 by the FrAE and named by them for the famous Tower of Pisa.

Touring Club, Mount 65°17'S., 63°56'W.

A small snow-capped peak near the extremity of a spur that descends southwestward from Mount Peary, on the west side of Graham Land. Discovered and named "Sommet du Touring Club" by the French Antarctic Expedition (1908-10) under Dr. Jean B.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Charcot. A party from the expedition hiked along the southern side of this feature in the course of charting the area.

Tourmaline Plateau 74°10'S., 163°27'E.

An ice-covered plateau in the central part of the Deep Freeze Range, bounded by the Howard Peaks and the peaks and ridges which trend N.-S. from Mt. Levick, in Victoria Land. So named by the Northern Party of NZGSAE, 1965-66, because of the quantities of tourmaline-granite found there.

Tournachon Peak 64°19'S., 61°05'W.

Peak, 860 m., rising S. of Spring Pt. on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Gaspard F. Tournachon (1820-1910), known professionally as Nadar, French portrait photographer and aeronaut who took the first air photos from a captive balloon in 1858 and suggested their use for mapmaking.

Tousled Peak 73°11'S., 169°01'E.

Small ice-covered peak, 1,220 m., situated 3.5 mi. NW. of the summit of Mt. Lubbock in the S. end of Daniell Pen., Victoria Land. The name given by NZ-APC in 1966 is descriptive of the exceptionally broken ice summit.

Tow Bay 57°02'S., 26°42'W.

Small bay 0.2 mi. S. of Vulcan Pt. on the W. side of Candlemas I., in the South Sandwich Islands. Charted and named in 1930 by DI personnel on the *Discovery II*.

Tower, Mont: see Tower Hill 63°42'S., 60°45'W.

Tower, The 62°13'S., 58°30'W.

Mountain, 345 m., which is snow covered except at the summit, standing close W. of Demay Pt. at the W. side of the entrance to Admiralty Bay, King George I., in the South Shetland Islands. Charted and named "La Tour" (The Tower) by the FrAE, 1908-10, under Charcot.

Tower Hill 63°42'S., 60°45'W.

Sharp conical summit, 1,125 m., surmounting the NW. part of Trinity I. in the Palmer Archipelago. The origin of the name is not known, but it may be associated with the voyage in 1824-25 of the British sealer *Sprightly* under Capt. Edward Hughes.

Tower Island 63°33'S., 59°51'W.

Island 5 mi. long and 305 m. high, lying 20 mi. NE. of Trinity I. and marking the NE. extent of Palmer Archipelago. Named on Jan. 30, 1820, by Edward Bransfield, Master, RN, who described it as a round island.

Tower Peak 64°23'S., 59°09'W.

Peak, 855 m., whose rock exposure stands out clearly from an evenly contoured icefield 5 mi. NW. of Longing Gap, in northern Graham Land. First charted and given this descriptive name by the FIDS, 1945.

Towle Glacier 76°38'S., 161°05'E.

Glacier in the Convoy Range of Victoria Land, draining NE. between Eastwind and Elkhorn Ridges into the Fry Glacier. Mapped in 1957 by the N.Z. Northern Survey Party of the CTAE (1956-58) and named for the USNS *Private John R. Towle*, an American freighter which carried a large proportion of the New Zealand stores south in December 1956.

Towles Glacier 72°25'S., 169°05'E.

Glacier descending from the western slopes of Mt. Humphrey Lloyd to enter Tucker Gl. northwest of Trigon Bluff, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Lt. William J. Towles, USN, medical officer at Hallett Station, 1960.

Towle Valley 76°41'S., 160°45'E.

The deep valley formerly occupied by the head of Towle Glacier, lying immediately W. of Towle Glacier in the Convoy Range of Victoria Land. Mapped in 1957 by the N.Z. Northern Survey Party of the CTAE (1956-58) and named by them for the USNS *Private John R. Towle*, an American freighter which carried a large part of the New Zealand stores south in December 1956.

Townrow Peak 76°38'S., 159°35'E.

A prominent outlier of the Tilman Ridge in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) and named after J. A. Townrow of the University of Tasmania, palaeobotanist with the expedition.

Toynbee Glacier 69°35'S., 69°35'W.

Glacier in NE. Alexander I., 17 mi. long and 5 mi. wide, between the mountains of the Douglas Range on the W. and Mt. Tyrrell and Mt. Tilley on the east. It flows N. from Mt. Stephenson to George VI Sound. First phot. from the air in 1937 by the BGLE under Rymill. Surveyed in 1948 by the FIDS and named for Patrick A. Toynbee, FIDS air pilot at Stonington I. in 1948 and 1949.

Trabucco Cliff 76°37'S., 118°01'W.

A cliff at the tip of the broad spur which forms the northeast extremity of Mt. Rees in the Cray Mountains. Mapped by USGS from surveys and U.S. Navy

GEOGRAPHIC NAMES OF THE ANTARCTIC

aerial photography, 1959-66. Named by US-ACAN for William J. Trabucco, USARP ionospheric physicist at McMurdo Station, 1969, and Siple Station, 1973.

Trachyte Hill 77°17'S., 166°25'E.

Prominent hill, 470 m., just S. of Shell Gl. in the center of the ice-free area on the lower W. slopes of Mt. Bird on Ross Island. Mapped and so named by the NZGSAE, 1958-59, because of the rock type composing the hill.

Tracy Glacier 65°57'S., 102°20'E.

A channel glacier flowing to the Shackleton Ice Shelf 4 mi. SW. of Cape Elliott. Delineated from aerial photographs taken by USN Operation Highjump, 1946-47. Named by US-ACAN for Lt. Lloyd W. Tracy, USN, pilot with USN Operation Windmill, 1947-48, who assisted in operations which resulted in the establishment of astronomical control stations from Wilhelm II Coast to Budd Coast.

Tracy Point 66°18'S., 110°27'E.

The westernmost point of Beall Island in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Radioman Gordon F. Tracy, USN, a member of the Wilkes Station party of 1958.

Trafalgar Glacier 72°28'S., 168°25'E.

A tributary glacier about 30 mi. long, flowing E. in the Victory Mountains to join Tucker Glacier below Bypass Hill, in Victoria Land. Named by NZGSAE, 1957-58, in association with the Victory Mountains and after the famous British naval victory of 1805.

Traffic Circle 68°37'S., 66°00'W.

A glacier-filled expanse 500 m. high, situated south of Mt. Ptolemy and medially on Antarctic Peninsula between Marguerite Bay and Mobiloil Inlet. Hub Nunatak rises from the center of the Traffic Circle. From this position, five glacial troughs radiate like the spokes of a wheel. One connects on the north with Gibbs Glacier and Neny Glacier, leading to Neny Fjord. Another connects on the west with Lammers Glacier and Windy Valley, leading to Mikkelsen Bay. A third, Cole Glacier, trends southwest along Godfrey Upland toward the Wordie Ice Shelf area. The fourth, Weyerhaeuser Glacier, trends southward toward Wakefield Highland and connects with glaciers leading westward to Wordie Ice Shelf. The fifth, Mercator Ice Piedmont, is nourished by the outflow from Weyerhaeuser, Cole and Gibbs Glaciers; it broadens as it descends eastward to the head of Mobiloil Inlet. Discovered in 1940 by members of the East Base party of the USAS, 1939-41, who used this system of troughs in traveling across the upland, hence the name Traffic Circle.

Trail, Mount 67°12'S., 50°51'E.

Mountain on the NE. side of Auster Gl., at the head of Amundsen Bay in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for D. S. Trail, geologist at Mawson Station in 1961.

Trail Bay: see Trail Inlet 68°05'S., 65°20'W.

Trail Glacier 73°34'S., 61°35'E.

A broken mountain glacier on the southern side of Mt. Menzies, about 2 mi. from the summit. It is about 5 mi. long and 3 mi. wide. The glacier flows from a snowfield at about 2,750 m. down a steep slope for at least 900 m. vertically, then spreads out and merges with the ice sheet a few mi. from the S. side of the mountain. Mapped from ANARE air photos and surveys of the Prince Charles Mountains, 1960-61. Named by ANCA for D. S. Trail, geologist who led an ANARE field party to this feature in December 1961.

Trail Inlet 68°05'S., 65°20'W.

Ice-filled inlet which recedes SW. 15 mi. between Three Slice Nunatak and Cape Freeman, on the E. coast of Graham Land. The inlet was sighted by Sir Hubert Wilkins on his flight of Dec. 20, 1928. The width of Graham Land is reduced to 20 mi. between the heads of Trail Inlet and Neny Fjord. So named by the US-SCAN because it was a natural route of travel for flights and sledge trips from the East Base of the USAS, 1939-41, to the E. coast of Graham Land.

Trainer Glacier 72°34'S., 167°29'E.

A glacier 7 mi. W. of Rudolph Gl., flowing NE. to enter Trafalgar Gl. in the Victory Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Charles Trainer, meteorologist and senior U.S. representative at Hallett Station, 1960.

Trajer Ridge 68°34'S., 78°30'E.

A rock ridge about 125 m. high at the S. side of the base of Breidnes Peninsula, Vestfold Hills. The region was photographed by USN Operation Highjump (1946-47), ANARE (1954, 1957 and 1958) and the Soviet Ant. Exp. (1956). Named by ANCA for F. L. Trajer, weather observer at Davis Station (1961) who, with M. Hay, visited the feature on foot on Nov. 4, 1961.

Tranchant, Mount 65°14'S., 64°05'W.

A small mountain or hill directly on the W. coast of Graham Land. The feature marks the S. side of the terminus of Wiggins Glacier. First charted by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

FrAE, 1908-10, under J. B. Charcot who gave the descriptive name "Mont Tranchant" (sharp mountain or edge mountain).

Transantarctic Mountains 85°00'S., 175°00'W.

The mountains and ranges which extend with some interruptions between Cape Adare and Coats Land, these mountains serving as the division between East Antarctica and West Antarctica. Included are the continuous but separately named mountain groups along the west side of Ross Sea and the western and southern sides of Ross Ice Shelf; also the Horlick Mountains, the Thiel Mountains, Pensacola Mountains, Shackleton Range and Theron Mountains. This purely descriptive name was recommended by the US-ACAN in 1962 and has since gained international acceptance.

Transition Glacier 70°26'S., 68°49'W.

Glacier on the E. coast of Alexander I., 8 mi. long and 2 mi. wide, which flows E. to George VI Sound along the N. side of Block Mtn. and Tilt Rock. First phot. from the air on Nov. 23, 1935, by Lincoln Ellsworth and mapped from these photos by W. L. G. Joerg. Surveyed in 1949 by the FIDS, and so named by them because this glacier marks the transition between igneous rocks to the north and sedimentary rocks to the south.

Transverse Island 67°20'S., 59°19'E.

Island between Fold I. and Keel I. on the E. side of Stefansson Bay, off the coast of Enderby Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Tverrholmen (the transverse islet). Seen by an ANARE party in 1956. The translated form of the name recommended by ANCA has been approved.

Tranter Glacier 82°32'S., 161°45'E.

A glacier in the N. part of Queen Elizabeth Range, draining into Nimrod Gl. between Mt. Chivers and Mt. Boman. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for David L. Tranter, USARP glaciologist at Roosevelt Island, 1962-63.

Traversay Islands 56°36'S., 27°43'W.

Group of three islands, consisting of Zavodovski, Leskov, and Visokoi Islands, at the N. end of the South Sandwich Islands. The group was disc. in 1819 by a Russ. exp. under Bellingshausen, who named them for Jean-Baptiste Prévost de Sansac, Marquis de Traversay (1754-1831), French naval officer who was sent by King Louis XVI, at the request of Empress Catherine II, to join the Russian navy in 1791. He was Minister

of Naval Affairs at St. Petersburg, 1811-31, and chief promoter of Bellingshausen's Antarctic voyage. The name was previously transliterated as Traverse because it was incorrectly thought that the man commemorated was a Russian.

Traverse Islands: see Traversay Islands 56°36'S., 27°43'W.

Traverse Mountains 69°51'S., 68°02'W.

Group of almost ice-free mountains, 1,250 m., standing at the S. side of Eureka Glacier and 6 mi. inland from George VI Sound in western Palmer Land. These mountains were first photographed from the air on Nov. 23, 1935, by Lincoln Ellsworth and were mapped from these photographs by W. L. G. Joerg. First surveyed in 1936 by the BGLE under Rymill and resurveyed in 1948 by the FIDS. The name was first used by BGLE sledging parties because the mountains are an important landmark in the overland traverse from the Wordie Ice Shelf, down Eureka Gl., to George VI Sound.

Treadwell, Mount 77°01'S., 144°51'W.

A mountain (820 m.) at the SE. extremity of the Swanson Mtns., in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named in 1969 by US-ACAN for Capt. T. K. Treadwell, USN, who earlier had been Deputy Commander as well as Commander, U.S. Naval Oceanographic Office.

Treatt, Mount 68°00'S., 56°48'E.

The easternmost of three peaks rising sharply from the ice plateau about 9 mi. SE. of Mt. Cook of the Leckie Range. Plotted from ANARE air photos. Named for G. Treatt, helicopter pilot with the 1965 ANARE (*Nella Dan*), led by Phillip Law.

Trench Glacier 70°12'S., 69°11'W.

Deeply entrenched glacier on the E. coast of Alexander I., 6 mi. long and 2 mi. wide, which flows E. into George VI Sound immediately S. of Mt. Athelstan. The mouth of this glacier was first phot. from the air on Nov. 23, 1935, by Lincoln Ellsworth, and it was mapped from these photos by W. L. G. Joerg. Trench Glacier was surveyed in 1948 and 1949 by the FIDS, who applied this descriptive name.

Trendall Crag 54°48'S., 35°59'W.

Mountain crag, 1,005 m., overlooking the N. side of Drygalski Fjord at the SE. end of South Georgia. Surveyed by the SGS in the period 1951-57, and named for Alec F. Trendall, geologist of the SGS, 1951-52 and 1953-54.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Trenholm Point 75°26'S., 142°23'W.

An ice-covered point 8 mi. NW. of Eldred Point on the coast of Marie Byrd Land. It marks the northern end of the peninsula between Holcomb Glacier and El-Sayed Glacier. Mapped by USGS from surveys and U.S. Navy aerial photography, 1959-65. Named by US-ACAN for William L. Trenholm, glaciologist at Byrd Station in three summer seasons, 1967-70.

Trent Glacier: see Kjerulf Glacier 54°21'S., 36°51'W.

Trepassey Bay 63°28'S., 56°58'W.

Bay 0.8 mi. wide, lying on the E. side of Tabarin Pen. 3.5 mi. SE. of Hope Bay. First surveyed by the FIDS and by E. Burden, Master of the *Trepassey*, from that vessel in 1947. Resurveyed in 1955 by the FIDS. Named by the UK-APC for the *Trepassey*, which was chartered by the FIDS in 1945-46 and 1946-47. The vessel was used for the relief of the station at Hope Bay in both seasons and for a survey of Antarctic Sound during the second one.

Trepassey Island 68°12'S., 66°59'W.

Small rocky island 0.6 mi. SE. of Stonington I. in Neny Bay, off the W. coast of Graham Land. Several islands were roughly charted in the area by the BGLE, 1934-37, and by the USAS, 1939-41. They were surveyed in 1947 by the FIDS and named for the M. V. *Trepassey*, ship used by the FIDS in establishing a base on Stonington I. in 1946.

Trepidation Glacier 78°46'S., 162°21'E.

Small glacier entering the E. side of Skelton Gl. between Moraine Bluff and Red Dike Bluff. The name was applied by the N.Z. party of the CTAE (1956-58) and refers to a 1957 attempt by an aircraft to land on the exceedingly broken ice at the foot of the glacier.

Tres Hermanos, Colina: see Three Brothers Hill 62°15'S., 58°41'W.

Tres Mellizos, Punta: see Triplets, The 62°24'S., 59°41'W.

Tres Puntas, Isla: see Jomfruene 54°04'S., 38°03'W.

Tressler Bank 65°00'S., 95°00'E.

Submarine bank with a least depth of 56 fathoms, extending from about 94° to 96°E. in the eastern part of the Davis Sea. The bank was sounded by the U.S.S. *Burton Island* and U.S.S. *Edisto* of USN Op. Wml., 1947-48. Named by the US-ACAN for Willis L. Tressler of the U.S. Navy Hydrographic Office who carried on oceanographic studies in the Antarctic

aboard the U.S.S. *Atka*, 1954-55, and during USN Op. DFrz. I and II, 1955-57. Tressler was scientific leader at Wilkes Station in 1958.

Tre Sten: see Sørle Rocks 60°37'S., 46°15'W.

Trethewry Point 67°23'S., 59°47'E.

Rocky promontory 120 m. high, projecting from the coast 4 mi. E. of William Scoresby Bay. Disc. and named in February 1936 by DI personnel on the *William Scoresby*.

Treves Butte 84°43'S., 114°20'W.

A prominent, partly ice-covered butte (2,100 m.) immediately NW. of Discovery Ridge in the Ohio Range. Named by US-ACAN for Samuel B. Treves, geologist, who worked several seasons in Antarctica and who in the 1960-61 and 1961-62 seasons made investigations in the Ohio Range and other parts of the Horlick Mountains.

Trevillian Island 67°38'S., 62°42'E.

Small, oval, humped island 1 mi. S. of Nøst I. in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Rundøy (round island). Renamed by ANCA for T. Trevillian, draftsman with the Division of National Mapping, Dept. of National Development, Canberra, who for a number of years was responsible for the compilation of maps for ANARE.

Trey Peaks 80°36'S., 28°52'W.

Three conspicuous rock peaks, the highest 1,180 meters. They stand W. of Blaiklock Gl. and 2 mi. N. of Mt. Homard in the W. part of Shackleton Range. First mapped in 1957 by the CTAE and given this descriptive name, trey being a term for three used in dice or cards.

Triad Islands 65°36'S., 64°28'W.

Group of three small islands lying 1.5 mi. E. of Chavez I., off the W. coast of Graham Land. First charted by the BGLE under Rymill, 1934-37. The name given by the UK-APC in 1959 is descriptive.

Triangle Point 62°32'S., 59°51'W.

Triangular headland lying 1.5 mi. NW. of Spit Pt. on the SW. side of Greenwich I., in the South Shetland Islands. Charted by DI personnel on the *Discovery II* in 1935 and given this descriptive name.

Trice Islands 72°25'S., 99°48'W.

A group of small ice-covered islands lying just W. of Evans Point, Thurston Island, in Peacock Sound. The

GEOGRAPHIC NAMES OF THE ANTARCTIC

group rises above the general level of Abbot Ice Shelf which occupies the sound. First mapped from air photos taken by USN Op. Hjp., 1946-47. Named by US-ACAN for Jack L. Trice, meteorologist at Byrd Station, 1964-65.

Trickster Rocks 65°36'S., 64°36'W.

Several small rocks emerging from the sea less than 1 mi. NW. of Chavez Island in Grandidier Channel, off the W. coast of Graham Land. So named by UK-APC because the rocks escaped notice of the 1957 FIDS survey party, as they were thought to be icebergs. The feature was photographed by Hunting Aerosurveys Ltd., 1957-58.

Tricorn, Mount 73°58'S., 61°45'W.

A distinctive massif whose vertical rock faces rise to 1,120 m. and surround a snow-covered interior which is lower except for a 1,610 m. peak in the NW. portion, standing at the head of Wright Inlet on the E. coast of Palmer Land. Disc. by members of the USAS in a flight from East Base on Dec. 30, 1940, and named for its resemblance to a gigantic tri-cornered hat.

Tricorn, Mount: see Tricorn Mountain 85°03'S., 173°27'E.

Tricorn Bluff: see Trigon Bluff 72°29'S., 169°09'E.

Tricorn Mountain 85°03'S., 173°27'E.

A mountain, 3,475 m., standing 4 mi. E. of Graphite Peak, about midway between the heads of Falkenhof and Leigh Hunt Glaciers. Named by the NZGSAE (1961-62) because of its resemblance to an admiral's tricorn hat.

Tricorn Peak 82°59'S., 156°48'E.

Snow-covered peak, 2,320 m., on the ridge between Astro Gl. and Skua Gl. in the N. part of the Miller Range. Seen by the northern party of the NZGSAE (1961-62) and so named because of its resemblance to a three-cornered hat.

Tricouni, Mount 78°30'S., 161°57'E.

Prominent peak, 1,630 m., rising steeply 2 mi. N. of Hobnail Peak on the E. side of Skelton Gl., in Victoria Land. Surveyed and named in 1957 by the N.Z. party of the CTAE, 1956-58. So named because it resembles a tricouni, a saw-toothed nail used on soles of alpine boots.

Trident, Mount 72°26'S., 169°14'E.

A prominent peak (2,480 m.) with three closely-spaced summits, rising above Trigon Bluff on the N. side of Tucker Glacier in Victoria Land. So named by NZGSAE, 1957-58, because of the three summits.

Trident, The 54°10'S., 37°05'W.

Ridge surmounted by three peaks, the highest 1,335 m., standing at the E. side of Briggs Gl. in South Georgia. The name is descriptive of the three peaks and was given by the UK-APC following survey by the SGS in the period 1951-57.

Trifid Peak 67°51'S., 67°09'W.

Peak at the head of Shoemith Gl. in western Horse-shoe Island. Named by UK-APC in 1958. The name is descriptive of this three-sided matterhorn-type peak.

Trigon Bluff 72°29'S., 169°09'E.

Steep, triangular bluff 10 mi. W. of Football Mtn., rising to 1,245 m. on the N. side of Tucker Glacier. Named by the NZGSAE, 1957-58, which placed a triangulation station on its summit. The name is descriptive.

Trigonia Island 66°01'S., 65°41'W.

Small island immediately off the S. tip of Beer I., lying 8 mi. W. of Prospect Pt., off the W. coast of Graham Land. Charted and named by the BGLE, 1934-37, under Rymill.

Trigwell Island 68°33'S., 77°57'E.

An island in Prydz Bay, lying immediately W. of Flutter Island and 1 mi. W. of Breidnes Peninsula, Vestfold Hills. First mapped from air photos taken by the Lars Christensen Exp., 1936-37. Remapped by ANARE (1957-58) and named for E. A. Trigwell, radio supervisor at Davis Station in 1958.

Trillingane Nunataks 71°50'S., 27°25'E.

Three nunataks standing 6 mi. NE. of Balchen Mtn. at the E. end of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Trillingane (the triplets).

Trilling Bay 69°31'S., 39°41'E.

A small bay just S. of Skarvsnes Foreland along the E. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Trillingbukta (the triplet bay) in association with nearby Trilling Islands.

Trillingbukta: see Trilling Bay 69°31'S., 39°41'E.

Trilling Islands 69°30'S., 39°38'E.

Three islands at the S. side of Skarvsnes Foreland, lying in Trilling Bay in the E. part of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Trillingöyane (the triplet islands).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Trillingnutane: see Trilling Peaks 67°58'S., 62°45'E.

Trillingöyane: see Trilling Islands 69°30'S., 39°38'E.

Trilling Peaks 67°58'S., 62°45'E.

Group of linear nunataks comprised of three main peaks standing 3 mi. S. of South Masson Range in the Framnes Mtns., Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Trillingnutane (the triplet peaks).

Trimpi, Mount 75°21'S., 72°48'W.

A mountain 3 mi. WNW. of Mt. Brice in the Behrendt Mtns., Ellsworth Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Michael L. Trimpi, radioscience researcher at Eights Station in 1963.

Trinidad, Isla: see Trinity Island 54°00'S., 38°10'W.

Trinidad, Isla: see Trinity Island 63°45'S., 60°44'W.

Trinité, Ile de la: see Trinity Island 63°45'S., 60°44'W.

Trinity Island 54°00'S., 38°10'W.

Island having three peaks, lying 0.7 mi. NE. of Main I. in the Willis Is. at South Georgia. Charted and so named for its three peaks by DI personnel in the period 1926-30.

Trinity Island 63°45'S., 60°44'W.

Island 15 mi. long and 6 mi. wide in the N. part of Palmer Archipelago. Named by Nordenskjöld, leader of the SwedAE, 1901-4, in commemoration of Bransfield's "Trinity Land" of 1820.

Trinity Nunatak 76°26'S., 160°38'E.

A large nunatak in the stream of the Mawson Gl., about 5 mi. N. of the Convoy Range in Victoria Land. Mapped in 1957 by the N.Z. Northern Survey Party of the CTAE (1956-58), which applied the name because of its three summits.

Trinity Peninsula 63°37'S., 58°20'W.

The extreme northeast portion of the Antarctic Peninsula, extending northeastward for about 80 mi. from a line connecting Cape Kater and Cape Longing. Dating back more than a century, chartmakers used various names (Trinity, Palmer, Louis Philippe) for this portion of the Antarctic Peninsula, each name having some historical merit. The recommended name derives from "Trinity Land" given by Edward Bransfield in January 1820, although the precise application by him

has not been identified with certainty and is a matter of different interpretation by Antarctic historians. Named after the Trinity Board.

Trío, Islotes: see Tau Islands 64°18'S., 62°55'W.

Trioen Nunataks 72°25'S., 3°59'W.

An isolated group of three nunataks about 8 mi. NW. of Borg Mountain in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Trioen (the trio).

Trio Nunataks 75°30'S., 159°42'E.

Three large nunataks standing at the S. side of David Gl., just W. of the terminus of Hollingsworth Gl., in Victoria Land. Named by the Southern Party of the NZGSAE, 1962-63.

Triple Islands 66°46'S., 141°12'E.

Three small rocky islands in a closely-spaced chain, lying close E. of the tip of Zélée Glacier Tongue, 0.4 mi. SSE. of Double Islands. Phot. from the air by USN Op. Hjp., 1946-47. Charted and named by the FrAE under Liotard, 1949-51.

Triplets, The 62°24'S., 59°41'W.

A three-pointed peak at the SE. side of Coppermine Cove, near the W. end of Robert I. in the South Shetland Islands. The name appears to have been applied by DI personnel on the *Discovery II*, who charted the peak in 1935.

Tripode, Islote: see Tripod Island 64°19'S., 62°57'W.

Tripod Island 64°19'S., 62°57'W.

Small island which lies close S. of the W. extremity of Eta I. and marks the N. side of the western entrance to Andersen Harbor in the Melchior Is., Palmer Archipelago. The name was probably given by DI personnel who roughly surveyed the island in 1927. The island was resurveyed by Argentine expeditions in 1942, 1943 and 1948.

Tripp, Mount 83°17'S., 166°53'E.

A massive, cone-shaped, ice-covered mountain, 2,980 m., standing between Hoffman and Hewitt Glaciers, 7 mi. WNW. of Rhodes Peak in the Holland Range. Discovered by the BrAE (1907-9) and named for Leonard O. H. Tripp, of New Zealand, who gave assistance to this expedition and also to Shackleton's expedition of 1914-17.

Tripp Bay 76°37'S., 162°44'E.

A bay along the coast of Victoria Land formed by a recession in the ice between the Oates Piedmont Gla-

GEOGRAPHIC NAMES OF THE ANTARCTIC

cier and Evans Piedmont Glacier. The bay was first charted by the BrAE, 1907-9. The name appears to have been first used by the BrAE (1910-13) and derives from Tripp Island which lies within the bay.

Tripp Island 76°38'S., 162°42'E.

An island in the S. part of Tripp Bay along the coast of Victoria Land. Discovered by the BrAE (1907-9) which named this feature for Leonard O. H. Tripp of Wellington, N.Z., a friend and supporter of Shackleton.

Tristan Island 66°44'S., 140°54'E.

Small rocky island 0.7 mi. W. of Yseult I. and 0.2 mi. N. of the W. point on Cape Jules. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE under Barré, 1951-52, and so named because of its twin relationship with Yseult Island. Tristan is the popular spelling of Tristram, legendary hero incorporated into Arthurian legend and later popularized by Wagner's opera *Tristan und Isolde*.

Triton Point 71°42'S., 68°12'W.

Rocky point forming the E. end of the high ridge separating Venus and Neptune Glaciers on the E. coast of Alexander Island. The coast in this vicinity was first seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. The point was roughly surveyed in 1936 by the BGLE and more accurately defined in 1949 by the FIDS. Named by the UK-APC for its association with Neptune Glacier, Triton being a satellite of Neptune.

Tritoppen: see Tritoppen, Mount 67°59'S., 62°29'E.

Tritoppen, Mount 67°59'S., 62°29'E.

A triple-peaked mountain, 1,350 m., standing 3 mi. S. of Mt. Hordern in the David Range of the Framnes Mountains. Mapped by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp., 1936-37, and named Tritoppen (the three-peaked mountain).

Tritoppen Peak: see Tritoppen, Mount 67°59'S., 62°29'E.

Triune Peaks 69°08'S., 66°52'W.

Three prominent, sharply-pointed rock peaks, rising 12 mi. NE. of Mt. Balfour and overlooking Wordie Ice Shelf on the W. coast of Antarctic Peninsula. First roughly surveyed from the ground by BGLE, 1936-37. Photographed from the air by RARE, Dec. 1947. Resurveyed from the ground by FIDS, Nov. 1958. The UK-APC name derives from the number of peaks in the group.

Trivial Islands 65°31'S., 65°13'W.

Group of small islands lying 1.5 mi. E. of Lacuna I. and 7 mi. N. of Vieugué I., in the Biscoe Islands. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. So named by the UK-APC because these islands are small, dull and uninteresting.

Trois Pérez, Cape: see Pérez, Cape 65°24'S., 64°06'W.

Trojan Range 64°32'S., 63°23'W.

A mountain range rising to 2,135 m., extending northward from Mt. Français along the E. side of Iliad Gl., Anvers I., in the Palmer Archipelago. Surveyed by the FIDS in 1955 and named by the UK-APC for the Trojans, one of the opposing sides in the Trojan War in Homer's *Iliad*.

Trollhul 54°49'S., 36°12'W.

Small cove 4 mi. NW. of Cape Disappointment at the mouth of Graae Gl., along the S. coast of South Georgia. Surveyed by the SGS in the period 1951-57. The name is well established in local use.

Trollkjelen Crevasse Field 71°17'S., 0°50'W.

A crevasse field about 12 mi. long in the Fimbul Ice Shelf, lying immediately off the NE. side of Trollkjelneset Headland in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Trollkjelen (the troll's cauldron).

Trollkjelneset Headland 71°25'S., 1°00'W.

A snow-domed headland rising between Krylvika Bight and the mouth of Jutulstraumen Gl. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Trollkjelneset (cape of the troll's cauldron).

Trollkjelpiggen Peak 71°35'S., 1°09'W.

A peak 5 mi. SW. of Utkikken Hill, on the E. side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Trollkjelpiggen (peak of the troll's cauldron).

Trollslottet Mountain 71°56'S., 7°14'E.

A high ridgelike mountain with several prominent peaks, forming the NW. limit of the Filchner Mtns. in Queen Maud Land. Plotted from surveys and air photos by NorAE (1956-60) and named Trollslottet (the troll castle).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Trooz, Cap de: see Pérez, Cape 65°24'S., 64°06'W.

Trooz Glacier 65°20'S., 63°58'W.

Glacier 1.5 mi. wide at its mouth and some 15 mi. long, flowing W. into the N. part of Collins Bay on the W. coast of Graham Land. Disc. by the FrAE, 1908-10. Named for J. de Trooz, Belgian Minister of the Interior and Public Instruction, who was instrumental in procuring funds for the publication of the scientific results of the BelgAE, 1897-99. This application was suggested by the US-ACAN because of duplication of the name Trooz for what is now known as Cape Pérez (q.v.).

Trost Peak 67°52'S., 62°48'E.

Peak, 980 m., standing 1.5 mi. NE. of Mt. Burnett in the Masson Range of the Framnes Mountains. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37. Remapped by ANARE, 1957-60, and named for P. A. Trost, physicist at Mawson Station, 1958.

Trost Rocks 69°45'S., 68°58'E.

Two rock outcrops at the NE. end of Single Island on the W. side of the Amery Ice Shelf. The rocks were photographed from ANARE aircraft in 1956 and their position fixed by a field party in December 1962. Named by ANCA for P. A. Trost, electronics engineer at Mawson Station in 1962, a member of the field party which visited the rocks.

Trott, Mount 70°42'S., 66°23'E.

A ridgelike mountain with a jagged, saw-tooth appearance, about 1 mi. N. of Mt. Bunt in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for N. E. Trott, weather observer at Wilkes Station in 1962, and officer in charge at Davis Station in 1964.

Troubridge, Mount 71°08'S., 167°44'E.

Mountain over 1,000 m., surmounting the E. end of Hedgpeth Heights in the Anare Mountains. Discovered and rudely charted in Jan. 1841 by Capt. James Ross, RN, who named it for R. Adm. Sir Edward Thomas Troubridge, one of the junior lords of the Admiralty at that time.

Trousers Rock 57°04'S., 26°45'W.

Rock with a prominent wave-cut arch, lying immediately W. of Cook Rock and 0.3 mi. NE. of Vindication I. in the South Sandwich Islands. Charted in 1930 and given this descriptive name by DI personnel on the *Discovery II*.

Trout Island 66°01'S., 65°27'W.

Island just E. of Salmon I. in the Fish Is., off the W. coast of Graham Land. Charted by the BGLE under

Rymill, 1934-37. So named by the UK-APC in 1959 because it is one of the Fish Islands.

Trowbridge, Mount: see Troubridge, Mount 71°08'S., 167°44'E.

Trowbridge Island 62°00'S., 57°39'W.

Island lying 2 mi. NW. of Cape Melville in Destruction Bay, off the E. coast of King George I. in the South Shetland Islands. Named by the UK-APC in 1960 for the sealer *Lady Trowbridge* (Capt. Richard Sherratt) from Liverpool, which was wrecked off Cape Melville on December 25, 1820.

Truant Island: see Vázquez Island 64°55'S., 63°25'W.

Trubyatchinskiy Nunatak 68°20'E., 49°38'E.

A nunatak lying 7 mi. S. of Alderdice Peak in the Nye Mountains, Enderby Land. Named by the SovAE, 1961-62, for Soviet magnetician N. N. Trubyatchinskiy (1886-1942).

Trudge Valley 76°43'S., 159°45'E.

A valley on the southern side of Windwhistle Peak in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) who named it after the many journeys along its length.

Trulla Bluff 59°02'S., 26°31'W.

A high, ice-covered bluff forming the eastern extremity of Bristol Island, South Sandwich Islands. This feature was named "Glacier Bluff" during the survey of the island from RRS *Discovery II* in 1930. It was renamed by UK-APC in 1971 to avoid duplication. The new name refers to the Norwegian whaling vessel *Trulla* which visited the islands in 1911.

Truman Nunatak 72°44'S., 75°01'E.

A small, partly snow-covered nunatak 7.5 mi. N. of Mt. Harding in the Grove Mountains. Mapped by ANARE from air photos, 1956-60. Named by ANCA for M. J. Truman, electrical fitter at Mawson Station, 1962.

Trumao, Islote: see McConnel Islands 66°29'S., 65°51'W.

Trump Islands 66°02'S., 65°56'W.

Small group of islands lying 4 mi. SW. of Dodman Island, off the W. coast of Graham Land. Discovered and named by the BGLE, 1934-37, under Rymill.

Trundle Island 65°23'S., 65°18'W.

Island lying 1 mi. NE. of Jingle I., Pitt Is., in the Biscoe Islands. Photographed by Hunting Aerosurveys Ltd. in 1956 and mapped from these photos by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

FIDS. Named by the UK-APC in 1959 after Mr. Trundle, a character in Charles Dickens' *Pickwick Papers*.

Trundy Island 64°47'S., 64°28'W.

Island 0.4 mi. WNW. of Robbins Island in the W. part of Joubin Islands. Named by US-ACAN for George B. Trundy, Able Seaman in the R.V. *Hero* in her first voyage to Antarctica and nearby Palmer Station in 1968.

Trygve Gran, Mount: see Gran, Mount 76°59'S., 160°58'E.

Trygve Point 77°39'S., 166°42'E.

Point 1 mi. NW. of Turks Head on the W. side of Ross Island. First charted by the BrAE, 1910-13, under Scott, who named it for Trygve Gran, Norwegian ski expert with the expedition.

Tryne Bay 68°24'S., 78°28'E.

A bay about 3 mi. wide at the NE. end of the Vestfold Hills, lying between the Tryne Islands and the coast. Charted by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37) and named "Trynevika" (the snout bay).

Tryne Crossing 68°30'S., 78°18'E.

A low but rough pass across Langnes Peninsula, Vestfold Hills, leading from the southwest arm of Tryne Fjord to Langnes Fjord. Used for portage and sledges and probably suitable for tracked vehicles. The area was mapped from air photos taken by the Lars Christensen Exp. (1936-37), and was photographed by USN Operation Highjump (1946-47). First traversed by an ANARE party led by B.H. Stinear, May 13, 1957, and named for its association with Tryne Fjord.

Tryne Fjord 68°28'S., 78°22'E.

An irregular-shaped fjord that indents the northern side of Langnes Peninsula in the Vestfold Hills. Mapped and named Tryne Fjord (snout fjord) by the Lars Christensen Expedition, 1936-37.

Tryne Inlet: see Tryne Fjord 68°28'S., 78°22'E.

Tryne Islands 68°24'S., 78°23'E.

A group of numerous small islands and rocks, about 4 mi. in extent, forming the western limit of Tryne Bay and Tryne Sound at the northeast end of the Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37) and named Trynöyane (the snout islands).

Tryne Point 67°18'S., 59°03'E.

Rocky point at the E. extremity of Law Promontory, forming the W. side of the entrance of Stefansson Bay.

Charted by Norwegian cartographers from aerial photographs taken by the Nor. exp. under Christensen in January-February 1937, and named Trynet, a Norwegian word meaning "the snout." The form Tryne, dropping the definite article, is approved with the added generic term point.

Tryne Sound 68°25'S., 78°25'E.

A short, narrow passage on the N. side of Langnes Peninsula, Vestfold Hills, connecting Tryne Bay and Tryne Fjord. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Expedition (1936-37) and named Tryne Sund (snout sound).

Tryne Strait: see Tryne Sound 68°25'S., 78°25'E.

Trynet: see Tryne Point 67°18'S., 59°03'E.

Trynet Point: see Tryne Point 67°18'S., 59°03'E.

Trynevika: see Tryne Bay 68°24'S., 78°28'E.

Trynöyane: see Tryne Islands 68°24'S., 78°23'E.

Tschuffert Peak 67°28'S., 60°54'E.

Prominent, isolated peak between Taylor Gl. and Chapman Ridge in Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Svartpiggen (the black peak). Renamed by ANCA for H. Tschuffert, meteorologist at Mawson Station in 1958.

Tsentrāl'naya Hill 70°45'S., 11°40'E.

A bare rock hill (205 m.) in the central part of the Schirmacher Hills, Queen Maud Land. The feature was mapped by the SovAE in 1961 and named Gora Tsentrāl'naya (central hill).

Tsiolkovskiy Island 70°30'S., 3°00'E.

An ice-covered island in the Fimbul Ice Shelf, Queen Maud Land. The summit of the island rises about 200 m. above the general level of the ice shelf. Kroshka Island lies close SW. and is similar but smaller. First mapped by the SovAE in 1961 and named for K. E. Tsiolkovskiy (1857-1935), Russian scientist and inventor.

Tsiolkovskogo, Kupol: see Tsiolkovskiy Island 70°30'S., 3°00'E.

Tte. Barrios, Cabo: see Alexander, Mount 63°18'S., 55°48'W.

Tua Hill 72°05'S., 1°12'E.

An isolated rock hill 3 mi. W. of Brattskarvet Mtn. in the Sverdrup Mtns., Queen Maud Land. Photo-

GEOGRAPHIC NAMES OF THE ANTARCTIC

graphed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tua (the knoll).

Tuatara, Mount 80°34'S., 158°20'E.

A mountain, 1,640 m., standing on the S. side of Byrd Glacier, 7 mi. N. of Mt. Hamilton. Mapped by the NZGSAE (1960-61) who so named it because the long spiny summit ridge resembles a lizard.

Tuck, Mount 78°29'S., 84°50'W.

A pyramidal mountain (3,560 m.) at the head of Hansen Gl. in the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Lt. John Tuck, Jr., USN, Navy support leader at the South Pole Station in 1957.

Tucker, Mount 64°20'S., 59°16'W.

A distinctive rock mountain mass 9 mi. NW. of Longing Gap, overlooking Larsen Inlet in Graham Land. Mapped from surveys by FIDS (1960-61). Named by UK-APC after the Tucker Sno-cat Corporation of Medford, Oregon, makers of Sno-cat vehicles.

Tucker Glacier 72°32'S., 169°15'E.

A major valley glacier of Victoria Land, about 90 mi. long, flowing southeast between Admiralty Mtns. and Victory Mtns. to the Ross Sea. There is a snow saddle at the glacier's head, just west of Homerun Range, from which Ebbe Glacier flows northwestward. Explored by NZGSAE, 1957-58, and named by them after Tucker Inlet, the ice-filled coastal indentation at the mouth of this glacier named by Ross in 1841.

Tucker Inlet 72°37'S., 169°45'E.

An ice-filled inlet indenting the coast of Victoria Land between Capes Wheatstone and Daniell. Discovered in February 1841 by Sir James Clark Ross who named this feature for Charles T. Tucker, master of the *Erebus*.

Tuff Bluff 78°04'S., 165°27'E.

A small though prominent light-colored bluff on the northern slopes of Brown Peninsula, Victoria Land. The bluff is significant geologically as a locality for trachytic tuff, from which the feature derives its name. Name applied by the NZ-APC following investigations by the N.Z. Geological Survey and Victoria Univ. Exp. in the area, 1964-65.

Tufft Nunatak 63°55'S., 58°42'W.

A small nunatak 3 mi. SW. of Mt. Bradley, Trinity Peninsula. Named by UK-APC for Ronald W. Tufft of FIDS, a member of the reconnaissance party for the Detroit Plateau journey in February 1957.

Tufts College Valley: see Tufts Pass 69°25'S., 70°35'W.

Tufts Pass 69°25'S., 70°35'W.

Pass extending in an E.-W. direction between Rouen Mtns. and Elgar Uplands in the N. part of Alexander Island. First seen from the air and roughly mapped by the BGLE in 1937. Remapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the RARE for Tufts University, Medford, Mass., where Dr. Robert Nichols was head of the geology department before joining the RARE.

Tufts Valley: see Tufts Pass 69°25'S., 70°35'W.

Tukey Island 64°46'S., 64°26'W.

Island near the center of the Joubin Islands. Named by US-ACAN for Claude C. Tukey, Messman in R.V. *Hero* on her first voyage to Antarctica and nearby Palmer Station in 1968.

Tukotok, Mount 72°17'S., 164°43'E.

A red granite peak, 2,540 m., standing 5 mi. ESE. of Mt. Apolotok in Salamander Range, Freyberg Mountains. Named by the Northern Party of NZGSAE, 1963-64; the name is of Eskimo origin and means "the little red one."

Tula, Cape: see Tula Point 65°31'S., 65°39'W.

Tula Mountains 66°54'S., 51°06'E.

Group of extensive mountains lying immediately eastward of Amundsen Bay in Enderby Land. Disc. on Jan. 14, 1930 by the BANZARE under Mawson and named Tula Range by him after John Biscoe's brig, the *Tula*, from which Biscoe disc. Enderby Land in 1831. The term "mountains" was recommended for the group following an ANARE sledge survey in 1958 by G. A. Knuckey.

Tula Point 65°31'S., 65°39'W.

Point forming the NE. extremity of Renaud I. in the Biscoe Islands. The Biscoe Islands were disc. in 1832 by a Br. exp. under John Biscoe and were first roughly surveyed by the FrAE, 1903-5 and 1908-10. Renaud Island was again roughly surveyed in 1935-36 by the BGLE. The point was named in 1954 by the UK-APC for the *Tula*, one of the two vessels of Biscoe's 1830-32 expedition.

Tula Range: see Tula Mountains 66°54'S., 51°06'E.

Tule del Sur, Grupo: see Southern Thule 59°26'S., 27°12'W.

Tumanny, Ostrov: see Miles Island 66°04'S., 101°15'E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Tumbledown Cliffs 64°05'S., 58°27'W.

Conspicuous rock cliffs on the W. coast of James Ross Island, about 3 mi. N. of Cape Obelisk. Probably first seen by Dr. Otto Nordenskjöld in 1903. Surveyed by FIDS in 1945. The name given by UK-APC is descriptive of the formation of the scree slope at the foot of these cliffs.

Tumble Glacier 69°57'S., 69°20'W.

Glacier on the E. side of Alexander I., 7 mi. long and 3 mi. wide, which flows E. from the cliffs of Mounts Egbert, Ethelwulf and Ethelred into the W. side of George VI Sound immediately S. of Mt. King. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS, and so named by them because of the extremely broken condition of the lower reaches of the glacier.

Tunet Valley 72°02'S., 4°02'E.

A semi-circular ice-filled valley on the N. side of Mt. Hochlin, in the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Tunet (the courtyard).

Tunga Spur 73°54'S., 5°20'W.

A prominent rock spur extending from the Kirwan Escarpment just SW. of Gommen Valley, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Tunga (the tongue).

Tuning Nunatak 84°44'S., 115°58'W.

A small rock nunatak 1 mi. N. of Darling Ridge, Ohio Range. Surveyed by the USARP Horlick Mountains Traverse party in Dec. 1958. Named by US-ACAN for Preston O. Tuning, meteorologist at Byrd Station in 1960.

Tuorda Peak 65°59'S., 65°10'W.

Peak, 870 m., rising eastward of Ferin Head on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Pava L. Tuorda, a Jokkmokk Lapp who, with Anders Rossa, accompanied A. E. Nordenskiöld to Greenland in 1883 and first demonstrated the possibilities of skis for polar travel.

Tupinier Islands 63°22'S., 58°16'W.

Group of pyramid-shaped islands lying off the N. coast of Trinity Pen., about 3 mi. NW. of Cape Ducorps. Disc. by the Fr. exp. under D'Urville, 1837-40. He named them for an official of the French Navy Dept.

who was instrumental in obtaining government support for the expedition. The islands were recharted by the FIDS, 1945-47.

Tupman Island 65°29'S., 65°32'W.

Island 2 mi. long lying E. of Pickwick I., Pitt Is., in the Biscoe Islands. Shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 after Tracy Tupman, a member of the Pickwick Club in Charles Dickens' *Pickwick Papers*.

Turbidite Hill 82°01'S., 157°45'E.

Hill 4 mi. E. of Laird Plateau on the N. side of Olson Névé. Mapped by the Holyoake, Cobham and Queen Elizabeth Ranges party of the NZGSAE (1964-65) and named after curious sedimentary features in the Beacon Sandstone making up a portion of the hill.

Turbulence Bluffs 67°09'S., 56°29'E.

Three high bluffs with vertical faces on the NW. but merging with the ice sheet on the SE., standing along the E. side of Robert Gl. 16 mi. NE. of Rayner Peak in Enderby Land. Mapped from ANARE surveys and air photos, 1954-66. So named by ANARE because of severe turbulence encountered while attempting a helicopter landing in 1965.

Turcotte, Mount 81°15'S., 85°24'W.

A rock peak 2.5 mi. NW. of Mt. Tidd in the Pirrit Hills. The peak was positioned by the U.S. Ellsworth-Byrd Traverse Party on Dec. 7, 1958, and named for F. Thomas Turcotte, seismologist with the party.

Turk Peak 81°02'S., 158°23'E.

A large hump-shaped peak, 2,000 m., being the central of three peaks on a ridge 6 mi. N. of Mt. Zinkovich, in the Churchill Mountains. Named by US-ACAN for Lt. Col. Wilbert Turk, commander of the 61st Troop Carrier Squadron which initiated the flights of C-130 Hercules aircraft in Antarctica in January 1960.

Turks Head 77°40'S., 166°46'E.

A precipitous black headland over 200 m. high, 5 mi. ESE. of Cape Evans on the W. side of Ross Island. Discovered by the BrNAE (1901-4) and so named because of its resemblance to a head swathed in a turban.

Turks Head Bay 77°40'S., 166°44'E.

A small bay between Tryggve Point and Turks Head on the W. side of Ross Island. The bay name appears to be first used on a map of the BrAE (1910-13) and is in association with Turks Head.

Turks Head Ridge 77°38'S., 166°49'E.

A mostly ice-covered ridge in the SW. part of Ross I., extending from Turks Head for a few miles up the

GEOGRAPHIC NAMES OF THE ANTARCTIC

slopes of Mt. Erebus. Mapped by the BrAE (1910-13) under Scott and so named because of its association with Turks Head.

Turmoil Point 59°02'S., 26°40'W.

The western point of Bristol Island, South Sandwich Islands. This imposing point, rising to 400 m. and culminating in a snow-covered summit, is a distinctive landmark when viewed from the west. Named by UK-APC. The name refers to the violent air streams commonly encountered during flying operations from HMS *Protector* in this area in March 1964, and to the confused seas typical of the locality.

Turmoil Rock 62°21'S., 59°47'W.

Rock lying 0.7 mi. SE. of Table I., South Shetland Islands. The descriptive name was given by UK-APC in 1971 since the surface of the rock is about 0.5 m. below the water level and almost always breaks the surface.

Turnabout Island 66°06'S., 65°45'W.

Snow-capped island in the Saffery Is., lying 2 mi. SW. of Black Head, off the W. coast of Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill. So named because it represents the turning point on a BGLE sledge journey in August 1935, when open water was encountered SW. of this island.

Turnabout Ridge 83°18'S., 162°35'E.

A high, rugged ridge, 10 mi. long, lying between Linehan and Lowery Glaciers in the Queen Elizabeth Range. So named by the Ohio State Univ. party to the Queen Alexandra Range (1966-67) because the ridge was the farthest point from Base Camp reached by the party.

Turnabout Valley 77°46'S., 160°32'E.

A partially deglaciated valley between Finger Mtn. and Pyramid Mtn., on the S. side of Taylor Gl. in Victoria Land. Named by the VUWAE, 1958-59.

Turnbull, Mount 70°21'S., 64°02'E.

A partly snow-covered mountain, 1,980 m., standing 12 mi. SW. of Mt. Starlight in the NW. portion of the Prince Charles Mtns., Mac. Robertson Land. Mapped from ANARE surveys and air photos, 1955-65. Named by ANCA for W.L. Turnbull, radio supervisor at Mawson Station, 1965.

Turnbull Point 63°02'S., 56°36'W.

An exposed rocky point at the W. extremity of D'Urville Island. Named by UK-APC for David H. Turnbull, master of R.R.S. *Shackleton*, one of the BAS ships.

Turner Hills 82°58'S., 156°18'E.

A group of hills between Astro Gl. and Nimrod Gl. in the NW. part of the Miller Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Dr. Mort D. Turner of the National Science Foundation who has been Program Manager for Polar Earth Sciences, Division of Polar Programs, since 1959. Turner studied the geology of the dry valley areas near McMurdo Sound, 1959-60, and in several subsequent seasons served as USARP Representative in Antarctica.

Turner Island 68°33'S., 77°53'E.

An island lying 0.5 mi. NW. of Bluff I. and 2.5 mi. W. of Breidnes Peninsula, Vestfold Hills, in Prydz Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Remapped by ANARE (1957-58) and named for P. B. Turner, radio officer at Davis Station in 1958.

Turnpike Bluff 80°44'S., 30°04'W.

Conspicuous rock bluff at the SW. extremity of the Shackleton Range, 5 mi. SW. of Mt. Homard. First mapped in 1957 by the CTAE and so named because it marks the beginning of a badly crevassed area of Recovery Gl. through which the vehicles of the CTAE had difficulty in passing on their journey from Shackleton Base to the South Pole in 1957.

Turnstile Ridge 79°50'S., 154°36'E.

A ridge about 9 mi. long, lying 3 mi. N. of Westhaven Nunatak at the NW. extremity of Britannia Range. So named by the Darwin Glacier Party (1957) of the CTAE because snow passages resembling turnstiles occur throughout its length.

Tu Rocks 62°14'S., 58°53'W.

Two low rocks lying in Maxwell Bay 2 mi. E. of the SW. end of King George I., in the South Shetland Islands. The name appears to have been given by DI personnel on the *Discovery II* who charted the rocks in 1935. Tu is apparently phonetic for two.

Tur Peak 73°06'S., 167°58'E.

A distinctive peak (1,470 m.) at the SE. periphery of Malta Plateau, situated along the N. wall of lower Mariner Glacier 4.5 mi. SSE. of Mt. Alberts, in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Lt. Juan J. Tur, USNR, medical officer at Hallett Station, 1957.

Turpie Rock 54°07'S., 36°39'W.

Rock 1 m. high, lying in the entrance to Hercules Bay off the N. coast of South Georgia. Positioned by the

GEOGRAPHIC NAMES OF THE ANTARCTIC

SGS in the period 1951-57, and named by the UK-APC for the *Turpie*, which was for many years used by the South Georgia Whaling Co. as a hulk at Leith Hbr. and is now sunk there.

Turquet Point 65°03'S., 63°57'W.

Point marking the N. extremity of Booth I. in the Wilhelm Archipelago. Probably first seen by the Ger. exp., 1873-74, under Dallmann. The point was charted by the FrAE, 1903-5, under Charcot and named by him for J. Turquet, naturalist of the expedition.

Turret, The 60°40'S, 45°09'W.

Conspicuous rocky headland, 460 m. high, at the S. side of the entrance to Gibbon Bay on the E. coast of Coronation I., in the South Orkney Islands. Probably first sighted by Capt. George Powell and Capt. Nathaniel Palmer who disc. these islands in December 1821. Charted and given this descriptive name by DI personnel on the *Discovery II* in 1933.

Turret Island 71°22'S., 169°13'E.

A small island, ice covered except for the N. face. It lies partly within the seaward terminus of Shipley Glacier, 1 mi. W. of Flat Island, along the N. coast of Victoria Land. The rocky N. end projecting from the glacier is suggestive of a turret. Charted and named by the Northern Party, led by Campbell, of the BrAE, 1910-13.

Turret Nunatak 82°25'S., 158°00'E.

Elongated nunatak, 1,960 m., standing W. of Cobham Range in the lower portion of Lucy Glacier. Mapped by the northern party of the NZGSAE (1961-62) and so named because of the turreted cliffs on its southern side.

Turret Peak 72°16'S., 166°06'E.

A prominent rock peak, 2,790 m., standing 7 mi. NW. of Crosscut Peak in Millen Range. The peak is topped with a 10 m. vertical spire, or tower, which is an excellent landmark. Named for its distinctive appearance by the Southern Party of NZFMCAE, 1962-63.

Turret Point 62°05'S., 57°55'W.

Point marked by conspicuous high rock stacks, forming the E. limit of King George Bay on the S. coast of King George I., in the South Shetland Islands. The point was charted in 1937 by DI personnel on the *Discovery II* who gave the name Turret Rocks, but this has led to confusion with a group of rocks lying close offshore. The UK-APC recommended in 1960 that since the feature originally named is a land feature, the term point be used to avoid confusion and ambiguity.

Turret Rocks: see Turret Point 62°05'S., 57°55'W.

Turtle Back Island: see Turtle Rock 77°44' S., 166°46' E.

Turtle Island 66° 04'S., 65°51'W.

Small island which is the northwesternmost of the Saffery Is., lying 6 mi. W. of Black Head, off the W. coast of Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill.

Turtle Peak 75°22'S., 111°18'W.

Conspicuous, nearly bare rock summit located 2 mi. S. of Hedin Nunatak. The peak is joined at its S. side to an ice-covered spur which descends SW. from Mt. Murphy, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for John P. Turtle, aurora researcher at Byrd Station in 1962.

Turtle Rock 77°44'S., 166°46'E.

Small island lying in Erebus Bay close W. of Hut Point Peninsula, Ross Island. Disc. by the BrNAE, 1901-4, under Scott, and so named because of its low rounded appearance.

Tusing Peak 76°51'S., 126°00'W.

A snow-capped peak (2,650 m.) rising from the central portion of Mount Hartigan in the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958-60. Named by US-ACAN for Allen D. Tusing, meteorologist at Byrd Station, 1959.

Tusk, The 84°52'S., 168°15'W.

A sharply pointed peak of white marble, about 460 m. high, in the E. part of Mayer Crags. It stands 1.5 mi. S. of Mt. Henson at the W. side of the terminus of Liv Glacier. A descriptive name given by the Southern Party of the NZGSAE, 1963-64.

Tussebrekka Slope 72°08'S., 6°24'E.

A mainly ice-covered slope, about 6 mi. long, at the SW. side of the head of Lunde Gl. in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Tussebrekka (the goblin slope).

Tussenobba Peak 72°00'S., 6°15'E.

Peak, 2,665 m., rising 6 mi. NE. of Halsknappane Hills in the E. part of the Mühlig-Hofmann Mtns. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Tussenobba.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Tussock Island 54°29'S., 37°07'W.

An island about 400 yards long that lies very close to the W. side of Annenkov Island, South Georgia. The UK-APC name derives from the thick mantle of tussock grass (*Poa flabellata*) that grows on the island.

Tustane Peaks 72°08'S., 25°17'E.

Group of peaks at the head of Koms Gl. in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Tustane (the clumps).

Tutton Point 66°53'S., 67°36'W.

The southwestern point of Liard I. in Hanusse Bay, Graham Land. This point is a landing place, the start of a route into the interior of the island. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for Alfred E.H. Tutton (1864-1938), British mineralogist, author of *The Natural History of Ice and Snow Illustrated from the Alps*.

Tuve, Mount 73°47'S., 80°08'W.

A mountain (935 m.) whose summit rises above the ice surface just south of the base of Wirth Peninsula, Ellsworth Land. Discovered by RARE, 1947-48, under Finn Ronne. He named it for Merle A. Tuve, Dir. of the Dept. of Terrestrial Magnetism of Carnegie Institution, Washington, D.C., who furnished instruments for the expedition.

Tuxen, Cape 65°16'S., 64°08'W.

Rocky cape forming the S. side of the entrance to Waddington Bay on the W. coast of Graham Land. Disc. and named by the BelgAE, 1897-99, under Gerlache.

Tverrbrekka Pass 72°14'S., 1°19'E.

An E.-W. pass through the Sverdrup Mtns. between Vendeholten Mtn. and Tverrveggen Ridge, in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tverrbrekka (the transverse slope).

Tverregga Spur 73°23'S., 3°36'W.

A spur 3 mi. W. of Mt. Hallgren, in the Kirwan Escarpment of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Tverregga (the transverse ridge).

Tverreggbreen: see Tverregg Glacier 73°27'S., 3°36'W.

Tverregg Glacier 73°27'S., 3°36'W.

A glacier between Heksegryta Peaks and Tverregga Spur in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Tverreggbreen (the transverse ridge glacier).

Tverreggtelen Hill 73°24'S., 3°33'W.

A hill immediately SE. of Tverregga Spur in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named in association with Tverregga Spur.

Tverrholmen: see Transverse Island 67°20'S., 59°19'E.

Tverrnipa Peak 72°15'S., 1°19'E.

Peak, 2,195 m., surmounting the N. end of Tverrveggen Ridge in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tverrnipa (the transverse peak).

Tverrseten Col 72°01'S., 4°46'E.

An ice col between Setenuten Peak and Petrellfjellet in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Tverrseten (the transverse seat).

Tverrveggen Ridge 72°17'S., 1°20'E.

A prominent ridge which extends southward for 4 mi. from Tverrbrekka Pass in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tverrveggen (the transverse wall).

Tvetaggen Peaks 71°45'S., 25°17'E.

A short line of peaks standing 1.5 mi. N. of Austkampane Hills on the W. side of Kamp Gl., in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Tvetaggen (the double prongs) because of their appearance.

Tvibåsen Valley 71°53'S., 5°15'E.

An ice-filled valley whose upper portion divides into two heads, lying between Svarthamaren Mtn. and Cumulus Mtn. in the Mühlig-Hofmann Mtns. of Queen

GEOGRAPHIC NAMES OF THE ANTARCTIC

Maud Land. Mapped from surveys and air photos by the NorAE (1956-60) and named Tvibåsen (the double stall).

Tvireita Moraine 71°55'S., 14°37'E.

A moraine, about 5 mi. long, comprising two somewhat parallel segments that appear to unite as they trend NE., located in the E. part of Mendeleyev Glacier in the Payer Mtns., Queen Maud Land. Plotted from air photos and surveys by NorAE, 1956-60, and named Tvireita (two furrows).

Tvistein Pillars 68°42'S., 90°40'W.

Two flat-topped pillar rocks standing 1 mi. SW. of Cape Eva, the N. extremity of Peter I Island. The rocks were sighted from the *Odd I* by a Norwegian expedition under Eyvind Tofte in 1927. The name Tvistein (two stones) was applied by a Norwegian expedition under Nils Larsen which charted the island from the *Norvegia* in 1929.

Twistern: see Tvistein Pillars 68°42'S., 90°40'W.

Tvitoppen Peak: Twintop, Mount 68°05'S., 62°22'E.

Tvora 72°10'S., 0°05'W.

A mountain with two north-trending spurs, about 3 mi. E. of Straumsvola Mtn. in the Sverdrup Mtns., Queen Maud Land. Plotted from air photos by the GerAE (1938-39). Remapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Tvora (two ridges).

Tweeny Point 54°14'S., 36°37'W.

Point lying 1 mi. SW. of Doubtful Pt. in Cumberland West Bay, South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Twigg, Mount 74°17'S., 67°50'E.

A large rock outcrop bisected by a north-trending glacier, standing 16 mi. SE. of Mt. Maguire near the head of Lambert Glacier. Mapped from ANARE air photos and surveys, 1956-58. Named by ANCA for D. R. Twigg, radio supervisor at Mawson Station, 1958.

Twig Rock 68°42'S., 67°32'W.

Small rocky mass, more than 90 m. high, between Alameda I. and Hayrick I. in the Terra Firma Is., off the W. coast of Graham Land. The Terra Firma Is. were first visited and surveyed in 1936 by the BGLE under Rymill. Twig Rock was surveyed in 1948 by the FIDS, who so named it because of the branching nature of the dike system exposed on its N. face.

Twilight Bay 68°32'S., 69°48'E.

A small re-entrant of the ice shelf into the plateau on the W. side of the Amery Ice Shelf. Photographed from ANARE aircraft in 1956. The position of the feature was fixed by ANARE survey party in February 1968. So named because the survey party was flown into the area after sunset, necessitating navigation and photo identification in twilight.

Twin Nunataks 75°38'S., 159°36'E.

Two small nunataks lying between Ricker Hills and Hollingsworth Gl. in the Prince Albert Mtns., Victoria Land. Descriptively named by the Southern Party of the NZGSAE, 1962-63.

Twin Peaks: see Gemel Peaks 62°12'S., 58°59'W.

Twin Peaks 63°24'S., 57°07'W.

Two sharply defined peaks, 750 m., standing together 1.5 mi. N. of Mt. Taylor and 2 mi. W. of the head of Hope Bay at the NE. end of Antarctic Peninsula. Disc. by the SwedAE, 1901-4, under Nordenskjöld. Named by the FIDS following their survey of the area in 1946.

Twin Pinnacles 62°08'S., 58°06'W.

Rock 20 m. high marked by two summits, lying 0.1 mi. NE. of Lions Rump at the W. side of the entrance to King George Bay in the South Shetland Islands. Charted and named during 1937 by DI personnel on the *Discovery II*.

Twin Rocks 78°25'S., 161°41'E.

Twin rock bluffs in the Lower Staircase of Skelton Gl., about 6 mi. E. of Halfway Nunatak, in Victoria Land. The rocks are an important reference point on the route up the glacier. Descriptively named by the N.Z. party of the CTAE, 1956-58.

Twins, The 60°37'S., 46°04'W.

Two rocks lying together 0.5 mi. S. of the S. end of Monroe I. in the South Orkney Islands. Charted and named in 1933 by DI personnel on the *Discovery II*.

Twintop, Mount 68°05'S., 62°22'E.

A twin-peaked mountain about 6 mi. SSW. of Mt. Tritoppen in the S. part of the David Range, Framnes Mountains. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp. (1936-37) and named Tvitoppen (the twin peak). The translated form of the name recommended by ANCA has been adopted.

Twiss, Mount 79°23'S., 85°36'W.

Peak (2,000 m.) at the N. end of Watlack Hills in the Heritage Range, Ellsworth Mountains. Mapped by

GEOGRAPHIC NAMES OF THE ANTARCTIC

USGS from ground surveys and USN air photos, 1961-66. Named by US-ACAN for John R. Twiss, Jr., USARP Representative at McMurdo Station, 1964-65 season.

Twisted Lake 60°43'S., 45°40'W.

A lake 0.1 mi. northeast of Cummings Cove in western Signy Island. So named by UK-APC because of the very irregular shoreline of the lake.

Twitcher Glacier 54°43'S., 35°56'W.

Glacier, 4 mi. long, which flows E. from the Salvesen Range to the E. coast of South Georgia, immediately S. of Herz Gl. and Iris Bay. The glacier was surveyed in 1951-52 by the SGS. Named by the UK-APC for John Montagu, fourth Earl of Sandwich, First Lord of the Admiralty, 1771-82, who was popularly known as "Jemmy Twitcher."

Twitcher Rock 59°28'S., 27°14'W.

Rock in Douglas Strait, 55 m. high, lying 0.7 mi. E. of the SE. point of Thule I. in the South Sandwich Islands. Disc. by a Russ. exp. under Bellingshausen in 1820. Charted in 1930 by DI personnel on the *Discovery II*. They named it for John Montagu, fourth Earl of Sandwich, who was popularly known by the nickname "Jemmy Twitcher."

Two Hummock Island: see Two Summit Island 62°15'S., 58°57'W.

Two Hummock Island 64°08'S., 61°42'W.

Ice-covered island, 5 mi. long in a N.-S. direction, conspicuous for its two rocky summits 670 m. high, lying 5 mi. SE. of Liège I. in the Palmer Archipelago. This name has appeared on maps for over 100 years and its usage has become established internationally.

Twombly Glacier 80°35'S., 157°45'E.

A glacier 6 mi. long, flowing from the N. side of Kent Plateau into the S. side of Byrd Glacier. Named by US-ACAN for C. E. Twombly of the U.S. Weather Bureau, a member of the Little America V winter party, 1956.

Twomey, Mount 71°30'S., 161°41'E.

A somewhat detached peak (over 1,200 m.) situated on the NW. margin of the Morozumi Range, 2.5 mi. NW. of Berg Peak. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Arthur A. Twomey, USARP geologist at McMurdo Station, 1967-68 and 1968-69.

Two Step Cliffs 71°54'S., 68°13'W.

The eastern face of a flat-topped sedimentary mountain, 680 m., immediately E. of Mars Gl. on the E.

coast of Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and mapped from photos obtained on that flight by W. L. G. Joerg. Roughly surveyed from the ground in 1936 by the BGLE and in 1940-41 by the USAS, who used the names "Two Step Mountains" and "Table Mountain" for this feature. The name Two Step Cliffs derives from the name used by USAS, and was suggested by FIDS following surveys in 1949 as being particularly descriptive of this feature.

Two Step Mountains: see Two Step Cliffs 71°54'S., 68°13'W.

Two Summit Island 62°15'S., 58°57'W.

Small island marked by two prominent summits, lying at the E. entrance to Fildes Strait in the South Shetland Islands. It was named Two Hummock Island by DI personnel following their survey in 1935, but this name has been rejected because of probable confusion with Two Hummock Island in the N. entrance to Gerlache Strait. Two Summit Island, equally descriptive of the feature, was recommended by the UK-APC in 1954.

Tyler Glacier 72°15'S., 168°35'E.

Tributary glacier flowing SW. between Taylor Peak and Mt. Francis to enter Tucker Gl., in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Lt. Paul E. Tyler, USN, medical officer at Hallett Station, 1962.

Tyndall Mountains 67°15'S., 67°10'W.

Mountains close S. of Avsyuk Gl. in central Arrow-smith Pen., Graham Land. Mapped by FIDS from surveys and air photos, 1948-59. Named by UK-APC for John Tyndall (1820-93), Irish mountaineer and pioneer glaciologist, author of many works on glaciers and the physical properties of ice.

Tyoto, Mount: see Chôtō, Mount 69°12'S., 39°40'E.

Tyree, Mount 78°24'S., 85°55'W.

A very high and prominent bare-rock mountain (4,965 m.) standing 8 mi. NW. of Vinson Massif in the main ridge of the Sentinel Range, Ellsworth Mountains. It was discovered by USN Squadron VX-6 during IGY reconnaissance flights of January 1958, and was mapped the same month by the Marie Byrd Land Traverse Party, 1957-58, under C.R. Bentley. Named by US-ACAN for Rear Adm. David M. Tyree, USN, Commander, U.S. Naval Support Force, Antarctica, from Apr. 14, 1959 to Nov. 26, 1962.

Tyrol Valley 77°35'S., 160°38'E.

A high ice-free valley lying E. of Mt. Baldr in the Asgard Range, Victoria Land. The valley was named

GEOGRAPHIC NAMES OF THE ANTARCTIC

by Austrian biologist Heinz Janetschek, a participant in the USARP program in this area in 1961-62, after his native Tirol (Tyrol).

Tyrrell, Mount 69°38'S., 69°31'W.

Mountain with two summits, the highest 1,310 m., standing 3 mi. inland from the E. coast of Alexander I. on the E. side and near the mouth of Toynbee Glacier. First phot. from the air in 1937 by the BGLE under Rymill. Surveyed in 1948 by the FIDS and named by them for George W. Tyrrell, British geologist at Glasgow University.

Tyskepasset: see Tysk Pass 72°43'S., 3°47'W.

Tysk Pass 72°43'S., 3°47'W.

A mountain pass between Høgskavlen Mtn. and Domen Butte in the Borg Massif, Queen Maud Land. The feature was first photographed from the air by the GerAE (1938-39). It was mapped by Norwegian car-

tographers from surveys and air photos by NBSAE (1949-52) and named Tyskepasset (the German pass), presumably because it was seen earlier by the German expedition.

Tyulen'i Islands 66°33'S., 92°57'E.

A group of about three very small islands in the S. part of the Haswell Islands, located 1 mi. off the mainland and 1.2 mi. W. of Mabus Point. The islands are aligned east-west and lie just west of Stroiteley Islands. Plotted by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946-47). Photographed by the Soviet Ant. Exp. (1956) and named Ostrova Tyulen'i (seal islands).

Tyulenyi Point 70°44'S., 11°36'E.

A rock point 0.5 mi. W. of Ozhidaniya Cove on the N. side of the Schirmacher Hills, Queen Maud Land. First photographed from the air by the GerAE, 1938-39. Mapped by the SovAE in 1961 and named Mys Tyulenyi (seal point).

U

Ubique, Mount 81°30'S., 160°32'E.

A peak, 935 m., standing 4 mi. S. of Hermitage Peak in the Surveyors Range. Named by the NZGSAE (1960-61) for the Royal Engineer's motto, meaning "everywhere."

Ueda Glacier 75°15'S., 64°35'W.

A large glacier flowing eastward along the S. side of the Scaife Mtns. to enter Hansen Inlet near the base of Antarctic Peninsula. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Herbert T. Ueda who, with B. Lyle Hansen, was in charge of the deep core drilling program at Byrd Station, summers 1966-67 and 1967-68.

Ufsebotnen Cirque 71°24'S., 13°09'E.

A cirque 1 mi. N. of the summit of Mt. Schicht in the Gruber Mtns. of the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Ufsebotnen (the bluff cirque).

Ufsebotet Bluff 71°23'S., 13°17'E.

A steep bluff located 2 mi. S. of Mt. Zimmermann in the central Gruber Mtns. of the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Ufsebotet.

Ufsekammen Ridge 71°24'S., 13°14'E.

An arc-shaped rock ridge, 3 mi. long, between Mt. Schicht and Ufsebotet Bluff in the Gruber Mtns. of the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Ufsekammen (the bluff ridge).

Ufs Island 67°28'S., 61°08'E.

A rocky island 2 mi. wide, lying in the E. part of Howard Bay. Cape Simpson, the N. end of this island, was disc. by the BANZARE under Mawson in February 1931, but the feature's insularity was first recognized by Norwegian cartographers working from aerial photographs taken by the Lars Christensen Exp., 1936-37. They named it Ufsøy (bluff island).

Ufsøyvågen: see Howard Bay 67°28'S., 61°04'E.

Ugolini Peak 78°01'S., 161°31'E.

A sharp rock peak, over 2,200 m., surmounting the central part of a large ice-free massif 6 mi. S. of Knobhead, at the S. side of upper Ferrar Gl. in Victoria Land. Named by US-ACAN for Fiorenzo C. Ugolini, who studied Antarctic soil processes in the McMurdo Sound area in 1961-62 and 1962-63.

Uksen Island 67°21'S., 60°09'E.

Steep-sided, isolated island lying 4 mi. NE. of Tilley Nunatak, off the coast of Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Uksen (the ox).

Uksøy: see Oom Island 67°24'S., 60°39'E.

Uksvika: see Oom Bay 67°26'S., 60°44'E.

Ula Point 64°05'S., 57°09'W.

A low ice-covered point on the NE. coast of James Ross Island, 5 mi. NW. of Cape Gage. First seen and roughly surveyed by SwedAE, 1901-04, under Otto Nordenskjöld. Resurveyed by FIDS in 1945. Named by UK-APC for Anton Olsen Ula, boatswain on the *Antarctic*, the ship of the above Swedish expedition.

Ulendet Crevasses 72°51'S., 0°59'W.

A crevasse field about 7 mi. long in the Jutulstraumen Gl., about 15 mi. NE. of Neumayer Cliffs in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Ulendet (the rough ground).

Ulla, Mount 77°32'S., 162°24'E.

A sharp peak between Meserve and Hart Glaciers in the Asgard Range, Victoria Land. The summit is a knife-edge ridge which drops away on both sides. Named by the VUWAE, 1958-59, after one of the Norse gods.

Ullmann, Massif: see Ullmann Spur 62°04'S., 58°22'W.

Ullmann Point 62°05'S., 58°23'W.

Point marking the SW. end of Ullmann Spur in Martel Inlet, Admiralty Bay, on King George I. in the South Shetland Islands. The point was charted by the FrAE, 1908-10, under Charcot. It was named in association with Ullmann Spur some 20 years later.

Ullmann Range: see Ullmann Spur 62°04'S., 58°22'W.

Ullmann Spur 62°04'S., 58°22'W.

Mountainous ridge, 275 m., situated centrally at the head of Martel Inlet, Admiralty Bay, on King George I. in the South Shetland Islands. Charted and named by the FrAE, 1908-10, under Charcot.

Ullman Point: see Ullmann Point 62°05'S., 58°23'W.

Ullman Range: see Ullmann Spur 62°04'S., 58°22'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ulmer, Mount 77°35'S., 86°09'W.

A prominent peak (2,775 m.) situated 2 mi. N. of Mt. Washburn in the northern part of the Sentinel Range, Ellsworth Mountains. Discovered in his trans-Antarctic flight, Nov. 23, 1935, by Lincoln Ellsworth who called it Mount Mary Louise Ulmer, after his wife. The peak has been reidentified by comparison of Ellsworth's photograph with those taken in 1959 by the U.S. Navy.

Ulvetanna Peak 71°51'S., 8°20'E.

A sharp peak, 2,930 m., about 2 mi. N. of Kinntanna Peak in the E. part of Fenriskjefte Mtn. in Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named Ulvetanna (the wolf tooth).

Umber Island 69°13'S., 72°00'W.

Rocky island, 1.5 mi. long, lying 6 mi. NW. of Dint I. in Lazarev Bay, off the W. side of Alexander Island. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. So named by the UK-APC because on the RARE photos the island appears in deep shadow cast by the Havre Mtns. to the north.

Umbriel, Mount 71°36'S., 68°53'W.

Peak, 1,500 m., overlooking the head of Venus Gl. in the E. part of Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC from association with nearby Uranus Glacier, Umbriel being one of the satellites of Uranus.

Umeboshi Rock 68°03'S., 43°07'E.

A rock exposure 4 mi. ENE. of Akebono Rock on the coast of Queen Maud Land. Mapped from surveys and air photos by JARE, 1957-62, and named Umeboshi-iwa (rumpled rock).

Umebosi Rock: see Umeboshi Rock 68°03'S., 43°07'E.

Underwood, Mount 68°08'S., 49°21'E.

An elongated mountain 2 mi. E. of Mt. Flett in the central Nye Mountains. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for R. Underwood, geophysicist at Wilkes Station in 1959.

Underwood Glacier 66°35'S., 108°00'E.

A channel glacier about 15 mi. long, flowing to the Antarctic coast between Reist Rocks and Cape Nutt. Mapped (1955) by G.D. Blodgett from aerial photographs taken by USN Operation Highjump (1947). Named by US-ACAN after Lt. Joseph A. Underwood, USN, who served on the sloop *Vincennes* of the USEE (1838-42) under Lt. Charles Wilkes.

Undine Harbor 54°02'S., 37°58'W.

Small harbor along the S. coast and near the W. end of South Georgia. This may be the harbor charted as Adventure Bay by James Weddell in 1823. The recommended name Undine Harbor, after the sealing ship *Undine* of the Compañía Argentina de Pesca, has been consistently used for this harbor since about 1912.

Undine South Harbor 54°31'S., 36°33'W.

Bay, 6 mi. wide and indenting 2 mi., between Ducloz Head and Leon Head along the S. coast of South Georgia. The name appears to have been given by the GerAE under Filchner, 1911-12. The *Undine*, a sealing ship of the Compañía Argentina de Pesca, was at South Georgia in the 1911-12 season and was made available for use by the Filchner expedition.

Ungane Islands 69°16'S., 39°29'E.

Three small islands lying 4 mi. WNW. of Hamnenabben Head in the E. part of Lützw-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Ungane (the young ones).

Unger Island 70°41'S., 166°55'E.

Small, ice-free island, the westernmost of the Lyall Islands, lying 4 mi. SE. of Cape Hooker in the W. side of the entrance to Yule Bay, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Pat B. Unger, USNR, Medical Officer at Little America V, 1957.

Unger Peak 79°21'S., 86°10'W.

Conspicuous, mainly ice-covered peak which rises above the plateau at the S. end of Founders Escarpment. It stands 2 mi. NNW. of Zavis Peak in the Heritage Range, Ellsworth Mountains. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Lt. Maurice H. Unger, USN, navigator on photographic flights over Marie Byrd and Ellsworth Lands during Deep Freeze 1965 and 1966.

Ungvar Neilsen Glacier: see Nielsen Glacier 71°31'S., 169°41'E.

Unicorn, Mount 71°16'S., 67°07'W.

The northernmost of the Batterbee Mountains, located about 6 mi. NW. of Mt. Ness. Named by UK-APC after the constellation of Monoceros (The Unicorn).

Union Glacier 79°45'S., 82°30'W.

A large, heavily-crevassed glacier which receives the flow of several tributaries and drains through the middle of the Heritage Range, Ellsworth Mountains. The glacier drains from the plateau at Edson Hills on the W. side of the range and flows E. between Pioneer

GEOGRAPHIC NAMES OF THE ANTARCTIC

Heights and Enterprise Hills. Union Glacier was mapped by USGS from surveys and USN air photos, 1961-66. The name was applied by US-ACAN in association with the name Heritage Range.

Union Point: see Nuñez, Cape 54°16'S., 37°25'W.

United States Army Range: see LeMay Range 70°55'S., 69°20'W.

United States Navy Range: see Colbert Mountains 70°35'S., 70°35'W.

University Peak 77°52'S., 160°44'E.

A peak at the head of University Valley, 2.5 mi. SSW. of West Beacon, in Victoria Land. Named by USARP researchers Heinz Janetschek, biologist at McMurdo Station, 1961-62, and Fiorenzo Ugolini, geologist at McMurdo Station, 1961-62, after their respective university affiliation, Leopold-Franzens-Universität at Innsbruck, Austria, and Rutgers University at New Brunswick, New Jersey.

University Valley 77°52'S., 160°40'E.

A valley about 1 mi. long, lying next NE. of Farnell Valley in the Beacon Valley area of Victoria Land. Named in January 1962 by USARP researchers Heinz Janetschek and Fiorenzo Ugolini after their respective university affiliation, Leopold-Franzens-Universität at Innsbruck, Austria, and Rutgers University at New Brunswick, New Jersey.

Unneruskollen Island 70°30'S., 6°10'W.

An ice-covered island lying N. of Halvfarryggen Ridge and between the Ekström and Jelbart Ice Shelves, on the coast of Queen Maud Land. First mapped by NBSAE, 1949-52. It was named Unneruskollen by the NorAE, 1956-60.

Unter-See, Lake 71°20'S., 13°27'E.

A meltwater lake 3 mi. SW. of Lake Ober-See. It occupies the S. part of the large cirque indenting the N. slopes of the Gruber Mtns. in central Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, who named it Unter-See (lower lake).

Unwin, Ensenada: see Unwin Cove 63°19'S., 57°54'W.

Unwin Cove 63°19'S., 57°54'W.

A cove immediately SE. of Toro Point, Trinity Peninsula. The cove was charted by the Chilean Antarctic Expedition, 1947-48, which named it for First Lt. Tomás Unwin Lambie, a naval officer of this expedition and the commander of the ship *Lientur* in these waters during the Chilean expeditions of 1949-50 and 1950-51.

Upper Ferrar Glacier: see Taylor Glacier 77°44'S., 162°10'E.

Upper Island 66°00'S., 65°39'W.

Narrow island at the N. side of Mutton Cove, lying between Cliff and Harp Islands and 8 mi. W. of Prospect Pt., off the W. coast of Graham Land. Charted and named by the BGLE, 1934-37, under Rymill.

Upper Staircase 78°15'S., 161°00'E.

The upper eastern portion of Skelton Gl., just N. of The Landing, which merges into the Skelton Névé in Victoria Land. Surveyed in 1957 by the N.Z. party of the CTAE (1956-58) and so named because of its staircase effect in being the key for the approach to the polar plateau.

Upper Victoria Glacier: see Victoria Upper Glacier 77°16'S., 161°25'E.

Upper Victoria Lake: see Victoria Upper Lake 77°19'S., 161°35'E.

Upper Wright Glacier: see Wright Upper Glacier 77°32'S., 160°35'E.

Upton Rock 62°12'S., 59°08'W.

Rock lying 3 mi. NW. of Flat Top Pen., King George I., in the South Shetland Islands. Named by the UK-APC in 1961 for Benjamin Upton, Master of the American sealing vessel *Nancy* from Salem, Massachusetts, who visited the South Shetland Islands in 1821-22.

Uragannyy Point 69°57'S., 12°50'E.

An ice point along the W. edge of Lazarev Ice Shelf, about 3 mi. N. of Leningradskiy Island, Queen Maud Land. Mapped by the SovAE in 1959. They named it Mys Uragannyy (hurricane point) because a strong hurricane occurred during the stay of the ship *Ob'* near this point.

Uranus Glacier 71°24'S., 68°20'W.

Glacier on the E. coast of Alexander I., 20 mi. long and 6 mi. wide at its mouth, flowing E. into George VI Sound immediately S. of Fossil Bluff. Probably first seen by Lincoln Ellsworth who flew directly over it and phot. segments of this coast on Nov. 23, 1935. The portion near the mouth of the glacier was first roughly surveyed in 1936 by the BGLE. Named by the UK-APC for the planet Uranus following resurvey of its lower portions by the FIDS in 1948 and 1949. The entire glacier was mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Urbanak Peak 84°38'S., 111°55'W.

A peak with exposed rock on the N. side, situated along Mirsky Ledge in the Ohio Range, Horlick Mountains. Surveyed by the USARP Horlick Mountains Traverse party in Dec. 1958. Named by US-ACAN for Richard L. Urbanak, meteorologist at Byrd Station in 1960.

Urban Point 79°48'S., 82°00'W.

A sharp rock point lying 2 mi. E. of the terminus of Ahrnsbrak Gl. on the N. side of the Enterprise Hills, Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Verdis D. Urban, meteorologist with the Ellsworth Station winter party, 1958.

Urchin Rock 65°19'S., 64°16'W.

Rock, over which the sea breaks, lying 2.3 mi. W. of the largest of the Berthelot Is., off the W. coast of Graham Land. First shown on an Argentine Govt. chart of 1957. So named by the UK-APC in 1959 because the rock is a hazard on the edge of Grandidier Channel; an urchin is a roguish or mischievous boy.

Urfjell Cliffs 73°53'S., 5°17'W.

A line of rock cliffs and spurs trending SW. for 10 mi. from Urfjelldokka Valley, forming a part of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59). They gave the name Urfjell (mountain with rock-strewn slopes).

Urfjelldokka Valley 73°50'S., 4°45'W.

A broad ice-filled valley between Urfjell Cliffs and Skappelnabben Spur along the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59). Named in association with Urfjell Cliffs.

Uribe, Islas: see Karelin Islands 65°35'S., 65°35'W.

Uritorco, Mount 62°56'S., 60°43'W.

Mountain surmounting the southern part of Telefon Ridge on Deception I., in the South Shetland Islands. The name appears on an Argentine chart of 1956.

Urnosa Spur 73°47'S., 5°02'W.

A spur at the W. side of Urfjelldokka Valley, in the SW. part of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59). They gave the name Urnosa (the rock-strewn nose).

Uruguay, Bahía: see Jessie Bay 60°44'S., 44°44'W.

Uruguay Cove 60°45'S., 44°43'W.

Cove in the W. part of Jessie Bay on the N. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under W.S. Bruce. He named the cove after the Argentine corvette *Uruguay* which for many years after 1904 carried relief parties to the Argentine meteorological station near the cove.

Uruguay Island: see Andersson Island 63°35'S., 56°35'W.

Uruguay Island 65°14'S., 64°14'W.

Island 0.5 mi. long with a cove indenting its W. side, lying between Irizar Island and Corner Island in the Argentine Islands, Wilhelm Archipelago. Discovered by the FrAE, 1903-5, under J.B. Charcot, and named by him after the Argentine corvette *Uruguay*, which effected the rescue of the SwedAE in 1903. The island was recharted in 1935 by the BGLE under John Rymill.

Urvantseva, Skaly: see Urvantsev Rocks 72°06'S., 5°37'E.

Urvantsev Rocks 72°06'S., 5°37'E.

A group of rocks lying 5 mi. SE. of Skorvetangen Spur in the Mühlig-Hofmann Mountains, Queen Maud Land. Mapped by Norsk Polarinstitut from surveys and air photos by NorAE, 1956-60. Also mapped by SovAE in 1961 and named for geologist N. N. Urvantsev.

Usarp Mountains 71°10'S., 160°00'E.

A major Antarctic mountain chain, lying westward of the Rennick Glacier and trending N.-S. for about 120 miles. The feature is bounded to the north by Pryor Glacier and the Wilson Hills. Its important constituent parts include Pomerantz Tableland, Daniels Range, Emlen Peaks, Helliwell Hills and Morozumi Range. Parts of these mountains were discovered and first photographed from aircraft of the U.S. Navy Operation Highjump, 1946-47. They were completely mapped by USGS from surveys and U.S. Navy air photos, 1960-63. The name is an acronym of the United States Antarctic Research Program, and was applied by US-ACAN in recognition of the accomplishments of that program in Antarctica.

Usas Escarpment 76°00'S., 130°00'W.

An expansive but discontinuous north-facing escarpment in Marie Byrd Land. It is about 200 mi. long, extending roughly west to east along the parallel of 76°S. from where the elevation of the snow surface

GEOGRAPHIC NAMES OF THE ANTARCTIC

descends toward the Ruppert Coast and Hobbs Coast. The position of the escarpment coincides with the north slopes of the Flood Range, Ames Range, McCuddin Mtns., and the eastern peaks of Mt. Galla, Mt. Aldaz and Benes Peak. The escarpment was observed by members of the United States Antarctic Service, 1939-41, and in ensuing scientific reports was referred to as "76th Parallel Escarpment." The approved name is an acronym for the discovery expedition.

Useful Island 64°43'S., 62°52'W.

Island 2 mi. W. of Rongé I., with a string of rocks between, lying in Gerlache Strait off the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, under Gerlache. The name appears on a chart based upon a 1927 survey by DI personnel on the *Discovery*.

Usher, Mount 84°57'S., 172°04'E.

A distinctive mountain overlooking the S. side of Keltie Glacier about 4 mi. SW. of the mouth of Brandau Glacier. Discovered and named by the BrAE (1907-9). Identification of this feature varied on subsequent maps. The present description follows the H. E. Saunders map of 1961 which has now been generally accepted.

Usher Glacier 62°02'S., 58°37'W.

Glacier nearly 4 mi. long, flowing NW. into the sea between Stigant and Davey Points on the N. coast of King George I., in the South Shetland Islands. Named by the UK-APC in 1960 for J. Usher, Master of the *Caraquet* from Liverpool, who visited the South Shetland Is. in 1821-22.

Usnea Plug 62°38'S., 61°05'W.

A volcanic plug, 30 m. from base to summit, standing less than 0.5 mi. SW. of Chester Cone in Byers Peninsula on the W. end of Livingston Island, South Shetland Islands. Named by K.R. Everett, Institute of Polar Studies, Ohio State Univ., who visited the area in Feb. 1969. The name derives from the genus of lichen, *Usnea*, prevalent on the plug and in this vicinity.

Utholmen Island 68°56'S., 39°31'E.

The northwesternmost island in the Flatvaer Islands, lying in Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Utholmen (the outer island).

Utkikken Hill 71°32'S., 1°01'W.

The northeasternmost rock summit on the Ahlmann Ridge, standing 4 mi. NE. of Trollkjelpiggen Peak where it overlooks the mouth of Jutulstraumen Gl. and the coastal ice shelf, in Queen Maud Land. Mapped

by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Utkikken (the look out).

Utöy: see Achernar Island 66°58'S., 57°12'E.

Utråkket Valley 73°40'S., 4°25'W.

An ice-filled valley between Skappelnabben Spur and Enden Point in the Kirwan Escarpment, Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Utråkket.

Utrinden Point 73°50'S., 5°18'W.

A rock point at the NW. side of Kuven Hill, near the SW. end of the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NGSAE (1949-52) and additional air photos (1958-59), and named Utrinden (the outer ridge).

Utrista Rock 71°35'S., 10°32'E.

An isolated rock lying 10 mi. NE. of Mt. Dallmann, at the NE. extremity of the Orvin Mtns. in Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Utrista (the outer ridge).

Utskjera: see Rigel Skerries 66°55'S., 57°18'E.

Utsteinen Nunatak 71°58'S., 23°34'E.

Nunatak standing 4 mi. N. of Viking Heights and the main group of the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Utsteinen (the outer stone) because of its position.

Utstikkar Bay 67°33'S., 61°28'E.

Bay 4 mi. wide, indenting the coast immediately E. of Utstikkar Glacier. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and so named by them because the bay is contiguous with Utstikkar Glacier.

Utstikkar Glacier 67°33'S., 61°20'E.

Broad glacier flowing N. from the vicinity of Moyes Peak and terminating in Utstikkar Glacier Tongue just W. of Utstikkar Bay. This glacier was mapped and named Utstikkarbreen (the out-jutting glacier) by Norwegian cartographers working from aerial photographs taken by the Lars Christensen Exp. in January-February 1937.

Utstikkar Glacier Tongue 67°30'S., 61°22'E.

A glacier tongue forming the seaward extension of Utstikkar Glacier, just W. of Utstikkar Bay. The gla-

GEOGRAPHIC NAMES OF THE ANTARCTIC

cier tongue was mapped and named by Norwegian cartographers from aerial photographs taken by the Lars Christensen Exp. in January-February 1937. The word Utstikkar refers to something jutting out and is descriptive of the conspicuous projection of the glacier tongue.

Utwikgalten: see Martin Island 66°44'S., 57°00'E.

Uven Spur 73°56'S., 5°20'W.

A small rock spur just SW. of Tunga Spur, extending

from the Kirwan Escarpment in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and additional air photos (1958-59), and named Uven.

Uversnatten Rock 72°58'S., 3°54'W.

A small rock eminence 1 mi. W. of Huldreslottet Mtn., at the S. end of Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Uversnatten.

Vaca Nunatak 82°17'S., 41°42'W.

The southernmost nunatak of Panzarini Hills, in the Argentina Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-67. Named by US-ACAN for Capt. José M. T. Vaca, Argentine officer in charge of General Belgrano Station, winter 1961.

Vagrant Island 66°28'S., 66°28'W.

The northern of two islands just W. of Rambler I. in the Bragg Is., lying in Crystal Sound about 7.5 mi. N. of Cape Rey, Graham Land. Mapped from surveys by FIDS (1958-59). The name derives from association with Rambler Island.

Vahsel, Cape 54°45'S., 35°48'W.

Cape forming the E. tip of South Georgia. Roughly charted by Capt. James Cook in 1775. Remapped by the GerAE under Filchner, 1911-12, and named for Capt. Richard Vahsel, master of the exp. ship *Deutschland*.

Vahsel Bay 77°49'S., 35°07'W.

A bay about 7 mi. wide in the western part of Luitpold Coast. This bay receives the flow of the Schweitzer Glacier and Lerchenfeld Glacier. Discovered by the GerAE, 1911-12, under Wilhelm Filchner. Upon discovery Filchner named the bay for Capt. Richard Vahsel of the expedition ship *Deutschland*. He renamed it "Herzog Ernst Bucht" after large portions of the surrounding ice broke away forming a much larger bay. However, later explorers have retained the name Vahsel Bay.

Vahsel Glacier 53°04'S., 73°23'E.

A glacier draining W. into South West Bay on the W. side of Heard Island. The feature was charted in 1902 by the GerAE under Drygalski. He named it for Richard Vahsel, an officer on the *Gauss* and a member of the party that made geological investigations near Atlas Cove.

Vakop, Cape 54°22'S., 36°10'W.

Cape between Hound Bay and Luisa Bay on the N. coast of South Georgia. Charted by the GerAE, 1911-12, under Filchner. The name appears on a chart based upon surveys of South Georgia in 1926-30 by DI personnel, but may represent an earlier naming.

Valavielle, Cape 60°41'S., 44°32'W.

Cape marking the N. end of Watson Pen. on the N. coast of Laurie I., in the South Orkney Islands. Charted and named by the Fr. exp., 1837-40, under D'Urville.

Valdivia, Cape 54°24'S., 3°24'E.

A prominent cape which projects from the central part of the north coast of Bouvetøya and forms the northernmost part of the island. Charted and named by a German expedition under Karl Chun which visited the island in 1898. Named for their expedition ship, the *Valdivia*.

Valdivia Point 64°21'S., 61°22'W.

Point forming the NW. side of the entrance to Salvesen Cove on the W. coast of Graham Land. Charted and named "Valdivia Insel," after the German ship *Valdivia*, by the SwedAE under Nordenskjöld, 1901-4. Air photos taken by the FIDASE in 1956-57 show the feature to be joined to the mainland.

Valentine, Cape 61°06'S., 54°39'W.

Cape forming the NE. extremity of Elephant I. in the South Shetland Islands. The name was in use by American and British sealers as early as 1822 and is now well established.

Valentino, Cabo: see Valentine, Cape 61°06'S., 54°39'W.

Valette Island 60°46'S., 44°36'W.

Island, 0.2 mi. long, lying in the W. side of the entrance to Mill Cove on the S. side of Laurie I., in the South Orkney Islands. Charted by the ScotNAE, 1902-4, under Bruce, who named it for L. H. Valette, Argentine meteorologist at the Laurie Island station during 1904.

Valhalla, Mount 77°35'S., 161°56'E.

A peak in the Asgard Range, Victoria Land, standing at the W. flank of Valhalla Glacier from where it overlooks the S. side of Wright Valley. The name is one in a group in the range derived from Norse mythology, Valhalla being the great hall where Odin receives and feasts the souls of heroes who have fallen bravely in battle. The name was suggested by US-ACAN in consultation with NZ-APC.

Valhalla Glacier 77°34'S., 161°58'E.

A small glacier in the Asgard Range located between Mt. Valhalla and Conrow Glacier. It flows part way down the N. wall of the range toward Wright Valley. Named by US-ACAN and NZ-APC in consultation.

Valiente Peak 65°27'S., 63°43'W.

Peak, 2,165 m., standing close N. of the mouth of Lever Gl. where the latter enters Beascochea Bay, on the W. coast of Graham Land. Disc. by the FrAE, 1908-10, under Charcot and named by him "Sommet Saens Valiente," probably for Capt. J. P. Saenz Va-

GEOGRAPHIC NAMES OF THE ANTARCTIC

liente of Argentina. Remapped by the BGLE under Rymill during surveys in Beascochea Bay in August 1935 and on a journey to Trooz Gl. in January 1936. Name shortened by the UK-APC in 1959.

Valikhanov, Mount 71°49'S., 12°15'E.

Mountain, 2,800 m., standing 1 mi. NW. of Mt. Miro-tvortsev in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Russian geographer Chokan Valikhanov (1935-65).

Valikhanova, Gora: see Valikhanov, Mount 71°49'S., 12°15'E.

Valinski, Mount 84°32'S., 177°30'E.

A rock peak, 1,640 m., standing just S. of Millington Gl. and 4 mi. W. of Ramsey Gl. in the Queen Maud Mountains. Named by US-ACAN for J. E. Valinski, USN, radio operator on USN Op. Hjp. (1946-47) Flight 8, Feb. 16, 1947, when this feature was photographed from the air.

Valken Hill 71°29'S., 1°59'W.

A hill 6 mi. SW. of Marsteinen Nunatak in the N. part of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Valken (the roll).

Valkyrie, Mount 77°33'S., 162°19'E.

A dolerite capped peak on the S. wall of Wright Valley, separating Bartley and Meserve Glaciers in the Asgard Range of Victoria Land. Named by the VUWAE, 1958-59, after the Valkyries of Norse mythology.

Vallavielle, Cape: see Buchanan Point 60°43'S., 44°28'W.

Vallenar, Isote: see Chanticleer Island 63°43'S., 61°48'W.

Vallot Glacier 67°18'S., 67°30'W.

A glacier flowing NW. to Laubeuf Fjord close S. of Lewis Peaks, on Arrowsmith Pen. in Graham Land. Mapped by FIDS from surveys and air photos, 1948-59. Named by UK-APC for Joseph Vallot, French naturalist and glaciologist who first measured the surface velocity of a glacier over a long period, in Switzerland, 1891-99.

Valter Butte 71°54'S., 3°14'W.

An ice-free butte on the E. side of Schytt Gl., about 5 mi. WNW. of Mt. Schumacher in Queen Maud Land.

Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named for Stig Valter Schytt, second in command and glaciologist with the expedition.

Valterkulten: see Valter Butte 71°54'S., 3°14'W.

Van Beneden, Cape: see Beneden Head 64°46'S., 62°42'W.

Van Buren, Mount 71°18'S., 63°30'W.

The prominent mountain 3 mi. NNW. of Mount Jackson, at the E. side of the Dyer Plateau, Palmer Land. Mapped by USGS in 1974. The name was applied by US-ACAN in association with Mount Jackson. Martin Van Buren (1782-1862) was the Eighth President of the United States, 1837-41. He was Vice President, 1833-37, during the second term of President Andrew Jackson.

Vance, Mount 75°28'S., 139°34'W.

A mountain (840 m.) rising between Mt. LeMasurier and Mt. McCrory in the Ickes Mtns. of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Dale L. Vance, ionospheric scientist at Byrd Station, 1963, and U.S. Exchange Scientist to the Vostok station, 1971.

Vance Bluff 81°49'S., 156°55'E.

A small ice-covered eminence near the polar plateau, 10 mi. N. of Laird Plateau. Its flat summit merges with the ice sheet to the north and west, but there is a steep cliff along the south side. Named by US-ACAN for the USS *Vance*, ocean station ship in support of aircraft flights between New Zealand and McMurdo Sound during USN Op. DFrz. 1962.

Vanda, Lake 77°32'S., 161°33'E.

Lake, 3 mi. long, just E. of the Dais in Wright Valley, Victoria Land. Named by the VUWAE (1958-59) after a dog used by C. Bull, leader of this party, in the British North Greenland Expedition.

Vandament Glacier 85°19'S., 167°10'E.

An east-flowing glacier, 6 mi. long, draining the east-central portion of the Dominion Range icecap. The glacier lies close S. of Koski Gl., whose flow it parallels, and terminates 2 mi. NW. of Safety Spur. Named by US-ACAN for Charles H. Vandament, USARP ionospheric physicist at South Pole Station, 1962.

Van der Essen, Mount 72°35'S., 31°23'E.

Mountain, 2,525 m., just S. of Mt. Gillet in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G.

GEOGRAPHIC NAMES OF THE ANTARCTIC

- enburg, Mount** 1,165 m., the Clark Mountains. Discovered by the USAS (Jan Valkenburg) at the University of Amsterdam.
- a, Mount 71** 1,165 m., the Clark Mountains. Discovered by the USAS (Jan Valkenburg) at the University of Amsterdam.
- de Gerlache, who named it for Alfred Van der Essen, Dir. at the Ministry of Foreign Affairs and a patron of the expedition.**
- Vanderford Glacier 66°35'S., 110°26'E.**
A glacier about 5 mi. wide flowing NW. into the SE. side of Vincennes Bay, close S. of the Windmill Islands. Mapped from aerial photographs taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for Benjamin Vanderford, pilot of the sloop of war *Vincennes* of the USEE under Wilkes, 1838-42.
- Vanderheyden, Mount 72°30'S., 31°20'E.**
Mountain, 2,120 m., standing 1.5 mi. NE. of Mt. Bastin on the N. side of the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache. He named it for Henri Vanderheyden, aircraft mechanic with the expedition.
- Van der Hoeven, Mount 71°54'S., 161°25'E.**
A mountain (1,940 m.) at the N. side of the head of Boggs Valley, near the center of Helliwell Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Frans G. Van der Hoeven, seismologist and leader of the USARP-sponsored Victoria Land Traverse, 1959-60. The 1,530 mile seismic and topographic traverse in Tucker Sno-Cat vehicles took a roughly triangular course, beginning at Hut Point Peninsula, Ross Island, and ascending to the plateau of Victoria Land via Skelton Glacier. From there a NW. course was followed on interior plateau to 71°09'S., 139°12'E. The party returned eastward, keeping S. of the 72°S. parallel to 72°37'S., 161°32'E. (E. side of Outback Nunataks), from where the party was evacuated by aircraft of U.S. Navy Squadron VX-6.
- Van der Veer, Mount 76°41'S., 145°54'W.**
A mountain about 8 mi. SE. of Mt. Ronne in the Haines Mtns., Marie Byrd Land. Mapped by the USAS (1939-41). Named by US-ACAN for Willard Van der Veer, photographer with the ByrdAE (1928-30).
- Vane Glacier 75°15'S., 110°19'W.**
A broad glacier that drains the NE. slopes of Mt. Murphy in Marie Byrd Land. It enters Crosson Ice Shelf between Eisberg Head and Boyd Head. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Gregg A. Vane, U.S. Exchange Scientist at the Soviet station Novolazerevskaya in 1972.
- Vang, Mount 73°26'S., 67°09'W.**
An isolated mountain standing southward of George VI Sound and 80 mi. ESE. of Eklund Is. in southern Palmer Land. Disc. by Finn Ronne and Carl Eklund of USAS, 1939-41, during their sledge journey through George VI Sound. Resighted from the air on a flight of Dec. 3, 1947 by the RARE under Ronne. Named by Ronne for Knut Vang of Brooklyn, N.Y., who contributed photographic materials to the RARE, 1947-48.
- Vangengeyma, Lednik:* see Vangengeym Glacier 71°17'S., 13°48'E.
- Vangengeym Glacier 71°17'S., 13°48'E.**
A glacier about 6 mi. long, draining the vicinity E. of Mt. Mentzel and flowing N. toward Mt. Seekopf in the Gruber Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet meteorologist Georgiy Vangengeym (1886-1961).
- Vanguard Nunatak 82°33'S., 47°38'W.**
A conspicuous cone-shaped nunatak, 715 m., standing at the northern extremity of Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. So named by US-ACAN for its prominent position at the north end of Forrestal Range.
- Vanhöffen Bluff 53°00'S., 73°21'E.**
A rocky bluff (225 m.) immediately E. of Jacka Glacier on the N. coast of Heard Island. The GerAE under Drygalski, during its 1902 investigations of the area, applied the name Kap Vanhöffen to a cliffed feature about 1.5 mi. to the NW., near The Sentinel. The ANARE, during its 1948 survey of the island, transferred the Vanhöffen name to this bluff, reporting that no well-marked cape exists along the high cliffs to the northwest.
- Van Hulssen Island 67°33'S., 62°43'E.**
A small island lying 3 mi. NW. of Flat Is. in Holme Bay. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and perhaps included in the scattered islands which they called Ytterskjera. Van Hulssen Island was included in a triangulation carried out by ANARE in 1954, and in 1955 a party established an automatic meteorological station there. Named by ANCA for F. A. Van Hulssen, radio station supervisor at Mawson Station in 1955.
- Van Hulssen Islands 67°33'S., 62°43'E.**
A group of about ten small islands, of which Van Hulssen Island is the largest, lying 1.5 mi. N. of Pila Island

GEOGRAPHIC NAMES OF THE ANTARCTIC

from air photos by the GerAE, and from air photos and surveys by the NorAE and SovAE, 1960-61. Named by Nikolay I. Vavilov, Soviet botanist.

65°55'S., 63°25'W.

en Fridtjof and Bob Islands, off the E. I. in the Palmer Archipelago. First charted by the BrAE under Charcot, 1903-5. The name was adopted by the Argentine Govt. chart of 1950.

cliffs 77°38'S., 167°45'E.

e Drygalski Glacier 64°43'S.,

l Islands 60°39'S., 44°51'W.

67°S., 64°15'W.

Islands lying 2 mi. W. of Hovgaard I. in the Palmer Archipelago. The largest island of this group was discovered in 1898 and given the name Vedel by the NorAE under Charcot. The BrAE under Charcot charted the islands in 1904, and again in 1910. The name was extended to include the entire group.

60°01'S., 3°58'E.

Island, standing 1 mi. SE. of Hovgaard I. in the Mühlig-Hofmann Mtns. of the Palmer Archipelago. Mapped by Norwegian cartographers and air photos by the NorAE under Charcot. Named for the wooden broom (the wooden broom).

62°03'S., 3°56'E.

and ice ridge on the NW. side of the Mühlig-Hofmann Mtns. of Queen Maud Land. Mapped by Norwegian cartographers and air photos by the NorAE (1956-60). Named for the wooden shed.

66°167°45'E.

covered cliffs, 4 mi. long, between the Ross and McMurdo Glaciers on the S. shore of Ross Island. Suggested by two prominent V-shaped peaks protrude from the cliff wall. The name was given by Dr. Edward A. Wilson who, with the NorAE, 1901-4, visited the area in 1903.

66°S., 57°25'W.

and 6 mi. wide, which is the northernmost of the Ross I. group and lies in the W. of the Terror Gulf. It is separated from the other islands by Herbert Sound and from Trinity

Pen. by Prince Gustav Channel. The island was named by Dr. Otto Nordenskjöld, leader of the SwedAE, 1901-4, apparently for the ship *Vega* used by his uncle, Baron A. E. Nordenskiöld, in making the first voyage through the Northeast Passage, 1878-79.

Vegetation Island 74°47'S., 163°37'E.

A narrow island lying 2 mi. N. of Inexpressible Island and just W. of the Northern Foothills, along the coast of Victoria Land. Discovered by the Northern Party of the BrAE, 1910-13, who named it because the rocks were densely covered with lichens.

Veier Head 66°29'S., 61°42'W.

A high, snow-covered headland which marks the southernmost point of Jason Peninsula on the east coast of Graham Land. Norwegian explorer Captain C.A. Larsen discovered what he charted as an island in this vicinity on Dec. 9, 1893. The feature was first seen by Søren Andersen, First Mate of the *Jason*, and was named after his home, Veierland or Veierøen, in Norway. It is possible that Larsen mistook this high southern part of Jason Peninsula (which agrees well with his position and is conspicuous from seaward) for a separate island. In order to preserve Larsen's original name in the area, the name Veier Head has been approved for the headland described.

Veier Island: see Veier Head 66°29'S., 61°42'W.

Veitch Point 60°36'S., 46°03'W.

Point situated centrally along the NE. end of Monroe I. in the South Orkney Islands. Charted in 1933 by DI personnel on the *Discovery II* and named for R. S. Veitch, sounding machine technician of the ship.

Vela Bluff 71°10'S., 66°56'W.

A large isolated nunatak which signposts the only known route across the lower part of Ryder Glacier. It is located 5 mi. W. of Canopus Crags and 11 mi. from the W. coast of Palmer Land. Named by UK-APC after the constellation of Vela.

Vélain, Mount 66°42'S., 67°44'W.

Mountain, 750 m., with an isolated, black triangular summit showing through its snow mantle, standing in the NE. part of Adelaide Island. First charted by the BrAE, 1903-5, under Charcot, and named by him for Charles Vélain, French geologist and geographer, and professor of physical geography at the Sorbonne.

Velain, Sommet: see Vélain, Mount 66°42'S., 67°44'W.

Vélain Peak: see Vélain, Mount 66°42'S., 67°44'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Vélez Sársfield, Isla: see Jagged Island 65°58'S., 65°41'W.

Velie Nunatak 74°23'S., 99°10'W.

A nunatak located 9 mi. N. of Mt. Moses in the Hudson Mountains. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Edward C. Velie, meteorologist at Byrd Station, 1967.

Veli Peak 77°39'S., 161°28'E.

A peak just E. of Idun Peak and 1 mi. S. of Brunhilde Peak in the Asgard Range of Victoria Land. The precise origin of "Veli," applied by NZ-APC, is not known.

Venable Ice Shelf 73°03'S., 87°20'W.

An ice shelf, 40 mi. long and 15 mi. wide, between Fletcher and Allison Peninsulas, Ellsworth Land. Mapped by USGS from surveys and U.S. Navy air photos, 1961-66. Named by US-ACAN for Cdm. J.D. Venable, USN, Ships Operations Officer, U.S. Naval Support Force, Antarctica, 1967 and 1968.

Vendehø Heights 72°19'S., 1°28'E.

A broad ice-covered elevation surmounted by several rock crags, rising close SE. of Tverrveggen Ridge in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vendehø.

Vendeholten Mountain 72°12'S., 1°20'E.

A mountain, 2,230 m., standing N. of Tverrbrekka Pass in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by Nor. exp. (1958-59) and named Vendeholten.

Venera-Tri, Skala: see Ormesporden Hill 72°05'S., 14°19'E.

Vengen Spur 72°04'S., 23°40'E.

Rocky spur projecting N. from the E. part of Mt. Widerøe in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Vengen (the wing).

Vennum, Mount 71°33'S., 61°53'W.

A mountain surmounting the NE. part of Rowley Massif on the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for Walter R. Vennum, geologist, a member of the USGS geological and mapping party to the Lassiter Coast, 1972-73.

Ventana, Isla: see Window Island 62°34'S., 61°07'W.

Ventana, Roca del la: see Hole Rock 61°53'S., 57°44'W.

Ventifact Knobs 77°42'S., 162°35'E.

Minor knobs, 3 to 6 m. high, composed of lake clay covered by glacial drift. The glacial drift has cobbles that are well polished by the wind and cut into ventifacts. The knobs are covered by ventifacts, suggesting the name, and are located just E. of Lake Bonney in Taylor Valley, Victoria Land. Named by U.S. geologist Troy L. Péwé who was first to study and describe the knobs in Dec. 1957.

Ventisquero, Fondeadero: see Orwell Bight 60°43'S., 45°23' W.

Venture Dome 68°36'S., 62°13'E.

A large, heavily crevassed ice dome about 30 mi. S. of Mt. Twintop in Mac. Robertson Land. The feature had been seen by several parties traveling S. from Mawson Station since 1957, but it had been avoided. In 1967, ANARE surveyor J. Manning selected a route through the crevasses and established a beaconed tellurometer station on it. So named by ANARE to indicate the risk taken in crossing the dome.

Venus Bay 61°55'S., 57°54'W.

Bay 6 mi. wide, lying between False Round Pt. and Brimstone Peak along the N. side of King George I., in the South Shetland Islands. The name Esther Bay was used for this feature by Scottish geologist David Ferguson in 1913-14. Since the ship *Esther* is already commemorated on two neighboring features, the UK-APC recommended a new name in 1960; Venus Bay is named for the schooner *Venus* from New York, which visited the South Shetland Islands in 1820-21, and was wrecked on a reef in the entrance to nearby Esther Harbor on Mar. 7, 1821. Her crew was rescued a few days later by the *Esther* and *Emerald*.

Venus Glacier 71°38'S., 68°15'W.

Glacier on the E. coast of Alexander I., 10 mi. long and 6 mi. wide at its mouth, flowing E. into George VI Sound between Keystone Cliffs and Triton Point. The coast in this vicinity was first seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. The glacier was first surveyed in 1949 by the FIDS and named by the UK-APC for the planet Venus.

Venzke Glacier 75°00'S., 134°24'W.

A broad glacier flowing northward between Bowyer Butte and Perry Range into Getz Ice Shelf, on the coast of Marie Byrd Land. The glacier was discovered and photographed from aircraft of the U.S. Antarctic

GEOGRAPHIC NAMES OF THE ANTARCTIC

Service in December 1940. It was mapped in detail by USGS from surveys and U.S. Navy photographs, 1959-66. Named by US-ACAN for Capt. Norman C. Venzke, USCG, Commanding Officer of USCGC *Northwind* in Antarctica, 1972 and 1973, and a participant in several other Deep Freeze operations as ship's company officer aboard icebreakers.

Verblyud Island 70°00'S., 15°55'E.

An ice-covered island whose summit rises 200 m. above the surrounding ice shelf, situated at the E. margin of Lazarev Ice Shelf along the coast of Queen Maud Land. First mapped by the SovAE in 1961 and named Kupol Verblyud (camel dome).

Verdant Island 54°00'S., 38°09'W.

Tussock-covered island 1 mi. E. of the NE. end of Main I., in the Willis Is. at South Georgia. So named because of its vegetative cover by DI personnel who mapped the island in the period 1926-30.

Verdant Islands: see Verdant Island 54°00'S., 38°09'W.

Verde, Isote: see Green Island 65°19'S., 64°10'W.

Verde, Laguna: see Kroner Lake 62°59'S., 60°35'W.

Verde, Pico: see Copper Peak 64°43'S., 63°21'W.

Verdi Inlet 71°30'S., 75°00'W.

Ice-filled inlet, 21 mi. long and 6 mi. wide, indenting the N. side of Beethoven Pen. 10 mi. SW. of Brahms Inlet on Alexander Island. Observed from the air and first roughly mapped by the RARE, 1947-48. Remapped from the RARE air photos by Searle of the FIDS in 1960. Named by the UK-APC for Giuseppe Verdi (1813-1901), Italian opera composer.

Vereteno, Lake 68°31'S., 78°25'E.

A narrow lake, 1.5 mi. long, located in the NE. part of Breidnes Peninsula, Vestfold Hills, approximately 1.5 mi. S. of Luncke Ridge. The lake was first photographed by USN Operation Highjump (1946-47), and subsequently by ANARE (1954-58), and the Soviet Ant. Exp. (1956). Named Ozero Vereteno (spindle lake) by the latter.

Verge Rocks 65°34'S., 64°34'W.

Two rocks lying 2 mi. N. of Chavez I., off the W. coast of Graham Land. Mapped by the FIDS from photos taken by Hunting Aerosurveys Ltd. in 1956-57. So named by the UK-APC because the rocks lie on the edge of Grandidier Channel.

Verhaegen, Mount 72°34'S., 31°08'E.

Ice-free mountain, 2,300 m., standing immediately W. of Mt. Perov in the Belgica Mountains. Disc. by the

BelgAE, 1957-58, under G. de Gerlache and named by him for Baron Pierre Verhaegen, collaborator of the expedition.

Verhage, Mount 71°23'S., 163°42'E.

A prominent mountain, 2,450 m., standing directly at the head of Smithson Gl. in the Bowers Mountains. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Lt. Ronald G. Verhage, USN, supply officer at McMurdo Station, winter party, 1967.

Verlautz, Mount 86°46'S., 153°00'W.

A mountain, 2,490 m., standing just N. of the mouth of Poulter Gl. in the SE. end of the Rawson Mountains, Queen Maud Mountains. Named by US-ACAN for Major Sidney J. Verlautz, U.S. Army Transportation Corps, who served as logistics research officer on the staff of the Commander, U.S. Naval Support Force, Antarctica.

Verleger Point 74°42'S., 136°15'W.

Point marking the W. side of the entrance to Siniff Bay on the coast of Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lt. (j.g.) W.F. Verleger, USNR, Master of the *Jacob Ruppert* on the first trip to Bay of Whales (1933) during ByrdAE, 1933-35.

Verne, Mount 67°45'S., 67°34'W.

Mountain, 1,645 m., standing 6 mi. E. of Bongrain Point and dominating the S. part of Pourquoi Pas I., off the W. coast of Graham Land. First sighted and roughly surveyed in 1909 by the FrAE under Charcot. Resurveyed in 1948 by the FIDS, and named by them for Jules Verne, author of *Twenty Thousand Leagues Under the Sea*. Other features on Pourquoi Pas I. are named after characters in this book.

Verner Island 67°35'S., 62°53'E.

One of the Jocelyn Is., lying just W. of Petersen I. in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Remapped by ANARE in 1956 and named for Verner Pedersen, chief officer of the *Thala Dan* in 1961.

Vernon Harcourt, Mount 72°32'S., 169°55'E.

A remarkable conical mountain (1,570 m.) in the south-central part of Hallett Peninsula, Victoria Land. Discovered in January 1841 by Sir James Clark Ross and named by him for the Rev. W. Vernon Harcourt, one of the founders of the British Association.

Verte Island 66°44'S., 141°11'E.

Small rocky island 1 mi. N. of Double Is. and 1.5 mi. E. of the tip of Zélée Glacier Tongue. Phot. from the

GEOGRAPHIC NAMES OF THE ANTARCTIC

air by USN Op. Hjp., 1946-47. Charted by the FrAE, 1949-51, and so named by them because of its greenish appearance, "verte" being French for green.

Vertigo Bluff 83°35'S., 167°00'E.

A prominent rock bluff (1,950 m.) located 4 mi. S. of Asquith Bluff on the W. side of Lennox-King Glacier. Rock samples were collected at the bluff by John Gunner and Henry Brecher of the Ohio State Univ. Geological Exp., 1969-70. The name suggested by Gunner reflects the precipitous nature of the bluff face.

Vesalius, Mount 64°04'S., 61°59'W.

Mountain, 765 m., standing NW. of Macleod Point, Liège I., in the Palmer Archipelago. Shown on an Argentine Govt. chart of 1950. Named by the UK-APC in 1960 for Vesalius (1514-1564), Flemish anatomist who wrote a pioneer work on the structure of the human body which revolutionized the whole concept of the subject.

Vesconte Point 68°31'S., 65°12'W.

A prominent point on the N. side of Mobiloil Inlet, formed by steep rock cliffs which mark the extremity of a ridge running SE. from the northernmost of the Bowditch Crests. The point was first plotted by W.L.G. Joerg from air photos taken by Lincoln Ellsworth in Nov. 1935. It was subsequently photographed from the air by USAS, Sep. 1940; FIDS, Aug. 1947; and RARE (Trimetrogon air photography), Dec. 1947; and was surveyed by FIDS, Dec. 1958. Named by UK-APC after Petrus Vesconte of Genoa, the earliest known chartmaker whose charts survive (the first dated 1311).

Vesčlaya Mountain 71°38'S., 12°32'E.

Mountain with a sharp summit, 2,385 m., forming the N. end of the Svarttindane Peaks in the Südliche Petermann Range, Wohlthat Mountains. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Gora Vesčlaya (cheerful mountain) by the USSR in 1966.

Veslekletten Peak 72°05'S., 3°26'W.

A small mountain about 1 mi. S. of Storkletten Peak on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Veslekletten (the little mountain).

Vesleknausen Rock 69°56'S., 38°53'E.

A rock, 110 m., standing 3 mi. SW. of Rundvågs Head on the SE. shore of Lützow-Holm Bay. Mapped by

Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Vesleknausen (the tiny crag).

Veslekulten: see Hayes Peak 67°28'S., 60°46'E.

Veslenupen Peak 72°07'S., 2°13'E.

A peak near the N. end of Nupskammen Ridge in the Gjelsvik Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Veslenupen (the little peak).

Veslenutane: see Fitzgerald Nunataks 66°15'S., 52°49'E.

Vesleskarvet Cliff 71°40'S., 2°51'W.

A rock cliff 5 mi. N. of Lorentzen Peak, on the W. side of Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vesleskarvet (the little barren mountain).

Veslestabben Nunatak 69°42'S., 37°35'E.

An isolated nunatak standing in the central part of Botnneset Peninsula on the S. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Veslestabben (the little stump).

Vesletind Peak 72°10'S., 3°02'W.

A small peak 3 mi. ESE. of Aurhø Peak on the Ahlmann Ridge in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Vesletind (little peak).

Vestbanen Moraine 71°35'S., 11°59'E.

A medial moraine in Humboldt Graben, originating near Zwiesel Mtn. and trending N. in string-like fashion for 13 mi. along the W. flank of the Petermann Ranges, Wohlthat Mountains. First plotted from air photos by GerAE, 1938-39. Remapped by NorAE, 1956-60, and named Vestbanen (the west path). The feature is similar to Austbanen Moraine which parallels it 7 mi. eastward.

Vestfjella: see Kraul Mountains 73°30'S., 14°10'W.

Vestfold Hills 68°33'S., 78°15'E.

An area of rounded rock coastal hills, 200 square mi. in extent, located at the N. side of Sørsdal Glacier on

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ingrid Christensen Coast. The hills are subdivided by three west-trending peninsulas bounded by narrow fjords. Most of the hills range between 30 and 90 meters, the highest summit being nearly 160 meters. Discovered and a landing made in the northern portion, Feb. 20, 1935, by Capt. Klarius Mikkelsen in the Norwegian whaling ship *Thorshavn* sent out by Lars Christensen. Named after Vestfold, a county in Norway where Sandefjord, headquarters of the whaling industry is located. This hill area and its off-lying islands were mapped from air photos taken by the Lars Christensen Exp. (1936-37). Further brief landings were made by Lincoln Ellsworth in 1939, and the area was photographed from the air by USN Operation Highjump (1946-47). Landings were made and exploration carried out in 1954 and 1955 by ANARE led by Philip Law. Davis Station was established by ANARE in Jan. 1957.

Vestfold Mountains: see Vestfold Hills 68°33'S., 78°15'E.

Vesthaugen: see Vesthaugen Nunatak 71°42'S., 23°40'E.

Vesthaugen Nunatak 71°42'S., 23°40'E.
Nunatak rising to 1,400 m., standing 15 mi. NW. of Brattnipane Peaks in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Vesthaugen (the west hill) by the Norwegians.

Vesthjelm: see Vesthjelm Peak 71°42'S., 26°18'E.

Vesthjelm Peak 71°42'S., 26°18'E.
Peak, 1,810 m., standing 8 mi. W. of Austhamaren Peak in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and in 1957 from air photos taken by USN Op. Hjp., 1946-47. Named Vesthjelm (the west helmet) by the Norwegians.

Vesthovde Headland 69°45'S., 37°23'E.
An icy headland, marked by several rock exposures, which forms the western elevated portion of Botnneset Peninsula on the S. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Vesthovde (west knoll).

Vestkapp, Cape 72°40'S., 19°00'W.
A prominent westward projection of the ice front of the Riiser-Larsen Ice Shelf, located midway along the ice

front and about 60 mi. W. of the Kraul Mountains, Queen Maud Land. First photographed from the air by NBSAE in 1951-52 and mapped from these photos. Named Vestkapp (west cape) by Norway.

Vestknatten: see Vestknatten Nunatak 69°48'S., 75°03'E.

Vestknatten Nunatak 69°48'S., 75°03'E.
An elongated nunatak in the center of Polarforschung Glacier, about 13 mi. ESE. of Mt. Caroline Mikkelsen. First mapped from air photographs by the Lars Christensen Exp., 1936-37, and named Vestknatten (the west crag). Visited by I.R. McLeod, geologist with the ANARE Prince Charles Mtns. survey party in Jan. 1969.

Vestre Petermannkjeda: see Westliche Petermann Range 71°35'S., 12°10'E.

Vestre Skorvebreen: see Vestreskorve Glacier 71°57'S., 5°05'E.

Vestreskorve Glacier 71°57'S., 5°05'E.
A broad glacier in the Mühlig-Hofmann Mtns., to the S. of Breplogen Mtn., which drains from a position opposite the head of Austreskorve Glacier northward along the W. side of Svarthamaren Mountain. Plotted and named from surveys and air photos by the NorAE (1956-60).

Vestskjera: see Child Rocks 67°26'S., 63°16'E.

Vestskotet: see West Stack 67°03'S., 58°03'E.

Vestskotet Bluff 73°13'S., 2°09'W.
A bluff just S. of Årmålsryggen, at the W. end of Neumayer Cliffs in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vestskotet (the west bulkhead).

Veststraumen Glacier 74°15'S., 15°00'W.
Glacier about 45 mi. long draining west along the south end of Kraul Mtns. into Riiser-Larsen Ice Shelf. The glacier was seen in the course of a U.S. Navy LC-130 plane flight over the coast, Nov. 5, 1967, and was plotted by USGS from photographs obtained at that time. In 1969, US-ACAN gave the name "Endurance Glacier" to this feature (in remembrance of the ill-fated voyage of the *Endurance* in this part of Weddell Sea in 1915), but that naming was rescinded because UK-APC gave the identical name to a small glacier on Elephant Island. The descriptive name "Veststraumen" (the west stream) appears on a 1972 Norsk Polarinstitut map.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Vestvika Bay 69°10'S., 33°00'E.

A large bay on the west side of Riiser-Larsen Peninsula, along the coast of Queen Maud Land. Mapped from air photos taken by the Lars Christensen Exp., 1936-37, and named Vestvika (west bay).

Vestvollen Bluff 72°06'S., 3°38'E.

A rock and ice bluff forming the W. side of Festninga Mtn. in the Mühlig-Hofmann Mtns., Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named Vestvollen (the west wall).

Vestvorren Ridge 73°06'S., 1°53'W.

The western of two rock ridges which trend northward from the Neumayer Cliffs in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vestvorren (the west jetty).

Veten Mountain 72°37'S., 3°50'W.

A mountain about 2 mi. NW. of Høgskavlen Mtn. in the Borg Massif of Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Veten (the beacon).

Veterok Rock 71°54'S., 14°43'E.

A prominent rock just N. of Spraglegga Ridge in the Payer Mtns. of Queen Maud Land. Plotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 as a token of achievement of Soviet scientists in the study of space.

Veto Gap 73°24'S., 162°54'E.

A gap between Tobin and Gair Mesas in the Mesa Range of Victoria Land which provides access from upper Rennick Glacier to the Aeronaut Glacier. Named "Veto" by the northern party of NZGSAE, 1962-63, because it was decided that Pinnacle Gap to the north offered the better route from Rennick to Aviator Glacier.

Vetrov Hill 66°34'S., 92°58'E.

Hill rising to 20 m., standing at the E. side of the entrance to McDonald Bay on the coast of Antarctica. Mapped from aerial photos taken by USN Op. Hjp., 1946-47. Remapped by the Soviet exp. of 1956 which named it Vetrov (windy).

Veynberg, Mount 67°27'S., 67°34'W.

Mountain close W. of Nye Gl. on Arrowsmith Pen. in Graham Land. Mapped by FIDS from surveys and air photos, 1948-59. Named by UK-APC for Boris P.

Veynberg, Russian physicist who made pioneer studies of the mechanical properties and flow of ice in laboratory conditions, in 1936.

V. Frolova, Khrebet: see Frolov Ridge 70°45'S., 162°09'E.

Vicans Island 65°51'S., 54°24'E.

A small ice-covered island about 2 mi. off the coast of Enderby Land. Discovered on Jan. 12, 1930 by the BANZARE under Mawson. He named it after an Australian textile company which presented the expedition with cloth for uniforms.

Vicecomodoro Marambio, Isla: see Seymour Island 64°17'S., 56°45'W.

Vickers Nunatak 85°20'S., 176°40'W.

A massive nunatak in the upper Shackleton Gl., about 11 mi. SE. of Mt. Black. Named by the Southern Party of the NZGSAE (1961-62) for E. Vickers, radio operator at Scott Base, who was in contact with the Southern Party almost every day during the three months they were in the field.

Victor, Mount 72°36'S., 31°16'E.

Mountain, 2,590 m., between Mt. Van Mieghem and Mt. Boë in the Belgica Mountains. Disc. by the BelgAE, 1957-58, under G. de Gerlache, who named it for French polar explorer, Paul-Émile Victor, a counselor of the expedition.

Victor Bay 66°20'S. 136°30'E.

Bay about 16 mi. wide and 7 mi. long, indenting the coast between Pourquoi Pas Pt. and Mathieu Rock. The bay is marked by an extensive chain of icebergs breaking away from the high tongue of Commandant Charcot Glacier. Delineated from aerial photographs taken by USN Op. Hjp., 1946-47, and named by the US-ACAN for Paul-Émile Victor, Director of the Expéditions Polaires Françaises, who organized French expeditions to Greenland in 1948-51 and Antarctica in 1948-53 and 1955-56.

Victor Cliff 85°20'S., 119°12'W.

An abrupt rock cliff, 1.5 mi. long, which forms the SW. shoulder of Long Hills in the Horlick Mountains. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1958-60. Named by US-ACAN for Lawrence J. Victor, aurora scientist at Byrd Station in 1961.

Victor Hugo Island: see Hugo Island 64°59'S., 65°46'W.

Victoria, Mount: see Victoria Peak 64°29'S., 62°34'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Victoria Land 74°15'S., 163°00'E.

That part of Antarctica which fronts on the western side of the Ross Sea, extending southward from about 70°30'S. to 78°00'S., and westward from the Ross Sea to the edge of the polar plateau. Discovered in January 1841 by Capt. James Clark Ross, RN, and named for Queen Victoria.

Victoria Lower Glacier 77°18'S., 162°40'E.

Glacier occupying the lower eastern end of Victoria Valley where it appears to merge with Wilson Piedmont Glacier. Named by the Victoria University of Wellington Antarctic Expedition (1958-59) for their Alma Mater which sponsored the expedition.

Victoria Peak 64°29'S., 62°34'W.

Cone-shaped peak, 485 m., situated 2 mi. E. of Mt. Bulcke in southern Brabant I., in the Palmer Archipelago. First seen and photographed by the BelgAE, 1897-99, under Gerlache. The name Victoria seems to have first appeared on charts in about 1921 and has since become established through common usage.

Victoria Upper Glacier 77°16'S., 161°25'E.

Glacier occupying the upper NW. end of Victoria Valley. Named by the Victoria University of Wellington Antarctic Expedition (1958-59) for their Alma Mater which sponsored the expedition.

Victoria Upper Lake 77°19'S., 161°35'E.

A meltwater lake at the terminus of Victoria Upper Glacier in Victoria Land. Named for its position at the terminus of the glacier by American geologist Parker E. Calkin, in 1964.

Victoria Valley 77°23'S., 162°00'E.

An extensive ice-free valley, formerly occupied by a large glacier, extending from Victoria Upper Glacier to Victoria Lower Glacier. Named by the Victoria University of Wellington Antarctic Expedition (1958-59) after their Alma Mater which sponsored the expedition.

Victory Glacier 63°49'S., 58°25'W.

Gently sloping glacier, 8 mi. long, flowing ESE. from the N. end of Detroit Plateau on Trinity Pen. to Prince Gustav Chan. immediately N. of Pitt Point. Disc. by the FIDS, who so named it because the discovery was made in the week following the surrender of Japan in World War II, in August 1945.

Victory Mountains 72°40'S., 168°00'E.

A major group of mountains in Victoria Land, about 100 mi. long and 50 mi. wide, which is bounded primarily by Mariner Glacier, Tucker Glacier and the Ross Sea. The division between these mountains and

the Concord Mountains (to the NW.) is less precise but apparently lies in the vicinity of Thomson Peak. A Ross Sea aspect of the mountains was first obtained by early British expeditions of Ross, Borchgrevink, Scott and Shackleton. The mapping of the interior mountains was largely done from air photos taken by the U.S. Navy and surveys undertaken by New Zealand and American parties in the 1950's and 1960's. So named by the NZGSAE, 1957-58, because of the proximity of this group to the Admiralty Mountains, and with the intention that many of the topographic features would be named for celebrated victories, especially naval victories.

Victory Nunatak 68°45'S., 64°22'W.

A conspicuous island-like nunatak with three rocky summits, the southernmost and highest, 360 meters. It rises above the ice of southeastern Mobiloil Inlet 8 mi. SE. of Kay Nunatak on the E. coast of Antarctic Peninsula. The nunatak was first mapped by W.L.G. Joerg from air photos taken by Lincoln Ellsworth on Nov. 23, 1935. It was subsequently photographed from the air by USAS, Sep. 1940; FIDS, Aug. 1947; and RARE (Trimetrogon air photography), Dec. 1947. Named by UK-APC in 1961; when viewed from the air three dots and a dash, Morse code for the letter 'V', are apparent on the surface of the feature.

Vida, Lake 77°23'S., 161°57'E.

A lake lying N. of Mt. Cerberus in the Victoria Valley of Victoria Land. Named by the VUWAE (1958-59) after Vida (Vaida), a sledge dog of the BrAE, 1910-13.

Vidal, Islote: see Vidal Rock 62°30'S., 59°43'W.

Vidal Rock 62°30'S., 59°43'W.

A rock 0.8 mi. W. of Ferrer Pt. in southern Discovery Bay, Greenwich I., South Shetland Islands. Named by the first Chilean Antarctic Expedition (1947) for mariner Osvaldo Vidal, in charge of echo sounding on the frigate *Iquique*.

Vidaurre Rock 63°18'S., 57°56'W.

A rock which breaks the surface at low water lying about 100 yards E. of Acuña Rocks in the Duroch Islands, Trinity Peninsula. Named by the fourth Chilean Antarctic Expedition, 1949-50.

Viddalen Valley 72°20'S., 2°45'W.

A broad ice-filled valley which drains eastward between the S. end of Ahlmann Ridge and the Borg Massif in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Viddalen (the wide valley).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Viddalskollen Hill 72°25'S., 2°19'W.

A hill 6 mi. SW. of Nashornet Mtn., on the S. side of Vaddalen Valley in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Viddalskollen (the wide valley's knoll).

Videla, Isla: see Bates Island 65°49'S., 65°38'W.

Vietor Rock 62°41'S., 61°06'W.

Rock which appears to be tied to the S. coast of Livingston I. by a spit, in the South Shetland Islands. Named by the UK-APC in 1958 for Alexander O. Vietor, Curator of Maps, Yale University Library, who discovered the original logbooks of the American brig *Hersilia*, 1819-20, and *Huron*, 1820-21.

Viets, Mount 78°14'S., 86°14'W.

A sharp pyramidal mountain over 3,600 m., standing 2 mi. N. of Mt. Giovinetto in the main ridge of the Sentinel Range, Ellsworth Mountains. Disc. by the Marie Byrd Land Traverse party, 1957-58, under C. R. Bentley, and named for Ronald L. Viets, geophysicist at Little America V Station in 1957.

Vieugué Island 65°40'S., 65°13'W.

Island 3 mi. long at the W. side of Grandidier Chan., lying 1 mi. NW. of Duchaylard I. and 12 mi. WNW. of Cape Garcia, off the W. coast of Graham Land. Disc. by the FrAE, 1903-5, and named by Charcot for Monsieur Vieugué, then French Chargé d'Affaires at Buenos Aires.

View Point 63°33'S., 57°22'W.

Eastern tip of a promontory, 150 m., forming the W. side of the entrance to Duse Bay on the S. coast of Trinity Peninsula. Disc. by a party under J. Gunnar Andersson of the SwedAE, 1901-4. So named by the FIDS following their survey of the area in 1945 because from this promontory, good panoramic photographs were obtained.

Vigia, Cabo: see Lookout, Cape 61°16'S., 55°12'W.

Vigia, Isla: see Watchkeeper, The 62°18'S., 59°49'W.

Vigil Spur 71°06'S., 165°30'E.

A spur which borders Ebbe Gl. and forms the SW. extremity of Mt. Bolt in the Anare Mountains. So named by the northern party of NZGSAE, 1963-64, because it spent a prolonged period of time here due to blizzard conditions which prevented travel.

Vik, Cape 60°40'S., 45°40'W.

Cape marking the W. side of the entrance to Marshall Bay on the S. coast of Coronation I., in the South

Orkney Islands. The cape appears to be first shown and named on a chart made by the Norwegian whaler Capt. Petter Sørle in 1912-13.

Viking Heights 72°04'S., 23°24'E.

A prominent flat-topped mountain, 2,960 m., between Tanngarden Peaks and Mt. Widerøe in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1957 from air photos taken by USN Op. Hjp., 1946-47, and named Vikinghøgda (the Viking height).

Vikinghøgda: see Viking Heights 72°04'S., 23°24'E.

Vil'gel'ma Pika, Khrebet: see Pieck Range 71°45'S., 12°06'E.

Villarrica, Monte: see Bain, Mount 66°33'S., 65°26'W.

Vincennes Bay 66°30'S., 109°30'E.

Large V-shaped bay, 65 mi. wide at its entrance between Cape Nutt and Cape Folger and marked by several large, steep glaciers near its head, lying along Knox and Budd Coasts. Photographed from the air by USN Op. Hjp., 1946-47. The bay was entered in January 1948 by USN Op. Wml. icebreakers *Burton Island* and *Edisto* which assisted in establishing astronomical stations in the Windmill Is. in the NE. portion of the bay. Named by the US-ACAN for the sloop of war *Vincennes*, flagship of the USEE under Wilkes, from which a series of coastal landfalls along Wilkes Land were disc. and plotted during January-February 1840. Wilkes' chart suggests a possible coastal recession corresponding closely with the longitudinal limits for Vincennes Bay, although pack ice conditions prevented close reconnaissance by the USEE of the coast in this immediate area.

Vincent Astor, Mount: see Astor, Mount 86°01'S., 155°30'W.

Vincent Gutenko Mountains: see Gutenko Mountains 71°40'S., 64°45'W.

Vincent Islands 54°09'S., 37°16'W.

Small group of islands at the head of King Haakon Bay on the S. side of South Georgia. Roughly charted by the Br. exp. under Shackleton, 1914-16, and surveyed by the SGS in the period 1951-57. Named by the UK-APC for J. Vincent, boatswain of the *Endurance*, 1914-16, who accompanied Shackleton in the *James Caird* from Elephant I. to King Haakon Bay.

Vindegga Ridge 72°57'S., 3°46'W.

A ridge of low peaks extending N. from Huldreslottet Mtn., in the S. part of Borg Massif in Queen Maud

GEOGRAPHIC NAMES OF THE ANTARCTIC

Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named Vindegga (the wind ridge).

Vindegga Spur 71°51'S., 11°19'E.

A prominent ridge just S. of Vindegghallet Glacier in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Vindegga (the wind ridge).

Vindegghallet Glacier 71°49'S., 11°15'E.

Glacier flowing W. for 4 mi. along the S. side of Mt. Flånuten in the Humboldt Mtns. of Queen Maud Land. Disc. and photographed by the GerAE, 1938-39. Mapped by Norway from air photos and surveys by NorAE, 1956-60, and named Vindegghallet (the wind ridge slope) in association with nearby Vindegga Spur.

Vindication Island 57°04'S., 26°46'W.

Island 1 mi. in extent, lying 2 mi. SW. of Candlemas I. in the South Sandwich Islands. Vindication Island was disc. in 1775 by Capt. James Cook, who reported it to be one of the two Candlemas Islands. Reports indicating that the Candlemas Islands contained three islands or a single island for many years overshadowed Cook's earlier description. A survey in 1930 by DI personnel on the *Discovery II* confirmed Cook's report, thus suggesting the name for this island.

Vinjebreen: see Vinje Glacier 71°55'S., 8°00'E.

Vinje Glacier 71°55'S., 8°00'E.

A broad glacier about 20 mi. long flowing NW. between the Filchner Mtns. and Fenriskjefte Mtn. in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by the NorAE (1956-60) and named for T. Vinje, meteorologist with NorAE (1956-58).

Vinson Massif 78°35'S., 85°25'W.

A large mountain massif in the southern portion of the main ridge of the Sentinel Range, Ellsworth Mountains. The massif is about 13 mi. long and 8 mi. wide and has a height of 5,140 m., the highest elevation in Antarctica. First seen on reconnaissance flights of U.S. Naval aircraft from Byrd Station in January 1958. Named by the US-ACAN for Rep. Carl G. Vinson of Georgia, Chairman of the House Naval Affairs Committee and later of the House Armed Services Committee, whose active interest and vision played a large part in U.S. Government support of Antarctic exploration in the period 1935-61.

Vinten-Johansenegga: see Vinten-Johansen Ridge 71°49'S., 8°58'E.

Vinten-Johansen Ridge 71°49'S., 8°58'E.

A high, bare rock ridge in the north-central part of the Kurze Mountains of Queen Maud Land. Mapped from surveys and air photos by NorAE (1956-60) and named for A. Vinten-Johansen, medical officer with NorAE (1957-58).

Violante Inlet 72°35'S., 61°05'W.

Ice-filled inlet 16 mi. long, in an E.-W. direction, and 12 to 15 mi. wide, lying between Cape Fanning and Cape Herdman along the E. coast of Palmer Land. Disc. and photographed from the air in December 1940 by members of the USAS and named for Maj. (later Col.) Andre L. Violante, USA, who designed the prefabricated buildings used by the expedition. Particularly because of a false floor, they proved to be the most satisfactory quarters used by American Antarctic expeditions.

Virchow Hill 64°07'S., 62°17'W.

Hill between Lister and Paré Glaciers in the N. part of Brabant I., in the Palmer Archipelago. Shown on an Argentine Govt. chart in 1953, but not named. Photographed by Hunting Aerosurveys Ltd. in 1956-57, and mapped from these photos in 1959. Named by the UK-APC for Rudolph Virchow (1821-1902), German pioneer of pathological research.

Virdin, Mount 73°29'S., 61°54'W.

A mountain 4 mi. SW. of Mt. Hemmingsen in the Werner Mtns., Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Floyd Virdin, construction mechanic at South Pole Station in 1967.

Virgil Spur: see Vigil Spur 71°06'S., 165°30'E.

Virginia, Mount 79°15'S., 84°02'W.

A bare rock mountain at the N. extremity of a ridge in the Pioneer Heights, Heritage Range. The mountain marks the point of convergence of the Splettstoesser and Schmidt Glaciers. Mapped by USGS from ground surveys and USN air photos, 1961-66. Named by US-ACAN for Virginia S. Taylor, geographer, a staff assistant to US-ACAN, 1961-65.

Visca, Anse: see Visca Anchorage 62°05'S., 58°24'W.

Visca Anchorage 62°05'S., 58°24'W.

The northwestern cove of Martel Inlet, Admiralty Bay, at King George I. in the South Shetland Islands.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Charted by the FrAE, 1908-10, under Charcot, and named by him for Dr. Visca, an acquaintance in Montevideo.

Vishniac Peak 77°14'S., 160°31'E.

A peak (2,280 m.) which rises just north of the head of Webb Glacier and 3 mi. southwest of Skew Peak in southern Victoria Land. Mapped by USGS from surveys and U.S. Navy aerial photography, 1947-62. Named by US-ACAN for Wolf V. Vishniac (1922-73), professor of biology at the Univ. of Rochester, New York, who made Antarctic studies (1971-72 and 1973) on the water absorption of soil particles and its microbiological significance, and the ability of microorganisms to withstand a hostile milieu. Dr. Vishniac fell to his death in the Asgard Range, upper Wright Valley, 20 mi. south of this peak, on Dec. 11, 1973.

Visible, Cabo: see Well-met, Cape 63°47'S., 57°19'W.

Vision, Mount 78°13'S., 166°15'E.

A peak in the volcanic complex 1 mi. NW. of Mt. Aurora on Black Island. So named by the NZGSAE (1958-59) because of the magnificent view obtained of the peaks in this vicinity and of the Ross Archipelago and Minna Bluff area.

Visión, Punta: see View Point 63°33'S., 57°22'W.

Visokoi Island 56°42'S., 27°12'W.

Island 4.5 mi. long and 3 mi. wide, capped by Mt. Hodson, a volcanic peak 915 m., in the South Sandwich Islands. Disc. in 1819 by a Russ. exp. under Bellingshausen, who named the island Visokoi (high) because of its conspicuous height.

Visser Hill 66°45'S., 67°44'W.

A hill 2.5 mi. S. of Mt. Vélain in northern Adelaide Island. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for Philipp C. Visser (1882-1955), Dutch diplomat and mountaineer who made classic investigations of glaciers in the Karakoram (1921-35).

Vista, Punta: see View Point 63°33'S., 57°22'W.

Vitie, Cabo: see Hartree, Cape 60°48'S., 44°44'W.

Vitkovskogo, Skaly: see Glopensranen Nunatak 72°08'S., 10°01'E.

Vitnesteinen Rock 71°25'S., 12°36'E.

A large rock outcrop along the W. side of Östliche Petermann Range in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by

GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and named Vitnesteinen (the witness stone).

Vito, Mount 85°44'S., 131°30'W.

A bare mountain, 1,810 m., in western Wisconsin Range, standing 2 mi. NE. of Mt. Frontz along the E. side of Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for John Vito, electronics technician, Byrd Station winter party, 1961.

Vittoria Buttress 69°23'S., 71°47'W.

Conspicuous rock cliff, 750 m., overlooking the SE. side of Lazarev Bay and forming the NW. extremity of the Lassus Mtns. in northern Alexander Island. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Tomás Luis de Vittoria (1535-1611), Spanish composer.

Vittorio Buttress: see Vittoria Buttress 69°23'S., 71°47'W.

Vivaldi Gap 70°40'S., 70°20'W.

Low snow-covered gap between Colbert Mtns. and Lully Foothills, connecting Purcell Snowfield with Schubert Inlet on the W. central coast of Alexander Island. The feature appears to be first shown on maps of the USAS which phot. Alexander I. from the air in 1940. It was mapped in detail from air photos obtained by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Antonio Vivaldi (1675-1741), Venetian composer.

Vivian Nunatak 77°32'S., 143°34'W.

A nunatak which marks the SW. extremity of the Mackay Mountains in Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Lt. John F. Vivian, USNR, co-pilot of LC-130F Hercules aircraft during Operation Deep Freeze 1968.

Vize Islands 65°40'S., 65°37'W.

Group of small islands lying 2.5 mi. S. of Karelin Is., off the E. side of Renaud I. in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Vladimir Vize, Soviet climatologist and oceanographer, a pioneer of ice forecasting methods and author of numerous works on sea ice in the Arctic.

Vkhodnoy Island 66°32'S., 92°58'E.

A small island in the Haswell Islands, lying 0.5 mi. SW. of Tokarev Island and 1.4 mi. NW. of Mabus Point. Plotted by G.D. Blodgett (1955) from aerial

GEOGRAPHIC NAMES OF THE ANTARCTIC

photographs taken by USN Operation Highjump (1946-47). Photographed by the Soviet Ant. Exp. (1956) and shown on their map as Ostrov Vkhodnoy (entrance island), presumably because of its location along the ship route to Mabus Point and Mirnyy Station.

Vogel Glacier 65°00'S., 63°10'W.

Glacier flowing into Flandres Bay 3 mi. SE. of Cape Willems, on the W. coast of Graham Land. The glacier appears on an Argentine Govt. chart of 1952. Named by the UK-APC in 1960 for Hermann W. Vogel (1834-1898), German chemist who introduced the first orthochromatic emulsion for photographic plates in 1903.

Vogel Insel: see Bird Island 54°00'S., 38°03'W.

Vogel Peak 54°34'S., 36°14'W.

Peak, 1,350 m., rising 1.5 mi. SE. of Ross Pass in the Salvesen Range of South Georgia. The name Matterhorn was given by the German group of the International Polar Year Investigations, 1882-83. This name has never gained currency and since many peaks in South Georgia resemble the Swiss Matterhorn, a new name was proposed by the UK-APC in 1957. Vogel Peak is named for Dr. P. Vogel, second-in-command, physicist and meteorologist on the 1882-83 Ger. exp., who made the first glaciological studies in South Georgia.

Vogt Peak 82°22'S., 156°44'E.

Peak, 2,180 m., surmounting the E. part of McKay Cliffs in the Geologists Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Peter R. Vogt, USARP geologist at McMurdo Station, 1962-63.

Voile, Rocher: see Sail Rock 63°02'S., 60°57'W.

Voit Peak 66°40'S., 65°35'W.

Peak between Drummond and Hopkins Glaciers on the W. coast of Graham Land. Photographed by the FIDASE in 1956-57. Named by the UK-APC in 1960 for Carl von Voit (1831-1908), German physiologist, pioneer of basic metabolic studies who published what was probably the first standard of human calorie requirements in 1881.

Volcano: see Vulcan Nunatak 76°35'S., 144°37'W.

Vollmer Island 76°44'S., 150°30'W.

An ice-covered island 11 mi. long, lying along the edge of Sulzberger Ice Shelf, 7 mi. NW. of Cronenwett Island. It appears that this feature was first observed and

roughly mapped from aerial photographs taken by the ByrdAE, 1928-30. Named by US-ACAN for Lt. T.H. Vollmer, USN, engineering officer aboard USS *Glacier* along this coast, 1961-62.

Von Braun, Mount 71°59'S., 169°34'E.

Mountain (3,275 m.) located 4 mi. S. of Mt. Sabine in the Admiralty Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Wernher von Braun of the National Aeronautics and Space Administration, a visitor at McMurdo Station, 1966-67.

Von der Wall Point 72°29'S., 98°50'W.

A low ice-covered point on the S. side of Thurston Island. It extends into Peacock Sound toward the NE. extremity of Sherman Island. Delineated from aerial photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for J. H. Von der Wall, tractor driver and mechanic with the ByrdAE in 1933-35.

Von Essen Mountain 72°14'S., 2°23'E.

Mountain, 2,665 m., marking the SW. end of the Gjelsvik Mtns. in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59). Named for R. G. D. J. Von Essen, commander of the Swedish Air Force unit (1951-52) with the NBSAE.

Von Essenskarvet: see Von Essen Mountain 72°14'S., 2°23'E.

von Sterneck, Cape: see Sterneck, Cape 64°04'S., 61°02'W.

Vorgebirge der guten Begegnung: see Well-met, Cape 63°47'S., 57°19'W.

Voronina, Mys: see Hudson Cape 68°20'S., 153°45'E.

Vorposten Peak 71°25'S., 15°31'E.

An isolated peak (1,670 m.) about 25 mi. NE. of the Payer Mtns. in central Queen Maud Land. This feature was discovered by the GerAE under Ritscher, 1938-39, and named Vorposten (the outpost) because of its location at the eastern extremity of the area explored by the German expedition.

Vorrkulten Mountain 73°04'S., 1°54'W.

A mountain at the N. end of Vestvorren Ridge, just N. of Neumayer Cliffs in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys

GEOGRAPHIC NAMES OF THE ANTARCTIC

and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vorrkulten (the jetty knoll).

Vornnipa Peak 73°08'S., 1°51'W.

A peak, 2,320 m., surmounting Neumayer Cliffs just S. of Vestvorren Ridge in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vornnipa (the jetty peak).

Vorrind Peak 73°05'S., 1°35'W.

A peak at the N. end of Austvorren Ridge, just N. of Neumayer Cliffs in Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vorrind (the jetty peak).

Vorta Nunatak 72°05'S., 1°44'E.

An isolated nunatak about 5 mi. E. of Brattskarvet Mtn., in the Sverdrup Mtns., Queen Maud Land. Photographed from the air by the GerAE (1938-39). Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Vorta (the wart).

Vörterkaka: see Vörterkaka Nunatak 72°20'S., 27°29'E.

Vörterkaka Nunatak 72°20'S., 27°29'E.

Rock outcrop 1 mi. S. of Bleiskoltane Rocks at the SE. extremity of the Sør Rondane Mountains. Mapped in 1957 by Norwegian cartographers from air photos taken by USN Op. Hjp., 1946-47, and named Vörterkaka (a round Norwegian sweet bread containing brewer's wort).

Vortex Col 77°34'S., 160°25'E.

A col leading from the plateau into the S. side of Wright Upper Glacier in Victoria Land. At this locality, winds carrying clouds of snow from the polar plateau are deflected by Mt. Fleming and funneled down this depression. The descriptive name was given by NZ-APC.

Vortex Island 63°44'S., 57°38'W.

Island 0.5 mi. long and 245 m. high, lying in the NE. part of Prince Gustav Chan. about 2 mi. WSW. of Corry I., close S. of Trinity Peninsula. Islands in this area were first seen by a party under J. Gunnar Andersson of the SwedAE, 1901-4. Vortex Island was

first charted by the FIDS in August 1945. The FIDS survey party was forced to lie idle there by a whirlwind snowstorm, thus suggesting the name.

Vorweg Point 65°57'S., 64°48'W.

Point NW. of Huitfeldt Pt. on the SW. side of Barilari Bay, on the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 for O. Vorweg, German pioneer exponent of skiing and author of *Das Schneeschuh Laufen* (1893), probably the earliest manual on skiing.

Vos'mogo Marta, Skaly: see Vos'moy Mart Rocks 72°02'S., 14°40'E.

Vos'moy Mart Rocks 72°02'S., 14°40'E.

Group of rocks lying 0.5 mi. E. of Mt. Dzhilil' in Linnormen Hills, Payer Mtns., in Queen Maud Land. Plotted from air photos and surveys by the NorAE, 1956-60, and SovAE, 1960-61. Named Skaly Vos'mogo Marta (March 8th Rocks) by the USSR in 1966 in recognition of International Women's Day.

Vostok, Cape 69°07'S., 72°10'W.

Rocky mass which forms the W. extremity of the Havre Mtns. and the NW. extremity of Alexander Island. First seen by the Russ. exp. of 1821 under Bellingshausen. Mapped in detail from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for the sloop *Vostok*, commanded by Bellingshausen.

Voyeykova, Gory: see Sørhortane 72°02'S., 12°35'E.

Voyeykov Ice Shelf 66°20'S., 124°38'E.

An ice shelf fringing the coast between Paulding Bay and Cape Goodenough. Mapped from photographs taken by the SovAE (1958) and named after the Russian climatologist Aleksandr I. Voyeykov (1842-1916).

Vrana Dome 69°53'S., 73°28'E.

A prominent, rounded ice dome about 4 mi. NE. of Statler Hills, at the E. side of Amery Ice Shelf. A survey station was established on the dome during the ANARE tellurometer traverse from Larsemann Hills to Reinbolt Hills in 1968. Named for A. Vrana, cosmic ray physicist at Mawson Station in 1968, who assisted in the survey.

Vrana Peak 70°22'S., 63°59'E.

Peak just SW. of Mt. Turnbull and 14 mi. SW. of Mt. Starlight, in the Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1955-65. Named by ANCA for A. Vrana, physicist at Mawson Station, 1965.

GEOGRAPHIC NAMES OF THE ANTARCTIC

V. Ryswyck, Cap: see Ryswyck Point 64°34'S., 62°50'W.

Vukovich Peaks 72°23'S., 74°59'E.

Two well-defined peaks surmounting the northernmost rock outcrop in the Grove Mountains. Mapped from air photos, 1956-60, by ANARE. Named by ANCA for J. N. Vukovich, weather observer at Mawson Station, 1963.

Vulcan Hills 73°40'S., 163°38'E.

A group of small volcanic hills about 4 mi. SW. of Shulte Hills in the Southern Cross Mtns. of Victoria Land. Named by the southern party of NZGSAE, 1966-67, in recognition of the volcanic composition of the rocks which form these hills.

Vulcan Nunatak 76°35'S., 144°37'W.

A nunatak, badly sculptured away by ice, the remnant of a huge cone of an extinct volcano, located 2 mi. SE. of Mt. Richardson in the Fosdick Mtns. of the Ford Ranges in Marie Byrd Land. Discovered on Nov. 28, 1934 by Paul Siple and Stevenson Corey of the ByrdAE, 1933-35, who investigated the feature and referred to it as "The Volcano." A form of the original field name has been approved by US-ACAN.

Vulcan Point 57°02'S., 26°43'W.

The NW. point of Candlemas I. in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and so named because a lava plateau occupies the N. portion of the island, giving evidence of earlier volcanic activity.

VX-6, Mount 72°38'S., 162°12'E.

A distinctive, sharp mountain, 2,185 m., standing 4 mi. N. of Minaret Nunatak in the Monument Nunataks. Surveyed by the USARP Victoria Land Traverse

Party, 1959-60. They named it for USN Air Development Squadron Six (VX-6) which supported the traverse party in the field. On Jan. 1, 1969, the squadron was redesignated Antarctic Development Squadron Six (VXE-6) but its mission remained the same.

Vyacheslava Frolova, Khrebet: see Frolov Ridge 70°45'S., 162°09'E.

Vyatskaya Peak 71°57'S., 13°32'E.

Peak, 2,455 m., on the N. part of Skavlrimen Ridge in the Weyprecht Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966, probably for Vyatka, a Soviet river.

Vysotskiy Peak 71°34'S., 11°40'E.

A peak, 2,035 m., in the N. part of Gorki Ridge, overlooking the Schüssel Moraine in the Humboldt Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for Soviet geographer G. N. Vysotskiy.

Vysotskogo, Gora: see Vysotskiy Peak 71°34'S., 11°40'E.

Vystrel Mountain 71°37'S., 15°04'E.

Partly snow-covered mountain, 1,995 m., standing 1 mi. S. of Mt. Rukhin at the S. end of the Lomonosov Mtns. in Queen Maud Land. Discovered and first plotted from air photos by GerAE, 1938-39. Replotted from air photos by NorAE, 1958-59, and SovAE, 1960-61. The name Gora Vystrel (shot mountain) first appears on a 1961 USSR map.

Waddington Bay 65°16'S., 64°05'W.

Bay 2 mi. long, in a NW.-SE. direction, and 1 mi. wide, indenting the W. coast of Graham Land immediately N. of Cape Tuxen. This bay is partially defined on the charts of the BelgAE, 1897-99, under Gerlache. It was more fully delineated by the FrAE, 1908-10, under Charcot, who named it for Senator Waddington, Pres. of the Chamber of Commerce at Rouen.

Wade, Mount 84°51'S., 174°19'W.

A massive mountain (4,085 m.) which is a most distinctive landmark in its region, standing 4 mi. NW. of Mt. Campbell in the Prince Olav Mountains. The feature is easily viewed from positions on Shackleton Glacier or the Ross Ice Shelf. Discovered and photographed by R. Adm. Byrd on flights to the Queen Maud Mtns. in November 1929. Named by US-SCAN for F. Alton Wade, geologist with the ByrdAE (1933-35), senior scientist at West Base of the USAS (1939-41), and leader of two Texas Tech Shackleton Glacier Parties (1962-63 and 1964-65) to this vicinity.

Wade Glacier: see Shackleton Glacier 84°35'S., 176°20'W.

Wade Point 70°41'S., 67°41'W.

Rocky mass fronting on George VI Sound, rising to 915 m. and marking the W. extremity of the rock ridge separating Millett and Bertram Glaciers on the W. coast of Palmer Land. First surveyed in 1936 by the BGLE under Rymill. Named in 1954 by the members of the expedition for Mrs. Muriel H. Wade, who was secretary to the BGLE.

Wadsworth, Cape: see Wadworth, Cape 73°19'S., 169°47'E.

Wadworth, Cape 73°19'S., 169°47'E.

The northern extremity of Coulman Island, in the Ross Sea just off Victoria Land. Discovered Jan. 17, 1841 by Sir James Clark Ross who named it in compliment to his wife's uncle, Robert John Coulman, Esq., of Wadworth Hall, Doncaster.

Waesche, Mount 77°10'S., 126°54'W.

A large and prominent mountain (3,290 m.) of volcanic origin, standing immediately SW. of Mt. Sidley and marking the southern end of the Executive Committee Range in Marie Byrd Land. The feature is snow covered except for rock exposures on the S. and SW. slopes. Discovered by the United States Antarctic Service expedition on a flight, Dec. 15, 1940, and named for V. Adm. Russell R. Waesche, U.S. Coast Guard, member of the Antarctic Service Executive Committee.

Wager Glacier 69°48'S., 69°23'W.

Small, heavily crevassed glacier on the E. coast of Alexander Island. It occupies a trench-like valley and flows E. into George VI Sound immediately S. of Marr Bluff. Surveyed in 1948 by the FIDS and named by them for Lawrence R. Wager, prof. of geology at Oxford University.

Wagner Ice Piedmont 69°28'S., 72°38'W.

Ice piedmont, 9 mi. long in a NW.-SE. direction and 4 mi. wide, overlying the SW. part of Rothschild Island. Observed and phot. from the air by the USAS, 1939-41. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Richard Wagner (1813-1883), German composer.

Wagner Nunatak 83°58'S., 66°30'W.

One of the Rambo Nunataks, 850 m., standing 9 mi. S. of Blackburn Nunatak in the Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for John K. Wagner, radioscience at Plateau Station, winter 1967.

Wagner Spur 70°09'S., 159°36'E.

A pointed rock and ice spur along the N. flank of Pryor Glacier, 11 mi. SE. of Mt. Gorton, at the SE. extremity of Wilson Hills. Mapped by USGS from surveys and U.S. Navy aerial photography, 1960-62. Named by US-ACAN for John E. Wagner, worker in the field of glaciology at McMurdo Station, 1967-68.

Wagoner Inlet 71°57'S., 100°02'W.

An ice-filled inlet between Tinglof and Starr Peninsulas on the N. side of Thurston Island. Delineated from aerial photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Charles Wagoner, seaman on the USS *Glacier* during the USN Bellingshausen Sea Exp., a member of the field party engaged in scientific work on Thurston Island in February 1960.

Wahl Glacier 83°59'S., 165°06'E.

A glacier, 10 mi. long, flowing NW. from Grindley Plateau to enter upper Lennox-King Gl. westward of Mt. Mackellar. Named by US-ACAN for Bruno W. Wahl, USARP ionospheric physicist at McMurdo Station, 1962.

Waifs, Les: see Waifs, The 64°33'S., 62°42'W.

Waifs, The 64°33'S., 62°42'W.

Group of islands and rocks lying in the middle of the SE. entrance to Schollaert Chan., in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache. The name appears on a chart based upon a 1927 survey by DI personnel on the *Discovery*.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Waipuke Beach 77°14'S., 166°24'E.

Beach between McDonald and Caughley Beaches, lying 6 mi. SW. of Cape Bird on Ross Island. So named by the NZGSAE, 1958-59, because of periodic flooding by meltwater from the Cape Bird icecap, which has been destructive to nearby penguin rookeries. Waipuke is the Maori word for flood.

Waist, The 64°38'S., 61°24'W.

The narrow neck of land between Herbert Plateau and Foster Plateau in northern Graham Land. Photographed by the FIDASE in 1956-57 and mapped from these photos by the FIDS. So named by the UK-APC in 1960.

Waitabit Cliffs 71°31'S., 68°14'W.

A line of sedimentary cliffs on the E. coast of Alexander I. which faces E. onto George VI Sound and extends 3 mi. N. from the mouth of Mercury Glacier. Probably first seen by Lincoln Ellsworth, who flew directly over it and phot. segments of this coast on Nov. 23, 1935. First roughly surveyed in 1936 by the BGLE. Resurveyed in 1949 by the FIDS, at which time the rock strata were independently examined by members of the party at two different points, an important investigation causing the delay which gave rise to the name.

Waite, Cape 72°44'S., 103°16'W.

Cape at the NW. extremity of King Peninsula, marking the SW. side of the entrance to Peacock Sound. Delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Amory H. Waite, member of the ByrdAE, 1933-35, and communications specialist on the *Atka* voyage of 1955 and the USN Bellingshausen Sea Exp. of 1959-60.

Waite Islands 72°44'S., 103°40'W.

A group of small islands in Amundsen Sea, lying 6 mi. W. of Cape Waite, the NW. extremity of King Peninsula. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for their proximity to Cape Waite.

Waitt Peaks 71°29'S., 62°34'W.

A cluster of pointed peaks, mostly snow covered, at the SW. end of a large horseshoe-shaped ridge. Located 4 mi. NW. of Schirmacher Massif in the E. part of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for geologist Richard B. Waitt, a member of the USGS geological and mapping party to the Lasiter Coast, 1972-73.

Wakadori Island 69°00'S., 39°32'E.

The southernmost island in a cluster of three small islands that lie 0.5 mi. northwest of the strait that sepa-

rates Ongul Island and East Ongul Island. Mapped from surveys and air photos by the JARE, 1957-62. The name "Wakadori-jima" (young bird island) was given by JARE Headquarters in 1972.

Wakefield, Mount: see Hope, Mount 69°46'S., 64°34'W.

Wakefield Highland 69°20'S., 65°10'W.

A snow-covered highland in central Antarctic Peninsula, bounded to the N. by Hermes Glacier and the heads of Weyerhaeuser and Aphrodite Glaciers, to the W. by the heads of Airy, Rotz and Seller Glaciers, to the S. by Fleming Glacier and to the E. by the heads of Lurabee, Sunfix and Grimley Glaciers. Photographed from the air by RARE on Dec. 22, 1947. Surveyed by FIDS in Nov. 1960. Named after Viscount Wakefield of Hythe, a contributor to BGLE, 1934-37. This toponym, concurred in by UK-APC and US-ACAN, restores the name Wakefield in the vicinity of the BGLE's displaced "Mount Wakefield" (now Mount Hope).

Wakefield Reef 53°11'S., 73°21'E.

Reef, 0.5 mi. across, lying 2.5 mi. WSW. of Cape Arcona, off the SW. side of Heard Island. The existence of a reef in this area is noted on an unpublished American sealer's map of "Hurds Island" compiled during the 1860-70 period, although the configuration of this side of the island is somewhat distorted, as were all early maps of the island. The feature was more accurately charted and named by HMS *Wakefield* which visited the island in April 1910.

Wakeford Nunatak 67°49'S., 63°02'E.

Small nunatak 3 mi. E. of the Central Masson Range in the Framnes Mtns., Mac. Robertson Land. Plotted from photos taken from ANARE aircraft in 1960 and seen by an ANARE party in 1962. Named by ANCA for R. Wakeford, cook at Mawson Station in 1962.

Walcott, Cape 69°05'S., 63°19'W.

Bold, ice-covered headland rising to 625 m., forming the seaward extremity of Scripps Heights on the E. coast of Palmer Land. Disc. by Sir Hubert Wilkins in 1928 and named by him for Frederic C. Walcott of the Council of the American Geographical Society.

Walcott, Mount 85°21'S., 87°23'W.

A mainly ice-free mountain (2,155 m.) located 2.5 mi. E. of Mt. Powell in the E. part of the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960-61. Named for Charles D. Walcott, third director of the U.S. Geological Survey, 1894-1907.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Walcott Bay 78°14'S., 163°37'E.

A bay indenting the coast of Victoria Land between Walcott Glacier and Heald Island. Named by the BrAE (1910-13) in association with Walcott Glacier.

Walcott Glacier 78°14'S., 163°15'E.

Glacier between Radian and Howchin Glaciers, descending eastward from the Royal Society Range toward Walcott Bay. Named by Taylor of the BrAE (1910-13), presumably for Charles D. Walcott, Director of the U.S. Geological Survey (1894-1907) and Secretary of the Smithsonian Institution, 1907-28.

Walcott Névé 84°23'S., 162°40'E.

A névé, about 350 square miles in area, bounded by the Marshall Mtns., Lewis Cliffs and Mt. Sirius. Named by the Northern Party of the NZGSAE (1961-62) for Richard Walcott, party leader and geologist.

Walcott Peak 71°49'S., 64°22'W.

A large nunatak midway between Mt. Jukkola and Lokey Peak in the S. part of the Guthridge Nunataks, in central Palmer Land. Mapped by the USGS in 1974. Named by US-ACAN for Lt. Fred P. Walcott, CEC, USN, Officer-in-Charge of the South Pole Station in 1973.

Waldeck Island: see Waldeck-Rousseau Peak 66°09'S., 65°38'W.

Waldeck Peak: see Waldeck-Rousseau Peak 66°09'S., 65°38'W.

Waldeck-Rousseau, Cap: see Waldeck-Rousseau Peak 66°09'S., 65°38'W.

Waldeck-Rousseau Peak 66°09'S., 65°38'W.

A conspicuous monolith 3 mi. ENE. of Cape Evensen on the W. coast of Graham Land. The FrAE (1903-5) under Jean B. Charcot charted a cape in this area which they named for French statesman Pierre Waldeck-Rousseau. On re-exploring this area, the FrAE (1908-10) under Charcot sighted the feature from Pendleton Strait, 25 mi. distant, and charted it as an island near the coast. Correlating its work with that of Charcot, the BGLE under John Rymill charted this portion of the coast by land and from the air in 1935. Waldeck-Rousseau Peak as here applied is in accord with the interpretation of the BGLE.

Walden, Cape 71°44'S., 96°55'W.

Ice-covered cape at the NW. termination of Evans Pen., marking the E. entrance of Koether Inlet on

Thurston Island. Delineated from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Arthur T. Walden, dog driver and leader of the Queen Maud Mountains Supporting Party of the ByrdAE in 1928-30.

Waldron, Cape 66°34'S., 115°33'E.

An ice-covered cape just westward of Totten Glacier. Delineated by G.D. Blodgett (1955) from aerial photographs taken by USN Operation Highjump (1946-47). Named by US-ACAN for R.R. Waldron, purser on the sloop *Vincennes* of the USEE (1838-42) under Lt. Charles Wilkes.

Waldron, Mount 78°27'S., 84°53'W.

A mountain (3,100 m.) 3 mi. N. of Mt. Tuck, surmounting the ridge between Dater and Hansen Glaciers in the Sentinel Range, Ellsworth Mountains. Discovered by USN Squadron VX-6 on photographic flights of Dec. 14-15, 1959, and mapped from these photos by USGS. Named by US-ACAN for Kenneth L. Waldron, construction electrician, USN, a member of the IGY South Pole Station winter party, 1957.

Waldron Glacier 66°31'S., 130°00'E.

A channel glacier flowing to the E. side of Porpoise Bay, midway between Sandford and Morse Glaciers. Delineated from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN for Thomas W. Waldron, captain's clerk on the brig *Porpoise* of the USEE (1838-42) under Wilkes.

Waldron Spurs 84°35'S., 175°40'W.

A group of rocky spurs at the E. side of the terminus of Shackleton Gl., in the foothills of the Queen Maud Mountains. Discovered by the USAS (1939-41), and named by US-ACAN for Lt. Cdr. James E. Waldron, USNR, pilot with Squadron VX-6 in 1957-58.

Wales Glacier 77°37'S., 163°31'E.

Short alpine glacier just W. of Mt. Barnes at the E. end of the Kukri Hills. It drains N. into Taylor Valley in Victoria Land. Named by the BrAE (1910-13) under Scott.

Wales Head 54°00'S., 37°34'W.

Headland 2.5 mi. E. of Craigie Pt. on the N. coast of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for William Wales (1734-1798), English astronomer sent by the Board of Longitude to make astronomical observations during Cook's second voyage, 1772-75, sailing in the *Resolution*.

Wales Stream 77°35'S., 163°30'E.

A meltwater stream that drains from Wales Glacier to Explorers Cove in New Harbor, Victoria Land. The

GEOGRAPHIC NAMES OF THE ANTARCTIC

name was used by N.Z. geologist Burton Murrell in 1973, but he attributes it to an earlier use by C.G. Vucetich and H.W. Wellman.

Walgreen Coast 75°30'S., 107°00'W.

That portion of the coast of Antarctica between Cape Herlacher and Cape Waite. Discovered by R. Adm. Byrd and members of the USAS in flights from the USS *Bear* in February 1940. Named by Byrd for Charles R. Walgreen, Pres. of the Walgreen Drug Co. of Chicago, who was a supporter of the ByrdAE, 1933-35, and assisted in equipping the *Bear* for the USAS, 1939-41. This coast was mapped in detail by USGS from ground surveys and U.S. Navy air photos, 1959-66.

Walgreen Peak 77°03'S., 145°43'W.

A prominent rock peak (570 m.) which forms the NW. extremity of the Sarnoff Mtns., in the Ford Ranges of Marie Byrd Land. Mapped by USAS (1939-41) led by R. Adm. R.E. Byrd. Named for Charles R. (Buck) Walgreen, Jr., V. Pres. of Walgreen Co., 1933-39 (later Chairman of the Board), who contributed malted milk powder used on the USAS (1939-41).

Walkabout Rocks 68°22'S., 78°32'E.

Prominent rock exposures along the coast at the NE. extremity of the Vestfold Hills, about 0.5 mi. S. of Wyatt Earp Islands. Mapped from air photos taken by the Lars Christensen Exp., 1936-37. In January 1939 a landing was made on this point from the *Wyatt Earp*. It was visited by an ANARE party in May 1957 and records left in 1939 were recovered. The records were wrapped in a copy of the Australian Geographical Magazine "Walkabout," hence the name.

Walker, Cape: see Walker Point 61°08'S., 54°42'W.

Walker, Mount 64°49'S., 62°01'W.

A snow-covered mountain which rises from the NE. part of Forbidden Plateau, 2 mi. S. of the head of Blanchard Glacier, in northern Graham Land. It was surveyed by FIDS in 1955. Named by UK-APC for Richard Walker of the Discovery Investigations, First Officer on RRS *Discovery II*, 1933-37.

Walker, Mount: see Siple, Mount 73°15'S., 126°06'W.

Walker Bay 62°38'S., 60°42'W.

Bay lying between John Beach and Hannah Pt. along the S. coast of Livingston I., in the South Shetland Islands. Named by the UK-APC in 1958 for John Walker, Master of the sealer *John* of London, who visited the South Shetland Islands in 1820-21 and provided George Powell with descriptions and sketches of their southern coasts for incorporation in his 1822 chart.

Walker Mountains 72°07'S., 99°00'W.

A range of peaks and nunataks which are fairly well separated but trend E.-W. to form the axis, or spine, of Thurston Island. Disc. by R. Adm. Byrd and members of the USAS in a flight from the ship *Bear*, Feb. 27, 1940. Named by US-SCAN for Lt. William M. Walker, captain of the USEE ship *Flying Fish* which reached a point 100 mi. N. of Thurston Island on Mar. 23, 1839.

Walker Nunatak 67°55'S., 63°15'E.

Small nunatak 10 mi. E. of Branson Nunatak on the E. edge of the Framnes Mtns., Mac. Robertson Land. Photographed from ANARE aircraft in 1962, and seen by an ANARE dog-sledge party in January 1963. Named by ANCA for K. G. Walker, assistant cook at Mawson Station in 1962, a member of the sledge party.

Walker Peak 82°38'S., 53°13'W.

A sharp peak, 1,495 m., marking the SW. extremity of Dufek Massif, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Paul T. Walker, glaciologist at Ellsworth Station, a member of the first party to visit Dufek Massif, in December 1957.

Walker Point 61°08'S., 54°42'W.

Point which lies 3 mi. SW. of Cape Valentine, near the E. end of Elephant I. in the South Shetland Islands. The name appears on Powell's map of 1822 based upon the joint cruise of Capt. Nathaniel B. Palmer, in the sloop *James Monroe*, and Capt. George Powell, in the sloop *Dove*, in December 1821. Probably named for Capt. John Walker, whose assistance in the construction of the map was acknowledged by Powell.

Walker Ridge 72°34'S., 168°22'E.

A high mountain ridge between Stafford Glacier and Coral Sea Glacier in the Victory Mtns. of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Dr. Eric A. Walker, Pres. of Pennsylvania State Univ. and Pres. of the National Academy of Engineering. He was a member of the National Science Board from 1960-64 and Chairman from 1964-66.

Walker Rocks 76°14'S., 161°36'E.

A group of high rocks, about 3 mi. in extent, lying 3 mi. SW. of Mt. Murray near the mouth of Mawson Gl. in Victoria Land. Named by US-ACAN in 1964 for Carson B. Walker, utility man at South Pole Station, 1961.

Walker's Point: see Walker Point 61°08'S., 54°42'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Walker Spur 85°01'S., 91°12'W.

A notable rock spur forming the E. side of Compton Valley in the N. part of the Ford Massif, Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party which surveyed these mountains in 1960-61. Named for Capt. Joseph G. Walker, USMC, Squadron VX-6 pilot who made several flights in support of the USGS party in 1960-61.

Walker Valley 70°41'S., 67°33'E.

A large, wide, snow-filled valley lying immediately W. of Manning Massif in the Aramis Range, Prince Charles Mountains. Mapped from ANARE air photographs. Named by ANCA for K.G. Walker, expedition assistant with the ANARE Prince Charles Mtns. survey party in 1970.

Walk Glacier 73°38'S., 94°18'W.

A glacier descending westward from Christoffersen Heights, to the south of Forbidden Rocks, in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61. Named by US-ACAN for Lt. Donald R. Walk, USN, medical officer and officer in charge of Byrd Station, 1961.

Wallabies Nunataks 81°12'S., 156°20'E.

A large group of nunataks near the polar plateau, lying 10 mi. NE. of All-Blacks Nunataks at the E. side of the Byrd Névé. Named by the NZGSAE (1960-61) for the well known Australian rugby team.

Wallace, Cape 63°13'S., 62°15'W.

Cape marking the NW. end of Low I. in the South Shetland Islands. Though the origin of the name Cape Wallace is unknown, it has appeared on charts for over a hundred years and its usage has been established internationally.

Wallace, Mount 85°39'S., 151°24'W.

One of the Tapley Mtns., 1,490 m., standing at the S. side of the mouth of Roe Gl. at the juncture with Scott Gl., in the Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for J. Allen Wallace, Jr., meteorologist, South Pole Station winter party, 1960.

Wallace Rock 75°55'S., 128°27'W.

A rock outcrop 1 mi. E. of Peter Nunatak at the SE. extremity of the McCuddin Mtns., Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-69. Named by US-ACAN for James W. Wallace, UTC, USN, Chief Utilitiesman at South Pole Station in 1965 and 1969.

Wollaston, Cape: see Wollaston, Cape 63°40'S., 60°47'W.

Wallend Glacier 64°58'S., 62°13'W.

A deeply entrenched glacier which drains eastward from Forbidden Plateau to join Green Glacier in northern Graham Land. Surveyed by FIDS in 1955. So named by UK-APC because the glacier is walled in on three sides by the escarpment of Forbidden Plateau.

Wollaston, Cap: see Wollaston, Cape 63°40'S., 60°47'W.

Wallis Glacier 71°14'S., 168°15'E.

A glacier nearly 20 mi. long in the NW. part of the Admiralty Mtns., Victoria Land. The glacier flows N. and then NW., eventually coalescing with the lower portions of Dennistoun and Nash Glaciers just before all three reach the sea just E. of Cape Scott. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Staff Sergeant Nathaniel Wallis, who perished in the crash of a C-154 Globemaster aircraft in this vicinity in 1958.

Wallis Island: see Willis Islands 54°00'S., 38°11'W.

Wallis Nunataks 66°52'S., 55°39'E.

Four nunataks with steep rock faces on their S. and E. sides, standing 4 mi. ENE. of Mt. Storegutt in Enderby Land. Mapped from ANARE surveys and air photos, 1954-66. Named by ANCA for G. R. Wallis, geologist with the ANARE (*Nella Dan*), 1965.

Wallows, The 60°42'S., 45°37'W.

Low-lying area 0.3 mi. S. of Berry Head in the NE. part of Signy I., in the South Orkney Islands. The area is sheltered by low ridges on all sides and has a small freshwater pond in the center. Roughly surveyed in 1933 by DI personnel and resurveyed in 1947 by the FIDS. The name given by the FIDS arose because the bulk of moulting elephant seals on Signy I. wallow here in the summer.

Wall Peak 71°03'S., 65°23'E.

The largest and northernmost of three sharply defined peaks about 5 mi. SE. of Husky Massif in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1960. Named for B. H. Wall, ionosphere physicist at Wilkes Station in 1960.

Wall Range 64°49'S., 63°22'W.

Mountain range, 3 mi. long in a NE.-SW. direction, with steep wall-like cliffs and jagged peaks rising to 1,095 m., extending from Thunder Gl. to Channel Gl. in the center of Wiencke I., in the Palmer Archipelago. First mapped by the BelgAE, 1897-99, under Gerlache. Surveyed in 1944 by the FIDS and given this descriptive name.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wall Rock 83°08'S., 56°57'W.

A rock 4 mi. N. of Robbins Nunatak in the Schmidt Hills portion of the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for John Wall, a member of the Electronic Test Unit in the Pensacola Mtns., 1957-58.

Walnum, Mount 72°06'S., 24°10'E.

Large mountain rising to 2,870 m., standing 4 mi. E. of Mt. Widerøe in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and named for Ragnvald Walnum, one-time chairman of the Norwegian Whaling Board, who prepared an ice chart of Antarctica. Remapped by the Norwegians in 1957 from air photos taken by USN Op. Hjp., 1946-47.

Walnumfjellet: see Walnum, Mount 72°06'S., 24°10'E.

Walsham Rocks 64°50'S., 64°32'W.

Group of rocks lying 1 mi. E. of Buff I. at the SW. end of the Palmer Archipelago. Surveyed by the British Naval Hydrographic Survey Unit in 1956-57 and named by the UK-APC for Able Seaman John Walsham, RN, a member of the Unit.

Walsh Bluff 53°06'S., 73°23'E.

A rock bluff close N. of the mouth of Abbotsmith Gl. on the W. side of Heard Island. Surveyed by ANARE in 1948. Named by ANCA for J. E. Walsh, ANARE weather observer on Heard I. in 1950 and 1954; dog attendant at Heard I. in 1951.

Walshe, Mount 86°11'S., 152°15'W.

A bare rock peak, 2,050 m., standing at the N. side of Bartlett Gl. where it joins Scott Gl., in southern Hays Mtns., Queen Maud Mountains. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Cdr. Edward C. Walshe, Jr., USN, an officer aboard the *Ameb* in Antarctica in the 1957-58 and 1958-59 seasons; on the staff of the Commander, U.S. Naval Support Force, Antarctica, during 1966-67.

Walsh Glacier 69°33'S., 158°45'E.

Tributary glacier in the central part of Wilson Hills. It drains ENE. along the S. side of Goodman Hills to enter the lower part of Tomilin Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Gary Walsh, USARP biologist at Hallett Station, 1968-69.

Walsh Nunatak 73°09'S., 63°11'W.

A nunatak on the N. side of Haines Gl., 8 mi. SW. of Mt. Axworthy, in the Dana Mtns., Palmer Land.

Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for John J. Walsh, biologist, member of the Palmer Station-Eastwind Expedition, summer 1965-66.

Walsh Spur 72°40'S., 169°22'E.

A pointed rock spur 4 mi. E. of Mt. Northampton in the Victory Mountains of Victoria Land. The spur forms the W. side of the terminus of Whitehall Glacier. First mapped from surveys by NZGSAE, 1957-58, and U.S. Navy aerial photography. Named by US-ACAN for Cdr. Don Walsh, USN, special assistant to the Assistant Secretary of the Navy for Research and Development, 1971-72. In 1960, with Jacques Piccard, Walsh descended to the bottom of the Mariana Trench in the *Trieste*.

Walter, Pointe: see Walker Point 61°08'S., 54°42'W.

Walter Kohler Range: see Kohler Range 75°05'S., 114°15'W.

Walters Peak 85°39'S., 128°45'W.

A sharp peak, 2,430 m., on the spur descending the N. slope of Wisconsin Range between Faure Peak and Lentz Buttress. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Lt. Cdr. Robert E. Walters, USN, a member of the McMurdo Station winter party, 1960.

Walton, Mount 72°29'S., 160°18'E.

A sharp, bare mountain (2,460 m.) rising midway between Oona Cliff and Mt. Chadwick in the Outback Nunataks. Mapped by USGS from surveys and U.S. Navy air photos, 1959-64. Named by US-ACAN for Fred W. Walton, geomagnetist/seismologist at South Pole Station, 1968.

Walton Mountains 71°10'S., 71°15'W.

Isolated chain of three predominantly snow-covered mountain masses, 1,250 m., extending S. from Schubert Inlet for 35 mi., in Alexander Island. First seen from the air by Lincoln Ellsworth on Nov. 23, 1935, and roughly mapped from photos obtained on that flight by W. L. G. Joerg. Resighted from the air by the USAS in 1940, and in 1947 by the RARE under Ronne. Ronne named the mountains for Lt. Col. R. C. Walton, USMC, of the Office of Naval Research, who was instrumental in obtaining the loan of a ship from the Navy and in securing Navy assistance for the Ronne expedition.

Walton Peak 68°09'S., 66°48'W.

Sharp peak, 825 m., which stands 2 mi. N. of Mt. Rhamnus and is part of the irregular ridge separating

GEOGRAPHIC NAMES OF THE ANTARCTIC

Northeast Gl. from Neny Fjord, on the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1946 and 1948 by the FIDS. Named for Eric W. K. Walton, FIDS engineer at Stonington I. in 1946 and 1947, who in 1946 rescued J. E. Tonkin of FIDS from a crevasse in Northeast Glacier.

Walts Cliff 76°01'S., 135°42'W.

A rock cliff that is conspicuous from a great distance, marking the base of Mt. Berlin at the NE. side, in the Flood Range of Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Dennis S. Walts of the U.S. Weather Bureau, meteorologist at South Pole Station, 1970.

Wandel Island: see Booth Island 65°05'S., 64°00'W.

Wandel Peak 65°05'S., 64°00'W.

Peak, 980 m., standing 0.5 mi. S. of Gourdon Peak and marking the highest point on Booth Island in the Wilhelm Archipelago. In 1898, the BelgAE under Gerlache charted this area and applied the name "Ile Wandel" to this island which Dallmann had named Booth in 1873-74. Although Booth later became established as the name of the island, Gerlache's naming has been preserved in the name for its highest peak. Carl F. Wandel (1843-1930) was a Danish hydrographer who assisted in preparations for the Belgian expedition.

Wanderer Valley 54°00'S., 38°03'W.

A valley in central Bird Island, South Georgia. The valley extends NE. for 0.5 mi. from the head of Freshwater Inlet. Named by the UK-APC after the Wandering Albatross (*Diomedea exulans*) whose principal breeding grounds are nearby.

Wanous, Mount 84°52'S., 62°20'W.

A prominent, bare, conical mountain, 1,660 m., standing 4.5 mi. E. of Pierce Peak at the NE. edge of Mackin Table in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Richard E. Wanous, geophysicist in the Pensacola Mountains, 1965-66.

Waratah Islands 67°24'S., 47°25'E.

Two small islands lying close to the coast about 1 mi. NW. of Hannan Ice Shelf, Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA after the Australian native plant Waratah (*Telopea truncata*).

Warburton Peak 54°05'S., 37°34'W.

Peak, 1,090 m., standing 3 mi. NE. of the head of Wilson Hbr. in the W. part of South Georgia. Sur-

veyed by the SGS in the period 1951-57, and named for Keith Warburton, medical officer of the SGS, 1953-54, who was invalided home soon after the expedition reached the island. He accompanied the SGS, 1955-56, as second-in-command, medical officer and mountaineer.

Ward, Mount 71°36'S., 66°57'W.

A mountain at the NE. end of Steeple Peaks, located S. of Batterbee Mtns. near George VI Sound in western Palmer Land. During a flight on Dec. 23, 1947, by the RARE (1947-48) a high peak was seen in the area S. and E. of Batterbee Mountains. It was named by F. Ronne after W.W. Ward of Beaumont, Texas, editor of the *Beaumont Journal* and a supporter of the expedition. No peak exists at the coordinates given by Ronne, but it is most likely that the feature here described was that seen by him.

Ward, Mount 85°40'S., 167°10'E.

A rock peak 3 mi. SE. of Davis Nunataks, the feature being a southern outlier of the main body of the Dominion Range. Discovered by the BrAE (1907-9) and named for Sir Joseph George Ward, then Prime Minister of New Zealand, who gave the expedition considerable support.

Warden, Mount 86°00'S., 146°37'W.

A snow-covered peak, 2,860 m., standing close SE. of Hunt Spur and surmounting a projecting buttress at the NW. face of Watson Escarpment. Mapped by USGS from surveys and USN air photos, 1960-63. Named by US-ACAN for Lt. George W. Warden, USN, pilot on aircraft flights over the Queen Maud Mtns. in USN Operation Highjump, 1946-47.

Warden Rock 67°32'S., 67°19'W.

Rock lying 2 mi. NW. of Guardian Rock on the N. side of Bigourdan Fjord in Graham Land. Mapped by FIDS from surveys and air photos, 1946-57, and so named from association with Guardian Rock.

Ward Glacier 78°10'S., 163°27'E.

Small glacier between Terminus Mtn. and Howchin Gl. on the E. side of the Royal Society Range in Victoria Land. Named by Taylor of the BrAE (1910-13) for L. Ward, a Tasmanian geologist.

Ward Islands 67°38'S., 69°35'W.

A group of two small islands and off-lying rocks forming the southern part of the Amiot Is., off the SW. part of Adelaide Island. Named by the UK-APC for Herbert G. V. Ward, Chief Engineer of RRS *John Biscoe*, 1948-1962, which ship assisted the RN Hydrographic Survey Unit which charted this group in 1963.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Ward Lake 78°10'S., 163°35'E.

A small lake, formed at the snout of the Ward Glacier, on the E. side of the Royal Society Range in Victoria Land. Named by the BrAE (1910-13) after Ward Glacier.

Wardle Entrance 65°27'S., 65°26'W.

Small SE. entrance to Johannessen Hbr., lying between Snodgrass and Weller Islands, Pitt Is., in the Biscoe Islands. Photographed by Hunting Aerosurveys Ltd. in 1956 and mapped from these photos by the FIDS. Named by the UK-APC after one of the central characters in Charles Dickens' *Pickwick Papers*.

Ward Nunataks 68°07'S., 49°36'E.

A linear group of nunataks 4 mi. N. of Alderdice Peak in the eastern part of Nye Mountains. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for D.J. Ward, radio officer at Wilkes Station in 1960.

Ward Rock 67°08'S., 51°21'E.

Rounded rock exposure just E. of the Howard Hills in the NE. part of the Scott Mtns., Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for F. J. Ward, a member of the crew of *Discovery* during the BANZARE, 1929-31.

Ware, Mount 70°27'S., 65°36'E.

A mountain just S. of Mt. Kerr in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for W. R. Ware, weather observer at Mawson Station in 1968.

Waring Bluff 73°01'S., 161°05'E.

A rock bluff in the N. part of the Sequence Hills, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for James T. Waring, USN, an air controlman at McMurdo Station in 1967.

Waring Rocks 54°04'S., 38°01'W.

Two pointed rocks lying off the W. end of South Georgia, 0.6 mi. SW. of Cape Paryadin. Charted by DI personnel on the *Discovery* in the period 1926-30. Named by the UK-APC in 1963 for Leading Seaman Thomas J. Waring of HMS *Owen*, which surveyed this area in 1961.

Warner, Mount 77°05'S., 144°00'W.

An isolated mountain just S. of the head of Arthur Gl. and 5 mi. N. of Mt. Crow in the Ford Ranges, Marie Byrd Land. Discovered by members of a geological party of the USAS (1939-41) and named for Lawrence A. Warner, geologist at the USAS West Base and leader of the party which visited this mountain.

Warning Glacier 71°32'S., 170°21'E.

A glacier descending sharply on the W. side of Adare Pen. to discharge into Robertson Bay 4 mi. N. of Nameless Gl., in Victoria Land. First charted by the BrAE, 1898-1900, under C.E. Borchgrevink. The feature was so named by Borchgrevink because southerly gales at Cape Adare were always heralded by a cloud of snow sweeping over this glacier into Robertson Bay.

Warnke, Mount 84°20'S., 64°55'W.

A mountain, 915 m., standing 3 mi. NE. of Martin Peak in the Thomas Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Detlef A. Warnke, biologist at Palmer Station, 1966-67.

Warnock Islands 67°12'S., 59°44'E.

Group of small offshore islands lying 1 mi. S. and SW. of Dales I. at the N. end of William Scoresby Archipelago. Disc. and named in February 1936 by DI personnel on the *William Scoresby*.

Warpasgiljo Glacier: see Arthur Glacier 77°03'S., 145°15'W.

Warren, Mount 77°43'S., 85°57'W.

Mountain, 2,340 m., just N. of the turn in Newcomer Gl. in the N. part of the Sentinel Range. Named by the US-ACAN for Aviation Master Sergeant Cecil O. Warren, USMC, navigator on USN Squadron VX-6 photographic flights over the range on Dec. 14-15, 1959.

Warren Island 67°23'S., 59°36'E.

Small island in William Scoresby Bay, close S. of the W. end of Bertha Island. Disc. and named by DI personnel on the *William Scoresby* in February 1936.

Warren Nunatak 79°32'S., 82°50'W.

A nunatak located 4 mi. E. of Mt. Capley, along the E. side of the Nimbus Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Arthur D. Warren, auroral scientist at Ellsworth Station in 1958.

Warren Peak 76°41'S., 159°52'E.

A high rock peak southeast of Halle Flat in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition, 1964. They named it after Guyon Warren, from whose initiative the expedition was conceived and organized, but who only participated in the expedition for part of the time because of an accident.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Warren Range 78°28'S., 158°16'E.

A range about 15 mi. long just W. of Boomerang Range, with which it lies parallel, in Victoria Land. Discovered by the Northern Survey Party of the CTAE (1956-58), which called the highest summit "Mount Warren" after Guyon Warren, a member of the party in 1957-58. To avoid confusion with another mountain of the same name, the name Warren has instead been applied to the whole range.

Warriner Island 68°37'S., 77°54'E.

A small island lying just off the W. end of Breidnes Peninsula, Vestfold Hills. First mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for A. Warriner, radio officer at Davis Station, 1961.

Warrington Island 66°20'S., 110°28'E.

Rocky island, 0.7 mi. long, lying immediately S. of Pidgeon I. in the Windmill Islands. First mapped from aerial photographs taken by USN Op. Hjp., 1946-47. Named by US-ACAN for W. H. Warrington, photographer's mate on USN Op. Hjp. flights in this and other coastal areas between 14° and 164°, East longitude.

Washburn, Mount 77°37'S., 86°08'W.

Mountain (2,725 m.) midway between Mt. Ulmer and Mt. Cornwell in the N. part of the Sentinel Range, Ellsworth Mountains. Mapped by the Marie Byrd Land Traverse party, 1957-58, under C. R. Bentley, and named for Dr. A. Lincoln Washburn, member, U.S. National Committee for the IGY.

Washington, Cape 74°39'S., 165°25'E.

A prominent cape, 275 m., marking the S. extremity of the peninsula which separates Wood Bay and Terra Nova Bay, in Victoria Land. Discovered in 1841 by Capt. James Clark Ross, RN, and named by him for Captain Washington, RN, who was Sec. of the Royal Geographical Soc., 1836-40.

Washington Escarpment 83°42'S., 55°08'W.

The major west-facing escarpment of the Neptune Range, Pensacola Mountains, extending some 50 mi. and being the point of origin of a number of west-trending rock ridges. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for the University of Washington at Seattle. Several members of the Neptune Range field party of 1963-64 attended this university.

Washington Ridge 78°06'S., 154°48'W.

A rock ridge surmounted by three peaks, standing 1.5 mi. SE. of Mt. Franklin in the S. group of the Rocke-

feller Mtns. on Edward VII Peninsula. Discovered on a ByrdAE flight of Jan. 27, 1929. Named by R. Adm. Richard E. Byrd for his niece, Miss Helen A. Washington.

Washington Strait 60°43'S., 44°56'W.

Passage 3 mi. wide between Fredriksen and Powell Islands on the W. and Laurie Island and several smaller islands on the E., in the South Orkney Islands. Disc. in December 1821 on the occasion of the joint cruise by Capt. George Powell, a British sealer in the sloop *Dove*, and Capt. Nathaniel Palmer, an American sealer in the sloop *James Monroe*. Supposedly, it was named for George Washington, first President of the United States.

Wasilewski, Mount 75°11'S., 71°24'W.

Prominent isolated mountain (1,615 m.) located 9 mi. ESE. of Merrick Mtns. in Ellsworth Land. First seen and photographed from the air by RARE, 1947-48. Named by US-ACAN for Peter J. Wasilewski, member of the Univ. of Wisconsin parties which explored this area in the 1961-62 and 1965-66 seasons.

Wasko, Mount 84°34'S., 176°58'W.

A double-peaked, saddle-shaped mountain (1,170 m.) on the W. side of Shackleton Gl., 3 mi. N. of Mt. Franke, in the Queen Maud Mountains. Discovered by the USAS (1939-41), and surveyed by A. P. Crary (1957-58). Named by Crary for Lt. Cdr. Frank Wasko, USNR, of Squadron VX-6 at Little America V in 1957-58.

Wasp Point 59°28'S., 27°22'W.

A projecting point in the middle of the SW. coast of Thule I., South Sandwich Islands. Named by UK-APC in 1971 after the American sealing vessel in which Capt. Benjamin Morrell of Stonington, Connecticut, visited the island in 1823.

Wasson Rock 73°50'S., 161°45'E.

A prominent, mainly ice-free rock situated along the N. wall near the head of Priestley Gl., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for William G. Wasson, aviation electrician's mate with USN Squadron VX-6 at McMurdo Station, 1966.

Watchkeeper, The 62°18'S., 59°49'W.

Low rock fringed on the N. side by sunken rocks, lying 2.5 mi. N. of Table I. in the South Shetland Islands. This feature was known to early sealers in the area as Flat Isle, but in recent years The Watchkeeper has overtaken the early name in usage. It was charted by DI personnel on the *Discovery II* in 1935.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Watchtower, The 64°23'S., 57°22'W.

An isolated, steep-sided, flat-topped rock mass, 400 m., on the SE. extremity of James Ross Island. First seen, roughly surveyed, and given the descriptive name "The Watch Tower" by Otto Nordenskjöld of the SwedAE in March 1902.

Watchtower Hill 73°16'S., 163°08'E.

A small, pointed hill at the SE. side of Pinnacle Gap in the Mesa Range, in Victoria Land. So named by the northern party of NZGSAE, 1962-63, because the feature provides a good "watchtower" to the entrance of Pinnacle Gap.

Waterboat Point 64°49'S., 62°51'W.

The low westernmost termination of the peninsula between Paradise Harbor and Andvord Bay on the west coast of Graham Land. This feature has "island" characteristics, but it is only separated from the mainland at high water and is more usefully described as a "point." The coast in this vicinity was first roughly surveyed by the Belgian Antarctic Expedition in 1898. This point was surveyed and given this name by T.W. Bagshawe and M.C. Lester who lived here in a water boat from January 1921 until January 1922.

Waterhouse Spur 86°37'S., 147°25'W.

A spur of well-exposed strata that juts SW. from the S. portion of Ackerman Ridge, 6 mi. NE. of Johansen Peak, in the La Gorce Mountains. First mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by NZGSAE, 1969-70, for Barry C. Waterhouse, a member of the geological party who worked here.

Waterloo Island: see King George Island 62°00'S., 58°15'W.

Waterman Mount 84°27'S., 175°25'E.

A massive mountain, 3,880 m., in the Hughes Range, standing 3 mi. NE. of Mt. Wexler. Discovered and photographed by R. Adm. Byrd on the Baselaying Flight of Nov. 18, 1929, and surveyed by A. P. Crary in 1957-58. Named by Crary for Alan T. Waterman, Director of the National Science Foundation, which directly supported U.S. Antarctic programs during and after the IGY period, 1957-58.

Waterpipe Beach 60°43'S., 45°37'W.

Flat shingle beach on the W. side of Borge Bay, Signy I., in the South Orkney Islands. Surveyed in 1933 by DI personnel. Resurveyed and named in 1947 by the FIDS. An old pipe line from a pumping station by the

southernmost lake in Three Lakes Valley leads down to this beach and was used by the Tønsberg Hvalfangeri for watering whaling vessels during the period 1920-30.

Watkins Island 66°22'S., 67°06'W.

Low, ice-covered island 5 mi. long, lying 3 mi. SW. of Lavoisier I. in the Biscoe Islands. The island was first mapped by the FrAE under Charcot, 1903-5 and 1908-10, but remained unnamed until resighted by the BGLE under Rymill, 1934-37. He gave the name Mikkelsen Island after Ejnar Mikkelsen, Danish Arctic explorer. In applying the name, Rymill was unaware of the existence of Mikkelsen Islands 75 mi. southwestward, named in 1908-10 by Charcot. To avoid confusion of the two, the UK-APC recommended in 1952 that the Rymill naming be amended. The new name, Watkins Island, commemorates Henry G. Watkins, leader of the British Arctic Air Route Expedition, 1930-31. A new feature, Mikkelsen Bay (q.v.), has been named for Ejnar Mikkelsen.

Watlack Hills 79°26'S., 85°22'W.

A line of mainly ice-free hills, 10 mi. long, bounded by the White Escarpment, Splettstoesser Gl. and Dobbratz Gl., in the Heritage Range. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for Chief Warrant Officer Richard G. Watlack, pilot with the 62nd Transportation Detachment, who assisted the party.

Watson Bluff 66°25'S., 98°57'E.

Dark bluff, 225 m., at the E. end of David Island. Disc. by the AAE, 1911-14, under Mawson, and named for Andrew D. Watson, geologist with the expedition.

Watson Escarpment 86°00'S., 145°00'W.

A major escarpment in the Queen Maud Mtns., trending northward along the east margin of Scott Glacier, then eastward to Reedy Glacier where it turns southward along the glacier's west side. Somewhat arcuate, the escarpment is nearly 100 mi. long, rises 3,550 m. above sea level, and 1,000 to 1,500 m. above the adjacent terrain. The north-central part of the escarpment was observed from a vantage point on Supporting Party Mountain and was partially mapped in December 1929 by the ByrdAE geological party under Laurence Gould. The escarpment was more closely observed in December 1934 by the ByrdAE geological party under Quin Blackburn, and was named by Byrd for Thomas J. Watson, American business executive, a patron of this expedition. The escarpment was mapped in detail by USGS from surveys and USN air photos, 1960-64.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Watson Nunatak 67°58'S., 62°45'E.

Nunatak standing between Price and Van Hulslen Nunataks in the Trilling Peaks, Framnes Mtns., in Mac. Robertson Land. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Named by ANCA for K. D. Watson, diesel mechanic at Mawson Station, who assisted in the Framnes Mtns.—Depot Peak survey by ANARE in 1965.

Watson Peaks 73°45'S., 62°36'W.

A linear group of peaks that trend in a NW.-SE. direction for 9 mi., located 2 mi. NE. of Rivera Peaks, in Palmer Land. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for George E. Watson, biologist on the Palmer Station-*Eastwind* Expedition, summer 1965-66; author of the handbook *Birds of the Antarctic and Sub-Antarctic*, 1975.

Watson Peninsula 60°42'S., 44°32'W.

Narrow peninsula 2 mi. long separating Macdougall and Marr Bays on the N. coast of Laurie I., in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for G. L. Watson, yacht builder and redesigner of the exp. ship *Scotia*.

Watson Ridge 67°00'S., 55°46'E.

Partially snow-covered rock ridge standing 9 mi. SE. of Mt. Storegutt, Enderby Land. Mapped from ANARE surveys and air photos, 1954-66. Named by ANCA for R. A. Watson, weather observer at Mawson Station, 1963.

Watt, Mount 72°28'S., 166°09'E.

A peak, 2,715 m., located 5 mi. SW. of Mt. Aorangi of the Millen Range. Named by the Southern Party of NZFMAE, 1962-63, for B. H. Watt, expedition secretary.

Watt Bay 67°02'S., 144°00'E.

A bay about 16 mi. wide indenting the coast between Garnet Point and Cape De la Motte. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for W.A. Watt, Premier of Victoria in 1911.

Watters, Mount 76°44'S., 159°38'E.

A massive peak westward of Scythian Nunatak in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) and named after W. A. Watters, a geologist with the expedition.

Wattle Island 67°17'S., 46°46'E.

Small island lying close to the coast and 6 mi. E. of Kirkby Head, Enderby Land. Plotted from air photos

taken from ANARE aircraft in 1956. Wattle is the vernacular name given to over 400 species of *Acacia* found in different parts of Australia.

Watt Ridge 84°45'S., 173°47'W.

A ridge, 7 mi. long, extending NW. from Mt. Llano in the Prince Olav Mtns. and terminating at the E. side of Barrett Glacier. Named by US-ACAN for Lt. Cdr. Robert C. Watt, USN, Supply Officer during USN Op. DFrz. 1964.

Watts Nunatak 72°38'S., 74°13'E.

An isolated nunatak lying 12 mi. NW. of Mason Peaks in the Grove Mountains. Mapped from air photos, 1956-60, by ANARE. Named by ANCA for J. P. Watts, supervising technician (radio) at Mawson Station, 1962.

Waugh, Mount 65°31'S., 64°07'W.

Mountain, 585 m., standing at the S. side of Beascochea Bay 3.5 mi. NE of Nuñez Pt., on the W. coast of Graham Land. First charted by the FrAE under Charcot, 1908-10. Named by the UK-APC in 1959 for W. A. Waugh, American biochemist who, with Charles G. King, first identified the antiscorbutic component from lemon juice, making possible the production of synthetic vitamin C to prevent scurvy, in 1932.

Waugh Peak 86°04'S., 160°36'W.

A rock peak, 2,430 m., standing just SE. of Breyer Mesa at the W. side of Amundsen Gl., in the Queen Maud Mountains. Named by US-ACAN for Douglas Waugh, Chief Cartographer with the American Geological Society, who has contributed much to the Society's Antarctic mapping program.

Wauters, Cape: see Wauters Point 64°06'S., 61°43'W.

Wauters Point 64°06'S., 61°43'W.

Ice-covered point forming the N. end of Two Hummock I. in the Palmer Archipelago. Charted by the BelgAE, 1897-99, under Gerlache, and named by him for Alphonse Wauters, a supporter of the expedition.

Wauwermann Islands: see Wauwermans Islands 64°55'S., 63°53'W.

Wauwermanns Islands: see Wauwermans Islands 64°55'S., 63°53'W.

Wauwermans Islands 64°55'S., 63°53'W.

Group of small, low, snow-covered islands forming the northernmost group in the Wilhelm Archipelago. Disc. by a Ger. exp., 1873-74, under Dallmann. Sighted by

GEOGRAPHIC NAMES OF THE ANTARCTIC

the BelgAE, 1897-99, under Gerlache, and named for Lieutenant General Wauwermans, Pres. of the Société Royale de Géographie, Antwerp, a supporter of the expedition.

Wave Peak 60°37'S., 45°36'W.

Conspicuous peak, 960 m., which rises precipitously from the head of Laws Gl. in the central part of Coronation I., in the South Orkney Islands. The feature has a prominent ridge running in a southwesterly direction. To the N. and E. it slopes gently to the level of Brisbane Heights. Surveyed in 1948-49 by the FIDS, and so named by them because of the resemblance of this peak to a wave about to break.

Waverly Glacier 74°01'S., 61°38'W.

Narrow glacier flowing along the S. flank of Mt. Tricorn and entering Wright Inlet, on the E. coast of Palmer Land. This glacier was photographed from the air by members of the USAS in December 1940, and by the RARE under Ronne in 1947. Named by Ronne after Waverly, New York, home of the Kasco Mills. Mr. Marc Ivy and Mr. Edwin Knapp, officers of the Kasco Mills, contributed twenty tons of dog food to Ronne's expedition.

Way Archipelago 66°53'S., 143°40'E.

More than 120 small islands and rocks, of which the largest is Stillwell Island, distributed close off shore in the form of an arc. The archipelago extends from the vicinity of Cape Gray, at the east side of the entrance to Commonwealth Bay, to the vicinity of Garnet Point, at the west side of the entrance to Watt Bay. Discovered by the AAE (1911-14) under Douglas Mawson, who named the group for Sir Samuel Way, Chancellor of the University of Adelaide in 1911.

Weasel Gap 70°11'S., 64°39'E.

A gap with a névé surface and a low gradient offering a feasible N.-S. route between Mt. Starlight and Mt. Lacey in the Athos Range, Prince Charles Mountains. Sighted in November 1955 by an ANARE party led by J.M. Béchervaise. Named after the tracked vehicles used by ANARE.

Weasel Hill 64°15'S., 59°33'W.

A small distinctive elevation in the ice piedmont 5 miles N. of Larsen Inlet, Graham Land, between Pyke and Polaris Glaciers. Mapped from surveys by FIDS (1960-61). Named by UK-APC after the M-29 Tracked Cargo Carrier, or "Weasel," manufactured by the Studebaker Corporation.

Weathercock Hill: see Cathedral Crags 63°00'S., 60°34'W.

Weather Guesser Nunataks 75°30'S., 71°45'W.

An isolated nunatak group 10 mi. WNW. of Thomas Mtns. in eastern Ellsworth Land. First seen and photographed from the air by RARE, 1947-48. The name was suggested by Russell R. White, Jr., USN aerographer and member of the Univ. of Wisconsin survey party to the area, 1965-66.

Weather Island: see Veier Head 66°29'S., 61°42'W.

Weaver, Mount 86°58'S., 153°50'W.

A mountain, 2,780 m., standing 2 mi. W. of Mt. Wilbur at the head of Scott Gl., in the Queen Maud Mountains. Discovered and ascended in December 1934 by members of the ByrdAE geological party under Quin Blackburn. Named by them for Charles E. Weaver, Prof. of Paleontology at the Univ. of Washington.

Weaver Nunataks 79°51'S., 81°11'W.

A cluster of nunataks just S. of Meyer Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for William E. Weaver, USARP meteorologist at Ellsworth Station, 1962.

Weaver Point 65°31'S., 65°46'W.

Point lying 2.5 mi. W. of Tula Pt. at the N. end of Renaud I., in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for John C. Weaver, American author of *Ice Atlas of the Northern Hemisphere*, 1946.

Webb, Cape 67°51'S., 146°55'E.

A coastal point separating Ainsworth and Doolette Bays, also serving to mark on the west the depression occupied by the Ninnis Glacier. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for E.N. Webb, chief magnetician of the Main Base Party of the expedition.

Webb, Mount 71°11'S., 163°00'E.

A mountain (2,430 m.) rising 4 mi. SE. of Mt. Glasgow at the W. side of Edlin Névé, in the Explorers Range, Bowers Mountains. Named by the NZGSAE, 1967-68, for William Webb, leader of the Scott Base winter party, 1968.

Webber Island 77°17'S., 153°05'W.

The large central island (between Olson I. and Chandler I.) of the White Islands in southern Sulzberger Bay. It is rudely delineated on the map of the ByrdAE, 1928-30, and indicated as "low ice cliffs" that rise above the ice shelf in this part of the bay. Mapped in detail by USGS from surveys and U.S. Navy air pho-

GEOGRAPHIC NAMES OF THE ANTARCTIC

tos, 1959-65. Named for James Webber, USARP ionospheric physicist at Byrd Station, 1968-69 season.

Webber Nunatak 74°47'S., 99°50'W.

A nunatak (495 m.) standing 6 mi. W. of Mt. Manthe in the Hudson Mountains. Mapped from air photos taken by USN Op. Hjp, 1946-47. Named by US-ACAN for George E. Webber, electrical engineer at Byrd Station, 1967.

Webb Glacier 54°32'S., 36°10'W.

Glacier, 2 mi. long, flowing SE. from Mt. Brooker into Ross Glacier on the N. side of South Georgia. Surveyed by the SGS, 1954-55. Named for E. Clive Webb, member of the SGS who, with I. M. Brooker, climbed Mt. Brooker on Jan. 30, 1955. This glacier forms part of the approach route to the mountain.

Webb Glacier 77°19'S., 160°45'E.

Glacier just N. of Mt. Bastion and Gibson Spur, flowing SE. into the head of Barwick Valley in Victoria Land. Named by the VUWAE (1958-59) for P. N. Webb who, with B. C. McKelvey, did the first geological exploration in this area (1957-58) and was in Wright Valley with the VUWAE in 1958-59.

Webb Icefall 77°16'S., 160°29'E.

An icefall just south of Vishniac Peak that descends from Willett Range and nourishes the western tributary at the head of Webb Glacier, in Victoria Land. Named by American geologist Parker E. Calkin in association with Webb Glacier.

Webb Island 67°27'S., 67°56'W.

Rocky island 1.5 mi. long, lying in Laubeuf Fjord about 3 mi. S. of the entrance to Stonehouse Bay, Adelaide Island. Disc. by the FrAE under Charcot, 1908-10, and named by him for Capt. (later Adm. Sir) Richard C. Webb, RN, commanding officer of an English cruiser in Argentine waters at that time.

Webb Lake 77°20'S., 160°52'E.

A meltwater lake at the terminus of Webb Glacier in Barwick Valley, Victoria Land. Named in 1964 by American geologist Parker E. Calkin in association with Webb Glacier.

Webb Névé 72°42'S., 166°18'E.

The névé at the head of Seafarer Glacier in Victoria Land. Named by the Northern Party of NZGSAE, 1966-67, after the appointed Public Relations Officer Dexter Webb, who was killed before taking up the appointment.

Webb Nunataks 83°24'S., 56°42'W.

A group of nunataks 2 mi. W. of Madey Ridge in the Neptune Range, Pensacola Mountains. Mapped by

USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Dalton Webb, electronics engineer with Raydist Corporation, a member of the Electronic Test Unit in the Pensacola Mtns., 1957-58.

Weber Inlet 71°50'S., 72°55'W.

Ice-filled inlet, 13 mi. long and 9 mi. wide, which indents the S. part of Beethoven Pen. and forms the NW. arm of the Bach Ice Shelf in Alexander Island. First mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for Carl Maria von Weber (1786-1826), German composer.

Weber Ridge 84°20'S., 63°12'W.

A bare rock ridge, 8 mi. long, located at the N. end of Anderson Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Max K. Weber, USGS topographic engineer in the Pensacola Mtns., 1965-66.

Webers Peaks 79°28'S., 84°40'W.

A line of peaks on a ridge bounded by Splettstoesser Gl. on the N., Balish Gl. on the E. and Dobbratz and Fendorf Glaciers on the W., in the Heritage Range, Ellsworth Mountains. Named by the Univ. of Minnesota Ellsworth Mountains Party, 1962-63, for geologist Gerald F. Webers, a member of that party.

Webster, Mount 85°40'S., 144°24'W.

Prominent isolated mountain, 1,610 m., standing 3 mi. N. of Leverett Gl. and 12 mi. NW. of Mt. Beazley. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Lt. John B. Webster, USN, flight surgeon with the McMurdo Station winter party in 1962.

Webster Bluff 76°06'S., 145°03'W.

An ice-covered bluff with a steep, rocky N. face, 9 mi. long, forming a northern extension of the Phillips Mtns. in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for David O. Webster, ionospheric physicist at Byrd Station, 1964.

Webster Glacier 79°06'S., 86°11'W.

Glacier in the Founders Peaks of the Heritage Range, flowing generally N. between Frazier Ridge and Pipe Peak to enter Minnesota Glacier. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for Charles W. Webster, USARP meteorologist and member of the winter party at Wilkes Station in 1963.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Webster Knob 85°18'S., 166°30'W.

A prominent rock knob at the head of Strom Gl. in the Queen Maud Mountains. It stands near the extremity of a spur which descends from the NE. shoulder of Mt. Fridtjof Nansen. Discovered and visited in November 1929 by the ByrdAE geological party under Laurence Gould. Named by Byrd for Mrs. Laurence J. Webster, a contributor to the expedition.

Webster Peaks 63°55'S., 59°40'W.

Group of four rocky peaks, 1065 m., standing W. of Whitecloud Gl. at the head of Charcot Bay on the W. coast of Graham Land. Charted by the FIDS in 1948, and named for W. H. B. Webster, medical officer and naturalist on the *Chanticleer*, which approached Tower and Trinity Islands off this coast in 1829.

Webster Peaks 70°28'S., 65°25'E.

A group of five peaks 3 mi. SE. of Mt. Kirkby in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos of 1965. Named by ANCA for G. K. Webster, ionospheric physicist at Mawson Station in 1965.

Weddell, Cape: see Weddell Point 54°03'S., 37°49'W.

Weddell Arm 68°32'S., 78°07'E.

The southernmost and westernmost arm of Langnes Fjord in the Vestfold Hills. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Visited in 1955 and 1957 by ANARE parties and so named because they found large numbers of Weddell seals in the area.

Weddell Glacier 54°35'S., 36°00'W.

Glacier 2 mi. long on the N. side of South Georgia, flowing N. into Royal Bay between Will Pt. and Cape Charlotte. First mapped by the German group of the International Polar Year Investigations, 1882-83, and named for James Weddell, Master, RN, who as a sealing captain visited South Georgia in 1823.

Weddell Islands 60°39'S., 44°51'W.

Group of small islands and rocks lying 1 mi. S. of Saddle I. and 4.5 mi. N. of the W. end of Laurie I., in the South Orkney Islands. Probably seen on the occasion of a joint cruise by Capt. Nathaniel B. Palmer and Capt. George Powell in December 1821. The name first appears on James Weddell's chart resulting from his exploration of the South Orkney Is. in 1823.

Weddell Point 54°03'S., 37°49'W.

Low, tussock-covered point forming the E. side of the entrance to Schlieper Bay, on the S. coast and near the W. end of South Georgia. The name Cape Weddell

was given by David Ferguson, Scottish geologist, during his visit to South Georgia in 1911-12. Named after James Weddell, Master, RN, who visited South Georgia in 1823. Point is considered a more suitable descriptive term for this feature than cape.

Weddell Sea 72°00'S., 45°00'W.

A great ice-filled sea which indents the continent between the Antarctic Peninsula and Cape Norvegia, Queen Maud Land. The sea was discovered in 1823 by James Weddell, Master, RN, who named it George IV Sea. The present name, honoring the discoverer, was proposed by Dr. Karl Fricker in 1900, and it has been universally accepted.

Weddell's Island: see Weddell Islands 60°39'S., 44°51' W.

Wedel, Ile: see Vedel Islands 65°07'S., 64°15'W.

Wedel Islands: see Vedel Islands 65°07'S., 64°15'W.

Wedel-Jarlsberg, Mount 85°39'S., 165°08'W.

An ice-covered mountain between Cooper and Bowman Glaciers, standing 2 mi. SW. of Mt. Ruth Gade in the Quarles Range. Discovered in December 1911 by Roald Amundsen, and named by him for Alice Wedel-Jarlsberg, wife of a Norwegian diplomat.

Wedemeyer Rocks 76°06'S., 135°56'W.

A group of rocks that outcrop near the base of the southern slope of Mt. Berlin in the Flood Range, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Charles H. Wedemeyer, CM1, USN, construction mechanic with the 1956 Army-Navy Trail Party that traversed eastward from Little America V to establish Byrd Station.

Wedge Face 84°12'S., 171°30'E.

A descriptive name for the prominent wedge-shaped rock spur that projects from Mount Patrick into the eastern part of Beardmore Glacier. This feature was almost surely observed by Shackleton's Southern Journey Party on its ascent of the Beardmore Glacier in December 1908. It was named by the South Pole Party of the British Antarctic Expedition, 1910-13, under Robert Scott.

Wedge Ridge 80°38'S., 29°12'W.

Conspicuous rock ridge, 1,145 m., near the head of Blaiklock Gl. and immediately W. of Pointer Nunatak in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE. The name given by the UK-APC is descriptive of the shape of the feature.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wedgwood Point: see Azufre Point 65°03'S., 63°39'W.

Wednesday Island 64°56'S., 63°45'W.

Island 1 mi. long, located at the E. end of the Wauwermans Is. in the N. part of the Wilhelm Archipelago. The Wauwermans Is. were disc. by the Ger. exp. under Dallmann, 1873-74, and were later roughly mapped by the BelgAE under Gerlache, 1897-99, and the FrAE under Charcot, 1903-5. Wednesday I. was charted by the BGLE, 1934-37, under Rymill, and so named because Rymill's exp. first sighted the island on a Wednesday.

Weeder Rock 70°23'S., 162°02'E.

A small isolated coastal rock located 6 mi. NNW. of Mt. Belolikov. It rises above the smooth, ice-covered peninsula between the mouths of Rennick and Gannutz Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Courtland C. Weeder, USN, storekeeper with the South Pole Station winter party, 1965.

Weeks, Mount 83°33'S., 160°54'E.

A tabular mountain 6 mi. N. of Cranfield Peak, on the western edge of Prince Andrew Plateau, Queen Elizabeth Range. Named by NZGSAE (1961-62) for Lt. James W. Weeks, USN, pilot of the reconnaissance and supply flights in the area.

Weeks Stack 62°14'S., 59°03'W.

A sea stack lying off the north tip of Nelson I. in the northern approach to Fildes Strait, in the South Shetland Islands. Named by the UK-APC in 1961 for Captain Weeks, Master of the British sealing vessel *Horatio* from London, who visited the South Shetland Islands in 1820-21.

Weems, Mount 77°27'S., 86°10'W.

Prominent mountain, 2,210 m., located 8 mi. N. of Mt. Ulmer near the N. end of the Sentinel Range in the Ellsworth Mountains. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for Capt. P. V. H. Weems, USN (Ret.), inventor and developer of air navigation instrumentation and techniques and consultant to Ellsworth on air navigation problems of this flight.

Weertman Island 66°58'S., 67°44'W.

The largest and southernmost of the Bennett Is., lying in Hanusse Bay. Mapped from air photos taken by RARE (1947-48) and FIDASE (1956-57). Named by UK-APC for Johannes Weertman, American metallurgist who proposed a theory of slip of glaciers on their beds and has made important contributions to the theory of glacier flow.

Wegert Bluff 69°42'S., 159°20'E.

A bluff, the NE. extremity of a truncated ridge that overlooks the E. margin of Noll Gl. in the Wilson Hills. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Cdr. Sidney J. Wegert, USN, pilot in LC-130F Hercules aircraft during Operation Deep Freeze 1967 and 1968.

Wegger Peak 62°06'S., 58°31'W.

Peak, 305 m., at the W. side of the entrance to Mackellar Inlet, Admiralty Bay, on King George I. in the South Shetland Islands. The name "Le Poing" (The Fist) was given to an elevation hereabout by the FrAE under Charcot in 1908-10. Although Charcot's map shows a single summit, there are four in the vicinity and a question arose over which was named. In 1958 it was suggested by FIDS members that the name referred to all four; together they resemble the knuckles of a clenched fist when viewed from the Chabrier Rock area. However, the UK-APC considered the collective name to be unsuitable and it was rejected. New names were recommended by the UK-APC in 1960 for the feature here described and nearby Admiralen Peak (q.v.). Wegger Peak is named for Ole Wegger (1859-1936), director for 47 years of Framnaes Mekanismiske Vaeksted, Norway, shipbuilders who fitted the *Admiralen* with a slipway for whaling.

Weihaupt, Mount 72°37'S., 161°03'E.

A large, bare mountain (2,285 m.) which stands 10 mi. E. of Mt. Bower and is the dominant feature in the E. part of the Outback Nunataks. First mapped by the U.S. Victoria Land Traverse party, 1959-60. Named by US-ACAN for John G. Weihaupt, seismologist with this party.

Weikman Nunataks 76°30'S., 143°59'W.

Two nunataks on the divide separating the upper reaches of Balchen Gl. and Crevasse Valley Gl., in the Ford Ranges of Marie Byrd Land. The nunataks lie 2 mi. E. of Mt. Perkins. First mapped by the USAS, 1939-41. Named by US-ACAN for Edward R. Weikman Jr., CMH2, USN, Construction Mechanic at Byrd Station, 1967.

Weininger, Mount 84°47'S., 65°30'W.

A large, mainly ice-free mountain, 1,970 m., standing at the N. extremity of Mackin Table, to which it is joined by a short ridge, in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Richard B. Weininger, scientific leader at South Pole Station, winter 1967.

Weir, Mount 84°59'S., 177°10'E.

A steep section of the polar plateau escarpment with almost all of the rock exposed facing NE., standing just

GEOGRAPHIC NAMES OF THE ANTARCTIC

S. of the base of Fulgham Ridge at the head of Ramsey Glacier. Discovered and photographed by USN Op. Hjp. on Flight 8A of Feb. 16, 1947, and named by US-ACAN for Maj. Robert R. Weir, USMC, pilot of this flight.

Weir Glacier 66°04'S., 64°42'W.

Glacier 8 mi. long, the western of two glaciers flowing N. into the S. part of Barilari Bay, on the W. coast of Graham Land. First sighted and roughly charted in 1909 by the FrAE under Charcot. It was surveyed in 1935-36 by the BGLE under Rymill and later named for William D. Weir, 1st Viscount Weir of Eastwood, and his son, the Hon. James K. Weir, who contributed toward the cost of the BGLE, 1934-37.

Weiss Amphitheater 77°04'S., 126°06'W.

An amphitheater-like caldera, 2 mi. wide and breached at the southern side, occupying the south-central part of Mount Sidley, in the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958-60. Named by US-ACAN for Bernard D. Weiss, Meteorologist-in-Charge at Byrd Station, 1959.

Weisse Insel: see White Island 78°08'S., 167°24'E.

Welch Island 67°34'S., 62°56'E.

Island, 1 mi. long with a prominent pinnacle rock of 130 m., lying N. of Rouse Is. and 1 mi. off the shore in the E. side of Holme Bay. Disc. in February 1931 by the BANZARE under Mawson, who named it for B. F. Welch, second engineer on the *Discovery*.

Welch Mountains 70°57'S., 63°30'W.

A group of mountains that dominate the area, the highest peak rising to 3,015 m., located 25 mi. N. of Mt. Jackson on the E. margin of the Dyer Plateau of Palmer Land. These mountains were probably seen from the air by Ellsworth in 1935 and their N. extremities were sketched in 1936 by a BGLE sledge party under Rymill. In 1940 they were photographed from the air and charted from the ground by the USAS, and in the exp. reports and charts were assumed to be Ellsworth's Eternity Range (q.v.). The mountains were mapped in detail by USGS in 1974. Named by US-ACAN for R. Adm. David F. Welch, Commander, U.S. Naval Support Force, Antarctica, 1969-71.

Welchness 63°29'S., 56°14'W.

A gravel spit which forms the W. extremity of Dundee Island in the Joinville Island group. The feature was sighted by the Dundee whaling exp. (1892-93) and is described in the report of C. W. Donald, who sailed aboard the *Active*.

Welch Peak 85°39'S., 149°15'W.

Peak, 1,010 m., standing at the N. side of the Tapley Mtns., 9 mi. NW. of Mt. Gould. Mapped by USGS from ground surveys and USN air photos, 1960-63. Named by US-ACAN for Walton D. Welch, electronics technician with the Byrd Station winter party in 1957.

Welch Rocks 67°33'S., 62°54'E.

Two rocks 0.5 mi. N. of Welch Island in the E. part of Holme Bay, Mac. Robertson Land. Plotted from photos taken from ANARE aircraft in 1958 and 1959. Named by ANCA after Welch Island.

Welcome Islands 53°58'S., 37°29'W.

Group of rocky islands lying 4 mi. WNW. of Cape Buller, off the N. coast of South Georgia. These islands were disc. by Capt. James Cook in 1775. The name dates back to at least 1912 and is now well established.

Welcome Mountain 72°14'S., 160°12'E.

A very prominent mountain that is surmounted by three peaks, the highest 2,505 m., standing 5 mi. SE. of Mt. Southard in the Outback Nunataks. Discovered and named by the U.S. Victoria Land Traverse party, 1959-60. So named because it was the first mountain visited by the traverse party after crossing the interior plateau and not seeing any mountains or landmark features for nearly three months.

Welcome Nunatak 79°06'S., 85°54'W.

A relatively small but truly distinctive cone-shaped nunatak standing in near isolation to the N. of Reuther Nunataks in the Founders Peaks, Heritage Range. Named by the Univ. of Minnesota Geological Party, 1963-64. For the members of the party using motor toboggans, the nunatak was a welcome sight as it meant they were almost to base camp, located at Camp Hills.

Weldon Glacier 76°33'S., 29°20'W.

A glacier entering the SE. part of Weddell Sea about 30 mi. WSW. of Hayes Glacier. The glacier was discovered in the course of a U.S. Navy LC-130 reconnaissance flight over the coast of Coats Land, Nov. 5, 1967, and was plotted by USGS from photographs obtained at that time. Named by US-ACAN for Don W. Weldon, USN, photographer on that flight.

Welhelmina Bay: see Wilhelmina Bay 64°38'S., 62°10'W.

Weller, Mount 67°17'S., 50°40'E.

Mountain, 1,080 m., standing W. of Auster Gl. and 2 mi. E. of Reference Peak in Enderby Land. Plotted

GEOGRAPHIC NAMES OF THE ANTARCTIC

from air photos taken by ANARE in 1956. Named by ANCA for G. E. Weller, meteorologist at Mawson Station in 1961.

Weller Island 65°27'S., 65°24'W.

Island lying E. of Snodgrass I., Pitt Is., in the Biscoe Islands. Shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 after Samuel Weller, Mr. Pickwick's servant in Charles Dickens' *Pickwick Papers*.

Wellman Cliffs 82°27'S., 156°10'E.

Prominent cliffs about 12 mi. long on the E. side of Boucot Plateau in the Geologists Range. Seen by the northern party of the NZGSAE (1961-62) and named for H. W. Wellman, geologist, who devised a simple method of map-making from air photos, used by the expedition.

Wellman Glacier 64°29'S., 61°26'W.

Glacier flowing into the NE. part of Recess Cove, Charlotte Bay, on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Walter Wellman (1858-1934), American Arctic explorer who attempted unsuccessfully to reach the North Pole in a semi-rigid airship in 1907 and 1909.

Wellman Valley 79°55'S., 156°40'E.

A mainly ice-free valley lying just E. of Midnight Plateau and N. of Mt. Ash in the Darwin Mountains. Explored by VUWAE, 1962-63, and named for H. W. Wellman, geologist of the Victoria Univ. of Wellington, a participant in three Antarctic expeditions.

Well-met, Cape 63°47'S., 57°19'W.

Dark, conspicuous headland near the center of the N. side of Vega I., close S. of Trinity Peninsula. Cape Well-met was disc. and named by the SwedAE, 1901-4, and commemorates the long delayed union at this point of a relief party under Dr. J. Gunnar Andersson and the winter party under Dr. Otto Norden-skjöld after twenty months of enforced separation.

Wells, Mount 85°10'S., 169°48'W.

A massive ice-covered mountain in the Prince Olav Mtns., standing at the W. side of Liv Gl., about 4 mi. NW of June Nunatak. Named by US-ACAN for Harry Wells, Executive Secretary of the Committee on Polar Research, National Academy of Sciences, 1962-66.

Wells Glacier 73°32'S., 61°11'W.

Glacier 9 mi. W. of Cape Brooks, flowing N. into New Bedford Inlet in Palmer Land. Mapped by USGS from ground surveys and USN air photos, 1961-67. Named by US-ACAN for James T. Wells, storekeeper with the South Pole Station winter party in 1967.

Wells Ridge 76°58'S., 144°45'W.

Rocky ridge 4 mi. long between the Swanson Mtns. and Mt. Gilmour in the Ford Ranges, Marie Byrd Land. Discovered on aerial flights made from the West Base of the USAS (1939-41) and named for Loran Wells, photographer and observer with the USAS geology party which visited this ridge in 1940.

Wells Saddle 76°03'S., 135°35'W.

A broad snow-filled saddle between Mt. Berlin and Mt. Moulton in the Flood Range of Marie Byrd Land. The saddle was photographed from aircraft of the USAS in December 1940. It was mapped by USGS from ground surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for James H. Wells, a member of the USARP team that studied ice sheet dynamics in the area NE. of Byrd Station, 1971-72.

Wendland, Mount 84°42'S., 175°18'W.

A peak (1,650 m.) near the head of Massam Glacier, 2 mi. NE. of Mt. Kenney, in the Prince Olav Mountains. The feature was geologically mapped on Nov. 18, 1970, by the USARP Ohio State University Party of 1970-71. Named by US-ACAN for Vaughn P. Wendland, geologist and field assistant with the Ohio State party.

Wennergard Point 63°51'S., 59°54'W.

A point forming the E. side of the entrance to Lanchester Bay on the W. coast of Graham Land. First charted by the SwedAE in Nov.-Dec. 1902 and named after Ole C. Wennergard, a seaman of the expedition who died while wintering on Paulet Island in 1903.

Wensley Beacon: see Wensleydale Beacon 62°57'S., 60°42'W.

Wensleydale Beacon 62°57'S., 60°42'W.

Hill, 110 m., situated just N. of Primero de Mayo Bay, on the W. side of Port Foster, Deception I., in the South Shetland Islands. The hill was charted by a Br. exp., 1828-31, under Foster. Named by Lt. Cdr. D. N. Penfold, RN, following his survey of the island in 1948-49, after Wensleydale in Yorkshire, England.

Werenskiöld Bastion 67°26'S., 65°32'W.

A bold rock headland that rises very steeply to over 1,000 m. and forms the coastline between Demorest Gl. and Matthes Gl. on the E. coast of Graham Land. The feature was observed and photographed by several American expeditions: USAS, 1939-41; RARE 1947-48; U.S. Navy photos, 1968. Mapped by FIDS, 1947-48. Named by UK-APC for Werner Werenskiöld (1883-1961), Norwegian geographer who worked on the theory of glacier flow.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Werlein Island 66°25'S., 110°26'E.

Rocky island 0.8 mi. long, lying 0.2 mi. SE. of Holl I. in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. in February 1947. Named by the US-ACAN for Ens. Richard O. Werlein, USN, assistant hydrographic officer with USN Op. Wml. which established astronomical control stations in the area in January 1948.

Werner Mountains 73°34'S., 62°20'W.

A group of mountains located just WSW. of New Bedford Inlet and between the Meinardus and Bryan Glaciers, in Palmer Land. The mountains were first seen and photographed from the air by the USAS, 1939-41. Mapped by USGS from surveys and USN air photos, 1961-67. Named by US-ACAN for Abraham Gottlob Werner (1750-1819), German geologist and mineralogist.

Werner Peak 68°43'S., 65°14'W.

The highest (1,550 m.) and most conspicuous peak on the SE. side of Mercator Ice Piedmont. The peak rises just E. of the N. end of Norwood Scarp. A steep rock ridge on its N. side is easily recognizable from any point on the ice piedmont. Photographed from the air by the USAS on Sep. 28, 1940. Surveyed by FIDS in 1958. Named by UK-APC after Johannes Werner (1468-1528), German astronomer and mathematician who probably first (1514) suggested the method of lunar distances for determining longitude.

Wessbecher Glacier 78°53'S., 84°18'W.

Glacier about 7 mi. long, draining S. between Wilson and Marze Peaks at the S. end of the Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for Howard O. Wessbecher, a member of the winter party at McMurdo Sound, 1956, who was representative (assisting in logistical preparations) for the establishing of the South Pole Station.

West, Mount 77°25'S., 145°30'W.

A somewhat isolated mountain 9 mi. SE. of Mt. Woodward, surmounting the ice-covered ridge between Hammond and Swope Glaciers, in the Ford Ranges of Marie Byrd Land. Mapped by the USAS, 1939-41. The name was applied by Paul Siple, commander of the West Base of the USAS, for James E. West, the first Chief Scout Executive of the Boy Scouts of America. Siple's first visit to Antarctica was as a member of the ByrdAE (1928-30), having been selected as an Eagle Scout for that venture.

West Antarctica 79°00'S., 100°00'W.

One of the two major regions of Antarctica, lying on the Pacific Ocean side of the Transantarctic Moun-

tains and comprising Marie Byrd Land, Ellsworth Land, and Antarctic Peninsula. All of West Antarctica lies within the Western Hemisphere. The name has been in existence at least 75 years (Balch, 1902; Nordenskjöld, 1905), but its greatest use has followed the International Geophysical Year (1957-58) and explorations disclosing that the Transantarctic Mountains provide a useful regional separation of West Antarctica and East Antarctica. The name was approved by US-ACAN in 1962.

West Arm 67°36'S., 62°52'E.

Rock mass forming the western limit of Horseshoe Harbor in Holme Bay, Mac. Robertson Land. Roughly mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Rephotographed by USN Op. Hjp., 1946-47. First visited by an ANARE party on Feb. 5, 1954. Named by ANARE.

West Balch Glacier: see Drummond Glacier 66°40'S., 65°43'W.

West Barrier: see West Ice Shelf 66°40'S., 85°00'E.

West Bay 53°02'S., 73°21'E.

A small bay on the west coast of Heard Island, indenting the south side of the base of Laurens Peninsula 0.5 mi. west of Atlas Cove. The name, which is descriptive of the position of the bay, may have been applied by American sealers at Heard I. in the period following their initiation of sealing there in 1855. It appears on a chart by the British *Challenger* expedition which visited the island in 1874 and utilized many names then in use.

West Bay: see Cumberland West Bay 54°14'S., 36°35'W.

West Beacon 77°50'S., 160°47'E.

The prominent western peak, 2,420 m., rising high above the plateau-type ridge that joins it to East Beacon, the whole forming the feature known as Beacon Heights, on the S. side of Taylor Gl. in Victoria Land. The name "Beacon Height West" was first used by the BrNAE (1901-4). The name was shortened by the NZGSAE, 1958-59.

West Bluff: see Sulphur Point 56°42'S., 27°16'W.

West Bluff: see Stench Point 56°18'S., 27°36'W.

West Budd Island 67°35'S., 62°50'E.

The western of two larger islands at the N. end of the Flat Islands in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos

GEOGRAPHIC NAMES OF THE ANTARCTIC

taken by the Lars Christensen Exp., 1936-37. They named the northern islands Flatöynålane (the flat island needles). This western island was named by ANCA for Dr. G. M. Budd, medical officer at nearby Mawson Station in 1959.

West Cape 53°02'S., 73°17'E.

A cape that marks the south extremity of Laurens Peninsula, Heard Island, and the western entrance point to West Bay. The feature appears to have been roughly charted on an 1860 sketch map compiled by Capt. H.C. Chester, American sealer operating in the area during this period. It was surveyed in 1948 by the ANARE and so named because of its position at the entrance to West Bay.

West Cumberland Bay: see Cumberland West Bay 54°14'S., 36°35'W.

West Dailey Island 77°53'S., 164°54'E.

The largest and westernmost of the Dailey Islands, located 5 mi. NE. of Cape Chocolate in McMurdo Sound. Though visited by Scott's BrNAE, 1901-4, which named the island group, this western island appears to have been named by Scott's BrAE, 1910-13.

West Dailey Isle: see West Dailey Island 77°53'S., 164°54'E.

Western Plain: see Maud Subglacial Basin 81°00'S., 15°00'E.

West Gould Glacier: see Erskine Glacier 66°29'S., 65°40'W.

West Groin 77°39'S., 160°48'E.

Prominent rock spur between Mudrey Cirque and Flory Cirque on the S. side of Asgard Range in Victoria Land. Named by the BrAE, 1910-13, led by Capt. Robert F. Scott. The name is descriptive of position; East Groin marks the east side of Flory Cirque.

Westhaven Nunatak 79°51'S., 154°14'E.

A prominent nunatak, 2,240 m., standing 3 mi. S. of Turnstile Ridge in the NW. part of Britannia Range. It is the westernmost rock outcrop in this part of the range. The Darwin Glacier Party of the CTAE set up a survey station on its summit in December 1957. The name was suggested by Squadron-Leader J. R. Claydon, RNZAF, who first saw the feature from the air.

West Ice Shelf 66°40'S., 85°00'E.

Prominent ice shelf extending about 180 mi. in an E.-W. direction along the coast between Barrier Bay and

Posadowsky Bay. Discovered and named by the GerAE, 1901-3, under Dr. Erich von Drygalski. The toponym describes the direction in which the German expedition first viewed the ice shelf. Their limited westward view became a prolonged one; on Feb. 22, 1902, the ship *Gauss* was beset by pack ice just east of this immense feature. It remained there imprisoned by the pack until Feb. 8, 1903.

Westliche Petermann Range 71°35'S., 12°10'E.

One of the Petermann Ranges, extending N.-S. for 16 mi. from Mt. Hansen to Aurdalen Valley, in the Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39, and so named by them for its western position in the northern part of the Petermann Ranges.

West Melchior Archipelago: see West Melchior Islands 64°19'S., 63°00'W.

West Melchior Islands 64°19'S., 63°00'W.

A group of small ice-covered islands and rocks which lie W. of The Sound in the Melchior Is., Palmer Archipelago. The islands E. of The Sound are called East Melchior Islands. The name was probably given by DI personnel who roughly surveyed these islands in 1927. The islands were surveyed by Argentine expeditions in 1942, 1943 and 1948.

Westminister, Mount 84°59'S., 169°22'E.

A mountain, 3,370 m., on the E. side of Beardmore Gl., standing 4 mi. S. of Mt. Kinsey in the Supporters Range. Discovered and named by the BrAE (1907-9). Named for the Duke of Westminster, a financial supporter of the expedition.

West Nunatak: see Seven, Peak 69°41'S., 64°42'E.

Weston, Mount 80°28'S., 29°10'W.

Conspicuous rock mountain having several peaks, the highest 1,245 m., rising midway along the W. side of Stratton Glacier in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Flight Sgt. Peter D. Weston, RAF, aircraft mechanic with the RAF contingent of the CTAE in 1956-58.

West Ongul Island: see Ongul Island 69°01'S., 39°32'E.

West Point 54°12'S., 36°35'W.

Point at the west side of the entrance to Jason Harbor in Cumberland West Bay, South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

GEOGRAPHIC NAMES OF THE ANTARCTIC

West Prongs 83°54'S., 57°34'W.

Three distinctive rock spurs that form the west end of the ridge just north of Elliott Ridge in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Clyde E. West, cook at Ellsworth Station, winter 1958.

West Quartzite Range 72°00'S., 164°45'E.

A range, the western of two parallel quartzite ranges, situated at the E. side of Houlston Gl. in the Concord Mountains. Named by the Northern Party of NZFMCAE, 1962-63, after the distinctive geological formation of the feature.

West Reef 61°05'S., 55°36'W.

A reef 3 mi. NW. of Cape Lindsey, Elephant I., South Shetland Islands. The name is descriptive of location with reference to Elephant Island. An old sealer name dating back to at least 1822.

West Russell Glacier: see Russell West Glacier 63°40'S., 58°50'W.

West Shelf Ice: see West Ice Shelf 66°40'S., 85°00'E.

West Skerry 54°15'S., 36°20'W.

Small group of islands and rocks forming the W. part of Skrap Skerries, lying 2 mi. E. of Barff Pt. off the N. coast of South Georgia. The name appears on a chart based upon a survey of this area by DI personnel in the period 1926-30, but it may reflect an earlier naming by whalers.

West Skrapskjar: see West Skerry 54°15'S., 36°20'W.

West Stack 67°03'S., 58°03'E.

A coastal rock outcrop which rises to 120 m. on the W. side of Hoseason Glacier, 14 mi. SE. of Edward VIII Bay. Disc. in February 1936 by DI personnel on the *William Scoresby*, and probably so named by them because of its distinctive appearance and association with nearby East Stack.

West Stenhouse Glacier: see Stenhouse Glacier 62°04'S., 58°25'W.

Westye Egeberg Glacier: see Egeberg Glacier 71°34'S., 169°50'E.

Wetmore Glacier 74°38'S., 63°35'W.

Glacier about 40 mi. long, flowing SE. between the Rare Range and Latady Mtns. into the N. part of Gardner Inlet. Disc. by the RARE, 1947-48, under Ronne, who named this feature for Alexander

Wetmore, Sec. of the Smithsonian Inst., who assisted Ronne in laying out the scientific research program of the expedition.

Wetmore Peak 71°28'S., 167°35'E.

A peak (2,120 m.) in the N. part of Lyttelton Range, 6 mi. ENE. of Mt. Bierle, in the Admiralty Mountains, Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Cliff Wetmore, USARP biologist at Hallett Station, 1963-64.

Wetter Island: see Veier Head 66°29'S., 61°42'W.

Wetterwand: see Smoky Wall 54°35'S., 36°11'W.

Wexler, Mount 84°30'S., 175°01'E.

A prominent ice-free mountain, 4,025 m., standing 3 mi. SW. of Mt. Waterman in the Hughes Range. Discovered and photographed by R. Adm. Byrd on the *Baselaying Flight* of Nov. 18, 1929, and surveyed by A. P. Crary in 1957-58. Named by Crary for Harry Wexler, Chief Scientist for U.S. Antarctic IGY program, 1957-58.

Wexler Mountains: see Heritage Range 79°45'S., 83°00'W.

Weyant, Mount 77°33'S., 162°42'E.

Prominent ice-free summit, 1,930 m., between Loftus and Newall Glaciers in Victoria Land. Named by the US-ACAN in 1964 for William S. Weyant, meteorologist in charge with the winter party at Little America V in 1958.

Weyerhaeuser Glacier 68°45'S., 65°32'W.

Large glacier flowing N. into Mercator Ice Piedmont close W. of Mobiloil Inlet, on the E. coast of Antarctic Peninsula. This glacier lies in the area first explored from the air by Sir Hubert Wilkins in 1928 and Lincoln Ellsworth in 1935, but it was first clearly delineated in aerial photographs taken by the USAS in 1940. The glacier was resighted in 1947 by the RARE under Ronne. He named it for F. K. Weyerhaeuser of the Weyerhaeuser Lumber Co. who contributed lumber and insulating material to the expedition.

Weyprecht Mountains 72°00'S., 13°30'E.

A small group of mountains about 10 mi. W. of the Payer Mtns., forming the western half of the Hoel Mtns. in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Karl Weyprecht, Austrian polar explorer who in company with Julius Payer discovered Franz Josef Land in 1873, and who initiated the first International Polar Year expedition in 1882-83.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Whakawhiti Saddle 82°34'S., 164°05'E.

A low, broad snow saddle between Oliver Gl. and the lower portion of Robb Gl., close E. of Taylor Hills. Traversed by the southern party of the NZGSAE (1959-60) and so named because Whakawhiti is a Maori word meaning "crossing over."

Whaleback: see Marston, Mount 76°54'S., 162°12'E.

Whaleback Islet: see Whaleback Rocks 63°39'S., 59°04'W.

Whaleback Rocks 63°39'S., 59°04'W.

A group of low rocks lying 2 mi. W. of Blake I. in Bone Bay, off the N. coast of Trinity Peninsula. Charted in 1948 by members of the FIDS who gave this descriptive name.

Whale Bay 60°44'S., 45°11'W.

Small bay between the SE. end of Coronation I. and the NW. side of Matthews I., in the South Orkney Islands. The name Hvalbugten (Whale Bay) appears on a chart based upon a running survey of the South Orkney Is. in 1912-13 by Norwegian whaler Capt. Petter Sørllø.

Whaler Channel 54°10'S., 36°42'W.

Northernmost of three small channels leading into Husvik Harbor in Stromness Bay, South Georgia. The name appears to be first used on a 1930 British Admiralty chart.

Whalers Bay 62°59'S., 60°34'W.

Small bay entered between Fildes Pt. and Penfold Pt. at the E. side of Port Foster, Deception I., in the South Shetland Islands. The bay was so named by the FrAE, 1908-10, under Charcot, because of its use at that time by whalers.

Whalers Passage 53°59'S., 37°29'W.

Narrow channel lying between the Welcome Is. and Sky Rock, off the N. coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Whaler Thal: see Whale Valley 54°30'S., 36°05'W.

Whales, Bay of 78°30'S., 164°20'W.

An iceport indenting the front of Ross Ice Shelf just northward of Roosevelt Island. A natural ice harbor which generally forms here, it served as the base site for Amundsen's successful dash to the South Pole, 1911, the Byrd Antarctic Expeditions of 1928-30 and 1933-35, and for the West Base of U.S. Antarctic Service, 1939-41. The configuration of the iceport is con-

tinuously changing. A survey by the Byrd expedition in 1934 determined that the feature lay at the junction of two separate ice systems, the movements of which are influenced by the presence of Roosevelt Island. Cdr. Glen Jacobsen, USN, who visited in the *Atka* in January 1955, found that calving of the ice shelf rendered the iceport temporarily unusable. The feature was so named by Ernest Shackleton in the *Nimrod*, January 24, 1908, because of the large number of whales seen in it.

Whale Skerries 60°42'S., 45°06'W.

Small group of islands and rocks in Lewthwaite Str. in the South Orkney Is., lying close W. of Cape Disappointment, Powell Island. First surveyed and named "Hvalskjaer" by Petter Sørllø in 1912-13. The name was later corrected to the plural form, "Hvalskjærene" (Whale Skerries), by Sørllø. The English form of the name was recommended by the UK-APC in 1954.

Whale Valley 54°30'S., 36°05'W.

A small valley leading NW. from Moltke Hbr., South Georgia. The name derives from "Whaler Thal" (whaler valley), given by the German exp. 1882-83, under Schrader.

Wharton, Mount 81°03'S., 157°49'E.

A mountain over 2,800 m., standing 5.5 mi. W. of Turk Peak in the Churchill Mountains. Discovered by the BrNAE (1901-4) and named for Sir William Wharton, Hydrographer to the Royal Navy, 1884-1904.

Whatahope Bay: see Windy Cove 54°04'S., 36°58'W.

Wheatstone, Cape 72°37'S., 170°13'E.

A bold rock cape that forms the south end of Hallett Peninsula and marks the north entrance to Tucker Inlet, Victoria Land. Discovered in January 1841 by Sir James Clark Ross who named it for Sir Charles Wheatstone, English physicist and inventor.

Wheatstone Glacier 64°44'S., 62°31'W.

A glacier on the west coast of Graham Land. It enters Errera Channel east of Danco Island. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Sir Charles Wheatstone (1802-1875), English scientist and inventor who designed the first mirror stereoscope in 1832.

Wheeler, Cape 73°58'S., 61°05'W.

An abrupt rock scarp rising to 460 meters. It forms the N. side of the entrance to Wright Inlet on the E. coast of Palmer Land. The cape was photographed from the air in 1940 by the USAS and in 1947 by the RARE

GEOGRAPHIC NAMES OF THE ANTARCTIC

under Ronne. Named by Ronne for John N. Wheeler, Pres. of the North American Newspaper Alliance and a contributor to the expedition.

Wheeler Bay 66°18'S., 56°06'E.

Bay 3 mi. wide, indenting the coast 2 mi. NW. of Magnet Bay. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37. They named this bay Brörvika (brother bay) and the rocks at its entrance Brødrene (the brothers). The area was remapped in 1956-57 by ANARE which renamed the bay and the rocks for G. T. Wheeler, weather observer at Mawson Station in 1957. The name Wheeler has been accepted for this bay; the name Brødrene Rocks (q.v.) has been approved for the associated rocks.

Wheeler Glacier 54°36'S., 36°22'W.

Glacier draining the N. flank of Mt. Fraser, flowing WNW. for 2 mi. to the S. coast of South Georgia. Surveyed by the SGS in the period 1951-57. Named by the UK-APC for J. F. G. Wheeler, British zoologist and member of the scientific staff of the Discovery Investigations Marine Station, Grytviken, South Georgia, 1925-27 and 1929-30.

Wheeler Rocks: see Brødrene Rocks 66°17'S., 56°06'E.

Wheeler Valley 77°12'S., 161°44'E.

The ice-free hanging valley on the SW. side of Miller Gl., immediately E. of Mt. Mahony in Victoria Land. Named by the VUWAE (1959-60) for R. H. Wheeler, the party's deputy leader and surveyor.

Whelan Nunatak 70°09'S., 64°17'E.

An isolated nunatak standing 5 mi. NW. of Mt. Starlight in the Athos Range, Prince Charles Mountains. Mapped by ANARE from air photos taken in 1965. Named by ANCA for R.F. Whelan, radio officer at Davis Station, 1964.

Whetter Nunatak 66°58'S., 143°01'E.

A small rock outcrop on the coastal ice slopes near the sea, situated 8 mi. ENE. of Cape Denison on the E. shore of Commonwealth Bay. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Dr. Leslie H. Whetter, a surgeon with the expedition.

Whewell, Mount 72°03'S., 169°35'E.

A massive mountain (2,945 m.) between the mouths of Ironside and Honeycomb Glaciers in the Admiralty Mtns., Victoria Land. Named by Sir James Clark Ross, Jan. 15, 1841, for the Reverend Dr. William Whewell, Master of Trinity College, Cambridge.

Whewell Glacier 72°04'S., 169°47'E.

A narrow, steep glacier that drains the E. slopes of Mt. Whewell and merges with the lower part of Honeycomb Glacier, in the Admiralty Mtns., Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN in association with Mount Whewell.

Whichaway Nunataks 81°33'S., 28°30'W.

Group of rocky nunataks extending for 7 mi. and marking the S. side of the mouth of Recovery Glacier. First seen from the air and visited in 1957 by the CTAE and so named because it was uncertain which route from the nunataks would lead furthest inland.

Whillans, Mount 84°27'S., 64°15'W.

Mountain, 870 m., standing 4 mi. SW. of Mt. Stroschein in Anderson Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Ian M. Whillans, glaciologist at Palmer Station, winter 1967.

Whiplash Glacier 72°16'S., 167°42'E.

A tributary glacier flowing northwestward from Cartographers Range into the lower part of Pearl Harbor Glacier where the direction becomes east, in the Victory Mtns., Victoria Land. Named by the northern party of NZFMCAE, 1962-63, because of its characteristic shape.

Whirlwind Glaciers 67°24'S., 65°32'W.

Four prominent converging glaciers which flow into the W. side of Whirlwind Inlet on the E. coast of the Antarctic Peninsula. Discovered by Sir Hubert Wilkins on his flight of Dec. 20, 1928, the glaciers were so named because their relative position was suggestive of the radial cylinders of his Wright Whirlwind engine. The Whirlwind Glaciers, comprising Flint, Demorest, Matthes, and Chamberlin Glaciers, were photographed from the air by the USAS in 1940; charted by the FIDS in 1948.

Whirlwind Inlet 67°30'S., 65°25'W.

Ice-filled inlet that recedes inland for 7 mi. and is 12 mi. wide at its entrance between Cape Northrop and Tent Nunatak, along the E. coast of Graham Land. Sir Hubert Wilkins disc. the inlet on his flight of Dec. 20, 1928. Wilkins reported four large glaciers flowing into the inlet, which he named Whirlwind Glaciers because their relative position was suggestive of the radial cylinders of his Wright Whirlwind engine. The inlet was photographed from the air by the USAS in 1940 and charted by the FIDS in 1947.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Whiskey Bay: see Corinthian Bay 53°01'S., 73°27'E.

Whisnant Nunatak 69°59'S., 73°05'E.

A small coastal nunatak protruding above the terminus of Rogers Glacier between McKaskle Hills and Maris Nunatak, at the E. side of Amery Ice Shelf. Delineated in 1952 by John H. Roscoe from USN Operation Highjump aerial photographs taken in March 1947. Named by Roscoe for J.R. Whisnant, Operation Highjump air crewman on photographic flights over this and other coastal areas between 14° and 164° East longitude.

Whistle Cove 54°09'S., 36°49'W.

Cove lying at the head of Fortuna Bay on the N. coast of South Georgia. The name appears to be first used on a 1931 British Admiralty chart.

Whistling Bay 67°30'S., 67°37'W.

An open bay, 4 mi. wide and indenting 2.5 mi., between Longridge Head and Cape Sáenz along the W. coast of Graham Land. First roughly surveyed in 1936 by the BGLE under Rymill. Resurveyed in 1948 by the FIDS and so named by them because of the curious and unidentified whistling sounds heard there at the time of the survey.

Whitcombe, Mount 76°46'S., 162°12'E.

A large mountain, 1,425 m., standing just N. of Mt. Perseverance and W. of Mt. Arrowsmith at the W. side of Evans Piedmont Glacier in Victoria Land. Mapped in 1957 by the N.Z. Northern Survey Party of the CTAE, 1956-58. Named by them for its similarity to the Canterbury, N.Z., mountain of that name, and in association with Mt. Arrowsmith.

Whitcomb Ridge 73°07'S., 166°00'E.

A high, ice-covered ridge along the S. side of the head of Gair Gl., standing 6 mi. SE. of Mt. Supernal in the Mountaineer Range of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Jean P. Whitcomb, radio scientist at McMurdo Station, 1965-66 and 1966-67.

White, Mount 85°09'S., 170°18'E.

A massive mountain, 3,470 m., standing 2.5 mi. NNW. of Mt. Henry Lucy and forming the highest elevation in the Supporters Range. Discovered by the BrAE (1907-9) and named for the Secretary of the expedition.

White City: see Gulbrandsen Lake 54°12'S., 36°44'W.

Whitecloud Glacier 63°55'S., 59°32'W.

A glacier which flows northward to discharge into Charcot Bay just west of Almond Point, Trinity Penin-

sula. Named by UK-APC in 1960. The name is descriptive of cloud conditions that prevailed at the time of FIDS survey of the area in 1948.

White Company, The 61°06'S., 55°09'W.

A group of snow-covered mountains located N. of Endurance Gl. and W. of Pardo Ridge in Elephant I., South Shetland Islands. A descriptive name given by the U.K. Joint Services Exp. to Elephant I., 1970-71.

White Cross Mountain: see Guernsey, Mount 69°20'S., 68°14'W.

Whited Inlet 69°50'S., 160°08'E.

An ice-filled inlet along the coast between Northrup Head and Anderson Peninsula. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Master Chief Quartermaster Robert J. Whited, USN, Leading Chief for the staff and a member of Operations Division responsible for maintaining and updating charts for Task Force 43 during Operation Deep Freeze 1968 and 1969.

White Escarpment 79°29'S., 85°37'W.

An escarpment in the W. part of the Heritage Range, extending for 15 mi. between the heads of the Splettstoesser and Dobbratz Glaciers. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for Chief Warrant Officer Ronald B. White, pilot with the 62nd Transportation Detachment, who assisted the party.

White Glacier 75°45'S., 140°50'W.

A broad westward flowing tributary glacier which joins the Land Glacier on the N. side of Mt. McCoy in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Gen. Thomas D. White, USAF, Chief of Staff and member of the Joint Chiefs of Staff, 1957-61, who participated in the planning and organizational stages of Operation Deep Freeze in an administrative capacity and in matters relating to aircraft. Application of the name was proposed by Adm. Richard E. Byrd.

Whitehall Glacier 72°43'S., 169°25'E.

A large glacier flowing N. into Tucker Inlet between Daniell Peninsula and the SE. part of the Victory Mtns., in Victoria Land. Named by NZGSAE, 1957-58, partly because of the literal meaning and partly with reference to the proximity of the glacier to the Admiralty Mountains, the Admiralty office in London being situated in Whitehall.

White Island 66°44'S., 48°35'E.

Ice-covered island 13 mi. long and 5 mi. wide, lying 6 mi. N. of Sakellari Pen., Enderby Land. Disc. and

GEOGRAPHIC NAMES OF THE ANTARCTIC

called Hvit Øya (White Island) by Riiser-Larsen in January 1930. Its existence was considered doubtful for a number of years but was confirmed by the Soviet exp. in the *Lena* in March 1957, and by ANARE led by D. F. Styles in the *Thala Dan* in February 1960.

White Island 78°08'S., 167°24'E.

An island in the Ross Archipelago, 15 mi. long, protruding through the Ross Ice Shelf immediately E. of Black Island. Discovered by the BrNAE (1901-4) and so named by them because of the mantle of snow which covers it.

White Islands 77°17'S., 153°10'W.

A group of ice-covered islands extending N.-S. for about 10 miles. They lie at the E. margin of Swinburne Ice Shelf and near the terminus of Butler Gl. in the S. part of Sulzberger Bay. This feature is rudely delineated on the map of the ByrdAE, 1928-30, as "low ice cliffs" that rise above the level of the ice shelf. The islands were mapped in detail by USGS from surveys and U.S. Navy air photos, 1959-65. The name was applied by US-ACAN at the suggestion of Adm. R.E. Byrd. Named for Dr. Paul Dudley White, internationally renowned specialist on heart diseases, who was a consultant on medical matters in regard to USN Operation Highjump, 1946-47, led by Byrd.

White Massif 70°32'S., 67°13'E.

A rock massif about 3 mi. ENE. of Thomson Massif in the Aramis Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for R. F. White, senior technician (electronics) at Mawson Station in 1963 who died there on October 18, 1963.

White Nunataks: see Arkhangel'skiy Nunataks 69°28'S., 156°30'E.

White Nunataks 84°46'S., 66°05'W.

Three nunataks standing 3 mi. N. of the NW. tip of Mackin Table in the Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Noah D. White, radioman at South Pole Station, winter 1967.

Whiteside, Mount 67°19'S., 59°29'E.

Low, conical peak, 190 m., surmounting the E. extremity of Fold Island. Disc. and named by DI personnel on the *William Scoresby* in February 1936.

Whiteside Hill 65°08'S., 61°38'W.

Ice-covered hill, 330 m., at the S. side of the mouth of Evans Gl. on the E. coast of Graham Land. This area

was observed from the air by Sir Hubert Wilkins on Dec. 20, 1928. The feature was first charted as a point during 1947 by the FIDS. In 1955, FIDS reported that the point is not marked by any rock exposures and merges so gradually with the ice of Evans Gl. that the hill is the feature to which the name should be applied. The descriptive name was given by the UK-APC.

Whiteside Point: see Whiteside Hill 65°08'S., 61°38'W.

White Spur 71°19'S., 160°16'E.

A spur forming part of the S. wall of Allegro Valley as it juts eastward from the central portion of the Daniels Range, Usarp Mountains. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Russell F. White, USARP meteorologist at South Pole Station, 1967-68.

White Strait 78°13'S., 166°48'E.

The small ice-filled strait between Black and White Islands, in the Ross Archipelago. First mapped by the BrNAE, 1901-4. Named by the NZGSAE (1958-59) for M. White, a member of the party.

White Valley 76°39'S., 117°57'W.

A broad ice-covered valley that indents the northern part of Crary Mountains between Trabucco Cliff and Lie Cliff, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photos, 1959-66. Named by US-ACAN for Franklin E. White, USARP ionospheric physicist at Byrd Station in four summer seasons, 1966-71.

Whitewhale Bastion 65°37'S., 62°30'W.

A prominent L-shaped mass that arises to nearly 1,200 m. and dominates Starbuck Glacier, 10 mi. from its terminus on the east side of Graham Land. Its east face consists of walls of white granite, hence the name, one of several in the vicinity applied by UK-APC in association with Herman Melville's whaling novel, *Moby Dick*.

Whiting, Mount 71°40'S., 62°37'W.

A pyramidal mountain, largely ice free and steep cliffed on the S. side, standing at the SW. side of Rankin Glacier near the E. coast of Palmer Land. Mapped by USGS in 1974. Named by US-ACAN for topographic engineer Ronald F. Whiting, a member of the USGS geological and mapping party to the Lassiter Coast area, 1970-71.

Whiting Nunatak: see Melfjellet 68°21'S., 59°12'E.

Whiting Rocks 65°15'S., 64°20'W.

Three rocks lying 0.5 mi. S. of The Barchans, Argentine Islands, off the coast of Graham Land. Named by

GEOGRAPHIC NAMES OF THE ANTARCTIC

UK-APC for Colin S. Whiting, survey asst. of the Hydrographic Survey Unit from HMS *Endurance* working in the area in February 1969.

Whitmer Peninsula 75°50'S., 162°45'E.

A broad ice-capped peninsula, about 7 mi. long and wide, between Cheetham Ice Tongue and Harbord Glacier Tongue on the coast of Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1957-62. Named by US-ACAN for Lt. (j.g.) R.D. Whitmer, USN, who wintered over at Williams Field, McMurdo Sound, in 1956. He returned to Antarctica with U.S. Naval Construction Battalion units during Deep Freeze 1966 and 1967.

Whitmore Mountains 82°35'S., 104°30'W.

An isolated group of mountains in West Antarctica, consisting of three mountains and a cluster of nunataks extending over 15 miles. The group was visited and surveyed on Jan. 2, 1959, by William H. Chapman, cartographer with the Horlick Mountains Traverse Party (1958-59). Named by Chapman for George D. Whitmore, Chief Topographic Engineer, USGS, who was a member of the Working Group on Cartography of the Scientific Committee on Antarctic Research.

Whitney Glacier 85°39'S., 160°00'W.

A tributary glacier, 6 mi. long, draining NE. from Mt. Ellsworth to enter Amundsen Gl. just S. of Robinson Bluff, in the Queen Maud Mountains. Discovered and mapped by the ByrdAE, 1928-30. Named by US-ACAN for Raymond L. Whitney, meteorologist, South Pole Station winter party, 1961.

Whitney Peak 76°26'S., 126°03'W.

A conspicuous peak (3,005 m.) rising 3 mi. NW. of Mt. Hampton, from which it is separated by a distinctive ice-covered saddle, in the northernmost part of the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy aerial photographs, 1958-60. Named by US-ACAN for Capt. Herbert Whitney, USNR, commander of the Navy's Mobile Construction Battalion responsible for the building of Antarctic stations for use during the International Geophysical Year. Whitney wintered over at Little America V in 1956.

Whitney Point 66°15'S., 110°31'E.

A rocky point at the N. side of the entrance to Powell Cove on Clark Peninsula. Mapped from air photos taken by USN Operation Highjump, 1946-47, and at first thought to be a small island. It was included in a ground survey by Carl R. Eklund in 1957. Named by US-ACAN for photographer's mate I. A. Whitney, USN, who participated in Operation Highjump.

Whit Rock 66°03'S., 65°56'W.

Rock lying between the Trump and Saffery Islands off the W. coast of Graham Land. First shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for its small size, "whit" meaning the smallest part or particle.

Whitson, Cape 60°46'S., 44°32'W.

Cape at the S. end of the peninsula separating Methuen and Aitken Coves, on the S. coast of Laurie I. in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for T. B. (later Sir Thomas) Whitson, treasurer of the expedition.

Whitten Peak 63°25'S., 57°04'W.

Pyramidal peak, 445 m., forming the NE. end of Blade Ridge at the W. side of the head of Hope Bay, on the NE. end of Antarctic Peninsula. Disc. by the SwedAE, 1901-4, under Nordenskjöld. Named by the FIDS for R. Whitten, first mate of the ship *Eagle*, which participated in FIDS operations in 1944-45.

Whittle Glacier 66°22'S., 114°13'E.

A short channel glacier flowing NE. to Colvocoresses Bay and terminating in a small glacier tongue 6 mi. NW. of Williamson Glacier. Delineated from air photos taken by USN Operation Highjump (1946-47), and named by US-ACAN for Dr. J.S. Whittle, Assistant Surgeon on the sloop *Vincennes* of the USEE (1838-42) under Lt. Charles Wilkes.

Whittle Glacier Tongue 66°20'S., 114°24'E.

A small glacier tongue extending seaward from Whittle Glacier into Colvocoresses Bay. Delineated from aerial photographs taken by USN Operation Highjump (1946-47), and named by US-ACAN in association with Whittle Glacier.

Whitworth Ridge 70°24'S., 66°08'E.

A rock ridge about 2 mi. NE. of Mt. Leckie in the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956. Named by ANCA for R. Whitworth, geophysicist at Wilkes Station in 1963.

Widdows, Point 67°42'S., 45°25'E.

Point at the W. side of the entrance to Freeth Bay on the coast of Enderby Land. Plotted from air photos taken by ANARE in 1956. Named by ANCA for E. I. Widdows, meteorologist at Mawson Station in 1959.

Widdowson Glacier 66°43'S., 65°46'W.

Glacier flowing into Darbel Bay between Drummond and McCance Glaciers, on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in

GEOGRAPHIC NAMES OF THE ANTARCTIC

1955-57, and mapped from these photos by the FIDS. Named by the UK-APC for Miss Elsie M. Widdowson of the Dept. of Experimental Medicine, Cambridge, joint author of *The Chemical Composition of Foods*, a fundamental work containing all the quantitative data required for calculating expedition ration requirements other than vitamins.

Wideopen Islands 63°00'S., 55°49'W.

Group of islands and rocks lying 7 mi. N. of Boreal Pt., Joinville Island. Roughly surveyed from a distance by the FIDS in 1953-54. The name arose because of their exposed, isolated position.

Widerøe, Mount 72°08'S., 23°30'E.

Large mountain rising to 3,180 m. between Mt. Walnum and Mt. Nils Larsen in the Sør Rondane Mountains. Mapped by Norwegian cartographers in 1946 from air photos taken by the Lars Christensen Exp., 1936-37, and named for Viggo Widerøe, airplane pilot of this expedition. Remapped by the Norwegians in 1957 from air photos taken on USN Op. Hjp., 1946-47.

Widerøe Fjell: see Widerøe, Mount 72°08'S., 23°30'E.

Widich Nunatak 85°20'S., 121°25'W.

A nunatak 3.5 mi. E. of Spencer Nunatak, lying between Wisconsin Range and Long Hills in the Horlick Mountains. Mapped by USGS from surveys and USN air photos, 1959-60. Named by US-ACAN for George Widich, traverse engineer, Byrd Station winter party, 1960.

Widmark Ice Piedmont 66°17'S., 65°30'W.

Ice piedmont between Holtedahl and Darbel Bays on the W. coast of Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1959 for Erik J. Widmark (1850-1909), Swedish ophthalmologist, pioneer of researches upon the etiology and treatment of snow blindness.

Widowmaker Pass 74°55'S., 162°20'E.

A heavily crevassed and therefore dangerous pass leading from Larsen Gl. to Reeves Gl., between Mt. Janetschek and Mt. Gerlache in Victoria Land. Given this expressive name by the NZGSAE, 1962-63.

Wiencke Island 64°50'S., 63°25'W.

Island 16 mi. long and from 2 to 5 mi. wide, which is the southernmost of the major islands of the Palmer Arch., lying between Anvers I. and the W. coast of Antarctic Peninsula. Disc. by the BelgAE, 1897-99, under Gerlache and named for Auguste-Karl Wiencke, a seaman who lost his life on the expedition.

Wiener Peaks 76°49'S., 144°30'W.

Group of nunataks 5 mi. NE. of Mt. Passel in the Ford Ranges, Marie Byrd Land. Discovered on aerial flights over this area by the USAS (1939-41) and named for Murray A. Wiener, auroral observer at West Base during this expedition.

Wiens Peak 83°59'S., 56°19'W.

A peak at the E. end of Elliott Ridge in southern Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Rudolph H. Wiens, aurora scientist at Ellsworth Station, winter 1962.

Wiest Bluff 85°22'S., 176°22'W.

A prominent bluff, 2,160 m., standing just N. of the confluence of Shackleton and Zaneveld Glaciers and marking the W. extremity of the Cumulus Hills. Named by US-ACAN for William G. Wiest, USARP ionospheric scientist at the South Pole Station, 1964.

Wiggins Glacier 65°14'S., 64°03'W.

Glacier 10 mi. long, flowing from Bruce Plateau to the W. coast of Graham Land just S. of Blanchard Ridge. Charted by the FrAE, 1908-10, under Charcot, and named "Glacier du Milieu" (Middle Glacier). Feeling that a more distinctive name was needed, the UK-APC in 1959 renamed the glacier for W. D. C. Wiggins, then Deputy Director of Overseas Surveys.

Wigg Islands 67°32'S., 62°34'E.

Group of six small islands, 6 mi. NW. of the Flat Is. in Holme Bay, Mac. Robertson Land. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Meisteinene (the middle stones). Renamed by ANCA for Dr. D. R. Wigg, medical officer at Mawson Station in 1962.

Wignall Nunataks 70°10'S., 64°23'E.

Two snow-covered nunataks standing 2 mi. NW. of Mt. Starlight in the Athos Range, Prince Charles Mountains. Mapped from ANARE surveys and air photos, 1955-65. Named by ANCA for R. Wignall, weather observer at Davis Station, 1964.

Wignall Peak 70°24'S., 66°24'E.

A small peak just W. of Mt. McCarthy in the eastern part of the Porthos Range, Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named for R. Wignall, weather observer at Davis Station in 1964.

Wilbanks, Mount 75°00'S., 112°53'W.

A mound-shaped mountain that is partly ice covered but has a prominent bare rock E. face, forming the E.

GEOGRAPHIC NAMES OF THE ANTARCTIC

extremity of the Kohler Range in Marie Byrd Land. First roughly mapped by USGS from air photos obtained by USN Op. Hjp. in January 1947. Named by US-ACAN for John R. Wilbanks, geologist with the USARP Marie Byrd Land Survey party, 1966-67.

Wilbur, Mount 86°58'S., 152°37'W.

A mountain standing 2 mi. E. of Mt. Weaver at the head of Scott Gl., in the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn, and named by Byrd for the Hon. Curtis D. Wilbur, Sec. of the Navy, 1925-29.

Wilbye, Mount 69°25'S., 71°37'W.

Mountain, 2,000 m., surmounting the N. end of Lassus Mtns. in the N. part of Alexander Island. Mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for John Wilbye (1574-1638), English madrigal composer.

Wilckenskette: see Wilckens Peaks 54°12'S., 36°57'W.

Wilckens Peaks 54°12'S., 36°57'W.

Numerous peaks, the highest 1,375 m., in the form of an arc which extends from the N. side of Keilhau Gl. to the N. side of Neumayer Gl. in South Georgia. The peaks were roughly located in 1928-29 by Ludwig Kohl-Larsen who gave the name "Wilckenskette" after Otto Wilckens of Bonn University. An English form of the name has been accepted.

Wilcox, Mount 67°57'S., 66°56'W.

Mountain with a sharp, rocky, triangular peak surmounting the SE. corner of Square Bay, 8 mi. E. of Camp Point on the W. coast of Graham Land. The mountain was apparently first seen and roughly charted in 1909 by the FrAE under Charcot. It was surveyed in 1936 by the BGLE under Rymill and was photographed from the air in 1940 by the USAS. The name, proposed by Col. Lawrence Martin, is for Phineas Wilcox, mate on the *Hero*, in which Capt. Nathaniel B. Palmer explored the Antarctic mainland S. of Deception I. in 1820.

Wild, Cape 68°23'S., 149°07'E.

A prominent rock cape on the eastern end of the Organ Pipe Cliffs. This may be the cape viewed from the ship *Vincennes* at a great distance, as a result of "looming" or superior mirage, by the USEE under Lt. Charles Wilkes, Jan. 19, 1840. Wilkes applied the name "Point Emmons" for Lt. George F. Emmons of the *Vincennes*. The cape was accurately positioned by the AAE (1911-14) under Douglas Mawson, who named it for Frank Wild, a member of the expedition and leader of the AAE Western Base Party.

Wild, Cape: see Wild, Point 61°06'S., 54°52'W.

Wild, Mount 84°48'S., 162°40'E.

A peak 2.5 mi. W. of Mt. Augusta at the SW. extremity of the Queen Alexandra Range. Discovered by the BrAE (1907-9) and named for Frank Wild, a member of the Southern Polar Party of that expedition.

Wild, Mount 64°12'S., 58°53'W.

Sharply defined rock ridge with several summits, the highest 945 m., standing at the N. side of the mouth of Sjögren Gl. on the E. coast of Trinity Peninsula. First charted by the FIDS in 1945 and named for Frank Wild.

Wild, Point 61°06'S., 54°52'W.

A point 6 mi. W. of Cape Valentine on the N. coast of Elephant I., South Shetland Islands. Named Cape Wild by the Shackleton *Endurance* exp., 1914-16, but Point Wild is recommended for this feature because of its small size and to avoid confusion with Cape Wild on George V Coast. Named for Frank Wild, leader of the party from Shackleton's shipwrecked exp. which camped on the point for four months until rescued in August 1916.

Wild Icefalls 84°55'S., 162°25'E.

The extensive icefalls at the head of Beardmore Gl., between Mt. Wild and Mt. Buckley. Named by the NZGSAE (1961-62) in association with nearby Mt. Wild.

Wild Mountains: see Wild, Mount 84°48'S., 162°40'E.

Wilds Nunatak 73°01'S., 160°13'E.

A lone nunatak located 2 mi. W. of the S. end of Frontier Mountain in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Ronald F. Wilds, aviation machinist's mate with USN Squadron VX-6 at McMurdo Station, 1966.

Wild Spur 64°42'S., 62°32'W.

Spur extending from Pulfrich Peak to the W. side of Arctowski Pen., on the W. coast of Graham Land. Shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1960 for Heinrich Wild (1833-1902), Swiss instrument designer responsible for the autograph, first used about 1924 for stereosurvey from ground stations and later adapted for air survey.

Wilh. Carlson Island: see Carlson Island 63°53'S., 58°16'W.

Wilh. Carlsons Ö: see Carlson Island 63°53'S., 58°16'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wilhelm Archipelago 65°08'S., 64°20'W.

The myriad of islands, the largest of which are Booth and Hovgaard Islands, extending from Bismarck Strait SW. to Lumus Rock, off the W. coast of Graham Land. Disc. by a Ger. exp. under Dallmann, 1873-74. He named them for Wilhelm I, then Emperor of Germany and King of Prussia.

Wilhelm Barrier: see Filchner Ice Shelf 79°00'S., 40°00'W.

Wilhelm Christophersen, Mount 85°33'S., 167°20'W.

A mound-shaped, ice-covered knob which rises from the edge of the polar plateau 3 mi. S. of Mt. Engeltstad and overlooks the S. side of the head of Axel Heiberg Glacier. Discovered in 1911 by Roald Amundsen and named by him for Wilhelm Christophersen, Norwegian diplomat and Minister at Buenos Aires at that time.

Wilhelm Glacier 72°46'S., 166°37'E.

A glacier 2 mi. N. of Olson Glacier, draining the N. part of the W. slopes of Malta Plateau and flowing W. into Seafarer Glacier in Victoria Land. Mapped by USGS from surveys and U.S. Navy air photos, 1960-64. Named by US-ACAN for Robert C. Wilhelm, a member of the USARP glaciological party at Roosevelt Island in 1967-68.

Wilhelmina Bay 64°38'S., 62°10'W.

Bay 15 mi. wide between Reclus Pen. and Cape Anna along the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, under Gerlache, and named for Wilhelmina, Queen of the Netherlands, 1890-1948.

Wilhelmine, Baie de: see Wilhelmina Bay 64°38'S., 62°10'W.

Wilhelm Shelf Ice: see Filchner Ice Shelf 79°00'S., 40°00'W.

Wilhelm II Coast 67°00'S., 90°00'E.

That portion of the coast of Antarctica lying between Cape Penck, in 87°43'E., and Cape Filchner, in 91°54'E. Discovered by the German Antarctic Expedition (1901-3), under the leadership of Erich von Drygalski, and named for Kaiser Wilhelm II.

Wilhoite Nunataks 81°39'S., 154°55'E.

Group of dark rock nunataks near the polar plateau, about 12 mi. SW. of All-Blacks Nunataks. Named by US-ACAN after the USS *Wilhoite*, radar picket escort vessel which maintained an ocean station in support of aircraft flights between New Zealand and Antarctica in USN Op. DFrz. 1961.

Wilkes Coast: see Clarie Coast 66°30'S., 133°00'E.

Wilkes Land 69°00'S., 120°00'E.

A large land in Antarctica fronting on the Indian Ocean between Queen Mary Coast and George V Coast, extending from Cape Hordern in 100°31'E. to Point Alden in 142°02'E. Named for Rear Admiral Charles Wilkes, American explorer who was in command of the United States Exploring Expedition, 1838-42. The name has been applied over this extent in recognition of the fact that Wilkes recognized the phenomena of the continental margin over a distance of 1,500 miles of coast and thus first provided substantial proof that Antarctica is a continent. This definition of extent excludes the area east of 142°02'E. which was sighted by Wilkes but has been shown by later expeditions to be farther south than the positions originally assigned by him.

Wilkes Subglacial Basin 75°00'S., 145°00'E.

A large subglacial basin situated generally southward of George V Coast and westward of Prince Albert Mountains in East Antarctica. The feature was roughly delineated by U.S. seismic parties, 1958-60. Named by US-ACAN (1961) for the proximity of the western portion of this feature to Wilkes Land, and for the explorations along George V Coast by the USEE (1838-42) under Lt. Charles Wilkes, USN.

Wilkins, Cape 67°15'S., 59°18'E.

A rocky cape at the N. tip of Fold I., forming the E. side of the entrance to Stefansson Bay. Disc. on Feb. 18, 1931, by the BANZARE under Mawson. Mapped in February 1936 by DI personnel on the *William Scoresby*. It was remapped in greater detail from air photos taken by the Lars Christensen Exp., 1936-37. Mawson named this feature Cape Hearst in gratitude for the purchase of the news rights of BANZARE by the Hearst Press. Later he agreed to change the name to Cape Wilkins, the name used by subsequent expeditions.

Wilkins Coast 69°40'S., 63°00'W.

That portion of the E. coast of the Antarctic Pen. between Cape Agassiz and Cape Boggs. Named by the US-ACAN for Sir Hubert Wilkins, who in a pioneer Antarctic exploratory flight on Dec. 20, 1928, flew southward from Deception I. and crossed the Antarctic Pen. to its E. side. He continued southward to Stefansson Strait and Hearst I. which lie midway along Wilkins Coast.

Wilkins Ice Shelf 70°15'S., 73°00'W.

A rectangular ice shelf about 80 miles long and 60 miles wide. The feature occupies the central part of

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wilkins Sound, from which it takes its name. The name was proposed by the UK-APC in 1971.

Wilkins Island: see Hearst Island 69°25'S., 62°10'W.

Wilkins Mountains 75°32'S., 66°30'W.

A group of low mountains of about 20 mi. extent, located 25 mi. SE. of the Sweeney Mtns. in eastern Ellsworth Land. Disc. by the RARE, 1947-48, under Ronne, who named these mountains for Sir Hubert Wilkins.

Wilkins Nunatak 75°39'S., 139°55'W.

The northeasternmost of three nunataks. It lies 6 mi. SW. of Ickes Mtns. in coastal Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Melvin L. Wilkins, QM3, USN, Quartermaster aboard USS *Glacier* in exploration of this coast, 1961-62.

Wilkinson Glacier 66°50'S., 66°20'W.

A glacier on the S. side of Protector Heights, flowing westward into Lallemand Fjord to the S. of Holdfast Point, Graham Land. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Capt. John V. Wilkinson, RN, captain of HMS *Protector* in these waters, 1955-56 and 1956-57.

Wilkinson Peaks 66°37'S., 54°15'E.

Group of peaks in the Napier Mtns. standing 5 mi. SE. of Mt. Griffiths. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37, and called Langnabbane (the long noses). Visited in 1961 by an ANARE sledge party and re-named by ANCA for B. G. Wilkinson, assistant diesel mechanic at Mawson Station in 1961.

Wilkins Sound 70°15'S., 73°00'W.

A sound that is largely occupied by the Wilkins Ice Shelf, located between the concave western coastline of Alexander Island and the shores of Charcot Island and Latady Island farther to the west. Its northern portion was first seen and roughly mapped in 1910 by the FrAE under J. B. Charcot and was observed from the air in 1929 by Sir Hubert Wilkins. The configuration of the sound was determined in 1940 on exploratory flights by USAS. Named by the USAS for Sir Hubert Wilkins, who in 1929 first proved "Charcot Land" to be an island and thereby indirectly discovered this feature. The existence of Latady I. at the SW. side of the sound was determined in 1960 by D.J.H. Searle of FIDS by examination of air photos taken by the RARE, 1947-48.

Wilkins Strait: see Wilkins Sound 70°15'S., 73°00'W.

Willems, Cape 64°57'S., 63°16'W.

Cape forming the N. side of the entrance to Flandres Bay on the W. coast of Graham Land. First charted by the BelgAE, 1897-99, and named by Gerlache for Pierre Willems.

Willett Cove 72°19'S., 170°14'E.

A small cove on the S. side of Seabee Hook, a recurved spit formed 1 mi. W. of Cape Hallett at the entrance to Edisto Inlet, Victoria Land. Surveyed in January 1956 by members of USN Op. DFrz. I from the icebreaker *Edisto*. Named by US-ACAN for James H. Willett of the Navy Hydrographic Office, who directed the establishment of astronomical control stations on Ross Island and Seabee Hook in 1955-56.

Willett Range 77°18'S., 160°25'E.

The range extending N. from Mistake Peak and running for 20 mi. as a high shelf along the edge of the continental ice to the Mackay Gl., in Victoria Land. The range is breached by several glaciers flowing E. from the plateau. Named by the N.Z. Northern Survey Party of the CTAE (1956-58) for R. W. Willett, Director of the N.Z. Geological Survey, who gave valuable assistance throughout the expedition and in the compilation stages after its return.

Willey Glacier 70°25'S., 67°50'W.

A heavily-crevassed glacier N. of Creswick Peaks in Palmer Land, flowing W. from Creswick Gap into George VI Sound. Named by UK-APC for Laurence E. Willey, BAS geologist at Fossil Bluff and Stonington Island stations, 1966-69 and 1973.

Willey Point 84°37'S., 165°45'E.

A conspicuous rock point along the W. side of Beardmore Gl., marking the S. side of the mouth of Berwick Glacier. Named by US-ACAN for Francis J. Willey III, USARP meteorologist at Hallett Station, 1963.

Will Hays Mountains: see Hays Mountains 86°00'S., 155°00'W.

William, Monte: see Banck, Mount 64°54'S., 63°03'W.

William, Mount 64°47'S., 63°41'W.

Prominent snow-covered mountain, 1,600 m., standing 4 mi. NNE. of Cape Lancaster, the S. extremity of Anvers I., in the Palmer Archipelago. Disc. on Feb. 21, 1832, by John Biscoe who believed it to be part of the mainland of Antarctic Peninsula. Named by Biscoe for William IV, then King of England.

William Bay: see Børgen Bay 64°45'S., 63°30'W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

William Block, Mount: see Block Peak 85°41'S., 176°13'E.

William Bruce, Cape: see Bruce Point 76°08'S., 162°26'E.

William Glacier 64°43'S., 63°27'W.

Glacier flowing S. from the interior highlands of Anvers I. to the head of Børgen Bay on the SE. coast of the island, in the Palmer Archipelago. Disc. by the BelgAE, 1897-99, under Gerlache, and charted by them simply as a "grand glacier." The name William Glacier first appears on a chart based upon a 1927 survey by DI personnel on the *Discovery*.

William Henry May, Cape: see May, Cape 81°50'S., 162°50'E.

Williams, Cape 70°30'S., 164°09'E.

An ice-covered cape at the E. side of the terminus of Lillie Glacier. Discovered in February 1911 when the *Terra Nova* of the BrAE, 1910-13, explored the area westward of Cape North. Named for William Williams, Chief Engine-room Artificer on the *Terra Nova*.

Williams, Mount 66°48'S., 50°51'E.

Peak between Mt. Riiser-Larsen and Mt. Soucek in the NW. part of the Tula Mtns., in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956. Named by ANCA for J. Williams, assistant diesel mechanic at Wilkes Station in 1959.

Williams, Point 67°49'S., 67°34'E.

A point on the coast of Mac. Robertson Land at the E. side of Shallow Bay. Disc. by the BANZARE under Mawson on Feb. 12, 1931, and named for A. J. Williams, wireless officer on the *Discovery*.

Williams, Port: see Foster, Port 62°57'S., 60°39'W.

Williams Bluff 70°43'S., 160°12'E.

A rock and ice bluff 7 mi. E. of Keim Peak in the Usarp Mountains. The east-facing bluff rises between the Pitzman and Lovejoy Glaciers. Mapped by USGS from surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Harry N. Williams of U.S. Navy Squadron VX-6, aerial photographer on flights over Victoria Land and other Antarctic areas in three summer seasons, 1960-63.

Williams Cliff 77°35'S., 166°47'E.

A prominent rock cliff that stands out from the ice-covered SW. slopes of Mt. Erebus, situated 6 mi. E. of Cape Barne on Ross Island. This rock cliff was mapped by the BrAE under Scott, 1910-13, and identified

simply as "Bold Cliff" on maps resulting from that expedition. It was named Williams Cliff by the US-ACAN in 1964 to commemorate Richard T. Williams, who lost his life when his tractor broke through the ice at McMurdo Sound in January 1956.

William Scoresby Archipelago 67°20'S., 59°45'E.

Group of islands which extends northward from the coast just E. of William Scoresby Bay. The more important islands in the group are Bertha, Islay, Couling and Sheehan Islands. Most of the islands in this archipelago were disc. in February 1936 by DI personnel on the *William Scoresby*. They named the group after their ship.

William Scoresby Bay 67°24'S., 59°34'E.

A coastal embayment at the W. side of William Scoresby Arch., 5 mi. long and 3.5 mi. wide, with shores marked by steep rock headlands and snow-free hills rising to 210 meters. The practical limits of the bay are extended 4 mi. northward from the coast by island groups located along its E. and W. margin. Disc. in February 1936 by DI personnel on the *William Scoresby*, for which the bay was named.

Williams Cove 54°50'S., 36°00'W.

Small cove in the N. side of Larsen Harbor at the SE. end of South Georgia. The name appears to be first used on a 1929 British Admiralty chart.

Williams Harbour: see Foster, Port 62°57'S., 60°39'W.

Williams Head: see Williams, Cape 70°30'S., 164°09'E.

Williams Hills 83°42'S., 58°55'W.

A compact group of hills, 10 mi. long, located S. of Childs Gl. and W. of Roderick Valley in the Neptune Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Paul L. Williams, USGS geologist with the Neptune Range field party, 1963-64.

Williams Island 71°54'S., 101°26'W.

Ice-covered island about 1 mi. long, lying midway between Cape Petersen and Dyer Point and about 2 mi. off the N. coast of Thurston Island. Delineated from air photos taken by USN Squadron VX-6 in January 1960. Named by US-ACAN for Frederick W. Williams, aviation machinist's mate with USN Operation Highjump, who lost his life in a seaplane crash at Thurston Island on Dec. 30, 1946.

Williams Nunatak 66°26'S., 110°43'E.

Small coastal nunatak just E. of the Windmill Is., standing at the S. side of the terminus of Peterson Gl.

GEOGRAPHIC NAMES OF THE ANTARCTIC

where it faces on Penney Bay. First mapped from air photos taken by USN Op. Hjp. in February 1947. Named by the US-ACAN for Calvin E. Williams, member of one of the two USN Op. Wml. photographic units which obtained ground and aerial photographic coverage of this area in January 1948.

Williamson Bluff 68°05'S., 65°42'W.

A flat-topped bluff more than 1,000 m. high near the head of Trail Inlet on the E. coast of Graham Land. The upper part of the bluff is snow topped, but the sides are steep and rocky. The bluff extends from the E. side of Bills Gulch, 4 mi. NE. of Mt. Shelby. First photographed from aircraft by personnel of USAS on a flight of Sep. 28, 1940. Named by UK-APC after the Rev. William Williamson (1804-75), British mathematician and lawyer who made one of the earliest measurements of the surface flow of a glacier, in Switzerland, 1844.

Williamson Glacier 66°40'S., 114°06'E.

A glacier draining northeastward from Law Dome into Colvocoresses Bay. Delineated by G.D. Blodgett (1955) from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN after John G. Williamson, crew member on the sloop *Vincennes* of the USEE (1838-42) under Lt. Charles Wilkes.

Williamson Glacier Tongue 66°29'S., 114°24'E.

The prominent seaward extension of the Williamson Glacier into Colvocoresses Bay. Delineated from air photos taken by USN Operation Highjump (1946-47). Named by US-ACAN in association with Williamson Glacier.

Williamson Head 69°11'S., 158°00'E.

A prominent cape 6 mi. WNW. of Drake Head on the coast of Antarctica. Discovered from the *Terra Nova* in Feb. 1911 during Scott's last expedition. Named for Petty Officer Thomas S. Williamson, RN, a member of the expedition.

Williamson Point: see Williamson Head 69°11'S., 158°00'E.

Williamson Ridge 75°47'S., 116°45'W.

Low snow-covered ridge, 10 mi. long and 2 to 5 mi. wide, that forms a western extension of Toney Mountain in Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-71. Named by US-ACAN for Paul R. Williamson, ionospheric physicist at Byrd Station in two austral summers, 1967-68 and 1969-70.

Williamson Rock 77°27'S. 169°15'E.

Rock lying 4 mi. NW. of Cape Crozier, close off the N. coast of Ross Island. Charted by the BrAE, 1910-13,

under Scott. Named for Thomas S. Williamson, who as able seaman and petty officer accompanied Scott's expeditions of 1901-4 and 1910-13.

Williams Peak 77°58'S., 163°57'E.

A prominent peak over 1,400 m. in a nodal position between the drainage of the Hobbs, Salmon and Garwood Glaciers, in Victoria Land. Named by the Victoria University of Wellington Antarctic Expedition (1960-61) for Dr. J. Williams, Vice-Chancellor of the University.

Williams Point 62°28'S., 60°09'W.

Point forming the NE. tip of Livingston I. in the South Shetland Islands. The discovery of the South Shetland Is. was first reported in 1819 by William Smith, Master of the brig *Williams*. In John Miers' account of Smith's voyage, published in 1820, he states that Smith gave the name Williams to a point of land in this vicinity. In recent years Williams Point has been established in international usage for the point described.

Williams Reef 54°28'S., 3°28'E.

A reef which extends southward for about 0.5 mi. from Cape Fie, Bouvetøya. The reef was charted in 1898 by a German expedition in the *Valdivia* under Karl Chun. It was recharted in December 1927 by a Norwegian expedition in the *Norvegia* under Capt. Harald Horn-tvedt. Named by the latter for Capt. John Williams, American sealer who visited Bouvetøya in the schooner *Golden West* in 1878, making a landing on the island.

Williamsrevet: see Williams Reef 54°28'S., 3°28'E.

Williams Ridge 80°30'S., 29°20'W.

Conspicuous rock ridge, 1,060 m., extending E.-W. between Blaiklock and Stratton Glaciers, 1 mi. NW. of Honnywill Peak in the W. part of the Shackleton Range. First mapped in 1957 by the CTAE and named for Sgt. Ellis Williams, RAF, radio operator with the advance party of the CTAE in 1955-56 and with the RAF contingent of the expedition in 1956-58.

Williams Rocks 67°26'S., 62°46'E.

Group of rocks 9 mi. N. of Flat Is. and Holme Bay, off the coast of Mac. Robertson Land. Mapped by R. G. Dovers of ANARE in 1954. Named by ANCA for J. Williams, assistant diesel mechanic at Mawson Station in 1962, who assisted in a triangulation of the rocks and the erection of a beacon.

Willing, Mount 71°51'S., 66°55'E.

A mountain, elongated in an E.-W. direction, standing 17 mi. SW. of Fisher Massif in the Prince Charles

GEOGRAPHIC NAMES OF THE ANTARCTIC

Mountains. Disc. in November 1956 during a photographic flight by ANARE aircraft. Named by ANCA for Dr. Richard L. Willing, medical officer at Mawson Station in 1957.

Willis, Mount 79°22'S., 159°27'E.

A mountain 2 mi. S. of Mt. Chalmers in the southern part of the Conway Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1959-63. Named by US-ACAN for Lt. Cdr. Charles H. Willis, USN, commander of USS *Wilhoite* on ocean station duty in support of aircraft flights between Christchurch and McMurdo Sound during USN Op. DFrz. 1961.

Willis Glacier 77°16'S., 162°05'E.

Valley glacier in the St. Johns Range of Victoria Land, flowing NE. from Schist Peak along the W. side of Mt. Harker to Debenham Glacier. Charted by the VUWAE, 1959-60, and named by them for I. A. G. Willis, geophysicist with the expedition.

Willis Island: see Willis Islands 54°00'S., 38°11'W.

Willis Islands 54°00'S., 38°11'W.

Group of islands and rocks lying 2 mi. W. of Bird I., off the W. end of South Georgia. Discovered in 1775 by Capt. James Cook and named for the crew member who first sighted them.

Willis's Island: see Willis Islands 54°00'S., 38°11'W.

Williwaw Rocks 63°20'S., 55°01'W.

Two small rocks lying 2 mi. S. of Moody Pt., the E. extremity of Joinville Island. Surveyed by the FIDS in 1953. The name arose because williwaws appear to be characteristic in the vicinity of Moody Pt. and the nearby Danger Islands.

Willows Nunatak 74°29'S., 165°17'E.

A nunatak standing 1 mi. inland from the S. shore of Wood Bay on the coast of Victoria Land, rising above the col between Cape Washington and Mt. Melbourne. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for A. O. Dennis Willows, biologist at McMurdo Station, summer 1965-66.

Will Point 54°33'S., 36°01'W.

Point at the head of Royal Bay, lying 4 mi. W. of Cape Charlotte on the N. coast of South Georgia. First mapped by the German group of the International Polar Year Investigations, 1882-83. Resurveyed by the SGS in the period 1951-57 and named by the UK-APC for Dr. H. Will, botanist with the German expedition which wintered at Royal Bay in 1882-83.

Wilma Glacier 67°12'S., 56°00'E.

The western of two glaciers entering the southern part of Edward VIII Bay. Seen by an ANARE party led by Robert Dovers in November 1954. Named by ANCA for the wife of Robert Dovers, officer in charge and surveyor at Mawson Station in 1954.

Wilson, Cape 54°02'S., 37°10'W.

Cape at the E. side of the entrance to the Bay of Isles on the N. coast of South Georgia. The Bay of Isles was charted in 1912-13 by Robert Cushman Murphy, American naturalist aboard the brig *Daisy*. The cape was named by Murphy for Woodrow Wilson, President of the United States, 1913-21.

Wilson, Cape 82°14'S., 163°47'E.

A bold, rocky, snow-covered cape, forming the SE. end of the Nash Range and marking the northern entrance point to Shackleton Inlet on the western edge of the Ross Ice Shelf. Discovered by Capt. Robert F. Scott, RN, in December 1902, on his attempted trip to the South Pole. He was accompanied on this trip by Lt. (later Sir) Ernest H. Shackleton, RNR, and Dr. Edward A. Wilson, for whom the cape was named.

Wilson, Lake 79°49'S., 159°33'E.

An ice-covered lake along the W. margin of Ross Ice Shelf, lying 5 mi. NE. of the summit of Diamond Hill just N. of the terminus of Darwin Glacier. Charted by the VUWAE, 1962-63, and named for Prof. A. T. Wilson of the Victoria University of Wellington, investigator of lakes in the ice-free valleys W. of McMurdo Sound.

Wilson, Mount 68°27'S., 65°34'W.

Mountain, 1,675 m., standing 7 mi. W. of Rock Pile Peaks on the E. coast of Graham Land. This mountain appears indistinctly in a photograph taken by Sir Hubert Wilkins on his flight of Dec. 20, 1928. The feature was rephotographed in 1935 by Lincoln Ellsworth, in 1940 by the USAS, and in 1947 by the RARE under Ronne. It was charted by the FIDS in 1948. Named by Ronne for Maj. Gen. R. C. Wilson, chief of staff to Lt. Gen. Curtis LeMay, head of the Office of Research and Development of the then Army Air Force, which furnished equipment for the RARE.

Wilson Bluff 74°20'S., 66°47'E.

Large, rather flat-topped rock outcrop at the S. end of Lambert Gl., 16 mi. WNW. of Mt. Borland. This feature is 5 sq. mi. in area and has a tail of moraine extending NE. for several miles. Plotted from air photos taken by ANARE in 1956 and visited by an airborne field party led by G. A. Knuckey in October 1958. Named by ANCA for Flight Lt. H. O. Wilson, RAAF, pilot at Mawson Station in 1958.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wilsonflya: see Wilson Saddle 72°13'S., 3°15'W.

Wilson Glacier 66°46'S., 56°25'E.

Glacier 9 mi. long, flowing NE. into Edward VIII Ice Shelf just S. of Seaton Glacier. Photographed from ANARE aircraft in 1956. Named by ANCA for Flight Lt. H. O. Wilson, RAAF, pilot at Mawson Station, 1959, who was killed in an aircraft accident shortly after his return to Australia.

Wilson Glacier: see Breiffuss Glacier 66°58'S., 64°52'W.

Wilson Harbor 54°07'S., 37°42'W.

Bay 1.5 mi. wide and 3 mi. long, between Kade Pt. and Cape Demidov along the S. coast of South Georgia. This coast was roughly charted by a Russ. exp. under Bellingshausen in 1819. Wilson Harbor was named about 1912, probably for J. Innes Wilson, who sketched some of the inland portions of the island at about that time.

Wilson Hills 69°40'S., 158°30'E.

A group of scattered hills, nunataks and ridges that extend NW.-SE. for about 70 mi. between Matusevich Glacier and Pryor Glacier. Discovered by Lt. H.L.L. Pennell, RN, on the *Terra Nova* in Feb. 1911 during Scott's last expedition. Named after Dr. Edward A. Wilson, zoologist with the expedition, who perished with Scott on the return journey from the South Pole.

Wilson Island 66°27'S., 110°34'E.

A mainly ice-free island lying between Browning Pen. and Bosner I. in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for W. Stanley Wilson, biologist and member of the Wilkes Station party of 1961.

Wilson Nunataks 80°01'S., 80°38'W.

An irregular string of nunataks about 8 mi. long, lying between the Douglas Peaks and the head of Hercules Inlet in the Heritage Range, Ellsworth Mountains. Named by the Univ. of Minnesota Geological Party to these mountains, 1963-64, for Chief Warrant Officer Kenneth Wilson, pilot with the 62nd Transportation Detachment which assisted the party.

Wilson Pass 68°26'S., 65°15'W.

A glacier pass at about 400 m. between Bowditch Crests and Rock Pile Peaks on the east side of Antarctic Peninsula. The pass leads from Solberg Inlet to Mobiloil Inlet. The feature was photographed from the air by the USAS, 1939-41, and RARE, 1947-48. Named for Miss Alison Wilson of the Center for Polar

Archives, National Archives, Washington D.C., who has been associated with Antarctic research since 1957 and a member of US-ACAN since 1974.

Wilson Peak 78°52'S., 84°48'W.

A peak (2,400 m.) near the S. end of the Sentinel Range of the Ellsworth Mtns., rising at the E. side of Nimitz Glacier, 15 mi. SSE. of Mt. Craddock. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for J. H. Wilson, radioman on Navy R4D reconnaissance flights in the area during January 1958.

Wilson Piedmont Glacier 77°15'S., 163°10'E.

A large piedmont glacier extending from Granite Harbor to Marble Point on the coast of Victoria Land. Discovered by the BrNAE, 1901-4. The BrAE, 1910-13, named the feature for Dr. Edward A. Wilson, surgeon and artist with Scott's first expedition and chief of the scientific staff with the second. Wilson lost his life on the way back from the South Pole with Scott.

Wilson Portal 84°28'S., 178°54'W.

A coastal mountain rising over 1,000 m., which is snow covered except for its N. steep rock face. Spurs descend NE. from the feature. It stands 2.5 mi. SE. of O'Leary Peak and overlooks the W. side of the mouth (or portal) of Kosko Glacier where the latter enters Ross Ice Shelf. Discovered and photographed by USAS (1939-41) and surveyed by A. P. Crary (1957-58). Named by Crary for Charles R. Wilson, chief aurora scientist at Little America V (1958) and glaciologist of the U.S. Victoria Land Traverse Party (1958-59).

Wilson Ridge 72°48'S., 75°05'E.

A prominent razorback ridge 6 mi. N. of Mt. Harding in the Grove Mountains. Mapped by ANARE from air photos, 1956-60. Named by ANCA for R. R. Wilson, topographic draftsman, Division of National Mapping, Australian Dept. of National Development, who has contributed substantially to the compilation of Antarctic maps.

Wilson Rock 59°03'S., 26°39'W.

Rock, 150 m. high, lying 1.4 mi. W. of Bristol I. in the South Sandwich Islands. Disc. by Capt. James Cook in 1775, but more accurately charted by Adm. Thaddeus Bellingshausen in 1819-20. Recharted in 1930 by DI personnel on the *Discovery II* and named for Sir Samuel H. Wilson, Permanent Under-Secretary of State for the British Colonies.

Wilson Saddle 72°13'S., 3°15'W.

A snow saddle between Kjølrabbane Hills and Aurhø Peak in the SW. part of Ahlmann Ridge in Queen

GEOGRAPHIC NAMES OF THE ANTARCTIC

Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and named for Ove Wilson, medical officer with NBSAE.

Wilson Stream 77°17'S., 166°26'E.

A meltwater stream which flows from the ice-free lower W. slopes of Mt. Bird, to the south of Alexander Hill, and over steep sea cliffs into Wohlschlag Bay, Ross Island. Mapped by the NZGSAE, 1958-59, and named by the NZ-APC for J. Wilson, mountaineer assistant with the expedition.

Wilton Bay 60°46'S., 44°45'W.

Bay lying between Cape Davidson and Cape Hartree on the SW. side of Laurie I. in the South Orkney Islands. Charted in 1903 by the ScotNAE under Bruce, who named it for D. W. Wilton, zoologist of the expedition.

Wiltshire Rocks 67°30'S., 63°07'E.

A group of rocks in the sea about 2.5 mi. ENE. of Smith Rocks, off the coast of Mac. Robertson Land. First mapped from air photographs by the Lars Christensen Exp., 1936-37, and named Spjøtøyskjera. Renamed (1971) by ANCA for A.C.W. Wiltshire, cook at Mawson Station in 1963.

Wiman, Cape 64°13'S., 56°38'W.

A low, rocky cape marking the N. extremity of Seymour Island, James Ross Island group. Probably first seen by Sir James Ross in January 1843, but the cape was not adequately surveyed until 1902-3 when the Swedish expedition under Nordenskjöld wintered in the area. Named by UK-APC after C. Wiman, who worked on the Seymour Island fossils collected by the Swedish expedition.

Wimple Dome 63°38'S., 58°51'W.

Ice-covered hill, 725 m., standing 2 mi. S. of Hanson Hill and 2 mi. E. of Bone Bay on the N. side of Trinity Peninsula. The name was applied by members of the FIDS following their survey in 1948 and is descriptive of the shape of the feature, a wimple being a type of headdress worn by nuns.

Windless Bight 77°42'S., 167°40'E.

The prominent bight indenting the S. side of Ross I. eastward of Hut Point Peninsula. Named by the Winter Journey Party, led by Wilson, of the BrAE (1910-13), which encountered no wind in this area.

Windmill Islands 66°20'S., 110°28'E.

A group of rocky islands and rocks about 6 mi. wide, paralleling the coast for 17 mi. immediately N. of Vanderford Gl. along the E. side of Vincennes Bay.

Mapped from aerial photographs taken by USN Op. Hjp., 1946-47. So named by the US-ACAN because personnel of Operation Windmill, 1947-48, landed on Holl I. at the SW. end of the group to establish ground control for USN Op. Hjp. photographs. The term Operation Windmill is a popular expression which developed after the exp. disbanded and refers to the extensive use of helicopters made by this group. The official title of this exp. was Second Antarctic Development Project, U.S. Navy Task Force 39, 1947-48.

Window Island 62°34'S., 61°07'W.

Island lying at the W. side of the entrance to Barclay Bay, off the N. coast of Livingston I. in the South Shetland Islands. It was charted and named by Capt. George Powell in 1820-22.

Winds, Bay of 66°30'S., 97°35'E.

Coastal embayment between Cape Dovers and Avalanche Rocks. Disc. by Western Base Party of the AAE, 1911-14, under Mawson, who so named it because of the almost constant outflow of cold dense air from the plateau into the bay.

Windvane Hill 77°38'S., 166°24'E.

Small hill just NE. of the extremity of Cape Evans on Ross Island. So named by the BrAE (1910-13) because an anemometer station was established on this site.

Windwhistle Peak 76°42'S., 159°46'E.

A square sandstone peak south of Punchbowl Cirque in the Allan Hills, Victoria Land. Reconnoitered by the NZARP Allan Hills Expedition (1964) which so named the peak because of the peculiar behavior of the wind in its vicinity.

Windy Cove 54°04'S., 36°58'W.

Small bay entered 0.6 mi. SE. of Antarctic Pt. on the N. coast of South Georgia. The bay was named Whatahope Bay, probably by DI personnel who charted this coast in 1929, but is known locally as Windy Cove. It is probable that this latter name, originally given by DI personnel in 1929 to the next bay to the northwest (now Tornquist Bay, q.v.), was erroneously transferred to this feature. Since Whatahope Bay is unknown locally, the name Windy Cove as applied to this feature is approved.

Windy Gap 63°34'S., 58°09'W.

Pass 975 m. high, located at the NE. end of Louis Philippe Plateau. It marks the meeting place of three valleys of Trinity Pen., namely Broad Valley leading eastward toward Duse Bay, a valley leading northward to Lafond Bay, and another southward to Prince

GEOGRAPHIC NAMES OF THE ANTARCTIC

Gustav Channel. Disc. by the FIDS and so named because of the very bad weather experienced in the pass during a survey journey in April 1946.

Windy Gully 77°52'S., 161°12'E.

An ice-filled gully between New Mtn. and Terra Cotta Mtn., on the S. side of Taylor Gl. in Victoria Land. Named by the Western Journey Party, led by Taylor, of the BrAE, 1910-13. All parties in this area have commented on the incidence of high winds here.

Windy Hole: see Tornquist Bay 54°04'S., 36°59'W.

Windy Nunatak: see Bumstead, Mount 85°39'S., 174°10'E.

Windy Peak 79°13'S., 86°04'W.

A prominent peak, 1,910 m., located 2 mi. SW. of the S. end of Reuther Nunataks in the Founders Peaks, Heritage Range. So named by the Univ. of Minnesota Geological Party, 1963-64, because high velocity winds were present here whenever the peak was visited.

Windy Valley 68°37'S., 66°50'W.

Glacier-filled valley opening onto the N. part of Mikelsen Bay on the W. coast of Graham Land and providing access via its head to the plateau, Lammers Gl. and the Traffic Circle area. So named by the BGLE under Rymill, 1934-37, because of the strong winds which descend from the high plateau and blow out of this valley with great force.

Winifred Cumming, Mount: see Cumming, Mount 76°40'S., 125°48'W.

Winkle Island 65°31'S., 65°39'W.

Island lying between Tula Pt. and Pickwick I., Pitt Is., in the Biscoe Islands. Shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 after Nathaniel Winkle, a member of the Pickwick Club in Charles Dickens' *Pickwick Papers*.

Winship Point 62°15'S., 58°44'W.

Point at the W. side of the entrance to Potter Cove, King George I., in the South Shetland Islands. Named by the UK-APC in 1960 for Jonathan Winship, Master of the ship *O'Cain* from Boston, Massachusetts, who visited the South Shetland Is. in 1820-21, operating from Potter Cove.

Winslow Rock 66°17'S., 66°44'W.

A rock close off the E. side of Lavoisier I., Biscoe Islands. Mapped from surveys by FIDS (1958-59). There is a small penguin rookery on this rock, which

provides the only known landing place on the E. side of Lavoisier Island. Named by UK-APC for Charles E.A. Winslow, American physiologist who has specialized in the reactions of the human body to cold environments.

Winston, Lake: see Winston Lagoon 53°09'S., 73°39'E.

Winston Glacier 53°09'S., 73°38'E.

A glacier flowing to Winston Lagoon on the SE. side of Heard Island. Surveyed by ANARE in 1948. Named by ANCA in 1964 in association with nearby Winston Lagoon.

Winston Lagoon 53°09'S., 73°39'E.

A lagoon indenting the SE. coast of Heard Island about 1 mi. NE. of Cape Lockyer. The feature is roughly portrayed on an American sealer chart of the 1860 period. It was sighted from the air by Lt. Malcolm Smith, RAAF, pilot of the ANARE seaplane that made the first reconnaissance flight over the island in 1948. Lieutenant Smith proposed that it be named Lake Winston after his wife. In view of his death in an aircraft accident shortly afterward, this proposal was adopted by ANCA with only a change of generic term.

Winter Island 65°15'S., 64°16'W.

Island 0.5 mi. long, lying 0.1 mi. N. of Skua I. in the Argentine Is., Wilhelm Archipelago. Winter Island was named by the BGLE, 1934-37, which made this island the site of its winter base during 1935.

Winter Quarters Bay 77°51'S., 166°37'E.

Small bay immediately E. of Hut Point, at the S. end of Ross Island. Disc. by the BrNAE, 1901-4, and so named because the expedition ship *Discovery* was moored in the bay and "frozen-in" during the winter seasons of 1902 and 1903.

Winter Quarters Peninsula: see Hut Point Peninsula 77°46'S., 166°51'E.

Wirdnam Glacier 78°25'S., 162°02'E.

Glacier which drains the W. slopes of the Royal Society Range between Mounts Moxley and Lisicky and flows W. into Skelton Glacier. Mapped by USGS from ground surveys and air photos. Named by US-ACAN for Squadron Leader K. A. C. Wirdnam, RAF pilot stationed at McMurdo Station in 1960 as an observer, who also flew missions for U.S. Navy Squadron VX-6.

Wirth Peninsula 73°27'S., 80°40'W.

A broad ice-covered peninsula, 20 mi. long, between Eltanin and Fladerer Bays, Ellsworth Land. Mapped by USGS from surveys and U.S. Navy air photos,

GEOGRAPHIC NAMES OF THE ANTARCTIC

1961-66. Named by US-ACAN for Capt. Laurence Wirth, commander of USNS *Ellanin* on Antarctic cruises, September 1966-November 1967.

Wisconsin Islands 63°17'S., 57°51'W.

A group of a dozen or more small rocky islands which lie 1 mi. NE. of Largo Island in the NE. part of the Duroch Islands. Named after the University of Wisconsin, Madison. The name was applied by Martin Halpern, leader of the University of Wisconsin field party which geologically mapped these islands, 1961-62.

Wisconsin Plateau 85°48'S., 125°24'W.

A large ice-capped plateau with general elevations above 2,800 m., comprising most of the upland surface area of the Wisconsin Range, Horlick Mountains. To the E. and SE., the plateau descends gradually and with only minor ice escarpments to merge with the interior ice plateau; to the N. and W., the plateau displays abrupt escarpments and cliffs of over 1,000 meters. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN in association with the Wisconsin Range.

Wisconsin Range 85°45'S., 125°00'W.

A major mountain range of the Horlick Mountains, comprising the Wisconsin Plateau and numerous glaciers, ridges and peaks bounded by the Reedy Gl., Shimizu Ice Stream, Horlick Ice Stream and the interior ice plateau. Mapped by USGS from surveys and USN air photos, 1959-64. Named by US-ACAN for the Univ. of Wisconsin, Madison, Wisc., which has sent numerous researchers to Antarctica.

Wise, Mount 78°08'S., 165°23'E.

A bare rock summit, the highest point (815 m.) on Brown Peninsula. Named by A. J. Heine of the McMurdo Ice Shelf Project, 1962-63, for K. C. Wise, a New Zealander who explored the peninsula while a member of the NZGSAE, 1958-59.

Wise Bay 83°02'S., 167°35'E.

An ice-filled inlet at the terminus of Ekblad Gl., opening on to the Ross Ice Shelf just W. of Driscoll Point. Named by the NZGSAE (1959-60) for K. C. Wise, who was a member of the expedition and wintered over in 1959.

Wise Peak 78°35'S., 158°18'E.

A small peak (1,580 m.) marking the S. end of Warren Range in Victoria Land. Named by US-ACAN for Keith A. J. Wise, biologist working out of the McMurdo Station for five seasons, 1960-61 to 1964-65.

Wishart, Mount 70°19'S., 65°15'E.

A snow-covered mountain 5 mi. N. of Mt. Kirkby, on

the N. side of Scylla Glacier in the Prince Charles Mountains. Plotted from ANARE air photos. Named for E. R. Wishart, technical officer (glaciology) at Mawson Station in 1963.

Wishbone Ridge 84°56'S., 166°56'W.

A Y-shaped ridge trending NE. from the main ridge of the Duncan Mountains. The feature is 2 mi. E. of Morris Peak and is unique among the series of ridges in the Duncan Mountains in that it bifurcates, giving an aerial view similar in shape to a "wishbone." The descriptive name was suggested by Edmund Stump of the USARP Ohio State University field party who, with C.E. Corbató and P.V. Colbert, geologically mapped the ridge on Dec. 21, 1974.

Wisting, Mount 86°27'S., 165°26'W.

A rock peak (2,580 m.), the northwesternmost summit of the massif at the head of Amundsen Glacier in the Queen Maud Mountains. In November 1911, a number of mountain peaks in this general vicinity were observed and rudely positioned by the South Pole Party under Roald Amundsen. Amundsen named one of them for Oscar Wisting, a member of the party. The peak described was mapped by USGS from surveys and U.S. Navy aerial photography, 1960-64. For the sake of historical continuity and to commemorate the Norwegian exploration in this area, the US-ACAN has selected this feature to be designated Mount Wisting. Other peaks in the massif have been named for members of Amundsen's South Pole Party.

Witalis Peak 85°33'S., 160°18'W.

A rock peak, 760 m., in the NE. part of Collins Ridge, at the confluence of Bowman and Amundsen Glaciers in the Queen Maud Mountains. Discovered and mapped by the ByrdAE, 1928-30. Named by US-ACAN for Ronald E. Witalis, meteorologist, South Pole Station winter party, 1961.

Witches Cauldron 69°56'S., 69°49'W.

Ice-filled basin on the W. side of the Douglas Range, immediately W. of Mt. Egbert in the N. part of Alexander Island. First seen from the air and roughly mapped by the BGLE in 1937. More accurately mapped from air photos taken by the RARE, 1947-48, by Searle of the FIDS in 1960. Named by the UK-APC for the feature's kettle-like shape.

Withen Island 62°14'S., 59°09'W.

Island lying off the NW. side of Nelson I. in the South Shetland Islands. Named by the UK-APC in 1961 for Nicholas Withen, Master of the American sealing vessel *Governor Brooks* from Salem, Massachusetts, who visited the South Shetland Islands in 1820-21.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Withrow Glacier 77°24'S., 156°25'W.

A glacier on Edward VII Peninsula, flowing NW. into Bartlett Inlet just E. of Cape Colbeck. Mapped from surveys by the USGS and U.S. Navy air photos (1959-65). Named by US-ACAN for Cdr. W. H. Withrow, USN, of the staff of the Commander, Naval Support Force, Antarctica, who was officer in charge of Detachment One at Christchurch, N. Z., 1965-66.

Witt Bluff 71°16'S., 68°27'W.

A rock bluff on the SW. side of Eros Glacier in eastern Alexander Island. The bluff is situated at the E. end of a spur projecting from Planet Heights. Mapped by Directorate of Overseas Surveys from satellite imagery supplied by U.S. National Aeronautics and Space Administration in cooperation with U.S. Geological Survey. Named by UK-APC from association with Eros Glacier after Carl G. Witt (1866-1946), the German astronomer who discovered Eros in 1898.

Witte Nunataks 75°29'S., 69°22'W.

Isolated nunataks about midway between the Sweeney Mtns. and Hauberg Mtns. in Ellsworth Land. Mapped by USGS from ground surveys and USN air photos, 1961-67. Named by US-ACAN for Paul F. Witte, construction mechanic with the Eights Station winter party in 1964.

Witte Peaks 71°32'S., 2°04'W.

A line of about four nunataks trending SW.-NE., rising 15 mi. W. of Stein Nunataks on the N. part of Ahlmann Ridge in Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Dietrich Witte, motor mechanic on the expedition. Surveyed by NBSAE, 1949-52.

Wittmann Island 65°44'S., 65°49'W.

Island lying 2 mi. WSW. of Nusser I., off the E. side of Renaud I. in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Walter I. Wittmann, American oceanographer who has specialized in sea ice studies.

Wohlschlag Bay 77°22'S., 166°25'E.

Large bay indenting the W. side of Ross I. between Harrison Bluff and Cape Royds. Charted by the BrNAE under Scott, 1901-4. Named by the US-ACAN in 1964 for Donald E. Wohlschlag, Prof. of Biology at Stanford Univ., who outfitted the biology laboratories on the USNS *Eltanin* and at McMurdo Station, where he worked five summer seasons from 1958-64.

Wohlthat-Massiv: see Wohlthat Mountains 71°35'S., 12°20'E.

Wohlthat Mountains 71°35'S., 12°20'E.

A large group of associated mountain features consisting of the Humboldt Mtns., Petermann Ranges, and the Gruber Mtns., located immediately E. of the Orvin Mtns. in central Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for Councilor of State Helmuth C.H. Wohlthat, who as economist and fiscal officer dealt with the organization of the expedition.

Woinarski, Mount 71°14'S., 66°30'E.

A triple-peaked mountain about 18 mi. SW. of Taylor Platform in the Prince Charles Mountains. Plotted from ANARE air photos taken in 1956 and 1960. Named by ANCA for B. C. Z. Woinarski, officer in charge at Mawson Station in 1965.

Wolak Peak 77°39'S., 161°08'E.

A peak in the Inland Forts, located 1 mi. NW. of St. Pauls Mtn. in the Asgard Range, Victoria Land. Named by US-ACAN for Richard J. Wolak, administrative assistant at McMurdo Station in the 1972-73 and 1973-74 seasons; he was station manager at South Pole Station in 1975.

Wold Nunatak 74°47'S., 98°38'W.

A nunatak standing 10 mi. E. of Mt. Manthe in the SE. part of the Hudson Mountains. Mapped by USGS from surveys and USN air photos, 1960-66. Named by US-ACAN for Richard J. Wold, USARP geologist at Byrd Station, 1960-61 season.

Wollan Island 66°25'S., 66°38'W.

A dome-shaped, ice-capped island with conspicuous rock exposures on its NW. side, lying 1 mi. N. of Davidson I. in Crystal Sound. Mapped from surveys by FIDS (1958-59). Named by UK-APC for Ernest O. Wollan, American physicist who used neutron diffraction to study the structure of ice.

Wollaston, Cape 63°40'S., 60°47'W.

Cape forming the NW. extremity of Trinity Island in the Palmer Archipelago. The name was originally applied to the N. tip of the island by the Br. exp. in the *Chanticleer*, 1828-31, under Foster. In recent years use of Cape Wollaston has been restricted to the E. extremity (now Cape Neumayer), but the cape here described has been determined to be the feature indicated by Foster. Named for William H. Wollaston, commissioner of the Royal Society on the Board of Longitude, 1818-28, which loaned astronomical instruments to Foster's former ship, the *Conway*, for astronomical and pendulum observations (an objective of the *Chanticleer* voyage).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Islands 67°31'S., 62°41'E.

of small islands in the entrance to Holme Bay, ii. W. of Azimuth Islands. First mapped from photographs by the Lars Christensen Exp., Remapped from air photos by ANARE. y ANCA for C. Wollesen Petersen, radio officer *Thala Dan* and *Nella Dan* on nine ANARE voyages.

Buttress 64°12'S., 59°47'W.

uttrass on the southern edge of Detroit Plaham Land, forming the W. side of Albore Mapped from surveys by FIDS (1960-61). y UK-APC after Wolseley Tool and Motor hich, in 1908-10, designed the experimental lge used by Captain Scott's 1910-13 expedi-

Island 67°35'S., 47°57'E.

land just off the E. end of McKinnon I., off of Enderby Land. Plotted from air photos m ANARE aircraft in 1956. Named by ter the wombat, a native animal of Australia.

Peaks 72°40'S., 161°04'E.

peaks about 2 mi. S. of Mt. Weihaupt in the Nunataks. Mapped by USGS from surveys Navy air photos, 1959-64. Named by US- Daniel R. Womochel, biologist at McMur- to, 1967-68.

Island 66°13'S., 110°36'E.

Island N. of Cameron I. in the Swain Islands. on was photographed by USN Op. Hjp. , ANARE (1956), and the Soviet exp. was included in a 1957 survey of the islands es Station by C. R. Eklund. He named the construction mechanic Duane J. Wonsey, he Wilkes Station party, 1957.

Island 71°24'S., 169°18'E.

marking the E. extremity of Flat Island at the entrance to Robertson Bay, Victoria Land. l in Jan. 1841 by Capt. James Ross, RN, d by him for Charles Wood, Esq., First Sec- he Admiralty.

Mount 74°49'S., 158°24'E.

l nunatak lying northward of David Glacier ii. NE. of Mt. Kring in Victoria Land. y D.B. McC. Rainey of the Cartographic the N.Z. Dept. of Lands and Survey. er the foster parents of Staff Sgt. Arthur L. MC, navigator with the U.S. Navy VX-6 which provided logistic support for the (1962-63).

Wood, Mount 74°51'S., 64°07'W.

Mountain, 1,230 m., standing W. of Gardner Inlet and 15 mi. W. of Mt. Austin on the E. coast of Palmer Land. Disc. by the RARE, 1947-48, under Ronne, who named this mountain for E. A. Wood, ship's engineer with the expedition.

Woodall Peak 84°17'S., 178°38'E.

A small rock peak, 720 m., close to the S. edge of the Ross Ice Shelf, about midway between the mouths of Good and Ramsey Glaciers. Discovered and photographed by the USAS on Flight C of February 29-March 1, 1940, and named by US-ACAN for Vance Woodall, Seaman, USN, who lost his life in an unloading accident on USN Op. Hjp., 1946-47.

Wood Bay 74°13'S., 165°30'E.

A large bay which is bounded by Cape Johnson and Aviator Glacier Tongue on the north and Cape Washington on the south, along the coast of Victoria Land. Discovered in 1841 by Capt. James Clark Ross, RN, and named by him for Lt. James F. L. Wood of the ship *Erebus*.

Woodberry Glacier 75°06'S., 161°38'E.

A small tributary glacier flowing S. between Evans Heights and Mt. Fearon to the N. side of David Gl., in Victoria Land. Mapped by USGS from surveys and USN air photos, 1956-62. Named by US-ACAN for Barry D. Woodberry, ionospheric physicist with the South Pole Station winter party, 1966.

Woodberry Nunataks 67°47'S., 62°11'E.

Group of small nunataks 1 mi. N. of Lucas Nunatak in the Casey Range, Framnes Mountains. Mapped by Norwegian cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Visited by an ANARE party in 1962 and named for B. D. Woodberry, ionosphere physicist at Mawson Station, a member of the field party.

Woodbury Glacier 64°47'S., 62°20'W.

Glacier just W. of Montgolfier Gl., flowing into Piccard Cove, Wilhelmina Bay, on the W. coast of Graham Land. Mapped by the FIDS from air photos taken by Hunting Aerosurveys Ltd. in 1956-57. Named by the UK-APC in 1960 for Walter B. Woodbury (1834-1885), English pioneer of photomechanical printing in 1865 and of serial film cameras for use in balloons and kites in 1877.

Wooden Peak 66°08'S., 65°35'W.

Peak 2 mi. SE. of Black Head on the W. coast of Graham Land. Charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 for Frederick E. Wooden, FIDS surveyor at Danco Island in

GEOGRAPHIC NAMES OF THE ANTARCTIC

1956 and at Prospect Point in 1957. Wooden was also attached to the British Naval Hydrographic Survey Unit which worked in the area in 1957-58.

Woodfield Channel 67°49'S., 68°44'W.

A deep water channel between the Dion Is. and Henkes and Rocca Islands, off the S. end of Adelaide Island. Named by the UK-APC in 1963 for Thomas Woodfield, First Officer of RRS *John Biscoe*, 1959-63, which ship assisted the RN Hydrographic Survey Unit in the survey of this area in 1963.

Wood Glacier 72°29'S., 166°42'E.

A tributary glacier flowing SE. and entering Trafalgar Glacier just E. of Mt. McDonald in the Victory Mtns., Victoria Land. It shares a common saddle with Lensen Glacier which flows northward. Named by the southern party of NZFMCAE, 1962-63, for B. L. Wood, geologist member of NZGSAE, 1957-58, which also worked in this general area.

Wood Island 62°29'S., 60°19'W.

Island lying SE. of Desolation I. in the South Shetland Islands. First charted in 1820-21 by Robert Fildes. Fildes gave the name Wood Harbour or Port Wood to the nearby harbor of Desolation I. in December 1820. Later in that season, however, Fildes changed the name of the harbor to Blythe Bay, which has since become established. Wood Island was applied by the UK-APC in 1958 and derives from Fildes' original naming.

Wood Point 77°25'S., 168°57'E.

Point on the N. coast of Ross Island, 10 mi. ESE. of Cape Tennyson. Named by the US-ACAN in 1964 for Robert C. Wood, USARP biologist who carried on investigations at nearby Cape Crozier in the summer seasons 1961-62, 1962-63, and 1963-64.

Wood Ridge 74°00'S., 163°45'E.

A flat-topped, ice-covered ridge, 7 mi. long, extending in a N.-S. direction between Campbell and Styx Glaciers in the Southern Cross Mtns., Victoria Land. Mapped by USGS from surveys and USN air photos, 1955-63. Named by US-ACAN for Vernon P. Wood, USN yeoman, a member of the McMurdo Station winter parties of 1963 and 1967.

Woodrow Wilson, Kap: see Wilson, Cape 54°02'S., 37°10'W.

Woods, Mount 84°40'S., 64°30'W.

A bare, ridge-like mountain, 1,170 m., standing 4.5 mi. NE. of O'Connell Nunatak in Anderson Hills in central Patuxent Range, Pensacola Mountains. Mapped

by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Clifford R. Woods, Jr., hospital corpsman at Palmer Station, winter 1967.

Woodward, Mount 54°06'S., 36°54'W.

Mountain, 770 m., standing 1.5 mi. E. of the mouth of Antarctic Bay on the N. coast of South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Roswall Woodward, of New Haven, Connecticut, who in 1790 commanded one of the first two American sealing vessels to visit South Georgia. Nearby Antarctic Bay was at one time known as Woodward Harbor, but this name did not survive.

Woodward, Mount 77°18'S., 145°47'W.

Mountain with broad twin summits standing between Hammond Gl. and Boyd Gl., 6 mi. WNW. of Mt. Douglass in the Ford Ranges, Marie Byrd Land. Discovered by the ByrdAE (1928-30) and named for Donald Woodward, a patron of the expedition.

Woodward Harbor: see Antarctic Bay 54°06'S., 36°59'W.

Woolam Peak 76°41'S., 125°49'W.

A small peak on the southern part of the crater rim of Mount Cumming in the Executive Committee Range, Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy trimetrogon photography, 1958-60. Named by US-ACAN for Alvis E. Woolam, ionospheric physicist at Byrd Station, 1959.

Woollard, Mount 80°33'S., 96°43'W.

An isolated mountain (2,675 m.) with only Mount Moore nearby 8 mi. to the north. It stands nearly 150 mi. W. of the Heritage Range, Ellsworth Mountains. Discovered by the Marie Byrd Land Traverse Party (1957-58), and named for George P. Woollard, member of the Technical Panel on Seismology and Gravity, U.S. National Committee for the IGY, trainer of numerous Antarctic geophysicists.

Woolnough, Mount 76°56'S., 161°19'E.

Mountain over 1,400 m., standing on the N. side of Mackay Glacier, about midway between Mt. Morrison and Mt. Gran in Victoria Land. Charted by the BrAE, 1910-13, and named for Walter G. Woolnough, British geologist who assisted in writing the scientific reports of the BrAE, 1907-9.

Woolpack Island 65°37'S., 65°00'W.

Narrow island 1.5 mi. long, lying 4 mi. NE. of Vieugué I. at the W. side of Grandidier Chan., off the W. coast of Graham Land. Disc. and named by the BGLE, 1934-37, under Rymill.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Woozle Hill 65°15'S., 64°15'W.

Hill near the center of Galindez I., in the Argentine Is. in the Wilhelm Archipelago. First charted by the BGLE under Rymill, 1934-37. Named by the UK-APC in 1959 after an imaginary animal in A. A. Milne's *Winnie-the-Pooh* which leaves tracks in the snow, in reality made by the tracker who is unaware that he is walking in circles. The hill was extensively used for ice observations and, as it can be approached from any direction, encircling tracks were often seen from the summit.

Worcester Range 78°50'S., 161°00'E.

A high coastal range, about 30 mi. long, standing between the Skelton and Mulock Glaciers on the W. side of Ross Ice Shelf. Probably named after the training ship in the Thames, in which many officers of early British Antarctic expeditions trained. Discovered by the BrNAE, 1901-4. The name seems to have been first applied on the charts of the BrAE, 1907-9.

Wordie Ice Shelf 69°15'S., 67°45'W.

A confluent glacier projecting as an ice shelf into the SE. part of Marguerite Bay between Cape Berteaux and Mt. Edgell, along the W. coast of Antarctic Peninsula. Disc. by the BGLE under Rymill, 1934-37, who named this feature for James M. Wordie, Honorary Sec. (later Pres.) of the Royal Geographical Soc., member of the Discovery Committee, and Chairman of the Scott Polar Research Institute. He also had been geologist and Chief of the Scientific Staff of the Br. exp., 1914-16, under Shackleton.

Wordie Nunatak 66°16'S., 51°31'E.

Rock outcrop 4 mi. SE. of Mt. Biscoe and 4 mi. ENE. of Mt. Hurley. Discovered in January 1930 by the BANZARE, 1929-31, under Mawson, and named for James M. Wordie.

Wordie Point 56°44'S., 27°15'W.

The SW. point of Visokoi I. in the South Sandwich Islands. Charted in 1930 by DI personnel on the *Discovery II* and named for James M. Wordie.

Wordie Shelf Ice: see Wordie Ice Shelf 69°15'S., 67°45'W.

Workman Rocks 66°23'S., 65°42'W.

Group of rocks in the NE. part of Darbel Bay just westward of Panther Cliff, off the W. coast of Graham Land. Photographed by the FIDASE in 1956-57. Named by the UK-APC in 1960 for Everley J. Workman, American physicist who has investigated the electrical properties of ice.

Works, Mount 71°15'S., 164°50'E.

A mountain, 1,780 m., rising just W. of Horne Gl. and 2 mi. SW. of Pilon Peak in the Everett Range, Concord Mountains. Mapped by USGS from ground surveys and U.S. Navy air photos, 1960-62. Named by US-ACAN for Lt. W. W. Works, USN, pilot of P2V aircraft on photographic missions in Victoria Land and other parts of Antarctica in 1961-62 and 1962-63.

Worley Point 74°24'S., 132°47'W.

A rock point, the site of an Adélie penguin rookery, forming the NW. corner of Shepard Island. Like Grant I., 5 mi. eastward, Shepard I. is surrounded by the Getz Ice Shelf except on the N. side. The point was charted from the USS *Glacier* (Capt. Edwin A. McDonald, USN) on Feb. 4, 1962. Name applied by US-ACAN for Lt. Richard J. Worley, USN, Medical Officer at South Pole Station, 1969.

Worsley, Cape 64°39'S., 60°24'W.

Dome-shaped cape 225 m. high with snow-free cliffs on the S. and E. sides, lying 10 mi. E. of the S. end of Detroit Plateau on the E. coast of Graham Land. Charted by the FIDS in 1947 and named for Cdr. Frank A. Worsley, British polar explorer and member of Sir Ernest Shackleton's expeditions of 1914-16 and 1921-22.

Worsley, Mount 54°11'S., 37°09'W.

Mountain, 1,105 m., on the W. side of Briggs Gl. in South Georgia. Surveyed by the SGS in the period 1951-57, and named by the UK-APC for Frank A. Worsley (1872-1943), Master of the *Endurance* during the Br. exp. under Shackleton, 1914-16. Worsley accompanied Shackleton in the *James Caird* from Elephant I. to King Haakon Bay, South Georgia, and made the overland crossing with him to Stromness whaling station.

Worsley Icefalls 82°57'S., 155°00'E.

Icefalls near the head of Nimrod Glacier. Seen by the northern party of the NZGSAE (1961-62) and presumably named for Frank Worsley, member of the British Trans-Antarctic Exp., 1914-16, and Shackleton-Rowett Antarctic Exp., 1921-22.

Worswick Hill 60°34'S., 45°44'W.

Rounded summit, 575 m., at the W. end of Brisbane Heights on Coronation I., in the South Orkney Islands. The peak appears on some early charts of the South Orkney Is. but is not accurately located. It was roughly surveyed by DI personnel in 1933 and resurveyed by the FIDS in 1948-49. Named by the UK-APC for Robert F. Worswick of the FIDS, meteorologist at Signy I. in 1950 and 1951, who reached this hill during a sledge journey in 1950.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Worthley Peak 82°43'S., 164°46'E.

Peak, 840 m., at the N. end of Benson Ridge overlooking lower Robb Glacier. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Elmer G. Worthley, USARP bryologist at McMurdo Sound, 1958-59.

Worth Reef 67°48'S., 68°56'W.

An arc of rocks forming the northernmost part of the Henkes Is., off the S. end of Adelaide Island. Named by the UK-APC for Acting Corporal David A. Worth, RM, of the RN Hydrographic Survey Unit which first charted this reef in 1963.

Wotkyns Glacier 86°04'S., 131°25'W.

A glacier flowing N. from Michigan Plateau along the W. side of Caloplaca Hills to enter the Reedy Glacier. Mapped by USGS from surveys and USN air photos, 1960-64. Named by US-ACAN for Grosenvar S. Wotkyns, hospital corpsman at Byrd Station in 1962.

Wrather, Mount 85°23'S., 87°14'W.

Rock peak (2,095 m.) 2.5 mi. SSE. of Mt. Walcott along the E. margin of the Thiel Mountains. The name was proposed by Peter Bermel and Arthur Ford, co-leaders of the USGS Thiel Mountains party that surveyed the mountains in 1960-61. Named for William E. Wrather, sixth director of the U.S. Geological Survey, 1943-56.

Wright, Mount 71°33'S., 169°10'E.

A peak over 1,800 m. in the N. part of the Admiralty Mtns., Victoria Land. It rises between Shipley Gl. and Crume Gl., 8 mi. SW. of Birthday Point. The feature was named by the BrAE, 1910-13, for Charles (later Sir Charles) S. Wright, physicist with the expedition.

Wright Bay 66°34'S., 93°37'E.

A small bay formed between the W. side of Helen Glacier Tongue and the mainland. Discovered by the AAE (1911-14) under Douglas Mawson, who named it for Charles S. Wright of Scott's *Terra Nova* expedition (1910-13).

Wright Glacier: see Wright Lower Glacier 77°25'S., 163°00'E.

Wright Hill 79°42'S., 158°46'E.

A large flat-topped hill at the E. side of Bowling Green Plateau in the Cook Mountains. Mapped by the Darwin Glacier Party of the CTAE (1956-58). Named after D. Wright, a member of the CTAE who accompanied Sir Edmund Hillary to the South Pole.

Wright Ice Piedmont 63°58'S., 60°20'W.

Ice piedmont extending westward from Lanchester Bay along the W. coast of Graham Land. Photo-

graphed by Hunting Aerosurveys Ltd. in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC in 1960 for Wilbur Wright (1867-1912) and his brother Orville Wright (1871-1948), American aeronautical engineers who made the first controlled flights in a powered heavier-than-air machine on December 17, 1903.

Wright Inlet 73°57'S., 61°26'W.

Ice-filled inlet receding westward between Capes Little and Wheeler along the E. coast of Palmer Land. The inlet was photographed from the air in 1940 by the USAS and in 1947 by the RARE under Ronne. Named by Ronne for John K. Wright, Dir. of the American Geographical Soc., which lent its auspices to Ronne's expedition.

Wright Island 74°03'S., 116°45'W.

An ice-covered island 35 mi. long, lying at the N. edge of Getz Ice Shelf about midway between Carney Island and Martin Peninsula, along the coast of Marie Byrd Land. Delineated from air photos taken by USN Op. Hjp. in January 1947. Named by US-ACAN for Adm. Jerauld Wright, USN, Commander in Chief, Atlantic Fleet, in over-all command of USN Deep Freeze operations during the IGY.

Wright Lake: see Brownworth, Lake 77°26'S., 162°45'E.

Wright Lower Glacier 77°25'S., 163°00'E.

A stagnant glacier occupying the mouth of Wright Valley and coalescing at its E. side with Wilson Piedmont Glacier, in Victoria Land. Formerly called Wright Glacier, but that name was amended by the VUWAE (1958-59) to distinguish this glacier from Wright Upper Glacier at the head of Wright Valley. Originally named by the BrAE (1910-13) for Charles (later Sir Charles) S. Wright, physicist with the expedition.

Wright Peak 73°40'S., 94°32'W.

Small rock peak (1,510 m.) located 0.5 mi. S. of Sutley Peak in the Jones Mountains. Mapped by the Univ. of Minnesota-Jones Mountains Party, 1960-61, which named it for Herbert E. Wright, Jr., glacial geologist, Univ. of Minnesota, who was advisor to the party and visited Antarctica in the 1961-62 season.

Wright Peninsula 67°28'S., 68°10'W.

Peninsula lying between Ryder and Stonehouse Bays on the E. coast of Adelaide Island. Named by the UK-APC in 1964 for Alan F. Wright, BAS surveyor at nearby Adelaide station, 1960-63.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Wright Point 66°24'S., 110°30'E.

The northernmost point of Ford I. in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for Commissaryman Robert D. Wright, USN, a member of the Wilkes Station party of 1958.

Wright Upper Glacier 77°32'S., 160°35'E.

An ice apron at the upper W. end of Wright Valley formed by a glacier flowing E. from the inland ice plateau. Named by the VUWAE (1958-59) for C. S. Wright, a member of the BrAE (1910-13), after whom the "Wright Glacier" (now Wright Lower Glacier) was named.

Wright Valley 77°31'S., 161°50'E.

Large E.-W. trending valley, formerly occupied by a glacier but now ice free except for Wright Upper Glacier at its head and Wright Lower Glacier at its mouth, in Victoria Land. Named by the VUWAE (1958-59) for Sir Charles Wright, for whom the BrAE (1910-13) named the glacier at the mouth of this valley.

Wrigley Bluffs 84°34'S., 63°45'W.

Rock bluffs 4 mi. long, standing 3 mi. N. of Mt. Cross in Anderson Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Richard J. Wrigley, equipment operator at Palmer Station, winter 1966.

Wrigley Gulf 74°00'S., 129°00'W.

An embayment about 115 mi. wide along the coastline of Antarctica, lying seaward of the Getz Ice Shelf. Nearly a right angle in plan, its limits are described by Grant, Dean, and Siple Islands, which are partially or wholly embedded in the ice shelf. Discovered in December 1940 by the USAS. Named for Philip Wrigley, Chicago manufacturer who helped support the expedition.

W. Spring, Cape: see Spring Point 64°18'S., 61°03'W.

Wunneburger Rock 74°42'S., 113°02'W.

An isolated rock outcrop in lower Kohler Glacier near the point where the glacier enters Dotson Ice Shelf, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-66. Named by US-ACAN for Henry E. Wunneburger, USN, cook with the Byrd Station winter party, 1966.

Wu Nunatak 72°29'S., 161°08'E.

A nunatak about 8 mi. NNE. of Mt. Weihaupt in the Outback Nunataks. Mapped by USGS from surveys

and U.S. Navy air photos, 1959-64. Named by US-ACAN for Tien H. Wu, glaciologist at McMurdo Station, 1966-67.

Wüst Inlet 72°20'S., 60°50'W.

Ice-filled inlet, from 2 to 5 mi. wide, indenting the E. side of Merz Pen. between Cape Christmas and Old Mans Head, along the E. coast of Palmer Land. The inlet was photographed from the air in 1940 by members of the USAS. During 1947 the inlet was photographed from the air by members of the RARE, who in conjunction with the FIDS charted it from the ground. Named by the FIDS for Prof. Georg Wüst, German oceanographer.

Wyandot Ridge 76°36'S., 160°30'E.

Rocky ridge at the W. side of Chattahoochee Glacier. It extends northward from the NW. end of the Convoy Range. Mapped by the USGS from ground surveys and Navy air photos. Named in 1964 by US-ACAN after the USS *Wyandot*, a cargo vessel in the American convoy to McMurdo Sound in several years beginning with the 1955-56 season.

Wyatt, Mount 86°46'S., 154°00'W.

A prominent flat-topped mountain, 2,930 m., standing 3 mi. W. of Mt. Verlautz in the Rawson Mtns. of the Queen Maud Mountains. Discovered in December 1934 by the ByrdAE geological party under Quin Blackburn and named by Rear Admiral Byrd for Miss Jane Wyatt, a friend of Richard S. Russell, Jr., a member of that party.

Wyatt Earp, Mount 77°34'S., 86°25'W.

A mainly snow-covered peak, 2,370 m., standing 3 mi. WNW. of Mt. Ulmer in the N. part of the Sentinel Range. Disc. by Lincoln Ellsworth on his trans-Antarctic flight of Nov. 23, 1935. Named by the US-ACAN for the ship *Wyatt Earp*, used by Ellsworth in four expeditions to Antarctica between 1933 and 1939.

Wyatt Earp Islands 68°22'S., 78°32'E.

A small group of islands and rocks off the northern extremity of the Vestfold Hills, about 0.5 mi. N. of Walkabout Rocks. Mapped from air photos taken by the Lars Christensen Exp. (1936-37) and named "Nörsteholmen" by Norwegian cartographers. In January 1939 a landing was made at nearby Walkabout Rocks from the *Wyatt Earp*, after which the islands were renamed by ANCA.

Wyatt Glacier 68°18'S., 66°10'W.

A steep, narrow glacier 6 mi. long in southern Graham Land. It flows S. from the central plateau near Beehive Hill to join the upper part of Gibbs Glacier. Photographed from the air by RARE, Nov. 1947. Sur-

GEOGRAPHIC NAMES OF THE ANTARCTIC

veyed from the ground by FIDS, May 1958. Named by UK-APC for Henry T. Wyatt of FIDS, Medical Officer at Detaille Island, 1957, and at Stonington Island, 1958.

Wyatt Island 67°20'S., 67°40'W.

Island, 5 mi. long and 2 mi. wide, lying 2 mi. S. of Day I. near the center of Laubeuf Fjord, off the W. coast of Graham Land. First surveyed in 1936 by the BGLE under Rymill which used the provisional name South Island for this feature. The island was resurveyed in 1948 by the FIDS and was renamed by V. Adm. Sir Arthur G. N. Wyatt, Hydrographer to the Navy, 1945-50.

Wyche Island 66°14'S., 110°35'E.

A small island just S. of the W. end of Burnett I. in the Swain Islands. This region was photographed from the air by USN Op. Hjp. (1946-47), ANARE (1956), and the Soviet exp. (1956). The island was included in a 1957 ground survey by C. R. Eklund. He named it for aerographer's mate Paul A. Wyche, USN, a member of the Wilkes Station party, 1957.

Wyck Island 64°39'S., 62°05'W.

Small island lying close to the W. side of Brooklyn I. in the E. portion of Wilhelmina Bay, off the W. coast of Graham Land. Disc. by the BelgAE, 1897-99, under Gerlache, and named on the recommendation of Dr. Frederick A. Cook, surgeon of the exp., in honor of R. A. Van Wyck, first mayor of Greater New York City.

Wyckoff Glacier 84°11'S., 164°40'E.

A glacier, 6 mi. long, flowing W. from Grindley Plateau in Queen Alexandra Range, just N. of Lamping Peak. Named by US-ACAN for Kent A. Wyckoff, USARP meteorologist at Hallett Station, 1963.

Wyers Ice Shelf 67°11'S., 49°54'E.

Small ice shelf at the E. side of the base of Sakellari Pen. in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for R. W. L. Wyers, glaciologist at Mawson Station in 1961.

Wyers Nunataks 67°13'S., 49°43'E.

Group of nunataks at the base of Sakellari Pen., just W. of Wyers Ice Shelf in Enderby Land. Plotted from air photos taken from ANARE aircraft in 1956 and 1957. Named by ANCA for R. W. L. Wyers, glaciologist at Mawson Station in 1961.

Wylde Glacier 73°32'S., 166°42'E.

A glacier situated E. of Mt. Murchison in the Mountaineer Range, draining S. between Dessent Ridge and Cape King into Lady Newnes Bay, Victoria Land. Named in 1966 by the NZ-APC for Leonard Wylde, scientific officer at Hallett Station, 1962-63.

Wylie Bay 64°44'S., 64°10'W.

Bay 4 mi. wide, lying between Cape Monaco and Norsel Pt. on the SW. coast of Anvers I., in the Palmer Archipelago. First charted by the FrAE under Charcot, 1903-5. Named by the UK-APC in 1959 for John P. Wylie, FIDS surveyor at Arthur Hbr. in 1956 and 1957.

Wylie Ridge 71°51'S., 168°27'E.

A ridge that extends westward from Meier Peak in the Admiralty Mountains. It parallels the N. side of Massey Glacier for 6 mi. and terminates at Man-o-War Glacier. Mapped by USGS from surveys and U.S. Navy air photos, 1960-63. Named by US-ACAN for Lt. Cdr. Ronald P. Wylie, USN, pilot with Squadron VX-6 during Operation Deep Freeze 1967 and 1968.

Wyman, Mount 83°54'S., 158°56'E.

A mountain, 2,665 m., at the end of the rock spur running W. from Sandford Cliffs, Queen Elizabeth Range. Named by US-ACAN for Carl O. Wyman, ionospheric scientist at Little America V, 1957.

Wyss, Mount 82°47'S., 162°42'E.

Peak, 1,930 m., standing 3 mi. E. of Mt. Rotoiti in the Frigate Range. Mapped by the USGS from tellurometer surveys and Navy air photos, 1960-62. Named by US-ACAN for Orville Wyss, USARP biologist at McMurdo Station, 1962-63.

X

X, Rock 66°20'S., 136°42'E.

Prominent offshore rock 0.4 mi. long, lying close inside the E. side of the entrance to Victor Bay, 1 mi. NW. of Gravenoire Rock. Photographed from the air by USN Op. Hjp., 1946-47. Charted by the FrAE under Marret, 1952-53. So named because the rock was indicated by a cross or "X" mark in selected prints of the Op. Hjp. photographs for the purpose of identifying it to the FrAE party which established an astronomical control station there.

Xanthus Spur 64°33'S., 63°30'W.

Mainly ice-covered spur extending northwestward from Mt. Priam for 3 mi. in the Trojan Range of Anvers I., in the Palmer Archipelago. Surveyed by the FIDS in 1955 and named by the UK-APC for Xanthus, son of Zeus and the god of one of the two chief rivers of the Trojan plain.

Y

Yaglou Point 66°23'S., 67°12'W.

The northern point of Belding I., Biscoe Islands. Mapped from air photos taken by FIDASE (1956-57). Named by UK-APC for Constantin P. Yaglou, American physiologist who has specialized in the reactions of the human body to cold environments.

Yakova Gakkelya, Massiv: see Jökulkyrkja Mountain 71°53'S., 6°40'E.

Yakovlev, Mount 71°59'S., 16°38'E.

A somewhat isolated mountain about 11 mi. N. of Sarkofagen Mtn. in the Russkiye Mtns., Queen Maud Land. Mapped by Norsk Polarinstitut from air photos taken by NorAE in 1958-59. Also observed in 1959 by the SovAE and named for noted Soviet paleontologist N. N. Yakovlev.

Yakovleva, Gora: see Yakovlev, Mount 71°59'S., 16°38'E.

Yalour, Estrecho: see Yalour Sound 63°34'S., 56°39'W.

Yalour Islands 65°14'S., 64°10'W.

Group of islands and rocks 1.5 mi. in extent in the S. part of the Wilhelm Archipelago. The group lies 1 mi. NW. of Cape Tuxen, Graham Land. Discovered and named by the FrAE, 1903-5, under J. B. Charcot. Named for Lt. Jorge Yalour, Argentine Navy, an officer of the Argentine corvette *Uruguay* which came to the rescue of the shipwrecked SwedAE in Nov. 1903.

Yalour Sound 63°34'S., 56°39'W.

A passage 1 mi. wide and 4 mi. long, usually ice bound, linking Fridtjof Sound and Antarctic Sound between Jonassen I. and Andersson I., off Trinity Peninsula. Named by Argentina for Lt. Jorge Yalour, who accompanied the *Uruguay* relief expedition of 1903.

Yamana, Nunatak: see Florence Nunatak 62°13'S., 58°37'W.

Yamato Glacier 71°25'S., 35°35'E.

A glacier about 6 mi. wide, flowing W. between Mt. Fukushima and Mt. Eyskens in the Queen Fabiola Mountains. Discovered by the BelgAE under Guido Derom, Oct. 7, 1960, and named after an old name of the peninsula of Honshu. Yamato is the symbol of the political unity and the national consciousness of the Japanese people. In November-December 1960, a Japanese field party reached this area and carried out geodetic and other scientific work.

Yamato Mountains: see Queen Fabiola Mountains 71°30'S., 35°40'E.

Yamato Sanmyaku: see Queen Fabiola Mountains 71°30'S., 35°40'E.

Yancey Glacier 80°14'S., 158°30'E.

A precipitous glacier in Britannia Range, flowing east from the vicinity of Mt. McClintock and then south-eastward to enter Byrd Glacier just west of Sennet Glacier. Named by US-ACAN in association with nearby Byrd Glacier for the USS *Yancey*, cargo ship (Central Group of Task Force 68) of USN Op. Hjp., 1946-47, led by Admiral Byrd.

Yankee Harbor 62°32'S., 59°47'W.

Small harbor entered between Glacier Bluff and Spit Pt., indenting the SW. side of Greenwich I. in the South Shetland Islands. Yankee Harbor was known to both American sealers and the British as early as 1820, and this name is now established in international usage. Port Foster, the crater harbor of Deception I., has at times also been referred to as Yankee Harbor.

Yankee Harbor: see Foster, Port 62°57'S., 60°39'W.

Yankee Sound: see McFarlane Strait 62°32'S., 59°55'W.

Yanovskiy Rocks 71°56'S., 11°40'E.

Two isolated rock outcrops lying 5 mi. S. of Mt. Khmyznikov near the SE. end of the Humboldt Mtns., Queen Maud Land. First plotted from air photos and surveys by SovAE, 1960-61. Named by USSR in 1966 for Soviet hydrographer S. S. Yanovskiy.

Yanovskogo, Skaly: see Yanovskiy Rocks 71°56'S., 11°40'E.

Yarbrough, Mount 84°24'S., 66°00'W.

A ridge-like mountain, 865 m., standing 2 mi. SW. of Nance Ridge in the Thomas Hills in northern Patuxent Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Leonard S. Yarbrough, industrial engineer at Plateau Station, 1965-66.

Yates Glacier 70°49'S., 62°12'W.

A glacier 3 mi. S. of Matheson Glacier, discharging into the W. side of Lehrke Inlet on the E. coast of Palmer Land. Named by UK-APC after J. Yates, BAS surveyor who worked in the general vicinity of this feature.

Yeates Bluff 83°23'S., 169°10'E.

A steep, mainly ice-covered bluff surmounted by a 1,190 m. peak at its N. end, standing between Lennox-King and Beaver Glaciers, 4 mi. NE. of Mt. Nickerson

GEOGRAPHIC NAMES OF THE ANTARCTIC

in Queen Alexandra Range. Named by NZGSAE (1959-60) for Peter A. Yeates, for two seasons radio operator at Scott Base.

Yeats Glacier 85°01'S., 175°00'W.

A tributary glacier about 8 mi. long, flowing W. from the N. side of Mt. Finley to enter Shackleton Gl. just N. of Lockhart Ridge, in the Queen Maud Mountains. Named by F. Alton Wade, leader of the Texas Tech Shackleton Glacier Expeditions (1962-63 and 1964-65), for Vestal L. Yeats, a member of the Texas Technological College faculty and of both expeditions.

Yelcho, Cape 61°03'S., 55°22'W.

The NW. extremity of Elephant I., South Shetland Islands. Named by the U.K. Joint Services Exp., 1970-71, after the Chilean steam tug *Yelcho* which rescued members of Shackleton's party from nearby Point Wild, August 1916.

Yelcho, Paso: see Graham Passage 64°24'S., 61°31'W.

Yeliseyeva, Skaly: see Yeliseyev Rocks 72°05'S., 14°30'E.

Yeliseyev Rocks 72°05'S., 14°30'E.

Group of rocks forming the S. part of Linnormen Hills in the Payer Mountains, Queen Maud Land. Discovered and plotted from air photos by GerAE, 1938-39. Replotted from air photos by NorAE, 1958-59, and SovAE, 1960-61. Named by USSR in 1966 for N. A. Yeliseyev, Soviet geologist.

Yellowstone Crag 57°45'S., 26°27'W.

Crag which are locally eroded into striking pinnacles, situated 0.5 mi. W. of Sombre Pt., Saunders I., in the South Sandwich Islands. The name applied by UK-APC in 1971 refers to the yellow color of the tuff rocks and their craggy topography.

Yerbas Buena, Punta: see Alexandra, Cape 67°45'S., 68°36'W.

Yermak Point 70°06'S., 160°41'E.

A coastal point in the W. part of Rennick Bay, 25 mi. WNW. of Znamenskiy Island. Named by the SovAE (1958) after the Soviet icebreaker *Yermak*.

Yesenin, Mount 72°03'S., 14°26'E.

Mountain, 2,520 m., standing 2 mi. NW. of Yeliseyev Rocks in the Payer Mtns. of Queen Maud Land. Plotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named by USSR in 1966 for S. A. Yesenin, Soviet poet.

Yesenina, Gora: see Yesenin, Mount 72°03'S., 14°26'E.

Yevgenov, Cape 69°00'S., 156°36'E.

An ice-covered cape midway along the NE. side of Krylov Peninsula, forming the W. entrance to Lauritzen Bay. Photographed by USN Operation Highjump (1946-47), Soviet Antarctic Expedition (1957-58) and ANARE (1959). Named by the USSR for Soviet hydrographer Nikolay I. Yevgenov (1888-1964).

Yingling Nunatak 66°30'S., 110°37'E.

Rocky nunatak just southward of the Windmill Islands, lying 0.8 mi. SE. of Goldenberg Ridge in the E. part of Browning Peninsula. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for David L. Yingling, meteorologist and member of the Wilkes Station party of 1960.

Yngvar Nielsen Glacier: see Nielsen Glacier 71°31'S., 169°41'E.

Yoder Glacier 75°07'S., 114°24'W.

Glacier with abrupt valley walls, 3 mi. long, which is a western tributary to Kohler Glacier. Located just SW. of Morrison Bluff in the central part of Kohler Range, Marie Byrd Land. Mapped by USGS from ground surveys and U.S. Navy air photos, 1959-71. Named by US-ACAN for Robert D. Yoder, U.S. Dept. of State, Chairman of the Interagency Committee on Antarctica, 1970-73.

Yoke Island 63°58'S., 61°56'W.

Island lying W. of the N. end of Liège I. in the Palmer Archipelago. Charted by the FrAE under Charcot, 1903-5. The name given by the UK-APC in 1960 is descriptive of the shape of the island in both plan and elevation.

Yotsume Rocks 69°44'S., 38°07'E.

Four distinct rock exposures on the ice-covered N. side of Djupvikneset Peninsula, along the SW. shore of Lützow-Holm Bay. First mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37. Surveyed by JARE, 1957-62, and named Yotsume-iwa (the rock with four eyes).

Yotume Rocks: see Yotsume Rocks 69°44'S., 38°07'E.

Young, Mount 84°27'S., 179°48'E.

A small peak, 770 m., at the N. end of a spur on the E. side of Ramsey Gl., just S. of the Ross Ice Shelf. Discovered and photographed by USN Op. Hjp. on the flights of Feb. 16, 1947, and named by US-ACAN for H. Robert Young of New Zealand, who was a mechanic on the ByrdAE, 1928-30 and 1933-35.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Young Glacier 78°04'S., 84°49'W.

A glacier which flows E. for 8 mi. and terminates at the N. end of Barnes Ridge on the E. side of Sentinel Range, Ellsworth Mountains. First mapped by USGS from surveys and USN air photos, 1957-59. Named by US-ACAN for First Lt. Dale L. Young, USAF, who participated in establishing the South Pole Station in the 1956-57 season.

Young Head 81°29'S., 161°24'E.

A prominent rock headland, 350 m., marking the N. side of the entrance to Beaumont Bay on the W. side of the Ross Ice Shelf. Named by US-ACAN for CWO Victor Young, USN, member of the Mobile Construction Battalion party at Little America V, winter 1956.

Young Island 66°25'S., 162°24'E.

An island, 19 mi. long and 4 mi. wide, which is the northernmost of the Balleny Islands. It is ice covered and rises gently to 1,340 meters. Discovered in Feb. 1839 by John Balleny, captain of the schooner *Eliza Scott*. He named it for G. F. Young, one of the merchants who united with Charles Enderby in sending out the expedition.

Youngman, Mount 77°15'S., 154°21'W.

A snow-covered coastal mountain (620 m.) 4 mi. SE. of Scott Nunataks in the Alexandra Mountains. It stands at the head of Cumbie Glacier and overlooks Swinburne Ice Shelf and Sulzberger Bay which are just northward. Mapped by USGS from surveys and U.S. Navy air photos, 1964-66. Named by US-ACAN for Capt. Samuel A. Youngman, USN, medical officer on the staff of the Commander, U.S. Naval Support Force, Antarctica, during Operation Deep Freeze 1969 and 1970.

Young Nunataks 66°44'S., 54°08'E.

Group of nunataks in the Napier Mtns. standing 2 mi. S. of Mt. Elkins. Mapped by Norwegian cartographers from aerial photos taken by the Lars Christensen Exp., 1936-37. Remapped from aerial photos taken by ANARE in 1956 and named for W. F. Young, electrical fitter at Mawson Station in 1961.

Young Peak 69°45'S., 74°31'E.

A low peak near the Antarctic coast, standing just S. of Holder Peak and 2 mi. E. of Mt. Caroline Mikkelsen. First plotted from air photos taken by the Lars Christensen Exp., 1936-37, and with Holder Peak called "Tvillingfjell" (twin mountain) by Norwegian cartographers. This peak was named by ANCA for W. Young, officer in charge at Davis Station, 1963, who led an ANARE party that surveyed this area.

Young Point 63°36'S., 58°55'W.

Rocky point 3 mi. S. of Cape Roquemaurel at the E. side of Bone Bay, on the W. coast of Trinity Peninsula. Charted by the FIDS in 1948 and named by the UK-APC for Dr. Adam Young, surgeon on the brig *Williams* which made explorations in the South Shetland Is. and Bransfield Strait in 1820.

Yseult Island 66°44'S., 140°56'E.

Small rocky island 0.7 mi. E. of Tristan I. and 0.4 mi. N. of the E. point on Cape Jules. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE under Barré, 1951-52, and so named because of its twin relationship with Tristan Island. Yseult is the French spelling of Isolde, legendary heroine incorporated into Arthurian legend and later popularized by Wagner's opera *Tristan und Isolde*.

Ystekleppane Rocks 69°59'S., 38°47'E.

A group of bare rocks protruding through the ice on the E. shore of Havsbotn, lying 1 mi. S. of Strandnebbå at the extreme SE. side of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Ystekleppane (the outermost lumps).

Ytrevohdeholmen Island 69°13'S., 39°28'E.

The largest of four islands in a cluster. It lies 4 mi. W. of Langhovde Hills in the E. part of Lützow-Holm Bay. Mapped by Nor. cartographers from air photos taken by the Lars Christensen Exp., 1936-37, and named Ytrevohdeholmen (the outer knoll island) because of its position among the islands adjacent to Langhovde Hills.

Ytstenut Peak 72°30'S., 2°50'W.

The northeasternmost peak in the Borg Massif, in Queen Maud Land. Mapped by Norwegian cartographers from surveys and air photos by NBSAE (1949-52) and air photos by the Nor. exp. (1958-59) and named Ytstenut (outermost peak).

Yugvar Nielsen Glacier: see Nielsen Glacier 71°31'S., 169°41'E.

Yule Bay 70°44'S., 166°40'E.

A bay indenting the coast of northern Victoria Land between Cape Hooker and Cape Dayman. An inner (western) portion of the bay is circumscribed by Bates Point and Ackroyd Point. Discovered by Capt. James Clark Ross, 1841, who named it for Henry B. Yule, Second Master on the *Erebus*.

Yule Peak 68°31'S., 65°37'W.

A small but conspicuous triangular rock peak (750 m.) along the N. side of Mercator Ice Piedmont, 9 mi. W.

GEOGRAPHIC NAMES OF THE ANTARCTIC

of Vesconte Point in eastern Graham Land. The peak was photographed from the air by Lincoln Ellsworth on Nov. 21 and 23, 1935, and was plotted from these photos by W. L. G. Joerg. Surveyed by FIDS in Dec. 1958 and so named because Christmas Day 1958 was celebrated by the FIDS sledging party close to this peak.

Yungay, Punta: see Bongrain Point 67°43'S., 67°48'W.

Yunyye, Skaly: see Henriksen Nunataks 71°30'S., 9°00'E.

Yuriya Gagarina, Khrebet: see Gagarin Mountains 71°57'S., 9°23'E.

Z, Punta: see Garnerin Point 64°41'S., 62°10'W.

Zabor, Gora: see Trollslottet Mountain 71°56'S., 7°14'E.

Zakharoff Ridge 72°55'S., 75°07'E.

A ridge with several peaks, mostly snow covered, 1.5 mi. SE. of Mt. Harding in the Grove Mountains. Mapped by ANARE from air photos, 1956-60. Named by ANCA for O. Zakharoff, radio officer at Mawson Station, 1960.

Zaneveld Glacier 85°26'S., 176°25'W.

A broad tributary glacier, flowing from the polar plateau NW. between Roberts Massif and Cumulus Hills to enter the upper part of Shackleton Glacier. Named by US-ACAN for Jacques S. Zaneveld, USARP biologist at McMurdo Station, 1963-64 and 1964-65, who participated in the cruise of the USS *Glacier*, January-March 1965.

Zanuck, Mount 85°58'S., 151°10'W.

A mountain about 5 mi. long surmounted by three sharp peaks in an E.-W. line, the highest of which rises to 2,525 meters. The feature stands at the S. side of Albanus Glacier at the point where the latter joins Scott Glacier, in the Queen Maud Mountains. Discovered by R. Adm. Byrd on the ByrdAE flight to the South Pole in November 1929. The mountain was visited in December 1934 by the ByrdAE geological party under Quin Blackburn. Named by Byrd for Darryl F. Zanuck, official of Twentieth Century-Fox Pictures, who assisted the ByrdAE, 1933-35, in assembling motion-picture records, and later supplied the USAS, 1939-41, with motion-picture projectors.

Zanuck East Peak 85°57'S., 150°53'W.

The easternmost of the three high peaks that rise from Mount Zanuck massif in the Queen Maud Mountains. The peak was discovered and mapped by the geological party of the ByrdAE, 1933-35, led by Quin Blackburn. The name was applied in association with Mount Zanuck by members of NZGSAE who climbed the peak in the 1969-70 season.

Zapadnoye Lake 70°44'S., 11°28'E.

A lake about 0.5 mi. long situated near the western end of the Schirmacher Hills, Queen Maud Land. Mapped by the SovAE in 1961 and named Ozero Zapadnoye (western lake).

Zapato Point 64°36'S., 61°58'W.

Point 3 mi. SW. of Cañón Pt. on the W. coast of Graham Land. First seen by the BelgAE under Gerlache, which sailed between the point and Brooklyn I., on Feb. 7, 1898. The name appears on an Argentine Govt. chart of 1954.

Zavadovskiy Island 66°43'S., 86°24'E.

Ice-covered island in the West Ice Shelf. It rises to 200 m. and is located 12 mi. E. of Mikhaylov Island. Disc. by the Soviet exp. of 1956 which named it for Ivan Zavadovskiy, second in command of the sloop *Vostok* in the Bellingshausen exp., 1819-21.

Zavaritskogo, Khrebet: see Östliche Petermann Range 71°26'S., 12°44'E.

Zavis Peak 79°23'S., 86°08'W.

A sharp peak, 2,195 m., standing 4 mi. W. of Navigator Peak at the S. end of Founders Escarpment in the Heritage Range. Named by the Univ. of Minnesota Geological Party, 1963-64, for Alfred Zavis, USGS topographic engineer with the party in these mountains.

Zavadovskii Island: see Zavodovski Island 56°20'S., 27°35'W.

Zavodovski Island 56°20'S., 27°35'W.

Circular island 3 mi. in diameter which marks the N. end of the South Sandwich Islands. An active volcanic cone of 490 m. surmounts the island. Disc. in 1819 by a Russ. exp. under Bellingshausen and named by him for Ivan Zavadovskiy, second in command on the sloop *Vostok*. The spelling "Zavodovski" has been retained because of long usage and results from an earlier system of transliteration of the Russian name.

Zavodovsk Island: see Zavodovski Island 56°20'S., 27°35'W.

Zdarsky, Mount 66°05'S., 64°58'W.

Mountain rising at the E. side of Simler Snowfield, between Barilari and Høltedahl Bays on the W. coast of Graham Land. First charted and named "Mont Garcia" by the FrAE under Charcot, 1908-10, presumably in association with his nearby "Cap Garcia." Charcot later transferred "Cap Garcia" (now Cape Garcia) to the N. entrance of Barilari Bay, leaving the mountain name on the S. side. To avoid confusion with Cape Garcia on the other side of Barilari Bay, the UK-APC altered the name of this mountain in 1959 to Mount Zdarsky. Named for Mathias Zdarsky, Austrian pioneer exponent of ski-mountaineering, inventor of the first dependable ski binding, and author of one of the earliest skiing manuals.

Zebra Peak 69°41'S., 64°56'E.

A peak 1.5 mi. NE. of Summers Peak in the Stinear Nunataks, Mac. Robertson Land. The feature was visited by D. J. Grainger, geologist with the ANARE Prince Charles Mtns. survey party in Feb. 1970. So

GEOGRAPHIC NAMES OF THE ANTARCTIC

named by ANCA because of the irregular bands and lenses of light and dark colored rocks which have the appearance of zebra stripes.

Zebra Ridge 70°02'S., 69°14'W.

Prominent rock ridge, 2 mi. long, situated 3 mi. S. of the mouth of Tumble Gl. where it rises 760 m. above the coastal ice piedmont of E. Alexander Island. First seen from a distance by Lincoln Ellsworth, who phot. the Douglas Range from the air on Nov. 23, 1935. First surveyed in 1948 by the FIDS and so named because of the striped appearance of the rock strata.

Zed Islands 62°26'S., 60°10'W.

Small group of islands, the westernmost rising to 290 m., lying 0.8 mi. N. of Williams Point, Livingston Island, in the South Shetland Islands. The name appears to have been applied by DI personnel on the *Discovery II* who charted the islands in 1935.

Zeigler, Mount 77°13'S., 143°03'W.

A mountain (1,120 m.) 3 mi. NNE. of Mt. Swartley in the Allegheny Mountains, Marie Byrd Land. Mapped by USAS (1939-41) and by USGS from surveys and U.S. Navy air photos (1959-65). Named by US-ACAN for Lt. Cdr. Luther L. Zeigler, USN, pilot on LC-130F Hercules aircraft flights during Operation Deep Freeze 1968.

Zeiss Needle: see Dedo, Mount 64°39'S., 62°33'W.

Zélée Glacier 66°52'S., 141°10'E.

Glacier about 3 mi. wide and 6 mi. long, flowing NNW. from the continental ice along the W. side of Lacroix Nunatak and terminating in a prominent tongue at the W. side of Port Martin. Probably first sighted in 1840 by the Fr. exp. under D'Urville, although no glaciers were noted on D'Urville's chart of this coast. Phot. from the air by USN Op. Hjp., 1946-47. Charted by the FrAE under Liotard, 1949-51, and named for the *Zélée*, corvette which accompanied D'Urville's flagship, the *Astrolabe*.

Zélée Glacier Tongue 66°47'S., 141°10'E.

Glacier tongue about 2 mi. wide and 7 mi. long which extends seaward from Zélée Glacier. Delineated from air photos taken by USN Op. Hjp., 1946-47, and named for the French corvette *Zélée*.

Zélée Rocks 62°57'S., 57°15'W.

Group of rocks, some of which are above water and others near the surface, lying in Bransfield Strait 17 mi. N. of Prime Head, the N. tip of Antarctic Peninsula. Disc. by the Fr. exp., 1837-40, under D'Urville, and named by him after the exp. ship *Zélée*.

Zeller Glacier 80°55'S., 156°30'E.

A glacier about 10 mi. long, flowing WNW. to enter the S. side of Byrd Gl. just N. of Mt. Fries. Named by US-ACAN for Edward J. Zeller, geologist at McMurdo Station, 1959-60 and 1960-61 seasons.

Zenith Glacier 71°52'S., 163°45'E.

A glacier which lies 1 mi. W. of Johnstone Gl. and drains S. from the S. end of Lanterman Range, Bowers Mountains. Named by the NZGSAE to northern Victoria Land, 1967-68, because the glacier is an important geological outcrop area with an impressive view from the top (the head of the glacier) of much of the Bowers Mountains.

Zenker Ridge 54°18'S., 36°30'W.

Low moraine ridge extending NE. from Osmic Hill to Discovery Pt. in Cumberland East Bay, South Georgia. This moraine was charted by the SwedAE, 1901-4, under Nordenskjöld. Named by the FIDS following their sketch survey in 1951. The name is one of a group in the vicinity of Discovery Pt. derived from the chemical fixatives used there in biological work by the FIDS.

Zeppelin, Mount 64°27'S., 61°31'W.

Mountain, 1,265 m., standing 3 mi. SE. of Eckener Pt. on the W. coast of Graham Land. Charted by the BelgAE under Gerlache, 1897-99. Named by the UK-APC in 1960 for Count Ferdinand von Zeppelin (1838-1917), German aeronautical engineer who perfected the large-scale rigid airship, 1894-1917.

Zero Point 54°07'S., 37°09'W.

Point at the N. side of Assistance Bay in Possession Bay, South Georgia. The name appears on a chart in the 1932 *Discovery Reports* and was probably applied as a result of DI surveys at South Georgia, 1926-30.

Zeta, Islas: see Zed Islands 62°26'S., 60°10'W.

Zeus Ridge 64°35'S., 63°34'W.

A heavily crevassed, steep-sided, ice-covered ridge, the main part rising over 1,675 m., extending NW. from Mt. Français between the Achaean and Trojan Ranges in central Anvers I., in the Palmer Archipelago. Surveyed by the FIDS in 1955 and named by the UK-APC for Zeus, the supreme Olympian deity.

Zhelannaya Mountain 72°04'S., 18°28'E.

A relatively isolated mountain about 9 mi. N. of Mt. Karpinskiy in the Russkiye Mtns., Queen Maud Land. Mapped by the SovAE of 1959 and named Gora Zhelannaya (desired mountain).

GEOGRAPHIC NAMES OF THE ANTARCTIC

Zhil'naya Mountain 71°40'S., 12°38'E.

The central mountain, 2,560 m., of the Svarthausane Crags, in the Südliche Petermann Range, Wohlthat Mtns., Queen Maud Land. Disc. and plotted from air photos by GerAE, 1938-39. Replotted from air photos and surveys by NorAE, 1956-60, and SovAE, 1960-61. Named Gora Zhil'naya (Branching Mountain) by the USSR in 1966, probably because several mountainous ridges radiate from this central summit.

Ziegler Point 79°21'S., 83°00'W.

A high rock point, or spur, on the SE. side of Gross Hills in the Heritage Range. Mapped by USGS from surveys and USN air photos, 1961-66. Named by US-ACAN for equipment operator Ernest L. Ziegler, USN, a participant in Deep Freeze 1966 at McMurdo Station.

Zigzag Bluff 85°18'S., 163°30'W.

A rock bluff at the foot of Herbert Range, overlooking Ross Ice Shelf about 5 mi. W. of the terminus of Axel Heiberg Glacier. Probably first seen by Roald Amundsen in 1911, the bluff was roughly mapped by the ByrdAE, 1928-30. So named by the Southern Party of the NZGSAE, 1961-62, because of the peculiar folding of the marble on the bluff.

Zigzag Island 63°36'S., 59°52'W.

A small island close off the S. coast of Tower I., Palmer Archipelago. The name applied by UK-APC is descriptive of the island in plan; it is deeply indented, with steep cliff faces.

Zilch Cliffs 74°58'S., 134°55'W.

A series of steep cliffs that mark the E. extremity of McDonald Heights near the coast of Marie Byrd Land. The cliffs were photographed from aircraft of USAS, 1939-41, and were mapped in detail from U.S. Navy air photos and USGS surveys, 1959-65. Named by US-ACAN for Lt. Cdr. C. H. Zilch, USN, Officer-in-Charge of the meteorological support unit during Operation Deep Freeze 1966.

Zilva Peaks 66°45'S., 65°23'W.

Two conspicuous peaks between the two arms of Drummond Gl. in Graham Land. Photographed by Hunting Aerosurveys Ltd. in 1955-57 and mapped from these photos by the FIDS. Named by the UK-APC for S. S. Zilva of the Lister Institute of Preventive Medicine, London, one of the principal investigators in the work which led to the production of synthetic vitamin C. He helped in the calculation of the sledging

rations of many British polar expeditions between World War I and II.

Zimmerman Island 66°26'S., 110°27'E.

A mainly ice-free island 0.4 mi. SE. of Werlein I. in the Windmill Islands. First mapped from air photos taken by USN Op. Hjp. and Op. Wml. in 1947 and 1948. Named by the US-ACAN for John R. Zimmerman, meteorologist and member of the Wilkes Station party of 1958.

Zimmermann, Mount 71°20'S., 13°20'E.

A peak (2,325 m.) standing 3.5 mi. N. of Ritscher Peak in the Gruber Mtns., central Queen Maud Land. Discovered by the GerAE under Ritscher, 1938-39, and named for the vice-president of the Deutsche Forschungsgemeinschaft (German Research Society).

Zinkovich, Mount 81°08'S., 158°21'E.

Pointed mountain, 2,280 m., standing 4 mi. N. of Mt. Frost at the N. side of the head of Silk Glacier in the Churchill Mountains. Named by US-ACAN for Lt. Col. Michael Zinkovich, USAF, commanding officer of the 1710th Aerial Port Squadron, which furnished airlift support between New Zealand and Antarctica, and from McMurdo Sound inland to Byrd, Eights, and South Pole Stations during USN Op. DFrz. 1962.

Zirzow, Mount 83°08'S., 49°06'W.

Mountain, 1,615 m., standing 4 mi. N. of Mt. Mann on the E. edge of Lexington Table, in the Forrestal Range, Pensacola Mountains. Mapped by USGS from surveys and USN air photos, 1956-66. Named by US-ACAN for Cdr. Charles F. Zirzow, USN, Asst. Chief of Staff to the Commander, U.S. Naval Support Force, Antarctica, 1966-67.

Znamenskiy Island 70°14'S., 161°51'E.

A high, nearly round, ice-covered island 2.5 mi. long, lying in Rennick Bay just N. of the terminus of Rennick Glacier. Charted by the SovAE in 1958 and named for Soviet hydrographer K.I. Znamenskiy (1903-41).

Zoller Glacier 77°53'S., 162°18'E.

Glacier in the Cathedral Rocks between Emmanuel and Darkowski Glaciers, flowing N. into the Ferrar Gl. of Victoria Land. Charted by the BrAE under Scott, 1910-13. Named by the US-ACAN in 1964 for Lt. John E. Zoller, USN, chaplain with the winter party of 1957 at Little America V.

Zotikov Glacier 85°02'S., 169°15'W.

A tributary glacier, 8 mi. long, flowing NE. from Mt. Fisher in the Prince Olav Mtns. and entering Liv Gl.

GEOGRAPHIC NAMES OF THE ANTARCTIC

just E. of Hardiman Peak. Named by US-ACAN for Igor A. Zotikov, Soviet exchange scientist to the USARP at McMurdo Station in 1965.

Zubchatyy Ice Shelf 67°13'S., 49°05'E.

A small ice shelf which borders the S. side of Sakellari Peninsula in Enderby Land. Plotted by Russian cartographers from air photos taken by the SovAE, 1961-62. The Russian name means "toothed" and refers to the serrated nature of the ice front when viewed in plan.

Zub Lake 70°45'S., 11°44'E.

A lake about 0.5 mi. long, lying 1 mi. ESE. of Tsentral'naya Hill in the Schirmacher Hills, Queen Maud Land. The feature was mapped by the SovAE in 1961 and named Ozero Zub (tooth lake), presumably for its shape when viewed in plan.

Zubov Bay 65°42'S., 65°52'W.

Bay 2.5 mi. wide, indenting the E. side of Renaud I. in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Nikolay N. Zubov, Soviet oceanographer and author of numerous works on sea ice in the Arctic.

Zuckerhut, Mount 71°25'S., 13°27'E.

A peak (2,525 m.) standing 2 mi. SE. of Ritscher Peak in the Gruber Mtns. of Queen Maud Land. Discovered and given the descriptive name Zuckerhut (sugarloaf) by the GerAE, 1938-39, under Ritscher.

Zuckerhut Insel: see Sugarloaf Island 61°11'S., 54°00'W.

Zuckerspitzenbucht: see Jacobsen Bight 54°25'S., 36°50'W.

Zuhn Bluff 72°13'S., 98°08'W.

Steep north-facing bluff standing about 5 mi. ESE. of Mt. Bramhall in the Walker Mtns. of Thurston Island. Delineated from air photos taken by USN Op. Hjp. in December 1946. Named by US-ACAN for Arthur A. Zuhn, physicist with the ByrdAE in 1933-35.

Zuhn Peak: see Zuhn Bluff 72°13'S., 98°08'W.

Zukriegel Island 65°54'S., 65°48'W.

Island 1 mi. long, lying between Rabot I. and Hennesy Is., in the Biscoe Islands. First accurately shown on an Argentine Govt. chart of 1957. Named by the UK-APC in 1959 for Josef Zukriegel, Czechoslovakian geographer who specialized in sea ice studies.

Zulu Shoals: see Pugh Shoal 54°02'S., 38°13'W.

Zumberge, Cape 76°14'S., 69°40'W.

A steep rock cape on the W. side of the Ronne Ice Shelf, marking the SW. end of the Orville Coast of Ellsworth Land. The name "Zumberge Nunatak" was given by the US-IGY party from Ellsworth Station, 1957-58, to a rock feature reported to lie 30 mi. north of the westernmost traverse station occupied by the party. The cape described, though somewhat farther north, is apparently the only rock feature lying in that direction. Named for James H. Zumberge, American glaciologist who has made studies of the Ross Ice Shelf.

Zumberge Nunatak: see Zumberge, Cape 76°14'S., 69°40'W.

Zuncich Hill 75°50'S., 142°51'W.

A broad, ice-covered hill (1,075 m.) rising between the heads of Siemiatkowski Gl. and El-Sayed Gl. in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-65. Named by US-ACAN for Lt. Joseph L. Zuncich, USNR, navigator in LC-130F Hercules aircraft on Operation Deep Freeze 1968.

Zurn Peak 75°44'S., 115°40'W.

Rocky peak (1,515 m.) rising from the N. edge of Toney Mountain, about 4 mi. NE. of Richmond Peak, in Marie Byrd Land. Mapped by USGS from surveys and U.S. Navy air photos, 1959-71. Named by US-ACAN for Walter A. Zurn, Station Scientific Leader at South Pole Station, 1972.

Zvezda, Lake 68°32'S., 78°27'E.

A large, irregular-shaped lake 0.5 mi. SE. of Lake Cowan in the E. part of Vestfold Hills. The lake was photographed from the air by USN Op. Hjp. (1946-47) and was mapped from air photos taken by the SovAE (1956) and ANARE (1957-58). Named Zvezda (star) by the Soviet expedition. Not to be confused with Braunsteffer Lake which is 0.5 mi. SW. of Lake Cowan.

Zwieselhögda: see Zwiesel Mountain 71°43'S., 12°08'E.

Zwiesel Mountain 71°43'S., 12°08'E.

A large complex mountain which is highly dissected, rising to 2,970 m. and forming the N. portion of Pieck Range in the Petermann Ranges of Queen Maud Land. Discovered and given the descriptive name "Zwiesel-Berg" (forked mountain) by the GerAE, 1938-39, under Ritscher.

GEOGRAPHIC NAMES OF THE ANTARCTIC

Zykov Glacier 70°37'S., 164°46'E.

A valley glacier about 25 mi. long in the Anare Mountains, flowing NW. and reaching the coast between Cape Williams and Cooper Bluffs. Photographed by the SovAE in 1958 and named for student navigator Ye. Zykov, who died in Antarctica, Feb. 3, 1957.

student navigator who lost his life in the Antarctic in 1957.

25 de Mayo, Bahía: see King George Bay 62°06'S., 58°05'W.

Zykov Island 66°32'S., 93°01'E.

Small island lying between Fulmar I. and Buromskiy I. in the Haswell Islands. Discovered and first mapped by the AAE under Mawson, 1911-14. Remapped by the Soviet exp. of 1956 which named it for Ye. Zykov,

25 de Mayo, Isla: see King George Island 62°00'S., 58°15'W.

76th Parallel Escarpment: see Usas Escarpment 76°00'S., 130°00'W.
